SEMESTER – III & IV					
INORGANIC PRACTICALS - II					
Code: 17PCHCR4					

- 1. Preparation of single stage inorganic complexes (a minimum of 6 complexes)
 - 1. cis potassiumdiaquadioxalatochromate(II) dihydrate
 - 2. trans potassiumdiaquadioxalatochromate(II) dihydrate
 - 3. tristhioureacopper(I)chloride dihydrate
 - 4. hexathiourealead(II)nitrate
 - 5. pentaamminenitritocobalt(III) nitrate
 - 6. hexaamminecobalt(III)chloride
 - 7. aquapentamminecobalt(III)chloride
 - 8. pentakisthioureadicopper(I) nitrate trihydrate
- 2. Quantitative estimation of a mixture containing two metal ions (Volumetric and Gravimetric estimations).
 - 1. Estimation of Cu²⁺ and Ni²⁺ ions.
 - 2. Estimation of Cu²⁺ and Zn²⁺ ions.
 - 3. Estimation of Fe^{2+} and Cu^{2+} ions.
 - 4. Estimation of Fe²⁺ and Ni²⁺ ions.
 - 5. Estimation of Ca²⁺ and Mg²⁺ ions.
 - 6. Estimation of Ca²⁺ and Ba²⁺ ions.
- 3. Analysis of ores and alloys (Course work only).

Note: For examination, a mixture may be given from which one cation is to be estimated volumetrically and the other gravimetrically.

- 1. Arthur I. Vogel, A Text book of Quantitative Chemical Analysis.
- 2. Mendtam. J et. al., Vogel's Text book of Quantitative Chemical Analysis, Pearson Education, 6th edition.

SEMESTER – III & IV					
ORGANIC PRACTICALS - II					
Code: 17PCHCR5 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

1. Quantitative Analysis

- i) Estimation of ethyl methyl ketone
- ii) Estimation of glucose-Lane Eynon method
- iii) Estimation of glucose- Bertrand's method
- iv) Determination of saponification value of oil.
- v) Estimation of iodine value of oil.

2. Preparation of Organic compounds (Double stage)

- i) Preparation of p-bromoaniline from acetanilide
- ii) Preparation of m-nitrobenzoic acid from ethylbenzoate
- iii) Preparation of p-nitro aniline from acetanilide
- iv) Preparation of 1,3,5-tribromobenzene from aniline
- v) Preparation of benzpinacolone from benzophenone

Note: Each student is expected to submit recrystallised samples of the preparation during her regular practical for evaluation during practical examinations.

3. Course work

- i) Estimation of phenol
- ii) Estimation of aniline.
- iii) Estimation of Ascorbic acid

- 1. Vogel's Textbook of Practical Organic Chemistry, B.S. Furniss, A.J. Hannaford, P.W.G.Smith, and A.R. Tatchell, V Edition, Pearson Education Ltd.,
- Ganapragasm and Ramamurthy , Organic Chemistry Lab Manual,
 Second Edition, S.Vishwanathan Printers and Publishers (P) Ltd., Chennai
- 3. Ragupathi Mukhopadhyay, Pratul Chatterjee, Advanced Practcal Chemistry, Books and Allied (p) Ltd., Third edition, (2007)

SEMESTER – III & IV					
PHYSICAL PRACTICALS - II					
Code: 17PCHCR6					

1. Potentiometry

- 1. Determination of solubility product of sparingly soluble salts.
- 2. Determination of dissociation constant of a weak acid.

2. Potentiometric titrations

a) Redox titrations

b) Precipitation titrations

i) Fe²⁺ Vs Cr₂O₇²-

i) Cl- Vs AgNO₃

ii) I Vs MnO₄

ii) I- Vs AgNO₃

iii) Fe²⁺ Vs Ce²⁺

iii) Mixture of Cl⁻ and I- Vs AgNO₃

3. Spectroscopy

Verification of Beer-Lambert's law. Determination of [Mn²⁺] and [Cr³⁺] by using UV-Visible spectrophotometer.

4. Adsorption:

Adsorption of acetic acid / oxalic acid on activated charcoal - Verification of Freundlich isotherm - Determination of unknown concentration.

5. Conductivity method

Study of Kinetics of ester hydrolysis and comparison of acid strength by conductivity method.

- Viswanathan.B and Raghavan.P.S, Practical Physical Chemistry, Viva Books Pvt.LTD., (2005)
- 2. Michell.J.Sienko, Robert.A, Plane, Stanley.T. Martu, Experimental Chemistry, International student edition (`1984)
- 3. David. P. Shoemaker, Carl. W. Garland and Joseph.W.Nibler, Experiments in Physical Chemistry, McGraw Hill International edition
- 4. Levitt.B.P, Findlay's Practical Physical Chemistry, Edition IX
- 5. Yadav. J.P , Physical Chemistry Practicals
- 6. Peter Mathews.G, Experimental Physical Chemistry, Clarendan Press Oxford (1985).

SEMESTER – III					
Core Elective - II Phytochemistry and Photochemistry					
Code: 17PCHE31 Hrs / Week: 5 Hrs / Sem: 75 Credits: 5					

Unit I Biomolecules

Synthesis and reactions of oxazole, imidazole, coumarins, benzopyrazole and anthocyanins - synthesis of flavones - Pyranose and furanose forms of aldohexose and ketohexose - Methods used for the determination of ring size - Structural elucidation of maltose, sucrose and lactose - Starch and cellulose - Nucleic acids, nucleotides, polynucleotides and nucleosides.

Unit II Alkaloids and Terpnoids

Alkaloids – Introduction - General methods of extraction – Classification - Degradation studies - HEM, Emde and Von-Braun - Structural elucidation of papaverine, morphine and quinine, cocaine.

Terpenoids – Introduction - General methods to elucidate the structure of terepenes - Structural determination of camphor, zingiberine, α -pinene and squalene.

Unit III Steroids

Classification – Structural elucidation of cholesterol and ergosterol – Structural elucidation of androsterone, testosterone, progesterone and Oestrone.

Conversion of Cholesterol into androsterone, progesterone, testosterone, 5α - and 5β - Cholanic acid - Conversion of Oestrone to Oestriol.

Unit IV Photochemistry and Green Chemistry

Photochemistry - Basic principles - Jablonski diagram - Photosensitization - Photochemical reactions - Photoreduction - Photochemical rearrangement through type I and II reactions - Paterno-Buchi reaction, Barton reaction and di- π methane rearrangement.

Green Chemistry - Twelve principles, atom economy- addition and rearrangement reaction, substitution reaction, elimination reaction - Green solvents - Supercritical CO₂, H₂O, Ionic liquids.

Unit V Pericyclic reactions

Atomic and molecular orbitals – Woodward-Hoffmann rules - FMO and MO correlation diagram approaches - Electrocyclic reactions - con and dis rotatory motions for 4n and 4n+2 system (butadiene and 1,3,5-hexatriene) - Stereochemical course of electrocyclic reaction in terms of conservation of orbital symmetry - Cycloaddition - suprafacial and antarafacial additions, [2+2] and [4+2] reactions (ethylene and butadiene) – Sigmatropic rearrangements - [i,j] shift of C-H and C-C bonds (1,3 1,5 and 3,3 system).

- 1. Finar I L, Organic Chemistry Volume I and II, Sixth Edition, ELBS with Longmann, Singapore (1997).
- 2. Gurdeep Chatwal, Organic Chemistry of Natural Products, Vol II, Himalaya Publishing House, Bombay, (2003).
- 3. Nasipuri D, Stereochemistry of Carbon Compounds, Second Edition, New-Age International Publishers, New Delhi (1996).
- 4. Ahluwalia, V. K and Rajender S. Varma, Green Solvents for Organic synthesis, Narosa Publishing House Pvt. Ltd. (2009).
- 5. Paul T Anastas, Text Book on Green Chemistry, OUP, (2006).

Semester – I & II				
Core Practical I Inorganic Chemistry Practical – I				
Code: 19PCHCR1 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

- 1. Qualitative analysis of inorganic mixture containing two familiar and two less familiar cations Pb, Cu, Bi, Cd, Zn, Co, Ni, Mn, Ca, Ba, Sr, W, Te, Se, Mo, Ce, Zr, V, Ti and Li.
- 2. Complexometric titrations Estimation of Cu, Zn and Mg by EDTA titration in presence of either Pb or Ba.

Course Work

1. Photocolorimetric estimation of Fe, Ni, Cr, Mn, Cu and NH₄⁺.

Book for Reference:

1. Revised by Svehla. G, Vogel's Qualitative Inorganic Analysis, Pearson Education, 7thedition, 2004.

Semester – I & II				
Core Practical II Organic Chemistry Practical - I				
Code: 19PCHCR2 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

1. Micro Qualitative Analysis of an organic binary mixture

- i) Pilot separation
- ii) Bulk separation
- iii)Determination of melting and boiling points
- iv) Analysis of organic compounds
- v) Derivatization

2. Single stage preparation of Organic compounds

- 1. Preparation of Benzoic acid from benzyl Chloride.
- 2. Preparation of Resacetophenone from resorcinol.
- 3. Preparation of dibenzalacetone from benzaldehyde.
- 4. Preparation of 2, 4, 6-tribromoaniline from aniline.
- 5. Preparation of Tetrahyrocarbazole from cyclohexanone.
- 6. Preparation of Picric acid from phenol.
- 7. Preparation of Iodoform from acetone.

3. Course work

Chromatographic techniques

- i) TLC
- ii) Paper chromatography

- 1. B.S. Furniss, A.J. Hannaford, P.W.G. Smith, and A.R. Tatchell, Vogel's Textbook of Practical Organic Chemistry, V Edition, Pearson Education Ltd., 2008.
- 2. Ganapragasm and Ramamurthy, Organic Chemistry Lab Manual, Second Edition, S.Vishwanathan Printers and Publishers (P) Ltd., Chennai, 2007.
- 3. Ragupathi Mukhopadhyay, Pratul Chatterjee, Advanced Practical Chemistry, Books and Allied (p) Ltd., Third edition, 2007.
- 4. Bidhan Chandra Ray, Satyanarayan Das, A textbook on Chemistry Practical, NewCentral Book Agency Ltd, London, 2014.

Semester – I & II				
Core Practical III Physical Chemistry Practical - I				
Code: 19PCHCR3 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

I Conductometry

- 1. Determination of solubility product of a sparingly soluble silver salt.
- 2. Determination of dissociation constant of a weak acid.
- 3. Conductometric Titrations
- i) Estimation of HCl and CH₃COOH in a mixture (vs NaOH)
- ii) Estimation of HCl and NH₄Cl in a mixture (vs NaOH)
- iii) Estimation of CH₃COOH and CH₃COONa in a mixture (vs NaOH)
- iv) Estimation of CH₃COOH and CH₃COONa in a mixture (vs HCl)

II Distribution

1. Distribution of Benzoic acid between Toluene and Water.

III Thermometry

Determination of solution enthalpy

- i) Oxalic acid Water
- ii) Ammonium oxalate Water
- iii) Naphthalene Toluene

IV. Kinetics

- i) Study of Kinetics of primary salt effect on K₂S₂O₈
- ii) Study of Kinetics of KI K₂S₂O₈ system.

- 1. Viswanathan.B and Raghavan.P.S, Practical Physical Chemistry, Viva Books Pvt. LTD., 2005.
- 2. Michell.J.Sienko, Robert.A. Plane, Stanley.T. Martu, Experimental Chemistry, International student edition, 1984.
- 3. Peter Mathews.G, Experimental Physical Chemistry, Clarendan Press Oxford, 1985.

Semester – I				
Elective I A Denova Designs In Chemistry				
Code: 19PCHE11 Hrs / Week: 4 Hrs / Sem: 60 Credits:				

Vision:

To develop better predictability of human pathophysiology and biological pathways underlying specific diseases and train the students to innovate new medicines.

Mission:

- > To understand about molecular modelling and drug designing.
- > To have depth knowledge about host-guest molecules.
- > To create awareness about common diseases and their treatments.

Course Outcome:

CO No.	Upon completion of this course, students will be able to	PSO addressed	CL
CO - 1	formulate molecular dynamics in drug design.	5	Ap
CO - 2	perform docking using Autodock virtual screening and De nova designs.	6,8	Cr
CO - 3	develop recent trends in the synthesis of crown ethers.	6	Cr
CO - 4	design a green method for the synthesis of compounds using twelve principles of Green chemistry.	5,6	Cr
CO - 5	organise C++ programming for the determination of some Chemical properties.	8	An
CO - 6	calculate the delocalisation energy for aromatic system.	4	Ev
CO - 7	acquire knowledge about common diseases due to insects, animals, air and water borne diseases.	1,8	Un
CO - 8	compare different dosage forms of drugs such as solid, semisolid, liquid and gaseous dosage form.	8	An

Ī	Semester – I				
ĺ	Elective I A Denova Designs in Chemistry				
ĺ	Code: 19PCHE11 Hrs / Week: 4			Hrs / Sem : 60	Credits: 4

Unit I Molecular modelling and Drug designing

Introduction to Molecular modelling - Drug discovery: the Evolution and process - The role of Computer assisted drug design- the process of drug discovery- Bioassay- Lipinski's rule of five. Quantum mechanical simulations - *Ab Initio* methods, Semi Empirical methods- Molecular dynamics in drug design. Docking- types of searching methods in Docking, docking methods, the scoring function, docking using Auto Dock, Virtual screening, De novo design. Cheminformatics - SMILES (Simplified Molecular Input Line Entry Specification) - Applications of Cheminformatics in Drug discovery.

Unit II Supramolecular chemistry

Introduction - Development, Classification - Based on cavity, Based on forces - Recent developments in Supramolecular compounds - Molecular self assembly - Self replicating molecular systems - Molecular self assembly based on hydrogen bond - Metal coordinated self assembly - Catenenes and Rotaxanes - Recent developments in the synthesis of crown ethers - Synthesis of Cryptands - Metal complexes with Crown ethers and Cryptands.

Unit III Green chemistry

Twelve principles - atom economy - Addition and rearrangement reaction, substitution reaction, elimination reaction - Green solvents - Supercritical CO_2 , H_2O , Ionic liquids. Solid state and non solid state microwave assisted reaction - Stille reaction, Suzuki reaction - Krohnke reaction - Hiyama reaction - Sonogashira reaction.

Unit IV Computational chemistry

Introduction - Character set in C++ - Tokens - Keywords, identifiers and constants, variables, operators (Input/Output) - Cascading - Selection of statements - IF, IFELSE, SWITCH, WHILE, DO.....WHILE, FOR, BREAK, CONTINUE and GOTO - Functions - Arrays - Classes - Pointers - Inheritance.

C++ programming for the determination of electronegativity of an atom - Lattice energy using Born - Lande equation - Normality, Molarity and Molality of solutions - Solubility of sparingly soluble salts - Molecular weights of organic compounds - Calculation of delocalisation energy values for aromatic systems.

Unit V Pharmaceutical Chemistry

Introduction - Drugs for common diseases due to insects & animals, Air borne diseases, Water borne diseases, Respiratory diseases & Diseases of the Nervous system - Pharmaceutical Aids - Preservative, Anti oxidants, Sequestrants - Colouring agents, Flavouring agents and

artificial sweetening agents added in drugs. Different dosage forms of Drugs - Solid (Tablet), Semisolid (Paste, Cream), Liquid (Solution, Suspension, Emulsion), Gaseous dosage form.

Text Books:

- 1. Anand Solomon K, Molecular modelling and Drug Design, MJP publishers, 2016.
- 2. P.S.Kalsi, J.P.Kalsi, Bioorganic, Bioinorganic and Supramolecular Chemistry, New AgeInternational publishers, Second Edition, 2010.
- 3. Ramesh Kumari, Computers and their Applications to Chemistry, Narosa PublishingHouse, New Delhi, Second Edition, 2005.
- 4. K. V. Raman, Computers in Chemistry, Tata McGraw-Hill Publishing Company Limited, New Delhi, Eighth Edition, 2005.

- 1. S.M. Khopkar, Analytical chemistry of Macrocyclic and Supramolecular compounds, Narosa Publishing House, Delhi, Second edition, 2008.
- 2. Ahluwalia, V. K and Rajender S. Varma, Green Solvents for Organic synthesis, Narosa Publishing House Pvt. Ltd., 2009.
- 3. Paul T Anastas, Text Book on Green Chemistry, OUP, 2006.
- 4. Raghupati Mukhopadhyay, Sriparna Datta, Rajib Kumar Das, Textbook of Pharmaceutical chemistry & Medicinal Chemistry, Books and Allied (P) Ltd, First Edition, 2011.

Semester – III					
Core X Research Methodology					
Code: 19PCHC34					

Vision:

To provide resources to the students to stimulate their basic research interest and other creative endeavors that promote entrepreneurial culture.

Mission:

- > To explain about various thermal and electrochemical instrumentation techniques.
- > To learn about all the hyphenated techniques used for the separation of compounds.
- > To interpret the results of analysis with accuracy.

Course Outcome:

CO No.	Upon completion of this course, students will be able to	PSO addressed	CL
CO - 1	select the research topic and able to survey the literature.	3	Ev
CO - 2	submit the project proposals to the funding agency.	8	Ap
CO - 3	explain the principle, instrumentation and applications of TGA, DTA and DSC.	3,6	Un
CO - 4	compare principle, instrumentation and applications of potentiometry, coulometry and voltammetry.	5	An
CO - 5	describe the different types of Atomic spectroscopy.	1,5	Un
CO - 6	interpret the data using TEM, SEM, XRD and EDAX techniques.	5,7	Ev
CO - 7	Separate the compound from a mixture using various chromatographic techniques.	3,4	An
CO - 8	improve the accuracy of data in chemical analysis.	5	Ev

Semester – III					
Core X	Core X Research Methodology				
Code: 19PCHC34 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

Unit I Research methodology

Introduction of research- selection of a research topic- Surveying the literature - Sources- primary source and secondary source - Identification of research problem - Assessing the status of the problem guidance from the supervisor - Actual investigation and analysis of experimental results - Reporting the results in the form of communication, paper etc - Dissertation and thesis writing - Project proposals to the funding agency.

Unit II Thermo and electro analytical methods

Thermoanalytical Methods - Principle, instrumentation and applications of Thermogravimetry (TGA), Differential Thermal Analysis (DTA) and Differential Scanning Calorimetry (DSC).

Electroanalytical Techniques – Coulometry - Principle, Instrumentation and Applications - Voltammetry - Types (Stripping voltammetry, Cyclic voltammetry, Amperometry) - Principle, instrumentation and applications.

Unit III Spectroscopic techniques

Atomic spectroscopy - Classification (Absorption, emission and fluorescence methods), Principle, Instrumentation and Application.

Principle, instrumentation and data interpretation of Transmission electron microscopy (TEM), Scanning electron microscope (SEM), Energy dispersive spectroscopy (EDAX) and X-ray diffraction (XRD) analysis.

Unit IV Chromatography techniques

Principle, instrumentation and specific applications of Column chromatography, Thin layer chromatography, Gas Chromatography (GC-MS, GC-FTIR), High Performance Liquid Chromatography (HPLC), Size-Exclusion Chromatography (SEC), Ion Chromatography (IC).

Unit V Data analysis

Errors in chemical analysis – Classification of errors – Determination of accuracy of methods – Improving accuracy of analysis - Comparison between precision and accuracy – Significant figures – Mean, median and standard deviation – Comparison of results - "t" test, "f" test and "chi" square test – Rejection of results – Presentation of data - Correlation and linear regression.

Semester – I					
Core I	Core I Inorganic Chemistry - I				
Course Code: 21PCHC11 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4					

- > To explain the various photophysical and photochemical processes involved in inorganic compounds.
- > To understand the atomic structure and periodical properties of elements.
- > To explain the various concepts of acids and bases.

Course outcome:

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	develop the idea about the photophysical and photochemical processes.	1,2	Ev
CO 2	produce semiconductor electrodes and solar cells based on laws of photochemistry.	7	Cr
CO 3	explain about the electron configuration, orbital stability and the reactivity	1,3	Ap
CO 4	discuss about the periodic properties of the elements	1,7	An
CO 5	demonstrate about the theories of VSEPR, Valance bond and Molecular Orbital.	1,8	Ap
CO 6	point out Arrhenius, Bronsted-Lowry and Lewis theories of acids and bases.	2,3	Cr
CO 7	compare the chemistry of Non-aqueous solvents such as liquid ammonia, Liquid hydrogen fluoride, Liquid sulfur dioxide.	1,3	An
CO 8	compare the properties of elements present in Lanthanides and Actinides.	1,5	An

Semester – I						
Core I Inorganic Chemistry - I						
Course Code: 21PCHC11	Course Code: 21PCHC11 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4					

Unit I Inorganic Photochemistry

Photo-physical processes - Jablonski diagram - d-d and Charge-transfer reactions, Bimolecular deactivation and Energy transfer - Photochemical processes: Electron transfer reactions, Isomerisation and Substitution (Photoaquation, Photoanation Adamson's rules, Photorearrangement, Photo redox reactions) - Photochemistry of Cr(III) and Co(III) complexes - Photochemistry of Ruthenium Polypyridyls - Applications of Inorganic Photochemistry: Photochemical Conversion and Storage of Solar energy, Semiconductor electrodes.

Unit II Periodic properties and Ionic Bonding

Periodic properties of elements - Ionic radii, Ionization potential, Electron affinity, Electronegativity, Bond lengths, Bond strength, Bond angles, Bond order, Bond energies and lattice energy.

Ionic Bond - Properties of ionic substances - Lattice energy - Born-Haber cycle - Size effect: Ionic Radii - Factors affecting radii of ions - Covalent character predominantly in ionic bonds - Polarization - Fajan's rule - Results of polarization.

Reasoning related to chemical periodicity.

Unit III Molecular Structure and Bonding

Lewis electron dot diagrams - Hybridization, Octet rule - Resonance VSEPR theory - Walsh diagram (H_2O) - Bent's rule - Apicophilicity - Valence bond theory - MO theory of homo and heteronuclear diatomic molecules and poly atomic molecules (O_2 , O_2 , O_3 , O_4 , O_5) - Geometrical isomerism - Fluxionality - Types of chemical bonds (weak and strong) - Intermolecular forces.

Unit IV Acids and Bases

Acid base theories - Arrhenius, Bronsted- Lowry theory, Factors affecting strength of acids and bases - Lewis theory - Catalytic behaviour of acids and bases - The Hard soft interaction principle (HSIP), Proton affinity.

Non-aqueous solvents - Chemistry in liquid ammonia, liquid hydrogen fluoride, liquid sulphur dioxide - Super acids – Molten salts.

Calculation of the strength of acids and bases - Problems related to conjugate acid and bases-Identification of the stability of the complex using HSAB principle.

Unit V Lanthanides and Actinides

Occurrence, properties of the elements - Common and Uncommon Oxidation States - Absorption and Emission Spectra - Magnetic Properties - Separation of lanthanide elements - lanthanide and actinide contraction - Similarities between Actinides and Lanthanides - Coordination complexes and Organometallic compounds of lanthanides and actinides - Uses of lanthanide compounds as shift reagents.

Semester – I					
Core II	Core II Organic Chemistry - I				
Course Code: 21PCHC12 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4					

- > To acquire excellence in Organic Chemistry.
- > To comprehend the various factors that operate in organic reactions.
- > To appreciate the stereochemical aspects of a reaction.

Course Outcomes

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	simulate the nomenclature of different compounds	1, 7	Ev
CO 2	illustrate the basic of aromaticity	5	Un
CO 3	criteria for aromaticity and Huckel's 4n+2 electron rule for benzene and non benzenoid aromatic compounds.	6	Ev
CO 4	understand the various types of aliphatic nucleophilic substitution reactions	5	Un
CO 5	explain neighbouring group participation in aliphatic Electrophilic substitution.	5	Ap
CO 6	explain the generation, detection, structure, stability and reactions of carbocations, carbanions, carbenes, nitrenes and free radicals	6	Ap
CO 7	learn the concept stereochemistry and its importance	7	Re
CO 8	identify the stereochemistry notations	1,7	Ap

Semester – I				
Core II Organic Chemistry - I				
Course Code: 21PCHC12 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

Unit I Aromaticity and Ring System

Aromatic character – Huckel's rule – Aromatic, Antiaromatic and Non aromatic – Molecular orbital description of aromaticity, antiaromaticity and homoaromaticity- Alternate and Non-alternate hydrocarbons – Paratopic compounds - Aromaticity of azulene - Tropones – Annulene- Higher annulenes- Fullerenes – Sydnones – Structure, stereochemistry and synthesis of Adamantane, Diamantane and Cubane - Problems related to the classification of aromaticity (Aromatic, Antiaromatic and Non aromatic only)

Unit II Aliphatic Nucleophilic and Electrophilic Reactions

Aliphatic Nucleophilic Substitution: SN_1SN_2 and SN_i mechanisms - Effect of substrate structure, effect of leaving group, effect of attacking nucleophile and effect of the reaction medium - Neighbouring group participation-substitution at vinylic and allylic carbons and reactivity - Ambient nucleophiles and Ambient substrates - Hydrolysis of esters.

Electrophilic substitution - SE₁and SE₂ mechanism- effect of substrate structure and effect of leaving group.

Problems includes the basic concepts of Aliphatic Nucleophilic and Electrophilic reactions.

Unit III Reactive Intermediates and Rearrangements

Carbocation - Generation, stability, reaction, Mechanism of rearrangements involving carbocation as intermediate Beckmann, Wagner- Meerwein rearrangements.

Carbanion - Generation, stability, reaction, Mechanism of rearrangements involving carbanion as intermediate, Sommelet-Hauser and Favorskii rearrangements.

Carbenes - Generation, stability, structure, reactions and stereochemistry of carbenes - Wolff rearrangement, Carbylamine reaction and its synthetic applications.

Nitrenes - Generation, stability, reaction of nitrenes - Mechanism of rearrangements through Nitrene intermediate – Schmidt rearrangement - Hoffmann rearrangement.

 $Arynes \hbox{ - Generation, Structure, Stability, reactions and trapping of arynes \hbox{ - Cine substitution.} \\$

Problems includes the basic concepts of reactive intermediates.

Unit IV Stereochemistry

Stereoisomerism - Introduction, classification, Principles of axial and planar chirality - Stereochemistry of allenes, spiranes and analogus- Atroisomerism in compounds other than biphenyl - optically activity and configurational nomenclature - Stereochemistry of Ansa Compound, Helicity - Topicity of ligands and faces – Homotopic, Enantiotopic, Diastereotopic - Nomenclature of stereoheterotopic ligands and faces - Mechanism of racemisation involving free radicals and carbonium ions - Conformations of cyclic systems - monosubstitued, disubstituted cyclohexanes [(1,2), (1,3), (1,4)], decalin, perhydrophenanthrene.

Problems related to Conformations.

Unit V Name Reactions

Reactions, Mechanism and Applications of Bouveault-Blanc reduction, Chichibabin reaction, Duff reaction, Etard reaction, Henery reaction, Nef reaction, Ritter reaction, Rosenmund reduction, Simmons-Smith reaction and Ullmann reaction.

Semester – I				
Core III Physical Chemistry - I				
Course Code: 21PCHC13 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

- > To achieve base knowledge about the concepts of physical chemistry.
- > To solve Schrodinger equations for a particle moving in different dimensions.
- > To demonstrate and prepare the polymer molecules by various methods.

Course Outcomes

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	Have a good foundation in understanding the physical and mathematical aspects of quantum mechanics.	1	Un
CO 2	Know the limitations of quantum chemistry and classical thermodynamics in the evaluation of macroscopic properties.	4	An
CO 3	Apply the approximation methods to different atoms and find the dissociation energy and bond order for various molecules by applying Huckel molecular orbital theory.	7	Ap
CO 4	Explain different types of methods of preparation of polymers.	6	Un
CO 5	Prepare the polymer molecule and determine the molecular weight of polymer.	6	Cr
CO 6	Predict the rate of collisional quenching.	6	Cr
CO 7	Deduce the experimental techniques involved in photochemical processes.	7	Ev
CO 8	Classify the molecules according to their moment of inertia.	1	An

Semester – I					
Core III	Core III Physical Chemistry - I				
Course Code: 21PCHC13 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

Unit I Quantum Chemistry – I

Postulates of quantum mechanics - Operators and their algebra - Linear operator, Hermitian operators - Eigen functions and Eigen values - Orthogonality and Normalization Theorems - Schrodinger Wave equation (Time dependent and Time independent) - Solution of Schrodinger equations - Particle in a box (1D and 3D) - Hydrogen atom - Rigid rotor and Simple Harmonic Oscillator - Quantum mechanical tunnelling.

Problems based on i) Eigen functions & Eigen values

- ii) Orthogonality & Normalization Theorems.
- iii) Calculation of energy for particle moving 1-D and 3-D boxes.

Unit II Quantum Chemistry – II

Pauli exclusion principle - Slater determinant - Approximation methods - Variation theorem - Application of variation method to helium atom - Perturbation theory (First order) - Application to helium atom - Hartree Fock - Self consistent field method (HF-SCF) to helium atom - Born-Oppenheimer approximations - MO and VB treatments of H₂ molecule - Huckel Molecular Orbital theory - Application to ethylene, butadiene and benzene.

Unit III Polymer Chemistry

Polymerization in homogeneous and heterogeneous phases - Kinetics and Mechanism of Free radical, Anionic and cationic polymerization - Molecular Weights - Methods of determination - Light scattering, Osmotic pressure and Viscosity methods - Glass transition temperature (T_g) - Factors affecting T_g - Conducting polymers - Factors affecting the conductivity of conducting polymers - Doping of Conducting polymers - Solitons, Polarons and Bipolarons.

Calculation of Molecular weight of the polymers.

Unit IV Photochemistry

Importance of photochemistry - Laws of photochemistry, Quantum yield and its determination - Physical properties of electronically excited molecules: excited state dipole moment, acidity constant and redox Potentials - Photophysical processes in electronically excited molecules: Jablonski diagram - Intersystem crossing, internal conversion, fluorescence, phosphorescence and other deactivation processes - Photosensitisation, Chemiluminescence and Bioluminescence - Kinetics of Collisional quenching: Stern-Volmer equation - Deviation from Stern-Volmer equation - Experimental Techniques in Photochemistry: Chemical Actinometers.

Unit V Rotational Spectroscopy

Electromagnetic radiation - Quantization of energy - Regions of spectra - Width of spectral lines - Collision broadening, Doppler broadening, Heisenberg uncertainty principle - Intensity of spectral lines - Diatomic molecules as rigid rotors - Rotational energy levels, intensity of spectral lines, selection rules - Effect of isotopic substitution - Diatomic molecules as non-rigid rotors - Rotational transitions - Rotational spectra of linear and symmetric top polyatomic molecules.

Semester – II					
Core IV	Core IV Inorganic Chemistry –II				
Course Code: 21PCHC21 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

- To discuss the stability and bonding in Co-ordination compounds.
- To know the basics of organometallic chemistry.
- To demonstrate the principle and applications of IR, Raman and Mossbauer spectroscopies.

Course outcome:

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	judge about the stability and factors affecting the stability of the coordination complexes.	1,2	Ev
CO 2	categorise the ligands into strong and weak by Irving William series and the spectrochemical series.	2,3	An
CO 3	discuss the various features of Valence bond, Crystal field and Molecular orbital theories.	1,7	An
CO 4	measure Crystal Field Stabilisation Energy (10Dq or Δ_0) of coordination complexes.	4	Ev
CO 5	synthesise and discuss reactivity of metal alkyls, carbenes, carbynes, carbides, alkenes, alkynes and arene complexes	2,3	Cr
CO 6	summarise the substitution, oxidative addition, reductive elimination, nucleophilic and electrophilic reactions of organometallic complexes.	2,3	Un
CO 7	predict about the number of active modes of vibrations in IR and Raman spectroscopy.	2,6	Un
CO 8	interpret the Mossbauer spectra of Iron and Tin complexes.	2,5	Ev

Semester – II					
Core IV Inorganic Chemistry – II					
Course Code: 21PCHC21 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

Unit I Stability of Co-ordination compounds

Coordination numbers and structures, Isomerism- Stability constants of complexes and their determination - Solubility method, Ion exchange method, Job's method and Bjerrum's method - Stabilisation of Unusual oxidation state - Irving William series and the spectrochemical series - Factors affecting stability constant: Charge, size & outer electron configuration of central metal ion; nature, Basicity & chelating ability of ligand atom; Size & number of chelate ring; Steric effect - Chelate and Macrocyclic effect.

Unit II Bonding in Co-ordination compounds

Valence bond theory - Crystal field theory for octahedral complexes ($[TiF_6]^{2-}$, $[Ti(H_2O)_6]^{3+}$, $[TiCN_6]^{3-}$), Crystal field theory for tetrahedral complexes ($[Zn(OH)_4]^{2-}$, $[CoCl_4]^{2-}$, $[CuCl_4]^{2-}$) and Crystal field theory for square planar complexes ($[NiCN_4]^{2-}$, $[XeF_4]^{2-}$) - Crystal Field Stabilisation Energy (CFSE) - Measurement of 10Dq or Δ_0 - Factors affecting magnitude of Δ_0 or 10Dq values - Consequences of crystal field splitting: ionic radii of transition metal ions, hydration energy, lattice energy - Unusual oxidation states and CFSEs - Jahn-Teller effect - Molecular orbital theory (sigma as well as pi bonding).

Unit III Organometallic chemistry I

Effective Atomic Number (EAN) - 16 and 18 electron rules - synthesis, structure and bonding in mono and polynuclear metal carbonyls, carbonylate ions, carbonyl hydride complexes - Isolobal fragments - Synthesis and reactivity of metal alkyls, carbenes, carbynes, carbides, alkenes, alkynes and arene complexes - Metallocenes and bonding in metallocenes.

Calculation of Effective Atomic Number.

Unit IV Organometallic chemistry II

Reactions of organometallic complexes - Substitution, oxidative addition, reductive elimination, nucleophilic and electrophilic displacement of coordinated ligands - Homogeneous Catalysis - Hydrogenation, Hydroformylation, Monsanto process, Wacker process, Alkene metathesis - Heterogeneous catalysis - Fischer-Tropsch process, Ziegler-Natta polymerization.

Unit V Spectroscopy I

IR and Raman Spectroscopy: Selection rules - Predicting number of active modes of vibrations - Applications of IR and Raman in the study of inorganic structures and coordination

compounds - Application of isotopic substitution, detection of intra and intermolecular hydrogen bonding.

Mossbauer Spectroscopy: Principle, conditions for Mossbauer spectroscopy - Isomer shift - Quadrupole interactions - Magnetic interactions - Interpretation of spectra of iron and tin compounds. Problems related to Mossbauer spectroscopy.

Semester – II				
Core V Organic Chemistry - II				
Course Code: 21PCHC22 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

- > To support and advance the worldwide community of chemistry scholars.
- > To enhance the basic and applied research framework in the Chemistry Department.
- > To understand the principle behind thermal and photochemical organic reactions.

Course Outcome:

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO1	organize the various methods of determination of reaction mechanism	6	Cr
CO2	comprehend the various factors that operate in organic reactions	3	An
CO 3	use relevant concepts and terminology in a correct fashion	8	Re
CO 4	understand the isolation and structural determination of alkaloids	5	Un
CO 5	determine structure and stereochemistry of Morphine and quercetin	6	Cr
CO 6	gain knowledge of photochemical organic reactions	5	Ap
CO 7	discuss the Photochemistry of $(n-\pi^*)$ transitions with particular reference to Norrish type I, Norrish II type reactions, Paterno - Buchi reactions & photochemistry of nitrites.	8	An
CO 8	understand the applicability of the spectroscopic techniques	4	Un

Semester – II				
Core V	Core V Organic Chemistry - II			
Course Code: 21PCHC22 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

Unit I Reactions and Methods of Determination of their Mechanism

Essential requirements of chemical reaction - Mechanistic Classification of reaction - Thermodynamic requirements and Kinetic requirements for the reaction, Microscopic reversibility - Methods of Determining Mechanism: Non-kinetic methods: Identification of products, characterisation of intermediates, isotopic labelling, Stereochemical effect, Kinetic methods: Kinetic study, Isotope effects - Transition state theory - Hammond Postulate- Hammett equation - Linear Free Energy Relationship - Taft equation. Problems related to Hammett equation and Taft equation.

Unit II Molecular Rearrangements with Migrating Aptitude

Migration of Carbon – Wagner-Meerwein rearrangement, Benzil-Benzilic acid rearrangement and Dienone-Phenol rearrangement.

Migration of heteroatoms - Migration to electron deficient nitrogen, Beckmann rearrangement, Curtius rearrangement and Lossen rearrangement.

Migration to electron deficient oxygen – Baeyer-Villiger oxidation, Hydroperoxide rearrangement and Dakin reaction.

Migration to electron rich carbon – Neber rearrangement and Tiffenev-Demjanov rearrangement.

Aromatic rearrangements – Fries rearrangement and Hofmann-Martius rearrangement

Unit III Alkaloids and Flavonoids

Alkaloids – Introduction - General methods of extraction - Classification - Degradation studies - HEM, Emde and Von-Braun - Structural elucidation of papaverine, morphine, quinine and cocaine.

Flavonoids – Introduction - Properties - Reactions - Isolation - General methods for the elucidation of structure of flavones - Isoflavone, flavonols and Quercetin. Structural relationship between Flavone, Isoflavone and Flavonol.

Unit IV Organic Photochemistry

Photochemistry basic principles - Photochemistry of carbonyl compounds - Norrish Type I and II cleavage reactions, Photocycloadditions – Paterno-Buchi reaction, Photorearrangements - Di- π -methane rearrangement, photo Fries rearrangement, Photoreduction of carbonyl compounds and aromatic hydrocarbons, Barton reaction, Photooxidation of alkenes an polyenes, Cis-Trans isomerisation of alkenes, Photochromism and Photoimaging.

Unit V UV - Visible and Infra - Red Spectroscopy

UV – Visible spectroscopy – Basic concepts, electronic energy levels, electronic transitions, selection rules, absorption laws and Instrumentation - Characteristic absorption of organic compounds, solvent

effect - Applications of Woodward – Fieser rules for calculating absorption maximum in conjugated diene, triene, polyenes, α and β unsaturated carbonyl compounds, UV spectroscopy to problems in organic chemistry.

Optical rotatory dispersion and circular dichroism – Circular Birefringence and Circular Dichorism, Opticalrotatory dispersion (ORD), Axial Haloketone rule and Octant rule, Applications of Octant rule.

IR spectroscopy – Basic theory and Instrumentation - Characteristics of IR absorption of different functional groups - Factors influencing vibrational frequencies - Applications of Infra-red spectroscopy.

Problems in spectroscopy.

Semester – II				
Core VI Physical Chemistry – II				
Course Code: 21PCHC23 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

- > To learn the concepts of Group Theory and to demonstrate the various types of symmetry elements present in the molecules.
- > To gain knowledge about the principles of surface chemistry and catalysis.
- > To understand the principle and applications of IR and Raman spectroscopies and by applying the different kinds of spectroscopy, give the structure of molecules.

Course Outcomes

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	assign the symmetry elements and so that the point group of the given molecule.	1	An
CO 2	construct the character table for various point groups.	7	Cr
CO 3	apply the principles of group theory in determining hybridization and symmetries of vibrational modes in linear and non-linear molecules.	5	Ap
CO 4	compare the different types of adsorption isotherm and Improve the surface area in catalysis.	4	Ev
CO 5	elaborate the theories and concepts of homogeneous and heterogeneous catalysed reactions.	4	Cr
CO 6	discuss in detail about partial molar properties.	1	Ap
CO 7	identify vibrational course structure and rotational fine structure of electronic band and differentiate the molecules whether they are IR active or Raman active.	1	Ap
CO 8	illustrate different types of electronic spectroscopy and draw the structures of various molecules.	4	Un

Semester – II				
Core VI Physical Chemistry – II				
Course Code: 21PCHC23 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

Unit I Group Theory- I

Symmetry elements and symmetry operations - Group postulates and types of group - Group multiplication table - Construction of multiplication table for C_{2v} , C_{3v} and C_{2h} - Point group - Schoenflies symbols - Matrix representations of symmetry operations - Reducible and irreducible representations - The Great Orthogonality theorem (GOT) - Properties of Reducible and irreducible representations - Construction of character tables for point groups (C_{2v} , C_{3v} and D_{2h}) by using the Great Orthogonality theorem.

Unit II Group Theory - II

Applications of Group theory - Standard reduction formula relating reducible and irreducible representations - Determination of Hybridisation of atomic orbitals in linear and non-linear molecules (AB₄ tetrahedral, AB₃ triangular planar, AB linear molecules) - Symmetries of vibrational modes in non-linear molecules (H₂O, NH₃ and BF₃) - Symmetries of vibrational modes in linear molecules (HCN, CO₂) - Symmetry selection rules for infrared and Raman spectra - Mutual exclusion principle.

Unit III Surface Chemistry & Catalysis

Surface phenomenon: Adsorption - Physisorption and chemisorption - Adsorption isotherms: Freundlich, Langmuir, Gibbs and BET adsorption isotherms - Measurement of surface area - Micelles and reverse micelles - Microemulsion - Solubilisation.

Catalysis: Homogeneous catalysis - Acid-base catalysis - Van't Hoff and Arrhenius complexes for Protropic and Protolytic mechanisms - Bronsted catalysis law - Hammett acidity function - Heterogeneous catalysis - Langmuir-Hinshelwood Mechanism - Langmuir-Rideal bimolecular mechanism - Enzyme catalysis: Michaelis-Menton Kinetics - Rate of enzyme catalyzed reaction - Factors influencing enzyme catalysis.

Unit IV Thermodynamics

Concepts of partial molar properties - Chemical Potential - Gibbs-Duhem equation - Gibbs-Duhem-Margulus equation - Partial Molar Volume and its significance - Determination of Partial Molar Volume - Method of Intercept and Apparent Molar Volume method - Concept of fugacity - Variation of fugacity with volume and pressure - Determination of fugacity by graphical method and compressibility factor method - Concept of Activity and activity coefficient - Determination of activity and activity coefficients for non-electrolytes from Gibbs-Duhem equation.

Unit V Vibrational and Raman Spectroscopy

Infrared spectroscopy - Polyatomic molecules - Fundamental vibrations and their symmetry - Overtone and combination frequencies - Concept of group frequencies - Fermi resonance and FT-IR.

Raman Spectroscopy - Rayleigh scattering - Raman Scattering - Classical and quantum theories of Raman effect - Rotational Raman spectra for linear and symmetric top molecules - Vibrational Raman spectra - Rotational fine structure - Polarization of light and the Raman effect - Technique and instrumentation - Laser Raman spectrometer - Structure determination from Raman and Infra-red spectroscopy.

Problems related to IR and Raman spectroscopy.

CO 9	discuss the applications of XPES and UVPES to inorganic spectra.	5,6	An

Semester – III				
Core VII Inorganic Chemistry - III				
Course Code: 21PCHC31 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

Unit I Solid state I

Types of close packing – hcp and ccp packing efficiency, radius ratios – Methods of Single crystal growth – Bridgeman, Czochralski, Verneuil, Epitaxial growth of thin layers – Chemical vapour transport – Hydrothermal method –Dislocations in solids – Point defects – Schottky and Frenkel defects – Line defects – Surface Defects – Dislocations – Grain Boundary and Stacking Fault – Crystal structures of common ionic compounds NaCl, Na₂O, Zinc blende, Wurtzite, Nickel arsenide, CsCl, Rutile, CdI₂, CdCl₂, and CaF₂, Perovskite, K₂NiF₄, Spinels.

Unit II Solid state II

Electronic structure of solids – Band theory, free electron theory – Insulators and semiconductors and its types. Electrical properties (Thomson effect, Peltier effect, Seeback effect, Hall effect) – Dielectric, Ferroelectric, Piezoelectric and Pyroelectric materials and their relationship and applications. Optical and electronic properties of semiconductors – Photovoltaic effect, Hall effect – p-n junction and n-p-n junction and their applications as Rectifiers and transistors – Solid electrolytes, superconductors, High-temperature superconductors, BCS theory, cooper electrons – Meissner effect and levitation.

Unit III Inorganic chains, rings and cages

Chains – Chain catenation – Heterocatenation – Isopoly and heteropoly anions – Silicate minerals –Classification – Aluminosilicates – Sulphur nitrides – Intercalation compounds.

Rings – Borazines, Phosphazenes, Phosphazene polymers– Homocyclic and heterocyclic inorganic ring systems.

Cages – Synthesis, properties and structure of boranes [styx notation], heteroboranes, metalloboranes and carboranes, metallocarboranes, silicones – Wade's rule.

Unit IV Inorganic clusters

Introduction to clusters – Carbonyl clusters, anionic and hydrido clusters, carbide clusters, sulphur metal clusters – Structure and Bonding of Metal clusters: Dinuclear: Cu(II) carboxylate, Chromium(II) acetate and $[M_2Cl_8]^4$ (M = Mo and Re) – Trinuclear: $[M_3(CO)_{12}]$ (M = Fe, Ru, Os) – Tetranuclear: $[M_4(CO)_{12}]$ (M = Co, Rh, Ir) – Hexanuclear clusters: $[Nb_6Cl_{12}]^{2+}$, $[Os_6(CO)_{18}]^{2-}$ and

[Mo₆Cl₈]Cl₄ - Capping rule -Clusters rotation with CO shells - Chevrel phases - Isolobal relationships between main group and transition metal fragments - Zintl ions.

Unit V Spectroscopy II

Electronic spectroscopy – Microstates, Term symbols, selection rules – Orgel and Tanabe-Sugano diagrams – Charge transfer spectra – Electronic spectra for 1st row transition metal complexes – Calculation of Dq, B for octahedral d² and d⁸ systems ([V(H₂O)₆]³⁺, Ni(II) complexes) – Nephelauxetic ratio – Electronic spectra of lanthanide and actinide.

Photo electron spectroscopy – UVPES - Principle, spin-orbit coupling – XPES – Principle, chemical shift in XPES – Koopman's theorem – Applications of XPES and UVPES to inorganic spectra – Auger electron spectroscopy.

SEMESTER – III					
Core VIII Organic Chemistry - III					
Course Code: 21PCHC32 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

- > To study pericyclic reactions and their types with mechanism.
- > To understand the stereochemistry of reactants, intermediates and products.
- > To study the multi-step synthesis of various natural products.
- > To learn the importance of steroids and terpenoids in natural products.

Course Outcomes

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	familiarize the various types of aromatic substitution reactions.	2	Re
CO 2	compare neighbouring group participation and Ambident nucleophiles in aromatic Electrophilic substitution.	4	Ev
CO 3	discuss the Conformational analysis of cyclic molecules and the factors governing the reactivity of axial and equatorial substituents in cyclohexanes.	5	An
CO 4	discuss optical rotatory dispersion and how it is used for the determination of structure of chiral molecules.	6	Ap
CO 5	study the synthesis and Elucidation of structure of steroids and terpenoids.	6	Re
CO 6	learn the conversion of cholesterol to progesterone, estrogen and testosterone.	8	Un
CO 7	acquire knowledge about the reagents specificity.	4	An
CO 8	know about the NMR spectroscopy.	6	Un
CO 9	distinguish spin-spin coupling and application to organic structure ¹³ C spectroscopy.	2	An

SEMESTER – III				
Core VIII Organic Chemistry - III				
Course Code: 21PCHC32 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

Unit I Aromatic Electrophilic and Nucleophilic Substitution Reaction

Aromatic Electrophilic substitution – Arenium ion mechanism – Selected reactions and Reactivity – Nitration – Nitrosation – Sulphonation – Halogenation – Friedel Craft's alkylations and arylations – Vilsmeir Haack reaction – Jacobsen reaction – Houben Hoesch reaction.

Aromatic Nucleophilic Substitution - S_N Ar mechanism -S $_N$ 1 (Aromatic) mechanism with evidences - Benzyne mechanism - Effect of substrate structure, leaving group, attacking nucleophile and solvent - Selected reactions - Von Richter and Smiles rearrangements.

Problems including the basic concepts of Aromatic Electrophilic and Nucleophilic Substitution Reaction.

Unit II Conformational Analysis

Conformation and reactivity of cyclic and acyclic compounds –Conformations of cyclohexanes – Ring inversion, monosubstituted cyclohexanes – Transition States and Intermediates, Conformational free energy, Determination of conformational energy, disubstituted cyclohexanes (1,2), (1,3) an (1,4) – Conformation of poylsubstituted cyclohexanes – Trimethylcyclohexanes, Tetramethylcyclohexanes and Menthols – Conformational analysis of fused bicyclic systems – Decalin and perhydrophenanthrene – Curtin-Hammett principle.

Unit III Steroids and Terpenoids

Steroids: Occurrence, nomenclature, basic skeleton, isolation, structure determination and synthesis of Bile acids, Cholesterol, Androsterone, Testosterone, Estrone, Progestrone, Non-Steroid Hormones.

Terpenoids: Classification, nomenclature, occurrence, isolation – General methods of structure determination – Isoprene rule – Structure determination, stereochemistry and synthesis of the following representative molecules: Zingiberene, Camphor, Apitic Acid, α - pinene and squalene.

Unit IV Reagents in Organic Reactions

Synthetic applications of the following – Crown Ethers, Diazomethane, 2,3-Dichloro-5,6-dicyano-1,4-benzoquinone(DDQ), N,N-Dicyclohexylcarbodiimide (DCC), Di-isobutyl aluminium hydride (DIBAL), 1,3-dithiane, Fenton's reagent, Gilman, Jones reagent, Lithium diisopropylamide (LDA), Osmium tetroxide, Pyridinium chlorochromate (PCC), Phase Transfer Catalysts (PTC), Wilkinson's catalyst, Ziegler-Natta catalyst.

Unit V Pericyclic Reactions

Atomic and molecular orbitals – Woodward-Hoffmann rules – The Mobius and Huckel concept, FMO and correlation diagrams – Electrocyclic reactions – con and dis rotatory motions for 4n and 4n+2 system (butadiene and 1,3,5-hexatriene) – Stereochemical course of electrocyclic reaction in terms of conservation of orbital symmetry – Cycloaddition – Suprafacial and antarafacial additions, [2+2] and [2+4] reactions (ethylene and butadiene) – Sigmatropic rearrangements with examples – C- and H-migration – [1,3], [3,3] & [1,5] shift – Claisen and Cope rearrangements.

Semester – III				
Core IX Physical Chemistry - III				
Course Code: 21PCHC33 Hrs/Week: 5 Hrs/Sem: 75 Credits: 4				

- > To achieve base knowledge about the concepts of physical chemistry.
- > To solve Debye-Huckel theories for electrolytes.
- > To demonstrate the Chemical information from spectroscopy.

Course Outcomes:

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO1	outline the behavior of electrolytes in solutions.	4	An
CO2	Predict the structure of the electrode surface and the applications of electrode process.	7	Cr
CO 3	investigate the corrosion and polarization studies	7	Ev
CO 4	analyse Onsager relations and Electro kinetic effect	1	An
CO 5	Justify electrochemical mechanisms of nervous system	6,7	Ev
CO 6	Categorise the principle and applications of NMR and EPR spectroscopy.	6,8	An
CO 7	differentiate the various types of electronic spectroscopy and draw the structures of various molecules.	4	An
CO 8	judge the structure of molecules by applying various spectroscopic techniques.	5	Ev

Semester – III				
Core IX Physical Chemistry - III				
Course Code: 21PCHC33 Hrs / Week: 5 Hrs / Sem: 75 Credits: 4				

Unit I Electrochemistry I

Debye-Huckel theory of inter-ionic attraction—Debye-Huckel Onsager equation and its validity—Debye-Falkenhagen and Wein effects — Activity coefficinets of electerolytes — Debye-Huckel limiting law — Debye-Huckel Bronsted equation — Quantitative and qualitative verification of Debye-Huckel limiting law — Electrode-electrolyte interface — Structure of electrified interface: Helmholtz-Perrin model and Gouy-Chapman Diffuse charge model of the double layer — Electrocapillary phenomenon — Lipmann equation.

Unit II Electrochemistry II

Kinetics of electrode reaction – Polarization and over potential – Butler-Volmer equation for one step and multistep electron transfer reactions – Tafel equation – Significance of I_c and transfer coefficient – Diffusion over potential - Polarizable and non- polarizable electrodes – Ilkovic equation – Derivation of Ilkovic equation from Fick's laws of diffusion – Corrosion – Pourbaix diagrams – Evan's diagram – Bioelectrochemistry – Electrochemical mechanisms of nervous system.

Unit III Irreversible Thermodynamic Processes

Phenomenological laws and Onsager reciprocal relations – Entropy production due to heat flow – Entropy production in chemical reactions – Entropy production and entropy flow in open system – Transformation properties of fluxes and forces – Principle of microscopic reversibility and Onsager reciprocal relations – Verification of Onsager relations – Electro kinetic effect – Thermomolecular pressure difference and Thermomechanical effect. Applications of irreversible thermodynamics to biological and non-linear thermodynamics of Irreversible processes.

Unit IV Nuclear Magnetic Resonance Spectroscopy

Nuclear Magnetic Resonance Spectroscopy – Theory of PMR spectra – Chemical shift – Factors affecting chemical shift – Solvents used in NMR – Solvent shift – Hydrogen bonding – Relaxation times and spin-spin interactions - Theory of Spin-spin splitting – Magnitude of coupling – Coupling constant, J – Factors influencing coupling constant – Calculation of coupling constants – First-order spectra of complex systems – NMR of simple AX and AMX type molecules – Double resonance technique.

Unit V Electronic Spectroscopy and Photoelectron spectroscopy

Electronic spectroscopy – Electronic spectrum of diatomic molecules – Born-Oppenheimer approximation – Sequences and progressions – The Frank-Condon principle – Dissociation energy and dissociation products – The fortrat diagram – Predissociation.

Photoelectron spectroscopy – Principle – XPES, UVPES and Chemical information from photoelectron spectroscopy – Applications of ESCA.

Semester – IV				
Core X Inorganic Chemistry - IV				
Course Code: 21PCHC41 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

- > To explain the various photophysical and photochemical processes involved in inorganic compounds.
- > To understand the chemistry involved in energy sources of life and functions of enzymes.
- > To discuss the theory of various types of nuclear reactions.
- > To study in detail NMR, NQR and ESR spectroscopies.

Course Outcome:

CON	Upon completion of this course, students will be	PSOs	CI.
CO No.	able to	addressed	CL
CO 1	demonstrate about the energy sources of life using photosynthetic and non-photosynthetic processes	4,5	Ap
CO 2	illustrate the inhibition and poisoning of xanthane oxidase and aldehyde oxidase.	5	Ap
CO 3	explain about the iron transport and storage proteins.	3	Un
CO 4	describe about tracer technique and counter technique in nuclear chemistry.	5,6	An
CO 5	justify substitution reactions in octahedral and square planar complexes	2,6	Ev
CO 6	sketch the electron transfer mechanism for inner and outer sphere complexes.	2	Ap
CO 7	catagorise the principle and applications of NMR, NQR and EPR spectroscopy.	6,8	An
CO 8	demonstrate the structural information from NMR and EPR spectra.	2,3	Ap

Semester – IV				
Core X Inorganic Chemistry - IV				
Course Code: 21PCHC41				

Unit I Bioinorganic chemistry I

Energy sources of life – Non-photosynthetic process – Metalloporphyrins – Cytochromes A,B,C – Dioxygen binding – Interaction between Heme and Dioxygen , Binding of Dioxygen – Myoglobin – Structure and Functions of Hemoglobin – Electron transfer : Rubidoxins and Ferridoxins – Respiration: Blue copper proteins – Photosynthesis: PS-I, PS-II– Photosynthesis with mechanism of Chlorophyll.

Unit II Bioinorganic chemistry II

Enzymes – Zinc enzymes: Carboxypeptidase A, Carbonic anhydrase, Inhibition and poisoning of enzymes illustrated by Xanthane oxidase, aldehyde oxidase, Copper enzyme: Superoxide dismutase, Toxicity of Metals and the role of Metallothionines – Nitrogen fixation – *Invitro* and *Invivo* conditions. Iron storage and transport proteins: Transferrin, Hemosiderin, Ferritin and Siderophores.

Unit III Nuclear Chemistry

Nuclear Reactions – Types, Q value, Cross Section of reactions – Direct nuclear reaction – transmutation reactions: Stripping and pickup – high energy reactions: neutron evaporation and spallation –Theory of nuclear fission – Nuclear Fusion and stellar energy – The Pinch effect – Generation of electricity from nuclear fusion – Nuclear waste disposal – Artificial Disintegration and its methods – Devices used for radioactive measurements i) Countering Techniques such as G.M Ionization and Proportional counters ii) Tracer techniques (Neutron activation analysis).

Unit IV Reaction mechanismin Coordination Complexes

Labile and inert complexes – Thermodynamic and kinetic stability of complexes – mechanism of substitution reactions of metal complexes – D, Id, A and Ia mechanisms – Substitution reactions in octahedral and square planar complexes, acid-catalyzed reactions, base-catalyzed reactions – Trans effect and its influence, water exchange, anation, isomerization reactions. Redox reactions: Inner and outer sphere electron transfer mechanism – Template reactions.

Unit V Spectroscopy III

NMR –Principle, 31 P, 19 F and 15 N NMR - Applications of spin-spin coupling to structure determination: P₄S₃, BrF₅, Pentacyanohydridorhodate(III) ion, SF₄, TiF₄, H₃PO₃, H₃PO₂ – Comparison between 1 H and 15 N- NMR of 15 NH₃ – Comparison between 1 H, 31 P and 19 F- NMR of H₂PF₃ and HPF₂ –Double resonance – NMR of fluxional molecules such as PF₅, $(\mathring{\eta}^{1}$ -C₅H₅)₂ ($\mathring{\eta}^{5}$ -C₅H₅)₂Ti, $(\mathring{\eta}^{5}$ -C₅H₅)₂Fe₂(CO)₄ and PCl₂F₃.

EPR – Principle–Fine structure– Interaction between nuclear spin and electron spin (hyperfine coupling) – Hyperfine splitting of systems withI=1/2, 1 &3/2– Zero field splitting &Kramer's degeneracy – EPR spectrum deduction for [Co(H₂O)²⁺], [Cr(H₂O)²⁺] [(NH₃)₅Co-O-O-Co(CN)₅]⁵⁺, [(NH₃)₅Co-O-O-Co(NH₃)₅]⁵⁺ – Covalency of M-L bonding in bis(salicylaldimine)copper(II) complex by EPR study – Jahn-Teller distortion in Cu(II) complexes.

SEMESTER – IV				
Core XI Organic Chemistry - IV				
Course Code: 21PCHC42 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

- > To understand the stereochemistry of reactants, intermediates and products.
- > To understand the stereo-chemical aspects and its applications in organic synthesis.
- > To learn the advanced spectroscopic techniques for analysis of organic compound.

Course Outcomes

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	to describe various reactions involved in addition to C=C bonds	2	Ap
CO 2	to demonstrate/apply the concepts involved in elimination reaction	2	Ap
CO 3	study about the outline of retrosynthetic analysis with some examples	7	An
CO 4	appraise the different retrosynthetic compounds	5	Ev
CO 5	to learn the concept of cycloaddition, electrocyclic and sigmatropic reaction mechanism	6	Cr
CO 6	explain the nomenclature, reactivity and spectral properties of heterocyclic compounds	3	Un
CO 7	demonstrate the synthesis and reactivity of heterocyclic compounds	2	Ap
CO 8	outline salient features of fragmentation pattern of organic compounds	8	Ev

SEMESTER – IV				
Core XI Organic Chemistry - IV				
Course Code: 21PCHC42 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

Unit I Addition and Elimination Reaction

Addition reaction –Addition to C=C bonds – Electrophilic, nucleophilic and free-radical additions - Additions to conjugated systems – Carbene addition to double bonds – Hydration of olefins.Reactions – Birch reduction – Hydroboration – Michael reaction – Diels-Alder reactions - Mannich reaction – Meerwein-Pondorf reduction – Reformatsky, Claisen, Stobbe, Darsen, Wittig, Thorpe and Benzoin condensations.

Elimination reactions – E1, E2 and E1CB mechanisms – Orientations – Hofmann and Saytzeff rules – Mechanism and orientation in pyrolytic elimination –Chugaev reaction – Cope elimination – Dehydration of alcohols – Dehydrohalogenation – Elimination versus substitution.

Unit II Retrosynthetic Analysis

Synthon – Synthetic equivalent – Functional group interconversions – Use of protecting groups for alcohols, amines, acids, carbonyl compounds – Use of activating and blocking groups – Robinson annulation reaction – Carbon skeletal complexity – Role of key intermediates in organic synthesis –Reterosynthetic analysis of the following compounds – Twistane, cis-Jasmone, Baclofan, Brufen, Trihexylphenydyl, Bisabolene, α -onocerin, isonootkatone, cascarillic acid, camphor.

Unit III Heterocycles and Nucleic acids

Heterocycles: Nomenclature, reactivity, aromaticity, spectral properties— Synthesis and electrophilic and nucleophilic substitution reactions of Indole, Oxazole, Thiazole, Pyrimidine, Pyrazine—Fused ring heterocycles.

Nucleic acids: Nucleic acids and nucleotides – Structure of nucleic acids – Base pairing in DNA – The Watson-Crick model– Nucleic acid and heredity – Replication of DNA– Structure and synthesis of RNA – Transcription– RNA and protein biosynthesis – Translation – DNA sequencing – DNA synthesis.

Unit IV NMR and C¹³ Spectroscopy

PMR spectroscopy – Basic principle – Number of signals – Chemical shift Chemical shift parameters and Internal Standards – Factors influencing chemical shift – Spin–spin coupling in AX, ABX, AMX type molecules – Coupling Constant – Geminal, vicinal and long range coupling – Nuclear Overhauser Effect (NOE) – FT-NMR – C¹³ NMR – 2D NMR – 2D-pulse sequences COSY – NOESY – INEPT and DEPT.

Unit V Mass Spectroscopy

Mass spectrometry – Basic principles–Instrumentation–Techniques of Ion production – EI, CI, FD, FAB, ESI-MS, MALDI-MS–Base peak – Molecular ion and parent ion–Metastable ion – Isotope ion – Daughter ion –Factors affecting fragmentation and governing reaction pathway– Factors governing reaction pathway–Nitrogen rule –Fragmentation pattern of various classes of organic compounds – Hydrocarbons, alcohols, amines, aldehyde, ketone, ether, ester, acids, phenols, amides – Mc-Lafferty rearrangement.

Combined Spectroscopy problems for UV, IR, NMR, C¹³ and Mass Spectroscopy

Semester – IV			
Core XII Physical Chemistry - IV			
Course Code: 21PCHC43 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4			

- > To understand the theories and applications of chemical kinetics.
- > To elucidate the structure of chemical compounds by electron spin resonance spectroscopy.
- > To gain knowledge about the principles of radiation chemistry and phase equilibrium.

Course Outcomes:

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	detect the use of chemical kinetics in understanding the reaction mechanisms.	2	Ev
CO 2	apply the theories and concepts of chemical kinetics for homogeneous and heterogeneous catalysed reactions.	4	Ap
CO 3	sketch the phase diagram for one, two and three component systems	5	An
CO 4	apply the concepts of statistical thermodynamics for the study of equilibrium reactions and reaction rates.	4	Ap
CO 5	formulate dosimetry and dosimeters in radiation chemistry	6	Cr
CO 6	interpret electron spin resonance and Mössbauer spectroscopies.	3	Ev
CO 7	examine the spin labeling studies of biomolecules using ESR spectroscopy.	7	An
CO 8	judge the structure of molecules by applying various spectroscopic techniques.	5	Ev

Semester – IV			
Core XII Physical Chemistry - IV			
Course Code: 21PCHC43 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4			

Unit I Chemical Kinetics

Theories of reaction rates – Arrhenius theory – Hard-sphere collision theory of gas phase reactions – Potential energy surfaces – Activated complex theory for ideal gas reactions (formation in terms of partition functions) – Relation between activated complex theory and hard sphere collision theory – Thermodynamic formulation – Activated complex theory (Enthalpies and entropies of activation) – Unimolecular reactions – Lindemann, Hinshelwood, RRK, RRKM and Slater theories – Kinetic isotopic effect.

Unit II Chemical and Phase Equlibria

Chemical equilibrium – Definition, Nature and characteristics – Law of mass action – De Donder's treatment of chemical equilibria – Thermodynamic relations for chemical affinity – Homogeneous equilibria – Heterogeneous equilibria – Linear free energy relationship (Hammett equation).

Phase rule – Conditions for equilibrium between phases – Gibbs phase rule – Derivation – One component system – Liquid Helium system – Two component system – Sodium sulphate-Water system–Three component system – Acetic acid-Chloroform-Water system.

Unit III Statistical Thermodynamics

Aim of statistical thermodynamics – Ensembles (Canonical, microcanonical and grand canonical ensembles) – Microstates and macrostates – Stirling's approximation – Maxwell-Boltzmann distribution law –Types of statistics – Maxwell-Boltzmann statistics, Bose-Einstein statistics and Fermi-Dirac statistics – Comparison of B.E. and F.D. statistics with Boltzmann statistics –Partition function – Molecular, Translational, Rotational, Vibrational, Electronic and Nuclear partition functions – Thermodynamic properties E, H, S, A, G, Cv and Cp in terms of partition function – Thermodynamic properties of ideal monoatomic gas –Calculation of entropy of monatomic gases (Sackur-Tetrode equation) – Debye theory of heat capacity of solids – Statistical thermodynamics of Ortho and Para Hydrogen.

Unit IV Radiation Chemistry

Introduction – Differences between radiation chemistry and photochemistry – Sources of High energy radiation – Interaction with matter: Primary effects due to charged particles, Radiation Tracks Spurs and δ -rays – Interaction of γ -radiation with matter: Photoelectric effect, Compton Scattering and Pair Production – Units for measuring radiation absorption – Radiation Dosimetry – Units of radiation energy – Chemical Dosimetry – Radiolysis of water: Mean LET in water radiolysis, Ionic Products, Free radical products and Hydrated electrons – Applications of radiation chemistry.

Unit V EPR and Mossbauer Spectroscopy

Electron Spin Resonance Spectroscopy – Basic principles – Factors affecting "g" value –Hyperfine splitting –Deuterium, methyl, benzene, naphthalene, anthracene, o-, p- and m-xylene, p-benzosemiquinone radicals – McConnel equation: Calculation of electron density – Fine structure in ESR – Zero field shifting and Kramer's degeneracy – Double resonance – ELDOR and ENDOR.

Mössbauer spectroscopy – Theory and Principle of Mössbauer spectroscopy – Isomer shift – Quadrupole interactions – Magnetic hyperfine interaction – Doppler shift – Recoil energy – Chemical applications.

Semester – IV				
Project				
Course Code: 21PCHP41 Hrs / Week: 6 Hrs / Sem: 90 Credits: 6				

Format for preparation of project report

1. Identification of the problem

Students are given the freedom of choosing the topic of the project. It may be theoretical or practical.

2. Arrangement of contents

The sequence in which the project report material should be arranged and bound should be as follows:

- ➤ Cover page and Title page
- ➤ Bonafide Certificate
- **▶** Abstract
- > Table of contents
- ➤ List of Tables
- ➤ List of Figures
- List of Symbols, Abbreviations & Nomenclature
- > Chapters
- > Appendices
- > References

3. Page dimension and binding specifications

- ➤ The dimension of the project report should be in A4 size. The project report should be bound using flexible cover of the thick white art paper. The cover should be printed in black letters and the text for printing should be identical.
- > Total number of pages should not exceed 70.

4. Typing instructions

- The impression on the typed copies should be black in colour.
- ➤ One and a half spacing should be used for typing the general text. The general text shall be typed in the Font style "Times New Roman" & Font size 12.

Semester – I & II			
Core Practical I Inorganic Chemistry Practicals – I			
Course Code: 21PCHCR1	Hrs / Week: 4	Hrs / Sem : 60	Credits: 4

- 1. Microscale Qualitative analysis of inorganic mixture containing two familiar and two less familiar cations Pb, Cu, Bi, Cd, Zn, Co, Ni, Mn, Ca, Ba, Sr, W, Te, Se, Mo, Ce, Zr, V, Ti and Li.
- 2. Complexometric titrations Estimation of Cu, Zn, Cd, Ni and Mg by EDTA titration in presence of either Pb or Ba.

Course Work

Green synthesis of nanomaterials by using

- a) Ultra-sonicator
- b) Magnetic stirrer

Reference

- 1. Svehla. G. Vogel's Qualitative Inorganic Analysis. Pearson Education. 7th edition 2012.
- 2. Guozhong Cao. *Nanostructures & Nanomaterials: Synthesis, Properties & Applications*. Imperial College Press. 2004.

Semester – I & II			
Core Practical II Organic Chemistry Practicals - I			
Course Code: 21PCHCR2 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4			

1. Microscale Qualitative Analysis of an organic binary mixture

- i) Pilot separation
- ii) Bulk separation
- iii) Determination of melting and boiling points
- iv) Analysis of organic compounds
- v) Derivatization
- vi) Recrystallisation

2. Single stage preparation of Organic compounds

- 1. Preparation of Benzoic acid from benzyl Chloride.
- 2. Preparation of Resacetophenone from resorcinol.
- 3. Preparation of dibenzalacetone from benzaldehyde.
- 4. Preparation of 2, 4, 6-tribromoaniline from aniline.
- 5. Preparation of Tetrahyrocarbazole from cyclohexanone.
- 6. Preparation of Picric acid from phenol.
- 7. Preparation of phenol-formaldehyde resin from phenol and formaldehyde.
- 8. Preparation of di- β -naphthol from β -naphthol.

3. Course work

Isolation experiments of alkaloids

- 1. Isolation of lycopene from riped tomotoes.
- 2. Isolation of piperine from pepper.

- 1. Furniss B.S, Hannaford A.J, Smith P.W.G, Tatchell A.R. *Vogel's Textbook of Practical Organic Chemistry*. Pearson Education Ltd. V Edition 2008.

- 4. Bidhan Chandra Ray, Satyanarayan Das. *A textbook on Chemistry Practical*. London: New Central Book Agency Ltd. 2014.
- 5. Sananda Chatterjee. A Chemical Analyser's Guide: A Practical Approach to Chemist & Laboratory Guide. New Delhi: Dominant Publishers. 2014.

Semester – I & II				
Core Practical III Physical Chemistry Practicals - I				
Course Code: 21PCHCR3 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

I Conductometry

- 1. Determination of solubility product of a sparingly soluble silver salt.
- 2. Determination of dissociation constant of a weak acid.
- 3. Conductometric Titrations
 - i) Estimation of HCl and CH₃COOH in a mixture (vs NaOH)
 - ii) Estimation of HCl and NH₄Cl in a mixture (vs NaOH)
 - iii) Estimation of CH₃COOH and CH₃COONa in a mixture (vs NaOH)
- iv) Estimation of CH₃COOH and CH₃COONa in a mixture (vs HCl)

II Distribution

- i) Distribution of Benzoic acid between Toluene and Water.
- ii) Distribution of I₂ between benzene and water.

III Thermometry

Determination of solution enthalpy

- i) Oxalic acid Water
- ii) Ammonium oxalate Water
- iii) Naphthalene Toluene

Course Work

- i) Study of Kinetics of primary salt effect on K₂S₂O₈
- ii) Removal of dyes from effluent.

Semester – III & IV					
Core Practical IV In	Core Practical IV Inorganic Chemistry Practicals – II				
Course Code: 21PCHCR4 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4					

- 1. Preparation of inorganic complexes (a minimum of 6 complexes)
 - 1. cis potassiumdiaquadioxalatochromate(II) dihydrate
 - 2. trans potassiumdiaquadioxalatochromate(II) dihydrate
 - 3. tristhioureacopper(I)chloride dihydrate
 - 4. hexathiourealead(II)nitrate
 - 5. aquapentamminecobalt(III)chloride
 - 6. pentakisthioureadicopper(I) nitrate trihydrate
 - 7. Potassium triooxalatoferrate(III)nonahydrate
 - 8. pentaamminechlorocobalt(III) chloride
 - 9. tristhioureacopper(I)sulphate dihydrate
- 2. Quantitative estimation of a mixture containing two metal ions (Volumetric and Gravimetric estimations).
 - 1. Estimation of Cu²⁺ and Ni²⁺ ions.
 - 2. Estimation of Cu²⁺ and Zn²⁺ ions.
 - 3. Estimation of Fe^{2+} and Cu^{2+} ions.
 - 4. Estimation of Fe²⁺ and Ni²⁺ ions.
 - 5. Estimation of Ca²⁺ and Ba²⁺ ions.
 - 6. Estimation of Cu²⁺ (V), Ba²⁺ (G) and Zn²⁺ (G) ions in a mixture
 - 7. Estimation of Fe²⁺ (V), Cu²⁺ (G) and Ni²⁺ (G) ions in a mixture
- 3. Analysis of ores and alloys (Course work only).

Note: For examination, a mixture may be given from which one cation is to be estimated volumetrically and the other gravimetrically.

6th edition.

SEMESTER – III & IV			
Core Practical V Organic Chemistry Practicals - II			
Course Code: 21PCHCR5 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4			

1. Quantitative Analysis

- i) Estimation of ethyl methyl ketone
- ii) Estimation of glucose Lane Eynon method
- iii) Estimation of glucose Bertrand's method
- iv) Determination of saponification value of oil.
- v) Estimation of iodine value of oil.
- vi) Estimation of Acetone by Messinger's method.
- vii) Estimation of phenol
- viii) Estimation of aniline.
- ix) Analysis of purity of Glucose
- x) Determination of Percentage purity in an unsaturated acid.

2. Preparation of Organic compounds (Double stage)

- i) Preparation of p-bromoaniline from acetanilide
- ii) Preparation of m-nitrobenzoic acid from ethyl benzoate
- iii) Preparation of p-nitro aniline from acetanilide
- iv) Preparation of 1, 3, 5-tribromobenzene from aniline
- v) Preparation of benzpinacolone from benzophenone
- vi) Preparation of benzilic acid from Benzoin
- vi Preparation ofphthalimide from Phthalic acid

3. Course work

i) Estimation of Ascorbic acid

Semester – III & IV				
Core Practical VI Physi	Core Practical VI Physical Chemistry Practicals - II			
Course Code: 21PCHCR6 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4				

1. Potentiometry

- 1. Determination of solubility product of sparingly soluble salts.
- 2. Determination of dissociation constant of a weak acid.

2. Potentiometric titrations

Determination of pH of buffer Potentiometrically

a) Redox titrations

b) Precipitation titrations

i) Fe^{2+} Vs $Cr_2O_7^2$ -

i) Cl⁻ Vs AgNO₃

ii) Fe²⁺ Vs Ce²⁺

ii) I- Vs AgNO₃

iii) Fe²⁺ vs MnO₄-

iii) Mixture of Cl⁻ and I- Vs AgNO₃

iv) I- Vs MnO₄-

3. Adsorption

Adsorption of acetic acid / oxalic acid on activated charcoal – Verification of Freundlich isotherm – Determination of unknown concentration.

4. Conductivity method

Study of kinetics of ester hydrolysis and comparison of acid strength by conductivity method.

5. Spectroscopy

Verification of Beer-Lambert's law. Determination of [Mn²⁺] and [Cr³⁺] by using UV-Visible spectrophotometer.

Semester – III			
Elective III A. Research Methodology			
Course Code: 21PCHE31 Hrs / Week: 4 Hrs / Sem: 60 Credits: 4			

- > To provide resources to the students to stimulate basic research interest and other creative endeavours that promote entrepreneurial culture.
- > To explain about various thermal and electrochemical instrumentation techniques.
- > To learn about all the hyphenated techniques used for the separation of compounds.
- > To interpret the results of analysis with accuracy.

Course Outcome:

CO No.	Upon completion of this course, students will be able to	PSOs addressed	CL
CO 1	select the research topic and able to survey the literature.	3	Ev
CO 2	submit the project proposals to the funding agency.	8	Ap
CO 3	explain about the principle, instrumentation and applications of TGA, DTA and DSC.	3,6	Un
CO 4	compare principle, instrumentation and applications of potentiometry, coulometry and voltammetry.	5	An
CO 5	describe different types of Atomic spectroscopy.	1,5	Un
CO 6	interpret data using TEM, SEM, XRD and EDAX techniques.	5,7	Ev
CO 7	improve the accuracy of data in chemical analysis.	5	Ev
CO 8	defend teaching methods.	6,7	Ev

Semester – III			
Elective III A. Research Methodology			
Course Code: 21PCHE31	Hrs / Week: 4	Hrs / Sem : 60	Credits: 4

Unit I Research methodology

Introduction of research–Selection of a research topic – Surveying the literature– Sources– primary source and secondary source – Identification of research problem – Actual investigation and analysis of experimental results – Reporting the results in the form of communication, paper – Dissertation and thesis writing– Project proposals to funding agency – Impact factor, citations and hindex –Publication and Indexing: Scopus, Web of Science and Google scholar – Concepts of IPR and Plagiarism.

Unit II Thermo and electro analytical methods

Thermoanalytical Methods –Principle, instrumentation and applications of Thermogravimetry (TGA), Differential Thermal Analysis (DTA) and Differential Scanning Calorimetry (DSC).

Electroanalytical Techniques – Coulometry – Principle, Instrumentation and Applications. Voltammetry – Types (Stripping voltammetry, Cyclic voltammetry, Amperometry) – Principle, instrumentation and applications

Unit III Spectroscopic & Surface techniques

Principle, instrumentation and applications of Atomic Absorption Spectroscopy, Atomic Fluorescence Spectroscopy and Atomic Emission Spectroscopy.

Principle, instrumentation and applications of Energy dispersive spectroscopy (EDAX), Transmission electron microscopy (TEM), Scanning electron microscope (SEM) and Scanning Probe Microscopes.

Unit IV Data Analysis

Errors in chemical analysis – Classification of errors –Methods for determination of accuracy– Improving accuracy of analysis – Comparison between precision and accuracy – Significant figures – Mean, median, mode and standard deviation – Confidence interval – Propagation of measurement uncertainties – Comparison of results – "t" test, "f" test and "chi" square test – Rejection of results – Presentation of data – Correlation analysis and correlation coefficient – Linear regression – Related Problems.

Unit V Research and Teaching Methodology

Teaching – Objectives of Teaching - Phases of Teaching – Teaching methods: Lecture Method, Discussion Method, Discovery Learning, Inquiry, Problem Solving Method, Project method, Seminar – Integrating ICT in Teaching: Individualized Instruction, Ways for Effective Presentation with Power Point – Documentation – Evaluation: Formative, Summative & Continuous and comprehensive Evaluation – Later Adolescent – Psychology: Meaning, Physical, Cognitive, Emotional, Social and Moral Development – Teaching Later Adolescents.
