c) a single force d) parallel force
7. _____ is an example of couple
a) **winding a clock** b) closing the door c) both a & b d) either (a) or (b)
8. The total turning effect of the forces of the couple upon the body is called the _____
a) **moment of the couple** b) arm of the couple c) axis of the couple d) both b and c
9. The perpendicular distance between the two equal forces P of a couple is called _____
a). moment of the couple b) **arm of the couple** c) axis of the couple d) none
10. A couple is positive when the forces tend to produce rotation in the _____ direction.
a) clockwise direction b) **anti-clockwise direction** c) both a and b d) none
11. If three forces acting on a rigid body be represented by the sides triangle then they will be in _____
a) Triangle b) equal c) couple d) **equilibrium**
12. Magnitude direction and line of action are equivalent to a couple whose moment is _____ the area of the triangle.

- a) **Twice** b) thrice c) equal to d) one
13. Magnitude, direction, and line of action by the sides of a polygon, they are equivalent to a couple whose moment is _____ the area of the polygon.
a) Thrice b) **twice** c) equal to d) parallel to
14. The resultant of two forces is maximum whose angle between them is
a) 0° b) **90°** c) 180° d) 270°
15. The direction of moment of a force is positive in the _____ direction.
a) clockwise direction b) **anti-clockwise direction** c) both a and b d) none
16. The weight of a body acts _____ through its centre of gravity.
a) Parallel b) **vertically downwards** c) vertically upwards d) horizontally

Unit – II

17. If three forces acting on a rigid body are in equilibrium, they must be _____.
a) parallel b) **coplanar** c) perpendicular d) concurrent
18. _____ can never be in equilibrium
a) torque and couple b) **torque and force**
c) couple and moment d) torque and moment
19. When three forces are in equilibrium and are parallel then each is proportional to _____ between the other two
a) angle b) **distance** c) resultant d) perpendicular distance
20. The resultant of two equal forces _____ the angle between them
a) perpendicular b) **bisect** c) rotate d) none
21. Let a force P be represented by a straight line AB and O is any point. Then the moment of P about O is represented in magnitude by _____.
a) $2\Delta AOB$ b) P.OB c) P.OA d) P.AB
22. With usual notation of $R=0$ but $G \neq 0$, the system reduces to _____ only.
a) R b) F c) **G** d) W
23. A system of coplanar forces reduces to a _____.
a) a couple b) a force
c) **a force and a couple** d) a force or a couple
24. Any two couples of equal moment in the same place are
a) different b) equivalent c) **same** d) different or equivalent
25. If three coplanar forces acting on a rigid body keep it in equilibrium, they must be _____.
a) **concurrent or parallel** b) concurrent and parallel c) concurrent d) parallel
26. _____ can never be in equilibrium
a) couple b) force c) couple or force d) **couple and force**

Unit – III

27. If two bodies are in contact with one another the property of two bodies by means of which a force is exerted between them at their point of contact to prevent one body from sliding on the other is called
- a) **Friction** b) Statical Friction c) limiting Friction d) None
28. The coefficient of friction is equal to the tangent of _____
- a) cone of friction b) **angle of friction**
- c) coefficient of friction d) total friction
29. The friction exerted is just sufficient to maintain equilibrium and it's called
- a) **Statical Friction** b) Friction c) Dynamical Friction d) None
30. The Friction exerted attains its maximum value and is called
- a) Statical Friction b) Dynamical Friction c) **Limiting Friction** d) None
31. When motion ensues by one body sliding over another the friction exerted is called
- a) **Dynamical Friction** b) Limiting Friction c) statical Friction d) None
32. The coefficient of friction $\mu =$ _____
- a) **F/R** b) $F \cdot R$ c) $F + R$ d) $F - R$
33. The ratio of the limiting friction to the normal reaction is called _____
- a) cone of friction b) angle of friction
- c) **coefficient of friction** d) total friction
34. In the limiting case, the angle made by the resultant reaction with the normal is called _____
- a) cone of friction b) **angle of friction**
- c) coefficient of friction d) total friction
35. The best angle of traction up a rough inclined plane is the
- a) **Angle of friction** b) coefficient of friction
- c) limiting friction d) cone of friction
36. The angle of repose of a rough inclined plane is equal to the _____
- a) cone of friction b) **angle of friction**
- c) coefficient of friction d) total friction

Unit – IV

37. The property which causes solid body to recover its shape is called _____
- a) Force b) **Elasticity** c) Inelasticity d) velocity
38. The coefficient of elasticity $e = 0$ is called _____
- a) **inelastic** b) elastic c) perfect d) impact

39. If two equal perfectly elastic spheres impinge directly, they interchange their _____
 a) Accelerations **b) Velocities** c) Masses d) Forces
40. For an oblique impact when $e=1$, the loss of kinetic energy is _____
 a) 1 **b) 0** c) 2 d) 3
41. Due to direct impact of perfectly elastic bodies the loss of kinetic energy is _____
 a) $\frac{m_1 m_2 (u_1 - u_2)^2 (1 - e^2)}{2(m_1 + m_2)}$ b) $\frac{m_1 m_2 (u_1 - u_2)^2 (1 - e^2)}{2}$
 c) $\frac{(u_1 - u_2)^2 (1 - e^2)}{2(m_1 + m_2)}$ d) $\frac{m_1 m_2 (u_1 - u_2)^2 (1 - e^2)}{(m_1 + m_2)}$
42. A sphere 'A' impinges directly on an exactly equal and similar sphere B lying on a smooth horizontal plane. If the coefficient of restitution is e the velocity of B: velocity of A is given by _____
 a) $1 + e$; $1 - e$ b) $1 - e$; $1 + e$ c) $1 + e^2$; $1 - e^2$ d) $1 - e^2$; $1 + e^2$
43. Two bodies are said to impinge _____ when the direction of motion of each before impact is along the common normal at the point where they touch.
 a) **directly** b) obliquely c) smoothly d) indirect
44. When a smooth sphere impinges directly on a fixed plane with a velocity u , then rebounding velocity is
 a) u b) u/e c) $e^2 u$ **d) eu**
45. If e is the coefficient of restitution, which one of the following is correct?
 a) $e = 60.8$ b) 6.08 **c) 0.608** d) 608

Unit – V

46. The equation of S.H.M is
 a) $\frac{dy}{dx} = -\mu x$ b) $\frac{dy}{dx} = \mu x$ c) $\frac{d^2 y}{dx^2} = -\mu x$ **d) $\frac{d^2 x}{dt^2} = -\mu x$**
47. The length of the simple equivalent pendulum is _____
 a) $\frac{g}{\mu}$ b) $\frac{\mu}{g}$ c) $\frac{\mu^2}{g}$ d) $\frac{\sin \mu}{g}$
48. The period of second pendulum is
 a) 1 sec **b) 2 sec** c) 3 sec d) 1/2 sec
49. For a particular moving in a SHM, maximum acceleration is 2cm/sec^2 and amplitude 8cm, then maximum velocity is
 a) **4cm/sec** b) 2cm/sec c) 1cm/sec
 d) 1/4cm/sec
50. The period of oscillation of a simple pendulum of length l is
 a) $2\pi\sqrt{lg}$ **b) $2\pi\sqrt{l/g}$** c) $\sqrt{2\pi lg}$ d) $2\pi\frac{\sqrt{l}}{g}$
51. The displacement of SHM is
 a) $x = a \cos \mu t$ b) $x = -a \cos(\sqrt{\mu} t)$ **c) $x = a \cos \sqrt{\mu} t$**
 d) $x = a^2 \cos \mu t$
52. If $x = a \cos \omega t + b \sin \omega t$, the constant μ of the SHM is
 a) ω b) $-\omega$ c) ω^2 **d) $-\omega^2$**
53. In a S.H.M., if $\mu=4$ and amplitude = 5, then the maximum velocity is
 a) 20 b) 80 **c) 10** d) 100
54. The maximum velocity of a particle executing SHM is 1 m/sec and its period is 1/5 of the second. The amplitude is

- a) $1/10m$ b) $10\pi m$ c) $1/10\pi$ d) $\frac{1}{10}\pi m$
55. 10. In a SHM, the frequency of the oscillation is
- a) $\frac{\sqrt{\mu}}{2\pi}$ b) $\frac{2\pi}{\sqrt{\mu}}$ c) $\frac{\pi}{\sqrt{\mu}}$ d) 2μ

Section-B
(Two marks)

Unit I

1. Explain Geometrical representation of a moment.
2. Define Like and Unlike Parallel forces.
3. Explain briefly about the physical significance of the moment of a force.
4. Define Unit of a moment.
5. Give a brief note about Sign of the moment.
6. State couples in parallel planes theorem.
7. State Varignon's theorem of moments.
8. Define Couple.
9. Define arm of the couple.

Unit II

10. State three coplanar forces theorem.
11. State two trigonometrical theorems.
12. Give the Conditions of Equilibrium.
13. When will be three forces are said to be coplanar?

Unit III

14. State the necessary and sufficient conditions that a system of coplanar forces acting on a rigid body may be in equilibrium.
15. Forces 3, 2, 4, 5 kg.wt act respectively along the sides AB, BC, CD and DA of a square. Find the magnitude of the resultant R.
16. Explain Cone of Friction.
17. Explain types of Friction.
18. A particle of weight 30 kg resting on a rough horizontal plane is just on the point of motion when acted on by a horizontal forces of 6 kg weight and 8 kg weight at right angle to each other. Find the coefficient of friction between the particle and the plane and the direction in which the friction acts.
19. Define Statical friction.
20. Define Dynamical friction.
21. Define Limiting friction.
22. Define Law of Dynamical friction.

Unit IV

23. Define (i) force of restitution (ii) elasticity and (iii) inelastic body.
24. Explain Newton's Experimental law.
25. Explain Principle of conservation of momentum.
26. Hailstones are observed to strike the surface of a frozen lake in a direction making an angle of 30° with the vertical and rebound at an angle of 60° . Find the coefficient of restitution.
27. An elastic ball of mass m falls from a height h on a fixed horizontal plane and rebounds. Show that the loss of kinetic energy by the impact is $mgh(1-e^2)$.
28. A ball is projected with a velocity of $24\sqrt{3}$ ft per sec at an elevation of 45° . It strikes a wall at a distance of 18 ft. and return to the point of projection. Show that $e = \frac{1}{2}$.
29. A ball falls vertically for 2 seconds and hits a plane inclined at 30° to the horizon. If the coefficient of restitution be $\frac{3}{4}$, show that the time that elapses before it again hits the plane is 3 seconds.
30. A particle impinges on a rough fixed plane whose coefficient of friction is $\frac{1}{\sqrt{3}}$, in a direction making an angle of 60° with the normal to the plane. If the coefficient of restitution be $\frac{1}{2}$ show that the angle of reflection of the particle is the same as its angle of incidence and that it loses half of its velocity.
31. A smooth sphere impinges on another one at rest. After collision their direction of motion are right angles. Show that if they are assumed perfectly elastic their masses must be equal.
32. A ball impinges directly on a second ball of twice its mass which is moving in the same direction as the first but with one seventh of its velocity. Given that coefficient of restitution is $\frac{3}{4}$, show that the first ball will come to rest after the impact.

Unit V

33. Define SHM in a straight line and give some examples.
34. Define (i) period (ii) frequency and (iii) amplitude of SHM.
35. Define phase and epoch of SHM.
36. A mass of 1 gram vibrates through a millimetre on each side of the midpoint of its path 256 times per sec; if the motion be SHM, find the maximum velocity.
37. A body moving with SHM has an amplitude 'a' and period T. Show that the velocity v at a distance x from the mean position is given by $v^2 T^2 = 4\pi^2 (a^2 - x^2)$.
38. If a body of mass m executing SHM makes n complete oscillations per sec, show that the difference of its kinetic energy when at the centre and when at a distance x from the centre is given by $2m\pi^2 n^2 x^2$.
39. A particle moving with SHM has amplitude 8 cm and maximum acceleration is 2 cm per sec sq. Find the velocity when it is 3 cm from the extreme position.
40. Define equivalent simple pendulum and show that its length is equal to $\frac{g}{\mu}$ where μ is a positive constant.
41. Find the length of a simple pendulum which oscillates 56 times in 55 seconds.

42. A pendulum whose length is l makes m oscillations in 24 hours. When its length is slightly altered, it makes $m + n$ oscillations in 24 hours. Show that the diminution of the length is $\frac{2n}{m}$.

Section-C

(5 marks)

Unit – I

1. State and prove the Lami's theorem.
2. State and Prove the conditions of equilibrium of three coplanar parallel forces.
3. Explain the centre of two parallel forces
4. Two men, one stronger than the other, have to remove a block of stone weighing 300kgs. With a light pole whose length is 6 metre. The weaker man cannot carry more than 100 kgs. Where must the stone be fastened to the pole, so as just to allow him his full share of weight?
5. Three like parallel forces, acting at the vertices of a triangle, have magnitudes proportional to the opposite sides. Show that their resultant passes through the centre of the triangle.
6. If the magnitude of two unlike parallel forces P , Q , ($P > Q$) be increased by the same amount, show that the line of action of the resultant will move further off from P .
7. The position of the resultant of two like parallel forces P and Q is unaltered, when the position of P and Q are interchanged. Show that P and Q are of equal magnitude.
8. P and Q are like parallel forces. If Q is moved parallel to itself through a distance x , prove that the resultant of P and Q moves through a distance $\frac{Qx}{P+Q}$.
9. Two unlike parallel forces P , Q , ($P > Q$) acting on a rigid body at A and B respectively be interchanged in position, show that the point of application of the resultant in AB will be displaced along AB through a distance $\frac{P+Q}{P-Q} AB$.
10. Write about Geometrical Representation of a moment and unit of moment.
11. State and explain generalized theorem of moments?
12. Two men carry a load of 224kg wt, which hangs from a light pole of length 8m each end of which rests on a shoulder of one of the men. The point from which the load is hung is 2m nearer to one man than other. What is the pressure on each shoulder?
13. Explain moment of force about an axis.
14. At what height from the base of a pillar must the end of a rope of a given length be fixed so that a man standing on the ground and pulling at its other end with a given force may have the greatest tendency to make the pillar overturn?
15. If l and m are the moment of a given force P about two fixed points A and B respectively, show that the line of action of P divides AB in the ratio $l:m$. Deduce that a force is completely known when the moment of the force about any three points, not lying in the same straight line, are known.
16. Prove that the resultant of any number of couples in the same plane on a rigid body is a single couple whose moment is equal to the algebraic sum of the moments of the several couples.
17. Explain Resultant of a couple and a force.

18. Prove a force acting at any point A of a body is equivalent to an equal and parallel force acting at any other arbitrary point B of the body together with a couple.
19. Prove if three forces acting on a rigid body be represented in magnitude, direction and line of action by the sides of a triangle taken in order, they are equivalent to couple whose moment is twice the area of the triangle.
20. ABC is an equilateral triangle of side a D.E.F divide the sides BC, CA, AB respectively in the ratio 2:1. Three forces each equal to P act at D, E, F perpendicularly to the sides and outward from the triangle. Prove that they are equivalent to a couple of moment $\frac{1}{2} Pa$.
21. ABC is an equilateral triangle of side a D.E.F divide the sides BC, CA, AB respectively in the ratio n:1. Three forces each equal to P act at D, E, F perpendicularly to the sides and outward from the triangle. Prove that they are equivalent to a couple of moment $\frac{3(n-1)}{2(n+1)} Pa$.

Unit – II

22. Prove that if three coplanar forces acting on a rigid body keep it in equilibrium then they must be either parallel or concurrent.
23. A beam of weight W hinged at one end is supported at the other end by a string so that the beam and the string are in a vertical plane and make the same angle θ with the horizon. Show that the reaction at the hinge is $\frac{W}{4} \sqrt{(8 + \operatorname{cosec}^2 \theta)}$.
24. A solid cone of height h and semi vertical angle α is placed with its base flatly resting against a smooth vertical wall and is supported by a string attached to its vertex and to a point in the wall. Show that the greatest possible length of the string is $h \sqrt{1 + \frac{16}{9} \tan^2 \alpha}$.
25. A heavy uniform sphere rests touching two smooth inclined planes one of which is inclined at 60° to the horizontal. If the pressure on this plane is one half of the weight of the sphere, prove that the inclination of the other plane to the horizontal is 30° .
26. A heavy uniform beam rests with its extremities on two smooth inclined planes which meet in a horizontal line and whose inclinations to the horizontal are α and β ; find the inclination of the beam to the horizontal and reactions of the planes.
27. A Sphere of given weight rests on two smooth planes inclined to the horizon at given angles; determine the pressures on the planes.
28. Show that a system of coplanar forces reduces to a single force and a couple unless they are in equilibrium.
29. The altitude of a right cone is h and the radius of its base is a. A string is fastened to the vertex and to a point on the circumference of the circular base and is then put over a smooth peg. The cone rests with its axis horizontal. Show that the length of the string is $\sqrt{h^2 + 4a^2}$.
30. A uniform solid hemisphere of weight W rests with its curved surface on a smooth horizontal plane. A weight w is suspended from a point on the rim of the hemisphere. If the plane base of the rim is inclined to the horizontal at angle θ . Prove that $\tan \theta = \frac{8w}{3W}$.

Unit – III

31. Define the friction. State the laws of friction.
32. Explain about angle of friction.

33. Explain Cone of friction.
34. Prove that the angle of repose of a rough inclined plane is equal to the angle of friction.
35. A particle of weight 30 kgs. Resting on a rough horizontal plane is just on the point of motion when acted on by horizontal forces of 6kg. wt and 8kg. wt. at right angles to each other. Find the coefficient of friction the particle and plane and the direction and which the friction acts.
36. A particle is placed on a rough plane whose inclination to a horizon is α and is acted upon by force P acting parallel to the plane and in a direction making an angle β with the line of greatest slope in the plane. If the coefficient of friction be μ and the equilibrium be limiting, find the direction in which the body will begin to move.
37. A uniform ladder is in equilibrium with one end resting on the ground and the other against a vertical wall; if the ground and wall be both rough, the coefficients of friction being μ and μ' respectively, and if the ladder be on the point of slipping at both ends, show that θ , the inclination of the ladder to the horizon is given by $\tan\theta = \frac{1 - \mu\mu'}{2\mu}$.
38. A uniform ladder rests in limiting equilibrium with its lower end on a rough horizontal plane and its upper end against an equally rough vertical wall. If θ be the inclination of the ladder to the vertical, prove that $\tan\theta = \frac{2\mu}{1 - \mu^2}$.
39. A uniform ladder rests with its lower end on a rough horizontal ground and its upper end against a rough vertical wall, the ground and wall being equally and the angle of friction being λ . Show that the greatest inclination of the ladder to the vertical is 2λ .
40. A particle is placed on the outside of a rough sphere whose coefficient of friction is μ . Show that it will be on the point of motion when the radius from it to the centre makes an angle $\tan^{-1}\mu$ with the vertical.
41. A uniform sphere is held in equilibrium on a rough inclined plane of angle α by a force of magnitude $\frac{W}{2} \sin\alpha$ applied tangentially to its circumference, where W is the weight of the sphere. Prove that the force must act parallel to the plane and that the coefficient of friction must be not less than $\frac{1}{2} \tan\alpha$.
42. A sphere whose radius is a and whose centre of gravity is at a distance c from the centre, rests in limiting equilibrium on a rough inclined plane at an angle α to the horizon. Show that it may be turned through an angle $2 \cos^{-1}\left(\frac{a \sin\alpha}{c}\right)$ and still be in limiting equilibrium.

Unit – IV

43. Explain Fundamental laws of impact
44. A ball overtakes another ball of m times its mass, which is moving with $\frac{1}{n}$ th of its velocity in the same direction. If the impact reduces the first ball to rest, prove that the coefficient of elasticity is $\frac{m+n}{m(n-1)}$ Deduce that $m > \frac{n}{n-2}$
45. A smooth sphere, or particle whose mass is m and whose coefficient of restitution is e , impinges obliquely on a smooth fixed plane; Find its velocity and direction, or particle

- whose mass is m and whose coefficient of restitution is e , impinges obliquely on a smooth fixed plane; Find its velocity and direction of motion after impact.
46. An elastic sphere is projected from a given point O with given velocity V at an inclination α to the horizontal and after hitting a smooth vertical wall at a distance d from O returns to O . Prove that $d = \frac{v^2 \sin 2\alpha}{g} \frac{e}{1+e}$ where e is the coefficient of restitution.
47. Two spheres of given masses with given velocities impinge directly, show that there is a loss of kinetic energy and to find the amount.
48. A smooth sphere of mass m impinges obliquely on a smooth sphere of mass M which is at rest. Show that if $m = eM$, the directions of motion after impact are at right angles?
49. A ball is thrown from a point on a smooth horizontal ground with a speed V at an angle α to the horizon. If e be the coefficient of restitution, show that the total time for which the ball rebounds on the ground is $\frac{2V \sin \alpha}{g(1-e)}$ and the horizontal distance travelled by it is $\frac{V^2 \sin 2\alpha}{g(1-e)}$
50. A smooth sphere of mass m_1 impinges directly with velocity u_1 on another smooth sphere of mass m_2 , moving in the same direction with velocity u_2 ; if the coefficient of restitution is e , to find their velocities after the impact
51. Two equal marble balls A, B lie in a horizontal circular groove at the opposite ends of a diameter; A is projected along the groove and after time t , impinges on B ; show that a second impact takes place after a further interval $\frac{2t}{e}$
52. (i) Two balls impinge directly and interchange their velocities after impact. Prove that they are perfectly elastic and are of equal masses.
(ii) A ball ' A ' impinges directly on an exactly equal and similar ball B lying on a smooth horizontal plane. If the coefficient of restitution is e , Prove that after impact the velocity of B will be to that of A as $1+e:1-e$

Unit – V

53. A particle is moving with S.H.M. and while making an oscillation from one extreme position to the other, its distance from the centre of oscillation at 3 consecutive seconds are x_1, x_2, x_3 . Prove that the period of oscillation is $\frac{2\pi}{\cos^{-1}\left(\frac{x_1 + x_3}{2x_2}\right)}$
54. Derive the result for period of oscillation of a simple pendulum.
55. Define a SHM. Find the velocity and displacement of a particle moving in SHM.
56. A particle of mass m is oscillating in a straight line about a centre of force O , towards which when at a distance r , the force is $m \cdot n^2 r$ and ' a ' is the amplitude of the oscillation; when at a distance $a\sqrt{3}/2$ from O , the particle receives a blow in the direction of motion which generates a velocity na , If this velocity be away from O , show that the new amplitude is $a\sqrt{3}$
57. Derive the results for Composition of two simple Harmonic Motions of the same period and in the same straight line.

58. Write short note about Horizontal oscillations of a particle tied to an elastic spring.
59. Write short note about seconds pendulum
60. A clock with a seconds pendulum loses 40 seconds per day at a place where the acceleration due to gravity is 981 cm/sec^2 . Find what change in the length is necessary to make it accurate.
61. A balloon ascends with constant acceleration and reaches a height of 360 metres in one minute. Show that during the ascent, a pendulum clock which has a seconds pendulum and which is carried in the balloon, will gain at the rate of about 37 sec /hr.
62. A particle is suspended from a fixed point by a spiral spring of natural length a and modulus λ . If it is displaced slightly in the vertical direction, discuss the subsequent motion.

Section-D (10 marks)

Unit – I

1. Find the resultant of two like parallel forces acting on a rigid body.
2. Find the resultant of two unlike and unequal parallel forces acting on a rigid body.
3. State and prove Varignon's theorem of moments.
4. A uniform plank of length $2a$ and weight W is supported horizontally on two vertical props at a distance b apart. The greatest weight that can be placed at the two ends in succession without upsetting the plank are W_1 and W_2 respectively. Show that $\frac{W_1}{W + W_1} + \frac{W_2}{W + W_2} = \frac{b}{a}$
5. Forces P , Q , R act along the sides BC , AC , BA respectively of an equilateral triangle. If their resultant is a force parallel to BC through the centroid of the triangle, prove that $Q = R = \frac{1}{2}P$.
6. A round table of weight W stands on three legs of which the upper end are attached to its rim so as to form an equilateral triangle. Show that a body whose weight does not exceed W may be placed anywhere on the table without the risk of toppling it over.
7. A uniform circular plate is supported horizontally at three A , B , C of its circumference. Show that the pressures on the supports are in the ratio $\sin 2A : \sin 2B : \sin 2C$.
8. Prove that if two couples whose moments are equal and opposite act in the same plane upon a rigid body they balance one another.
9. Prove: If any number of forces acting on a rigid body be represented in magnitude, direction and line of action by the sides of a polygon taken in order, they are equivalent to a couple whose moment is twice the area of the polygon.
10. Forces P , $2P$, $-P$, $2P$ act along the sides AB , BC , CD , DA of the square $ABCD$ and a force reduce to a couple of moment $2aP$, where a is the side of the square.

Unit – II

11. A uniform rod of length a , hangs against a smooth vertical wall being supported by means of a string of length l , tied to one end of the rod, the other end of the string being attached to a point in the wall. Show that the rod can rest inclined to the wall at an angle θ given by $\cos^2 \theta = \frac{l^2 - a^2}{3a^2}$. What are the limits of the ratio of $a : l$ in order that equilibrium may be possible.

12. A uniform rod of length $2l$ rests with its lower end in contact with a smooth vertical wall. It is supported by a string of length a , one end of which is fastened to a point in the wall and the other end to a point in the rod at a distance b from its lower end. If the inclination of string to the vertical be θ , show that $\cos^2\theta = \frac{b^2(a^2 - b^2)}{a^2l(2b - l)}$.
13. One end of a uniform rod of weight W is attached to a hinge and other end is tied to a string which is fixed to a point on the same level as the hinge such that the rod and the string are inclined at the same angle α to the horizontal. Show that the tension of the string is given by $T = \frac{W}{4} \operatorname{cosec}\alpha$ and the reaction at the hinge is $\frac{W}{4} \sqrt{(8 + \operatorname{cosec}^2\alpha)}$.
14. (a) A heavy uniform rod of length $2a$ lies over a smooth peg with one end resting on a smooth vertical wall. If c is the distance of the peg from the wall and θ the inclination of the rod to the wall, show that $c = a \sin^3\theta$.
(b) A uniform rod of length $16a$ rests in equilibrium against a smooth vertical wall and upon a peg at a distance of ' a ' from the wall. Show that the inclination of the rod to the vertical is 30° .
15. A uniform beam of length l and weight W hangs from a fixed point by two strings of lengths a and b . Prove that the inclination of the rod to the horizon is $\sin^{-1} \frac{a^2 - b^2}{l\sqrt{2(a^2 + b^2) - l^2}}$.
16. Equal weights P and P are attached to two strings ACP and BCP passing over a smooth peg C . AB is a heavy beam of weight W , whose centre of gravity is ' a 'ft. from A and ' b 'ft from B . Show that AB is inclined to the horizon at an angle $\tan^{-1} \left[\frac{a-b}{a+b} \tan \left(\sin^{-1} \frac{W}{2P} \right) \right]$.
17. A square of side $2a$ is placed with its plane vertical between two smooth pegs which are in the same horizontal line at a distance c . Show that in the position of equilibrium, the inclination of one of its edges to the horizon is either 45° or $\frac{1}{2} \sin^{-1} \left(\frac{a^2 - c^2}{c^2} \right)$.
18. A uniform rectangular board rests vertically in equilibrium with side a and b on two smooth pegs in the same horizontal line at a distance c apart. Prove that the side of length a makes with vertical an angle θ given by $2c \cos 2\theta = b \cos \theta - a \sin \theta$.

Unit – III

19. Find the equilibrium of a body on a rough inclined plane under a force parallel to the plane.
20. Find the equilibrium of a body on a rough inclined plane under any force.
21. A weight can be supported on a rough inclined plane by a force P acting along the plane or by a force Q acting horizontally. Show that the weight is $\frac{PQ}{\sqrt{(Q^2 \sec^2 \lambda - P^2)}}$ where λ is the angle of friction.
22. Two particles P and Q each of weight W on equally rough inclined planes CA and CB of the same height, placed back to back are connected by a light string which passes over a smooth top edge C of the planes. Show that if the particles are on the

- point of the slipping, the differences of the inclinations of the panes is double the angle of friction.
23. A ladder 20 m long with its centre of gravity 8 m up from the bottom, weight 60 kgms. and rests at an angle of θ to the ground against a smooth vertical wall. The coefficient of friction between the ladder and the ground is $\frac{1}{2}$. Find the least value of θ which will enable a man weighing 140 kgms. To reach the top without the ladder slipping.
 24. A ladder of length $2l$ is in contact with a vertical wall and a horizontal floor, at each contact the angle of friction being λ . If the weight of the ladder acts at a point distant kl below the middle point, prove that $\cot\theta = \cot 2\lambda - k \operatorname{cosec} 2\lambda$ where θ is limiting inclination to the vertical.
 25. A uniform rod of weight W rests with its one end against a rough inclined plane AB of inclination α and the other end against a smooth vertical wall BD , B being at a higher level than A . If θ be the inclination of the rod to the vertical in the position of limiting equilibrium, prove that $\tan\theta = 2\tan(\lambda - \alpha)$ where λ is the angle of friction. Prove also that the reaction of the wall is $W \tan(\lambda - \alpha)$ and the resultant reaction with the ground is $W \sec(\lambda - \alpha)$.
 26. A straight uniform beam of length $2h$ rests in limiting equilibrium, in contact with a rough vertical wall of height h , with one end on a rough horizontal plane and with the other end projecting beyond the wall. If both the wall and the plane be equally rough, prove that λ , the angle of friction, is given by $\sin 2\lambda = \sin\alpha \sin 2\alpha$ where α is the inclination of the beam to the horizon. Show that if the beam can rest in the above manner at any inclination α to horizon which is geometrically possible, then the angle of friction must be less than $\frac{1}{2} \sin^{-1}\left(\frac{4}{3\sqrt{3}}\right)$.
 27. A glass rod is balanced, partly in and partly out of a cylindrical tumbler with its lower end resting against the vertical side of the tumbler. If α and β be the greatest and least angles which the rod can make with the vertical, show that the angle of friction λ is
$$\frac{1}{2} \tan^{-1} \frac{\sin^3 \alpha - \sin^3 \beta}{\sin^2 \alpha \cos \alpha + \sin^3 \beta \cos \beta}.$$
 28. A heavy uniform rod is placed over one and under the other of two horizontal pegs, so that the rod lies in a vertical plane; show that the length of the shortest rod which will rest in such a position is $a(1 + \tan\alpha \cot\lambda)$ where a is the distance between the pegs, α is the angle of inclination to the horizon of the line joining them and λ is the angle of friction.
 29. A uniform rod rests in limiting equilibrium within a rough hollow sphere. If the rod subtends an angle 2α at the centre of the sphere and if λ , the angle of friction show that the inclination of the rod to the horizontal is $\tan^{-1} \left[\frac{\sin 2\lambda}{\cos 2\alpha + \cos 2\lambda} \right]$
 30. A square lamina whose plane is vertical rests with the ends of a side against a rough vertical wall and a rough horizontal ground. If the coefficients of friction for the ground and the wall be μ and μ' respectively. Prove that, when the lamina is on the point of inclination of the side in question to the horizontal is $\tan^{-1} \left(\frac{1 - \mu\mu'}{1 + 2\mu + \mu\mu'} \right)$.
 31. A solid homogeneous hemisphere rests on a rough horizontal plane and against a smooth vertical wall. Show that if the coefficient of friction be greater than $\frac{3}{8}$, the

hemisphere can rest in any position and if it be less the least angle that the base of the hemisphere can make with the vertical is $\cos^{-1}\left(\frac{8\mu}{3}\right)$.

32. A uniform cylinder of height h is placed with its plane circular base of radius r on a rough inclined plane and the inclination of the plane to the horizon is gradually increased. Show that, the cylinder will (i) slide before it topples over if μ , the coefficient of friction is less than $\frac{2r}{h}$ (ii) topple if μ is greater than $\frac{2r}{h}$. What happens if $\mu = \frac{2r}{h}$?

Unit – IV

33. A particle falls from a height h upon a fixed horizontal plane : if e be the coefficient of restitution, show that the whole distance described before the particle has finished rebounding is $h\left(\frac{1+e^2}{1-e^2}\right)$ and Show also that the whole time taken is

$$\frac{1+e}{1-e} \sqrt{\frac{2h}{g}}$$

34. A ball of mass 8 gms. moving with velocity 4cms. Per sec impinges on a ball of mass of mass 4gms. moving with velocity 2cm. per sec. If their velocities before impact be inclined at angle 30° and 60° to the line joining their centres at the moment of impact, find their velocities after impact when $e = \frac{1}{2}$
35. A smooth circular table is surrounded by a smooth rim whose interior surface is vertical. Show that a ball projected along the table from a point A on the rim in a direction making an angle α with the radius through A will return to the point of projection after two impacts if $\tan \alpha = \frac{e^{3/2}}{\sqrt{1+e+e^2}}$. Prove that when the ball returns to the point of projection, its velocity is to its original velocity as $e(3/2):1$.
36. Two spheres of masses m_1 and m_2 moving with velocities u_1 and u_2 at angles α_1 and α_2 with their line of centres, come into collision. Find an expression for the loss of kinetic energy.
37. Two equal spheres A and B, of masses 2 gm. and 30 gm respectively lie on a smooth floor, so that their line of centres is perpendicular to a fixed vertical wall. A being nearer to the wall. A is projected towards B. Show that if coefficient of restitution between two spheres and that between the first sphere and the wall is $\frac{3}{5}$, then A will be reduced to rest after its second impact with B.
38. Two equal billiard balls are in contact on a smooth table and a third equal ball moving along their common tangent strikes them simultaneously. Prove that $\frac{3}{5}(1-e^2)$ of its kinetic energy is lost by the impact, e being the coefficient of restitution for each pair of balls
39. (i) A Particle impinges on a fixed rough plane whose coefficient of friction is μ ; find the change in the motion.
(ii) A particle impinges on a rough fixed plane whose coefficient of friction is $\frac{1}{\sqrt{3}}$, in a direction making an angle of 60° with the normal to the plane; if the coefficient of

friction be $\frac{1}{2}$, show that the angle of reflection of the particle is the same as its angle of incidence and that it loses half its velocity.

Unit – V

40. (i) If the displacement of a moving point at any time be given by an equation of the form $x = a \cos \omega t + b \sin \omega t$, show that the motion is a simple harmonic motion. If $a = 3$, $b = 4$, $\omega = 2$ determine the period, amplitude, maximum velocity and maximum acceleration of the motion
 (ii) Show that the energy of a system executing S.H.M is proportional to the square of the amplitude and of the frequency.
41. A particle is attached to the midpoint of an elastic string AB tightly stretched to tension T between two fixed points A and B. If the particle be pulled slightly in a direction perpendicular to AB, and let go, show that the period of vibration is $\pi \sqrt{\frac{ml}{T}}$ where m is the mass of the particle and l is the length of AB.
42. (i) Define simple harmonic motion and Find the velocity and displacement of a particle moving in SHM.
 (ii) Find the solution of the differential equation of a simple harmonic motion.
43. (i) In a S.H.M., if f be the acceleration and v the velocity at any time and T is the periodic time, prove that $f^2 T^2 + 4\pi^2 v^2$ is constant.
 (ii) A body moving with simple harmonic motion has an amplitude 'a' and period T. show that the velocity v at a distance x from the mean position is given by $V^2 T^2 = 4\pi^2 (a^2 - x^2)$.
44. If the distance x of a point moving on a straight line measured from a fixed origin o n it and its velocity v are connected by the relation $4V^2 = 25 - x^2$, show that the motion is simple harmonic. Find the period and amplitude of the motion.
45. Derive the results for Composition of two simple Harmonic Motions of the same period in two perpendicular directions.
46. Two bodies, of masses M and M', are attached to the lower end of an elastic string whose upper end is fixed and hang at rest; M' falls off. show that the distance of M from the upper end of the string at time t is $(a + b + c) \cos \sqrt{\frac{g}{b}} t$, where a is the unstretched length of the string, and b and c are the distances by which it would be stretched when supporting M and M' respectively.
47. One end of an elastic string, whose modulus of elasticity is λ and whose unstretched length is a, is fixed to a point on a smooth horizontal table and the other end is tied to a particle of mass m which is lying on the table. The particle is pulled to a distance where the extension of the string is b and then let go; show that the time of a complete oscillation is $2 \left(\pi + \frac{2a}{b} \right) \sqrt{\frac{am}{\lambda}}$

Question Bank 2021

Section A(10 x 1 = 10 marks)

UNIT-I

1. The transportation problem deals with the transportation of _____
 - (a) a single product from several sources to a destination
 - (b) a multi product from several sources to several destinations.
 - (c) **a single product from several sources to several destinations**
 - (d) a single product from a source to several destinations.
2. The transportation problem is balanced, if
 - (a) total demand and total supply are equal and the number of sources equals the number of destinations.
 - (b) **total demand equals total supply irrespective of the number of sources and destinations.**
 - (c) number of sources matches with the number of destinations.
 - (d) none of the routes is prohibited.
3. The initial solution of a transportation problem can be obtained by applying any known however the only condition is that
 - (a) the solution must be optimum
 - (b) the solution should be non degenerate
 - (c) **the rim conditions are satisfied**
 - (d) all of the above
4. The solutions to a transportation problem with m sources and n destinations is feasible, if the number of allocations are _____
 - (a) $m + n + 1$
 - (b) **$m + n - 1$**
 - (c) $m + n$
 - (d) $m \times n$
5. While solving a transportation problem the occurrence of degeneracy means that
 - (a) total supply equals total demand
 - (b) **the solution so obtained is not feasible**
 - (c) the few allocations become negative
 - (d) none of the above
6. In Vogel's approximation method
 - (a) **the cost difference indicate the penalties for not using the respective least cost routes**
 - (b) initial solution to transportation problem is not applicable, if some routes are prohibited
 - (c) degeneracy never occurs
 - (d) none of the above
7. The initial solution of a transportation problem is obtained by _____
 - (a) North West corner rule would invariably be optimum
 - (b) least cost method does not provide the least cost solution to a transportation problem
 - (c) **VAM would invariably be very near to optimum solution**
 - (d) MODI method is infeasible
8. In transportation problem,
 - (a) a solutions is said to degenerate is the number of occupied cells is smaller than the

- number of rows plus the number of columns minus one
- (b) a degenerate solution may or may not be optimum
- (c) to remove degeneracy an infinitesimally small quantity is placed in each of the required number of independent cells
- (d) all of the above hold.**

9. The dummy source or destination in a transportation problem is introduced to _____

- (a) prevent solution to become degenerate
- (b) to satisfy rim conditions**
- (c) ensure that total cost does not exceed a limit.
- (d) solve the balanced transportation problem

10. If we were to use opportunity cost value for non – basic cell to test optimality it should be

- (a) **most negative number**
- (b) most positive number
- (c) equal to zero
- (d) any value

Unit II

11. The assignment problem is a special case of transportation problem in which number of origins

- (a) equals the number of destinations.**
- (b) is greater than the number of destinations
- (c) is less than the number of destinations
- (d) is less than or equal to the number of destinations

12. An assignment problem is considered as a particular case of transportation problem, because

- (a) all the rim conditions are 1
- (b) all x_{ij} are either 1 or 0.
- (c) the number of rows equals columns
- (d) all of the above**

13. In an assignment problem involving four workers and three jobs, total number of assignments possible are _____

- (a) 4
- (b) 3**
- (c) 7
- (d) 12

14. The minimum number of lines covering all zeroes in a reduced cost matrix of order n can be ____

- (a) atmost n**
- (b) atleast n
- (c) $n-1$
- (d) $n+1$

15. The assignment problem can be _____

- (a) designed and solved as a transportation problem
- (b) of maximization type
- (c) solved only if number of rows equals the number of columns
- (d) all the above**

16. The method used for solving an assignment problem is called _____

- (a) MODI system
- (b) Hungarian method**
- (c) reduce matrix method
- (d) none of the above

17. An assignment problem _____

- (a) is unbalanced when each of the given workers cannot do each of the given jobs.
- (b) may not be balanced if the number of jobs matches with the number of workers.
- (c) can be balanced by introducing a dummy row or dummy column**
- (d) can be balanced by introducing a dummy rows as well as dummy columns

18. In marking assignments, which of the following should be preferred :

- (a) **only that row which have single zero** (b) only that column which have single zero
 (c) only a row/column that have single zero (d) only column having more than one zero

19. While solving an assignment problem, an activity is assigned to a resource with zero opportunity cost because the objective is to _____

- (a) reduce the cost of assignment to zero.
 (b) **minimize total cost of assignment**
 (c) reduce the cost of that particular assignment to zero
 (d) all of the above

20. An assignment problem can be solved by ____

- (a) transportation method (b) simplex method
 (c) **both (a) and (b)** (d) none of the above

Unit III

21. Sequencing algorithm

- (a) the selection of an appropriate order for a series of jobs is to be done on a finite service facilities.
 (b) **the jobs must be processed on a first-come-first service facilities.**
 (c) a service facility can process more than one job at a time
 (d) the service facilities are not of different types

22. Sequencing problem involving six jobs and three machines require evaluation of :

- (a) $(6! + 6! + 6!)$ sequences
 (b) **$(6!)^3$ sequences**
 (c) $(6 \times 6 \times 6)$ sequences
 (d) $(6 + 6 + 6)$ sequences

23. In 'n' jobs and two machines (say A and B) sequencing problems in which the order of processing is AB

- (a) job having minimum time on machine B is processed first.
 (b) job having minimum time on machine A is processed in the last
 (c) **job having minimum time on machine B is processed in the last.**
 (d) job having maximum time on machine B is processed in the last.

24. If A_i , B_i and C_i denote the processing times of i th job on three machines A, B and C

respectively, then a n-job three machines problems can be reduced to

an n-job and two machine problem, provided that

- (a) $\text{Min. } A_i \geq \text{Max. } B_i$ and / or $\text{Min. } C_i \leq \text{Max. } B_i$
 (b) **$\text{Min. } A_i \geq \text{Max. } B_i$ and / or $\text{Min. } C_i \geq \text{Max. } B_i$**
 (c) $\text{Min. } A_i \leq \text{Max. } B_i$ and / or $\text{Min. } C_i \geq \text{Max. } B_i$
 (d) $\text{Min. } A_i \leq \text{Max. } B_i$ and / or $\text{Min. } C_i \leq \text{Max. } B_i$

25. Five jobs are to be processed on three machines A, B and C in the order ABC. The timings of the jobs are known to be (30,40,70), (80,50,90), (70, 10, 50), (50,20,60) and (40, 30, 100)

The optimum sequence would be

- (a) $J_1 \rightarrow J_4 \rightarrow J_5 \rightarrow J_2 \rightarrow J_3$ (b) $J_1 \rightarrow J_4 \rightarrow J_2 \rightarrow J_5 \rightarrow J_3$
 (c) $J_4 \rightarrow J_1 \rightarrow J_3 \rightarrow J_2 \rightarrow J_5$ (d) **$J_4 \rightarrow J_1 \rightarrow J_5 \rightarrow J_2 \rightarrow J_3$**

26. Sequencing problems involving processing of two jobs on 'n' machines

- (a) **can be solved graphically**
- (b) cannot be solved graphically
- (c) have a condition that the processing of two jobs must be in the same order
- (d) none of the above.

27. Which of the following is not correct?

- (a) There is no general solution procedure available for solving sequencing problems involving processing of n jobs through three machines
- (b) In case of two jobs needing processing on some machines in varying order the problem may be solved graphically.
- (c) **Solution to a sequencing problem is found in such a manner that none of the machines is idle at any time.**
- (d) Maintenance crew scheduling problems can also be considered as sequencing problems.

28. In sequencing problems

- (a) **Gantt Charts can be used to determine optimum sequence in relatively small-sized problems**
- (b) Gantt Charts provides a very effective technique for solving large sized sequencing problems
- (c) a unique optimum solution exists.
- (d) first come first served basis of job performance is the ideal one since it involves a sense of fair play.

29. The general assumption which is not correct in solving a sequencing problem is that

- (a) the time taken by different jobs in moving from one machine to another is negligible.
- (b) the processing times on various machines are independent of the order in which different jobs are processed on them.
- (c) the job once started on a machine would be performed to the point of completion interrupted.
- (d) **a machine can process more than one job at a given point of time**

30. In sequencing problems

- (a) **jobs are completely known and are ready for processing.**
- (b) jobs are processed sequentially that is first on the first machine and then on the second machine , and so on.
- (c) the total elapsed time is determined by the point of time at which the first of the n jobs goes to machine until the time when the last job comes off machine B.
- (d) none of the above.

Unit IV

31. An activity which must be completed before one or more other activities start is known as -----

- (a) **predecessor activity**
- (b) successor activity
- (c) dummy activity
- (d) looping

32. The procedure of assigning numbers to various events of a network is known as - - -

- (a) **Fulkerson's rule**
- (b) network
- (c) numbering
- (d) assigning

33. The concurrent activities drawn are known as ----- in the network jargon.

- (a) looping
- (b) dangling
- (c) **ladders**
- (d) dependency

34. An activity is critical if its total float is -----

- (a) 0
- (b) 1
- (c) constant
- (d) **non zero**

35. ----- is a technique used for planning and scheduling large projects in the construction

- (a) **network scheduling**
- (b) project
- (c) event
- (d) activity

36. A network is a ----- representation of project's operations.

- (a) diagram
- (b) activity
- (c) event
- (d) **graphical**

37. ----- represent the start or completion of some activity and it consumes no time.

- (a) activity **(b) An event** (c) burst event (d) merge event
38. An event represents the joint initiation of more than one activity. It is called -----
(a) Burst event (b) merge event (c) event (d) critical
39. ----- does not consume either any resource or time.
(a) Dummy activity (b) looping (c) dangling (d) dependency
40. Nodes are numbered to identify an activity -----.
 (a) distinct **(b) Uniquely** (c) even (d) none
41. An example of concurrent activity is -----
 (a) Trenching (b) laying pipe (c) back filling **(d) all the above**
42. Latest occurrence time of an event is ----- to its earliest occurrence time.
(a) Greater than or equal to (b) Greater than (c) Less than (d) Equal
43. An activity is ----- if it's total float is non zero.
 (a) critical **(b) Non critical** (c) network (d) event

Unit V

44. Which of the following is correct?
(a) Completion time of each activity in a PERT network is assumed to follow β distribution.
 (b) The completion time of an activity in a PERT calculations is assumed to follow normal distribution.
 (c) The pessimistic time for every activity in a PERT project must always be greater than its optimistic time.
 (d) In case of more than one critical path for a PERT network, the one with the least variance is selected for making probability calculations.
45. The longest time that an activity could take if every thing goes wrong is called -----
 a) critical time b) optimistic time **c) pessimistic time** d) most likely time
46. The shortest possible time to complete the activity is called -----
 a) critical time **b) optimistic time** c) pessimistic time d) most likely time
47. The estimate of normal time of an activity is called -----.
 a) critical time b) optimistic time c) pessimistic time **d) most likely time**
48. In PERT analysis, in assuming a β distribution which of the following is not true?
 a) **It need not be symmetrical about modal value.**
 b) It is a uni-modal distribution.
 c) Has non-negative end points
 d) Approximately symmetric
49. Abbreviation of PERT -----
 a) Project Evaluation and Review Technique
b) Program Evaluation and Review Technique
 c) Program Evaluation and Research Technique
 d) Project Evaluation and Research Technique
50. The standard Deviation σ is given by
 a) $\left\{\frac{t_m - t_0}{6}\right\}^2$ b) $\left\{\frac{t_p - t_0}{2}\right\}^6$ c) $\left\{\frac{t_p - t_0}{6}\right\}^2$ d) $\left\{\frac{t_m - t_0}{2}\right\}^6$
51. The expected value of the activity duration is given by the formula $t_e =$ -----.
 a) $\frac{t_0 + 4t_m + t_p}{6}$ b) $\frac{t_m + 4t_0 + t_p}{6}$ c) $\frac{t_0 + 4t_p + t_m}{2}$ d) $\frac{t_0 + 4t_m + t_p}{2}$
52. Which of the following is not correct?
 a) PERT is applied mainly for planning and scheduling research programmes, whereas CPM is employed in construction and business problem
 b) In PERT analysis, for every activity three time estimates are taken, namely the optimistic, most likely and pessimistic
c) The standard deviation of the project completion time is obtained by adding the

standard deviation of the times of completing the critical activities.

d) Probability calculation in PERT represent only the probability of completing the activities on the critical path.

53. Which probability distribution is used in PERT calculations?

a) Binomial

b) Poisson

c) Chi-square

d) Normal

Section B (7 x 2 = 14)

Unit I

- 1) Define transportation problem.
- 2) When the transportation problem is said to be balanced?
- 3) When the transportation problem is said to be unbalanced?
- 4) Define occupied cells.
- 5) Define non occupied cells.
- 6) What are the methods to find the solution of a transportation problem?

Unit II

- 7) Define assignment problem.
- 8) What are the solution methods of assignment problem?
- 9) How do we convert maximization assignment problem into minimization assignment problem?
- 10) Write the mathematical formulation of the assignment problem.
- 11) What is the efficient method for solving assignment problem? Why?

Unit III

- 12) Define sequencing.
- 13) What is processing order?
- 14) What is processing time?
- 15) Define total elapsed time.
- 16) Define idle time on a machine.
- 17) What is no passing rule?
- 18) Write down the conditions for processing n jobs through 3 machines to obtain an optimum solution.
- 19) Define optimal path

Unit IV

- 20) Define dangling event.
- 21) What is meant by dependency relationship?
- 22) Define predecessor activity.
- 23) Define successor activity.
- 24) Define dummy activity.
- 25) What are concurrent activities?
- 26) Define critical path.
- 27) What are the types of activity floats? Explain.
- 28) What are the techniques used in network scheduling?
- 29) What are the calculation methods used to find the critical path?

Unit V

- 30) Define optimistic time.
- 31) Define pessimistic time.
- 32) Define most likely time.
- 33) Write the formulas to find the expected value of the activity duration and standard deviation.
- 34) How to determine probability of meeting the scheduled time?
- 35) Which distribution is assumed in PERT analysis? Why?
- 36) Draw a sample PERT network diagram.

37) Give any two differences between PERT and CPM.

Section C (5 x 6 = 30)

Unit I

1) Explain the solution of a transportation problem

2) Explain Vogel's Approximation Method

3) Explain North West Corner Method.

4) Determine an initial basic feasible solution of the transportation problem using VAM Method

		D	E	F	G	Available	
	A	11	13	17	14	250	
5) Obtain	B	16	18	14	10	300	an initial feasible solution to transportation problem using West Corner rule
the	C	21	24	13	10	400	
North	Demand	200	225	275	250		
			D ₁	D ₂	D ₃	D ₄	Available
	O ₁		5	3	6	2	19
	O ₂		4	7	9	1	37
	O ₃		3	4	7	5	34
	Demand		16	18	31	25	

6) Obtain an initial feasible solution to the following transportation problem using the matrix minima method

	D ₁	D ₂	D ₃	D ₄	Capacity
O ₁	1	2	3	4	6
O ₂	4	3	2	0	8
O ₃	0	2	2	1	10
Demand	4	6	8	6	

7) Solve the following transportation problem

	From	To			Availability	
8) Solve		A	B	C		the following transportation
problem	I	50	30	220	1	
	II	90	45	170	3	
	III	250	200	50	4	
	Requirement	4	2	2		

	Origin	Destination				Availability	
9) Find an		D ₁	D ₂	D ₃	D ₄		optimum solution for transportation
the following	O ₁	1	2	1	4	30	
problem	O ₂	3	3	2	1	50	
	O ₃	4	2	5	9	20	
	Demand	20	40	30	10		

Origin	Destination				Availability
	D ₁	D ₂	D ₃	D ₄	
O ₁	42	48	38	37	160
O ₂	40	49	52	51	150
O ₃	39	38	40	43	190
Demand	80	90	110	160	

10) Obtain an initial feasible solution to the following transportation problem using the matrix minima method

Source	Destination				Availability
	1	2	3	4	
1	20	22	17	4	120
2	24	37	9	7	70
3	32	37	20	15	50
Requirement	60	40	30	110	240

Unit II

11) A department head has four tasks to be performed and three subordinates, the subordinates differ in efficiency. The estimates of the time, each subordinate would take to perform, is given below the matrix. How should be allocate the tasks one to each man, so as to minimize the total man-hours?

Tasks	Men		
	1	2	3
I	9	26	15
II	13	27	6
III	35	20	15
IV	18	30	20

12) A student has to select one and only one elective in each semester and the same elective should not be selected in different semesters. Due to various reasons, the expected grades in each subject, if selected in different semesters, vary and they are given below:

Semester	Analysis	Statistics	Graph Theory	Algebra
I	F	E	D	C
II	E	E	C	C
III	C	D	C	A
IV	B	A	H	H

The grade points are H = 10, A = 9, B = 8, C = 7, D = 6, E = 5 and F = 4. How will the student select the electives in order to maximize the total expected points and what will be his maximum expected total points?

- 13) The following is the cost matrix of assigning 4 clerks to 4 key punching jobs. Find the optimal assignment if clerk 1 cannot be assigned to job 1:

	Clerk				Job			
		1	2	3	4			
1	-	5	2	0				
2	4	7	5	6				
3	5	8	4	3				
4	3	6	6	2				

- 14) MCS Inc is a software company that has three projects of Y2K with the departments of health, education and housing of Maharashtra Government. Based on the background and experiences of the project leaders, they differ in terms of their performance at various projects. The performance score matrix is given below:

	Project Leaders			Projects		
		Health	Education	Housing		
P ₁	20	26	42			
P ₂	24	32	50			
P ₃	32	34	44			

Help the management by determining the optimal assignment that maximizes the total performance score.

- 15) Suggest the optimal assignment schedule for the following assignment problem:

	Salesmen				Markets			
		I	II	III	IV			
A	80	70	75	72				
B	75	75	80	85				
C	78	78	82	78				

What will be the total maximum sale?

- 16) Solve the following assignment problem to find the maximum total expected sale

Salesman	Area
----------	------

	I	II	III	IV
A	42	35	28	21
B	30	25	20	15
C	30	25	20	15
D	24	20	16	12

- 17) The owner of a small machine shop has four machines available to assign to jobs for the day. Five jobs are offered with expected profit for each machinist on each job as follows:

	A	B	C	D	E
1	62	78	50	101	82
2	71	84	61	73	59
3	87	92	111	71	81
4	48	64	87	77	80

Find the assignment of machinists to jobs that will result in a maximum profit. Which job should be declined?

- 18) Solve the following assignment problem

	1	2	3	4
A	10	12	19	11
B	5	10	7	8
C	12	14	13	11
D	8	15	11	9

- 19) Solve the following assignment problem

	A	B	C	D
1	10	25	15	20
2	15	30	5	15
3	35	20	12	24
4	17	25	24	20

- 20) Suggest optimal assignment for four salesman to sales territories where the estimated sales (in lakh rupees) to be made by each of the salesmen in different sales territories are given below:

Salesmen	Sales territories				
	I	II	III	IV	V
A	16	15	17	10	8
B	16	16	20	15	12
C	12	8	10	13	15
D	18	16	17	12	10

Unit III

- 21) We have five jobs, each of which should go through two machines A and B in the order AB. The processing timings (in hours) for the jobs are given here. You are required to determine the sequence for the five jobs that would minimize the total elapsed time.

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅
Machine A	:	5	1	9	3	10
Machine B	:	2	6	7	8	4

- 22) In a factory , there are six jobs to perform, each of which should go through two machines A and B in the order A, B. The processing timings (in hours) for the jobs are given here. You are required to determine the sequence for performing the jobs that would minimize the total elapsed time, T. What is the value of T?

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅	J ₆
Machine A	:	1	3	8	5	6	3
Machine B	:	5	6	3	2	2	10

- 23) A company has six jobs on hand coded A to F . All the jobs have to go through two machines M1 and M2 . The time required for each job on each machine ,in hours , is given below :

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅	J ₆
M1	:	3	12	18	9	15	6
M2	:	9	18	24	24	3	15

Determine a sequence for the five jobs that will minimize the elapsed time.

- 24) Determine the optimal sequence of jobs that minimizes the total elapsed time based on the following information processing time on machines is given in hours and passing is not allowed:

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅
Machine A	:	8	10	6	7	11
Machine B	:	5	6	2	3	4
Machine C	:	4	9	8	6	5

- 25) Determine the optimal sequence of jobs that minimizes the total elapsed time based on the following information processing time on machines given in hours and passing is not allowed.

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅
Machine A	:	3	8	7	5	2
Machine B	:	3	4	2	1	5
Machine C	:	5	8	10	7	6

- 26) A machine shop has six machines A, B, C, D, E and F. Two jobs must be processed through each of machines. The times on machines and the necessary sequence of the jobs through the shop are given below:

Order	1	2	3	4	5	6
Job I	A-20	C-10	D-10	B-30	E-25	F-10
Job II	A-10	C-30	B-15	D-10	F-15	B-20

- 27) A machine shop has four machines A, B, C and D. Two jobs must be processed through each of these machines. The time (in hours) taken on each of the machines and the necessary sequence of jobs through the shop are given below:

	Sequence	A	B	C	D
Job 1	Time	2	4	5	1
	Sequence	D	B	A	C
Job 2	Time	6	4	2	3

Use graphic method to obtain the total minimum total elapsed time.

Unit IV

- 28) Write down the rules of network construction.
 29) Construct the network diagram comprising activities B,C .. Q and N such that the following constraints are satisfied;

$B < M$; $H < G, L$; $E < G < H$; $L, H < I$;

$L < M$; $H < N$; $H < J$; $I, J < P$; $P < Q$

The notation $X < Y$ means that the activity X must be finished before Y can begin.

- 30) Following are the activities which are to be performed for a building site preparation.

Determine the precedence relationship and draw the network

1. Clear the site
2. Survey and layout
3. Rough Grade
4. Excavate for sewer
5. Excavate for electrical manholes
6. Install sewer and baskfill
7. Install electrical manholes
8. Construct the boundary wall

- 31) Explain forward pass calculation method.

- 32) Explain backward pass calculation method

- 33) Draw a network diagram for the following data:

activity	A	B	C	D	E	F	G	H	I	J
Preceding activities	none	A	A	B	A	B,E	C	D,F	G	H,I

Unit V

- 34) A project consists of seven activities with the following relevant information

Activity	Immediate predecessors	Estimated duration(Week)		
		Optimistic time	Most likely time	Pessimistic time
A	None	3	6	9
B	None	2	5	8
C	A	2	4	6
D	B	2	3	10
E	B	1	3	11
F	C,D	4	6	8
G	E	1	5	15

Draw the PERT Network and find out expected project completion time.

35) A project consists of some activities, the details of which are given below

Activity	Immediate predecessors	Estimated duration(Week)		
		Optimistic time	Most likely time	Pessimistic time
A	None	1	3	7
B	A	2	6	14
C	A	3	3	3
D	B,C	4	10	22
E	B	3	7	15
F	D,E	2	5	14
G	D	4	4	4

Draw the PERT Network and find out expected project completion time.

36) A small project is composed of seven activities whose time activities are listed in the table

Activity		Estimated duration(weeks)		
i	j	Optimistic	Most likely	Pessimistic
1	2	1	1	7
1	3	1	4	7
1	4	2	2	8
2	5	1	1	1
3	5	2	5	14
4	6	2	5	8
5	6	3	6	15

Draw the project network and find the expected duration.

Section C (3 x 12 = 36 marks)

Unit I

1) Solve the transportation problem using VAM method

	M ₁	M ₂	M ₃	M ₄	Supply
F ₁	4	6	8	13	500
F ₂	13	11	10	8	700
F ₃	14	4	10	13	300
F ₄	9	11	13	3	500
Demand	250	350	1050	200	

2) Explain MODI Method

3) Solve the transportation problem

	D ₁	D ₂	D ₃	D ₄	Supply
S ₁	3	7	6	4	5
S ₂	2	4	3	2	2
S ₃	4	3	8	5	3
Demand	3	3	2	2	

- 4) A company has factories at F₁, F₂, F₃ which supply warehouses at W₁, W₂, W₃. Weekly factory capacities are 200, 160, 90 units respectively. Weekly warehouses requirements are 180, 120, 150 units respectively. Unit shipping costs in rupees are as follows

Warehouses

Factory	W ₁	W ₂	W ₃	Supply
F ₁	16	20	12	200
F ₂	14	8	18	160
F ₃	26	24	16	90
Demand	180	120	150	350

Determine the optimum distribution for this company to minimize shipping costs.

- 5) Consider the following transportation problem:

Factory	Godowns						Stock
	1	2	3	4	5	6	Available
A	7	5	7	7	5	3	60
B	9	11	6	11	-	5	20
C	11	10	6	2	2	8	90
D	9	10	9	6	9	12	50
Demand	60	20	40	20	40	40	

It is not possible to transport any quantity from factory B to Godown 5.

Determine

- Initial solution by Vogel's approximation method.
 - Optimum Basic feasible solution.
- 6) Given $x_{13} = 50$ units, $x_{14} = 20$ units, $x_{21} = 55$ units, $x_{31} = 30$ units, $x_{32} = 35$ units and $x_{34} = 25$ units

Available units

	6	1	9	3	70
	11	5	2	8	55
	10	12	4	7	90
Required units	85	35	50	45	

- 7) Find an optimal solution to the following transportation problem

	D ₁	D ₂	D ₃	D ₄	Available
O ₁	23	27	16	18	30
O ₂	12	17	20	51	40
O ₃	22	28	12	32	53
Demand	22	35	25	41	123

- 8) Solve the following transportation problem to find the minimum transport cost
Destination.

source	D ₁	D ₂	D ₃	D ₄	D ₅	Available
S ₁	4	7	3	8	2	4
S ₂	1	4	7	3	8	7
S ₃	7	2	4	7	7	9
S ₄	4	7	2	4	7	2
Required	8	3	7	2	2	

- 9) The table below records transportation costs per unit of a product from origins O₁, O₂, O₃ and O₄ to destinations D₁, D₂, D₃, D₄ and D₅. The capacities of the four origins are respectively 55, 45, 30 and 50, while the requirements of the five destinations are respectively 40, 20, 50, 30 and 40. employing Vogel's approximation method, or otherwise, make the initial allocations to the origins to satisfy the requirements of the destinations and test the optimality of these allocations. Use MODI method for obtaining an optimal solution that would minimize the cost of transportation.

	Destination					
source	D ₁	D ₂	D ₃	D ₄	D ₅	Available
O ₁	12	4	9	5	9	55
O ₂	8	1	6	6	7	45

O ₃	1	12	40	7	7	30
O ₄	10	15	6	9	1	50
Required	40	20	30	30	40	

- 10) ABC company wishes to develop a monthly production schedule for the next three months. upon the sales commitments, the company can either keep the production constant, allowing fluctuations in inventory, or inventories can be maintained at a constant level, with fluctuating production. Fluctuating production necessitates in working overtime, the cost of which is estimated to be double the normal production cost of Rs.12 per unit. Fluctuating inventories result in inventory carrying cost of Rs.2 per unit. If the company fails to fulfill its sales commitment, it incurs a shortage cost of Rs.4 per unit per month. The production capacities for the next three months are shown below:

Month	Production capacity		Sales
	Regular	Overtime	
1	50	30	60
2	50	0	120
3	60	50	40

Determine the optimal production schedule.

Unit II

- 11) Explain Hungarian Assignment Method.
- 12) Explain the Mathematical formulation of the assignment problem with example.
- 13) (i) A department head has four subordinates and four tasks to be performed. The Subordinates differ in efficiency and the tasks differ in their intrinsic difficulty. His estimate of the time each man would take to perform each task, is given in the matrix below.

Tasks	Men			
	E	F	G	H
A	18	26	17	11
B	13	28	14	26
C	38	19	18	15
D	19	26	24	10

How should the task be allocated, one to a man, so as to minimize the total man-hours?

- (ii) Five men are available to do five different jobs. From past records, the time (in hours)

that each man takes to do each job is known and given in the following table

Men	Jobs				
	I	II	III	IV	V
A	2	9	2	7	1
B	6	8	7	6	1
C	4	6	5	3	1
D	4	2	7	3	1
E	5	3	9	5	1

- 14) (i) A Pharmaceutical company is producing a single product and is selling through agencies located in different cities. All of a sudden, there is a demand for the product in another five cities not having any agency of the company. The company is faced with the problem of deciding on how to assign the existing agencies to dispatch the product to needy cities in such a way that the travelling distance is minimized. The distance between the surplus and deficit cities (in km) is given in the following table.

	Deficit cities				
	a	B	c	D	e
A	85	75	65	125	75
B	90	78	66	132	78
C	75	66	57	114	69
D	80	72	60	120	72
E	76	64	56	112	68

Determine the optimum assignment schedule.

- (ii) Consider the problem of assigning five operators to five machines. The assignment are given below.

Operators	Machine				
	A	B	C	D	E
I	10	3	10	7	7
II	5	9	7	11	9
III	13	18	2	9	10
IV	15	3	2	7	416
V	16	6	2	12	12

- 15) (i) Consider the problem of assigning five jobs to five persons. The assignment costs are given as follows.

	1	2	3	4	5
A	8	4	2	6	1
B	0	9	5	5	4
C	3	8	9	2	6
D	4	3	1	0	3
E	9	5	8	9	5

- (ii) Suggest optimal assignment of the workers to jobs if the completion time (in hours) different jobs by different workers is as given below.

Job	Workers			
	W	X	Y	Z
A	8	7	9	10
B	7	9	9	8
C	10	8	7	11
D	10	6	8	7

- 16) (i) Determine an optimal assignment schedule for the following assignment problem. The cost matrix is given below:

Job	Machine					
	1	2	3	4	5	6
A	11	17	8	16	20	15
B	9	7	12	6	15	13
C	13	16	15	12	16	8
D	21	24	17	28	26	15
E	14	10	12	11	15	6

If job C cannot be assigned to machine 6, will the optimum solution change?

- (ii) Solve the following assignment problem

	A	B	C	D
I	1	4	6	3

II	9	7	10	9
III	4	5	11	7
IV	8	7	8	5

- 17) (i) A company is faced with the problem of assigning 4 machines to 6 different jobs (one machine to one job only). The profits are estimated as follows:

Job	Men			
	E	F	G	H
1	3	6	2	6
2	7	1	4	4
3	3	8	5	8
4	6	4	3	7
5	5	2	4	3
6	5	7	6	4

- (ii) Five labels are to be allowed to five operators (one for each). The following table gives weekly output figures (in pieces)

Operator	Weekly output in Lathe				
	L ₁	L ₂	L ₃	L ₄	L ₅
P	20	22	27	32	36
Q	19	23	29	34	40
R	23	28	35	39	34
S	21	24	31	37	42
T	24	28	31	36	41

Profit per piece is Rs. 25.Find the maximum profit per week.

- 18) (i) A company marketing consumer items has divided its area of operation into four zones (A,B,C and D). There are four sales items available. Based on previous experience the company has estimated the annual sales (in rupees crores) if different teams are assigned to different zones as given in the table below. Find the optimal allocation of the sales teams to different regions so that the total annual sales is maximized.

Sales teams	Zones			
	A	B	C	D
1	5	11	8	9

2	5	7	9	7
3	7	8	9	9
4	6	8	11	12

- (ii) A company has four sales representatives who are to be assigned to four different sales territories. The monthly sales increase estimated for each sales representative for different sales territories (in lakh rupees). are shown in the following table.

Sales Representatives	Sales territories			
	I	II	III	IV
A	200	150	170	220
B	160	120	150	140
C	190	195	190	200
D	180	175	160	190

Suggest optimal assignment and the total maximum sales increase per month.

- 19) (i) A marketing manager has 5 salesmen and 5 sales districts. Considering the capabilities of the salesman and the nature of the districts, the marketing manager estimates that sales per month (in hundred rupees) for each salesman in each district would be as follows:

	Salesman				
	Sales district				
	A	B	C	D	E
A	32	38	40	28	40
B	40	24	28	21	36
C	41	27	33	30	37
D	22	38	41	36	36
E	29	33	40	35	39

- (ii) A car hire company has one car at each of the five depots a,b,c,d and e. A customer in each of the five towns A,B, C, D and E requires a car. The distance(in miles) between the depots(origins) and the towns(destinations) where the customers are, is given in the following distance matrix:

	a	B	C	D	e
A	160	130	175	190	200
B	135	120	130	160	175
C	140	110	155	170	185

D	50	50	80	80	110
E	55	35	70	80	105

Unit III

- 20) Six jobs go first over machine I and machine II. The order of the completion of jobs has no significance . The following table gives the machine times in hours for six jobs and the two machines.

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅	J ₆
Machine I	:	5	9	4	7	8	6
Machine II	:	7	4	8	3	9	5

Find the sequence of jobs that minimizes the total elapsed time to complete the jobs. Find the minimum time by using Gantt's chart .

- 21) A book binder has one printing press, one binding machine, and the manuscripts of a number of different books. The time required to perform the printing and binding operations for each book is shown below. Determine the order in which books should be processed, in order to minimize the total time required to turn out all the books:

Book	:	1	2	3	4	5	6
Printing time (hrs)	:	30	120	50	20	90	100
Binding time (hrs)	:	80	100	90	60	30	10

- 22) In the machine shop, 8 different products are being manufactured each requiring time on two machines A and B as given below:

Product	Time(in min.) on machine A	Time(in min.) on machine B
I	30	20
II	45	30
III	15	50
IV	20	35
V	80	36
VI	120	40
VII	65	50
VIII	10	20

Decide the optimum sequence of processing of different products in order to minimize the total manufacturing time for all the products. Name the scheduling model used.

- 23) Determine the optimal sequence of jobs that minimizes the total elapsed time based on the following information processing time on machines is given in hours and passing is not allowed:

Job	:	J ₁	J ₂	J ₃	J ₄	J ₅	J ₆	J ₇
Machine A	:	3	8	7	4	9	8	7
Machine B	:	4	3	2	5	1	4	3
Machine C	:	6	7	5	11	5	6	12

- 24) Find the sequence that minimizes the total time required in performing the following jobs on three machines in the order ABC:

Processing time (in hours) on	Job					
	1	2	3	4	5	6
Machine A	8	3	7	2	5	1
Machine B	3	4	5	2	1	6
Machine C	8	7	6	9	10	9

- 25) Use graphical method, calculate the minimum time needed to process job 1 and 2 on five machines A, B, C, D and E that is for each machine find the job which should be done first. Also calculate the total time elapsed to complete both the jobs:

Sequence		A	B	C	D	E
Job 1	Time	6	8	4	12	4
Sequence		B	C	A	D	E
Job 2	Time	10	8	6	4	12

- 26) Use graphical method to minimize the time added to process the following jobs on the machines shown that is for each machine find the job which should be done first. Also calculate the total time elapsed to complete both the jobs:

Sequence		A	B	C	D	E
Job 1	Time	3	4	2	6	2
Sequence		B	C	A	D	E
Job 2	Time	5	4	3	2	6

- 27) Use graphic method to find the minimum elapsed total time sequence of 2 jobs and 5 machines, when we are given the following information.

Sequence		A	B	C	D	E
Job 1	Time	2	3	4	6	2
Sequence		B	C	A	D	E
Job 2	Time	4	5	3	2	6

Unit IV

- 28) A small project consists of seven activities for which the relevant data are given below;

Activity	Preceding Activities	Activity Duration days
A	-	4
B	-	7

C	-	6
D	A, B	5
E	A, B	7
F	C, D, E	6
G	C, D, E	5

- Draw the network and find the project completion time
- Calculate total float for each of the activities and highlight the critical path.
- Draw the time scaled diagram.

29) The following are the details of estimated times of activities of a certain project.

Activity Immediate Preclecessors Normal time days

A	-	16
B	-	20
C	A	8
D	A	10
E	B, C	6
F	D, E	12

- Find the critical path and the expected time of the project
- Find the total and free float for the each activities

30) Given the following information

Activity	0-1	1-2	1-3	2-4	2-5	3-4	3-6	4-7	5-7	6-7
Duration (days)	2	8	10	6	3	3	7	5	2	8

- Draw the arrow diagram
- Identify critical path and find the total project duration
- Determine total, free and independent floats.

Unit V

31) A project consist of eight activities with the following relevant informations

Activity	Immediate predecessors	Estimated duration(Week)		
		Optimistic time	Most likely time	Pessimistic time
A	None	1	1	7
B	None	1	4	7
C	None	2	2	8
D	A	1	1	1
E	B	2	5	14
F	C	2	5	8
G	D,E	3	6	15
H	F,G	1	2	3

- Draw the PERT network and find out the expected project completion time.
- What duration will have 95% confidence for project completion?

32)The manager of swimming club is planning club's swimming team programme. The first team practice is scheduled for August 1, 2010. The activities their immediate predecessors and the activity time estimates are as follows :

Activity	Immediate Predecessor	Estimated duration (days)		
		Optimistic	Most likely	Pessimistic
A	-	1	1	2

B	A	4	6	8
C	A	2	4	6
D	B,C	1	2	3
E	B	2	3	4
F	A	1	2	3

Draw the project network and find the expected duration.

33) A project consist of seven activities with the following relevant informations

Activity	Immediate predecessors	Estimated duration(Week)		
		Optimistic time	Most likely time	Pessimistic time
A	None	1	3	7
B	A	2	6	14
C	A	3	3	3
D	B,C	4	10	22
E	B	3	7	15
F	D, E	2	5	14
G	D	4	4	4

- Draw the PERT network and find out the expected project completion time.
- What duration will have 95% confidence for project completion?

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI-628001
I B.Sc-MICROBIOLOGY, SEMESTER- I
CORE: I INTRODUCTION TO MICROBIOLOGY-21UMIC11
QUESTION BANK

Section-A

(1 Mark)

Choose the correct answer:

UNIT:I

1) The process of vaccination was introduced by -----

- a) Louis Pasteur b) **Jenner** c) Metchnikoff d) Ehrlich

2) Who discovered interferon's ?

- a) **Isaacs and Lindenmann** b) Burnet Macfarlane c) Widal Fernando d) Alexander Fleming

3) Antiseptic methods were first introduced by -----

- a) **Joseph Lister** b) Iwanowski c) Beijerinck d) Edward Jenner

4) The study of bacteria is called -----

- a) Mycology b) **Bacteriology** c) Parasitology d) Virology

5) Robert Koch cultured ----- bacteria

- a) *Staphylococcus* b) *Streptococcus* c) ***Pseudomonas*** d) *E.coli*

6) Who discovered cancer-causing viruses?

- a) Robert Holley b) **Peyton Rous** c) Daniel Nathans d) Porter

7) Who described the structure of antibodies ?

- a) **Gerald** b) David Baltimore c) Werner Arber d) Paul Berg

8) Who discovered Streptomycin ?

- a) **Waksman** b) krebs c) robbins d) Wilkins

9) Who identified the physical structure of DNA?

- a) **D.Watson** b) Peyton rocus c) David Dulbecco d) Max Delbruck

10) Father of microbiology is -----

- a) Louis pasteur b) Lister c) **A.V.Leewenhock** d) Robert Koch

UNIT:II

11) In electron microscope source of electrons is from -----

- a) Mercury lamp b) **Tungsten metal** c) UV lamp d) Tungsten steel

12) The resolution power of the compound microscope is -----

- a) **0.2 micron** b) 0.2 millimeter c) 0.2 angstrom units d) 0.2 centimeter

13) A micrometer is equal to ----- m

- a) **0.000001m** b) 0.0001m c) 0.001m d) 0.01 m

14) The magnification is achieved when light rays from an -----

- a) condenser b) ocular lens c) objective d) **illuminator**

15) The image obtained in a compound microscope is -----

- a) Real b) **Virtual** c) Real inverted d) Virtual inverted

16) TEM -----

- a) Transport electron microscope

- b) Transparent electron microscope

c) Transet electron microscope

d) **Transmission electron microscope**

17) Condensation of light in light microscope is by -----

a) Objective b) Ocular c) **Condensor** d) Angular aperture

18) Source of light in fluorescence microscopy is from -----

a) **Mercury lamp** b) Sunlight c) UV lamp d) Tungsten metal

19) The electron passed out from the specimen are called -----

a) Primary electron b) **Secondary electron** c) Tertiary electron d) Electron beam

20) Who perfected a magnetic lens in 1927----

a) **Gabor** b) Broglie c) Busch d) Porter

UNIT-III

21) Endospores can be stained with -----

a) Safranine b) Crystal violet c) Methylene blue d) **Malachite green**

22) Preparing colorless bacteria against colored background is called -----

a) Capsule staining b) **Negative staining** c) Gram staining d) Flagella staining

23) The motile bacteria is -----

a) ***Salmonella typhi*** b) *Klebsiella pneumoniae* c) *Bacillus anthracis* d) *Shigella*

24) Fimbriae are demonstrated by -----

a) Culture b) Gram stain c) Biochemical reaction d) **Haemagglutination test**

25) Mesosomes are also known as -----

- a) Kinds of ribosomes b) Formed during cell lysis
- c) A part of cell wall d) **Principal sites of respiratory enzymes**

26) Acid – fast staining is otherwise called-----

- a) Differential staining b) **Ziehn- neelsen** c) Negative staining d) Capsule staining

27) In simple staining , alcohol is used as a -----

- a) Primary stain b) Mordant c) **Decolorizer** d) Counterstain

28) Metachromatic granules can be stained with -----

- a) Saffanine b) **Methylene blue** c) Crystal violet d) Pienic acie

29) Autolysis is done by -----

- a) Mitochondria b) **Lysosomes** c) Golgi bodies d) Peroxisomes

30) Agar is obtained from -----

- a) Brown algae b) **Red algae** c) Green algae d) Blue-green algae

UNIT:IV

31) Cocci that remain in paris are called -----

- a) Streptococci b) Tetracocci c) **Diplococci** d) Coccibacilli

32) Mordant used is gram staining is

- a) Crystal violet b) **Iodine** c) Saffranin d) Water

33) Cell wall of gram negative bacteria is

- a) Think b) Lipid are present c) **Teichoic acids are absent** d) Teichoic acis are present

34) Protein attached to carbohydrates are called -----

- a) Glycolipid b) **Glycoprotein** c) Glycolipid d) Glyomembrane

35) Rod shaped bacteria are known as -----

a) Cocci b) Bacilli c) **Comma forms** d) Pleomorphic forms

36) Bacterial multiply by -----

a) Spore formation b) **Simple binary fission** c) Conjugation d) Gametes

37) Gram positive bacteria appear as -----

a) Pink b) **Violet** c) Red d) yellow

38) In short plasmids without any gene is called as -----

a) **Cryptic** b) Transgenes c) Multiple d) Stringent

39) Bacteriosins kill cells by forming channels in the -----

a) Cellwall b) Cytoplasm c) **Plasma membrane** d) Ribosome

40) Ti plasmids -----

a) *E.coli* b) *Bacillus* c) ***Agrobacterium tumefaciens*** d) *Pseudomonas*

UNIT:V

41) Lysol is a-----

a) Sterilant b) **Disinfectant** c) Antiseptic d) Antifungal agent

42) ----- are designed to suppress the growth of unwanted bacteria

a) **Selective media** b) Enrichment media c) Transport media d) Preservation media

43) Temperature in pasteurization is -----

a) **62.8° C** b) 35.7° C c) 68.2° C d) 60.8°C

44) ----- are derivatives of phenol

a) Biguanides b) Halogens c) **Bisphenols** d) Alcohols

45) ----- is used as a disinfectant especially in wine making

a) **SO₂** b) CO₂ c) H₂O d) H₂SO₄

46) ----- is the process of removing or destroying all microbial life

a) Disinfection b) Antisepsis c) Sepsis d) **Sterilization**

47) ----- is the process of reducing or inhibiting microbial growth

a) **Antisepsis** b) Sepsis c) Disinfection d) Sterilization

48) Which of the following is most effective for sterilizing plastic petridishes ?

a) Chlorine b) **Ethylene oxide** c) Glyteraldehyde d) Autoclaving

49) Which of the following is used to control microbial growth in food?

a) **Organic acid** b) Alcohols c) Aldehydes d) Heavy metals

50) Which of the following does not kill endospores?

a) Autoclaving b) Incineration c) Hot air sterilization d) **Pasteurization**

Section-B

Answer the following questions in about 50 words each :

(2Mark)

UNIT:I

1. Define biogenesis.

2. Define aseptic techniques.

3. Define fermentation.

4. What is meant by pasteurization?

5. Define spontaneous generation.
6. What is meant by vaccination?
7. Define chemotherapy.
8. Define antibiotics.
9. Define microbiology.
10. Write about two important events in microbiology

UNIT:II

11. Define microscopy.
12. What is meant by objective lens.
13. Define light microscopy.
14. What are the component present in dark field microscopy?
15. What is meant by SEM ?
16. What is meant by TEM?
17. What is meant by illuminator?
18. What is meant by refractive index?
19. What is meant by specimen?
20. Define nanometer.

UNIT:III

21. Define staining.
22. In what purpose staining is used in microbiology
23. Define gram's staining.
24. What is meant by differential staining?
25. Define flagella staining.
26. Define serial dilution technique.
27. Define fixation.

28. Write about crystal violet stain.
29. Define ziehl nelson acid fast staining.
30. Write the uses of staining.

UNIT:IV

31. Define bacteria.
32. Define mycology.
33. Define Parasitology.
34. Define Virology.
35. Define Prokaryotes.
36. Define Eukaryotes.
37. What is meant by plasmids?
38. Define motility.
39. Describe the bacteria shapes and size.
40. What is meant by endospore?

UNIT: V

41. Define disinfection.
42. Define antiseptics.
43. What is meant by sterilization?
44. Define moist heat.
45. Define filtration.
46. Define radiation.
47. Define dry heat.
48. What is meant by desiccation?
49. What is meant by pure culture?
50. What is meant by selective media?

Section - C

Answer the following questions in about 200 words each:

(6MARKS)

UNIT:I

1. Write short notes on spontaneous generation .
2. Describe cell theory .
3. Write about the theory of biogenesis .
4. Give a short account on pasteurization .
5. Describe vaccination.
6. Write note on mycology.
7. Write about the important events of microbiology.
8. Write note on prophylaxis .
9. Give an account on attenuation.
10. Write short notes on the contribution of the scientist worked in the field of microbiology.

UNIT:II

11. What are the parts present in the microscopy ?
12. Write the principle for electron microscope .
13. Write about the magnification of microscopy .
14. Distinguish features between dark field and bright field microscopy.
15. Draw a diagram on light microscopy .
16. What is the purpose for using electron microscope ?
17. Write short notes on phase contrast microscopy .
18. Write about the history of microscopy .
19. Write the uses of microscopy
20. Write about the application of microscopy

UNIT:III

21. Give account on hanging drop technique .
22. Write the preparation of dry mount technique .

23. Write the procedure for negative staining .
24. What is the purpose for doing endospore staining ?
25. Write about the principle of differential staining .
26. Which reagent is used in the negative staining ? Write its application..
27. What are the stains used in the simple staining ?
28. Write the procedure for giemsa staining .
29. Give account on acid-fast stain .
30. List out the advantage of simple staining
31. Give an account on Endospore staining

UNIT:IV

32. Describe glycocalyx .
33. Write short notes on bacterial cell wall .
34. Describe phagocytosis .
35. Give a short note on capsule .
36. Describe chemotaxis .
37. Explain the structure of plasma membrane .
38. Write the functions of prokaryotic cell .
39. Write short notes on cytoplasm .
40. Give a short notes on endospores .
41. Write a account on cell wall composition.

UNIT:V

42. Write about ribosome subunits .
43. Write short notes on spores and cysts.
44. Give an account on sterilization of glassware and media.
45. Write short notes on culture media.
46. Write about the aseptic transfer of bacteria
47. Give short notes on pour plate method.

48. Write about streak plate method .
49. How to maintain the bacterial culture?
50. Write short notes on blood agar .
51. Give account on selective & differential media .
52. Write short notes on hot air oven .
53. Write the uses of growth media .

Section-D

Answer the following in about 400 words in each:

(12 MARKS)

UNIT:I

1. Give a brief account of Antony van Leeuwenhoek.
2. Write short notes on Robert Koch .
3. Give a notes on Joseph Lister .
4. Write short notes on antibiotics .
5. Give a brief account on small pox .
6. Write brief account of Winogradsky and Beijerinck .
7. Write about the development of techniques for studying microbial pathogens.
8. Write the scope and relevance of microbiology .
9. Write about the future of microbiology .
10. Write the recognition of the relationship between microorganisms and disease.

UNIT:II

11. Explain how electron microscopy differ from light microscopy.
12. Explain microscopy resolving power.
13. Describe the numerical aperture of microscopy .
14. Give a detail account on limit of resolution.
15. Explain dark field microscopy .
16. Write the aim principle of bright field microscopy .

17. Write the procedure of electron microscopy .
18. Write the procedure of dark field microscopy .
19. Write the principle of SEM microscopy .
20. Write the procedure of TEM microscopy.

UNIT:III

21. Give a detail account on simple staining .
22. Write down the procedure for gram's staining .
23. Explain endospore staining..
24. Give a short notes on differential staining .
25. Write the procedure for flagella staining .
26. Describe cytoplasmic inclusion staining .
27. Explain giemsa stain and their application .
28. Write the difference between simple and differential staining .
29. Explain capsule staining .
30. Write the procedure for simple and gram's staining .

UNIT:IV

31. Write the structure of bacterial cell .
32. Write the structure and function of capsule .
33. Give a brief account on flagella and its types .
34. Write a short notes on fimbriae or pilli .
35. Write about the chemical composition of the cell wall .
36. Explain plasma membrane (fluid mosaic model).
37. Explain mesosomes and cytoplasm .
38. Give an account on ribosome .
39. Explain plasmids and its types .
40. Write about cytoplasmic inclusions.

UNIT:V

- 41.Explain the principle of sterilization .
- 42.Give detail account on dryheat and moist heat sterilization .
- 43.Explain pasteurization .
- 44.Give an account on radiation and disinfectant .
- 45.Explain the development of pure culture techniques.
- 46.Define media .Explain the media types .
- 47.Write the basic component of growth media .
- 48.Explain the isolation and purification of pure culture .
- 49.Write notes on transport media and preservation media .
- 50.Explain macconkey agar and enrichment blood agar .

ST. MARY'S COLLEGE (AUTONOMOUS), THOOTHUKUDI-628001

I B. Sc. - MICROBIOLOGY

ALLIED – I – DAIRY TECHNOLOGY- SUB. CODE : 21UMIA11

QUESTION BANK

Section-A

Choose the correct answer:

(1 mark)

Unit-I

1. _____ is the first form of milk produced by the mammary glands of mammals.
a) **Colostrum** b) celestial c) serial d) coliseum
2. Colostrum contains large numbers of antibodies called _____.
a) enzymes b) protein c) **secretory immunoglobulin** d) IgA
3. Yellow color of milk fat is due to the presence of?
a) Fat b) **Carotinoids** c) Casein d) lactochrome
4. Chlorine compounds have widespread acceptance in the dairy industry due to?
a) low sanitising efficiency b) **high sanitising efficiency**
c) enzymes d) None of the above
5. Microorganisms may be present in the
a) **teat of the udder** b) environment c) milking staff d) all of the above
6. Mesophilic bacteria grow best between
a) **10 to 45 °C** b) 0 to 10 °C c) 40 to 80 °C d) 55 to 60 °C
7. Moisture content of cow milk
a) 30% b) 50% c) **83%** d) 90%
8. Fat percentage of cow milk is _____.
a) 10% b) **9%** c) 15% d) 4%

9. 1 Litre of cow milk provides calcium

- a) **1 gm** b) 2 gm c) 3 gm d) 0.5 gm

10. _____ involves destruction of pathogens and minimising microflora

- a) chemicals b) hot water **c) sanitisation** d) All of the above

Unit –II

11. Which apparatus is used for measuring the purity of milk?

- a) Hydrometer **b) Lactometer** c) polarimeter d) spectrometer

12. Milk is rich in

- a) vitamin A & D** b) vitamin C c) vitamin K d) vitamin B

13. Milk is an emulsion of

- a) oil in starch b) water in oil c) oil in oil **d) oil in water**

14. Methylene Blue Reduction Test (MBRT) is conducted to know the efficiency of _____

- a) toned milk b) double toned milk c) sterilized milk **d) pasteurized milk**

15. Milk acidity is

- a) 0.10% b) 0.11% c) 0.12% **d) 0.13%**

16. In milk, the whey proteins are in _____ solution and the casein in colloidal suspension

- a) Water **b) Colloidal** c) Fat d) Gas

17. The specific gravity of milk fat at 21°C is _____

- a) 0.93%** b) 0.56% c) 1.2% d) 0.43%

18. Name the major protein of milk

- a) casein** b) albumin c) globulin d) None of the above

19. As it comes from a cow, the solids portion of milk contains approximately 3.7 percent fat and ____ percent solids-not-fat.
a) 3% b) 6% **c) 9%** d) 12%
20. Water added to the milk is detected by checking the ____
a) acid degree value b) sediment content c) titratable acidity **d) freezing point**

Unit-III

21. The fat content of toned milk _____
a) 3% b) 5% c) 6% d) 0.5%
22. The main purpose of pasteurization
a) killing all the micro-organisms b) deteriorating the nutritional value of milk
c) killing the pathogenic micro-organism d) killing of spores only
23. Test performed for checking the efficiency of pasteurization is _____
a) lipase **b) phosphatase** c) analase d) catalase
24. Destruction of which enzyme is used as an index of super-HTST pasteurization?
a) catalase b) lipase **c) lactoperoxidase** d) pepsin
25. What is the freezing point of milk ?
a) 0 °C **b) -0.55 °C** c) -1 °C d) 2 °C
26. The milk becomes the property of the buyer once ?
a) the transport truck leaves the farm b) it is loaded into the processor's bulk tank
c) the transport truck reaches the plant **d) it is loaded into the transport truck on the farm**
27. After calving the cow gives milk for how many months ?
a) 2 months b) 6 months **c) 10 months** d) 1 year
28. The purpose of heat treatment on milk is
a) kill pathogenic micro-organism b) heat milk
c) evaporation d) taste enhancement
29. Temperature used in UHT treatment is _____
a) 90-100 °C b) 100-120 °C c) 120-125 °C **d) 130-140 °C**

30. _____ survive after pasteurization
a) non-thermodurics b) **thermodurics** c) aerobes d) anaerobes

Unit-IV

31. _____ bacteria are often called dairy starter culture.
a) **lactic acid bacteria** b) bifidobacteria
c) streptococcus species d) coliform bacteria
32. Saponification number of butter fat is
a) 190 b) 195 c) 210 d) **231**
33. Curd contains mainly ____ acid?
a) Benzoic b) Fumaric c) **Lactic** d) Malic
34. Curd is the _____ during the cheese making process.
a) a region which supplies substantial components required.
b) material found in the stomach of young calves
c) liquid portion at the bottom on the container that is hard to dispose of
d) **custard like substance form at top of the container.**
35. Butter milk is the product resulting from _____
a) an addition of extra fat to raw fluid milk
b) **removal of the butter (fat particles) form raw fluid milk**
c) heating of both butter and milk to facilitate the blending of them together
d) artificial product produced using non-saturated vegetable oils
36. Non-fat yoghurt must have a maximum of _____ fat prior to the addition of bulky flavours
a) **0.5%** b) 1% c) 2 % d) 3%
37. Butter is made from the milk and / or cream and must contain a minimum of ?
a) 5% fat b) 20% fat c) 50% fat d) **80% fat**
38. The yoghurt is made from _____
a) *Lactobacillus bulgaricus* b) *Streptococcus thermophiles*
c) *S.cremoris* d) **mixed culture of *Lactobacillus bulgaricus* and *Streptococcus thermophiles***
39. Which one is used as an emulsifying agent in process cheese blend?
a) Paprika b) Pectin c) **Glycerides** d) Whey Powder

40. Which of the following would be classified as 'Hard Cheese'?

- a) Brick b) Monterey jack **c) Cheddar** d) Brie

Unit-V

41. Cream is a liquid milk product separated from the fluid milk that must contain a minimum of ?

- a) 4% fat b) 10% fat c) 14 % fat **d) 18% fat**

42. which of the following milk product has high iron content ?

- a) paneer **b) khoa** c) curd d) cheese

43. Heavy cream (whipping cream) contains a minimum milk fat of?

- a) 10% b) 18% c) 30% **d) 36%**

44. Total solid content of ice cream should not be less than

- a) 16% b) 11% c) 21% **d) 36%**

45. In preparation of ice cream gelatin is used as

- a) sweetening agent b) emulsifier **c) stabiliser** d) flavouring

46. Commonly used for the preparation for the milk powder

- a) drum or roller drying b) spray drying
c) drum or roller drying and spray drying d) none of the above

47. Skimmed milk or skim milk is made when all the milk fat is _____

- a) removal from whole milk** b) removal from toned milk
c) removal from evaporated milk d) none of the above

48. Ratio of milk powder and water in recombined milk is _____

- a) 1:3 b) 1:2 **c) 1:7** d) 1:5

49. The process to increase in volume caused by whipping air into the ice cream mix during freezing is called

- a) homogenization b) aging **c) overrun** d) hardening

50. Semisolid ice-cream is placed in a hardening room at a temperature of about?

- a) -15 °C b) -20 °C **c) -34 °C** d) -44°C

Section-B

Answer the following in about 50 words:

(2 marks)

Unit-I

1. Define colostrum
2. Give any four comparison between cow's milk and buffalo's milk
3. What are the sources of microorganisms in milk?
4. Give the strategies for clean milk production
5. Name some thermophilic bacteria present in milk.
6. How microorganisms are classified based on temperature.
7. Define sanitation.
8. Name any two tests for detection of detergent in milk.
9. Why is cow milk considered better than buffalo milk?
10. Give the meaning of udder.

Unit-II

11. What is the composition of milk?
12. What are the factors affecting nature of milk
13. Give the importance and nutritive value of milk
14. Define specific gravity of milk
15. Define SNF.
16. How to test milk for adulteration
17. Define MBRT.
18. Define Resazurin test.
19. Name any two properties of milk.
20. What are the adulterants in milk?

Unit-III

21. Why chilling of milk is necessary?
22. What is the process of heat treating milk?
23. Define Sterilisation.

24. Define Pasteurisation.
25. What is toned milk ?
26. Expand UHT.
27. What is Standard milk?
28. What is special milk?
29. What is acid phosphatase test?
30. What is milk packaging?

Unit-IV

31. Define starter culture of milk.
32. What is the function of starter culture?
33. Expand LAB.
34. List down fermented milk products.
35. What are the different types of butter?
36. What curd means?
37. What is the difference between butter and ghee?
38. What is buttermilk?
39. What are the different types of cheese?
40. Name any two uses of fermented milk products?

Unit-V

41. What is condensed milk?
42. List down non fermented milk products.
43. Which milk is best for Ice-Cream?
44. What is Skim milk called?
45. Give the uses of Khoa.
46. Name any two dis-advantages of skim milk powder.
47. What is ice-cream defines as?
48. What are advantages of milk powder?
49. Define Khoa.
50. Give any four types of cream.

Section- C

Answer in about 200 words:

(6 mark)

Unit-I

1. What is Clean milk production?
2. Which factors affect clean milk production?
3. How is milk produced in the udder?
4. What are the sources of microorganisms?
5. What are the main sources of microbial contamination in milk?
6. What are the microorganism found in raw milk?
7. What is dairy detergent?
8. How do you clean and sanitise dairy equipments?
9. What are the common chemicals used in cleaning and sanitising?
10. What are the disadvantages of buffalo's milk?

Unit-II

11. What is the composition of milk?
12. Explain the importance of milk.
13. Give the nutritive value of milk.
14. Give the properties of milk.
15. Explain the common adulterants of milk.
16. What is MBRT?
17. How do you calculate the amount of acid in fat?
18. Describe SNF.
19. Explain water adulteration.
20. Discuss about Resazurin test.

Unit-III

21. How do you market the fluid milks?
22. Explain sterilisation.
23. What is the importance of chilling in dairy industry?

24. What is the process of heat treating milk?
25. Describe UHT milk.
26. What are the benefits of toned milk?
27. Write Short notes on a) Milk transportation b) Milk collection
28. Describe the process of milk packaging.
29. Give the advantages of UHT milk.
30. Write about special milk.

Unit-IV

31. What is needed for preparation of starter culture?
32. What are the characteristics of good starter culture?
33. Give the nutritional value of ghee.
34. Give the benefits of Yogurt.
35. Explain the different types of Cheese.
36. Which type of starter culture is used in preparation of curd?
37. Write about the biochemical activities of starter culture.
38. Explain the nutritive value of butter milk.
39. List out the uses of fermented milk products.
40. Explain the process of making Ghee.

Unit-V

41. How is condensed milk made?
42. How do you make cream out of milk?
43. How many types of khoa are there?
44. What is the standard of khoa for its fat content?
45. What are the characteristics of skimmed milk?
46. What are the emulsifiers in ice-cream?
47. List out the methods of manufacturing non-fermented milk products.
48. What are the process involved in making powdered milk?
49. Describe the process of making khoa.
50. Write in brief about different micro-organisms in milk.

Section- D

Answer in about 500 words:

(12 marks)

Unit-I

1. Explain the strategies for clean milk production
2. Explain dairy sanitizers and their properties.
3. List out the importance of colostrum.
4. Differentiate between goat's and cow's milk.
5. Write in brief about secretion of milk in Udder.
6. Discuss about detergents and sanitizers.
7. Write in brief about colostrum.
8. Explain the cleanliness of the animal.
9. List out the nutritive values of cow's milk.
10. What are the advantages of buffalo milk?

Unit-II

11. Explain the factors that affect quality and quantities of milk.
12. Explain in detail about detection of adulterants.
13. Explain the acidity test estimation of fat.
14. Explain in detail about important constituents of milk.
15. How do you determine the specific gravity of milk?
16. Write briefly about milk.
17. Explain water adulteration.
18. Write in brief about total solids of milk.
19. Discuss about lactometer.
20. Write in brief about adulterants of milk.

Unit-III

21. Explain the various types of transport in milk.
22. Explain the test for effective Pasteurisation.
23. Differentiate between UHT and fresh milk.
24. What are the different methods of packaging of milk?
25. Explain phosphatase test.
26. Explain about Pasteurisation

27. Explain about chilling of milk.
28. Write in brief about role of transport in milk.
29. Elaborate about toned milk.
30. Write about advantages of special milk.

Unit-IV

31. Explain the role of starter culture.
32. Discuss about the steps of Butter preparation.
33. List out the methods of manufacturing fermented milk products.
34. Describe the uses of any two fermented milk products.
35. Explain the factors that causes shrinkage in cheese.
36. Briefly discuss about the steps of cheese preparation.
37. Write in brief about butter milk.
38. List out the biochemical activities in starter culture.
39. Explain in brief about preparation of curd.
40. Explain the process of making Yoghurt.

Unit-V

41. List out the methods of manufacturing non-fermented milk products.
42. Discuss the uses of any two non- fermented milk products.
43. Differentiate between skim milk and condensed milk.
44. Explain the milk powder production process
45. Explain the preparation of condensed milk.
46. Explain in brief the factors affecting quality and yield of Khoa.
47. Write briefly about ice-cream preparation.
48. Discuss about skim milk.
49. Write about the nutritional value of milk powder.
50. List out the process of making khoa.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

I B.Sc Microbiology – Semester - I

Skill Enhancement Course I – Professional English for Microbiology - I – 21UMIPE1

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

- 1) _____ lab coat before entering the lab.
a) **Wear** b) Dispose c) Rinse d) Adjust
- 2) The bacteria are _____ in a conical flask.
a) **cultured** b) put up c) settled d) closed
- 3) I have invented pasteurization. Who am I?
a) Edward Jenner b) **Louis Pasteur** c) Leeuwenhoek d) Lister
- 4) Identify the type of sentence - Place the microscopic slide on the stage of the microscope.
a) **Imperative** b) Simple c) Complex d) Non-Imperative
- 5) In the term Microbiology, 'logy' means _____
a) collection b) **study** c) research d) observation
- 6) Arrange the jumbled word "caimsnalule" _____
a) animals b) **animalcules** c) animal kingdom d) animalia
- 7) Identify the Verb in this sentence. "**Adjust the knob of the microscope**"
a) **Adjust** b) knob c) microscope d) of the
- 8) You can use me to see tiny microbes. Who am I? _____
a) lens b) magnifying glasses c) d) **microscope**
- 9) _____ the spills immediately.
a) Dilute b) dillute c) **Clean** d) Cleen
- 10) Identify this contributor who contributed to the field of Microbiology.

- a) Louis Pasteur b) Edward Jenner c) **Antonie Van Leewenhoek** d) Lord Joseph Lister

Unit –II

- 11) Cells are _____ with crystal violet.
a) coloured b) **stained** c) decolourized d) fixed
- 12) Chlorine is a/an _____.
a) antiseptic b) chemical c) **disinfectant** d) **bleach**
- 13) *E. coli* abbreviate _____.
a) *Echerichia coli* b) *Esherichia coli* c) *Escheichia coli* d) ***Escherichia coli***
- 14) Heat sterilization is a/an _____.
a) **method** b) place c) instrument d) chemical
- 15) A _____ is a place that is used to conduct experiments.
a) seminar room b) classroom c) **laboratory** d) lecture hall
- 16) _____ algae and virus are eukaryote.
a) **Both** b) Unlike c) Yet d) But
- 17) _____ bacteria, algae are photosynthetic.
a) As well as b) **Unlike** c) Likewise d) Also
- 18) Gram's staining _____ between gram positive and gram negative cell wall.
a) **differentiate** b) compare c) relate d) associate
- 19) Smear is prepared using _____ & _____.
a) test tube and glass slide b) glass slide & inoculation needle
c) test tube & inoculation needle d) **glass slide & inoculation loop**
- 20) Bacterial smears must be prepared _____ any of the staining techniques
a) **prior to** b) after c) next to d) later to

Unit-III

- 21) An _____ can be defined as an interaction between two people, where questions are asked to elicit information.
a) dialogue b) conversation c) **interview** d) discussion
- 22) _____ good communication skill and vocabulary.
a) **Acquire** b) Ecquire c) Decquire d) Get
- 23) An ideal time frame for brain storming would be _____.
a) 12 minutes b) 5 minutes c) **30 minutes** d) 20 minutes
- 24) Give the constructive way of expressing 'Let's vote on it'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I understand how you feel, but I think you might consider also ...

25) Give the constructive way of expressing 'That doesn't make sense at all'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

26) Give the constructive way of expressing 'You are dead wrong'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

27) Give the constructive way of expressing 'Wow! That is ever drub'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

28) Give the constructive way of expressing 'That is not what the teacher asked us to do'

a) I think we should check our notes and the original assignment.

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

29) Give the constructive way of expressing 'That really offends me!'

a) I think we should check our notes and the original assignment

b) Does everyone agree?

c) I understand how you feel, but I think you might consider also ...

d) I don't think I agree. Could you explain?

30) _____ is a solidifying agent in culture media.

a) Agar b) Agaar c) Aggar d) Aagar

Unit-IV

- 31) Algae is a _____ word
a) monosyllabic **b) bisyllabic** c) trisyllabic d) tetrasyllabic
- 32) Find the synonym of the term 'determined'
a) decisive b) enormous c) modernistic d) fiction
- 33) Electron is a _____ word
a) monosyllabic **b) bisyllabic** c) trisyllabic d) tetrasyllabic
- 34) Crystallography is a _____ word
a) bisyllabic b) trisyllabic c) tetrasyllabic **d) pentasyllabic**
- 35) Microscope is a _____ word
a) bisyllabic **b) trisyllabic** c) tetrasyllabic d) pentasyllabic
- 36) Find the synonym of the term 'Reproduction'
a) forging **b) duplication** c) xeroxing d) cloning
- 37) Find the synonym of the term 'Multicellular'
a) many-celled b) multilayered c) multinucleated d) manysided
- 38) Find the synonym of the term 'Unicellular'
a) uninucleated b) unilayered **c) single-celled** d) one-sided
- 39) Ruby loves Latha. The structure of this sentence is _____
a) S+V **b) S+V+O** c) S+O d) S+O+V
- 40) The baby sleeps. The structure of this sentence is _____
a) S+V b) S+V+O c) S+O d) S+O+V

Unit-V

- 41) The meaning of the term virus is _____
a) sweet b) food **c) poison** d) toxin
- 42) An individual virus is a virion.
a) I agree b) I disagree c) I strongly disagree **d) I strongly agree**
- 43) Viruses have cell membranes, cytoplasm, ribosomes, but they have genetic material.
a) I agree **b) I disagree** **c) I strongly disagree** d) I strongly agree
- 44) Since viruses evolve, they are living organisms.
a) I agree b) I disagree c) I strongly disagree **d) I strongly agree**
- 45) A virus is made up of DNA or RNA and a protective protein coat.
a) I agree b) I disagree c) I strongly disagree **d) I strongly agree**
- 46) In note making, there are _____

a) **5R's** b) 3R's c) 6R's d) 10R's

47) Use _____ when discussing any quantitative analysis

- a) **pie charts and graphs** b) bar diagram
c) graphs and table d) pictogram

48) The _____ is a note taking system

- a) Kernel notes **b) Cornell notes** c) Blobbel notes d) Tierra notes

49) _____ is/are visual notes.

- a) Mind map **b) Sketch notes** c) Note making d) Kernel notes

50) _____ is the character of good summary.

- a) **Briefness** b) Overlapping c) Repetition d) Duplication

Section-B

Answer the following in about 50 words:

(2 marks)

Unit-I

- 1) Write an informal conversation between you and your friend about Microbiology.
- 2) Write any four instructions to handle a microscope.
- 3) Define the term Molecular Biology.
- 4) Write the meaning of the expression 'Cell wall'
- 5) Write the meaning for the expression 'Prokaryotes'.
- 6) Write the meaning for the expression 'Eukaryotes'.
- 7) Write a slogan on Bacterial cell wall.
- 8) Find out any 4 words related to Microbiology from the word puzzle given below:

M	B	A	C	T	E	R	I	A
X	G	L	U	C	O	S	E	H
N	U	C	L	E	U	S	X	B
Z	R	C	E	L	L	G	C	I
R	K	F	U	N	G	I	N	G

- 9) Write any two differences between a prokaryotic and eukaryotic cell.
- 10) Who is your favorite contributor to the field of Microbiology and Justify?

Unit-II

11) Rearrange the following jumbled sentences:

- Turn the Rotating Nosepiece to set the lowest power Objective Lens into

position.

- Place the microscopic Slide on the Stage of the microscope.
- Turn the Focus Knob to move the Stage upward.
- Look through the Eyepiece and move the Focus Knob for the image to come into focus.
- Fasten the Slide with the Stage Clips on the Stage.

12) Write a caption on sterilization.

13) Frame a single sentence definition using 'spore'

14) Give the meaning of the word 'Etymology'

15) Write an extended definition using the 'critical item'

16) Identify the word, class, and distinguishing feature in the single sentence definition -

'A hot air oven is an instrument used for sterilizing using hot air'

17) Write steps of smear preparation by seeing the following image.

18) Write a flow chart on smear preparation.

19) Describe the four step procedure for gram's staining using the picture given below.

20) Frame a single sentence definition using the given clues.

- Hot air Oven
- Instrument
- Sterilization using dry heat

21) Write a caption on sterilization.

Unit-III

- 22) Have you attended an interview? If yes share your experience.
- 23) Find the one-word substitute in the passage for the following:
- a substance that provides nourishment essential for the maintenance of life and for growth.
- 24) Find the one-word substitute in the passage for the following:
- a solid, naturally occurring inorganic substance.
- 25) Agar medium to be _____(**poured**/pulled) into plates is sterilized in a flask, _____(**and then**/and) poured afterward.
- 26) Match the following:
- Basal media - used for specimen cannot be cultured soon after collection
 - Transport media - used for storing the bacteria for a long period of time
 - Differential media - generally used for growth of bacteria
 - Storage media - used to differentiate microbes
- 27) Write any two instructions to be followed during brainstorming.
- 28) Write any two Instructions to generate a Mind Map.
- 29) Draw a mind map on microorganisms.
- 30) Write the difference between basal media and enriched media.

Unit-IV

- 31) Complete the following sequence:
- Kingdom → _____ → Class → Order → _____ → Genus → Species
- 32) Syllabify the following words:
- a) Topography
 - b) Morphology
- 33) Write the three steps involved in preparing a short speech.
- 34) Write about the invention of electron microscope.
- 35) Write any two monosyllabic words.
- 36) Write any two disyllabic words.
- 37) Write any two trisyllabic words.
- 38) Write any two pentasyllabic words.
- 39) Syllabify the following words:
- a) Transmission
 - b) Magnetic

40) What are the types of speech?

Unit-V

41) Imagine and draw the structure of some virus.

42) RNA is the genetic material of virus- Comment on this statement.

43) List down don'ts while making a power point presentation.

44) List down do's while making a power point presentation.

45) Comment on MS PPT.

46) Why is Note Making important?

47) Write down the 5R's of note making.

48) Write the general principles of note making.

49) Draw a chart depicting the formats for notes.

50) Which profession you like the most?

Section- C

Answer in about 100 words:

(5 mark)

Unit-I

1) Write about your favourite invention in the field of Microbiology.

2) Describe the most desired profession for a microbiology student.

3) What would happen if there is no cell wall surrounding a bacteria cell?

4) Frame instructions for using and handling a microscope.

5) Write a formal conversation between a student and professor.

6) Match the expressions with their meanings

- | | |
|------------------|--|
| a) Semirigid | - a toxin present inside a bacterial cell that is released when it disintegrates. |
| b) Tetra peptide | - The bursting or rupturing of cell membrane due to osmotic movement of water into the cell when the cell is in a hypotonic environment. |
| c) Osmotic lysis | - an enzyme which acts outside the cell that produces it. |
| d) Exoenzymes | - a peptide composed of four amino acids. |
| e) Endotoxin | - rigid to some degree or in some parts. |

7) Draw the structure of bacterial cell and label the parts.

- 8) Differentiate between prokaryotic and eukaryotic cell.
- 9) Design a poster on history of Microbiology.
- 10) Narrate the differences between gram positive and gram negative cell wall.

Unit-II

- 11) Write an imaginary conversation taking place between gram positive and gram negative bacteria during gram staining.
- 12) Draw a flow chart for Gram's staining.
- 13) Read the passage and answer the questions:

A bacterial smear is a thin layer of bacteria placed on a slide for staining. Preparing the smear requires attention to a number of details that help prevent contamination of the culture and ensure safety to the preparer. The first step in most bacterial staining procedures is the preparation of a smear. Each step in this procedure has an important reason, and each should be followed carefully as a prerequisite to successful work. In a smear preparation, cells from a culture are spread in a thin film over a small area of a microscope slide, dried, and then fixed to the slide by heating or other chemical fixatives. A good smear preparation is the key to a good stain. The following procedure is one that you will do repeatedly throughout the semester, so pay close attention to your technique. The most common errors in staining are due to poor smear preparation.

- a) What is the first step in staining procedures?
 - b) Which is the key to a good stain?
 - c) Define bacterial smear.
 - d) How bacterial smear is done?
 - e) What is the reason behind errors in staining?
- 14) Write extended definitions using the given words
 - a) Decontamination
 - b) Heat sterilization
 - 15) From each sentence given below recognize the term and write appropriate extended definition.
 - Bacterial cell harbour spore
 - Hot air oven uses dry heat Sterilization
 - Decontamination is an essential step in maintaining a sterile equipment in labs, hospitals, industries, etc.
 - 16) Write a single sentence definition for the following words
 - a) Disinfection
 - b) Spore
 - c) Critical item
 - d) Decontamination
 - e) Disinfectant
 - 17) What are the uses of hot air oven in your laboratory?
 - 18) Give the importance of skimming and scanning.
 - 19) Write a formal conversation of handling a microscope between the teacher and the student.
 - 20) What happens to the gram negative cell wall during decolourisation? Write an

imaginative answer by referring the picture.

- 21) How will you compare and contrast sentences using different words. Name any ten words.
- 22) Name any five basic microbiology instruments in the laboratory. Write a one line definition of the instruments.

Unit-III

- 23) List down some skills one can develop by listening to interviews.
- 24) Write some instructions to be followed during brainstorming.
- 25) If one listen to interviews he/she will acquire good communication skill and vocabulary – justify the above quote.
- 26) Write a slogan on Mind mapping.
- 27) Arrange the jumbled sentence correctly – ‘accurately down quickly getting and information’
- 28) Arrange the jumbled sentence correctly – ‘which and quotes best you selecting need facts information’
- 29) Complete the given sentences:
- a) _____ (**Determine**/Decide) what _____ (**information**/news) you need from the interview.
 - b) _____ (**Encourage**/Discourage) the generation of _____ (noncreative/**creative**) ideas.
 - c) Do not _____ or evaluate ideas (**criticize**/kriticize)
 - d) Record ideas _____ (inaccurately/**accurately**)
 - e) Complete the sentence - _____ (**Identify**/Identity) the _____ (fauts/facts) of the interview
- 30) Draw a mind map on Microscopy.

Unit- IV

- 31) Work-out a short speech on the topic ‘Microscope is an important tool in a Microbiology lab’

- 32) Match the following
- | | |
|-------------------------|--|
| a) Persuasive | - To educate the audience about a topic or idea |
| b) Informative | - To state the problem and to propose/suggest a solution |
| c) Cause and Effect | - To make your audience accept what you believe |
| d) Problem and Solution | - To give information on the chosen topic |
| e) Demonstrative speech | - To explain the phenomena |
- 33) Write some tips to be followed while rehearsing a speech.
- 34) Write a short speech on a topic of your interest.
- 35) Syllabify the following words and write how many syllabi each word has:
- a) Transmission
 - b) Topography
 - c) Morphology
 - d) Magnetic
 - e) Scanning
- 36) Write a short speech on electron microscope.
- 37) Write a short speech on the importance of Microscope.
- 38) Design a poster on electron microscope.
- 39) Write any 5 words and syllabify it.
- 40) Are you interested in speech? If yes what skills make you to be? If no what is your barrier to do it?

Unit-V

- 41) Think and write about the different skill sets required for some of the jobs specific to your course of study and discuss in small groups.
- 42) Draw a neat illustration describing the structure and characteristics of virus.
- 43) Write a Problem - Solution Essays on Non-biodegradable waste.
- 44) Write a Problem - Solution Essays on Genetically modified food.
- 45) Write the characteristics of a good summary.
- 46) Prepare a summary of the passage on the human immune system.
- 47) What are the essential components of Problem Solution essay?
- 48) Write a Problem - Solution Essays on Immunization.
- 49) In your perception what do you think about Immunization?
- 50) Is it essential to possess the skill of summary writing?

Section- D

Answer in about 400 words:

(10 marks)

Unit-I

- 1) Differentiate and compare prokaryotic and eukaryotic cell.
- 2) Write an essay on structure of bacterial cell.
- 3) Fill the blanks with these suitable words
(Rinse, Wear, Arrange, Dispose, Disinfect, Handle, Do not, Clean, Dilute, Do not)
 1. _____ lab coat before entering the lab.
 2. _____ eat in the lab.
 3. _____ the concentrated acids in the presence of your professor.
 4. _____ glassware with care.
 5. _____ apparatus before and after the experiment.
 6. _____ the spills immediately.
 7. _____ waste in the dustbin.
 8. _____ apparatus in order after the experiment is over.
 9. _____ water to clog in the sink.
 10. _____ your hands before and after using lab.
- 4) Write the use of the following modal auxiliaries and frame sentences using the same:
 - a) Could -
 - b) Will -
 - c) Shall -
 - d) Should -
 - e) Might -
- 5) Justify why you consider cell wall as a protective barrier around the bacterial cell.
- 6) Can we construct a bacterial cell wall chemically - Justify?
- 7) Match the following:

1. I don't have a cell wall. Who am I?	Plant cell
2. I have a cell wall made up of cellulose. Who am I?	Bacterial cell
3. My cell wall is made up of peptidoglycan. Who am I?	Animal cell
4. I don't have a true nucleus.	Eukaryotic cell
5. I am used to observe microbes. Who am I?	Microscope

8) Do this word puzzle on cell and find out any 12 words.

9) Frame a conversation between a student and a teacher about a favorite contributor in the field of Microbiology.

10) Narrate a story with a picture given below:

Unit-II

11) Write the gist of gram's staining in a paragraph and give a title for it.

12) Write a flow chart for general staining procedure.

13) Write a conversation between gram positive and gram negative bacteria.

- 14) Describe the process of performing Gram's staining in your own words and write in a paragraph.
- 15) Write a role play between a teacher and a student about favorite contributor to the field of Microbiology.
- 16) Write a conversation between an interviewer and a contributor in the field of Microbiology.
- 17) Read the following passage on smear preparation and answer the questions given below.
Smear preparation technique consists of spreading a small volume of sample on a slide and air drying the film before staining and microscopy. Bacterial smears must be prepared prior to any of the staining techniques.

Step I: Preparation of the glass slide:

- Clean, grease free slides are needed for smear preparation.
- Grease or oil from the fingers on slides must be removed by washing the slides with soap and water
- Finally rinse the slide with 95% alcohol and dry it.
- Hold the slide by their edge.

Step II: Labeling of slides:

- Proper labelling of the slide is essential.
- Every slide should be labelled clearly.
- A lead pencil is used to write on the frosted areas of the glass slide.

Step III: Preparation of smear:

- An evenly spread smear should be prepared covering area of 15-20mm diameter.
- Avoid thick and dense smear because thick smear prevent light penetration to visualize the morphology of cell.
- A good smear is one that, when dried, appears as a thin whitish layer or film. The print of textbook should be legible through the smear.
- Different techniques are used for smear preparation depending upon culture media

i. Broth cultures (liquid medium):

- Resuspend the culture by tapping the tube with your finger.
- Depending on the size of the loop, one or two loopfuls should be applied to the center of the slide with a sterile inoculating loop and spread evenly over an area about the size of a dime.
- Set the smears on the laboratory table and allow to air-dry.

ii. Culture plates (Solid medium):

- Organisms cultured in a solid medium produce thick, dense surface growth and are not amenable to direct transfer to the glass slide.
- These cultures must be diluted by placing one or two loopfuls of water on the center of the slide in which the cells will be emulsified.
- Transfer of the cells requires the use of a sterile inoculating loop or a needle.
- Only the tip of the loop or needle should touch the culture to prevent the transfer of too many cells.
- Suspension is accomplished by spreading the cells in a circular motion in the drop of water with the loop or needle. This helps to avoid cell clumping.
- The finished smear should occupy an area about the size of a nickel and should appear as a translucent, or semi-transparent, confluent whitish film

Step IV: Air dry

- Smear should be allowed to dry completely at room temperature at safe place

Step V: Fixation of smear:

- The purpose of fixation of smear is to preserve and prevent smear being washed away during staining.
- Smears are fixed by heat, alcohol and occasionally by other chemicals.

i. Heat fixation

- After the smear is air dried completely, rapidly pass 3-4 times through the flame of Bunsen burner or spirit lamp.
- Avoid too much heating.
- After heat fix, allow the smear to cool before staining.

ii. Alcohol fixation:

- Allow smear to air dry completely
- Fix the smear with one or two drops of 70% alcohol, and leave it for 2 minutes until the alcohol dries up.

Questions:

- a) What is heat fixation?
- b) What is alcohol fixation?
- c) Define smear.
- d) How smear is prepared?
- e) How smear is prepared from solid medium?

18) Frame single sentence definition and extended definition for the following words:

- a) Disinfectants
- b) Decontamination
- c) Heat Sterilization
- d) Filtration
- e) Sanitizer

19) Write an essay on sterilization and emphasize its importance in a microbiology lab.

20) Imagine yourself as Antonie Van Leeuwenhoek's and do a role play on Antonie Van Leeuwenhoek's contribution to Microbiology.

Unit- III

21) Have you attended an interview before? If yes narrate your experience as an essay. If no narrate how will you respond and react to an interview.

22) Draw a mind map on a topic of your interest.

23) If you are an interviewer what are the skills you must have?

24) List down some steps to be followed during a discussion.

25) Read the passage and answer the questions:

Bacteria and fungi are grown on or in microbiological media of various types. The medium that is used to culture the microorganism depends on the microorganism that one is trying to isolate or identify. Different nutrients may be added to the medium, making it higher in protein or in sugar. Various pH indicators are often added for differentiation of microbes based on their biochemical reactions: the indicators may turn one color when slightly acidic, another color when slightly basic.

Other added ingredients may be growth factors, NaCl, and pH buffers which keep the medium from straying too far from neutral as the microbes metabolize. In this exercise, you will make all-purpose media called trypticase soy broth and trypticase soy agar. These 2 media, one a liquid and the other a solid are the exact same formula save for the addition of agar agar (really- agar agar), an extract from the cell walls of red algae. The old way to make media was by the cookbook method--- adding every ingredient bit by bit. The only time that is done today is when making a special medium to grow a certain finicky organism, where particular growth factors, nutrients, vitamins, and so on, have to be added in certain amounts. This medium is called a chemically defined medium (synthetic). Fortunately, the most common bacteria that we want to grow will do nicely with media that we commonly use in lab. Some of our media is bought, but most is produced in the prep area behind the lab. Since this type of medium has some unknown ingredients, or sometimes unknown quantities it is called complex media. It is really very simple to make complex media these days:

1. Rehydrate the powder form of the medium
2. Stir and boil the agar medium to get the agar powder dissolved (if making an agar medium rather than a broth medium)
3. Distribute the medium into tubes
4. Autoclave to sterilize the tube media
5. Autoclave the agar medium for plate production and then pour into sterile petri dishes

STERILIZATION AND THE AUTOCLAVE

When microbiological media has been made, it still has to be sterilized because of microbial contamination from air, glassware, hands, etc. Within a few hours there will be thousands of bacteria reproducing in the media so it has to be sterilized quickly before the microbes start using the nutrients up. The sterilization process is a 100% kill, and guarantees that the medium will stay sterile UNLESS exposed to contaminants by less than adequate aseptic technique to expose to air. Media sterilization is carried out with the autoclave, basically a huge steam cooker. Steam enters into a jacket surrounding the chamber. When the pressure from the steam is at a certain point in the jacket, a valve allows the steam to enter the chamber. The pressure will go up over 15 pounds per square inch (psi): at this point the timer begins to count down usually for 15 minutes, depending on the type of media. The high pressure in a closed container allows the temperature to go above the highest temperature one could get by just boiling, around 121 °C. Therefore, the parameters for sterilization with an autoclave are 121 °C at >15 psi for 15 minutes. Fifteen minutes is the thermal death time for most organisms (except some really hardy spore formers). The prepared media is distributed in different ways, depending on the form one is making. Broths and agar deeps are dispensed into tubes and then sterilized. Agar slant tubes are sterilized and then the rack is tilted to allow the agar to solidify in a slanted fashion. Agar medium to be poured into plates is sterilized in a flask, and then poured afterward. Not all media or solutions can be sterilized via an autoclave. Certain high-protein solutions such as urea, vaccines, and serum will denature in the extreme heat, and so they may have to be filter-sterilized without heat.

You will be making slant and broth media, but not plate media in this lab.

PROCEDURE

1. Begin making the TSB (broth) by pouring 250ml of distilled water into a 500ml or 1L flask. Put in the stir bar and turn on the stir plate so that the surface is just disturbed. Add 3.25 grams of the TSB powder to this flask and allow it to dissolve (will happen quickly). No heat needs to be applied at this stage.
2. Once the powder is dissolved, pipet out 5ml green cap. Green caps are always used for TSB.
3. With the remaining solution (about 100ml) still stirring, add 2 grams of agar powder.

4. The next step will require you to apply heat to the mixture. Before you do this, however, you should be aware that agar has a strong tendency to boil over when it reaches 100°C. Someone in your group should be watching the flask at all times once you see steam coming off of it. At the first sign that the mix is near boiling, REMOVE it from the hot plate (paper towels around the flask neck). DO NOT simply turn off the heat, letting the flask sit there. The metal plate retains a significant amount of heat, and turning off the heat will not prevent the flask from boiling over. Folded paper towels allow you to grasp the flask neck tightly, yet not burn your hand.
5. Have you read step 4? OK, then you can turn on the heat to setting 9 (not High). Make sure that the magnetic bar is stirring the solution.
6. Upon boiling, the agar dissolves, it will turn clear, deeper tan. Remove it from the heat and pipette out 5ml aliquots into 15 tubes for slants (will not be BE slants until removed from the autoclave and tilted to the side to solidify). Cover the slant tubes with yellow caps. The rest of the agar medium in the flask will be poured into 1 large flask for the class. From this point on, yellow caps will be used for nutrient agar slants.
7. Place all of the tubes you have pipetted out in the plastic autoclave racks on the instructor's table as well as the remaining of your melted agar. All agar slants go in one rack, broths in another rack, etc.
8. Dispose of your used pipets in the pipet holder. These glass pipets are reusable, so don't throw them in the trash.

a) Answer the following questions in your own words:

- 1) What are two types of media? How is media sterilization carried out?
- 2) What is the difference between macro and micro nutrients?

b) Find the one-word substitute in the passage for the following:

- 3) a substance that provides nourishment essential for the maintenance of life and for growth.
- 4) a solid, naturally occurring inorganic substance.

c) Say whether the following statements are correct.

- 5) Agar medium to be poured into plates is sterilized in a flask, and then poured afterward.

26) Write an autobiographical essay on 'I am a microbe'

27) Create a mind map on Microscopy.

28) Write an essay on types of culture media and make a conclusion.

29) Write an interview taking place between a MD of a pharmaceutical company and a Microbiologist.

30) Draw a mind map on Microorganisms.

Unit- IV

31) Read the passage, write some 5 key points and syllabify 5 words from the passage.

Electron microscopes are scientific instruments that use the beam of highly energetic electrons to examine objects on a very fine scale. The electron microscope gives information about the topography morphology composition and crystallographic nature of any object. Electron microscopes were developed to overcome the limitations of light microscopes. The electron microscopes are of two types namely transmission electron microscope TEM and scanning electron microscope SEM. Max Knoll and Ernst Ruska of Germany designed the transmission electron microscope in 1931 working on an electron microscope. Electron microscopes function exactly as their optical counterparts except that they use a beam of electrons instead of light to

view the specimen and gain information about its structure and Composition. Electron microscope consists of an electron source, magnetic lenses, condenser lens, projector lens and objective lens. Projector lens are magnetic lenses the magnetic lens is formed by passing suitable steady current through a coil of wire enclosed in an EIN shield the magnetic lenses help to control the path of the electrons there is a viewing port and also a fluorescent screen the basic steps involved in the working of all electron microscopes can be understood with the help of this schematic representation the electrons emitted from the hot filament of the electron source are accelerated by high potentials the condenser magnetic lens concentrates these electrons the object to be viewed is placed on a special holder the concentrated beam of electrons is made to strike the object to be viewed the electrons get partially absorbed by the object the object of lens placed below the object forms an enlarged image of the object this magnified image serves as a virtual object for the projector lens the magnetic projector lens produces the final enlarged image of the object on a fluorescent screen for visual examination or on a photographic plate for permanent record the whole system is placed in an evacuated chamber so that the electrons are able to move freely from the filament to the screen electrons source all electron microscopes generally use a thermionic gun as a source of electrons a Fermi on a gum is shown here a positive electric potential is applied to the anode plate the filament which is the cathode is heated until a stream of electrons is produced the electrons are then accelerated by the positive potential down the column.

32) Write down the steps involved in preparing a speech.

33) Frame a short speech to emphasize the importance of Microbiology.

34) Write an essay using the data in the tabular column given below

Features of Algae	
Kingdom	Protista
Size	Microscopic to 200 feet length
Morphology	Filamentous
Motility	Flagella
Genus	<i>Spirogyra, Palmaria, Stigeoclonium, Macrocyctis</i>

35) Draw a pie chart depicting the applications and uses of algae.

36) Write sentences with connectives and linkers.

37) Draw a bar chart for the uses of algae.

38) The following passage is on Algae. Read the passage and present the data given in this passage as a tabular column.

Algae, members of a group of predominantly aquatic photosynthetic organisms of the kingdom Protista. Algae have many types of life cycles, and they range in size from microscopic. *Micromonas* species to giant kelps that reach 60 metres (200 feet) in length. Their photosynthetic pigments are more varied than those of plants, and their

cells have features not found among plants and animals. In addition to their ecological roles as oxygen producers and as the food base for almost all aquatic life, algae are economically important as a source of crude oil and as sources of food and a number of pharmaceutical and industrial products for humans. The taxonomy of algae is contentious and subject to rapid change as new molecular information is discovered. The study of algae is called phycology, and a person who studies algae is a phycologist. The algae can be divided into several types based on the morphology of their vegetative, or growing, state. Filamentous forms have cells arranged in chains like strings of beads. Some filaments (e.g., *Spirogyra*) are unbranched, whereas others (e.g., *Stigeoclonium*) are branched and brush like. In many red algae (e.g., *Palmaria*), numerous adjacent filaments joined laterally create the gross morphological form of the alga. Parenchymatous (tissue like) forms, such as the giant kelp (*Macrocystis*), can measure many metres in length. Coenocytic forms of algae, such as the green seaweed *Codium*, grow to fairly large sizes without forming distinct cells.

39) Differentiate Pie chart and bar chart.

40) Write an essay on Microscope and its invention.

Unit- V

41) Write a problem and solution essay on COVID 19 vaccination.

42) Draw a PPT slide on structure of virus.

43) Draw a flow chart on life cycle of virus.

44) Draw a PPT slide on life cycle of virus.

45) Choose a simple topic related to your subject and draw a PPT containing 5 slides.

46) Read the passage and answer the following questions:

Characteristics of Viruses:

An individual virus is called a virion. It is a tiny particle much smaller than a prokaryotic cell. Because viruses do not consist of cells, they also lack cell membranes, cytoplasm, and other cell organelles. Without these structures, they are unable to make proteins or even reproduce on their own. Instead, they must depend on a host cell to synthesize their proteins and to make copies of themselves. Viruses infect and live inside the cells of living organisms. When viruses infect the cells of their host, they may cause disease. For example, viruses cause AIDS, influenza (flu), chicken pox, and the common cold. Although viruses are not classified as living things, they share two important traits with living things. They have genetic material, and they can evolve. This is why the classification of viruses has been controversial. It calls into question just what it means to be alive.

Structure of Viruses

A virus particle consists of DNA or RNA within a protective protein coat called a capsid. The shape of the capsid may vary from one type of virus to another. Some viruses have an envelope of phospholipids and proteins. The envelope is made from portions of the host's cell membrane. It surrounds the capsid and helps protect the virus from the host's immune system. The envelope may also have receptor molecules that can bind with host cells. They make it easier for the virus to infect the cells.

Classification of Viruses

Viruses are classified on the basis of several traits. For example, they may be classified by capsid shape, presence or absence of an envelope, and type of nucleic

acid. The table below gives examples of virus families and their traits. Most systems of classifying viruses identify at least 20 virus families.

Questions:

- a) Have any of these viruses made you sick?
- b) Describe a virion.
- c) Why are viruses not able to make their own proteins?
- d) Describe the structure of a virus.
- e) Do you think viruses should be classified as “living organisms”? Why or Why not?

47) Write the 5R's of note making.

48) Draw a mind map on note making.

49) Draw a neat sketch on life cycle of virus.

50) Discuss the various job opportunities related to your subject of study.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

I B. Sc Microbiology – Semester- II

Core I Microbial Diversity

Sub Code: 21UMIC21

Question Bank

Section-A

Choose the best answer:

(1 mark)

UNIT I

1. The basic and first choice of taxonomists for the classification of bacteria is _____
a. **Bergey's manual** b. NCTC c. ACTC d. None
2. Difference and variation among population is called as _____
a. Variety b. **Diversity** c. Combination d. Hybrid
3. Microbes are classified in to how many groups?
a) 2 b) 4 c) 5 d) 1
4. Method of arranging organisms into groups is called _____
a) Array b) ordering c) **classification** d) Division
5. ICBN of classification is used for _____
a) Birds b) Animals c) Microbes d) **Plants**
6. All the observable characteristics of an organism are _____
a) **Phenotype** b) Genotype c) Karyotype d) Both a and b
7. Examples of phenotypic characters are _____
a) Hair color b) Eye colour c) **Sound of voiced** d) All
8. *Vibrio cholerae* is an example for _____
a) Atrichates b) **Monotrichate** c) Lophotrichated d) Amphitrichate
9. Which of the following is used for margin of the colony
a) Curled b) Entire c) Filamentous d) **All**
10. Full-form of ATCC is _____
a) **American Type Culture Collection** b) Automatic Type Counter & Classifier
c) American Type Counter Collection d) American Type Classifier and Collection

Unit II

11. _____ mode of reproduction is followed in bacteria
a) Vegetative b) Sporulation c) Mitosis d) **Both a and b**
12. Autotrophs are _____
a) **Self-nourisher** b) Depends on dead organic matter c) Uses chemicals d) None
13. Selective media for *E.coli* is _____
a) **EMB Agar** b) Mac conkey agar c) Endo Agar d) All
14. Infections caused by *E.coli* in human are _____
a) UTI infection b) Septic infection of wound c) Dysentery d) **All**
15. *Bacillus* sps are specifically known for _____
a) **Spore formation** b) Toxin production c) Antibiotics d) Easily available
16. Phycophilins are _____
a) **Blue colour pigment** b) Red colour pigment c) Green colour pigment d) None
17. Which of the following algae can be grown on wastewater?
a) *Spirogyra* b) *Volvox* c) ***Spirulina*** d) *Chlamydomonas*
18. Which of the following is the most common source of SCP?
a) Multicellular yeast b) **Single-celled yeast** c) Unicellular algae d) Unicellular bacteria
19. Uniseriate filaments are found in _____
a) Pleurocapsales b) **Oscillatoriales** c) Nostocales d) None
20. Cyanobacteria shown to produce _____
a) Neurotoxins b) Hepatoxin c) Dermatotoxin d) **All**

UNIT III

21. The study of fungus is called as _____
a) **Mycology** b) Phycology c) Virology d) Physiology
22. Various forms of fungi are _____
a) Yeast b) Mold c) Mushroom d) **All**
23. The cell wall of fungi made of _____
a) Cellulose b) Polysaccharide c) Ammonia d) **Chitin**
24. The vegetative phase of a fungus is _____
a) Mycelium b) Sporangia c) Conidia d) **Thallus**
25. Which of the following is an example for Saprophytes?
a) *Rhizopus* b) *Mucor* c) *Agaricus* d) **All**
26. Yeast produces an enzyme complex, which is responsible for fermentation?
(a) **Zymase** (b) Dehydrogenase (c) Aldolase (d) Invertase

27 The rising of dough is due to

- (a) Sulphur dioxide (b) hydrogen (c) carbon dioxide (d) oxygen

28 *Penicillium* belongs to _____

- (a) Deuteromycetes (b) Phycomycetes (c) Ascomycetes (d) Basidiomycetes

29 Number of ascospores formed in each ascus of *Penicillium* is _____

- (a) 4 (b) 8 (c) 12 (d) 16

30 Streptomycin is obtained from _____

- (a) *Penicillium* sps (b) *Streptomyces griseus* (c) *Aspergillus griesus* (d) None

Unit IV

31. The branch that deals with the study of algae are known as _____

- a) Embryology b) **Phycology** c) Physiology d) All

32. Algae chlorophyll are _____

- a) **Thalloid** b) Mycelium c) Hyphae d) All

33. Chlorophyll DII is found in _____

- a. **Rhodophycophyta** b. Xanthophycophyta c. Euglenophyta d. Chlorophyta

34. Phycoerythrin is found in _____

- a. Green algae b. Brown algae c. Blue algae d. **Red algae**

35. Algin is found in _____

- a. **Brown algae** b. Green algae c. Brown algae d. both a and b

36 Agar agar is produced from _____

- a. Gracillaria b. Gelidium c. Both a and b d. Ostacales

37. Asexual reproduction is by the formation of resting spores known as _____

- a. **Akinetes** b. Conidiospores c. Sporangiospores d) None

38 Which of the following medium used for algal growth?

- a) Beneck's media b) Chu's media c) **both a and b** d) BG 11

39. Galactan is a type of _____ formed by gracillariae

- a) **Sugar** b) protein c) Enzyme d. None

40 Plasmodium is an example for _____

- a) **Sporozoa** b) Mastigophora c) Amoeba d) None

Unit V

41 Virus is otherwise be called as _____.

- (a) Parasite (b) Symbionts (c) Commensals (d) **Living chemicals**

42. Viral genomes are surrounded by protein shells known as _____

(a) **Capsid** (b) Capsomeres (c) Spike (d) Anchor

43. Virus are in _____ form

(a) Helical (b) Poly headral (c) *Enveloped* (d) **All**

44 Which of the following is not an RNA virus?

a. Adenovirus b. Rhabdo virus c. Rubella virus d. Polio virus

45 Which of the following is bacteriophage ?

a. Pox virus b. Retrovirus c. Polio virus **d. M13**

46 Life cycle of TMV consists of _____

a) 6 stages **b) 4 stages** c) 5 Stages d) None

47 What is the important classification system used for viruses?

a. Baltimore b. Zuwanc. Alexpolousd. bergeys's

48. Bacteriophages undergo replication by _____

a) Lytic cycle b. lysogenic cycle c. *Haplontic cycle* **d. Both a and b**

49. Lysogenic phages are _____

(A) Temperate (B) Virulent (C) Avirulent **(D) Both a and c**

50 Bacteriophage is a parasite of _____

a) E.coli b) *Pseudomonas* c) *Klebsiella* d) None

Section-B

Answer the following in about 50 words:

(2 marks)

UNIT I

1. What are the different groups of microbes in nature?
2. Define diversity
3. What is phenotypic classification?
4. List out the importance of classification
5. Give any four examples for phenotypic characters?
6. Differentiate between phenotype and Genotype?
7. Comment on nomenclature?
8. What are the different types of nomenclature system?
9. Comment on karyotaxonomy
10. What is phylogenetic tree?

Unit II

11. Give any two examples of Gram ⁺ve bacteria
12. Comment on pathogenicity of *Bacillus* sps
13. Comment on economic importance of *E. coli*
14. List out cultural characteristics of microorganism
15. Comment on cell structure of cyanobacteria
16. Name the classifications of cyanobacteria
17. Differentiate between asexual reproduction and sexual production
18. Give economic importance of cyanobacteria
19. Comment on importance of Bergey's manual
20. Comment on identification features of bacteria

Unit III

21. Comment on distribution of fungi
22. Draw the cell structure of typical fungi
23. Comment on different types of nutrition
24. List out different types of life cycle

25. What are the economic importance of fungi?
26. Differentiate between Actinomycetes and fungi
27. Comment on types of antibiotics produced by Actinomycetes
28. Comment on industrial uses of *S.cerevisiae*
29. What is haplobiontic life cycle?
30. Comment on lab diagnosis of *A.niger*

Unit IV

31. Comment on algal diversity based on nutrition
32. Comment on different types of algal pigment
33. Comment of features of chlorophyceae
34. Draw and label the parts of nostoc
35. How will you formulate the media for algal growth?
36. Comment on life cycle of Red algae
37. List out any four important features of protozoa
38. Differentiate between Sarcodina and Sporozoa
39. Differentiate between trophozoite and cyst
40. What are the disease caused by protozoa in human?

Unit V

41. What are the different shapes of virus?
42. Comment on infection sequence events in virus
43. Comment on pathogenicity of virus
44. List out types of symmetry found in virus
45. Comment on pathogenicity of adenovirus
46. Comment on general diagnostic methods for viral infection
47. Draw the structure of bacteriophage and label it
48. Comment on life cycle stages of T4 Bacteriophage
49. Comment on systematic position of TMV
50. Comment on controlling measures of TMV

Section- C

Answer in about 200 words:

(6 mark)

Unit-I

1. Discuss about differences and variations among population
2. Give an detailed account on importance of classification
3. Discuss about morphological features of bacteria
4. Give an account on physiological features of bacteria
5. Discuss about importance of nomenclature
6. Discuss about evolution methods classification
7. Discuss about arrangement of flagella
8. Discuss about characteristics of bacterial colony on the agar media
9. Differentiate microbes based on oxygen requirment
10. Give an discuss about types of taxonomy

UNIT II

11. Discuss about bacterial cell structure
12. Discuss about types of bacterial reproduction
13. Give a detailed account on biochemical characteristics of bacteria
14. List out the economic importance of *E.coli*
15. Classify the *Bacillus sps* based on spore production
16. Discuss in detail about cell structure of cyanobacteria
17. Discuss about classification of cyanobacteria
18. Discuss about reproduction of cyanobacteria
19. Discuss about 4 possible methods of asexual reproduction
20. Give an elaborate account on economic importance of cyanobacteria

UNIT III

21. Give a short account of general features of fungi
22. Discuss about morphological features of various fungi
23. Classify the fungus based on mycelium and spore production
24. Discuss about various life stages occur in microscopic fungi
25. Differentiate between filamentous and yeast fungi

26. Comment on types of mushroom and its importance
27. Discuss about factors affecting mushroom cultivation
28. Discuss about economic importance of edible mushroom
29. Highlight the significance of cyanobacterial classification
30. Justify -fungi is an economically important sps

UNIT IV

31. Discuss about general characteristics of algae
32. Differentiate between red and green algae
33. Give a short note on algal diversity
34. Discuss about various life cycle in algae
35. Highlight the importance of Nostoc in soil system
36. Explain about importance of red algae in aquatic environment
37. Give a significant note on features of protozoa
38. Give a short note on life cycle of sarcodina
39. Justify – Entamoeba is an destructive parasite in human
40. Differentiate between trophozoite and cyst

UNIT V

41. Justify virus is a living chemical
42. Discuss about stages of infection in virus
43. Discuss about various types of virus based on genome
44. Explain about steps involved in pathogenic formation of virus
45. Discuss about importance of virus classification
46. List out host choices of viruses
47. Explain about significance of antibiotics in viral control
48. Discuss about mode of transmission of virus
49. Explain about viral capsid and its proteins
50. Differentiate between virion and virus

Section- D

Answer in about 500 words:

(12 marks)

Unit-I

1. Give a detailed account on classification system
2. Explain about various methods for microbial identification
3. Discuss in detail about e – classification system
4. Write an essay method of bacterial identification
5. How would you identify an unknown microbes by various methods
6. Discuss about evolution methods in classification
7. Give a detailed account on molecular taxonomy
8. Give an elaborate account on DNA hybridization and protein profile methods
9. Explain in detail about taxonomic approaches and phylogeny
10. Discuss about applications modern taxonomy in classification system

UNIT II

11. Write an essay about various shapes of bacteria based on its cell wall nature
12. Give a detailed account on various biochemical methods in identifying bacteria
13. Write an essay about pros and cons of bacteria in human
14. Explain about steps involved staining methods for identifying an organism
15. Give an elaborate account on structure and types of flagella
16. Write an essay about importance of methanogens
17. Discuss in detail about structure and features of appendaged bacteria
18. Give an detailed account on life cycle of cyanobacteria
19. Differentiate the cyanobacterial species based on pigments
20. Write an elaborate account on determinative classification of Bergey's manual

UNIT III

21. Discuss about various morphological features of fungi
22. Explain about economic importance actinomycetes
23. Discuss about life cycle of filamentous fungi
24. Discuss about pathogenic nature of *Aspergillus*
25. Explain about life cycle of *Penicillium* sps and its importance in industry

26. Write an essay about importance of microscopic fungi
27. Explain about life cycle of *S. cerevisiae*
28. Differentiate between haplobiontic and diplobiontic life cycle
29. Justify – asexual reproduction in fungi is dominant than sexual reproduction
30. Give an account on advantage of Alexopolous classification system

UNIT IV

31. Discuss about various morphological features of algae
32. Discuss diversity among algae based on pigments
33. Write an essay life cycle of blue green algae
34. Discuss about life cycle of blue green algae
35. Write an essay about structure and reproduction of red algae
36. Discuss about general features of protozoa
37. Give a detailed account on classification of protozoa
38. Write an essay about pathogenic features of protozoa in human
39. Explain about life cycle of *Entamoeba histolytica* in human
40. Draw a complete detail on *Mastigophora* life cycle

UNIT V

41. Write an essay about general features of virus
42. Discuss about role of antibiotics in controlling viral replication
43. Give an account on classification of virus based on its infection
44. Discuss about various life stages of animal virus
45. Write in detailed about various host involved in viral growth
46. Justify- virus needs a host to multiply
47. Differentiate between lytic and lysogenic cycle
48. Discuss about stages of viral infection in a host
49. Give a complete information on adenovirus replication and life cycle
50. Explain about role of TMV in plant infection

St. Mary's College (Autonomous) Thoothukudi -628001

B.Sc Microbiology- Semester –II

Allied II - Biochemistry- 21UMIA21

Question Bank

SECTION - A

(1 marks)

Choose the best answer

UNIT I

1. According to Sorensen, PH is defined as_____
 - (a) The logarithm of H⁺ ions
 - (b) The negative logarithm of H⁺ ions**
 - (c) The equilibrium product of H⁺ & OH⁻ ions
 - (d) The logarithm of OH⁻ ions
 2. High energy compound includes all the following except _____
 - (a) Esters (b) Phosphate anhydride **(c) thio-esters** (d) Creatinine phosphate
 3. Energy rich bonds number in ATP is _____
 - (a) 1 (b) 2 **(c) 3** (d) 4(a).
 4. The law that states the total amount of energy in the universe remains constant
 - (a) First law of thermodynamics** (b) Second law of thermodynamics
 - (c) Law of mass action (d) Chemosynthetic hypothesis.
- Vanderwaals interactions are _____.
- (a) Weak interatomic attractions (b) Strong interatomic interactions
 - (c) Association of non-polar groups (d) Both a & b.
5. The pH of the blood ranges from _____.
 - (a) 7-8 **(b) 7.3-7.4** (c) 8.3-8.4 (d) 6.9-7.0.
 6. According to Arrhenius concept ,
 - (a) An acid is a proton donor and a base is a proton acceptor.
 - (b) An acid does not donate a proton**
 - (c) An acid can accept a proton and an electron from another molecule
 - (d) None of the above.
 7. A buffer is a solution that can be _____
 - (a) made by taking a weak acid or a base and adding its conjugate salt to it.**
 - (b) prepared by mixing a weak acid and a strong base.
 - (c) made by mixing a strong acid and a weak base.

- (d) Prepared by mixing a strong acid and a strong base.
8. ____ solution resists a change in PH on addition of acid or base more effectively.
 (a) HCl (b) NaCl (c) Water (d) **Buffer**.
9. _____ is a strong bonds.
 (a) hydrogen (b) ionic (c) vanderwaals (d) **covalent**.

UNIT II

10. Which of the following is not a reducing sugar?
 (a) Glucose (b) Fructose (c) **Sucrose** (d) Lactose.
11. It is a plant carbohydrate_____
 (a) **Starch** (b) Glycogen (c) Hyaluronic acid (d) Dermatan sulphate.
12. _____ is insoluble in water.
 (a) Amylose (b) **Amylopectin** (c) Pectin (d) none of these
13. Heparin is a _____
 (a) Heteropolysaccharide (b) **Homopolysaccharide** (c) Anticoagulant (d) Both b & c.
14. _____ is otherwise called table sugar.
 (a) **Sucrose** (b) Lactose (c) Maltose (d) Glucose.
15. Equimolar mixture of glucose and fructose is known as _____
 (a) Disaccharide (b) Sucrose (c) **Invert sugar** (d) None of these.
16. _____ is the structural material of the skeleton of the arthropoda.
 (a) **chitin** (b) inulin (c) pectin (d) dextran.
17. _____ is otherwise called as “animal starch”.
 (a) starch (b) **glycogen** (c) dextran (d) None.
18. _____ is the jelly like substance present in connective tissues.
 (a) Chondroitin sulfates (b) **Hyaluronic acid** (c) Keratan sulphates (d) none of these.
19. The general formula of monosaccharides is
 (a) **C_nH_{2n}O_n** (b) C_{2n}H_{2n}O_n (c) C_nH_{2n}O_{2n} (d) C_nH_{2n}O_{2n}
20. The general formula of polysaccharides is
 (a) **(C₆H₁₀O₅)_n** (b) (C₆H₁₂O₅)_n (c) (C₆H₁₀O₆)_n (d) (C₆H₁₀O₆)_n
21. The aldose sugar is
 (a) **Glycerose** (b) Ribulose (c) Erythrulose (d) Dihydroxyacetone

UNIT III

22. All proteins contain the

- (a) Same 20 amino acids (b) **Different amino acids** (c) 300 Amino acids occurring in nature (d) Only a few amino acids

23. Proteins contain

- (a) **Only L- α - amino acids** (b) Only D-amino acids (c) DL-Amino acids (d) Both (a) and (b)

24. An essential amino acid in man is

- (a) Aspartate (b) Tyrosine (c) **Methionine** (d) Serine

25. Non essential amino acids

- (a) Are not components of tissue proteins
(b) **May be synthesized in the body from essential amino acids**
(c) Have no role in the metabolism
(d) May be synthesized in the body in diseased states

26. Which one of the following is semiessential amino acid for humans?

- a) Valine (b) **Arginine** (c) Lysine (d) Tyrosine

27. An example of polar amino acid is

- a) Alanine (b) Leucine (c) **Arginine** (d) Valine

28. Which among the following is not polymeric?

- (a) Carbohydrates (b) Nucleic acids (c) Proteins (d) **Lipids**

29. The amino acid with a nonpolar side chain is

- a) Serine (b) **Valine** (c) Asparagine (d) Threonine

30. An example of chromoprotein is

- a) **Hemoglobin** (b) Sturine (c) Nuclein (d) Gliadin

31. An example of scleroprotein is

- a) Zein (b) **Keratin** (c) Glutenin (d) Ovoglobulin

32. Casein, the milk protein is

- a) Nucleoprotein (b) Chromoprotein (c) **Phosphoprotein** (d) Glycoprotein

33. An example of phosphoprotein present in egg yolk is

- a) Ovoalbumin (b) Ovoglobulin (c) **Ovovitellin** (d) Avidin

34. A simple protein found in the nucleoproteins of the sperm is

- a) Prolamine (b) **Protamine** (c) Glutelin (d) Globulin

35. Pulses are rich in

- a) **Lysine** (b) Methionine (c) Tryptophan (d) Phenylalanine

36. Milk is deficient in
a) Vitamin B1 (b) Vitamin B2 (c) **Sodium** (d) Potassium

UNIT IV

37. An example of a hydroxy fatty acid is
a) Ricinoleic acid (b) Crotonic acid (c) Butyric acid (d) Oleic acid
38. An example of a saturated fatty acid is
a) Palmitic acid (b) Oleic acid (c) Linoleic acid (d) Erucic acid
39. If the fatty acid is esterified with an alcohol of high molecular weight instead of glycerol, the resulting compound is
a) Lipositol (b) Plasmalogen (c) **Wax** (d) Cephalin
40. A fatty acid which is not synthesized in the body and has to be supplied in the diet is
(a) Palmitic acid (b) Lauric acid (c) **Linolenic acid** (d) Palmitoleic acid
41. Essential fatty acid:
(a) Linoleic acid (b) Linolenic acid (c) Arachidonic acid (d) All these
42. The fatty acid present in cerebrosides is
(a) Lignoceric acid (b) Valeric acid (c) Caprylic acid (d) Behenic acid
43. The number of double bonds in arachidonic acid is
(a) 1 (b) 2 (c) **4** (d) 6
44. In humans, a dietary essential fatty acid is
(a) Palmitic acid (b) Stearic acid (c) Oleic acid (d) **Linoleic acid**
45. A lipid containing alcoholic amine residue is
(a) Phosphatidic acid (b) Ganglioside (c) Glucocerebroside (d) **Sphingomyelin**
46. Cephalin consists of
a) Glycerol, fatty acids, phosphoric acid and choline
b) Glycerol, fatty acids, phosphoric acid and ethanolamine
c) Glycerol, fatty acids, phosphoric acid and inositol
d) Glycerol, fatty acids, phosphoric acid and serine
47. In mammals, the major fat in adipose tissues is
(a) Phospholipid (b) Cholesterol (c) Sphingolipids (d) **Triacylglycerol**
48. Glycosphingolipids are a combination of
(a) Ceramide with one or more sugar residues
(b) Glycerol with galactose
(c) Sphingosine with galactose

(d) Sphingosine with phosphoric acid

49. Molecular formula of cholesterol is

a) C₂₇H₄₅OH (b) C₂₉H₄₇OH (c) C₂₉H₄₇OH (d) C₂₃H₄₁OH

50. Auto-oxidation occurring in natural edible fats is called _____

(a) beta oxidation (b) **rancidification** (c) emulsification (d) oxidation.

51. _____ enzyme which brings about hydrolysis.

a) hydrolyase (b) lysases (c) transferase (d) ligases.

52. Saturated fatty acids contains _____ double bonds.

(a) **one** (b) two (c) no (d) more than two.

53. FAD is a derivative of _____.

a) Vitamin B1 (b) **Vitamin B3** (c) Vitamin B6 (d) Vitamin B2.

54. Group transfer reaction includes _____

(a) **CoA** (b) NAD (c) NADH (d) FMN.

55. Electron transfer reaction includes _____

(a) FMN (b) CoA (c) TPP (d) Pyridoxal phosphate.

56. The term enzyme was first introduced by _____

(a) **Kuhne** (b) Newberg (c) Warburg (d) Kendell

57. In reversible non-competitive enzyme activity inhibition

(a) **V_{max} is increased** (b) K_m is increased
(c) K_m is decreased (d) Concentration of active enzyme is reduced

58. In reversible non-competitive enzyme activity inhibition

a) inhibitor bears structural resemblance to substrate
(b) inhibitor lowers the maximum velocity attainable with a given amount of enzyme
(c) **k_m is increased**
(d) k_m is decreased

59. Coenzymes are

a) heat stable, dialyzable, non protein organic molecules
(b) **soluble, colloidal, protein molecules**
(c) structural analogue of enzymes
(d) different forms of enzymes

60. An example of hydrogen transferring coenzyme is

a) CoA (b) **NAD⁺** (c) Biotin (d) TPP

UNIT V

61. Vitamins are

- (a) Accessory food factors **(b) Generally synthesized in the body**
(c) Produced in endocrine glands (d) Proteins in nature

62. Vitamin A or retinal is a

- (a) Steroid **(b) Polyisoprenoid compound containing a cyclohexenyl ring**
(c) Benzoquinone derivative (d) 6-Hydroxychromane

63. β -Carotene, precursor of vitamin A, is oxidatively cleaved by

- (a) β -Carotene dioxygenase** (b) Oxygenase (c) Hydroxylase (d) Transferase

64. Retinal is reduced to retinol in intestinal mucosa by a specific retinaldehydereductase utilising

- (a) NADPH + H⁺ (b) FAD (c) NAD **(d) NADH + H⁺**

65. Preformed Vitamin A is supplied by

- (a) Milk, fat and liver** (b) All yellow vegetables
(c) All yellow fruits (d) Leafy green vegetables

66. Retinol and retinal are interconverted requiring dehydrogenase or reductase in the presence of

- (a) NAD or NADP** (b) NADH + H⁺ (c) NADPH (d) FAD

67. Fat soluble vitamins are

- (a) Soluble in alcohol** (b) one or more Propene units (c) Stored in liver (d) All these

68. The normal serum concentration of vitamin A in mg/100 ml is

- a) 5–10 **(b) 15–60** (c) 100–150 (d) 0–5

69. One manifestation of vitamin A deficiency is

- (a) Painful joints **(b) Night blindness** (c) Loss of hair (d) Thickening of long bones

70. Deficiency of Vitamin A causes

- (a) Xerophthalmia** (b) Hypoproteinaemia (c) Megaloblastic anaemia (d) Pernicious anaemia

71. An important function of vitamin A is

- (a) To act as coenzyme for a few enzymes
(b) To play an integral role in protein synthesis
(c) To prevent hemorrhages
(d) To maintain the integrity of epithelial tissue

72. Retinal is a component of

- (a) Iodopsin **(b) Rhodopsin** (c) Cardiolipin (d) Glycoproteins

73. On exposure to light rhodopsin forms

- (a) All trans-retinal** (b) Cis-retinal (c) Retinol (d) Retinoic acid

74. Vitamin D absorption is increased in
(a) **Acid pH of intestine** (b) Alkaline pH of intestine
(c) Impaired fat absorption (d) Contents of diet
75. The most potent Vitamin D metabolite is
a) 25-Hydroxycholecalciferol (b) **1,25-Dihydroxycholecalciferol**
(c) 25-Dihydroxycholecalciferol (d) 7-Dehydrocholesterol
76. A poor source of Vitamin D is
(a) Egg (b) Butter (c) **Milk** (d) Liver
77. Richest source of Vitamin D is
(a) **Fish liver oils** (b) Margarine (c) Egg yolk (d) Butter
78. Deficiency of vitamin D causes
(a) **Ricket and osteomalacia** (b) Tuberculosis of bone (c) Hypothyroidism (d) Skin cancer
79. Vitamin B12 is synthesized by
(a) **Bacteria only** (b) Plants only (c) Animals only (d) Both (a) and (c)
80. Deficiency of vitamin B12 can occur because of
(a) **Decreased intake of vitamin B12**
(b) Atrophy of gastric mucosa
(c) Intestinal malabsorption
(d) All of these
81. Deficiency of vitamin C causes
(a) Beriberi (b) Pellagra (c) Pernicious anaemia (d) **Scurvy**
82. Daily requirement of vitamin C in adults is about
(a) 100 mg (b) 25 mg (c) **70 mg** (d) 100 mg
83. The vitamin having the highest daily requirement among the following is
(a) Thiamin (b) Riboflavin (c) Pyridoxine (d) **Ascorbic acid**
84. Anaemia can occur due to the deficiency of all the following except
(a) Thiamin (b) Pyridoxine (c) **Folic acid** (d) Cyanocobalamin
85. A vitamin which can be synthesized by human beings is
(a) Thiamin (b) **Niacin** (c) Folic acid (d) Cyanocobalamin
86. Precursor of Vitamin A is
(a) α -Carotene (b) **β -Carotene** (c) γ -Carotene (d) All of these
87. Vitamins are _____
(a) **organic compounds** (b) inorganic compounds (c) gas (d) none of the above.

88. The poor source of vitamin D is _____.
(a) Eggs (b) Butter (c) **Milk** (d) Liver.
89. Pro-vitamins A is derived from _____.
(a) milk (b) steroid (c) **carotenoid** (d) none of these.
90. Nicotinamide is the biologically active form of _____.
(a) thiamine (b) riboflavin (c) **niacin** (d) panthothenic acid.
91. Vitamin E is stored in _____.
(a) **mitochondria** (b) microsomes (c) both (d) none
92. coined the term “vitamine”
a) Funk (b) Sumner (c) Kohne (d) Hopkins.
93. _____ is anti haemorrhagic vitamin.
(a) **Vitamin K** (b) Vitamin A (c) Vitamin D (d) Vitamin C.
94. Deficiency of _____ leads to rickets.
(a) Vitamin K (b) Vitamin A (c) **Vitamin D** (d) Vitamin C.
95. Deficiency of _____ leads to scurvy.
(a) Vitamin K (b) Vitamin A (c) Vitamin D (d) **Vitamin C**.
96. Deficiency of _____ leads to beri-beri.
a) Vitamin K (b) Vitamin A (c) Vitamin D (d) **Vitamin B1**.

SECTION –B

Answer in about 50 words: 2 Marks

UNIT I

1. Define atom
2. Define thermodynamics
3. Define chemical bonds.
4. Elaborate ATP
5. Elaborate PEP
6. Define pH
7. Define buffers
8. List down the energy rich phosphate
9. Define acid and base.
10. List down the types of buffer.

UNIT II

11. Define Carbohydrate.
12. Define polysaccharide
13. Draw the structure of maltose.
14. Give the composition of lactose.
15. Give the function of sucrose.
16. Give the uses of heparin
17. What are the function of starch.
18. What is the difference between monosaccharides and disaccharides.
19. Differentiate between homopolysaccharide and heteropolysaccharide.
20. Why sucrose is called invert sugar.

UNIT III

21. Define protein
22. Define peptide
23. Define amino acid
24. Define peptide.
25. Define nucleic acid
26. Elaborate on DNA
27. Elaborate on RNA
28. List down the forms of DNA.
29. Classify peptides.
30. Give the functions of DNA.

UNIT IV

31. Define lipid.
32. Define enzyme
33. Define active site.
34. Define allosterism

35. Define cofactors.
36. What are the factors that affect K_m value.
37. What are isozymes?
38. Define inhibitors.
39. Define coenzyme.
40. What is K_m ?

UNIT IV

41. Define vitamin.
42. List down fat soluble vitamins
43. List down water soluble vitamins
44. Give the source for Vitamin A.
45. What are the deficiency for Vitamin C
46. Write the source for vitamin K
47. List down vitamin B-complex.
48. Give the deficiency of Vitamin D
49. What is fat soluble vitamin.
50. What is water soluble vitamin.

SECTION – C

Answer in about 200 words:

6 Marks

UNIT I

1. Write about ATP structure and function.
2. Explain the role of buffer system in blood.
3. Explain the laws of thermodynamics
4. What are buffers? Explain the method to prepare any buffer.
5. Write the structure and function of any one energy rich phosphates.
6. Write briefly about the structure of an atom
7. What are the types of chemical bonding? Discuss any one briefly.

8. Give the principles of bioenergetics.
9. Write about creatine phosphate.
10. Elaborate on PEP

UNIT II

11. Distinguish between amylose and amylopectin
12. Write short note on Pectin
13. Explain the chemical properties of monosaccharides
14. Explain the structure of polysaccharides with an example.
15. Write note on optical activity of carbohydrates.
16. Classify disaccharides.
17. Write a note on invert sugar.
18. Write about the importance of carbohydrates of biomolecules.
19. Differentiate amylase from amylopectin
20. Why sucrose is a non-reducing sugar?

UNIT III

21. Write short notes on amino acid classification.
22. Distinguish between essential and non-essential amino acids.
23. Write a note on Zwitter ion.
24. Define iso-electricpoint .
25. Explain the general properties of protein.
26. Define peptide and classify it.
27. Compare and contrast tRNA and mRNA.
28. Explain the structure of tRNA with a neat diagram.
29. Write down the biological functions of the nucleic acids.
30. Distinguish between RNA and DNA.

UNIT IV

31. Classify lipids.
32. Write short notes on co-factors and isozymes.
33. Explain induced fit theory for enzyme action

34. Explain lock and key theory for enzyme action
35. How will you determine the Michaelis-Menten constant?
36. Write a note active site of an enzyme.
37. Explain with example the competitive inhibition.
38. Define Inhibitors. Write a note on uncompetitive inhibitions.
39. Explain briefly about isozymes.
40. Give the structure and function of phospholipids

UNIT V

41. Define fat soluble vitamin with an example.
42. List out the various names of Vitamin B12 and explain its deficiency syndrome.
43. Write a note on Rickets.
44. Describe the source, functions and deficiency of vitamin C.
45. Write a note on Pellagra.
46. Name the vitamins with coenzyme activities. Discuss the biological importance of flavoproteins.
47. Write a note on Scurvy.
48. Name any two fat soluble vitamins and mention their functions.
49. Name water soluble vitamins and mention their functions.
50. Write a note on B-complex vitamins.

SECTION D

Answer in about 400 words:

12 Marks

UNIT I

1. Explain the structure of an atom and discuss the types of bonding.
2. Define pH and derive Henderson-Hasselbalch equation.
3. Define buffer and discuss the types of buffer.
4. Write in detail about the structure and functions of energy rich phosphates.
5. What are the types of chemical bonding? Discuss briefly.
6. Briefly explain creatinine phosphate and PEP.
7. Define atom. Explain the structure of atom.

8. Define thermodynamics. Give the laws of thermodynamics. Write down the principles of bioenergetics.

UNIT II

9. List down the reducing disaccharides. Write briefly about it.
10. Classify carbohydrates with example and give its function.
11. Define polysaccharide and classify it.
12. Define carbohydrates and classify disaccharides.
13. Write note on (a) Sucrose (b) Starch.
14. Write a note on heteropolysaccharides.
15. Draw the structure and give the functions of sucrose.
16. Draw the structure and give the functions of maltose.
17. Write a note on homopolysaccharides.
18. Define oligosaccharides and classify it.
19. Define monosaccharides and classify it.
20. Write a note on lactose.

UNIT III

21. Explain secondary structure of protein and Ramachandran's plot.
22. Write the different forms of DNA and differentiate them from each other.
23. Differentiate between DNA and RNA.
24. Explain about the structure of Watson - Crick Model of DNA.
25. Define protein and classify it.
26. Define aminoacids and classify it.
27. Explain the primary, secondary, tertiary and quaternary structures of protein.
28. What is a peptide linkage? Classify peptide and write the structure of glycyl glycine.
29. Give the functions of protein.
30. Briefly discuss the secondary structure of tRNA.

UNIT IV

31. How lipids are classified? Discuss the biological functions of the major classes.
32. What are phospholipids? Explain the structure and occurrence of any three types.
33. Explain induced fit and lock and key theories for enzyme action.
34. Briefly explain the term allosterism.
35. Define enzyme and classify it with example.
36. Discuss the various factors which affect the velocity of enzymatic reactions.
37. Derive Michaelis-Menten equation.
38. Explain the structure of cholesterol.
39. Define the term inhibition. Explain the different types of reversible inhibition.
40. Comment on waxes and steroids

UNIT V

41. Define vitamins. Classify it.
42. Write the source, function and deficiency of vitamin B complex.
43. Write the source, function and deficiency of vitamin C.
44. Write a note on Vitamin A.
45. Give a detailed note on fat soluble vitamins.
46. Mention the source, deficiency and metabolic functions of vitamin B12.
47. Give short notes on (a) Rickets (b) Beriberi
48. Give short notes on (a) Pellagra (b) Scurvy
49. Give a detailed account on vitamin D.
50. Comment on Vitamin K.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

I B.Sc Microbiology – Semester - I

Skill Enhancement Course I – Professional English for Microbiology - I – 21UMIPE1

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

- 1) _____ lab coat before entering the lab.
a) **Wear** b) Dispose c) Rinse d) Adjust
- 2) The bacteria are _____ in a conical flask.
a) **cultured** b) put up c) settled d) closed
- 3) I have invented pasteurization. Who am I?
a) Edward Jenner b) **Louis Pasteur** c) Leeuwenhoek d) Lister
- 4) Identify the type of sentence - Place the microscopic slide on the stage of the microscope.
a) **Imperative** b) Simple c) Complex d) Non-Imperative
- 5) In the term Microbiology, 'logy' means _____
a) collection b) **study** c) research d) observation
- 6) Arrange the jumbled word "caimsnalule" _____
a) animals b) **animalcules** c) animal kingdom d) animalia
- 7) Identify the Verb in this sentence. "**Adjust the knob of the microscope**"
a) **Adjust** b) knob c) microscope d) of the
- 8) You can use me to see tiny microbes. Who am I? _____
a) lens b) magnifying glasses c) d) **microscope**
- 9) _____ the spills immediately.
a) Dilute b) dillute c) **Clean** d) Cleen
- 10) Identify this contributor who contributed to the field of Microbiology.

- a) Louis Pasteur b) Edward Jenner c) **Antonie Van Leewenhoek** d) Lord Joseph Lister

Unit –II

- 11) Cells are _____ with crystal violet.
a) coloured b) **stained** c) decolourized d) fixed
- 12) Chlorine is a/an _____.
a) antiseptic b) chemical c) **disinfectant** d) **bleach**
- 13) *E. coli* abbreviate _____.
a) *Echerichia coli* b) *Esherichia coli* c) *Escheichia coli* d) ***Escherichia coli***
- 14) Heat sterilization is a/an _____.
a) **method** b) place c) instrument d) chemical
- 15) A _____ is a place that is used to conduct experiments.
a) seminar room b) classroom c) **laboratory** d) lecture hall
- 16) _____ algae and virus are eukaryote.
a) **Both** b) Unlike c) Yet d) But
- 17) _____ bacteria, algae are photosynthetic.
a) As well as b) **Unlike** c) Likewise d) Also
- 18) Gram's staining _____ between gram positive and gram negative cell wall.
a) **differentiate** b) compare c) relate d) associate
- 19) Smear is prepared using _____ & _____.
a) test tube and glass slide b) glass slide & inoculation needle
c) test tube & inoculation needle d) **glass slide & inoculation loop**
- 20) Bacterial smears must be prepared _____ any of the staining techniques
a) **prior to** b) after c) next to d) later to

Unit-III

- 21) An _____ can be defined as an interaction between two people, where questions are asked to elicit information.
a) dialogue b) conversation c) **interview** d) discussion
- 22) _____ good communication skill and vocabulary.
a) **Acquire** b) Ecquire c) Decquire d) Get
- 23) An ideal time frame for brain storming would be _____.
a) 12 minutes b) 5 minutes c) **30 minutes** d) 20 minutes
- 24) Give the constructive way of expressing 'Let's vote on it'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I understand how you feel, but I think you might consider also ...

25) Give the constructive way of expressing 'That doesn't make sense at all'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

26) Give the constructive way of expressing 'You are dead wrong'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

27) Give the constructive way of expressing 'Wow! That is ever drub'

a) I disagree because ' I see it differently because

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

28) Give the constructive way of expressing 'That is not what the teacher asked us to do'

a) I think we should check our notes and the original assignment.

b) Does everyone agree?

c) It might be better to Have you considered

d) I don't think I agree. Could you explain?

29) Give the constructive way of expressing 'That really offends me!'

a) I think we should check our notes and the original assignment

b) Does everyone agree?

c) I understand how you feel, but I think you might consider also ...

d) I don't think I agree. Could you explain?

30) _____ is a solidifying agent in culture media.

a) Agar b) Agaar c) Aggar d) Aagar

Unit-IV

- 31) Algae is a _____ word
a) monosyllabic **b) bisyllabic** c) trisyllabic d) tetrasyllabic
- 32) Find the synonym of the term 'determined'
a) decisive b) enormous c) modernistic d) fiction
- 33) Electron is a _____ word
a) monosyllabic **b) bisyllabic** c) trisyllabic d) tetrasyllabic
- 34) Crystallography is a _____ word
a) bisyllabic b) trisyllabic c) tetrasyllabic **d) pentasyllabic**
- 35) Microscope is a _____ word
a) bisyllabic **b) trisyllabic** c) tetrasyllabic d) pentasyllabic
- 36) Find the synonym of the term 'Reproduction'
a) forging **b) duplication** c) xeroxing d) cloning
- 37) Find the synonym of the term 'Multicellular'
a) many-celled b) multilayered c) multinucleated d) manysided
- 38) Find the synonym of the term 'Unicellular'
a) uninucleated b) unilayered **c) single-celled** d) one-sided
- 39) Ruby loves Latha. The structure of this sentence is _____
a) S+V **b) S+V+O** c) S+O d) S+O+V
- 40) The baby sleeps. The structure of this sentence is _____
a) S+V b) S+V+O c) S+O d) S+O+V

Unit-V

- 41) The meaning of the term virus is _____
a) sweet b) food **c) poison** d) toxin
- 42) An individual virus is a virion.
a) I agree b) I disagree c) I strongly disagree **d) I strongly agree**
- 43) Viruses have cell membranes, cytoplasm, ribosomes, but they have genetic material.
a) I agree **b) I disagree** **c) I strongly disagree** d) I strongly agree
- 44) Since viruses evolve, they are living organisms.
a) I agree b) I disagree c) I strongly disagree **d) I strongly agree**
- 45) A virus is made up of DNA or RNA and a protective protein coat.
a) I agree b) I disagree c) I strongly disagree **d) I strongly agree**
- 46) In note making, there are _____

a) **5R's** b) 3R's c) 6R's d) 10R's

47) Use _____ when discussing any quantitative analysis

- a) **pie charts and graphs** b) bar diagram
c) graphs and table d) pictogram

48) The _____ is a note taking system

- a) Kernel notes **b) Cornell notes** c) Blobbel notes d) Tierra notes

49) _____ is/are visual notes.

- a) Mind map **b) Sketch notes** c) Note making d) Kernel notes

50) _____ is the character of good summary.

- a) **Briefness** b) Overlapping c) Repetition d) Duplication

Section-B

Answer the following in about 50 words:

(2 marks)

Unit-I

- 1) Write an informal conversation between you and your friend about Microbiology.
- 2) Write any four instructions to handle a microscope.
- 3) Define the term Molecular Biology.
- 4) Write the meaning of the expression 'Cell wall'
- 5) Write the meaning for the expression 'Prokaryotes'.
- 6) Write the meaning for the expression 'Eukaryotes'.
- 7) Write a slogan on Bacterial cell wall.
- 8) Find out any 4 words related to Microbiology from the word puzzle given below:

M	B	A	C	T	E	R	I	A
X	G	L	U	C	O	S	E	H
N	U	C	L	E	U	S	X	B
Z	R	C	E	L	L	G	C	I
R	K	F	U	N	G	I	N	G

- 9) Write any two differences between a prokaryotic and eukaryotic cell.
- 10) Who is your favorite contributor to the field of Microbiology and Justify?

Unit-II

11) Rearrange the following jumbled sentences:

- Turn the Rotating Nosepiece to set the lowest power Objective Lens into

position.

- Place the microscopic Slide on the Stage of the microscope.
- Turn the Focus Knob to move the Stage upward.
- Look through the Eyepiece and move the Focus Knob for the image to come into focus.
- Fasten the Slide with the Stage Clips on the Stage.

12) Write a caption on sterilization.

13) Frame a single sentence definition using 'spore'

14) Give the meaning of the word 'Etymology'

15) Write an extended definition using the 'critical item'

16) Identify the word, class, and distinguishing feature in the single sentence definition -

'A hot air oven is an instrument used for sterilizing using hot air'

17) Write steps of smear preparation by seeing the following image.

18) Write a flow chart on smear preparation.

19) Describe the four step procedure for gram's staining using the picture given below.

20) Frame a single sentence definition using the given clues.

- Hot air Oven
- Instrument
- Sterilization using dry heat

21) Write a caption on sterilization.

Unit-III

- 22) Have you attended an interview? If yes share your experience.
- 23) Find the one-word substitute in the passage for the following:
- a substance that provides nourishment essential for the maintenance of life and for growth.
- 24) Find the one-word substitute in the passage for the following:
- a solid, naturally occurring inorganic substance.
- 25) Agar medium to be _____(**poured**/pulled) into plates is sterilized in a flask, _____(**and then**/and) poured afterward.
- 26) Match the following:
- | | |
|----------------------|--|
| • Basal media | - used for specimen cannot be cultured soon after collection |
| • Transport media | - used for storing the bacteria for a long period of time |
| • Differential media | - generally used for growth of bacteria |
| • Storage media | - used to differentiate microbes |
- 27) Write any two instructions to be followed during brainstorming.
- 28) Write any two Instructions to generate a Mind Map.
- 29) Draw a mind map on microorganisms.
- 30) Write the difference between basal media and enriched media.

Unit-IV

- 31) Complete the following sequence:
- Kingdom → _____ → Class → Order → _____ → Genus → Species
- 32) Syllabify the following words:
- a) Topography
 - b) Morphology
- 33) Write the three steps involved in preparing a short speech.
- 34) Write about the invention of electron microscope.
- 35) Write any two monosyllabic words.
- 36) Write any two disyllabic words.
- 37) Write any two trisyllabic words.
- 38) Write any two pentasyllabic words.
- 39) Syllabify the following words:
- a) Transmission
 - b) Magnetic

40) What are the types of speech?

Unit-V

41) Imagine and draw the structure of some virus.

42) RNA is the genetic material of virus- Comment on this statement.

43) List down don'ts while making a power point presentation.

44) List down do's while making a power point presentation.

45) Comment on MS PPT.

46) Why is Note Making important?

47) Write down the 5R's of note making.

48) Write the general principles of note making.

49) Draw a chart depicting the formats for notes.

50) Which profession you like the most?

Section- C

Answer in about 100 words:

(5 mark)

Unit-I

1) Write about your favourite invention in the field of Microbiology.

2) Describe the most desired profession for a microbiology student.

3) What would happen if there is no cell wall surrounding a bacteria cell?

4) Frame instructions for using and handling a microscope.

5) Write a formal conversation between a student and professor.

6) Match the expressions with their meanings

- | | |
|------------------|--|
| a) Semirigid | - a toxin present inside a bacterial cell that is released when it disintegrates. |
| b) Tetra peptide | - The bursting or rupturing of cell membrane due to osmotic movement of water into the cell when the cell is in a hypotonic environment. |
| c) Osmotic lysis | - an enzyme which acts outside the cell that produces it. |
| d) Exoenzymes | - a peptide composed of four amino acids. |
| e) Endotoxin | - rigid to some degree or in some parts. |

7) Draw the structure of bacterial cell and label the parts.

- 8) Differentiate between prokaryotic and eukaryotic cell.
- 9) Design a poster on history of Microbiology.
- 10) Narrate the differences between gram positive and gram negative cell wall.

Unit-II

- 11) Write an imaginary conversation taking place between gram positive and gram negative bacteria during gram staining.
- 12) Draw a flow chart for Gram's staining.
- 13) Read the passage and answer the questions:

A bacterial smear is a thin layer of bacteria placed on a slide for staining. Preparing the smear requires attention to a number of details that help prevent contamination of the culture and ensure safety to the preparer. The first step in most bacterial staining procedures is the preparation of a smear. Each step in this procedure has an important reason, and each should be followed carefully as a prerequisite to successful work. In a smear preparation, cells from a culture are spread in a thin film over a small area of a microscope slide, dried, and then fixed to the slide by heating or other chemical fixatives. A good smear preparation is the key to a good stain. The following procedure is one that you will do repeatedly throughout the semester, so pay close attention to your technique. The most common errors in staining are due to poor smear preparation.

- a) What is the first step in staining procedures?
 - b) Which is the key to a good stain?
 - c) Define bacterial smear.
 - d) How bacterial smear is done?
 - e) What is the reason behind errors in staining?
- 14) Write extended definitions using the given words
 - a) Decontamination
 - b) Heat sterilization
 - 15) From each sentence given below recognize the term and write appropriate extended definition.
 - Bacterial cell harbour spore
 - Hot air oven uses dry heat Sterilization
 - Decontamination is an essential step in maintaining a sterile equipment in labs, hospitals, industries, etc.
 - 16) Write a single sentence definition for the following words
 - a) Disinfection
 - b) Spore
 - c) Critical item
 - d) Decontamination
 - e) Disinfectant
 - 17) What are the uses of hot air oven in your laboratory?
 - 18) Give the importance of skimming and scanning.
 - 19) Write a formal conversation of handling a microscope between the teacher and the student.
 - 20) What happens to the gram negative cell wall during decolourisation? Write an

imaginative answer by referring the picture.

- 21) How will you compare and contrast sentences using different words. Name any ten words.
- 22) Name any five basic microbiology instruments in the laboratory. Write a one line definition of the instruments.

Unit-III

- 23) List down some skills one can develop by listening to interviews.
- 24) Write some instructions to be followed during brainstorming.
- 25) If one listen to interviews he/she will acquire good communication skill and vocabulary – justify the above quote.
- 26) Write a slogan on Mind mapping.
- 27) Arrange the jumbled sentence correctly – ‘accurately down quickly getting and information’
- 28) Arrange the jumbled sentence correctly – ‘which and quotes best you selecting need facts information’
- 29) Complete the given sentences:
- a) _____ (**Determine**/Decide) what _____ (**information**/news) you need from the interview.
 - b) _____ (**Encourage**/Discourage) the generation of _____ (noncreative/**creative**) ideas.
 - c) Do not _____ or evaluate ideas (**criticize**/kriticize)
 - d) Record ideas _____ (inaccurately/**accurately**)
 - e) Complete the sentence - _____ (**Identify**/Identity) the _____ (fauts/facts) of the interview
- 30) Draw a mind map on Microscopy.

Unit- IV

- 31) Work-out a short speech on the topic ‘Microscope is an important tool in a Microbiology lab’

- 32) Match the following
- | | |
|-------------------------|--|
| a) Persuasive | - To educate the audience about a topic or idea |
| b) Informative | - To state the problem and to propose/suggest a solution |
| c) Cause and Effect | - To make your audience accept what you believe |
| d) Problem and Solution | - To give information on the chosen topic |
| e) Demonstrative speech | - To explain the phenomena |
- 33) Write some tips to be followed while rehearsing a speech.
- 34) Write a short speech on a topic of your interest.
- 35) Syllabify the following words and write how many syllabi each word has:
- a) Transmission
 - b) Topography
 - c) Morphology
 - d) Magnetic
 - e) Scanning
- 36) Write a short speech on electron microscope.
- 37) Write a short speech on the importance of Microscope.
- 38) Design a poster on electron microscope.
- 39) Write any 5 words and syllabify it.
- 40) Are you interested in speech? If yes what skills make you to be? If no what is your barrier to do it?

Unit-V

- 41) Think and write about the different skill sets required for some of the jobs specific to your course of study and discuss in small groups.
- 42) Draw a neat illustration describing the structure and characteristics of virus.
- 43) Write a Problem - Solution Essays on Non-biodegradable waste.
- 44) Write a Problem - Solution Essays on Genetically modified food.
- 45) Write the characteristics of a good summary.
- 46) Prepare a summary of the passage on the human immune system.
- 47) What are the essential components of Problem Solution essay?
- 48) Write a Problem - Solution Essays on Immunization.
- 49) In your perception what do you think about Immunization?
- 50) Is it essential to possess the skill of summary writing?

Section- D

Answer in about 400 words:

(10 marks)

Unit-I

- 1) Differentiate and compare prokaryotic and eukaryotic cell.
- 2) Write an essay on structure of bacterial cell.
- 3) Fill the blanks with these suitable words
(Rinse, Wear, Arrange, Dispose, Disinfect, Handle, Do not, Clean, Dilute, Do not)
 1. _____ lab coat before entering the lab.
 2. _____ eat in the lab.
 3. _____ the concentrated acids in the presence of your professor.
 4. _____ glassware with care.
 5. _____ apparatus before and after the experiment.
 6. _____ the spills immediately.
 7. _____ waste in the dustbin.
 8. _____ apparatus in order after the experiment is over.
 9. _____ water to clog in the sink.
 10. _____ your hands before and after using lab.
- 4) Write the use of the following modal auxiliaries and frame sentences using the same:
 - a) Could -
 - b) Will -
 - c) Shall -
 - d) Should -
 - e) Might -
- 5) Justify why you consider cell wall as a protective barrier around the bacterial cell.
- 6) Can we construct a bacterial cell wall chemically - Justify?
- 7) Match the following:

1. I don't have a cell wall. Who am I?	Plant cell
2. I have a cell wall made up of cellulose. Who am I?	Bacterial cell
3. My cell wall is made up of peptidoglycan. Who am I?	Animal cell
4. I don't have a true nucleus.	Eukaryotic cell
5. I am used to observe microbes. Who am I?	Microscope

8) Do this word puzzle on cell and find out any 12 words.

N	Z	U	P	E	S	C	W	B	C	K	H	Q	A	N	D	X	Z	P	W	X	B	N	Q

9) Frame a conversation between a student and a teacher about a favorite contributor in the field of Microbiology.

10) Narrate a story with a picture given below:

Unit-II

11) Write the gist of gram's staining in a paragraph and give a title for it.

12) Write a flow chart for general staining procedure.

13) Write a conversation between gram positive and gram negative bacteria.

- 14) Describe the process of performing Gram's staining in your own words and write in a paragraph.
- 15) Write a role play between a teacher and a student about favorite contributor to the field of Microbiology.
- 16) Write a conversation between an interviewer and a contributor in the field of Microbiology.
- 17) Read the following passage on smear preparation and answer the questions given below.
Smear preparation technique consists of spreading a small volume of sample on a slide and air drying the film before staining and microscopy. Bacterial smears must be prepared prior to any of the staining techniques.

Step I: Preparation of the glass slide:

- Clean, grease free slides are needed for smear preparation.
- Grease or oil from the fingers on slides must be removed by washing the slides with soap and water
- Finally rinse the slide with 95% alcohol and dry it.
- Hold the slide by their edge.

Step II: Labeling of slides:

- Proper labelling of the slide is essential.
- Every slide should be labelled clearly.
- A lead pencil is used to write on the frosted areas of the glass slide.

Step III: Preparation of smear:

- An evenly spread smear should be prepared covering area of 15-20mm diameter.
- Avoid thick and dense smear because thick smear prevent light penetration to visualize the morphology of cell.
- A good smear is one that, when dried, appears as a thin whitish layer or film. The print of textbook should be legible through the smear.
- Different techniques are used for smear preparation depending upon culture media

i. Broth cultures (liquid medium):

- Resuspend the culture by tapping the tube with your finger.
- Depending on the size of the loop, one or two loopfuls should be applied to the center of the slide with a sterile inoculating loop and spread evenly over an area about the size of a dime.
- Set the smears on the laboratory table and allow to air-dry.

ii. Culture plates (Solid medium):

- Organisms cultured in a solid medium produce thick, dense surface growth and are not amenable to direct transfer to the glass slide.
- These cultures must be diluted by placing one or two loopfuls of water on the center of the slide in which the cells will be emulsified.
- Transfer of the cells requires the use of a sterile inoculating loop or a needle.
- Only the tip of the loop or needle should touch the culture to prevent the transfer of too many cells.
- Suspension is accomplished by spreading the cells in a circular motion in the drop of water with the loop or needle. This helps to avoid cell clumping.
- The finished smear should occupy an area about the size of a nickel and should appear as a translucent, or semi-transparent, confluent whitish film

Step IV: Air dry

- Smear should be allowed to dry completely at room temperature at safe place

Step V: Fixation of smear:

- The purpose of fixation of smear is to preserve and prevent smear being washed away during staining.
- Smears are fixed by heat, alcohol and occasionally by other chemicals.

i. Heat fixation

- After the smear is air dried completely, rapidly pass 3-4 times through the flame of Bunsen burner or spirit lamp.
- Avoid too much heating.
- After heat fix, allow the smear to cool before staining.

ii. Alcohol fixation:

- Allow smear to air dry completely
- Fix the smear with one or two drops of 70% alcohol, and leave it for 2 minutes until the alcohol dries up.

Questions:

- a) What is heat fixation?
- b) What is alcohol fixation?
- c) Define smear.
- d) How smear is prepared?
- e) How smear is prepared from solid medium?

18) Frame single sentence definition and extended definition for the following words:

- a) Disinfectants
- b) Decontamination
- c) Heat Sterilization
- d) Filtration
- e) Sanitizer

19) Write an essay on sterilization and emphasize its importance in a microbiology lab.

20) Imagine yourself as Antonie Van Leeuwenhoek's and do a role play on Antonie Van Leeuwenhoek's contribution to Microbiology.

Unit- III

21) Have you attended an interview before? If yes narrate your experience as an essay. If no narrate how will you respond and react to an interview.

22) Draw a mind map on a topic of your interest.

23) If you are an interviewer what are the skills you must have?

24) List down some steps to be followed during a discussion.

25) Read the passage and answer the questions:

Bacteria and fungi are grown on or in microbiological media of various types. The medium that is used to culture the microorganism depends on the microorganism that one is trying to isolate or identify. Different nutrients may be added to the medium, making it higher in protein or in sugar. Various pH indicators are often added for differentiation of microbes based on their biochemical reactions: the indicators may turn one color when slightly acidic, another color when slightly basic.

Other added ingredients may be growth factors, NaCl, and pH buffers which keep the medium from straying too far from neutral as the microbes metabolize. In this exercise, you will make all-purpose media called trypticase soy broth and trypticase soy agar. These 2 media, one a liquid and the other a solid are the exact same formula save for the addition of agar agar (really- agar agar), an extract from the cell walls of red algae. The old way to make media was by the cookbook method--- adding every ingredient bit by bit. The only time that is done today is when making a special medium to grow a certain finicky organism, where particular growth factors, nutrients, vitamins, and so on, have to be added in certain amounts. This medium is called a chemically defined medium (synthetic). Fortunately, the most common bacteria that we want to grow will do nicely with media that we commonly use in lab. Some of our media is bought, but most is produced in the prep area behind the lab. Since this type of medium has some unknown ingredients, or sometimes unknown quantities it is called complex media. It is really very simple to make complex media these days:

1. Rehydrate the powder form of the medium
2. Stir and boil the agar medium to get the agar powder dissolved (if making an agar medium rather than a broth medium)
3. Distribute the medium into tubes
4. Autoclave to sterilize the tube media
5. Autoclave the agar medium for plate production and then pour into sterile petri dishes

STERILIZATION AND THE AUTOCLAVE

When microbiological media has been made, it still has to be sterilized because of microbial contamination from air, glassware, hands, etc. Within a few hours there will be thousands of bacteria reproducing in the media so it has to be sterilized quickly before the microbes start using the nutrients up. The sterilization process is a 100% kill, and guarantees that the medium will stay sterile UNLESS exposed to contaminants by less than adequate aseptic technique to expose to air. Media sterilization is carried out with the autoclave, basically a huge steam cooker. Steam enters into a jacket surrounding the chamber. When the pressure from the steam is at a certain point in the jacket, a valve allows the steam to enter the chamber. The pressure will go up over 15 pounds per square inch (psi): at this point the timer begins to count down usually for 15 minutes, depending on the type of media. The high pressure in a closed container allows the temperature to go above the highest temperature one could get by just boiling, around 121 °C. Therefore, the parameters for sterilization with an autoclave are 121 °C at >15 psi for 15 minutes. Fifteen minutes is the thermal death time for most organisms (except some really hardy spore formers). The prepared media is distributed in different ways, depending on the form one is making. Broths and agar deeps are dispensed into tubes and then sterilized. Agar slant tubes are sterilized and then the rack is tilted to allow the agar to solidify in a slanted fashion. Agar medium to be poured into plates is sterilized in a flask, and then poured afterward. Not all media or solutions can be sterilized via an autoclave. Certain high-protein solutions such as urea, vaccines, and serum will denature in the extreme heat, and so they may have to be filter-sterilized without heat.

You will be making slant and broth media, but not plate media in this lab.

PROCEDURE

1. Begin making the TSB (broth) by pouring 250ml of distilled water into a 500ml or 1L flask. Put in the stir bar and turn on the stir plate so that the surface is just disturbed. Add 3.25 grams of the TSB powder to this flask and allow it to dissolve (will happen quickly). No heat needs to be applied at this stage.
2. Once the powder is dissolved, pipet out 5ml green cap. Green caps are always used for TSB.
3. With the remaining solution (about 100ml) still stirring, add 2 grams of agar powder.

4. The next step will require you to apply heat to the mixture. Before you do this, however, you should be aware that agar has a strong tendency to boil over when it reaches 100°C. Someone in your group should be watching the flask at all times once you see steam coming off of it. At the first sign that the mix is near boiling, REMOVE it from the hot plate (paper towels around the flask neck). DO NOT simply turn off the heat, letting the flask sit there. The metal plate retains a significant amount of heat, and turning off the heat will not prevent the flask from boiling over. Folded paper towels allow you to grasp the flask neck tightly, yet not burn your hand.
5. Have you read step 4? OK, then you can turn on the heat to setting 9 (not High). Make sure that the magnetic bar is stirring the solution.
6. Upon boiling, the agar dissolves, it will turn clear, deeper tan. Remove it from the heat and pipette out 5ml aliquots into 15 tubes for slants (will not be BE slants until removed from the autoclave and tilted to the side to solidify). Cover the slant tubes with yellow caps. The rest of the agar medium in the flask will be poured into 1 large flask for the class. From this point on, yellow caps will be used for nutrient agar slants.
7. Place all of the tubes you have pipetted out in the plastic autoclave racks on the instructor's table as well as the remaining of your melted agar. All agar slants go in one rack, broths in another rack, etc.
8. Dispose of your used pipets in the pipet holder. These glass pipets are reusable, so don't throw them in the trash.

a) Answer the following questions in your own words:

- 1) What are two types of media? How is media sterilization carried out?
- 2) What is the difference between macro and micro nutrients?

b) Find the one-word substitute in the passage for the following:

- 3) a substance that provides nourishment essential for the maintenance of life and for growth.
- 4) a solid, naturally occurring inorganic substance.

c) Say whether the following statements are correct.

- 5) Agar medium to be poured into plates is sterilized in a flask, and then poured afterward.

26) Write an autobiographical essay on 'I am a microbe'

27) Create a mind map on Microscopy.

28) Write an essay on types of culture media and make a conclusion.

29) Write an interview taking place between a MD of a pharmaceutical company and a Microbiologist.

30) Draw a mind map on Microorganisms.

Unit- IV

31) Read the passage, write some 5 key points and syllabify 5 words from the passage.

Electron microscopes are scientific instruments that use the beam of highly energetic electrons to examine objects on a very fine scale. The electron microscope gives information about the topography morphology composition and crystallographic nature of any object. Electron microscopes were developed to overcome the limitations of light microscopes. The electron microscopes are of two types namely transmission electron microscope TEM and scanning electron microscope SEM. Max Knoll and Ernst Ruska of Germany designed the transmission electron microscope in 1931 working on an electron microscope. Electron microscopes function exactly as their optical counterparts except that they use a beam of electrons instead of light to

view the specimen and gain information about its structure and Composition. Electron microscope consists of an electron source, magnetic lenses, condenser lens, projector lens and objective lens. Projector lens are magnetic lenses the magnetic lens is formed by passing suitable steady current through a coil of wire enclosed in an EIN shield the magnetic lenses help to control the path of the electrons there is a viewing port and also a fluorescent screen the basic steps involved in the working of all electron microscopes can be understood with the help of this schematic representation the electrons emitted from the hot filament of the electron source are accelerated by high potentials the condenser magnetic lens concentrates these electrons the object to be viewed is placed on a special holder the concentrated beam of electrons is made to strike the object to be viewed the electrons get partially absorbed by the object the object of lens placed below the object forms an enlarged image of the object this magnified image serves as a virtual object for the projector lens the magnetic projector lens produces the final enlarged image of the object on a fluorescent screen for visual examination or on a photographic plate for permanent record the whole system is placed in an evacuated chamber so that the electrons are able to move freely from the filament to the screen electrons source all electron microscopes generally use a thermionic gun as a source of electrons a Fermi on a gum is shown here a positive electric potential is applied to the anode plate the filament which is the cathode is heated until a stream of electrons is produced the electrons are then accelerated by the positive potential down the column.

32) Write down the steps involved in preparing a speech.

33) Frame a short speech to emphasize the importance of Microbiology.

34) Write an essay using the data in the tabular column given below

Features of Algae	
Kingdom	Protista
Size	Microscopic to 200 feet length
Morphology	Filamentous
Motility	Flagella
Genus	<i>Spirogyra, Palmaria, Stigeoclonium, Macrocyctis</i>

35) Draw a pie chart depicting the applications and uses of algae.

36) Write sentences with connectives and linkers.

37) Draw a bar chart for the uses of algae.

38) The following passage is on Algae. Read the passage and present the data given in this passage as a tabular column.

Algae, members of a group of predominantly aquatic photosynthetic organisms of the kingdom Protista. Algae have many types of life cycles, and they range in size from microscopic. *Micromonas* species to giant kelps that reach 60 metres (200 feet) in length. Their photosynthetic pigments are more varied than those of plants, and their

cells have features not found among plants and animals. In addition to their ecological roles as oxygen producers and as the food base for almost all aquatic life, algae are economically important as a source of crude oil and as sources of food and a number of pharmaceutical and industrial products for humans. The taxonomy of algae is contentious and subject to rapid change as new molecular information is discovered. The study of algae is called phycology, and a person who studies algae is a phycologist. The algae can be divided into several types based on the morphology of their vegetative, or growing, state. Filamentous forms have cells arranged in chains like strings of beads. Some filaments (e.g., *Spirogyra*) are unbranched, whereas others (e.g., *Stigeoclonium*) are branched and brush like. In many red algae (e.g., *Palmaria*), numerous adjacent filaments joined laterally create the gross morphological form of the alga. Parenchymatous (tissue like) forms, such as the giant kelp (*Macrocystis*), can measure many metres in length. Coenocytic forms of algae, such as the green seaweed *Codium*, grow to fairly large sizes without forming distinct cells.

39) Differentiate Pie chart and bar chart.

40) Write an essay on Microscope and its invention.

Unit- V

41) Write a problem and solution essay on COVID 19 vaccination.

42) Draw a PPT slide on structure of virus.

43) Draw a flow chart on life cycle of virus.

44) Draw a PPT slide on life cycle of virus.

45) Choose a simple topic related to your subject and draw a PPT containing 5 slides.

46) Read the passage and answer the following questions:

Characteristics of Viruses:

An individual virus is called a virion. It is a tiny particle much smaller than a prokaryotic cell. Because viruses do not consist of cells, they also lack cell membranes, cytoplasm, and other cell organelles. Without these structures, they are unable to make proteins or even reproduce on their own. Instead, they must depend on a host cell to synthesize their proteins and to make copies of themselves. Viruses infect and live inside the cells of living organisms. When viruses infect the cells of their host, they may cause disease. For example, viruses cause AIDS, influenza (flu), chicken pox, and the common cold. Although viruses are not classified as living things, they share two important traits with living things. They have genetic material, and they can evolve. This is why the classification of viruses has been controversial. It calls into question just what it means to be alive.

Structure of Viruses

A virus particle consists of DNA or RNA within a protective protein coat called a capsid. The shape of the capsid may vary from one type of virus to another. Some viruses have an envelope of phospholipids and proteins. The envelope is made from portions of the host's cell membrane. It surrounds the capsid and helps protect the virus from the host's immune system. The envelope may also have receptor molecules that can bind with host cells. They make it easier for the virus to infect the cells.

Classification of Viruses

Viruses are classified on the basis of several traits. For example, they may be classified by capsid shape, presence or absence of an envelope, and type of nucleic

acid. The table below gives examples of virus families and their traits. Most systems of classifying viruses identify at least 20 virus families.

Questions:

- a) Have any of these viruses made you sick?
- b) Describe a virion.
- c) Why are viruses not able to make their own proteins?
- d) Describe the structure of a virus.
- e) Do you think viruses should be classified as “living organisms”? Why or Why not?

47) Write the 5R's of note making.

48) Draw a mind map on note making.

49) Draw a neat sketch on life cycle of virus.

50) Discuss the various job opportunities related to your subject of study.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

II B. Sc Microbiology – Semester III

Core II - Microbial physiology and metabolism Sub Code: 21UMIC31

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

1. An enzymatic reaction taking place inside the cell is defined as ____
a) **Metabolism** b) Photosynthesis c) Division of nuclei d) None
2. Transport of molecules through plasma membrane is inferred as ____
a) **Membrane transport system** b) Symport c) Abort d) Movement
3. _____ system quoted as energy requirement
a) Active transport b) **Passive transport** c) Osmosis d) Group translocation
4. _____ listed under requirement of mediator molecule
a) **Facilitated diffusion** b) Iron transport c) Osmosis d) Reverse osmosis
5. When the concentration of solute lower than inside is named as ____
a) **Hypotonic** b) Isotonic c) Hypertonic d) Monotonic
6. _____ is a state inferred as electrochemical gradient
a) **Net difference in the charges** b) Similarity in the charges c) Colloidal d) None
7. An increase in the number of bacteria is defined as ____
a) **Growth** b) Division c) Multiplication d) Improvement
8. Process that regulates the osmotic pressure of fluids and electrolytic balance named as ____
a) **Osmoregulation** b) Symbiosis c) Electronic balance d) Gaseous balance
9. Nutrients which are required in large amount is indicated as _____
a) **Macro nutrient** b) Micro nutrient c) Trace element d) All

10. Nutrients required in minimum is inferred as _____

- a) **Micro nutrient** b) Osmoconformers c) Osmoregulators d) None

Unit II

11. The absorption and digestion of food or nutrients by the body is inferred as _____

- a) **Assimilation** b) Dissimilation c) Egestion d) Absorption

12. Formation of pyruvate from glucose is named as _____

- a) **Glycolysis** b) ETC c) Krebs cycle d) Oxidation

13. The end product of ETC is described as _____

- a) **H₂O** b) O₂ c) Carbon d) Nitrogen

14. Process by which organic molecules are converted into acids or alcohol is named as _____

- a) **Fermentation** b) Anaerobic metabolism c) Aerobic metabolism c) All

15. _____ products are listed as end products of fermentative process

- a) Acid b) Alcohol c) Gases **d) All**

16. _____ is inferred as end product of homolactic metabolism

- a) **Lactic acid** b) Acetic acid c) Sulphuric acid d) Amino acids

17. _____ inferred as heterolactic metabolism

- a) Lactate b) Ethanol c) **Both a and b** d) Pyruvate

18. Alcohol fermentation also named as _____

- a) **Ethanol fermentation** b) Butanol fermentation c) Butane diol fermentation d) Lysol

19. Formation of mixed acid is quoted as _____

- a) **Combination of acids** b) Acids and Ethane c) Methane d) Succinate

20. _____ inferred as formation of amino acids

- a) **Protein metabolism** b) Nucleic acid metabolism c) Glucose metabolism d) Lipid

Unit III

21. Cellular respiration that takes place in the presence of oxygen gas is named as ____
a) Aerobic respiration b) Anaerobic respiration c) Sulphur respiration d) Nitrate respiration
22. Nitrate respiration is listed under ____
a) Anaerobic respiration b) Aerobic respiration c) Cellular respiration d) Metabolism
23. ____ is quoted as oxidation of sulphur
a) Sulphur respiration b) Nitrogen respiration c) Phosphorous respiration d) None
24. Acetogenesis is indicated by ____ (K2)
a) Homoacetogens b) Hetero acetogens c) Methanogens d) Archea
25. The formation of starch using light is named as ____
a) Phototrophic metabolism b) Photosynthesis c) Both a and b d) Heterotrophic metabolism
26. The formation of methane is defined as ____
a) Methanogenesis b) Acetogenesis c) Lactogenesis d) Hydrogenesis
27. The process of emission of light is inferred as ____
a) Bioluminescence b) Luminescence c) Photolysis d) Hydrolysis
28. Chlorophyll is described as ____
a) Pigments b) Light harvesting molecules c) Photolytic materials **d) Both a and b**
29. ____ defined as electron carrier
a) Fes b) Ubiquinone c) FMN **d) All**
30. ____ is indicated CO₂ as an electron acceptor
a) Carbonate b) Methane c) Oxygen d) Hydrogen

Unit IV

31. ____ named as closed system of cultivation
a) Batch b) Fed batch c) Continuous d) None

32. ____ system is quoted as continuous removal of culture
a) **Continuous** b) Batch c) Fed batch d) All
33. Turbidity method is inferred as ____
a) Direct count b) **Indirect count** c) Logarithmic d) Electro method
34. Photostat describes the application of ____
a) **Photocell** b) Photons c) Carbon d) Nitrogen
35. ____ interpreted as growth stages
a) Log phase b) Lag phase c) Stationary phase d) Death phase
36. The time interval for the formation of two daughter cell from one is named as ____
a) **Generation time** b) Multiplication time c) Duplication time d) Replication time
37. ____ is quoted as sporogenesis
a) **Formation of spores** b) Formation of nucleus c) Formation of cell wall d) None
38. Spores are named as ____
a) **Vegetative body** b) Reproductive body c) Resistant structure d) All
39. Fixation of atmospheric nitrogen is indicated as ____
a) **Nitrogen fixation** b) Nitrogen assimilation c) Nitrogen formation d) None
40. Nitrogen is inferred as ____
a) **Common element** b) Important element c) Necessary element d) All

Unit V

41. ____ defined as the ability of organisms to use inorganic carbon
a) **Autotrophs** b) Phototroph c) Heterotrophs d) None
42. ____ organisms indicated as chemolithotrophs
a) **Use that chemical energy** b) Use that carbon c) Use that nitrogen d) All
43. ____ of the following is named as the most popular oxoacid of sulfur
a) **Pyrosulphuric acid** b) Sulphurous acid c) Sulphur acid d) Sulphate

44. _____ is quoted as iron for improving its oxidation resistance

- a) **Nickel** b) Chromium c) Aluminum d) Cobalt

45. _____ of the following is not inferred as accessory pigment

- a) **Cholorophyll** a b) Carotenoid c) Rhodopsin d) Phycobilin

46. _____ quoted as main function of carotenoids

- a) Photolysis **b) Photooxidation** c) Photosensation d) All

47. Rhodopsin is indicated to be found in _____

- a) **Eye** b) Ear c) Nose d) Teeth

48. _____ is named as energy rich compounds

- a) Pyrophosphate b) Acyl phosphate c) Enol phosphate **d) All**

49. Compound that releases high energy is listed as ____

- a) **High energy compound** b) Low energy compound c) Moderate energy d) None

50. _____ is inferred during cracking of natural gas

- a) **Hydrogen** b) Nitrogen c) Oxygen d) Phosphorous

Section-B

Answer the following in about 50 words:

(2 marks)

Unit I

1. Define metabolism

2. Distinguish between active and passive transport

3. Explain facilitated diffusion

4. Identify the factors required for microbial growth

5. Write the functions of osmoregulatory proteins

6. Summarise the importance of macro and micronutrients

7. Differentiate between group translocation and iron transport

8. Draw the sequence events of molecule transport

9. List out the end products of glucose metabolism

10. Define heterotrophic metabolism

Unit II

11. Distinguish between assimilatory and dissimilatory pathway

12. Define glycolysis

13. Explain krebs cycle

14. Identify the electron transport carrier in ETC

15. Write the importance of fermentative mechanism

16. Summarise the importance of fermentation by bacteria and yeast

17. Differentiate between homo and hetero lactate fermentation

18. Draw the metabolic pathway for butanediol fermentation

19. List out the end products of ethanol fermentation

20. Define protein metabolism

Unit III

21. Distinguish between aerobic and anaerobic respiration

22. Define nitrate respiration

23. Draw the metabolic pathway for methane fermentation

24. Write the importance of carbonate metabolism

25. Identify the enzymes responsible for bioluminescence mechanisms

26. Summarise the importance of phototrophic metabolism

27. Differentiate between photolysis and photo harvesting

28. List out the historical events of photosynthesis

29. Define luminescence

30. Write the examples of bioluminescent organisms

Unit IV

- 31.Distinguish between batch and continuous culture
- 32.Define growth curve
- 33.List out the factors affecting growth of bacteria
- 34.Write the importance of macro nutrients in bacterial growth
- 35.Identify the trace elements needed for culture media
- 36.Summarise the steps involved in sporulation process
- 37.Differentiate between nitrogen assimilation and fixation
- 38. Define sporogenesis
- 39.Write the examples of nitrogen fixing bacteria
- 40.Quote the mechanism of endospore formation

Unit V

- 41.Distinguish between autotroph and heterotrophs
- 42.Define chemolithotroph
- 43.List out examples of sulphur oxidizing bacteria
- 44.Differentiate between hydrogen and ion oxidation
- 45.Identify the photosynthetic pigments in bacteria
- 46.Summarise the energy rich compounds
- 47.Draw the metabolic pathway in the oxidation of sulphur
- 48.List out the importance of carotenoids
- 49.Write the examples of autotrophic organism
- 50.Explain the importance of chlorophyll

Section- C

Answer in about 200 words:

(6 mark)

Unit-I

- 1.Examine the importance of metabolism in bacteria
- 2.Compile membrane transport system
- 3.Outline the requirement of bacterial growth
- 4.Demonstrate the mechanism of group translocation
- 5.Compare the passive and active transport of molecules
- 6.Distinguish between the requirement of active and passive transport
- 7.Show the significance of trace elements for the support of bacterial growth
- 8.Organise the role of osmoregulatory proteins
- 9.Classify the carriers found in group translocation
- 10.Simplify the mechanism of catabolism in prokaryotes

Unit II

11. Examine the importance of assimilatory pathways
- 12.Compile the components of respiratory pathway
- 13.Relate the mechanism of krebs cycle and glycolysis
- 14.Demonstrate the importance of fermentative pathway
- 15.Outline homo and heterolactic acid pathway
- 16.Distinguish between mixed and simple acid pathway
- 17.Show the importance of butanediol fermentation
- 18.Organise the fermentative pathway of bacteria
- 19.Classify the significance of acetate and propionate pathway

20. Analyse the functions of protein in living organism

Unit III

21. Examine the patterns of anaerobic respiration

22. Compile the sulphur and nitrate respiratory pathway

23. Classify the significance of carbonate pathway

24. Distinguish between methane and respiratory pathway

25. Organise the bioluminescence components

26. Show the importance of phototrophic organism

27. Outline the factors affecting phototropism

28. Demonstrate the history of photosynthetic pathway

29. Relate the components of photosynthetic mechanism

30. Analyse the functions of phototropism in prokaryotic organism

Unit IV

31. Examine the patterns of growth in bacteria

32. Distinguish between batch and fed batch growth

33. Show the importance of continuous culture system

34. Analyse the factors affecting growth

35. Relate the components of bacterial growth

36. Demonstrate the significance of physical and chemical elements required for growth

37. Organise the steps of endospore formation

38. Compile the structures of endospore developed during sporogenesis

39. Differentiate between nitrogen assimilation and fixation

40. Outline the biological factors affecting bacterial growth

Unit V

- 41.Examine the characteristics and metabolism of autotrophs
- 42.Show importance of chemolithotrophs
- 43.Relate the pathway involved in hydrogen oxidation
- 44.Distinguish between hydrogen and sulphur oxidation
- 45.Compile the photosynthetic pigments
- 46.Out line the energy rich compounds in cell metabolism
- 47.Demonstrate the salient features of cell metabolism
- 48.Analyse the molecular mechanism of photosynthesis
- 49.Organise the biochemical pathway related to light reaction
- 50.Examine the growth curve with different phases of growth

Section- D

Answer in about 500 words:

(12 marks)

Unit-I

1. Assemble the hypothesis of anabolism and catabolism with examples
2. Prove that metabolism is important in growth of living organism
3. Develop the requirements of bacterial growth
4. Transport mechanism is inevitable in prokaryotes – Judge
5. Combine the active and passive transport mechanism
6. Conclude the role of osmoregulation
7. Formulate the advantages of micro nutrients and trace elements
8. Generate the formal requirements of production media
9. Evaluate the role of osmoregulatory proteins
10. Design the flow chart of iron transport mechanism

Unit II

11. Assemble respiratory pathways with its example
12. Prove that glucose metabolism is essential for all cellular activities
13. Combine the significance of krebs and TCA cycle
14. Design the flow chart of electron transport system
15. Evaluate the applications of fermentation pathway
16. Generate homo and heterolactic acid pathway system
17. Conclude the role of fermentation by bacteria and yeast
18. Mixed acid fermentation is inevitable in cellular metabolism – Judge
19. Formulate the mechanism of protein metabolism
20. Develop the butanol and propionate pathway

Unit III

21. Prove that anaerobic respiration is different from aerobic respiration
22. Assemble respiratory pathway for nitrate and sulphur
23. Generate the role of methane respiration in anaerobic organism
24. Evaluate the significance of carbonate respiration
25. Bioluminescence is advantage for living organism – Judge
26. Develop the pathway for phototrophic metabolism
27. Formulate the concept of light and dark reaction
28. Conclude that photosynthesis is life serving mechanism in bacteria
29. Generate an historical account of photosynthesis
30. Design the mechanism which represent anaerobic respiration

Unit IV

31. Develop the different phases of growth curve
32. Assemble the significance of batch and continuous culture system
33. Formulate the factors affecting growth curve
34. Prove that biological and chemical factors are essential for growth
35. Conclude macro and micro elements differ from each other in terms of supporting growth
36. Endospores are helpful in sustaining unfavorable condition – Judge
37. Generate different stages of endospore formation with respect to sporulation
38. Evaluate the importance of nitrogen assimilation
39. Design the mechanism of nitrogen fixation by bacteria
40. Develop the futures of sporulation in endospore producing bacteria

Unit V

41. Generate the characteristics of autotrophs
42. Assemble the significance of metabolism of autotrophs
43. Evaluate the importance of chemolithotroph
44. Design the mechanism for sulphur reducing metabolism
45. Develop the list of bacteria involved in iron and hydrogen oxidation
46. Photo synthesis is vital in bacteria – Judge
47. Formulate the futures of energy rich compounds in cellular metabolism
48. Conclude rhodopsin and chlorophyll are accessory pigments
49. Assemble the compounds involved in phototrophic and lithotrophic respiration
50. Prove that carotenoids are as important as other pigments

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI

II B.Sc Microbiology Semester-V

Allied III – Genetic Engineering

Sub.Code: 21UMIA31

Question Bank

SECTION – A

(1 Mark)

Choose the correct answer:

UNIT-I

1. _____ is an unit of inheritance.
a) Chromosome b) Nucleus c) **Gene** d) Proteins
2. The father of genetic engineering is_____
a) **Paulberg** b) Crick c) Watson d)James
3. The extra chromosomal circular double stranded DNA is_____
a) Cosmid b)Episome c) Phagemid **d) Plasmid**
4. _____ is a process used to make genetic copies of living things.
a) Screening **b) Cloning** c) Replication d) Lysogenic
5. The functional unit of heredity is_____
a)DNA b) RNA c) Proteins d) Phosphate
6. The hybrid plasmid contains a lambda phage cos sequence is_____
a) Transposans b) Genes **c) Cosmid** d) Plasmid
7. The direct contact of transfer of genes is _____
a) Conjugation b) Biolistics c) Transduction d) Electrophoration
8. The enzyme occurs in *E.coli* in Blue-screening method is_____
a) Lactase b) Peptidase c) Protease **d) Galactosidase**
9. The blunt ends are formed by _____
a) Adaptors b)Linkers c) Homopolymers d) Primers

10. The transformation process was suggested first by _____
- a) Jenner b) Pasteur c) Kary Mullis **d) Griffith**

UNIT-II

11. _____ were the first to isolate plasmid as a cloning vector.
- a) Ken & Berklin b) Smith & Nathans c) Hawley & Lure **d) Chang & Cohen**
12. The transposons are also known as-----
- a) Immobile genes b) Promoter genes **c) Jumping genes** d) Resistant genes
13. ----- is an example for cosmid vector.
- a) P^{BR 322} b) P^{UC 8} **c) P^{LFR 5}** d) P^{SC 101}
14. ----- vectors that can replicate in two different organisms.
- a) Phage **b) Shuttle** c) Cosmid d) Viruses
15. The DNA carries the desired gene to the host cell is called as-----
- a) Vector** b) Transposons c) Enzymes d) Vehicle
16. RSF 1010 a double stranded plasmid present in -----
- a) *P. putida*** b) *P. fluorescens* c) *P. aeruginosa* d) *P. fragii*
17. Cosmids was constructed by ----- in 1978.
- a) Craig & Benton **b) Collins & Hohn** c) Wilkins d) Cleland
18. The phage DNA incorporated into the genome of a bacterium is-----
- a) Capsomeres b) Viruses **c) Prophage** d) Lambdaphage
19. ----- has two different origins of replication that replicate both in *E. coli* & *Bacillus*.
- a) P^{SC101} b) ColE1 **c) P^{EB10}** d) P^{BR322}
20. Transposons were discovered by _____
- a) Barbara** b) Jacob c) Ernst d) Koch

UNIT-III

21. DNA finger printing is also known as-----
- a) **DNA profiling** b) DNA marker c) DNA printing d) DNA hybridization
22. The original DNA finger printing technique was developed by -----
- a) Gregor b) **Alec Jaffreys** c) Nathan d) Kary
23. The telomers are essential for the-----of YAC in yeast cells.
- a) Centromeres b) **Telomers** c) Monomers d) Diplomeres
24. -----discovered the technique to separate DNA fragments of an organism.
- a) **Edward Southern** b) Northern c) Luyer d) Tale
25. ----- is a shuttle vector for *E.coli* & insect cell baculovirus.
- a) Plasmid b) Cosmid c) **Bacmid** d) Yacmid
26. The northern blotting method was devised by-----
- a) **Alwine** b) Luyer c) Haberlandt d) Cohen
27. Western blotting technique is used to separate-----
- a) DNA b) **Proteins** c) RNA d) Peptide
28. The enzyme used in PCR technique is-----
- a) **Taq polymerase** b) DNA Polymerase c) Exonuclease d) Endonuclease
29. PCR technique was developed by -----
- a) **Kary Mullis** b) Edward c) Stahl d) Karl
30. A labelled molecule used in hybridization technique is-----
- a) Protein b) **Probe** c) Purine d) Pyrimidine

UNIT-IV

31. The treatment of genetic disorders by introducing proper genes into cells of the target organ is -----
- a) Chemotherapy b) Gene manipulation c) Gene drug d) **Gene therapy**

32. The gene used in gene therapy is called as-----
 a) Chemotherapy b) Gene manipulation c) **Gene drug** d) Gene therapy
33. -----genetically manipulated organism used to degrade DDT.
 a) **Candida** b) *Rhizopus* c) *Saccharomyces* d) *Moraxella*
34. ----- is used to treat osteoporosis.
 a) **Calcitonin** b) Relaxin c) Glucagon d) Trypsin
35. ----- are used to clear up the oil slicks and hydrocarbons.
 a) *Bacillus* b) ***Pseudomonas*** c) *Mycobacterium* d) *Candida*
36. The transplantation of animal organs in human system is-----
 a) Transplant b) Cell transplantation c) Organ transplantation d) **Xenotransplantation**
37. The treatment of diabetes by injecting insulin is -----
 a) **Insulin therapy** b) Glucotherapy c) Glycotherapy d) Carbothotherapy
38. ----- manufactures human insulin in the name humulin.
 a) **Eli Lilly** b) Gilbert c) George d) Aaron
39. The small proteins that stimulate viral resistance in cells is-----
 a) Insulin b) Intron c) **Interferons** d) Inositol
40. ----- is plastic like natural polymer produced in many bacteria.
 a) PKI b) PHG c) PBJ d) **PHB**

UNIT-V

41. _____ is a type of agreement royalty is paid on the basis of sale.
 a) Mining b) Patent c) Licensing d) **Copyright**
42. Intellectual Property right in India do not covers _____
 a) Patent b) Copyrights c) Trademarks d) **Moral rights**
43. The top genetically modified food is _____
 a) soy b) Cotton c) **Corn** d) Canola

44. GMO stands for_____
- a) **Genetically Modified organism** b) Genetically made organism c) Generally made organ
d) Generically moderated organism
45. Cry gene is present in _____
- a) **Bt cotton** b) Corn c) Maize d) Wheat
46. _____is the largest area of GMO crops are grown.
- a) **US** b) UK c) Australia d) Greenland
47. The transgenic crop whose genes are altered by _____
- a) **Manipulation** b) Hybridization c) conjugation d) Transformation
48. The exclusive rights to a specific sequence of DNA given by government is_____
- a) **Genepatent** b) License c) Trademark d) Copyright
49. The first gene patented was _____
- a) PEO b) EBO c) **EPO** d) BEP
50. ----- started issuing patents to whole genes with known functions.
- a) Morgan b) Aristotle c) David d) **Chakrabarty**

SECTION –B

(5 Marks)

Answer the following in about 50 words:

UNIT-I

1. Draw an outline of rDNA technology.
2. Define gene cloning.
3. Differentiate between cohesive and blunt ends.
4. Describe Homopolymer tailing.
5. Discuss isoschizomers.
6. Illustrate shot gun cloning method.
7. Describe Electrophoration.
8. Explain colony hybridization.
9. Describe immunochemical method in screening.
10. Discuss molecular scissors.

UNIT-II

11. Define vector.
12. List the properties of a good vector.
13. Name the types of plasmids.
14. List the salient features of cosmid.
15. Define transposans.
16. Describe shuttle vectors.
17. Explain the characteristics of plasmid vector.
18. Discuss shuttle vector.
19. Express the advantages & disadvantages of cosmids.
20. Illustrate lambda phage vector.

UNIT-III

21. Define blotting .
22. List out the blotting techniques.
23. Explain about the applications of DNA finger printing.
24. Describe DNA libraries.
25. Discuss BAC.
26. Define gene amplification.
27. Explain DNA profiling.
28. Define probe.
29. Explain autoradiography.
30. Discuss Hybridization.

UNIT-IV

31. Define transgene.
32. Discuss insecticides.
33. Define transgenesis.
34. Describe GMO.
35. List out the steps in genetic engineering.
36. Explain hydrocarbons.
37. Describe superbug.
38. Discuss Bt cotton.
39. Define biodegradation.
40. Explain Ti plasmids.

UNIT-V

41. Discuss GMO'S in agriculture.
42. Describe Gene crops.
43. List out the applications of genetic engineering in environment.
44. Explain patent rights.
45. List the limitation of GMO.
46. Discuss IPR.
47. Explain copyrights.
48. Describe Trademarks.
49. List out 5 transgenic organisms.
50. Explain the advantages of genetic engineering in various fields.

SECTION-C

(5Marks)

Answer the following in about 200 words:

UNIT-I

1. Explain cloning process.
2. Organize the steps involved in cloning process.
3. Classify the restriction enzymes.
4. Explain shotgun cloning method.
5. Construct the steps involved in rDNA.
6. Explain gene transfer methods in detail.
7. Demonstrate screening of chimeric DNA.
8. Distinguish linkers and adaptors.
9. Differentiate transduction and transfection.
10. Illustrate colony hybridization method.

UNIT-II

11. Categorize the plasmids based on its function.
12. Compare the cosmids and its types.
13. Express lambda phage vector in cloning.
14. Draw a labelled outline of shuttle vectors.
15. Compile about M₁₃ bacteriophage vector.
16. Construct P^{BR} 322 vector.
17. Categorize the types of transposons.
18. Explain briefly the types of natural plasmids.
19. Discuss the ideal characteristics of plasmid vector.
20. Interpret the advantages of cosmids.

UNIT-III

21. Write a experimental procedure of southern blotting.
22. Explain Northern blotting.
23. Apply the blotting method to find proteins
24. Discuss PCR .
25. Investigate DNA finger printing in crime.
26. Compile PCR modifications.
27. Briefly explain YAC.
28. Explain BAC.
29. Express PCR applications.
30. Construct DNA libraries.

UNIT-IV

31. Explain the applications of genetic engineering.
32. Briefly explain the role of rDNA technology in agricultural field.
33. Explain in detail about the applications of rDNA in aquaculture.
34. Explain commercial production of rDNA technology.
35. Write a note on extend applications of genetic engineering in medicine.
36. Discuss transgenic plants.
37. Explain the process in insulin production.
38. Construct Superbug.
39. Briefly explain about the genetically engineered biocontrol agents.
40. Compile the pollution control by GMO'S.

UNIT-V

41. Compile GMO'S.
42. Distinguish the advantages and disadvantages of GMO'S.
43. Explain ecological impact of transgenic plant.
44. Summarize GMO'S in environment aspects.
45. Explain IPR.
46. Discuss copyrights of biological materials.
47. Discuss Trademarks.
48. Express the modified organisms by genetic methods.
49. Predict genetically modified plants are patentable.
50. Explain international agencies in GMO.

SECTION- D

(10Marks)

Answer the following in about 400 words:

UNIT-I

1. Write a detail account on the historical development in genetic engineering.
2. Describe in detail about the discovery of transformation process.
3. Write a brief note on the gene cloning mechanisms.
4. Explain in detail about the enzymes in cloning.
5. Write the steps involved in construction of rDNA.
6. Describe gene transfer methods in detail.
7. Elaborate screening of chimeric DNA.
8. Describe in detail about the applications of gene cloning.
9. Give a detail account on selection of recombinant bacteria.
10. Explain in detail about the chimeric DNA .

UNIT-II

11. Justify plasmids as a cloning vector in detail.
12. Describe in detail about the cosmids and its types.
13. Prove lambda phage as a vector in cloning.
14. Construct the steps of binary and shuttle vectors in detail.
15. Examine the role of P^{UC8} as a vector.
16. Elaborate the types of plasmids.
17. Write a brief account on M13 vector.
18. Explain in detail about the types of transposons.
19. Briefly explain the classification of plasmids.
20. Explain the selecting and designing of cloning vectors in detail.

UNIT-III

21. Explain Southern blotting in detail.
22. Briefly explain YAC.
23. Elaborate BAC.
24. Examine the protein separation by western blotting.
25. Explain in detail about the screening of DNA library.
26. Explain polymerase chain reaction.
27. Elaborate DNA finger printing.
28. Write a brief note on modification of PCR.
29. Write in detail about the cDNA libraries.
30. Briefly explain about the applications of blotting techniques.

UNIT-IV

31. Write a detail note on applications of genetic engineering in medicine.
32. Elaborate transgenic plants.
33. Give a brief account on the role of Ti plasmids.
34. Write a detail note on the development of resistant crops.
35. Explain insulin production by rDNA technology.
36. Briefly explain superbug.
37. Write a detail note on construction method of superbug.
38. Elaborate marker gene.
39. Write a detail note on oil degradation by superbug.
40. Explain briefly about the pollution control by GMO'S.

UNIT-V

41. Discuss in detail about GMO'S in medicine.
42. Describe genetically modified crops.
43. List out the disadvantages of GMO'S.
44. Explain patent rights in detail.
45. List the application of GMO in detail.
46. Elaborate IPR.
47. Explain about the Indian agencies involved in patenting.
48. Describe international agencies and their role in patent rights in detail.
49. Write a detail account on transgenic organisms.
50. Explain the advantages of genetic engineering.

ST. MARY'S COLLEGE (Autonomous) – THOOTHUKUDI

II B.Sc Microbiology

Elective Vermiculture Technology Sub. Code: 21UMIS32

Question Bank

Unit I

1. The earthworm is placed under the group
 - (a) Polychaeta
 - (b) Hirudinea
 - (c) **Oligochaeta**
 - (d) Crustacea
2. The parasite found in the seminal vesicle of earthworms are
 - (a) Nosema
 - (b) Sarcocystis
 - (c) **Monocystis**
 - (d) Nyctotherus
3. The typhlosole in earthworm is related to
 - (a) respiration
 - (b) excretion
 - (c) **absorption**
 - (d) reproduction
4. Colour of the body in earthworms is due to the presence of
 - (a) Haemoglobin
 - (b) Blood
 - (c) **Porphyrin**
 - (d) Haemocyanin
5. Region of earthworm that is a forest of nephridia is
 - (a) Pharyngeal region
 - (b) **Clitellar region**
 - (c) Typhlosolar region
 - (d) Intestinal region
6. Chloragogen cells are found in
 - (a) Blood of earthworm
 - (b) **The coelomic fluid of the earthworm**
 - (c) Blood of cockroach
 - (d) The body wall of leucosolenia
7. This animal does not show any metamorphosis of larval stage
 - (a) Asteria
 - (b) Musca domestica
 - (c) **PheretimaPosthuma**
 - (d) Butterfly
8. The most effective organ for food digestion in earthworm is
 - (a) Mouth
 - (b) Buccal cavity
 - (c) **Pharynx**
 - (d) Stomach
9. The typhlosole found in Pheretima occurs in
 - (a) Stomach
 - (b) **Intestine**
 - (c) Oesophagus
 - (d) Gizzard

10. In earthworm, the mouth is located on

- (a) Stomium
- (b) **Peristomium**
- (c) Prostomium
- (d) Protostomium

11. What is vermicomposting?

- a) **Using worms to decompose organic waste.**
- b) Eliminating worms from you compost.
- c) Selling worms as a business.
- d) Compost

12. How much can worms eat each day?

- a) **half their body weight in food**
- b) equal to their body weight in food
- c) double their body weight in food
- d) equal to the soil

13. What type of worms are the best for vermicomposting?

- a) Blue
- b) brown
- c) **red**
- d) Yellow

14. Where should you buy worms from?

- a) bait shops
- c) **worm farms**
- c) your garden
- d) predators

15. How long will it take for your worm population to double?

- a) 30 days
- b) 60 days
- c) **90 days**
- d) 120 days

Why do you need to weigh your worms before putting them in your compost bin?

- a) **to know how much to feed them**
- b) to know how many there are
- c) to see how much weight, they are putting on
- d) to see the compost

Unit II

1. What is the ratio of male and female worms required for effective worm reproduction?

- a) 1 male:1 female
- b) 1 male:2 female
- c) **it doesn't matter**
- d) 2 male and 2 females

2. How can you tell if a worm is sexually mature?

- a) Their skin starts to shed.
- b) **They get dark, red bands around their neck.**
- c) The end of their body swells.
- d) they get yellow bands

3. What type of bin is best for vermicomposting?

- a) Metal
- b) plastic
- c) **wood**
- d) Iron

4. What are worms afraid of?

- a) Noise
- b) **light**
- c) water
- d) Air

5. What can be used for the bedding of a vermicomposting bin?

- a) **shredded paper**
- b) food
- c) eggshells
- d) Water

6. How do worms breathe?

- a) **through their skin**
- b) through their lungs
- c) through their ears
- d) through their lungs

7. The digestive system of worms is similar to that of:

- a) monkeys
- b) fish
- c) **birds**
- d) animals.

8. Where do worms get calcium from?

- a) **Eggshells**
- b) cheese
- c) rice
- d) vegetables

9. Which of the following foods are bad for worms?

- a) **Oranges**
- b) rice
- c) potatoes
- d) cheese

10. What does it mean if your compost bin begins to smell?

- a) You have too much bedding and not enough soil.
- b) **You are feeding the worms too much.**
- c) You have too many worms in the bin.
- d) You have many compost in the bin

11. What does it mean if you see tiny white sacks in the compost bin?

- a) There are maggots in your bin.
- b) The food is rotting in the bin.
- c) **There are worm egg sacks.**
- d) There are too many sacks

12. With reference to vermicomposting, what is black gold?

- a) worm oil
- b) **worm poop**
- c) black worms
- d) earthworm

13. How can you separate the worm poop from the rest of the compost?

- a) **Feed the worms on one side of the bin for a week.**
- b) Take all the bin contents out and sift it.
- c) Allow the poop to fall through holes at the bottom of the bin.

- d) Allow to breath
14. Which of the following chemicals is used for protecting vermi-bed from ants?
- (a) DDT (b) Griseofulvin
(c) Chloramphenicol (d) **Chlorpyriophosphate**
15. Which of the following is a commonly used earthworm species for the vermicomposting process?
- (a) Eisenia fetida (b) Perionix excavatus
(c) **Both (a) and (b)** (d) None of the above

Unit III

1. The highly decomposed organic matter rich in minerals like nitrogen, phosphorus, and potassium, in particular, produced from the activity of earthworms is called _____.
- (a) Humus (b) **Vermicompost**
(c) Worm casting (d) Compost bedding
2. Vermicompost is used as a biofertilizer because it is rich in _____.
- (a) Calcium (b) Nitrogen
(c) Phosphorus (d) **All of the above**
3. Which of the following is false about vermicomposting?
- (a) Worms population doubles in 90 days
(b) **Worms eat double their body weight**
(c) The wooden bin is best for vermicomposting
(d) Red worms are the best for vermicomposting
4. Which of the following is true about vermicomposting?
- (a) Composting using rats (b) Composting using birds
(c) **Composting using worms** (d) All of the above
5. Which of the following is true about vermicompost?
- (a) Vermicompost is red in colour
(b) Vermicompost is black in colour
(c) Vermicompost is white in colour
(d) **Vermicompost is brown in colour**
6. Which of the following are the best worms used for composting?
- (a) Maggots (b) Pink worms
(c) **Red wigglers** (d) All of the above
7. The moisture level required for vermicomposting should be between _____.
- (a) Below 30 per cent (b) 40 and 50 per cent

- (c) **70 and 80 per cent** (d) Above 90 per cent
8. The maximum temperature required for vermicomposting is_____.
- (a) 20C to 25C (b) 25C to 30C
- (c) **30C to 35C** (d) 35C to 40C
9. Which of the following is not a drawback of vermicomposting?
- (a) Time-consuming process
- (b) Require regular monitoring
- (c) Require minimum temperature
- (d) **Enriches soil with microorganisms**
10. Which of the following is not raw material required for preparing composts?
- (a) Cow dung (b) Weed biomass
- (c) Dry straw and leaves (d) **All of the above**
11. Which of the following procedures are used by the farmers to multiply the earthworms?
- (a) By adding cow dung (b) By adding plant materials
- (c) By mixing more amount of biodegradable wastes (d) **All of the above**
12. Which of the following products cannot be used for vermicomposting?
- (a) Cow dung (b) Plant materials
- (c) **Animal Wastes** (d) All of the above

Unit IV

1. The chemical used for providing protection to vermibed from ants is
- a) Chloramphenicol b) Griseofulvin
- c) **Chlorpyriophosphate** d) DDT
2. The highly degraded organic matter rich in phosphorus, nitrogen and potassium in particular, resulting from the activity of earthworms is called
- a) Compost bedding b) Humus
- c) Worm casting d) **Vermicompost**
3. Vermicomposting is bio fertilizer which is rich in
- a) Phosphorus b) Calcium
- c) Nitrogen d) **All of the above**
4. What is a manure prepared from debris consisting of animal excreta and agriculture waste called?
- a) **Vermicompost** b) Vermibed
- c) Earthworm d) Tapeworm

5. The optimum moisture level for maintaining aerobic conditions is
- a) **75-90%**
 - b) 90-100%
 - c) 60-70%
 - d) 30-70%
6. Types of pipes should be fixed to the bottom surface to collect vermiwash
- a) Stable pipes
 - b) **PVC pipes**
 - c) Plastic pipes
 - d) CPVC pipes
7. Bedding is the preparation of the substratum for the worm is called
- a) **Vermibed**
 - b) Vermicast
 - c) Vermicompost
 - d) Vermicomposting
8. The worms are active at the temperature ranging from
- a) 30-40⁰c
 - b) 40-50⁰c
 - c) **25-30⁰c**
 - d) 50-60⁰c
9. One pound of worm will eat ----- food scraps
- a) 1 pound
 - b) 3 pound
 - c) 7 pound
 - d) **4 pound**
10. ----- thick of fresh cow dung paste is laid on the vermibeds
- a) **2cm**
 - b) 4cm
 - c) 6cm
 - d) 8cm
11. The beds are covered with bag called -----
- a) Garbage bag
 - b) **Gunny bag**
 - c) Plastic bag
 - d) Waste bag
12. The decomposing of organic waste in to compost by earthworm is called
- a) Vermitrash
 - b) Vermibed
 - c) Vermicompost
 - d) **Vermicast**
13. The pit of convenient size is about-----
- a) **2-4**
 - b) 4-5
 - c) 4-6
 - d) 6-8
14. The remaining 90% of the swallowed materials are expelled out as -----
- a) Vermitrash
 - b) Vermibed
 - c) Vermicompost
 - d) **Vermicast**
15. Which among the following characteristics are to be maintained in bedding for vermined?

- a) **Moisture**
- b) Aeration
- c) Food source
- d) All the above

Unit V

1. Which type of earthworm are majorly required for vermicomposting?
 - a) Anecic
 - b) **Epigeic**
 - c) Endogeic
 - d) All the above
2. The moisture level to be maintained for vermicomposting is
 - a) 30%
 - b) 40%
 - c) **50%**
 - d) 60%
3. The method of composting done in open ground is called
 - a) Batch method
 - b) **Windrow method**
 - c) Bed method
 - d) Continuous flow method
4. The macronutrients provided by inorganic fertilizer are
 - a) Carbon, Iron, Boron
 - b) **Nitrogen, Phosphorus, Potassium**
 - c) Magnesium, zinc & Iron
 - d) Magnesium, Manganese, Sulphur
5. The arrangement of the rows of vermibed is V- Shaped in the wedge system called
 - a) Heap method
 - b) Bed method
 - c) **Batch method**
 - d) Stacked bin method
6. Green manure plants are
 - (a) Poaceae
 - (b) Solanaceae
 - (c) **Leguminosae**
 - (d) Compositae
7. This chemical fertilizer is essential for better rhizobial nitrogen fixation
 - (a) calcium
 - (b) potassium
 - (c) sodium
 - (d) **phosphorus**
8. Azolla is used as a biofertilizer as it possesses
 - (a) humus in large quantities
 - (b) rhizobium
 - (c) mycorrhiza
 - (d) **cyanobacteria**

9. Pyrethrin is obtained from

(a) *Chrysanthemum cinerariifolium*

(b) *Azadirachta indica*

(c) *Urtica dioica*

(d) *Tagetes erecta*

10. This is not included in organic farming

(a) crop rotation

(b) **chemical fertilizer**

(c) green manures

(d) compost and farmyard manures

11. Appropriate use of cow dung is made in

(a) medicine

(b) fuel

(c) **manure**

(d) building/construction material

12. In children, this disease is caused due to excess nitrate fertilizers usage

(a) mumps

(b) jaundice

(c) septicemia

(d) **methaemoglobinaemia**

13. For paddy, the best fertilizer is

(a) *Bacillus polymyxa*

(b) *Bacillus megaterium*

(c) *Azolla pinnata*

(d) *Rhizobium meliloti*

14. Composted manure is formed from

(a) farm and household refuse

(b) **animal refuse and rotten vegetables**

(c) organic wastes from where biogas extraction takes place

(d) green and farmyard manure

15. Green manure is

(a) Maize

(b) Rice

(c) Sorghum

(d) **Sesbania**

Section B

Unit I

1. Define Earthworm.
2. List out the classification of earthworm.
3. Draw an anatomy of earthworm.
4. Define Vermicompost.
5. Define Composting.
6. State Vermi.
7. List out the scope of vermicompost.
8. Write a short note on nature of earthworm.

9. List out the basic Environmental needs.
10. Write a short on types of earthworm.

Unit II

1. List out the materials used for vermicomposting.
2. Write a short note on physical changes.
3. Define biological changes by earthworm
4. Write a short note on soil structure
5. Write a short note on carbon transformation
6. Write a short note on nitrogen transformation
7. Write a short note on phosphorous transformation.

Unit III

1. Define Bed
2. Write a short note on materials used in bedding
3. Write a short note on feeding on earthworm
4. Define windrow methods
5. List out the uses of gunny bags
6. Write a short note on pH required for the composting
7. State about the soil type for vermicomposting
8. Define Vermiculture
9. List out the nutrient availability in vermicomposting
10. Write a short note on optimal condition required for the vermicomposting.

Unit IV

1. Define bedding
2. Write a short note on harvesting of vermicompost.
3. State about the preparation of vermibed
4. Write a short note on parasites
5. Define pathogens
6. Write a short note on predators.
7. Define Vermiwash.
8. Define Vermiculture
9. Write a short note about waste reduction
10. List out the maintenance of vermicomposting beds.

Unit V

1. Define composting.
2. List out the required conditions for vermicomposting
3. Advantages of vermicomposting
4. Role of vermicomposting in plant growth
5. List out the application of plant growth in vermicomposting
6. Define field sampling
7. Write a short note on passive methods.
8. List out the growth of any plant.
9. Write a short note on optimal temperature for plant growth
10. List out the condition for the growth of plant.

Section C

Unit I

1. Explain about the Morphology of earthworm
2. Describe in detail about the anatomy of Earthworm
3. Give a detail account on *Lumbricusterrestis*
4. Explain about the nature of earthworms.
5. List out the basic environmental requirements for vermicomposting
6. Explain vermicomposting

Unit II

1. Give a detail account on vermicomposting materials required for vermicompost
2. Explain in detail about the classification of vermicomposting
3. Describe about the physical and chemical changes brought by earthworm in soil
4. Explain in detail about the soil structure
5. Give a brief account on transformation of carbon and nitrogen

Unit III

1. Describe in detail about the batch system
2. Give a detail account on continuous flow system
3. Explain in detail about the pit method
4. Give a brief account on Heap and tray methods
5. Write an essay on Bedding and inoculation of earthworm
6. Explain in detail about the organic matter.

Unit IV

1. Give a account on harvesting the worms.
2. Explain in detail about the production of vermicomposting
3. Describe about the methods of production of vermicomposting
4. List out the problems in using vermiwash
5. Give a brief account on mite pests in earthworm beds.
6. Illustrate about the mite prevention and removal.

Unit V

1. Describe about the vermicomposting
2. List out the required condition for vermicomposting
3. Explain in detail about the plant growth application
4. Field sampling – Explain
5. Advantages of vermicomposting.

Section D

Unit I

1. Explain in detail about the classification of earthworm.
2. Define vermicompost, Write an essay about the vermicomposting.
3. Illustrate about the soil environmental requirements for vermicomposting

Unit II

1. Give a detail account on biological changes brought by the earthworm in soil structure.
2. Explain in detail about the nutrient availability in vermicomposting
3. Elucidate about the classification of vermicomposting

Unit III

1. Explain in detail about the Wedge system.
2. Give a account on Stacked bin Method
3. Describe in detail about the vermireactor
4. Explain in detail about the nutrient availability in vermicomposting.

Unit IV

1. Describe in detail about the vermicomposting in pit
2. Explain in detail about the production of vermicompost by surface bed methods.
3. Give a brief account on harvesting the compost and worms.
4. Illustrate about the vermiwash

Unit V

1. Describe in detail about the Vermicomposting and requirements
2. Give a brief account on plant growth using vermicomposting
3. Explain in detail about passive methods

Semester IV

QUESTION BANK

Answer all questions

SECTION – A

Choose the correct answer :

UNIT I

1. ----- is called as bread mold.
a) *Rhizopus stolonifer* b) *Zygorrhynchus* c) *Penicillium* d) *Neurospora*
2. The compounds that resist changes in P^H of food is-----
a) Solute b) Solvent c) **Buffers** d) Acid.
3. Water requirement is expressed as -----
a) Moisture b) Water activity c) pH d) **Relative humidity.**
4. ----- is called as a “breadmold”.
a) *Rhizopus* b) *Mucor* c) *Aspergillus* d) *Penicillium*
5. The chemical compounds that inhibit the growth of molds are _____.
(a) Fungicidal (b) algicidal (c) **mycostatic**(d) inhibitors.
6. Molds are-----
a) **Aerobic** b) Anaerobic c) Microaerophilic d) Strict anaerobes
7. Fat is hydrolysed by the enzyme-----
a) Amylase b) Cellulase c) **Lipase** d) Protease
8. ----- is a proteolytic species.
a) *Klebsiella* b) *Lactobacillus* c) *Escherichia coli* d) *Pseudomonas*
9. Red bread is caused by -----
a) *Serratia marcescens* b) *Rhizopus* c) *Trichosporon* d) *Bacillus*
10. ----- is called as a “breadmold”.
a) *Rhizopus* b) *Mucor* c) *Aspergillus* d) *Penicillium*

11. _____ is used for the leavening of bread and wines
(a) molds (b) fungi (c) bacteria **(d) yeast**
12. The growth of the yeast is favoured by an acid at pH _____.
(a) 3-3.5. b) 2-2.5 **c) 4-4.5** d) 5-5.5 .
13. The chemical compounds that inhibit the growth of molds are _____.
(a) Fungicidal (b) algicidal **(c) mycostatic**(d) inhibitors.
14. _____ is employed in many food industries such as bread, wine and alcohol.
(a) *Candida* **(b) Saccharomyces** (c) *Aspergillus* (d) *Penicillium*.

UNIT II

15. Fat is hydrolysed by the enzyme-----
a) Amylase b) Cellulase c) **Lipase** d) Protease.
16. ----- is a proteolytic species.
a) *Klebsiella* b) *Lactobacillus* c) *Escherichia coli* d) ***Pseudomonas***.
17. ----- is present in egg white.
a) Nisin b) Latenins c) **Lysozyme** d) Propionic acid.
18. ----- an inhibitory substance present in egg white.
a) Propionates b) **Lysozyme** c) Benzoates d) Lactenin.
19. ----- is the process of prevention of growth of microorganisms.
a) **Asepsis** b) Filtration c) Sedimentation d) Trimming
20. ----- is incipient or gentle boiling.
a) Simmering b) Roasting c) Cooking d) **Warming**
21. ----- is called as the father of canning.
a) Spallanzani b) Pasteur c) Hasse d) **Nicolas Appert**.
22. The anaerobic decomposition of protein is called as-----
a) Putrefaction b) Ropiness c) Rancidity d) Souring
23. The oxidation of unsaturated fatty acids leads to -----
a) Bitterness b) Off-flavors c) Putrid odors **d) Rancidity**
24. A type of food preservation technique that involves sealing food in sterilized, airtight containers-----
a) canning b) irradiating c) freezing d) drying
25. Bacteria that can grow in the absence of oxygen are called:

- a) aerobes **b) anaerobes** c) facultatives d) osmotic.
26. Fish can be preserved by
(a) freezing (b) canning (c) drying **(d) all of the above.**
27. -----is an example of perishable food.
a) Flour **b) Meat** c) Potato d) Dried fruits
28. A type of food preservation technique that involves sealing food in sterilized, airtight containers-----
a) canning b) irradiating c) freezing d) drying
29. Putrefaction is the anaerobic decomposition of -----
a) Protein b) Fat c) Carbohydrate d) Sugar

UNIT III

30. Salt fish are spoiled by----- bacteria
a) Thermophilic **b) Halophilic** c) Psychrophilic d) Barophilic
31. The final stage of spoilage of eggs by molds is _____.
(a) black rot (b) pin spot molding (c) fungal rotting **(d) superficial fungal spoilage .**
- 32.._____ is found in faeces.
(a) *Clostridium* (b) *Bacillus* (c) *Lactobacillus* **(d) *Escherichia coli***
- 33.----- is the temperature at which aflatoxin is produced.
a) 12-40°C b) 40-50°C c) 20-30°C d) 30-35°C
34. *Aspergillus flavus* produces-----
a) Ochratoxin b) Penicillic acid **c) Aflatoxin** d) Patulin
35. *Staphylococcus aureus* produces an -----
a) Endotoxin b) Neurotoxin **c) Enterotoxin** d) Exotoxin
36. The molecular weight of staphylococcal enterotoxin is-----
a) 26,000 to 30,000 b) 15,000 to 20,000 c) 4,000 to 5,000 d) 7,000 to 8,000
37. _____ bacteria has the ability to ferment sugar to lactic acid.
(a) Proteolytic bacteria (b) coliform group **(c) Lactic acid bacteria** (d) prebiotics
38. _____ causes rancidity in butter and dairy products.
(a) *Candida* **(b) *Saccharomyces*** (c) *Aspergillus* (d) *Penicillium*.

UNIT IV

39. Aflatoxins are produced by _____.

- (a) *Candida* (b) *Saccharomyces* (c) ***Aspergillus*** (d) *Penicillium*.
40. Cultures from nose, throat or skin lesions are used to test for _____.
 (a) *Clostridium* (b) *Bacillus* (c) ***Staphylococcus*** (d) *Escherichia coli*
41. Nitrates play a role in the color of _____.
 (a) fruits (b) vegetables (c) **meat** (d) sweet meat.
42. Bone taint refers to _____.
 (a) putrefaction next to the bone (b) decay of the tendons (c) **loss of calcium in the bone**
 (d) none of these
44. The most common organism causes spoilage in peanut is _____.
 (a) *Candida* (b) *Saccharomyces* (c) ***Aspergillus*** (d) *Penicillium*.
45. _____ discolour cheeses
 a) ***Aspergillus*** b) mold c) agaricus d) *Brucella*
46. _____ is a thermophilic
 a) ***Micrococcus*** b) *Aspergillus* c) mold d) agaricus
47. The ropiness in milk is caused by-----
 a) *Serratia* b) *Salmonella* c) *Enterobacter* d) ***Alcaligenes***
48. ----- causes yellow colour in the cream layer of milk.
 a) *Pseudomonas synchyanea* b) ***Pseudomonas synxantha*** c) *Klebsiella* d) *Streptococcus*
49. The commercial storage refrigerated temperature of butter is-----
 a) -30°C b) -10°C c) **-17.8°C** d) 0°C

UNIT V.

50. A system to control the safety of a manufactured product is determined by
 a) **HACCP** b) ISO9000 c) CCP d) FAO
49. HACCP is designed to
 a) prevent problems before they occur b) correct deviations as soon as detected
 c) **both a and b** d) none of the above
51. National academy of sciences is an authority on
 a) food additives b) **food safety** c) food preservation d) food processing.
52. The codex guidelines for HACCP has
 a) five principles b) six principles c) **seven principles** d) none of these.
53. CIP refers to

- a) **clean in place system** b) cleanliness in place system c) clean in place system
d) none of them.
54. CCP aims at preventing or reducing
a) physical hazards b) chemical hazards c) biological hazards **d) all the above.**
55. Validation ensures that the industry
a) complies with the required plan b) has random sampling
c) prevents deviations d) lists the significant hazards
56. The simplest record- keeping system to ensure effectiveness is by
a) establishing procedures for verification **b) establishing documentation.**
c) establishing monitoring systems d) establishing critical control points.
57. **AGMARK** is a certification mark employed on agricultural products in _____.
(a) India (b) USA (c) USSR (d) Pakistan
58. **AGMARK** standards cover quality guidelines for 213 different commodities spanning a variety of -----
(a) pulses (b) meat (c) fishes (d) eggs
59. The entire system of Agmark, including the name, was created by
(a) Archibald MacRonald Livingstone **(b) Archibald Macdonald Livingstone** (c) Archibald Macdonald Livestone (d) Arizona Macdonald Livingstone
60. FDA is formed on
(a) June 30, 1909 (b) June 30, 1908 **(c) June 30, 1906** (d) June 30, 1904
61. FDA stands for _____
(a) Food and Drug Administer (b) Foot and Drug Administration **(c) Food and Drug Administration** (d) Food and District Administration
62. Headquarter of World Health Organization is located in
(a) Washington (b) California **(c) Geneva** (d) Arizona
63. F.P.O stands for
(a) Fruit Production Operation **(b) Fruit Product Order**
(c) Flavour Production Office (d) Fruit Procurement Order

SECTION – B

Answer in about 200 words each:

UNIT I

1. (a) Give the general characteristics of Yeast.

(or)

- (b) Give the general characteristics of Bacteria.

- 2 (a) Brief account on Molds.

Or

- (b) Give a note on- Food as a substrate for microorganisms

UNIT II

3. (a) Comment on asepsis.

(or)

- (b) Define anaerobic and write about anaerobic conditions

4. (a) How microorganisms can be removed?

Or

- (b) Explain the Principles of food preservation.

UNIT III

5. (a) How contamination can be controlled in meat?

Or

- (b) List down the spoilage that occurs in fish and fish products.

6. (a) Comment on spoilage problems in fishes.

(or)

- (b) List the spoilage problems in meat.

- 7 (a) Milk and milk products contamination-explain

Or

- (b) Define contamination. How contamination occurs in fish and fish products.

UNIT IV

8. (a) Differentiate between food poisoning and food infection.

(or)

- (b) Comment on viral infection.

9. (a) Write down the symptoms for hepatitis disease.

Or

- (b) Define transmission and write down the mode of transmission in food borne disease.
10.(a) Comment on the Mode of Transmission of Staphylococcal disease.

Or

- (b) Comment on the Mode of Transmission of Fungal (Aspergillus)
11 (a) Explain in detail about Viral infection (Hepatitis).

Or

- (b) Classify disease.

UNIT V

12. (a) What are the responsibilities of WHO?

Or

- (b) Write down the principles and importance of HACCP.

- 13.(a) Write short note on-AGMARK

or

- (b) Write short note on-ISI

14. (a) Comment on FPO

Or

- (b) Comment on FAO

- 15.(a) Elaborate BIS

Or

- (b) Elaborate on food laws and regulations

SECTION – C

Answer in about 400 words each :

UNIT I

1. Define and Classify food.
2. Explain important microorganisms involved in food Microbiology.
3. Food as a substrate for microorganisms- Explain?

UNIT II

4. Define preservation and write the principles of food preservation.
5. Write short note on –Asepsis
6. Explain in detail about –removal of microorganisms.
7. How anaerobic conditions can be maintained?

UNIT III

- 8 List down the spoilage problems in fruits and vegetables.
9. Define spoilage and Write about spoilage problems in fruits and vegetables.
10. Write a note on spoilage of meat and meat products
11. Write short note on milk and milk products
12. Write a report on the spoilage of fish.

UNIT IV

13. Distinguish between food infection and food intoxication.
14. Write a note on bacterial infection.-*Staphylococcus*.
15. Brief about viral infections in food.
16. Write a note on Aflatoxin.
17. Explain in detail about Viral disease-Hepatitis.

UNIT V

18. Write down the principles and importance of AGMARK.
19. Comment on HACCP
20. Give a note on FDA
21. Elaborate on WHO
22. Write short notes on –ISI and FAO
23. Explain FPO in detail.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

II B. Sc Microbiology - Semester-IV

Core I – Molecular biology and Microbial Genetics

Sub Code: 21UMIC41

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

1. Study of patterns of inheritance is defined as _____ (K1)
a) Genomics b) Proteomics c) Metagenomics d) **Genetics**
2. Name the phenomena that explains gene expression _____ (K1)
a) **Central dogma** b) Operon c) Gene regulation d) Hereditary
3. _____ are listed in the nucleotide of DNA molecule (K1)
a) Phosphorous b) Nitrogenous base c) Sugar residue d) **All**
4. Genes are indicated as _____ (K2)
a) Carrier of traits b) Alternative form of DNA c) Mediator of traits d) **All**
5. Double helix model was proposed by _____ (K1)
a) Gustav Embden b) **Watson & Crick** c) Jakub Karol Parnas d) All
6. Capsule is indicated to add _____ (K2)
a) Virulent b) Non virulent c) **Polysaccharide** d) None
7. The overall process of genetic regulation is summarised as _____ (K2)
a) Transcription b) Post transcription modulation c) Translation d) **All**
8. _____ a process that defined to regulates duplication of genetic material. (K1)
a) **DNA replication** b) Polymerisation c) Reverse transcription d) None
9. Identify experiments performed by Hershey and Chase _____ (K1)
a) Transformation b) **Radioactive isotopes** c) Protein separation d) None
10. Quote the enzyme involved in adding nucleotides to the growing chain _____ (K1)
a) **Polymerase** b) Helicase c) Adenylase d) Topoisomerase

Unit II

11. Plasmids may be defined as _____ (K1)
a) Extrachromosomal DNA b) Autonomous replicative body c) Cloning vector d) **All**
12. Name the phenomena that describes co-existence _____ (K1)
a) Compatibility **b) Incompatibility** c) Operon d) copy number
13. _____ listed in the plasmid DNA (K1)
a) Ori b) Nitrogenous base c) Sugar residue d) Methyl group
14. Super bug is indicated as _____ (K2)
a) Degradative plasmids b) Vir plasmids c) Mediator of traits d) All
15. _____ of the following is identified as gene expression (K1)
a) Transcription b) Metabolism c) Photosynthesis d) Replication
16. Ti plasmids are indicated to introduce gene in _____ (K2)
a) Plant cells b) Animal cells c) *E. coli* cells d) None
17. _____ is summarised as formation of DNA from RNA (K2)
a) Reverse transcription b) Transcription c) Capping d) Splicing
18. _____ a enzyme that defined to regulates bactericidal activity. (K1)
a) Col protein b) R protein c) Vir protein d) None
19. Identify factors responsible for fertility _____ (K1)
a) X factor b) Y factor **c) F factor** d) M factor
20. Quote the enzyme involved in binding the promoter _____ (K1)
a) DNA Polymerase b) Helicase c) Adenylase **d) RNA polymerase**

Unit III

21. DNA damage and error is named as _ (K1)
a) Mutation b) Anaerobic respiration c) Photolysis d) Nitrate assimilation
22. Base analog is listed under _____ (K1)
a) Chemical mutagen b) Alkalytic agent c) Detoxifying agents d) All
23. _____ is quoted as transition (K1)
a) Base deletion b) Frame shift c) Mutant d) Reverse analysis

24. Thymine dimer is indicated by _____ (K2)
- a) **Acrydine orange** b) Etbr c) UVd) None
25. The formation of reverse mutant is named as ____ (K1)
- a) **Auxotrophic mutant** b) Chemical mutant c) Both a and b d) Natural mutant
26. The formation of nonsense mutant is defined as _____ (K1)
- a) **No change in amino acid** b) Changeless event c) Lactogenesis d) Hydrogenesis
27. The process of bringing new trait is inferred as _____ (K2)
- a) **Phenotypic mutant** b) Genotypic mutant c) Photolysis d) Hydrolysis
28. Ames test is described as ____ (K1)
- a) **Screening test** b) Diagnostic test c) Lysis test d) All
29. _____ defined as intercalating agent (K1)
- a) **Etbr** b) Nitrous oxide c) FMN d) NADH
30. _____ is indicated in genotypic mutant (K2)
- a) **Sickle cell anemia** b) Malnutrition c) Syndrome d) Colourblindness

Unit IV

31. _____ named as bacteria eaters (K1)
- a) **Phages** b) Virions c) Protozoa d) None
32. ____ is quoted as prophage (K1)
- a) **DNA integrated in the host** b) RNA progenies c) Ligand d) All
33. cDNA inferred as _____ (K2)
- a) Non template DNA b) **mRNA copies** c) Template strand d) Non codons
34. Reverse transcriptase describes the application of ____ (K1)
- a) **Reverse transcription** b) Transcription c) d) Nitrogen assimilation d) Post translation
35. _____ interpreted as lytic stages (K2)
- a) **Formation of new progenies** b) Assembly of capsid c) Head form d) Tail form
36. The time interval for the formation of two daughter cell from one is named as _____ (K1)
- a) **Generation time** b) Multiplication time c) Duplication time d) Replication time

37. _____ is quoted as lysogenic cycle (K1)

- a) **Formation of prophage** b) Formation of capsids c) Formation of cell wall d) None

38. Polymerase is named as _____ (K1)

- a) **Amplifying enzymes** b) Restricting enzymes c) Ligating enzymes d) All

39. Tail attachment is indicated as _____ (K2)

- a) **Anchoring** b) Ordering c) Breaking d) None

40. DNA to mRNA is inferred as _____ (K2)

- a) **Transcription** b) Reverse transcription c) Mutation d) All

Unit V

41. _____ defined as competency (K1)

- a) **Ability to uptake** b) Ability to replicate c) Ability to integrate d) None

42. _____ organisms indicated as F⁺ strains (K2)

- a) **Fertile plasmids** b) Non fertile plasmids c) Resistant plasmids d) Integrated one

43. _____ of the following is named as an example of recombination (K1)

- a) **Transcription** b) Conjugation c) Transduction d) All

44. _____ is quoted as transduction (K1)

- a) **Viral mediated transfer** b) Non-viral mediated c) Bacteria mediated d) Both a and c

45. _____ of the following is not inferred to genetics (K2)

- a) Cloning b) Transformation c) **Photosynthesis** d) Translation

46. _____ quoted as main function of F factor (K1)

- a) Photolysis b) **Reproduction** c) Resistant d) Degradation

47. Nucleoid associated protein indicated to be found in _____ (K2)

- a) **Chromosome** b) Ear c) Nose d) Teeth

48. _____ is named as conjugative plasmids (K1)

- a) Vertical transfer b) **Horizontal transfer** c) Non transferring d) None

49. Compound that releases high energy is listed as _____ (K1)

- a) **High energy compound** b) Low energy compound c) Moderate energy d) None

50. ____ is inferred during translation (K2)

a) **Ribosome** b) Nitrogen c) Oxygen d) Phosphorous

Section-B

Answer the following in about 50 words:

(2 marks)

Unit I

1. Define genetics (K1)
2. Distinguish between eukaryotic and prokaryotic ribosome (K2)
3. Explain double helical structure of DNA (K2)
4. Identify the factors required for transformation (K1)
5. Write the functions of osmoregulatory proteins (K1)
6. Summarise the importance of topoisomerase enzyme (K2)
7. Differentiate between DNA and RNA (K2)
8. Draw the sequence events of gene expression (K1)
9. List out DNA modifying enzymes (K1)
10. Define genetic code (K1)

Unit II

11. Distinguish between F plasmid and R plasmid (K2)
12. Define IS elements (K1)
13. Explain transposons (K2)
14. Identify the transfer DNA in virulence plasmids (K1)
15. Write the importance plasmids (K1)
16. Summarise the importance of degradative plasmids (K2)
17. Differentiate between genomic and plasmid DNA replication (K2)
18. Draw the structure of R plasmids (K1)
19. List out the types of plasmids (K1)
20. Define col plasmids (K1)

Unit III

- 21.Distinguish transcriptase and reverse transcriptase (K2)
- 22.Define transcription (K1)
- 23.Draw the structure of phages (K1)
- 24.Write the importance of prophage (K1)
- 25.Identify the enzymes responsible for phage attachment (K1)
- 26.Summarise the steps of phage infection (K2)
- 27.Differentiate between lytic and lysogenic cycle (K2)
- 28.List out the types of phage heads (K1)
- 29.Define infection (K1)
- 30.Write the examples of lambda and T4 phages (K1)

Unit IV

- 31.Distinguish between spontaneous and induced mutation (K2)
- 32.Define mutation (K1)
- 33.List out the factors affecting mutation (K1)
- 34.Write the importance of natural mutants in growth of bacteria (K1)
- 35.Identify the physical mutagen (K1)
- 36.Summarise the steps involved in substitution process (K2)
- 37.Differentiate between frameshift and deamination (K2)
38. Define base analog (K1)
- 39.Write the examples of physical mutagen (K1)
- 40.Quote the mechanism of 5 methyl deamination (K1)

Unit V

- 41.Distinguish between conjugation and transduction (K2)
- 42.Define Hfr factors (K1)

43. List out examples of natural competent (K1)
44. Differentiate between electroporation and microwave shock treatment (K2)
45. Identify the mechanism of natural transduction (K1)
46. Summarise the cell transmissible elements (K2)
47. Draw the conjugation tube (K1)
48. List out the importance specialized transduction (K1)
49. Write the examples of auxotrophic organism (K1)
50. Explain the importance of artificial transformation (K2)

Section- C

Answer the following in about 200 words:

(6 mark)

Unit-I

1. Examine the importance of molecular genetics (K4)
2. Compile the history of genetics (K3)
3. Outline the requirement of Hershey and Chase experiments (K4)
4. Demonstrate the mechanism of replication (K3)
5. Compare the structure of DNA and RNA (K4)
6. Distinguish between the requirement of plasmid and genomic replication (K4)
7. Show the significance of genetic code (K3)
8. Organise the role of gyrase and polymerase enzymes (K4)
9. Classify the carriers found in DNA replication (K3)
10. Simplify the mechanism of genomic replication (K4)

Unit II

11. Examine the importance of bacterial plasmids (K4)
12. Compile the components of transposable elements (K3)
13. Relate the mechanism of transposable and IS elements integration on the genome (K3)

14. Demonstrate the structure of T- DNA region (K3)
15. Outline the importance of degradative plasmids (K4)
16. Distinguish between col plasmids and resistant plasmids (K4)
17. Show the importance of plasmid replication (K3)
18. Organise the important applications Ti plasmids (K4)
19. Classify the significance of virulence and fertility plasmids (K3)
20. Analyse the functions of IS elements (K4)

Unit III

21. Examine the patterns of transcriptase enzyme (K4)
22. Compile the steps of reverse transcription (K3)
23. Classify the significance of translation (K3)
24. Distinguish between lambda and T4 phages (K4)
25. Organise the parts of phages (K4)
26. Show the importance of lytic and lysogenic cycle (K3)
27. Outline the factors affecting translation (K4)
28. Demonstrate the steps of phage infection (K3)
29. Relate the components required for transcription and translation (K3)
30. Analyze the significance of prophage (K4)

Unit IV

31. Examine the patterns of mutation (K4)
32. Distinguish between spontaneous and induced mutation (K4)
33. Show the importance of physical mutagens (K3)
34. Analyse the types of chemical mutagens (K4)
35. Relate the components of changing hydrogen bonding (K3)
36. Demonstrate the significance of rations as mutagens (K3)

- 37.Organise the reverse and suppression mutant (K4)
- 38.Compile the types of genetic and chromatic mutant (K3)
- 39.Differentiate between substitution and point mutation (K4)
- 40.Outline the biological factors affecting mutation (K4)

Unit V

- 41.Examine the characteristics and metabolism of auxotrophs (K4)
- 42.Show importance of gene transfer mechanism (K3)
- 43.Relate the cell wall and conjugation tube (K3)
- 44.Distinguish between natural competence and coincidence (K4)
- 45.Compile the types of competent preparation (K3)
- 46.Outline the features of recombination process (K4)
- 47.Demonstrate the steps of artificially induced transcription process (K3)
- 48.Analyse the molecular mechanism of gene transfer (K3)
- 49.Organise the pathway related to transduction (K4)
- 50.Examine the factors affecting specialized transduction (K4)

Section- D

Answer the following in about 500 words:

(12 marks)

Unit-I

- 1. Assemble the hypothesis of gene and chromosome with reference to inheritance (K6)
- 2. Prove that inheritance is important in growth of living organism (K5)
- 3. Develop the requirements of Griffith experiments (K6)
- 4. Molecular inheritance is inevitable in prokaryotes – Judge (K5)
- 5. Combine the features of RNA and DNA (K6)
- 6. Conclude the role of different kinds of polymerase enzyme (K5)
- 7. Formulate the advantages of DNA replication related to cell cycle (K6)
- 8. Generate the list of enzymology of DNA replication (K6)
- 9. Evaluate the role of ribosome and translation factors in protein synthesis (K5)
- 10. Design the flow chart of central dogma of molecular biology (K6)

Unit II

11. Assemble types of bacterial plasmids (K6)
12. Prove that recombination is essential for all cellular activities (K5)
13. Combine the significance of transposons and IS elements (K6)
14. Design the flow chart of plasmid replication (K6)
15. Evaluate the applications of degradative plasmids (K5)
16. Generate the importance of plasmids in recombinant DNA technology (K6)
17. Conclude the role of virulent and fertility plasmids (K5)
18. Jumping genes are essential in mutation process – Judge (K5)
19. Formulate the mechanism of protein synthesis regulation (K6)
20. Develop the events of gene expression related to central dogma (K6)

Unit III

21. Prove that transcription is different from reverse transcription (K5)
22. Assemble the events of complementary DNA synthesis (K6)
23. Generate the role of phages in molecular genetics (K6)
24. Evaluate the significance of different kinds of phages (K5)
25. Phages are advantage for living organism – Judge (K5)
26. Develop the lytic pathway (K6)
27. Formulate the concept of bacterial infection (K6)
28. Conclude that translation is life serving mechanism in all living organism (K5)
29. Generate an historical account of bacterial infection (K6)
30. Design the mechanism which represent lysogenic cycle (K6)

Unit IV

31. Develop the different phases of natural mutation (K6)
32. Assemble the significance of spontaneous mutation (K6)

33. Formulate the factors affecting induced mutation (K6)
34. Prove that ratons as mutagens (K5)
35. Conclude alkylating and intercalating agent differ from each other in mutation (K5)
36. Reverse mutation is helpful in sustaining unfavorable condition – Judge (K5)
37. Generate different stages of mutation with respect to DNA damage (K6)
38. Evaluate the importance of Ames test (K5)
39. Design the mechanism of artificial mutation (K6)
40. Devlope the futures of genotypic and phenotypic mutant (K6)

Unit V

41. Generate the characteristics of gene transferring mechanism (K6)
42. Assemble the significance of conjugation process (K6)
43. Evalute the importance of cell transmissible elements (K5)
44. Design the mechanism of F – factor and high frequency factor (K6)
45. Develop the list of bacteria involved in natural transformation (K6)
46. Recombination is vital in bacteria – Judge (K5)
47. Formulate the futures of artificially induced competence (K6)
48. Conclude generalized transduction is important in recombination process (K5)
49. Assemble the compounds involved in phototrophic and auxotrophic mutants (K6)
50. Prove that transformation and conjugations are as important as other process (K5)

SEMESTER IV			
Core – IV– Molecular Biology and Microbial Genetics			
Course Code: 21UMIC41	Hrs/Week- 4	Hrs/Sem: 60	Credit: 4

Unit –I: Basics of Genetics Genetics - Historical Introduction- experiments of Griffith, Avery, Hershey and Chase - DNA structure - RNA – types, structure. RNA as the genetic material - Genetic code. Replication of DNA and enzymology of DNA replication.

Unit –II: Bacterial plasmids Bacterial plasmids (F-plasmid, R plasmid, col plasmid, degradative plasmid, virulence plasmid, Ti Plasmid) - Structure, types and properties of plasmids- Plasmid replication Transposons and IS elements- Structure, types and properties.

Unit- III: Central Dogma and Bacteriophages Transcription – Reverse transcription, Reverse transcriptase -Translation – Bacteriophages - Classification based on structure and genetic material - Lytic cycle and lysogenic cycle (T4 and Lambda phage only).

Unit- IV: Mutations Mutations- Spontaneous (Substitution, Spontaneous Deamination of 5-Methyl cytosine, Frameshift Mutation) induced (Chemical mutagens-Base Analogues, Chemicals changing the specificity of hydrogen bonding, Alkylating agents, intercalating agents) Rations as mutagens (UV and X-rays) Genotypic and phenotypic mutants- Reversion and suppression- Ames test.

Unit –V: Gene transfer mechanisms - Conjugation (Cell transmissible plasmids, F factor and Hfr strains- Transformation (Natural transformation, competence, DNA uptake, role of natural transformation, artificially induced competence and electroporation) - Generalized and specialized transduction

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI

II B.Sc. – Microbiology

Semester IV

Mushroom Technology Sub. Code: 21UMIA41

Question bank

SECTION – A

(1 mark)

Choose the correct answer:

Unit I:

1. CaCO₃ is mixed with spawn in the _____ ratio. (K1)
a) **20g / 1Kg** b) 30g / 1Kg c) 40g / 1Kg d) 10g / 1Kg
2. _____ is known as king mushroom (K1)
a) *Agaricus bisporus* b) *Calocybe indica* c) *Pleurotus sajor-caju* d) ***Ganoderma lucidum***
3. _____ has anti-HIV activity (K1)
a) *Agaricus bisporus* b) *Calocybe indica* c) *Pleurotus sajor-caju* d) ***Ganoderma lucidum***
4. _____ mushroom acts against *Plasmodium*. (K1)
a) ***Omphalotus olearius*** b) *Calocybe indica* c) *Pleurotus sajor-caju* d) *Ganoderma lucidum*
5. The scientific name of milky mushroom is _____ (K1)
a) *Agaricus bisporus* b) ***Calocybe indica*** c) *Pleurotus sajor-caju* d) *Volvariella volvcea*
8. The scientific name of paddy straw mushroom is _____ (K1)
a) *Agaricus bisporus* b) *Calocybe indica* c) *Pleurotus sajor-caju* d) ***Volvariella volvcea***
9. The scientific name of button mushroom is _____ (K1)
a) ***Agaricus bisporus*** b) *Calocybe indica* c) *Pleurotus sajor-caju* d) *Volvariella volvcea*
10. The scientific name of oyster mushroom is _____ (K1)
a) *Agaricus bisporus* b) *Calocybe indica* c) ***Pleurotus sajor-caju*** d) *Volvariella volvcea*

Unit II:

1. To maintain the pH of spawn _____ is added to it. (K1)
a) **CaCo₃** b) CaOH c) CaPO₄ d) CaCl
2. The first step in mushroom cultivation is _____ technique (K1)
a) Tissue growth b) **Tissue culture** c) spawn d) harvest
3. In third generation spawn the _____ of mushroom will be reduced (K1)
a) yield b) growth c) colour d) **virulence**
4. Spawn is prepared by _____ grains for oyster mushroom (K1)
a) rice b) **Sorgham** c) moringa d) wheat
5. For tissue culture technique _____ media is used (K1)
a) **PDA** b) MSA c) TCBS d) MRA
6. _____ acts as a seed for mushroom cultivation (K1)
a) Tissue b) **spawn** c) bed d) Spore
7. In canning process, after blanching the mushrooms are placed in cans containing _____
(K1)
a) **NaCl and citric acid** b) NaOH and citric acid c) NaCo and citrate d) Citrate
8. The cans are placed in an autoclave and sterilized for one hour at _____ C (K1)
a) **120** b) 150 c) 180 d) 200

Unit III:

1. The fruiting body of *Aspergillus* is called _____ (K1)
a) **Cleistothecium** b) Apothecium c) Hypanthodium d) Perithecium
2. All fungi are _____ (K1)
a) parasites b) saprophytes c) autotrophs d) **Heterotrophs**
3. Fungi can be stained by _____ (K1)
a) **Lactophenol cotton blue** b) methylene blue c) crystal violet d) saffranine
4. Fungi usually store the reserve food material in the form of _____ (K1)
a) starch b) **Glycogen** c) fat d) protein
5. Mushrooms have been recognized by the _____ as food constituting to the protein nutrition (K1)
a) FAD b) FSSAI c) ISI d) **FAO**
6. _____ activity is rare in mushrooms (K1)
a) Vit C b) Vit B1 c) VitB2 d) **vit D**

7. For tissue culture technique _____ media is used (K1)
a) **PDA** b) MSA c) TCBS d) MRA
8. _____ acts as a seed for mushroom cultivation (K1)
a) tissue b) **spawn** c) bed d) spore
9. _____ carbohydrate is present in mushrooms. (K1)
a) **chitin** b) starch c) galactose d) lactose
10. _____ amino acid lacking in mushrooms. (K1)
a) lysine b) **methionine** c) tyrosine d) alanine

Unit IV:

1. In canning process, _____ is incorporated for color retention (K1)
a) **Sodium metabisulphite** b) acetic acid c) sodium carbonate d) sodium hydroxide
2. _____ step in canning process is used to reduce the activity of enzymes (K1)
a) Bleaching b) **Blanching** c) curing d) cleaning
3. After blanching process, the Mushroom are placed in cans containing _____ (K1)
a) **Nacl and citric acid** b) NaOH and citrate c) Nacl and acetate d) NaOH and acetate
4. Drying prevents _____ of mushrooms (K1)
a) denaturation b) **deterioration** c) degradation d) dehydration (K1)
5. Fresh mushrooms contain approximately _____ % of moisture
a) 80 % b) 70 % c) **90 %** d) 20%

Unit V:

1. Besides food, the Chinese value mushrooms for what other purpose? (K1)
a) **Their medicinal properties** b) antimicrobial c) antifungal d) antiviral
2. Ancient Romans and Greeks, particularly the upper classes, used mushrooms for what? (K1)
a) **Culinary purposes.** b) medicinal c) ayurveda d) unani
3. Why were food tasters employed by Roman emperors? (K1)
a) **To ensure that mushrooms were safe to eat** b) poison c) waste d) medicine
4. Mushrooms are also easily what?
a) **Preserved** b) dying c) pickles d) candy

5. How many species of mushrooms are commercially cultivated? (K1)
a) **Over twenty.** b) thirty c) forty d) fifty
6. In how many countries are mushrooms cultivated? (K1)
a) **In at least 60 countries.** b) 20 countries c) 40 countries d) 50 countries
7. A fraction of the many fungi consumed by humans are currently what? (K1)
a) **Cultivated and sold commercially.** b) heating c) bleaching d) blanching
8. How many calories are in 100 grams of raw white mushrooms? (K1)
a) **5 calories.** b) 10 calories c) 15 calories d) 20 calories
9. The content of vitamin D is absent or low unless mushrooms are exposed to what? (K1)
a): **Sunlight or purposely treated with artificial ultraviolet light.** b) UV c) IR d) Blue ray
10. Mushrooms exposed to ultraviolet (UV) light produce what? (K1)
a) **Vitamin D2.** b) Vitamin C c) Vitamin B d) Vitamin K

Section B

Answer in about 50 words:

2 Marks

Unit I

1. Associate the Different parts of a typical mushroom (K2)
2. Compare poisonous mushroom (K2)
3. Discuss the types of mushrooms (K2)
4. Explain toxin (K2)
5. Health stalk (K2)
6. Estimate buds (K2)
7. Discuss cap (K2)
8. Discuss pileus (K2)
9. Illustrate spores (K2)
10. Summarize mycelium (K2)

Unit II

1. Explain spawn (K2)
2. Illustrate pure culture (K2)
3. Discuss RBA (K2)
4. Estimate potato dextrose agar (K2)
5. Explain caco3 (K2)
6. Extend chalk powder (K2)
7. Explain harvest the mushroom from the bed? (K2)
8. Express will you store the mushrooms? (K2)
9. Compare outline for green house for mushroom cultivation (K2)

10. Differentiate substrates you can use for mushroom bed? (K2)

Unit III

1. Discuss precautions should be taken during the media preparation? (K2)
2. Explain precautions should be taken during the bed preparation? Restate (K2)
3. Explain the precautions should be taken tissue culture technique? (K2)
4. Discuss the precautions should be taken during the spawn preparation? (K2)
5. Explain any six examples for medicinal mushroom (K2)
6. Discuss mushrooms contain vitamin D? (K2)
7. Explain mushrooms' health benefits? (K2)
8. Express the mineral content of mushroom (K2)
9. Relate any two uses of mushroom (K2)

Unit IV

1. Explain short note on minerals of mushroom (K2)
2. Interpret moisture content of mushroom (K2)
3. Interpret short note on Proteins of mushroom (K2)
4. Discuss fats of mushroom (K2)
5. Explain short note on carbohydrates of mushroom (K2)
6. Illustrate fibre content of mushroom (K2)
7. Explain short note on vitamins of mushroom (K2)
8. Discuss the short term storage method for mushroom (K2)
9. Distinguish long term storage method for mushroom (K2)
10. Explain method for mushroom drying (K2)

Unit V

1. Explain Mushroom - Soup (K2)
2. Discuss Mushroom Pickles (K2)
3. Explain Mushroom Powders (K2)
4. Illustrate Mushroom Jams (K2)
5. Pandemic Mushroom Cutlet (K2)
6. Discuss Mushroom Omelette (K2)
7. Discuss Mushroom Samosa (K2)
8. Express Mushroom Curry (K2)
9. Discuss Mushroom biscuits (K2)
10. Explain Mushroom chips (K2)

Section C

Answer in about 200 words:

5 Marks

Unit I

1. Compile the antibacterial and antitumor effect of mushroom. (K3)
2. Demonstrate about the use of mushrooms as medicine (K3)
3. Outline antifungal, antiprotozoal and antiviral effect of mushroom. (K4)
4. Plot the antiprotozoal effect of mushroom. (K3)

5. Investigate the antiviral effect of mushroom(K4)
6. Comprise the life cycle of mushroom(K4)
7. Categorize the structure of mushroom (K3)
8. Categorize the e steps in cultivation of mushroom. (K4)
9. Show the medicinal value of mushroom (K3)

Unit II

1. Examine the about tissue culture technique(K4)
2. Investigate about spawn preparation (K3)
3. Demonstrate about traditional mushroom house(K4)
4. Calculate the the greenhouse layout of mushroom (K3)
5. Construct about mushroom bed preparation (K3)

Unit III

1. Compile the precaution methods for tissue culture and saw dust spawn (K4)
2. Demonstrate the precaution methods for spawn preparation(K3)
3. Outline the the precaution methods for mushroom bed preparation(K3)
4. Categorize short note on precaution methods for tissue culture technique
5. detail about the steps involved in Paddy straw mushroom cultivation(K3)

Unit IV

1. Compile about protein and carbohydrate content of mushroom(K4)
2. Demonstrate in vitamin and mineral content of mushroom (K3)
3. Outline fats and moisture content of mushroom Plot the (K4)
4. Analyze the long term storage of mushroom (K4)
5. Investigate short term storage of mushroom(K4)
6. Comprise about drying storage method for mushroom (K3)

Unit V

1. Examine the procedure for Mushroom – Soup and their nutritive value (K3)
2. Investigate the procedure for Mushroom Powders and their nutritive value (K4)
3. Demonstrate procedure for Mushroom Jams and their nutritive value(K3)
4. Construct procedure for Mushroom Cutlet and their nutritive value(K4)
5. Explain the procedure for Mushroom Omelette and their nutritive value(K3)
6. Distinguish procedure for Mushroom Samosa and their nutritive value(K4)
7. Outline the procedure for Mushroom Curry and their nutritive value(K3)
8. Investigate procedure for Mushroom biscuits and their nutritive value(K4)
9. Comprise the procedure for Mushroom chips and their nutritive value(K3)
10. Distinguish procedure for Mushroom candy and their nutritive value(K4)

Section D

Answer in about 400 words:

10 Marks

Unit I

1. Distinguish about the nutritional value of mushroom (K4)
2. Examine about the historical development of mushroom in India. (K4)

3. Investigate Button, (K4)
4. Investigate Oyster(K4)
5. Argue General morphology(K5)
6. Judge the distinguishing characteristics of mushroom (K4)
7. Estimate spore germination (K5)
8. Categorize life cycle of mushroom. (K4)
9. Simplify the Nutritional and medicinal value of mushrooms. (K4)
10. Evaluate Historical account on mushroom cultivation. (K4)

Unit II

1. Research Infrastructure(K4)
2. Conclude spawn lab(K5)
3. Deconstruct equipments and substrates in mushroom cultivation (K5)
4. Conclude the Casing(K4)
5. Analyze the preparation of casing material(K5)
6. Select the important sanitation during various stages of mushroom cultivation(K4)
7. Examine Precautions in mushroom cultivation(K4)
8. Critique the area selection(K5)
9. Organize the spawn run(K4)
10. Support harvesting, pest management. (K5)

Unit III

1. Research about the about the steps involved in oyster mushroom cultivation (K4)
2. Conclude the steps involved in milky mushroom cultivation (K5)
3. Deconstruct the steps involved in button mushroom cultivation (K4)
4. Conclude the medicinal value of mushroom (K5)

UNIT IV

1. Estimate about the steps involved in mushroom cultivation (K5)
2. Defend the detail about the mushroom house layout (K5)
3. Analyze technique and spawn preparation(K4)
4. Investigate the about mushroom bed preparation with different types of substrates. (K5)
5. Evaluate the economics of mushroom cultivation(K4)
6. Simplify the precaution methods for spawn preparation(K5)
7. Estimate precaution methods for media preparation(K4)
8. Categorize precaution methods for mushroom bed preparation(K5)

UNIT V

1. Select the the procedure for Mushroom – Soup and Pickles and discuss about their nutritive value (K5)
2. Organize the procedure for Mushroom Powders and Jams - discuss about their nutritive value (K4)
3. Conclude procedure for Mushroom Cutlet and Omelette and discuss about their nutritive value (K5)

4. Analyze the procedure for Mushroom Samosa and Curry and discuss about their nutritive value(K4)
5. Prove procedure for Mushroom biscuits and ketchup and discuss about their nutritive value. (K5)
6. Investigate the procedure for Mushroom chips and candy and discuss about their nutritive value (K4)

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI-628001

Semester-IV

NME - Clinical Microbiology – 21UMIN41

Question Bank

Section-A

Choose the correct answer;

Unit-I

1. _____ is called Father of Medical Microbiology.
a) **Robert Koch** b) Louis Pasteur c) Antonvan Leuwenhook d) Elie metchnikoff
2. _____ is occurrence and distribution of a disease within a given population.
a) **Epidemiology** b) Entomology c) Pathology d) Infection
3. A disease transmitted from one person to another is called _____.
a) non-communicable b) **communicable** c) Infection d) iatrogenic
4. Diseases occurring occasionally and at regular intervals _____.
a) **sporadic** b) endemic c) epidemic d) pandemic
5. Sudden outbreak of a disease is called _____.
a) endemic b) sporadic c) pandemic d) **epidemic**
6. Detectable occurrence of disease world wide _____.
a) **pandemic** b) epidemic c) sporadic d) endemic
7. Presence of bacteria in blood is called _____.
a) septicaemia b) viraemia c) **bacteriamia** d) fungaemia
8. _____ is an example for vector borne disease.
a) Typhoid b) Cholerae c) **Dengue** d) jaundice
9. Example for zoonotic disease is _____.
a) **Rabies** b) cholera c) Typhoid d) HIV
10. _____ are infections that are acquired through hospitals.
a) **Nosocomial** b) Iatrogenic c) Zoonotic d) Contagious

Unit-II

1. _____ shows bunch of grapes like appearance under grams staining.
a) *Streptococci* b) ***Staphylococci*** c) *E.coli* d) *Vibrio cholerae*
2. _____ are organisms that appear in chain form.
a) ***Streptococci*** b) *Staphylococci* c) *E.coli* d) *Bacillus*
3. _____ shows metallic sheen colonies on EMB agar.
a) ***E.coli*** b) *Staphylococci* c) *Streptococci* d) *Vibrio*
4. _____ are comma shaped bacteria.
a) ***Vibrio cholera*** b) *Salmonella* c) *Shigella* d) *E.coli*
5. Typhoid is caused by _____.
a) ***Salmonella typhi*** b) *Staphylococci* c) *Streptococci* d) *E.coli*
6. Travellers diarrhea is caused by _____.
a) ***E.coli*** b) *Salmonella* c) *Shigella* d) *Vibrio*
7. _____ is Hansens bacilli.
a) *Vibrio* b) ***Mycobacteria leprae*** c) *Mycobacteria tuberculosis* d) *Clostridium*
8. _____ are clinical manifestation of Dermatophytes.
a) **Ring worm** b) Hook worm c) Tape worm d) Flat worm
9. _____ is an anti-fungal agent.
a) **Nystatin** b) Erythromycin c) Bacitracin d) Amoxycillin
10. _____ is used in identifying fungi.
a) Gram staining b) **KOH Mount** c) Acid fast staining d) Iodine mount

Unit-III

1. Aflatoxin is produced by _____
a) ***Aspergillus*** b) *Pencillium* c) *E.coli* d) *Candida*
2. Fungus ball is caused by. _____
a) *Streptococci* b) ***Aspergillus*** c) *Candida* d) *Bacillus*
3. KOH Mount is used to identify _____

a)protozoan b)virus c)bacteria d)**fungi**

4. _____ is an opportunistic pathogen.

a)*Mucor* b)*Penicillium* c)*Aspergillus* d)***Candida***

5. _____ are normal commensals of human beings

a)*Dermatophytes* b)*Penicillium* c)***Candida*** d)*Aspergillus*

6. Germ tube test is done for _____.

a)*Mucor* b)*Penicillium* c)***Candida*** d)*Aspergillus*

7. _____ causes skin infection.

a)*Penicillium* b)***Dermatophytes*** c)*Mucor* d)*Candida*

8. Tinea or Ringworm is a clinical manifestation of _____

a)*Aspergillus* b)***Dermatophytes*** c)*Penicillium* d)*Candida*

9. Superficial skin infections are caused by _____

a) *Vibrio cholerae* b)*Mucor* c)***Dermatophytes*** d)*Candida*

10. _____ is an yeast like fungi

a)*Penicillium* b) *Aspergillus* c)***Candida*** d)*Mucor*

Unit-IV

1, Small pox is caused by _____.

a)***Variola*** b)Varicella c)Rubella d)Rubeola

2. _____ is a disease that has been eradicated world wide.

a)Chicken pox b)Polio c)**Small pox** d)Measles

3. _____ is a viral disease affecting the parotid glands affecting children.

a)**Mumps** b)Measles c)Chicken pox d)Rubella

4. MMR vaccine is used for _____.

a)**Measles Mumps Rubella** b)Meningitis Mumps Rubeola c)Measles Mumps Rabies
d)Measles Mumps Rubeola

5. _____ are inclusion bodies present rabies.

a)**Negri bodies** b)Cowdry type A c)Dane particles d)Kopliks spot

6. Hydrophobia is symptom of _____.

a) Measles b) Mumps c) **Rabies** d) Polio

7. _____ is an zoonotic disease.

a) **Rabies** b) Polio c) Hepatitis c) Common cold

8. _____ is an sexually transmitted disease.

a) Rabies b) Polio c) Common cold d) **AIDS**

9. AIDS stands for _____.

a) **Acquired immunological Deficiency Syndrome** b) Adopted Immunological Deficiency Syndrome c) Acquired Immuno Deficiency Syndrome d) Acquired Immuno Deficiency Symptom

10. Anti Retro Viral therapy is used for _____.

a) **HIV** b) Polio c) Rabies d) Mump

Unit-V

1. _____ is an vector borne disease.

a) **Malaria** b) Cholerae c) Typhoid d) TB

2. _____ is an disease transmitted by mosquitoes.

a) **Malaria** b) Common cold c) Typhoid d) Polio

3. Plasmodium causes _____.

a) **Malaria** b) Cholerae c) Hepatitis d) Brain fever

4. _____ is the causative agent of Amoebiasis.

a) *Giardia* b) *Plasmodium* c) ***Entamoeba*** d) *Acanthoemba*

5. *Entamoeba histolytica* is _____ nucleated.

a) **4** b) 8 c) 2 d) 12

6. _____ is an protozoal parasite.

a) *Staphylococci* b) *Penicillium* c) ***Entamoeba*** d) Rabies

7. _____ is an tennis racket shaped protozoan.

a) ***Giardia*** b) *Plasmodium* c) *Entamoeba* d) *Trichomonas*

8. _____ is an endoparasite.

a) ***Entamoeba*** b) *Giardia* c) *Staphylococci* d) Dermatophytes

9. Yellow fever is an _____ disease.

a) bacterial b) fungal c) protozoal d) **viral**

10. _____ is used for microscopic examination of *Entamoeba*.

a) KOH mount b) Giemsa c) **Iodine wet mount** d) Lactophenol cotton blue

Section-B

(3X2=6)

Answer any four in about 50 words:

Unit-I

1. Define Epidemic.

2. Define ABS.

3. Define Endemic.

4. Define sporadic.

5. Define pandemic.

6. List out the different modes of transmission.

7. Write about the different sources of infections.

8. Define Nosocomial infections.

9. Write about fomites.

10. What is iatrogenic infections.

Unit-II

1. Write about morphology of *Streptococci*.

2. Write about the colony morphology of *Staphylococci*.

3. Morphology of *E. coli*.

4. Write about the types of *E. coli*.

5. Write about EMB agar.

6. Define motility of *Vibrio*?

7. Write about *Salmonella typhi*.

8. Write about the types of disease causing *Mycobacteria*.

9. What is AFB.

10. Write about colony appearance of *salmonella*.

Unit-III

1. Define Aflatoxin.
2. What is *Aspergillosis*.
3. What are the different species of *Aspergillus*.
4. Define Dermatophytes.
5. List out the different species of Dermatophytes.
6. Define Candidiasis.
7. List out the species of *Candida*.
8. Define Germ tube.
9. Write about morphology of *Candida*
10. Write about *Tinea*

Unit-IV

1. Define negri bodies .
2. Write about morphology of pox virus.
3. Expand AIDS.
4. Write about HIV.
5. Write about Mumps virus.
6. Explain the morphology of Rabies virus.
7. Explain the vaccination for Rabies
8. Write about the mode of transmission of HIV.
9. Write about the disease caused by Pox virus.
10. Write about the morphology of Mumps virus.

Unit-V

1. Write about the vectors causing malaria.
2. Write about malarial parasite.
3. Write about amoebiasis.
4. Give account on *Plasmodium*.
5. Write about the structure of *Giardia*.
6. What is amoebic dysentery.
7. Write about the stages of *Entamoeba histolytica*.
8. Write about the causal organism of yellow fever.
9. Explain the morphology of yellow fever
10. List out the different cycles of malaria.

Section - C

Answer in about 200 words each by choosing either (a) or (b):

(2x6=12)

Unit-I

1. Write about the sources of infection?
2. Explain Koch postulates with neat diagram.

3. Briefly explain the modes of transmission.
4. Explain Kirby bauer method.
5. What is the transmission of diseases?
6. Give an note on transmission of infections by contact and inhalation.
7. Briefly explain ABS.
8. Give an account on infections?
9. Write about the testing of diseases?
10. Write about the different testing procedures?
- 11.) Koch postulates -give an note?

. Unit –II

1. Write about the morphology and cultural characteristics of *Streptococci*.
2. Give an account on pathogenesis of *Streptococci*.
3. Write about the pathogenesis of *Staphylococci*.
3. Write about the morphology and cultural characteristics of *Staphylococci*.
4. Give an note on *E.coli*.
5. Explain about the morphology and cultural characteristics of *Vibrio*.
6. Write about the morphology and cultural characteristics of *Salmonella*.
7. Write about the pathogenesis of *Salmonella*.
8. Give an note on pathogenesis of *E.coli*.
9. Give an note on epidemiology of *Salmonella*.
10. Write about the morphology of and cultural characteristics of *Mycobacterium*.
11. Give account on the epidemiology of *Vibrio*.
12. Write about the pathogenesis of tuberculosis.
13. Give an account on pathogenesis of cholera.

Unit-III

1. Give an account on morphology and cultural characteristics of *Aspergillus*.
2. Give an account on pathogenesis of *Aspergillus*.
3. Explain candidiasis.

4. Give an account on morphology and cultural characteristics of *Candida*.
5. Explain the pathogenesis of *Candida*.
6. Write about Dermatophytes.
7. Give account on morphology and cultural characterization of Dermatophytes.
8. Explain about the pathogenesis of Dermatophytes.

Unit-IV

1. Write about the morphology of Pox virus.
2. Explain the disease caused by Pox virus.
3. Write about the Lab diagnosis of Pox virus.
4. Give an account on Mumps.
5. Write about pathogenesis of Mumps.
6. Write about the lab diagnosis of HIV.
7. Write about HIV.
8. Explain the lab diagnosis of HIV.
9. Give an account on Rabies.
10. Explain the morphology and epidemiology of Rabies.

Unit-V

1. Write about Malaria.
2. Explain the life cycle of *Plasmodium*.
3. Give account on malarial parasite.
4. Write the pathogenesis of malarial fever.
5. Explain the morphology of *Amoeba*.
6. Give an note on Amoebiasis.
7. Give a note on *Giardia*.
8. Give the morphology of *Giardia*.
9. Write about Yellow fever.
10. Give an account on pathogenesis of Yellow fever.

.Section-D

Answer in about 500 words each by choosing any 2 questions:

(2X12=24)

Unit-I

1. Write in detail about infections.
2. Explain in detail about sources of infections.
3. Add an detailed note on Infection.
4. Give an detailed note on Transmission.
5. Add an detailed note on different modes of transmission.
6. Give an detailed notes on the different control measures and Koch's postulates.
7. Write about Antibiotics and its sensitivity testing detail.
8. Explain in detail about Antibiotic sensitivity test.
9. Elaborate about Kirby bauer method.
10. Add an detailed notes on transmission.

Unit-II

1. Add an detailed note on *Streptococci*.
2. Give an detailed note on morphology, cultural characteristics, pathogenesis and lab diagnosis of *Streptococci*
3. Give an detailed note on *Staphylococci*.
4. Discuss about the morphology and pathogenesis of *Staphylococci*.
5. Give an detailed note on epidemiology and lab diagnosis of *Staphylococci*.
6. Discuss in detail about *E.coli*.
7. Add an detailed note on *Salmonella*.
8. Explain in detail about *Mycobacteria*.
9. Give an detailed note on Tuberculosis.
10. Add an detailed note on *Vibrio*

Unit-III

1. Explain in detail about *Aspergillus*.
2. Write in detail about cultural characterization and pathogenesis of *Aspergillus*.

3. Give an detail note on Morphology,classification and lab diagnosis of *Aspergillus*.
4. Explain in detail about candidiasis.
5. Give an detail note on morphology,cultural characterization and pathogenesis of *candida*.
6. Give an detailed note on *Candida*.
7. Add an detailed note on *Candida*.
8. Explain in detail about Dermatophytes.
9. Give an detailed notes on morphology,classification and cultural characteristics of Dermatophytes.
10. Explain in detail about classification and pathogenesis of Dermatophytes.

Unit-IV

1. Explain in detail about Pox virus.
2. Explain the morphology and pathogenesis of Pox virus.
3. Give an detailed note on Epidemiology and pathogenesis of Poxvirus.
4. Write in detail about Mumps.
5. Explain in detail about Mumps virus and its pathogenesis.
6. Give an detailed note on HIV.
7. Explain in detail about structure and the pathogenesis of HIV.
8. Add an detailed note on Rabies .
9. Elaborately discuss Rabies.
10. Give an detailed note on the structure and pathogenesis of Rabies virus.

Unit-V

1. Give an detailed notes on Amoebiasis .
2. Explain the morphology and pathogenesis of *Entamoeba*.
3. Give an detailed notes on Malaria.
4. Elaborate the life cycle of malarial parasite and control measures.
5. Give an detailed note on pathogenesis Malaria.
6. Add an detailed note on *Giardia*.
7. Explain about pathogenesis *Giardia*.

8. Add an detailed Yellow fever.

9. Write an detailed notes on pathogenesis of Yellow fever.

10. Give an detailed notes on Yellow fever virus.

Unit 1

1. Psychology falls under the category of _____
 - a. **Positive science**
 - b. Normative science
 - c. Physical science
 - c. Life science
2. The branch of Psychology that provides the framework and theories for the subject is _____
 - a. **Pure Psychology**
 - b. Applied Psychology
 - c. Para Psychology
 - d. Abnormal Psychology
3. The psycho dynamic theory was proposed by _____
 - a. **Freud**
 - b. Adler
 - c. Jung
 - d. Watson
4. Behaviourism was initiated by _____
 - a. Freud
 - b. Adler
 - c. Jung
 - d. **Watson**
5. Psychology that deals with children is _____ psychology.
 - a. **Child**
 - b. Industrial
 - b. Educational
 - d. Sports
6. Psychology that deals with workers and the management is _____ psychology.
 - a. Child
 - b. **Industrial**
 - b. Educational
 - d. Sports
7. Psychology that deals with the various stages of human development is _____ psychology.
 - a. Child
 - b. **Developmental**
 - b. Educational
 - d. Sports
8. Behaviourism views psychology as a study of _____ behaviour.
 - a. **observable**
 - b. covert
 - c. emotional
 - d. mental

10. Who is regarded as a father of microbiology?

- a) **Leeuwenhoek**
- b) Robert Hook
- c) Louis Pasteur
- d) Robert Koch

11. Who is regarded as a father of bacteriology?

- a) Leeuwenhoek
- b) Robert Hook
- c) **Louis Pasteur**
- d) Robert Koch

12. Who is regarded as a father of medical microbiology?

- a) Leeuwenhoek
- b) Robert Hook
- c) Louis Pasteur
- d) **Robert Koch**

13. The term viruses was coined by _____

- a) Twort
- b) **Iwanowsky**
- c) Roux
- d) Meyer

14. The term bacteriophage was coined by _____

- a) Twort
- b) Iwanowsky
- c) Roux
- d) **Meyer**

15. Germ theory of disease was postulated by _____

- a) Edward Jenner
- b) Robert Hook
- c) Louis Pasteur
- d) **Robert Koch**

16. Virus was coined by _____

- a) Twort
- b) **Iwanowsky**
- c) Roux
- d) Herelle

17. Bacteriophage were studied in detailed by _____

- a) Twort
- b) Iwanowsky
- c) Roux
- d) **Herelle**

18. Bacteria were first discovered by _____

- a) **Edward Jenner**
- b) Robert Hook
- c) Louis Pasteur
- d) Robert Koch

19. Cyanophages were discovered by _____

- a) Twort and Herelle
- b) Bold and Tippo
- c) **Safferman and Morris**
- d) Hershey and chase

20. Viruses were first crystallized by _____

- a) Twort
- b) Iwanowsky
- c) Roux
- d) Stanley**

21. Gram staining was developed by _____

- a) Louis pasteur
- b) Robert Koch
- c) Christian Gram**
- d) Gerald gram

22. Viruses were cultured by _____

- a) Twort
- b) Iwanowsky
- c) Enders**
- d) Stanley

23. Cancer causing viruses were discovered by _____

- a) Twort
- b) Rous**
- c) Enders
- d) Stanley

24. Who is regarded as the father of virology?

- a) Twort
- b) Iwanowsky
- c) Roux
- d) Stanley**

Unit II

1. Naturally acquired active immunity would be most likely acquired through which of the following processes?

- a) Vaccination
- b) Drinking colostrum
- c) natural birth
- d) infection with disease causing organism followed by recovery.**

2. Which of the following convey the longest lasting immunity to an infectious agent?

- a. Naturally acquired passive immunity
- b. artificially acquired passive immunity
- c. naturally acquired active immunity**
- d. All of these
- e. None of these

3. Which of the following substances will not stimulate an immune response unless they are bound to a larger molecule?

- a. Antigen
- b. Virus
- c. Hapten**
- d. Miligen
- e. Antibod

4. B and T cells are produced by stem cells that are formed in:

- a. **Bone marrow**
- b. The liver
- c. The circulatory system
- d. The spleen
- e. The lymph nodes

5. B cells mature in the..... while T cells mature in the

- a. Thymus/bone marrow and gut associated lymphoid tissue (GALT)
- b. Spleen/bone marrow and GALT
- c. **Bone marrow and GALT/Thymus**
- d. Liver/Kidneys

6. Which of the following immune cells/molecules are most effective at destroying intracellular pathogens?

- a. T helper cells
- b. B cells
- c. **Antibodies**
- d. Complement
- e. T cytolytic cells

7. A living microbe with reduced virulence that is used for vaccination is considered:

- a. A toxoid
- b. Dormant
- c. Virulent
- d. **Attenuated**
- e. Denatured

8. B cells that produce and release large amounts of antibody are called:

- a. Memory cells
- b. Basophils
- c. **Plasma cells**
- d. Killer cells
- e. Neutrophils

9. The specificity of an antibody is due to

- a. its valence
- b. The heavy chains
- c. The Fc portion of the molecule
- d. **The variable portion of the heavy and light chain**

10. In agglutination reactions, the antigen is a.....in precipitation reactions, the antigen is a.....

- a. whole cell/soluble molecule
- b. **Soluble molecule/whole cell**
- c. Bacterium/virus
- d. Protein/carbohydrates
- e. Protein/Antibody

11. B Cells are activated by

- a. Complement
- b. Antibody

c. Interferon

d. Memory cells

e. Antigen

12. Fusion between a plasma cell and a tumor cell creates a

a. Myeloma

b. Natural killer cell

c. Lymphoblast

d. Lymphoma

e. Hybridoma

13. **Monoclonal antibodies** recognize a single:

a. Antigen

b. Bacterium

c. Epitope

d. B cell

e. Virus

14. Cell mediated immunity is carried out by..... While humoral immunity is mainly carried out by.....

a. B cells/T cells

b. Epitopes/Antigens

c. T cells/B cells

d. Antibodies/Antigens

e. Antibodies/Phagocytes

15. The ability of the immune system to recognize self-antigens versus nonself antigen is an example of:

a. Specific immunity

b. Tolerance

c. Cell mediated immunity

d. Antigenic immunity

e. Humoral immunity

Unit III

1. Coronary artery disease (CAD) can be determined by this test

a) Cardiac catheterization

b) Electrocardiogram

c) Treadmill stress test

d) all of these

2. The modifiable risk factor associated with coronary artery disease is

a) Age

b) Obesity

c) Heredity

d) Gender

3. This is one of the symptoms of Coronary artery disease

a) Sleep problems

b) Headache

c) Diarrhoea

d) Pain or discomfort in the chest, lower jaw or

arms

4. If a stent is not used in a few cases who have coronary angioplasty done, the artery tends to narrow down or get blocked again in 6 months. This is more likely to happen if:

- a) one smokes
- b) one has unstable angina before the procedure
- c) one has diabetes
- d) all of these**

5. Coronary angioplasty, part of CAD's treatment involves:

a) A new part of artery replaces the blocked section b) to expand artery, medication is used

- c) Inflammation of a tiny balloon inside an artery**
- d) None of these

6. Doctors place a stent inside the artery during angioplasty. A stent is a

- a) A new fragment of the artery
- b) A wire mesh tube**
- c) A cotton tube
- d) A slow-release medicine capsule

7. The _____ branches into Circumflex artery and left anterior descendary artery

- a) Left main coronary artery**
- b) right marginal artery
- c) Posterior descendary artery
- d) None of these

8. One of these is not a symptom of acute coronary syndrome

- a) ST Segment elevation myocardial infarction
- b) Non ST segment elevation myocardial infarction
- c) unstable angina
- d) No episodes of dyspnea**

9. Ischemia is

- a) restriction of blood supply to tissues**
- b) Overflow of blood to tissues
- c) Inadequate deoxygenated blood carrying veins
- d) the medical term for shortness of breath

10. This is the role of the coronary artery

- a) to carry blood away from the heart muscles
- b) to supply blood to heart muscles**
- c) to supply blood to all parts of the body
- d) none of these

11. In what age group is the asthma incidence rate the highest?

- a. Elderly
- b. Children
- c. Adult**
- d. All are equal

12. Environmental risk factors for the development of asthma include:

- a. **Socioeconomic status** b. Allergen exposure
- c. Exposure to secondhand tobacco smoke at infancy d. All the above
13. What is a risk factor for early recurrent wheezing associated with viral infections?
- a. Female gender b. Male gender
- c. **High birth weight** d. Premature birth
14. What is a common symptom of asthma?
- a. **Wheezing** b. Whistling
- c. Full breaths d. Snoring
15. What is the value that is measured by spirometry?
- a. Residual volume **b. Total lung capacity**
- c. Functional residual capacity d. Forced expiratory volume
16. What drug therapy should be available to ALL asthma patients (intermittent and persistent)?
- a. Low dose ICS b. PRN SABA
- c. LABA **d. Leukotriene Antagonist**
17. Which of the following is a pro-inflammatory cytokine?
- a)CRP b) Interleukin 4 (IL-4)
- c) IL-10 d) Serum amyloid precursor protein
- e) Tumour necrosis factor-alpha**
16. 17. The probable cause of Erythroblastosisfetalis can be
- a) Bleeding b) Haemophilia
- c) **Adjoining of RBC** d) Diapedesis
18. This can help on the diagnosis of the genetic basis of a disorder
- a) **PCR** b) ELISA
- c) ABO blood group d) NMR
19. This measure does not help to prevent diabetes complications
- a) controlling blood lipids and blood pressure
- b) Prompt detection of diabetic eye and kidney disease

c) Eliminating all carbohydrates from the diet

d) controlling blood glucose

20. The disease as a result of prolonged clotting is due to lack of plasma thromboplastin component (PTC) necessary to the formation of thromboplastin, is

a) Haemophilia

b) Hypoprothrombinemia

c) Christmas disease

d) Stuart disease

21. This diabetes drug acts by decreasing the amount of glucose produced by the liver

a) Alpha-glucosidase inhibitors

b) Sulfonylureas

c) Biguanides

d) Meglitinides

22. Presence of RBC in urine is known as

a) Proteinuria

b) Hematuria

c) Urolithiasis

d) Nephritis

23. The disease characterized by extreme muscle weakness and brownish pigmentation of the buccal cavity and skin is

a) Grave's disease

b) Myxoedema

c) Addison's disease

d) Cushing's disease

24. This statement regarding Angina is true

a) Blood flow is unaffected

b) Most common in children

c) Inadequate supply of oxygen to the heart muscles

d) Heart stops beating

25. Pick the wrongly matched pair

a) Heart failure – not enough blood supply to the body

b) Angina pectoris – acute chest pain

c) Cardiac arrest – narrowing of the lumen

d) Heart attack – not enough blood supply to cardiac muscles

26. This disease is not related to the circulatory system

- a) Diabetes mellitus
- b) Hypertension
- c) Diphtheria**
- d) Coronary thrombosis

27. The _____ is responsible for secreting gonadotropin-releasing hormone.

- A. Thalamus
- B. Hypothalamus**
- C. Anterior pituitary gland
- D. Posterior pituitary gland

28. During which cycle day of a typical 28 day menstrual cycle does the follicular phase occur?

- A. Cycle days 7-14
- B. Cycle days 14-28
- C. Cycle days 1-6
- D. Cycle days 1-13**

29. As the graafian follicle matures, a massive amount of estrogen is released by the follicle which causes a luteinizing hormone surge. Approximately, what cycle day does the LH surge occur?

- A. Cycle day 11-13**
- B. Cycle Day 14
- C. Cycle day 5-8
- D. Cycle day 1-6

30. Select all the functions of the luteinizing hormone:

- A. Forming the corpus luteum**
- B. Thickening the endometrium layer for implantation
- C. Breaking down the wall of the graffian follicle to allow for release of the ovum**
- D. Thinning cervical mucous

31. During which stage of the menstrual cycle does the endometrium layer thicken?

- A. Secretory Phase
- B. Luteal Phase
- C. Ovulation Phase
- D. Proliferative Phase**

32. What cycle day does the proliferative stage occur?

A. Cycle day 7-14

B. Cycle day 14-28

C. Cycle day 1-6

D. Cycle day 1-14

33. Which statement is TRUE about the ovulation phase?

A. The newly released egg will live for 72 hours and disintegrate if not fertilized.

B. The woman will have a low basal body temperature before ovulation and then a temperature increase of 0.4-1°F degrees around ovulation.

C. The ovum is directly released into the fallopian tube.

D. Fertilization most commonly occurs at the fimbria.

34. If the ovum is to be fertilized, where is the most common site of fertilization?

A. Uterine wall

B. Fimbria

C. Ampulla of the Fallopian Tube D. Isthmus of the Fallopian Tube

35. In what stage does the corpus luteum form?

A. Luteal Phase

B. Follicular Phase

C. Proliferative Phase

D. None of the above

36. What cycle day does the luteal phase occur?

A. Cycle days 15-28

B. Cycle days 5-13

C. Cycle day 14

D. Cycle days 7-14

37. The corpus luteum secretes (select-all-that-apply)?

A. Progesterone

B. Estrogen

C. FSH

D. LH

38. During the menstrual phase the _____ layer of the endometrium is shed.

A. Stratum basalis

B. Stratum functionalis

C. Stratum compactum

D. Myometrium

39. A patient is trying to prevent pregnancy by using the rhythm method. At what time during a woman's cycle is she the most fertile?

A. Cycle days 21-28

B. Cycle days 1-6

C. Cycle days 9-16

D. Cycle days 6-9

40. _____ is released from the anterior pituitary gland and stimulates the follicles in the ovary to mature.

A. Progesterone

B. Follicle-stimulating hormone

C. Estrogen

D. Human chorionic gonadotropin

41. If pregnancy does not occur, the corpus luteum will disintegrate and turn into what is called the?

A. Corpus Albicans

B. Corpus Callosum

C. Corpus Cavernosum

D. Corpus Allatum

42. Select all the following that is NOT a function of progesterone and estrogen:

A. Inhibits the production of LH and FSH

B. Causes the hypothalamus to release gonadotropin releasing hormone

C. Maintains the endometrium for pregnancy

D. Causes the follicle to mature into a graafian follicle

43. If fertilization occurs the corpus luteum will act as a temporary endocrine structure to release hormones. It will do this until the placenta is fully developed to take over with hormone secretion and this occurs at approximately?

A. 4 weeks gestation

B. 8 weeks' gestation

C. 20 weeks gestation

D. 2 weeks' gestation

Unit IV

1. Insulin is a hormone that eating.
 - a. **controls**
 - b. stimulates
 - c. prevents
 - d. adds
2. Obesity is an accumulation of excessive in the body.
 - a. protein
 - b. carbohydrates
 - c. **fat**
 - d. nutrients
3. The optimal level of fat in women is
 - a) **20-27%**
 - b) 25-29%
 - c) 27-32%
 - d) 30-35%
4. Damage to Hypothalamus leads to overeating.
 - a) lateral
 - b) frontal
 - c) medial
 - d) **ventro medial**
5. Dieting is the first suggested treatment for obesity.
 - a) always
 - b) never
 - c) sometimes
 - d) **depends on the level of obesity**
6. The optimal level of fat in men is
 - a) **15-22%**
 - b) 25-29%
 - c) 27-32%
 - d) 30-35%
7. The predominant factor associated with obesity is
 - a. **Family history**
 - b. friendship
 - c. job
 - d. health
8. Successive cycles of dieting and eating is called Dieting.
 - a. bo-bo
 - b. **yo-yo**
 - c. zo-zo
 - d. do-do
9. is a eating disorder that results in starvation.
 - a. **anorexia nervosa**
 - b. bulimia
 - c. stress eating
 - d. yo-yo dieting
10. Successive eating and vomiting is a characteristic feature of
 - a. anorexia nervosa
 - b. **bulimia**
 - c. stress eating
 - d. yo-yo dieting
11. Sleep disorders characterized by pauses in breathing during sleep is called-----
 - a) **Sleep apnea**
 - b) Insomnia
 - c) Parasomnia
 - d) RLS
12. Dreams occur in -----

- . 13. At home,..... Are more prone to accidents.

1. Baby talk is a reason for miscommunication from the part of

2. Cognitive schema is also called representations of

3. Lay referral refers to opinions received from

4. Health care providers include

5. The misinterpretation of mild symptoms as serious illnesses is called

6. Medical students disease is an example of factor that helps in recognizing symptoms.

7. Illness representations are also called

8. Abbreviation of CAM is

- a. **complementary alternative medicine** b. Comprehensive alternative medicine
c. compulsory alternative medicine d. consecutive alternative medicine
9. Women use medical service men.
a. less than b. **more than**
c. equal to d. not known
10. To be cared for by others is again of illness.
a. primary b. **secondary**
c. tertiary d. only
11. Is a cause of miscommunication on the part of the health care provider.
a. jargon b. baby talk
c. non person treatment d. **all the above.**
12. Attitudes is a reason for miscommunication from the part of
a) Health care provider b) **patient**
c) Family d) friends
13. Is a cause of miscommunication on the part of the patient.
a. characteristics b. attitudes
c. ignorance/knowledge d. **all the above.**
14. is the result of poor interaction between health care provider and patient.
a. **poor adherence** b. relapse
c. worsening of symptoms d. all the above.
15. is the first step to improve adherence.
a. **listening** b. treating
c. caring d. curing

Section B

Unit I

1. Define Psychology.
2. Describe psychology as a science.
3. List few schools of psychology.
4. What are the 2 branches of psychology?
5. Describe pure psychology.
6. Describe applied psychology.
6. List few branches of pure psychology.
7. List few branches of applied psychology.
8. Describe structuralism.

9. Describe functionalism.
10. Describe behaviourism.
11. Describe psycho analysis.
12. Explain the nature of psychology.
13. List the scopes of psychology.
14. Write note on Germ theory of diseases
15. Give the significance of Germ theory of fermentation.
16. Enlist Koch's Postulates.
17. Describe the experiment of John Tendam for Tantalization.
16. Why Antony Von Leeuwenhoek called as 'Father of Microbiology'?
17. Write note on Experiment of Robert Hook and his "Micrographia"
18. Diagrammatically represent the Microscope of Antony Von Leeuwenhoek and write short notes.
19. Describe in short- Francesco Redi's 'Fly Experiment'
20. Discuss Spontaneous generation theory.

Unit II

1. Define Immune
2. Define Antigen
3. Define Antibody
4. State Specificity
5. List out the types of immunity
6. Cytokine
7. Write a short note on innate immunity
8. Define Acquired Immunity
9. Define phagocytosis
10. Write a short note on APC
11. Difference between B cells and T cells.
12. Types of Immunoglobulin

Unit III

1. Define CHD
2. Write a causes of Asthma
3. Define Allergy
4. List out the treatment of Eczema

5. List out the symptoms of Hiding
6. Define the pathophysiology of Rheumatoid
7. List out the types of diabetes mellitus
8. Define hyperglycemia
9. Write a short note on insulin
10. Give an account on Type I Diabetes
11. Write a short note on Type II Diabetes
12. Define PCOD

Unit IV

1. Define exercise,
2. What are the benefits of exercising?
3. List the psychological effects of doing exercise.
4. Define nutrition.
5. Define obesity.
6. Mention the ideal amount of fat that can be present in men and women.
7. List few healthy foods that can be taken.
8. Define public health.
8. List the public health contributing factors.
9. List the stages of sleep.
10. What is REM sleep?
11. When do dreams occur?
12. Name 4 sleep disorders.
13. Why do accidents occur at home?

Unit V

1. What are illness symptoms?
2. List the factors contributing to recognizing illness symptoms?
3. Define schema.
4. Describe lay referral.
5. What is non adherence to treatment?
6. List few factors contributed by health care providers to faulty relationship.
7. List few factors contributed by patients to faulty relationship.
8. What is jargon?
9. Who are called health care providers?

10. List the factors that help in obtaining health care services.

Section C

Unit I

1. Give a note on the scope and nature of psychology.
2. Explain structuralism
3. Describe psycho analysis.
4. What is behaviorism?
5. Describe functionalism.
6. Describe the branches of psychology.
7. Describe a few branches of pure psychology
8. Describe a few branches of applied psychology.
9. Give a detail account on contribution of Antony van leeuwenhook
10. Explain about contribution of Louis pasteur
11. Write an essay on contribution of Robert Koch
12. Give an account on Koch's postulates
13. Describe in detail about Contribution of Edward jenner

Unit II

1. Classify immunity.
2. Discuss about the mechanism of innate immunity.
3. Tabulate the difference between the active immunity and innate immunity.
4. Give an account on Natural passive immunity.
5. Describe in detail about the artificial passive immunity.
6. Write a short notes on haptens.
7. Discuss about the heterophile antigens.
8. What is an antibody? Draw a labelled diagram of IgG.
9. Give a detail account on human stressor.
10. Write a short note on neuro hormonal receptors.

Unit III

1. Give a detail account on anxiety disorders
2. Describe in detail about the epidemiology of RA
3. Write an essay about the symptoms of peptic ulcer.

4. Write a short note on complication of diabetes
5. Give a detail account about the causes for the anxiety disorder
6. Describe about the pathophysiology of asthma
7. Give an account on treatment for peptic ulcer
8. Describe about the primary and secondary amenorrhoea
9. Write a short note on gestational diabetes.
10. Illustrate about the management of diabetes.

Unit IV

1. Describe the neurobiology of exercise.
2. List the psychological effects of exercise.
3. Write a note on obesity.
4. Write a note on public health.
5. Describe the stages of sleep.
6. Write a note on few sleep disorders.
7. Effects of accidents at home.
8. Causes of accidents in work place.

Unit V

1. Explain the factors that help in symptom recognition.
2. Write a note on illness perception and beliefs.
3. Describe the health provider contributing factors to conflicts.
4. Describe the patient contributing factors to conflicts.
5. List the factors that promote the obtaining of health care.
6. Describe the impact of poor interpersonal relationship between health care provider and patient.

Section D

Unit I

1. Explain the main schools of psychology.
2. Describe in detail the various fields of psychology.
3. Define Psychology. Describe the scope and nature of the field of psychology.
4. Describe in detail about the contribution of Pavlov
5. Name four Nobel laureates in microbiology

Unit II

1. What is an antigen? Discuss briefly about the various determinants of antigenicity.
2. Differentiate between T cells and B cells in a tabulated form
3. Give an account of lymphocytes
4. Describe in detail about the types of lymphocytes
5. Illustrate and explain about the MHC and HLA

Unit III

1. Illustrate and explain about allergy
2. Elaborate on the types of anxiety
3. Explain in detail about the RA.
4. Write a note on peptic ulcer.
5. Explain in detail about the types of menstrual disorders

Unit IV

1. Illustrate and explain the neurobiology of exercise.
2. Elaborate on the eating related processes.
3. Explain in detail sleep and sleep disorders.
4. Write a note on accidents at home.
5. Give a detailed account of accidents at work place.

Unit V

1. Give a detailed account of recognizing illness symptoms.
2. Give detailed account of treatment relationship.
3. Give a detailed account of illness perception and beliefs.
4. Explain the health provider contributing factors that affect treatment relationships.
5. Explain the patient contributing factors that affect treatment relationships.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

III B. Sc Microbiology - Semester-V

Core II - Immunology Sub Code: 21UMIC52

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

1. _____ defined as antiseptic agent (K1)

Phenol b) Carboxylic acid c) Sodium chloride d) Methanol

2. Phagocytosis was described by _____ (K1)

a) **Elie Metchnikoff** b) Koch c) Pasteur d) Rudolf

3. _____ quoted as father of immunology (K1)

a) **Robert Koch** b) Fleming c) Torner d) None

4. Inflammation is named as _____ (K1)

a) **Natural barrier** b) Chemical barrier c) host response d) Self Ag

5. _____ is labelled as acquired immunity (K1)

a) **Immunization** b) Blood transfusion c) Fever d) All

6. Study of immunity is defined as _____ (K1)

a) Physiology b) Metabolism c) Genetics **d) Immunology**

7. _____ are listed in acquired immunity (K1)

a) Specificity b) Diversity c) Memory **d) All**

8. _____ interpreted as production of lymphoid cells (K1)

a) **Lymphoid lineage** b) Myeloid lineage c) Gemology d) None

9. _____ named as phagocytic cells (K1)

a) **Macrophage** b) Monocytes c) Platelets d) RBC

10. B and T cells are defined as _____ (K1)

a) **Lymphocytes** b) Thrombocytes c) Dendroid d) Neurons

Unit II

11. _____ are named as part of immune system (K1)
a) Lymph nodes b) Lymph vessel c) Lymphoid organs **d) All**
12. Thymus is defined as _____ (K1)
a) Primary lymphoid organs b) Site of maturation c) Site of differentiation d) None
13. Spleen is quoted as _____ (K1)
a) Secondary lymphoid organs b) Site of development c) Site of action d) All
14. Mucous associated lymphoid tissue is defined as _____ (K1)
a) MALT b) GALR c) TLCT d) RNCT
15. _____ described as site of Tcell production (K1)
a) Thymus b) Bone marrow c) Liver d) Lungs
16. Network of reticular endothelial cells is defined as _____ (K1)
a) Medulla b) Cortex c) Endometrium d) Particartium
- 17 Yellow bone is named merely after its _____ (K1)
a) Colour b) Fat cells c) Function d) Growth
18. The other name for red bone marrow is _____ (K1)
a) Ossium rubra b) Ossium medulla c) Oblongata d) None
19. The red bulb of is quoted as _____ (K1)
a) Cords of Billroth b) Cords of tiny c) Junction d) Growth
- 20 Peyer's patches is drawn in _____ (K1)
a) Terminal ileum. b) Terminal rectum c) Spleen d) Heart.

Unit III

21. Molecular structures that are foreign to the body is named as _____ (K1)
a) Antigen b) Antibodies c) Natural Killer cells d) Haptens
- 22 The nature of antigens are quoted as _____ (K1)
a) Chemical b) Rigidity c) Foreign **d) All**

23. Antigens are listed as ____ (K1)

- a) Self b) Non self c) Endogenous **d) All**

24. A substance that enhances the immune response is defined as ____ (K1)

- a) Adjuvants** b) Haptens c) Lattice d) Carbonate materials

25. _____ is named as an incomplete antigen (K1)

- a) Haptens** b) Adjuvants c) Proteins d) Enzymes

26. Immunoglobulins are defined as ____ (K1)

- a) Antibodies** b) Antigens c) Natural barrier d) Artificial barrier

27. Immunoglobulins are listed as _____ (K1)

- a) IgG b) IgA and M c) IgD and E **d) All**

28. The Fab is quoted as ____ (K1)

- a) Fragment antigen binding** b) Fragment antibodies c) Fragment d) amino binding

29. Fragment crystallizable is named as ____ (K1)

- a) Fc** b) Fd c) Fe d) Fn

30. HLA is written as ____ (K1)

- a) MHC** b) MLC c) MXC d) MYC

Unit IV

31. The interactions between antigens and antibodies are named as _____ (K1)

- a) Ag – Ab reaction b) Immune reaction c) Invivo methods **d) Both a and b**

32. Epitope is quoted in _____ (K1)

- a) Ag** b) Ab c) Serum d) Monocytes

33. The influence of antigen-antibody reaction can be listed by ____ (K1)

- a) Temperature b) Ph c) Ionic strength **d) All**

34. Paratope is indicated in ____ (K1)

- a) Ab** b) Ag c) RBC d) WBC

35. ELISA is defined as _____ (K1)

- a) Enzyme assay b) Fluorescent assay c) Immune assay d) All

36. The factors that induce the precipitin reaction is named as _____ (K1)

- a) **Pricipitinogen** b) Precipitin c) Precipitate d) None

37. The cross-linking of Ag and Ab to form an immunocomplex is defined as _____ (K1)

- a) **Lattice** b) Latex c) Foreign nature d) Nature reaction

38. The rejection of graft is quoted in _____ (K1)

- a) **Transplantation** b) Grafting c) Transfusion d) All

39. Radio Immuno Assay is named as _____ (K1)

- a) **Invivo method** b) Invitro method c) Cross reaction d) Lattice formation

40. Blood grouping is summarised as _____ (K1)

- a) **Agglutination** b) Precipitation c) Complement fixation d) Complementation

Unit V

41. Hypersensitivity reaction may also be defined as _____ (K1)

- a) **Allergic reaction** b) Sensitization c) Neutralization d) Immune function

42. _____ is also named as delayed hypersensitivity (K1)

- a) **Type IV** b) Type II c) Type I d) Type III

43. Antibody dependent cytotoxicity is matched as _____ (K1)

- a) **Type I** b) Type II c) Type III d) Type IV

44. Rheumatoid arthritis is quoted as _____ (K1)

- a) **Auto immune disease** b) Tumour growth c) Antigen proficiency d) Ab differentiation

45. _____ is indicated in the involvement of release of histamine (K1)

- a) **IgE** b) IgA c) IgM d) IgG

46. The most common anaphylactic reactions are listed to _____ (K1)

- a) Food b) Drug c) Pollen **d) All**

47. Epinephrine is quoted as emergency drug for _____ (K1)
a) Fever **b) Allergic reaction** c) Asthma d) Syphilis
48. Signs of anaphylaxis are named as _____ (K1)
a) Itching b) Diarrhea c) Air blocking **d) All**
- 49 The particles that causes allergic reactions are defined as _____ (K1)
Allergens b) Pollens c) Immunogens d) Anaphylogens
50. Mismatching of blood grouping is drawn as _____ (K1)
a) Immediate reaction b) Delayed reaction c) Intermediate d) Swift

Section-B

Answer the following in about 50 words:

(2 marks)

Unit I

1. Differentiate between innate and acquired immunity (K2)
2. Explain phagocytosis (K2)
3. Summarize the barriers of innate immune system (K2)
4. Indicate the structure of phagocytic process (K2)
5. Illustrate immunity with reference to protection (K2)
6. Summarize the cells involved in immune system (K2)
7. Indicate the functions of T cells (K2)
8. Explain the different types of T cells (K2)
9. Compare the features of myeloid lineage system (K2)
10. Explain the contributions of Joseph lister (K2)

Unit II

11. Recall the parts of immune system (K2)
12. Differentiate primary and secondary lymphoid organs (K2)

13. Distinguish between thymus and bone marrow (K2)
14. Summarize different kinds of MALT (K2)
15. Explain the functions of spleen (K2)
16. Discuss the structure of bone marrow (K2)
17. Interpret isthmus and its uses (K2)
18. Summarize the function of thymus (K2)
19. Illustrate the stages of lymphoid cells proliferation (K2)
20. Discuss the features of lymph nodes (K2)

Unit III

21. Compare different kinds of Ags (K2)
22. Illustrate the structure of antibodies (K2)
23. Differentiate between HLA and MHC (K2)
24. Explain complement system (K2)
25. Distinguish between humoral and cell mediated immune response (K2)
26. Summarize the properties of tumour antigens (K2)
27. Discuss steps involved in antigen recognition (K2)
28. Explain classical pathway (K2)
29. Express the classes of MHC molecules (K2)
30. Relate the process of B cell induction (K2)

Unit IV

31. Explain immune reaction (K2)
32. Differentiate between primary and secondary immune reaction (K2)
33. Summarize the applications of RIA (K2)
34. Relate the principle of ELISA (K2)
35. Illustrate the steps of immunofluorescence technique (K2)

36. Distinguish between agglutination and precipitation reactions (K2)
37. Interpret in vivo methods of immune reaction (K2)
38. Compare applications of immunofluorescence technique (K2)
39. Summarise the importance of immune reaction (K2)
40. Discuss transplantation immunology (K2)

Unit V

41. Differentiate between type I and type II hypersensitivity (K2)
42. Estimate the factors involved in hypersensitivity (K2)
43. Explain immune reactions related to hypersensitivity (K2)
44. Summarize the sign and symptoms of Rheumatoid arthritis (K2)
45. Distinguish between type III and type IV hypersensitivity (K2)
46. Relate the process of anaphylaxis to auto immune disease (K2)
47. Explain the diagnostic method for allergic reactions (K2)
48. Summarize the names of allergens (K2)
49. Explain auto immune diseases (K2)
50. Indicate the drugs used for treating hypersensitivity (K2)

Section- C

Answer in about 200 words:

(5 marks)

Unit-I

1. Outline the history of immunology (K4)
2. Classify the contributions of Joseph lister (K3)
3. Compare the features of innate and acquired immunity (K4)
4. Compile the natural barriers in the human immune system (K3)
5. Organize the cells involved in immune system (K4)
6. Examine the structure of immune cells (K4)
7. Differentiate the role of Robert koch and Louis Pasteur (K4)
8. Demonstrate the formation of blood and immune cells (K3)
9. Analyse the importance of passive immunity (K4)

10. Show how important is the phagocytosis process (K3)

Unit II

11. Compile the components of immune system (K3)

12. Distinguish the primary and secondary organs (K4)

13. Organize the encounter steps of ag (K4)

14. Examine the structure of bone marrow (K4)

15. Compare the yellow and red marrow (K4)

16. Simplify the steps of crossing natural barriers (K4)

17. Demonstrate the features of lymphoid tissues (K3)

18. Show the importance of MALT (K3)

19. Relate the importance of myeloid and progenitor lineage (K3)

20. Analyse the functions of immune system (K4)

Unit III

21. Outline the types of ags (K4)

22. Analyse the properties of tumour antigens (K4)

23. Compare the importance of haptens and adjuvants (K4)

24. Simplify the classical pathway (K4)

25. Relate the MHC and HLA (K3)

26. Distinguish the features of IgG and IgM (K4)

27. Examine the features of clusters of major histo compatibility (K4)

28. Classify the features of ag and antibodies (K3)

29. Show the features of antibodies in response to APc (K3)

30. Examine the structure of spleen (K4)

Unit IV

31. Compare the immune reactions in relation to other activities in the body (K4)

32. Outline the factors affecting immune reaction (K4)

33. Examine the different In vivo methods (K4)

34. Compare the precipitation and agglutination methods (K4)

35. Compile the features of complement fixation (K3)

36. Simply the steps involved in RIA (K4)

37. Differentiate the applications of ELISA and Immunofluorescence (K4)

38. Relate the importance of immune reaction (K3)
39. Demonstrate the neutralization of ag- ab interaction (K3)
40. Compare the structural features of immune organs (K4)

Unit V

41. Differentiate between anaphylaxis and allergic reaction (K4)
42. Organize the antibody mediated hypersensitivity (K4)
43. Compile the factors of allergic reaction (K3)
44. Analyse the features of type II reaction (K4)
45. Solve the complexity of type IV reaction (K3)
46. Outline the factors responsible for auto immune disease (K4)
47. Simplify the features of hypersensitivity reaction(K4)
48. Show the importance of allergic reaction (K3)
49. Classify the features of type I and type III reaction (K3)
50. Demonstrate the sequence events of anaphylaxis (K3)

Section- D

Answer in about 400 words:

(10 marks)

Unit-I

1. Outline the time line of immunology(K4)
2. Prove that contributions of pioneers are important in the development of immunology(K5)
3. Simplify the importance of immune system in human body(K4)
4. Innate immunity is important during birth – Judge (K5)
5. Conclude the acquired the immunity is achievable during the growth stages (K5)
6. Organize the features of passive and active immunity(K4)
7. Categorize the cells involved in immune system (K4)
8. Analyse the myeloid and lymphoid lineage (K4)
9. Evaluate the functions of immune cells (K5)
10. Distinguish the structural and functional importance of T and B cells (K4)

UNIT II

11. Examine the types of immune organs (K4)
12. Outline the arrangement and functions of lymph nodes (K4)

13. Conclude the features of primary and secondary lymphoid organs (K5)
14. Select the structural importance of bone marrow (K4)
15. Compare the features of thymus (K4)
16. Lymphoid organs are important in protecting our body from germs – Judge(K5)
17. Evaluate the functions of MALT (K5)
18. Criticize the steps of lymphocytes maturation and differentiation(K5)
19. Support the spleen is more vital in immune function (K5)
20. Conclude the importance of lymphoid system related to endocrine (K5)

Unit III

21. Estimate the properties of antigens (K5)
22. Organize the features of antibodies (K4)
23. Evaluate the importance of antigen and antibodies reaction (K5)
24. Haptens and adjuvants are important – Judge (K5)
25. Prove complement system are important in immune reaction (K5)
26. Estimate the importance of classical pathway (K5)
27. Conclude the properties of HLA (K4)
28. MHC are important in antigen presentation – Judge (K5)
29. Simplify the importance of humoral immune response (K4)
30. Analyse the steps of cell mediated immune response (K4)

Unit IV

31. Simplify the ag – ab interactions (K4)
32. Conclude the structure and functions of epitope and paratope(K5)
33. WIDAL is an example for agglutination reaction – Judge (K5)
34. Estimate the importance of precipitation reaction (K5)
35. Evaluate the features of complement fixation system(K5)
36. Analyse the history of immunofluorescence technique (K4)
37. Compare the features of RIA and non radio techniques (K4)
38. Prove that modern immuno assay is important in diagnosis(K5)
39. Outline the mechanism of host rejection and acceptance(K4)
40. Simplify the importance of transplantation techniques(K4)

UNIT V

41. Estimate the significance of allergic reaction (K5)
42. Evaluate the causes of hypersensitivity reaction (K5)
43. Compare the features of type I and type IV hypersensitivity (K4)
44. Natural mechanism are good enough to control allergic reactions - Judge (K5)
45. Prove that over sensation of immune system is responsible for hypersensitivity (K5)
46. Outline the steps involved in neutralizing the allergic reactions (K4)
47. Select auto immune disease are of natural host defence (K5)
48. Criticize the factors involved in rheumatoid arthritis (K5)
49. Conclude the historical features of auto immune disorder (K5)
50. Examine strong evidence for allergic reaction (K4)

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

III B.Sc Microbiology - Semester-V

Core III –Clinical Microbiology – 21UMIC52

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

1. _____ demonstrated the role of bacteria in causing disease. (K1)
a) **Robert Koch** b) Edward Jenner c) Antonie Van Leeuwenhoek d) Joseph Lister
- 2) A _____ is a person who harbors the pathogen without suffering from any illness. (K1)
a) **carrier** b) fomite c) vector d) suspect
- 3) Infectious diseases transmitted from animals to human beings are called _____ (K1)
a) **zoonoses** b) vector borne diseases c) nosocomial infection d) venereal disease
- 4) The ability of a pathogen to spread in the host tissues after establishing infection is called _____ (K1)
a) pathogenicity b) **invasiveness** c) virulence d) toxicity
- 5) Normal flora synthesizes a chemical called _____. (K1)
a) **Bacteriocin** b) Fibronectin c) Betalysin d) TNF
- 6) In which year Robert Koch proposed Germ theory of Disease? (K1)
a) 1882 b) 1881 c) 1878 d) **1876**
- 7) Which microbicidal substance is present in tears? (K1)
a) **Lysozyme** b) Conjugivac c) Amylase d) Heparin
- 8) The ability of a microorganism to cause disease is called _____ (K1)
a) **pathogenicity** b) invasiveness c) virulence d) toxicity
- 9) Free living microbes that live on dead and decaying matter is called _____ (K1)
a) **saprophyte** b) parasite c) pathogen d) commensal
- 10) Hospital acquired infection can be also called as _____ (K1)
a) Vector borne infection b) Zoonotic disease
c) **Nosocomial infection** d) Atypical infection
- 11) The normal pH of skin is about _____ (K1)
a) **3-5** b) 7-9 c) 2-4 d) 6-8
- 12) A _____ is a person who harbours the pathogen without suffering from any illness. (K1)
a) **carrier** b) fomite c) vector d) All the above
- 13) Cholera is transmitted through _____ (K1)
a) sexual contact b) air c) vector d) **water**
- 14) Anopheles mosquito is _____ (K1)
a) a mechanical vector b) **a biological vector** c) a fomite d) not a vector

15) Infectious diseases transmitted from animals to human beings are called_____ (K1)

- a) **zoonoses** b) vector borne diseases c) nosocomial infection d) venereal disease

16) Normal flora of human skin is _____ (K1)

- a) **Staphylococcus** b) *Vibrio*sp c) *Escherichia coli* d) *Bacillus*sp

17) Example of sexually transmitted disease _____ (K1)

- a) typhoid b) TB c) candidiasis d) **syphilis**

18) HIV can be transmitted through _____ (K1)

- a) food b) aerosols c) vector d) **contaminated syringes**

19) Initial infection with a parasite with a host is called _____ (K1)

- a) **primary infection** b) secondary infection c) reinfection d) cross infection

20) Temporary carrier state lasts less than _____ (K1)

- a) 3 months b) 4 months c) **6 months** d) 1 year

21) Example of zoonotic disease is _____(K1)

- a) tetanus b) leprosy c) **rabies** d) mumps

22) _____ is an infection transmitted through air. (K1)

- a) **Influenza** b) Gonorrhoea c) Hepatitis d) Herpes simplex

Unit –II

23) _____ is an enrichment agar (K1)

- a) **Blood agar** b) Mannitol salt agar c) EMB d) Nutrient agar

24) _____ is the common cause of UTI (K1)

- a) ***Escherichia coli*** b) *Streptococcus faecalis* c) *Proteus vulgaris* d) *Enterococcus*sp

25) Albert's staining technique is used to stain _____ (K1)

- a) cytoplasm b) nucleus c) **volutin granules** d) capsule

26) _____ is an example of upper respiratory tract infection (K1)

- a) **Common cold** b) Influenza c) Pneumonia d) TB

27) _____ is a transport agar (K1)

- a) Colistin nalidixic agar b) **Cary Blair agar** c) TCBS d) Citrate agar

28) _____ is a tubular instrument used to withdraw fluids from the body cavity. (K1)

- a) Syringe b) **Catheter** c) Needle d) Aspirator

29) _____ is the selective media for *Vibrio cholera* (K1)

- a) EMB b) **TCBS** c) MSA d) APW

30) Albert's staining technique is used to stain _____ (K1)

- a) cytoplasm b) **nucleus** c) volutin granules d) capsule

31) _____ is an example of upper respiratory tract infection (K1)

- a) **Common cold** b) Influenza c) Pneumonia d) TB

32) The presence of bacteria in urine is called _____ (K1)

- a) **bacteriuria** b) viremia c) sepsis d) None of the above

Unit-III

- 33) The diagnostic test for leprosy is _____ (K1)
a) Tuberculin test **b) Lepromintest** c) Montaux test d) WIDAL test
- 34) _____ agar is the selective media for *Neisseria gonorrhoeae*. (K1)
a) Modified Thayer Martin b) TCBS c) EMB d) Chocolate agar
- 35) *Mycobacterium tuberculosis* was discovered by _____ (K1)
a) Robert Koch **b) G. A. Hansen** c) Edward Jenner d) **Benjamin Schenck**
- 36) Tetanus is a _____ disorder. (K1)
a) gastrointestinal b) muscular **c) neurological** d) mental
- 37) The causative agent of syphilis is _____ (K1)
a) *Treponema pallidum* b) *Mycobacterium tuberculosis*
c) *Neisseria gonorrhoea* d) *Vibrio cholerae*
- 38) *Vibrio cholerae* belongs to _____ family. (K1)
a) Vibrionales **b) Vibrionaceae** c) Vibrio d) Proteobacteria
- 39) *Vibrio cholerae* is a _____ bacteria (K1)
a) gram positive **b) gram negative** c) acid fast d) saprophytic
- 40) The gonococcus was first described by _____ (K1)
a) Koch **b) Neisser** c) Beijerinck d) Schenk
- 41) Tetanus is also called as _____ (K1)
a) Lock jaw b) Lock mouth c) Lock leg d) Lock nose
- 42) *Clostridium tetani* is an/a _____ bacteria (K1)
a) aerobic b) facultative aerobe **c) anaerobe** d) microaerophilic

Unit-IV

- 43) Mumps virus belongs to the family of _____ (K1)
a) Orthomyxoviridae **b) Paramyxoviridae** c) Flaviviridae d) Arenaviridae
- 44) Human receptor for rhinovirus is _____ (K1)
a) ICMA-1 b) ICMA-2 **c) ICAM-1** d) ICAM-2
- 45) Hepatitis B antigen was also called as _____ antigen (K1)
a) Bombay b) African **c) Australian** d) American
- 46) Co-receptor for HIV _____ (K1)
a) CCR5 b) CD4 c) CDX d) gp120
- 47) HIV-2 type is concentrated in _____ (K1)
a) America b) Antarctica c) Asia **d) West Africa**
- 48) Common cold is an infection of _____ (K1)
a) Upper respiratory tract b) lower respiratory tract
c) nervous system d) gastrointestinal tract
- 49) Hepatitis A is transmitted by _____ (K1)

a) **faecal oral route** b) sexual fluids and blood c) vector d) Air

50) Hepatitis B was originally called as _____ (K1)

a) Australian antigen b) **Serum Hepatitis** c) Serious Hepatitis d) Blood Hepatitis

51) HSV-2 usually causes _____ (K1)

a) orofacial infections b) encephalitis c) **genital infections** d) skin rashes

52) Influenza virus has _____ (K1)

a) ds DNA b) ss DNA c) ds RNA d) **ss RNA**

53) Measles virus belongs to the family _____ (K1)

a) Orthomyxoviridae b) **Paramyxoviridae** c) Retroviridae d) Flaviviridae

Unit-V

54) Haemoptysis means _____ (K1)

a) **coughing out of blood** b) vomiting of blood c) blood in stool d) blood in sputum

55) Tinea nigra is an example of _____ mycoses (K1)

a) subcutaneous b) cutaneous c) **superficial** d) systemic

56) Rabies virus is a _____ virus (K1)

a) enterotropic b) gastrotropic c) hepatotropic d) **neurotropic**

57) Amoebiasis is a _____ disease (K1)

a) bacterial b) fungal c) **protozoan** d) viral

58) _____ discovered that malaria was caused by *Plasmodium* (K1)

a) Ronald Ross b) French chemists
c) William Thomson d) **Charles Louis Alphonse Laveran**

59) _____ is the dominant species in Africa (K1)

a) *Plasmodium vivax* b) ***Plasmodium falciparum***
c) *Plasmodium ovale* d) *Plasmodium malariae*

60) *Ascaris lumbricoides* is also known as _____ (K1)

a) **round worm** b) hook worm c) tape worm d) ring worm

61) Each female worm produces a daily output of _____ ova (K1)

a) 100,000 b) **200,000** c) 50,000 d) 25,000

62) Sporotrichosis is also called as _____ (K1)

a) **Rose gardener's disease** b) Fruit gardener's disease
c) Vegetable gardener's disease d) Flower gardener's disease

63) *Sporothrix schenckii* was isolated for the first time by _____ (K1)

a) Ronald Ross b) Charles Louis Alphonse Laveran
c) Neisser d) **Benjamin Schenck**

Section-B

Answer the following in about 50 words:

(2 marks)

Unit-I

1. Define pathogenicity. (K1)
2. Summarize vector (K2)
3. Define pandemic. (K1)
4. Define epidemic. (K1)
5. Explain nosocomial infection (K2)
6. Define systemic infection. (K1)
7. Describe contagious disease (K1)
8. Define normal microbial flora. (K1)
9. Write any 2 bacteria which are found in healthy skin. (K1)
10. Define virulence (K1)
11. Define invasiveness. (K1)
12. Name some sources of infection. (K1)

Unit-II

13. Name some tests used to identify a bacterium. (K1)
14. Explain transport media (K1)
15. Name any 2 host defense mechanisms found in human respiratory system. (K1)
16. Define diagnostic microbiology (K1)
17. Describe selective media (K1)
18. Describe sero diagnosis (K1)
19. Define Gram's staining. (K1)
20. Name some URT infections. (K1)
21. Write about sample collection. (K1)
22. Name some tests to detect UTI. (K1)

Unit-III

23. Extend the advantages of high content of lipids in *M. tuberculosis*. (K2)
24. List out the virulence factors of typhoid (K1)
25. List down the symptoms of cholera. (K1)
26. Explain tetanospasmin (K2)
27. Explain the causative agent of typhoid (K2)
28. Explain Tuberculin test (K2)
29. List out the virulence factors of *H.influenza* (K2)
30. Write short note on *Neisseria meningitides* (K2)
31. Extend STD (K2)
32. List out the treatment of gonorrhea. (K1)

Unit-IV

33. Explain the structure and properties of picorna virus. (K2)
34. List out the history of influenza virus (K2)
35. Draw a neat sketch on HIV and label it. (K1)
36. Write the causative agent of mumps. (K1)
37. List out the clinical manifestation of dengue. (K1)
38. Draw a neat sketch on Influenza virus (K1)
39. Describe AIDS. (K2)
41. Discuss the history of rabies virus. (K2)
42. Name the characteristics of Hepatitis A virus. (K1)

Unit-V

43. Define systemic mycoses. (K1)
44. Write note on sporotrichosis (K1)
45. Write note on candidiasis (K1)
46. Define amoebiasis (K1)
47. Name the forms of Leishmaniasis (K1)
48. Define zoonotic disease. (K1)
49. Draw a neat sketch on the morphology of *Entamoeba histolytica*. (K1)
50. Draw the structure of Plasmodium (K1)

Section- C

Answer in about 200 words:

(5 mark)

Unit-I

1. Explain the sources of infection. (K2)
2. Interpret about Koch postulates (K2)
3. Explain the modes of transmission of infection. (K2)
4. Extend normal microbial flora of human body. (K2)
5. Write about pathogenicity and invasiveness. (K1)
6. Describe about infections caused by food and water. (K2)
7. Outline “Vector is a source of infection” (K4).
8. Simplify “Air is a source of infection” (K4)
9. Explain the role of normal flora of human body. (K2)
10. Explain how Food acts as a source of infection. (K2)

Unit-II

11. Explain about collection of specimen for microbiological examination. (K2)
12. Describe the methods of isolation and identification of bacteria from UTI. (K2)
13. Elaborate about the transport of specimen. (K2)
14. Describe the methods of isolation and identification of bacteria from LRT. (K2)

15. Discuss the methods of isolation and identification of bacteria from URT. (K2)
16. Simplify the methods of isolation and identification of bacteria from skin. (K4)
17. Describe the methods of isolation and identification of bacteria from UTI. (K2)
18. Outline the precautionary measures to be followed while collecting specimen. (K4)
19. Describe pheno typing methods. (K2)
20. Classify the different types of media used for the isolation of bacteria. (K3)

Unit-III

21. Classify the antigenic characteristics of *Salmonella typhi*. (K3)
22. Explain the antigenic characteristics of gonorrhoea. (K2)
23. Simplify the lab diagnosis of tuberculosis. (K4)
24. Describe the mode of action of cholera toxin. (K2)
25. Describe the role of tetanus toxin. (K2)
26. Explain the causative agent of gonorrhea (K2)
27. Summarize the different stages of syphilis. (K2)
28. Explain the lab diagnosis of *Salmonella typhi*. (K2)
29. Describe the pathogenesis of *Neisseria meningitidis*. (K2)
30. Summarize about sexually transmitted diseases. (K2)

Unit- IV

31. Explain the replication of common cold causing virus (K2)
32. Describe the lab diagnosis of influenza virus. (K2)
33. Simplify the pathogenesis of measles. (K4)
34. Write about the etiological agent of AIDS. (K2)
35. Differentiate between Hepatitis A & B. (K4)
36. Describe mumps (K2)
37. Outline the multiplication of rabies virus with diagram. (K4)
38. Discuss about dengue virus. (K2)
39. Explain about cytomegalovirus. (K2)
40. Summarize about corona virus. (K2)

Unit-V

41. Discuss account on ascariasis. (K2)
42. Summarize about malaria. (K2)
43. Explain about *Tinea nigra*. (K2)
44. Describe about candidiasis. (K2)
45. Outline about superficial mycoses. (K4)
46. Summarize the pathogenesis of sporotrichosis
47. Extend the morphological structure of amoebiasis (K2)
48. Simplify Leishmaniasis (K4)

49. Outline the structure and life cycle of Malaria (K4)

50. Explain about plague. (K2)

Section- D

Answer in about 500 words:

(10 marks)

Unit-I

1. Outline about the normal microbial flora of human body. (K4)
2. Produce the role of normal microbial flora of human body. (K6)
3. Simplify the sources of infection. (K4)
4. Outline about the 'Food as a source of vector' (K4)
5. Produce 'Water as a source of vector' (K6)
6. Outline about 'Vector as a source of vector' (K4)
7. Formulate the 'Air as a source of vector' (K6)
8. Outline the modes of transmission of infection. (K4)
9. Outline the Robert Koch's contribution to microbiology and Koch's postulates. (K4)
10. Simplify the sources of infection and modes of transmission. (K4)

Unit-II

11. Explain the methods for isolating and identifying the bacteria from LRT and URT. (K2)
12. Outline the methods for isolating and identifying the bacteria from LRT. (K2)
13. Illustrate the methods for isolating and identifying the bacteria from URT. (K2)
14. Discuss the methods for isolating and identifying the bacteria from UTI. (K2)
15. Describe the methods for isolating and identifying the bacteria from skin. (K2)
16. Comment on Diagnostic microbiology. (K2)
17. Elaborate about collection of specimen for microbiological examination. (K2)
18. Outline about transport of specimen to laboratory for microbiological examination. (K4)
19. Outline about typing methods of bacterial isolates. (K4)
20. Produce serodiagnosis (K6)

Unit- III

21. Produce the pathogenesis of typhoid fever. (K6)
22. Outline the characteristics, virulence factors and pathogenesis of tuberculosis (K4)
23. Simplify the mode of action and pathogenesis of Cholera toxin with neat diagram (K4)
24. Produce the causative agent and toxin of tetanus. (K6)
25. Outline about Sexually transmitted diseases caused by bacteria. (K4)
26. Simplify Meningitis (K4)
27. Formulate gastro intestinal disorders (K6).
28. Simplify the pathogenesis of Syphilis (K4)
29. Outline about gonorrhea. (K4)

30. Outline about *Salmonella typhi*. (K4)

Unit- IV

31. Produce the replication and pathogenesis of common cold. (K6)

32. Outline about influenza virus. (K4)

33. Simplify about Hepatitis A virus. (K4)

34. Outline about the replication and lab diagnosis of Hepatitis B virus (K4)

35. Formulate measles. (K6)

36. Produce the replication and pathogenesis of rabies virus. (K6)

37. Outline the pathogenesis, lab diagnosis and treatment of HIV. (K4)

38. Simplify cytomegalo virus. (K4)

39. Simplify the neurological diseases. (K4)

40. Outline about the corona virus as emerging disease (K4)

Unit- V

41. Simplify an account on candidiasis. (K4)

42. Outline about *Tinea nigra*. (K4)

43. Produce the pathogenesis of sporotrichosis (K6)

44. Outline about the structure and pathogenesis of amoebiasis (K4)

45. Simplify the life cycle of Leishmaniasis(K4)

46. Formulate the pathogenesis and lab diagnosis of Malaria (K6)

47. Produce the pathogenesis, diagnosis and prevention of Ascariasis. (K6)

48. Simplify the replication and treatment of Plague (K4)

49. Outline about protozoan diseases (K4)

50. Simplify fungal infections (K4)

.

SECTION – A

Choose the correct answer:

UNIT I :

1. The word STATISTICS has been traced from the Latin word _____ (K1)
a) **status** b) statistic c) statistik d) stata
2. _____ is a group of individuals or study elements or observations. (K1)
a) Sample **b) Population** c) data d) events
3. The population containing limited number of individuals is called a _____ population (K1)
a) Finite b) Infinite c) Data d) Sampling
4. The population containing unlimited number of individuals is called a _____ population (K1)
a) Event **b) Infinite** c) Finite d) Probability
5. The value of an item or individual is called _____ (K1)
a) Data b) Population **c) Variable** d) Sample
6. The persons who help the investigators in collecting the information are called _____ (K1)
a) Enumerators b) Investigators c) Correspondents d) Respondents
7. The person collecting the data is called _____ (K1)
a) Sampling b) Enumeration c) Census **d) Investigator**
8. The data collected from another source is called _____ data. (K1)
a) Primary **b) Secondary** c) d)
9. A small representative fraction of a population is called a _____ (K1)
a) Data b) Population c) Investigation **d) Sample**
10. Getting a sample from a population is called _____ (K1)
a) Sampling b) Editing c) Investigation d) Enquiry

UNIT- II

11. The data which is collected by actual observation or measurement is called _____ data. (K1)
a) secondary b) third degree **c) primary** d) indirect
12. Arranging values in columns is called _____ (K1)

a) Layer chart b) Histogram c) Polygon **d) Tabulation**

13. _____ is one which has been collected by someone for some investigation and is used by someone else for another investigation. (K1)

a) **secondary** b) third degree c) primary d) indirect

14. _____ is defined as the logical and systematic organization of statistical data in rows and columns. (K1)

a) **tabulation** b) manipulation c) scrutinizing d) data analysis

15. The persons from whom the information is collected are known as _____ (K1)

a) Investigators b) Correspondents c) Scholars **d) Respondents**

16. An investigation in which the results are not published is known as _____ investigation (K1)

a) **Confidential** b) Extensive c) Official d) Semi-official

17. The investigation conducted by the government is known as _____ enquiry. (K1)

a) Unlimited **b) Official** c) Legal d) Limited

18. _____ enquiry is conducted by employing only a limited number of persons. (K1)

a) Unlimited b) Special c) Restricted **d) Limited**

19. A column of values is called a _____ (K1)

a) **Table** b) Vertical values c) Definite values d) cell value

20. A table contains boxes called _____ (K1)

a) Column b) Row **c) Cells** d) None

UNIT III

21. _____ is the middle value in a distribution arranged in ascending or descending order. (K1)

a) A.M b) G.M. c) Z **d) M**

22. Mode = _____ - 2 Mean (K1)

a) 2 Median **b) 3 Median** c) 2 Mode d) 3 Mode

23. _____ is defined as the n^{th} root of the product of all the 'n' items given. (K1)

a) A.M **b) G.M.** c) Z d) H.M

24. _____ can be defined as the reciprocal of 'the mean of the reciprocals' of the values. (K1)

a) A.M b) G.M. c) Z **d) H.M**

25. _____ is the summation of all items divided by the number of observations. (K1)

a) **A.M** b) G.M. c) Z d) H.M

26. In symmetric distribution the mean, median and _____. (K1)

a) lesser than b) greater than c) equal to **d) zero**

27. AM, GM, and HM in any series are equal when _____. (K1)

a) distribution is symmetric b) distribution is normal

c) **all the values are same** d) both b &c

28. Median can never be equal to _____ in case of skewed distribution. (K1)

a) **mean** b) deviation c) correlation d) mode

29. To avoid tedious calculation, we can use ----- method (K1)

a) Graphic b) Mathematical c) **Assumed mean** d) Co-efficient

30. Median and mode are called _____ averages. (K1)

a) **Second** b) first c) third d) fourth

Unit IV

31. Which of the following is an example of Homology and similarity tool? (K1)

(a) **BLAST** (b) RasMol (c) EMBOSS (d) PROSPECT

32. In which year did the SWISSPROT protein sequence database begin? (K1)

(a) 1988 (b) 1985 (c) 1986 (d) **1987**

33. Which of the following scientists created the first Bioinformatics **database**? (K1)

(a) **Dayhoff** (b) Pearson (c) Richard Durbin (d) Michael.J.Dunn

34. The human genome contains approximately _____. (K1)

(a) 6 billion base pairs (b) 5 billion base pairs
(c) **3 billion base pairs** (d) 4 billion base pairs

35. Which of the following tools is used for the identification of motifs? (K1)

(a) BLAST (b) **COPIA** (c) PROSPECT (d) Pattern hunter

36. The first molecular biology server expasy was in the year _____. (K1)

(a) 1992 (b) **1993** (c) 1994 (d) 1995

37. What is the deposition of cDNA into the inert structure called? (K1)

(a) DNA probes (b) DNA polymerase (c) **DNA microarrays** (d) DNA fingerprinting

38. The identification of drugs through the genomic study is called _____. (K1)

(a) Genomics (b) **Pharmacogenomics** (c) Pharmacogenetics
(d) Cheminformatics

39. Which of the following compounds has desirable properties to become a drug? (K1)

(a) Fit drug (b) **Lead** (c) Fit compound (d) All of the above

40. Proteomics refers to the study of _____. (K1)

(a) Set of proteins in a specific region of the cell (b) Biomolecules
(c) Set of proteins (d) **The entire set of expressed proteins in the cell**

Unit IV

41. The process of finding the relative location of genes on a chromosome is called _____.(K1)
(a) Gene tracking (b) Genome walking (c) **Genome mapping** (d) Chromosome walking
42. The computational methodology that tries to find the best matching between two molecules, a receptor and ligand are called _____.(K1)
(a) Molecular fitting (b) Molecular matching (c) **Molecular docking** (d) Molecule affinity checking
43. Which of the following are not the application of bioinformatics? (K1)
(a) Drug designing (b) Data storage and management
(c) Understand the relationships between organisms (d) **None of the above**
44. The term “invitro” is the Latin word which refers to _____.(K1)
(a) Within the lab (b) **Within the glass**(c) Outside the lab(d) Outside the glass
45. The stepwise method for solving problems in computer science is called _____.(K1)
(a) Flowchart (b) **Algorithm**(c) Procedure (d) Sequential design
46. The term Bioinformatics was coined by _____.(K1)
(a) J.D Watson (b) **Pauline Hogeweg** (c) Margaret Dayhoff (d) Frederic Sanger
47. The laboratory work using computers and associated with web-based analysis generally online is referred to as _____.(K1)
(a) **In silico** (b) Dry lab (c) Wet lab (d) All of the above
48. Which of the following is the first completed and published gene sequence? (K1)
(a) **ΦX174** (b) T4 phage (c) M13 phage (d) Lambda phage
49. The laboratory work using computers and computer-generated models generally offline is referred to as _____. (K1)
(a) Insilico (b) Wet lab (c) **Dry lab** (d) All of the above
50. The computer simulation refers to _____. (K1)
(a) Dry lab (b) Invitro (c) **In silico** (d) Wet lab

SECTION – B

Answer in about 50 words each:

UNIT I

1. Explain biostatistics? (K2)
2. Interpret four applications of Biostatistics? (K2)
3. Explain primary data? (K2)
4. Estimate random sampling? (K2)
5. Discuss Questionnaire? (K2)
6. Discuss about non-random sampling? (K2)

7. Illustrate Census survey method? (K2)
8. Interpret Sample survey method? (K2)
9. Summarize the methods of sampling techniques. (K2)
10. Discuss is sampling error? What are its kinds? (K2)

UNIT II

11. Explain what are the components of table? Give the specimen table. (K2)
12. Illustrate primary data? (K2)
13. Discuss secondary data? (K2)
14. Estimate what are the methods of collecting Primary data? (K2)
15. Explain frequency polygon? (K2)
16. Extend about Mailed questionnaire method? (K2)
17. Explain Histogram? (K2)
18. Express the types of diagrams. (K2)
19. Compare foot note in diagrams & graphs. (K2)
20. Differentiate the characteristics of good questionnaire. (K2)

UNIT III

21. Discuss about the Arithmetic mean with its formula. (K2)
22. Explain what is median? List out two merits of median. (K2)
23. Restate a frequency distribution, the values of arithmetic mean and median are 78 and 76 respectively. Calculate mode. (K2)
24. Explain what is mode? List out its kinds. (K2)
25. Discuss the Harmonic mean with its formulas. (K2)
26. Explain the term Central tendency. (K2)
27. Discuss the Median with its formula. (K2)
28. Explain Geometric mean with its formula. (K2)
29. Express standard deviation. (K2)
30. Relate variables with types. (K2)

Unit IV

31. Illustrate bioinformatics. (K2)
32. Interpret the Application of Bioinformatics (K2)
33. Interpret the tool of bioinformatics (K2)
34. Discuss about database. (K2)

35. Explain internet (K2)
36. Illustrate world wide web. (K2)
37. Explain protein sequence database (K2)
38. Discuss PIR (K2)
39. Distinguish EMBL (K2)
40. Explain SWISS PROT (K2)

Unit V

41. Explain sequence (K2)
42. Discuss what are types of sequence alignment? (K2)
43. Explain the need of alignment (K2)
44. Illustrate global alignment (K2)
45. Discuss about the local alignment (K2)
46. Interpret any two methods available for alignment of pair of sequence? (K2)
47. Discuss dynamic programming and its types. (K2)
48. Express what are the steps involved in dynamic programming? (K2)
49. Discuss what are the applications of Smith-waterman algorithm? (K2)
50. Explain what is FASTA? What are types of FASTA? (K2)

SECTION – C

Answer in about 200 words each choosing either (a) or (b):

UNIT I

1. Compile “Statistics”. Discuss the characteristics of biostatistics. (K3)
2. Demonstrate in detail the importance of statistics in business. (K3)
3. Outline about Biostatistics? (K4)
4. Plot the history of Biostatistics? (K3)
5. Analyze about limitation of biostatistics. (K4)
6. Investigate the statistical methods in bioinformatics(K4)
7. Comprise the functions of variable(K4)
8. Categorize the difference between qualitative and quantitative data. (K4)
9. Show the functions of biostatistics(K3)
10. Investigate the uses of biostatics (K4)

UNIT II

11. Examine about collection of data? (K4)
12. Investigate about the classification of data? (K4)

13. Demonstrate about tabulation of data? (K3)
14. Construct diagrammatic representation of data? (K3)
15. Calculate the graphical representation of data? (K3)
16. Distinguish the types of data? (K4)
17. Outline the tabulation of data? (K4)
18. Implement manifold classification of data? (K3)
19. Plot in detail about chronological classification of data? (K3)
20. Distinguish in detail about pictogram and cartogram? (K4)

UNIT III

21. Calculate the arithmetic means for the following data. (K3)

Class	0-20	20-40	40-60	60-80	80-100
Frequency	41	51	64	38	7

22. Calculate the arithmetic mean by step deviation method. (K3)

Daily wages (Rs.)	75	100	125	150	200
No.of labourers	5	12	20	14	9

23. Calculate the median from the following frequency distribution: (K3)

Daily wages (Rs.)	60-69	70-79	80-89	90-99	100-109	110-119
No.of labourers	5	15	20	30	20	8

24. Calculate the median from the following. (K3)

X	300-500	500-700	700-900	900-1100	1100-1300	1300-1500
Frequency	25	55	30	20	14	6

25. Calculate the Geometric mean for the following data: (K3)

X	10	15	25	40	50
f	4	6	10	7	3

26. Calculate the Geometric mean for the following data: (K3)

Marks	0-10	10-20	20-30	30-40	40-50	50-60
No.of Students	3	8	15	20	10	4

27. Organize mean and its limitation. (K4)
28. Simplify Geometric mean and its merits and demerits (K4)
29. Comprise range and its types (K4)
30. Examine quartile deviation with one example (K4)

Unit IV

31. Outline the application and significance of bioinformatics? (K4)
32. Analyze the database and its classification(K4)
33. Show the types of databases(K3)

34. Investigate the various database management models(K4)
35. Investigate the various databases that deal with DNA and protein structure(K4)
36. Show database heterogeneity is very common in bio-databases. (K3)
37. Classify the biological databases. (K3)
38. Examine some information about applications of databases in molecular biology, (K4)
39. Demonstrate what is SRS? Define composite database with an example(K3)
40. Compare data life cycle and database management system, (K4)

Unit V

41. Classify the methods of sequence analysis (K3)
42. Examine the detailed account of dynamic programming algorithms used for shotgun DNA. (K4)
43. Show what are the BLAST programs and modes available? (K3)
44. Outline the various types of multiple sequence alignment(K4)
45. Classify the programs under each category, and mention the drawbacks of progressive alignment(K3)
46. Investigate Needleman and Wunsch algorithm(K4)
47. Examine the Smith Waterman algorithm in detail(K4)
48. Plot the applications of Structural genomics. (K3)
49. Show are Phylogram? (K3)
50. Analyze are the methods of analyzing Phylogenetic trees(K4)

SECTION – D

Answer in about 500 words each:

UNIT I

1. Evaluate “Statistics”. Discuss the characteristics of statistics. (K5)
2. Analyze on limitations of statistics. (K4)
3. Estimate the comment on variables. (K5)
4. Outline the essential characteristics of a good table? (K4)
5. Prove diagrams are useful in representing statistical data? (K5)
6. Simplify types of classification. (K4)
7. Outline the functions of biostatistics. (K4)
8. Compare numerical and continuous variable. (K4)
9. Outline history of biostatics. (K4)
10. Evaluate use of statistics. (K5)

UNIT II

11. Prove diagrammatic presentation of data. (K5)
12. Simplify graphic presentation of data.(K4)
13. Investigate about collection of data. (K4)
14. Distinguished classification of data? (K4)
15. Evaluate about tabulation of data? (K5)
16. Estimate the characteristics of good questionnaire(K5)
17. Estimated the secondary data can be collected? (K5)
18. Analyze census survey method? (K4)
19. Evaluated sample survey method? (K5)
20. Distinguished components of table? Give the specimen table(K4)

UNIT III

- 21 . Estimate (i) Mean (ii) Median (iii) Mode from the following frequency distribution.
(K5)

Marks below	10	20	30	40	50
No.of Students	3	8	17	20	22

22. Prove Mean, median, mode? (K5)
23. Estimate the standard deviation: (K5)

X	10-30	30-50	50-70	70-90	90-110	110-130	130-150
Y	14	59	101	61	28	17	4

24. Estimate the Geometric mean for the following data: (K5)

Marks	0-10	10-20	20-30	30-40	40-50	50-60
No.of Students	3	8	15	20	10	4

25. Estimate for a group of 50 male workers, the mean and the standard deviation of their wages are Rs.63 and Rs. 9 respectively. For a group of 40 female workers these are Rs.54 and Rs 6 respectively. Find the standard deviation for the combined group of 90 workers. (K5)
26. Investigate about the variables(K4)
27. Analyze mean, median, mode? (K4)
28. Investigate median(K4)
29. Investigate mode(K4)
30. Distinguished types of variables(K4)

Unit VI

- 31.Prove the significant of life science in bioinformatics ?(K5)

32. Evaluated classification of database? (K5)

33. Judge world wide web? (K5)

34. Prove genebank?(K5)

35. Investigate EMBL? (K4)

36. Analyze the NCBI ?(K4)

37. Investigate SWISS PROT ? (K4)

38. Estimate biological database ? (K5)

39. Analyze the nucleic acid database ? (K4)

40. Investigate DDBJ ? (K4)

Unit V

41. Support the need of alignment tools? (K5)

42. Prove the importance of pair wise alignment ? (K5)

43. Evaluate alignment concept ? (K5)

44. Investigate ENTREZ ? (K4)

45. Evaluate PSIBLAST ? (K5)

46. Analyze the PHIBLAST algorithms ? (K4)

47. Outline the steps involved in phylogenetic tree construction and discuss with a distance based method? (K4)

48. Differentiate between Ab-initio and Heuristic methods of protein structure prediction ? (K4)

49. Estimated the applications of Structural genomics ? (K5)

50. Investigate Clustal ?(K4)

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

III B. Sc Microbiology - Semester-V

Core Elective - Microbial Nanotechnology Sub Code: 21UMIE52

Question Bank

Section-A

Choose the best answer:

(1 mark)

Unit-I

1. Who coined the word nanotechnology? (K1)
a) Antony von Leeuwenhoek **b) Richard Feynman** c) Galilee d) Jenner
2. The size of nanoparticles is between _____ nm. (K1)
a) 100 to 1000 b) 0.1 to 10 **c) 1 to 100** d) 0.01 to 1
3. Fullerene or bucky ball is made up of _____ carbon atoms (K1)
a) Fifty **b) Sixty** c) Eighty d) Thirty
4. Total magnification of electron microscope is _____.(K1)
a) 1000 X b) 5000 X c) 20000 X **d) 100000 X**
5. Nanoscience can be studied with the help of _____.(K1)
a) quantum mechanics b) Newtonian mechanics c) macro-dynamics d) geophysics.
6. Nano ceramics can be synthesized by _____ (K1)
a) Polyol method **b) Sol gel method** c) Sputtering d) Plasma method
7. The two important properties of nano substances are _____ (K1)
a) Pressure and friction **b) sticking and friction**
c) sticking and temperature d) temperature and friction
8. The electrical conductivity of a nanotube is _____ times that of copper. (K1)
a) 10 b)100 **c)1000** d)1/100
9. The width of a carbon nanotube is _____ nm. (K1)
a) 1 **b) 1.3** c) 2.5 d) 10
10. In the structure of fullerene each carbon atom forms covalent bonds with _____ other carbon atoms. (K1)
a) one b) two **c) three** d) four

UNIT II

11. The tip motion of AFM is monitored by _____ (K1)
a) Collimator b) force c) cantilever **d) piezoelectric scanner**
12. In AFM “F” stands for _____ (K1)
a) Friction b) Fast **c) Force** d) Both a and b

13. _____ present in plant extract used for the reducing and stabilization of nanoparticles (K1)

- a) Secondary metabolites b) Primary metabolites c) **Phytochemicals** d) Plant hormones

14. The cantilever is typically made of _____ (K1)

- a) **Silicon** b) iron c) zinc d) plastic

15. *Saccharomyces cerevisiae* is used to synthesize _____ nanoparticles. (K1)

- a) Gold b) **Silver** c) Zinc d) Iron

16. Where do we obtain the magnified image of the specimen in SEM? (K1)

- a) **cathode ray tube** b) phosphorescent screen c) anode d) scanning generator

17. X-rays are generated by a _____ tube. (K1)

- a) Gamma ray b) X-ray c) **Cathode ray** d) Anode ray

18. Scanning probe is made up of _____ (K1)

- a) **Silicon** b) Nitrate c) Borate d) Aluminium

19. _____ measures light matter interactions at the nano scale to investigate local optical properties of a sample. (K1)

- a) ESCA b) XRD c) AFM d) **SNOM**

20. Electron Spectroscopy for Chemical Analysis (ESCA) is also called _____ (K1)

- a) **X-ray photoelectron spectroscopy** b) Atomic force microscopy
c) Scanning tunnelling microscopy d) Scanning electron microscope

Unit III

21. Bio sensors working based on _____ (K1)

- a) **Signal transduction** b) Signal reflection c) Amount of Electrons

22. Glucose oxidizing enzyme is used in _____ (K1)

- a) **Glucose monitoring sensor** b) Serum analysis c) Immuno assay d) All

23. _____ converts biochemical events into measurable signals. (K1)

- a) amplifier b) opamp c) rectifier d) **transducer**

24. The sensors are classified on the basis of _____ (K1)

- a) Functions b) Performance c) **Output** d) All of the above

25. Which of the following acts as detector in Optical sensor _____ (K1)

- a) Light emitting diode b) **Photo diode** c) Transistor d) All of the above

26. Which of the following is (are) the type(s) of Light sensor(s)? (K1)

- a) Photo sensor b) Photo transistors c) Photo conductors d) **All of the above**

27. Bio chips are made up of _____ (K1)

- a) **Semi conducting molecules** b) Conduction molecules c) Non conducting molecules d) None

28. Micro arrays are also known as _____ (K1)

- a) Bio chips b) DNA chips c) Gene chips **d) All**
29. Multi-functional Biochip is used in _____ (K1)
- a) Mycobacterium tuberculosis (TB) b) Chem-bio detection c) Electronic system **d) a and b**
30. CMOS bio chips are meant for _____ (K1)
- a) Detection of MDR – TB** b) HIV c) Colon cancer d) None

Unit IV

31. A molecule that binds to another molecule is _____ (K1)
- a) Ligand** b) Adjuvants c) Receptor d) All
32. Which of the following factor affects drug designing? (K1)
- a) Medicinal objective b) Screening facility c) Cost **d) All of these**
33. Targeted chemotherapy helps in _____ (K1)
- a) Delivering TNF** b) Delivering MNF c) Delivering CNF d) Delivering SAF
34. Bismuth nanoparticles are applied for _____ (K1)
- a) Increase dose concentration** b) Surface concentration c) Surface tension d) all
35. FDA is an authority for _____ (K1)
- a) Drug release in the market** b) Hybrid plants release c) Cancer diagnosis
- d) Animal welfare
36. The term ADME is used in _____ (K1)
- a) Drug metabolism** b) Metabolite synthesis c) Hormone regulation d) None
37. Blood test in Prostate cancer determines _____ (K1)
- a) PSA** b) MCA c) MHC d) TPA
38. Application of Nanotechnology in medicine involves _____ (K1)
- a) Drug delivery b) Cell repair c) Antibacterial treatment **d) All of these**
39. Which of the following materials are used in chronic wound treatment _____ (K1)
- a) Liposomes b) Nanofibrous c) Tio2 **d) Both and b**
40. Mammography is meant for _____ (K1)
- a) Cervix cancer b) Colon cancer **c) Breast cancer** d) Skin cancer

Unit V

41. Nanoparticles can inhibit _____ (K1)
- a) Biofilm formation b) Food spoilage c) Delay ripening **d) All the above**
42. Surface enhanced Raman Scattering (SERS) is employed as _____ (K1)

- a) **Sensing tools** b) Adjuvants c) Allergens d) Binder
43. A substance that absorbs another substance is called _____ (K1)
- a) Catalyser b) **Adsorbant** c) Ligand d) Solvent
44. Nano composites are useful in _____ (K1)
- a) **Soil remediation** b) Water purification c) Gene transfer d) Nutrient improvement
45. Nano fertilizers are enriched in _____ (K1)
- a) Adsorption b) Attachment c) Encapsulation d) **All the above**
46. Nano sensors are used in agriculture for _____ (K1)
- a) **Monitoring soil conditions** b) Monitoring pest attack c) Manure development
- d) All the above
47. _____ is the protection of an environment from biological threats (K1)
- a) **Bio security** b) Wild life security c) Warfare d) None
48. QD-antibody conjugates have been highly successful in detecting _____ (K1)
- a) **Ricin** b) Oxitoxin c) Biopsin d) Cry proteins
49. _____ developed a quick diagnostic test for Covid-19 (K1)
- a) **Gold NP** b) Silver Np c) Fullerenes d) Bucky balls
50. Anthrax a bio weapon was first developed in the year _____ (K1)
- a) **2001** b) 2005 c) 2008 d) 2012

Section-B

Answer the following in about 50 words:

(2 marks)

Unit-I

1. List out the classification of nanomaterials. (K1)
2. Define Nanotechnology. (K1)
3. Write note on nanoscale (K1)
4. Summarize the zero, one- and two-dimensional nano structures. (K2)
5. Define Nano cones. (K1)
6. Explain about the two approaches by which Nano ceramics can be synthesized. (K2)
7. Extend different fields of applications of Nanotechnology. (K2)
8. List out the different forms of nanoparticles. (K1)
9. List out the uses of carbon nano tubes. (K1)
10. Write the importance on bucky balls. (K1)

Unit -II

11. Describe biosynthesis of nanoparticles (K1)
12. List out any four important bacteria that are being used in nanoparticle production. (K1)
13. Describe-why microorganism involved in the nanoparticle synthesis. (K1)
14. Differentiate between extracellular and intracellular synthesis. (K2)
15. List out the different parts of AFM. (K1)
16. Explain the basic principle behind XRD (K2)
17. Write the significance of SPEM. (K1)
18. Define ESCA. (K1)
19. Compare Top down and Bottom up synthesis. (K2)
20. Explain the factors that affects the synthesis of green nanoparticles. (K2)

UNIT III

21. List out the different parts of biosensor. (K1)
22. List out the different types of biosensor(K1)
23. Explain the principle of Biosensor. (K2)
24. Differentiate between optical and analytical biosensor. (K2)
25. Define bio chip. (K1)
26. Define MFB. (K1)
27. Find the laboratory tests applied for TB diagnosis (K1)
28. Explain the different approaches for biochip preparation (K2)
29. Define nano clay. (K1)
30. Define optical biosensor. (K1)

Unit IV

31. Classify the types of drug designing. (K2)
32. Illustrate about cancer markers. (K2)
33. Summarize nanodrugs (K2)
34. Define ligand. (K1)
35. Define rational drug designing. (K1)
36. Write any four examples of drug designing softwares (K1)
37. Explain the role of genes in cancer (K2)

38 Summarize MEMS (K2)

39. List out the features of an ideal drug. (K2)

40. Summarize - how nanomaterials are helpful in rapid diagnostics) (K2)

Unit V

41. Describe nanotechnology in food safety. (K2)

42. Discuss -how nanomaterials are useful in biosensor for detection of food pathogens? (K2)

43. Define bio security. (K1)

44. Name the most common food allergens. (K1)

45. Write note on biofilm (K1)

46. Define bio availability (K1)

47. Write the significance of nanotechnology in food packaging? (K1)

48. Explain nanoparticles in food processing (K2)

49. Explain nanomaterials used in crop improvement. (K2)

50. Define biosecurity. (K1)

Section- C

Answer in about 200 words: (6 mark)

Unit-I

1. Explain the history of Nanotechnology. (K2)

2. Discuss about magnetic properties of nanomaterials. (K2)

3. Illustrate about electrical properties of nanomaterials. (K2)

4. Explain about different forms of nanoparticles. (K2)

5. Produce the importance of Nano cones. (K4)

6. Discuss about Nano ceramics (K2)

7. Explain the applications of nanoparticles in automobile industry (K2)

8. Explain about emerge of nanodevices in recent era. (K2)

9. Simplify nano glasses. (K4)

10. Produce the chemical properties of nanoparticles. (K3)

Unit-II

11. Discuss about physical factors involved in the production of nanomaterials (K2)

12. Explain about synthesis of nanoparticle by yeast. (K2)

13. Discuss intracellular synthesis of nanomaterials. (K2)
14. Classify the different methods of nanotechnology (K3)
15. Explain X-Ray Diffraction (K2)
16. Explain about the synthesis of bacteria (K2)
17. Discuss about advantages of synthesis of nanoparticles using Plants (K2)
18. Simplify the working principle of AFM (K3)
19. Produce the applications of SNOM. (K3)
20. Discuss about ESCA (K2)

Unit-III

21. Classify the types of biosensors. (K3)
22. Outline about the working principle of biosensors (K4)
23. Explain about structure and applications of biosensors (K2)
24. Differentiate optical and other sensors (K4)
25. Illustrate the significance of bio chip (K2)
26. Explain about analytical procedure in biochip. (K2)
27. Discuss about diagnostic methods associated with TB(K2)
28. Summarize nano clays (K2)
29. Simplify the applications of MFB (K4)
30. Explain the applications of nano clays. (K2)

Unit- IV

31. Explain different phases of drug discovery process. (K3)
32. Simplify the applications of Nanotechnology in heart disease (K3)
33. Outline the importance of nanotechnology in genetic disorder (K4)
34. Simplify computer based drug designing. (K4)
35. Express the analysis of cancer markers using nanoparticles. (K2)
36. Show the different drugs found in natural systems. (K3)
37. Differentiate between modern and conventional drug designing. (K4)
38. D Prove the nano particles in diagnostic techniques and wound treatment. (K5)
39. Discuss about the role of FDA. (K2)
40. Produce the applications of MEMS. (K3)

Unit-V

41. Outline about food safety (K4)
42. Discuss-how nanotechnology used in food packaging? (K2)
43. Summarize nanodevices in food processing (K2)
44. Discuss about nanotechnology in agriculture (K2)
45. Describe-how the crops are improved using nanodevices? (K2)
46. Simplify the various pest management practices followed in India (K4)
47. Examine about important nanomaterials applied in controlling pests (K4)
48. Produce biosecurity (K3)
49. Organize the role of bio particles in bioterrorism (K4)
50. Simplify the role of nanoparticles in preventing spoilage of food (K4)

Section- D

Answer in about 500 words:

(12 marks)

Unit-I

1. Simplify carbon nano tubes (K4)
2. Categorize the classification of nanomaterials (K4)
3. Outline the importance of size and shape of material properties at the nanoscale (K4)
4. Simplify the potential effects of nano materials to environment. (K4)
5. Outline about carbon nano cones (K4)
6. Produce the characteristic features and application of nano glasses (K6)
7. Outline the various nano materials used in diagnostic and therapeutic applications. (K4)
8. Produce the structural and functional properties of nanotechnology. (K4)
9. Distinguish between salient features of carbon nanotubes and nanocones. (K4)
10. Outline the applications of nanoceramics. (K4)

Unit-II

11. Produce the advantages of biological synthesis of nanomaterials. (K4)
12. Outline about production of nanomaterials using plant extracts under controlled environment. (K4)
13. Simplify the synthesis of nanoparticles by using plant extracts. (K4)
14. Outline about SNOM. (K4)

15. Produce the analysis of biomolecules with advanced techniques. (K4)
16. Design the working principle and applications of AFM. (K6)
17. Produce the structure and working principle of SEM. (K6)
18. Formulate the importance of XRD for the analysis of surface atoms. (K4)
19. Differentiate top down and bottom approach of nanomaterials synthesis. (K4)
20. Outline about ESCA. (K4)

Unit- III

21. Design the working principle and applications of biosensors. (K6)
22. Produce the functionalization and applications of nano clays. (K6)
23. Simplify the features of optical biosensor with neat diagram. (K4)
24. Outline about the working principle and applications of biochip. (K4)
25. Design-how is MFB more advantageous than traditional methods? (K6)
26. Simplify various diagnostic tests associated with TB. (K4)
27. Outline the importance of biochip in MDR – TB detection. (K4)
28. Classify the types of biosensors in biological system. (K4)
29. Classify the types of nanoclays. (K4)
30. Outline about the detection of *Mycobacterium* using MFB (K4)

Unit- IV

31. Simplify about how nanotechnology is useful in a) Antibacterial treatment, Wound treatment and cell repair. (K4)
32. Prove the nano particles used in drug delivery. (K5)
33. Formulate the general diagnostic tests available for cancer. (K6)
34. Design the screening methods for cancer. (K4)
35. Outline the applications of nanoparticles in sensing cancer biomarkers. (K4)
36. Outline about bioimaging (K4)
37. Formulate the various types of drug designing. (K4)
38. Explain about interference of modern softwares in drug designing. (K6)
39. Produce different modes of drug delivery using nanomaterials. (K6)
40. Produce micro electro mechanical system (K6)

Unit- V

41. Simplify the applications of nanomaterials in food safety. (K4)
42. Outline the important factors to be considered while packaging food for long use. (K4)
43. Design – nanomaterials are of good source for food processing in food industries. (K6)
44. Outline about involvement nanotechnology in agriculture. (K4)
45. Simplify the nanomaterials are useful in gene transfer, soil monitoring and yield improvement. (K4)
46. Outline about conventional applications of nanomaterials in crop improvement. (K4)
47. Produce the different approaches of pest management using nanoparticles. (K4)
48. Produce the bio security in relation to human threats. (K4)
49. Outline the applications of silver nanoparticles against bacterial inhibition. (K4)
50. Prove – how silver crystalline silver for bacterial inhibition. (K6)

Section A

(1 mark)

Choose the best answer:

UNIT- I

1. The compounds that resist changes in P^H of food is-----
a) **Solute** b) Solvent c) Buffers d) Acid
2. Water requirement is expressed as -----
a) Moisture b) Water activity c) pH d) **Relative humidity**
3.) Fat is hydrolysed by the enzyme-----
a) Amylase b) Cellulase c) **Lipase** d) Protease
- 4) ----- is a proteolytic species.
a) *Klebsiella* b) *Lactobacillus* c) *Escherichia coli* d) ***Pseudomonas***
- 5) ----- is present in egg white.
a) Nisin b) Latenins c) **Lysozyme** d) Propionic acid.
- 6) ----- is called as bread mold.
a) ***Rhizopus stolonifer*** b) *Zygorrhynchus* c) *Penicillium* d) *Neurospora*
7. The O-R potential is expressed in-----
a) Volts b) Millivolts c) Kilovolts d) **Daltons**
8. ----- an inhibitory substance present in egg white.
a) Propionates b) **Lysozyme** c) Benzoates d) Lactenin.
- 9) ----- is the process of prevention of growth of microorganisms.
a) **Asepsis** b) Filtration c) Sedimentation d) Trimming
- 10) ----- is incipient or gentle boiling.
a) Simmering b) Roasting c) Cooking d) **Warming**
- 11) ----- is called as the father of canning.
a) Spallanzani b) Pasteur c) Hasse d) **NicolasAppert.**

12. The method recommended for the manufacture of sauerkraut is-----.
- a) Trimming b) **Blanching** c) Filleting d) Cutting
13. The method for the complete removal of organism is-----
- a) Centrifugation b) Sedimentation c) Filtration d) **Clarification**
14. The maintenance of anaerobic condition in packaged food is by filling-----
- a) O₂ b) SO₂ c) **CO₂** d) CH₄.
15. The father of canning is-----
- a) **Appert** b) Alex c) Aaron d) Arber

UNIT-II

16. The molecular weight of staphylococcal enterotoxin is-----
- a) **26,000 to 30,000** b) 15,000 to 20,000 c) 4,000 to 5,000 d) 7,000 to 8,000
17. ----- produces luteoskyrin
- a) ***Penicillium islandicum*** b) *Pseudomonas* c) *Lactococcus* d) *Staphylococcus*
18. Ornithosis virus produces-----
- a) Intestinal infection b) **Respiratory infection** c) Neuro infection d) Urinary infection
19. ----- samples are used to test *Shigella*
- a) Nasal b) Saliva c) Urine d) **Faecal**
20. The toxin produced by *Aspergillus* is -----
- a) Enterotoxin b) Endotoxin c) Neurotoxin d) **Aflatoxin**
21. ----- produces respiratory infection in man through poultry.
- a) *Hepatitis* b) *Polio* c) ***Ornithosis*** d) *Rhabdo*
22. The syndrome resulting from the ingestion of toxin in a food contaminated by mold is -----
- a) **Mycotoxycosis** b) Bacteriotoxycosis c) Toxicosis d) Viral toxicosis
23. The toxin produced by *Clostridium botulinum* is----
- a) Neurotoxin b) **Endotoxin** c) Enterotoxin d) Mycotoxin
24. The causative organism of botulism is-----
- a) *Bacillus* b) ***Clostridium*** c) *Mycobacterium* d) *Botyrtis*

25. The organism most responsible for traveller's diarrhoea is-----

- a) EIEC b) **ETEC** c) EPEC d) EHEC

26. The water activity required for the growth of *Aspergillus* is-----

- a) **0.99** b) 0.82 c) 0.9 d) 0.87

27. ----- is the temperature at which aflatoxin is produced.

- a) **12-40°C** b) 40-50°C c) 20-30°C d) 30-35°C

28. *Clostridium botulinum* is found in -----

- a) Water b) **Soil** c) Air d) Food

29. *Staphylococcus aureus* produces an -----

- a) Endotoxin b) Neurotoxin c) **Enterotoxin** d) Exotoxin.

30. Salmonellosis is caused by-----

- a) *Staphylococcus* b) *Streptococcus* c) ***Salmonella*** d) *Serratia*

31. Incubation period of Salmonellosis is -----

- a) 14 to 20 Hrs b) **12 to 36 Hrs** c) 22 to 28 Hrs d) 2 to 4Hr.

UNIT-III

32. The leavening of _____ type of bread results from the action of *Torulopsis holmii*

- a) **San Francisco Dough bread** b) normal bread c) butter bread d) fermented bread

33. _____ culture is used for the production of cheese

- a) ***Propionibacterium freudenreichi*** b) *E.coli* c) *Salmonella* d) *Shigella*

34. Bitterness may be caused by _____

- a) **Lactic Streptococci** b) *Streptococci* c) *Staphylococci* d) *Salmonella*

35. Soft cheese _____

- a) **Limburger** b) Cheddar c) Swiss d) mold

36. Hard Cheese _____

- a) Limburger b) Brie c) **Swiss** d) mold

37. _____ is called as dairy mold

- a) **Oospora** b) Brie c) Swiss d) mold

38. _____ is characterized by dark green to black colours.

- a) ***Cladosporium herbarum*** b) *Clostridium* c) *Brucella* d) *Shigella*.

39. _____ discolour cheeses
a) *Aspergillus* b) mold c) *Agaricus* d) *Brucella*
40. _____ is a thermophilic
a) **Micrococcus** b) *Aspergillus* c) mold d) *agaricus*
41. The centrifugal procedure used for removing bacteria from milk known as _____
a) **Bactofugation** b) fumigation c) fungification d) algalisation.
42. The ropiness in milk is caused by-----
a) *Serratia* b) *Salmonella* c) *Enterobacter* d) ***Alcaligenes***
43. ----- causes yellow colour in the cream layer of milk.
a) *Pseudomonas synchyanea* b) ***Pseudomonas synxanthac*** c) *Klebsiella* d) *Streptococcus*
44. The commercial storage refrigerated temperature of butter is-----
a) -30°C b) -10°C c) **-17.8°C** d) 0°C.

UNIT-IV

45. The first pasteurization test was completed by _____ and _____
a) pasteur and franklin b) pasteur and claud bernard c) francois appert and pasteur d) **pasteur and francis.**
46. ----- is the suspected vehicle for the source of *Clostridium botulinum*
a) Sugar b) Maple syrup c) **Honey** d) Cane
47. Commercial honey is pasteurised at a temperature of -----
a) 76°C b) **71°C** c) 78°C d) 80°C
48. Food additives which are specifically added to prevent the deterioration (or) decomposition of a food have been referred to as _____
a) **chemical preservatives** b) physical preservatives c) pasteurization d) smoking.
49. The process of spraying cold water before cooling of vegetables is -----
a) Freezing b) Chilling c) **Hydrocooling** d) Cooling.
51. The storage temperature of frozen meat is-----
a) **-12.2 to -28.9°C** b) 10.8 to -18.9°C c) 15 to 17°C d) -1 to -2
52. The sodium salt of _____ has been used extensively as an antimicrobial agent in food.
a) Benzoic acid b) **sodium chloride** c) calcium chloride d) potassium chloride.

53. _____ is poisonous and should not be added to foods the traces added to foods by smoking are not enough to be harmful.

- a) methanol b) alcohol c) vinegar **d) salt.**

UNIT-V

54. A system to control the safety of a manufactured product is determined by

- a) **HACCP** b) ISO9000 c) CCP d) FAO

55. HACCP is designed to

- a) prevent problems before they occur b) correct deviations as soon as detected
c) **both a and b** d) none of the above

56. National academy of sciences is an authority on

- a) food additives **b) food safety** c) food preservation d) food processing.

57. The codex guidenlines for HACCP has

- a) five principles b) six principles c) **seven principles** d) none of these.

58. CIP refers to

- a) clean in place system** b) cleanliness in place system c) clean in place system
d) none of them.

59. During transporation perishable foods should be kept at

- a) 3.3- 4.4° c b) 66° c c) 0° c **d) both a and b.**

60. An examples of a wetting agent is

- a) polyether alcohol** b) cholrine c) trisodium phosphate d) citric acid

61. CCP aims at preventing or reducing

- a) physical hazards b) chemical hazards c) biological hazards **d) all the above.**

62. Validation ansures that the industry

- a) **complies with the required plan** b) has random sampling c) prevents deviations
d) lists the significant hazards

63. The simplest record- keeping system to ensure effectiveness is by

- a) establishing procedures for verification **b) establishing documentation.** c) establishing monitoring systems d) establishing critical control points.

SECTION - B

Answer the following in 50 words each:

(2 marks)

UNIT I

1. Define Molds.
2. What are yeasts.
3. Define Bacteria.
4. What is Canning?
5. What are Psychrophiles?
6. What are thermophiles?
7. Define Pasteurization.
8. What are chemical preservatives?
9. List down industrially important molds.
10. Define Appertization.
11. What is redox potential.
12. What is relative humidity.
13. Define chilling storage.
14. List down the various plant and animal products.

UNIT-II

15. Define food intoxication.
16. Define food borne infection.
17. List out the fungal toxins.
18. Name any four toxin producing algae.
19. Mention any four algal toxins.
20. Name any four viruses which are responsible for food borne infection.
21. List down some toxin producing bacteria.

- 22. What is botulism?
- 23. Write notes on *Clostridium perfringens*.
- 24. Discuss staphylococcal food intoxication.

UNIT-III

- 25. Comments on acidophilus milk.
- 26. Define koumiss.
- 27. Mention the quality and safety assurance in dairy industry.
- 28. What is SSF?
- 29. What is kefir?
- 30. Define spoilage.
- 31. What is fermentation?
- 32. Define Yoghurt
- 33. Mention few microorganisms which are responsible for production of fermented.
- 34. What is Milk cream?
- 35. Define Buttermilk.
- 36. Mention the types of Buttermilk.

UNIT-IV

- 37. What is radiation?
- 38. Define aseptic handling.
- 39. Describe Asepsis
- 40. Discuss food processing methods.
- 41. Comments on drying in food preservation.
- 42. Describe the effect of freezing methods.
- 43. What is pasteurization?
- 44. Discuss refrigeration.
- 45. List out the kinds of ionizing radiation in food.
- 46. Explain the growth of microorganisms under freezing condition.
- 47. Describe the different types of freezing process.

UNIT-V

- 46. Describe about the biological treatment and disposal methods in food sanitation.
- 47. Explain about the use of antimicrobial additives in food.

48. What is BIS?
49. Discuss food sanitation.
50. Explain HACCP.
51. Mention the quality and safety assurance in dairy industry
52. Discuss the principles of HACCP.
53. Explain FAO.
54. What is WHO?
55. Discuss FPO.

SECTION - C

Answer the following in 200 words each:

(6 marks)

UNIT I

1. Write short notes on Molds.
2. Give an account on yeasts.
3. Comment on Bacteria.
4. Give an account on drying of foods.
5. Write about food additives.
6. Explain types of cold storage.
7. Discuss about industrially important Bacteria.
8. Write about canning process.
9. Give an account on Asepsis.
10. Comment on industrially important Molds.

UNIT-II

11. Discuss food poisoning.
12. Describe bacterial food borne infection.
13. Explain food borne intoxication.
14. Elaborate aflatoxins.
15. Write about the properties of food borne viruses.
16. Discuss traveler's diarrhoea in detail.
17. Explain four categories of human botulism.
18. Explain the *Bacillus* as a "food poisoning agent".

19. Discuss major mycotoxins.
20. Discuss Protozoan food poisoning.
21. Give an account on food borne outbreaks.
22. Explain about food borne infection by E.coli
23. Comment on food borne viral infection.
24. Give an account on algal food poisoning.
25. Give an account on food borne infection by bacillus.
26. Differentiate food borne infection and intoxication.
27. Write about Enterotoxin.
28. Describe about Algal toxins.

UNIT-III

29. Explain about the spoilage of curd and yoghurt.
30. Describe microbial spoilage of bread.
31. Write about the contamination and spoilage of milk.
32. Give an account on production of cream.
33. Write about spoilage of yoghurt.
34. Discuss about fermentation of bread.
35. Describe about acidophilus milk.
36. Comment on buttermilk production.
37. Write short notes on kefir.
38. Write about SSF.
39. Explain about production of koumiss.
40. Describe about contamination and spoilage of yoghurt.

UNIT-IV

41. Describe food processing methods.
42. Discuss the methods of drying in food preservation.
43. Explain the effect of freezing methods.
44. Explain pasteurization.
45. Describe TDT.

46. List out the kinds of ionizing radiation in food.
47. Explain the growth of microorganisms under freezing condition.
48. Describe the different types of freezing process.
49. Describe about the biological treatment and disposal methods in food sanitation.
50. Explain in detail about the principles of food preservation.
51. Briefly explain the methods of food preservation.
52. Elaborate the chemical preservatives.
53. Give a detail note on the chilling and freezing methods.
54. Write a brief note on heat processing methods in food.
55. Write in brief on the effect of pressure in food preservation?

UNIT-V

56. Explain HACCP in detail.
57. Explain in detail about the food sanitation.
58. Give an account on estimate and examine the microbes.
59. Give the importance of WHO.
60. Discuss food sanitation.
61. Explain hazard analysis and control in food.
62. What is FAO? Discuss.
63. Discuss the principles of HACCP.
64. Explain ISO/FPO.
65. Elaborate BIS.
66. What are the objectives of food laws and regulations?
67. List out the objectives of quality control in food products.
68. Write notes on AGMARK.

SECTION - D

Answer the following in 500 words each:

(12 marks)

UNIT I

69. Explain about food as a substrate for microorganisms.
70. Describe about Yeasts and its industrial importance.
71. Give a detailed account on food preservation by using high temperature.
72. Discuss about canning process.
73. Explain in detail about food preservatives.
74. Comment on food preservation by using low temperature.
75. Explain about molds.
76. Explain about the various methods of food preservation.
77. Compare and differentiate yeasts and bacteria.
78. Comment on factors which influence microbial activity in food.

UNIT-II

79. Elaborate on food borne bacterial infection.
80. Briefly explain the food poisoning by *Staphylococcus*.
81. Explain in detail about the role of protozoa in food poisoning.
82. Explain the different types of fungal toxin in detail.
83. Elaborate viral food borne pathogens.
84. Describe the pathogenesis and characteristics of the food borne disease caused by *Salmonella*.
85. Give a brief account on the mechanism of pathogenesis of *E.coli* in food poisoning.
86. Write in brief about the survival characteristics of *Brucella* in food.
87. Briefly explain about the pathogenicity of *Clostridium botulinum*.
88. Write briefly about the food toxins and its effect.
89. Explain about Staphylococcal intoxication. 90. Discuss about Mycotoxin.
91. Explain in detail about food borne infection by Clostridium.
92. Comment on Algal food poisoning.
93. Describe about Laboratory testing procedures and preventive measures for food borne outbreaks.
94. Explain about food intoxication.
95. Discuss about viral toxins.
96. Give a detailed account on toxigenic fungi.
97. Compare and differentiate PSP and NSP.

98. Describe about Botulism.

UNIT-III

99. Explain in detail about solid state fermentation.

100. Discuss about Submerged fermentation.

101. Explain about fermentation of bread.

102. Explain in detail about production, contamination and spoilage of Yoghurt.

103. Describe about production, contamination and spoilage of buttermilk.

104. Explain about production, contamination and spoilage of Acidophilus milk.

105. Describe about Fermented dairy products.

106. Discuss about contamination and spoilage of kefir.

107. Comment on various factors which affect submerged fermentation.

108. Differentiate SSF and Submerged fermentation.

UNIT-IV

109. Explain in detail about the principles of food preservation.

110. Briefly explain the methods of food preservation.

111. Elaborate the chemical preservatives.

112. Give a detail note on the chilling and freezing methods.

113. Write a brief note on heat processing methods in food.

114. Write in brief on the effect of pressure in food preservation.

115. Briefly explain about the Modified Atmosphere Packaging.

116. Explain the effect of freezing methods.

117. Explain pasteurization.

118. List out the kinds of ionizing radiation in food.

UNIT-V

119. Comment FPO.

120. Explain HACCP in detail.

121. Describe Asepsis.

122. Explain FAO/WHO.

123. Give the importance of WHO.

124. Elaborate BIS.

125. What are the objectives of food laws and regulations?

126. List out the objectives of quality control in food products.

127. Elaborate AGMARK/ ISO.

128. Explain quality control.

ST. MARY'S COLLEGE (AUTONOMOUS) THOOTHUKUDI

III B. Sc Microbiology - Semester-VI

Core IX Industrial Microbiology Sub Code: 21UMIC62
Question Bank

Section-A

Choose the best answer:

(1 mark)

UNIT I

1. Batch fermentation is also called _____
a. **Closed system** b. Open system c. Fed-Batch system d. Sub-merger system
2. The micro-organism useful for fermentation are _____
a. Bacteria **b. Yeast** c. Fungi d. None of these
3. Which of the following microorganism produces dextran?
a) *Bacillus polymyxa* b) *Bacillus thuringiensis* **c) *Leuconostoc mesenteroides*** d) *Streptomyces*
4. Which of the following time is not included in continuous sterilization?
a) Heating time b) Cooling time c) Holding time **d) Sterilization time**
5. Which of the following is not a method of sterilization?
a) Radiation b) Chemical Treatment c) Ultrasonic treatment **d) Cooling**
6. Which of the following is an advantage of continuous sterilization over batch sterilization?
a) Solid matter can be used in media b) Reduction of fermenter corrosion
c) Lower risk of contamination **d) Easier control**
7. Magnesium is required in the medium for _____
a) Membrane stabilization b) Production of ATP **c) Membrane structure and function**
d) Amino acid synthesis
8. Which of the following method is not used in isolation and screening of desired microorganisms?
a) Crowded plate technique b) Auxanographic technique c) Enrichment Culture technique **d) Hanging Drop technique**
9. Which of the following method is useful for the isolation and detection of organisms having the ability to produce antibiotics?

- a) **Crowded plate technique** b) Auxanographic technique c) Enrichment Culture technique
d) Indicator dye technique

10. Full-form of ATCC is _____

- a) **American Type Culture Collection** b) Automatic Type Counter & Classifier
c) American Type Counter Collection d) American Type Classifier and Collection

Unit II

11 . The small-scale bioreactors have volume of _____

- a) 5-10 litres b) 10-20 litres c) 1-10 litres **d) 1-20 litres**

12 Which of the following fermenters are characterized by height to diameter ratio?

- a) **Tower fermenter** b) Airlift fermenter c) Hollow fibre d) Perfusion bioreactor

13 The bioreactor is not capable of _____

- a) Producing aseptic conditions b) Meeting containment regulations c) Controlling pH
d) Produce electricity

14. The restriction of enzyme mobility in a fixed space is known as _____

- a) **enzyme immobilization** b) enzyme inhibition c) enzyme kinetics d) biosensor

15. Which of the following is not a property of carrier matrices?

- a) **Thermal stability** b) Stability of the material c) Physical strength d) Easily available

16. In which of the following method, the enzyme is bound to a suitable adsorbent material?

- a) **Adsorption** b) Covalent binding c) Entrapment d) Membrane confinement

17. Which of the following algae can be grown on wastewater?

- a) *Spirogyra* b) *Volvox* c) ***Spirulina*** d) *Chlamydomonas*

18. Which of the following is the most common source of SCP?

- a) Multicellular yeast **b) Single-celled yeast** c) Unicellular algae d) Unicellular bacteria

19. Insulin activates cells by binding to the following receptor?

- a) G protein Receptor **b) Tyrosine kinase Receptor** c) Nuclear receptor d) None

20. The growth hormone binds to its cell surface receptor and activate

- a) cGMP production b) cAMP production **c) Tyrosine kinase activity** d) All

UNIT III

21. SCP stands for _____

- a) **Single Cell Protein** b) Stress Cultivated Plant c) Somatic Cultivated Plantlet
d) Soma Clonal Plants

22. Which of the following is the physico-chemical component?
a) Enzymes b) Anti-bodies **c) Transducer** d) Cells or tissues
23. An example of biosensor, urea electrode makes use of which of the following electrodes?
a) Carbon dioxide electrode b) Ammonia electrode c) Fluoride electrode **d) Ammonium**
24. Biosensors measure glucose concentrations between which of the following ranges?
a) 10^{-1} to 10^{-2} M b) 10^{-2} to 10^{-4} M c) 10^{-1} to 10^{-4} M **d) 10^{-1} to 10^{-7} M**
25. Micro arrays also known as _____
a) Bio chip b) DNA chip c) Gene chip **d) All**
26. Yeast produces an enzyme complex, which is responsible for fermentation?
(a) Zymase (b) Dehydrogenase (c) Aldolase (d) Invertase
27. The rising of dough is due to
(a) sulphur dioxide (b) hydrogen **(c) carbon dioxide** (d) oxygen
28. *Penicillium* belongs to _____
(a) Deuteromycetes (b) Phycomycetes **(c) Ascomycetes** (d) Basidiomycetes
29. Number of ascospores formed in each ascus of *Penicillium* is _____
(a) 4 (b) 8 (c) 12 **(d) 16**
30. Bioethanol is mixed with _____ to prepare transport fuel
(a) oil **(b) petrol** (c) kerosene (d) diesel

Unit IV

31. What are the fermentation conditions for the ethanol production?
a) pH 6; temperature 35°C **b) pH 5; temperature 35°C** c) pH 6; temperature 30°C
d) pH 5; temperature 30°C
32. The yeast generated during the fermentation of beer is generally separated by____
a) Centrifugation b) Filtration c) Cell disruption d) All
33. By-product of acetone-butanol fermentation include _____
a. Riboflavin b. Penicillin **c. Isopropanol** d. All of these
34. Citric acid is used as _____
a. Flavouring agent in food b. As an antioxidant c. As preservative **d. All of the above**
35. The fungus used in the industrial production of citric acid _____
a. *Rhizopus Oryzac* b. *Fusarium moniliformae* c. *Rhizopus nigricans* **d. Aspergillus nigricans**
36. Up to the production of desirable production in the fermentor is called _____

a. Upstream process **b. Downstream process** c. Surface fermentation d. None of these

37. The following statements are true about DPT vaccine except_____

A. Aluminium salt has an adjuvant effect B. Whole killed bacteria of Bordetella

C. Presence of influenza competent increases d) None

38. Amino acids are mostly synthesised from _____

(a) fatty acids (b) mineral salts **(c) α -ketoglutaric acid** (d) volatile acids

39. Which of the following is a precursor of amino acid synthesis?

(a) fatty acids **(b) α -ketoglutaric acid** (c) mineral salts (d) volatile acids

40 Which of the following is Not the example of a live attenuated vaccine?

a) Tetanus vaccine b) MMR vaccine c) Varicella (chickenpox) vaccine

d) None

Unit V

41. The yield of the antibiotic depends upon _____.

(a) Age of the inoculum (b) Only the pH of the medium(c) Composition of the medium

(d) All of the above

42. Which of the following fermentation processes is used in the production of penicillin?

(a) Aerobic fermentation followed by anaerobic fermentation (b) Anaerobic fermentation

(c) Aerobic fermentation (d) Anaerobic fermentation followed by aerobic fermentation

43. Which of the following species is used for producing streptomycin?

(a) *S. ramosus* **(b) *S. griseus*** (c) *S. aureofaciens* (d) *S. griseoflavus*

44 Which of the following is a second-generation cephalosporin?

a.Cefaclor b. Ceftazidime c. Cephalexin d. Cefotaxime

45 Which of the following amylase is not produced by organisms?

a) Salivary amylase **b) Hepatic amylase** c) Pancreatic amylase

d) Gastric amylase

46 Which of the following involves in lipase production_____

a) *Chromobacterium viscosum* b) *A. niger* c) *Rhizopus* sp., d) All

47 Which of these does the chemical classification of hormones exclude?

- (a) steroid hormones (b) amino-acid based hormones (c) **glucose containing hormones**
(d) protein based hormone

48. Vitamin B12 can be estimated and determined by using organism_____

a) *Lactobacillus* sps **b. *Lactobacillus Leichmanni*** c. *Bacillus subtilis* d. *E.Coli*

49. Biotin is a coenzyme of the enzyme _____

(A) **Carboxylase** (B) Hydroxylase (C) Decarboxylase (D) Deaminase

50 An example of biopolymer is _____

a)Teflan b) Nylon c) Chloron d) None

Section-B

Answer the following in about 50 words:

(2 marks)

UNIT I

1. What is screening process?
2. List out industrially important microbes
3. Differentiate between Batch and continuous fermentation
4. Comment on factors affecting fermentation
5. What are the carbon sources in media preparation ?
6. Why anaerobic fermentation is more important?
7. How microbes are isolated and identified?
8. Comment on inoculum
9. Comment on significance of Dual fermentation
10. Comment on sterilization methods

Unit II

11. Comment on features of fermentor

12. How aeration is controlled in fermentation process?

13. What is immobilization ?

14. Comment on insulin

15. List of recovery steps

16. Draw the structure of impeller and label it

17. Comment on antifoams

18. Comment on production of SCp

19. Comment on importance of interferon

20. Comment on significance of somatotropin

Unit III

21. What is biology of microorganism?

22. Comment on importance of streptomyces

23. List out the features of spirulina

24. How penicillium is identified under lab condition?

25. What is the principle of Biochip?

26. What are the applications of biosensors?

27. Comment on Microbial sources of biofuels

28. Comment on features of *S.hanselina*

29. What is spawn?

30. Highlight the significance of mushroom in health improvement

Unit IV

31. Comment on types of alcohol

32. What is malting?

33. What is bottling in wine production ?

34. Comment on types of amino acids

35. What is the importance of acetic acid in industries products?

36. List out types of vaccines

37. what is leptospirosis?
38. How plant vaccines are obtained?
39. Highlight the significance of microbes involved in wine production
40. Comment on heat killed vaccines

Unit V

41. What are naturally available antibiotics?
42. Differentiate between broad spectrum and narrow spectrum antibiotics
43. Comment on importance of vitamins in regulatory mechanism
44. Comment on production of industrially important microbes
45. What are bio preservatives?
46. Why microbial hormones are important?
47. Comment on nisin
48. Comment on testosterone
49. Comment on significance of Riboflavin in body balancing mechanism
50. List out microbes involved in amylase production

Section- C

Answer in about 200 words:

(6 mark)

Unit-I

1. Discuss about different isolation methods of microbes
2. List out various industrially important microbes
3. Explain about types of raw materials in media formulation
4. Discuss about sterilization methods
5. How inoculum is formulated?
6. Explain about various fermentation methods
7. Discuss about factors affecting fermentation processes
8. Explain about steps involved in Downstream process?
9. Discuss about drying of fermentative products

10. Differentiate between Aerobic and anaerobic respiration

UNIT II

11. Explain about fermenter designing

12. Discuss about aeration control

13. Discuss about immobilization

14. Explain about recombinant proteins

15. Discuss about production of interferons

16. Explain about parameters involved in SCP production

17. Highlight the cell recovery process

18. Explain about fermenter types

19. Discuss about carrier molecules involved in immobilization process

20. Discuss about agitation methods in fermenter

UNIT III

21. Discuss about life cycle of industrially important microbes

22. Explain about life cycle of yeast

23. Discuss about life cycle of *Hansenula* sps

24. Explain about requirements of SCP production

25. Discuss about methods involved in identification of penicillium

26. Comment on types of mushroom cultivation

27. Discuss about factors affecting mushroom cultivation

28. Discuss about production of biofuels

29. Highlight the significance of biosensor

30. Explain about biochip and its applications

UNIT IV

31. Discuss about types of alcohols

32. Discuss about steps involved in production of wine

33. Explain about materials required for Glutamic acid production

34. Discuss about importance of citric acid

- 35.Explain about types of vaccines
- 36.Explain about industrially important microbes in acid production
- 37.Differentiate between vaccine and hormone synthesis
- 38. Highlight the importance of DPT
- 39.Explain about animal-based vaccine
- 40. Explain about media involved in vaccine production

UNIT V

- 41.Explain about history of antibiotics
- 42. Discuss about types of vitamins
- 43.Discuss about importance of enzymes
- 44.Explain about steps involved in BHP production
- 45.Discuss about bio preservation
- 46. List out microbes involved in hormone production
- 47.Explain about production of streptomycin
- 48.Discuss about antibiotics based on spectrum of action
- 49.Explain about production of lipase
- 50.Differentiate between hormonal regulation and antibiotics control

Section- D

Answer in about 500 words:

(12 marks)

Unit-I

- 1. Give a detailed account on time line of fermentation technology
- 2. Explain about various screening methods involved in industrial microbiology
- 3. Discuss in detail about various preservation methods
- 4. How media is designed? Discuss
- 5. How inoculum is developed using various sources?
- 6. Write an essay on types of fermentation
- 7. Differentiate in detail about mechanism involved in Aerobic and anaerobic fermentation

8. Give an elaborate list of various microbes actively involved in fermentation process
9. Explain in detail about combs test
10. Discuss about applications of batch and continuous fermentation

UNIT II

11. Write an essay about designing of fermenter
12. Explain in detail about how aeration is controlled in fermentation process
13. What is foam formation? How foam formation is prevented?
14. Explain about steps involved in recovering microbial product
15. Give an elaborate account on immobilization of enzymes and cells
16. Explain about importance of therapeutic proteins
17. Discuss in detail about various methods involved in interferon production
18. Explain about production of somatotropin hormone
19. SCP is a boon to human kind – Justify
20. List out the trouble shooting methods in downstream and upstream process

UNIT III

21. Discuss about biology of microorganism
22. Explain about economic importance of *Streptomyces*
23. Discuss about life cycle of *S.hansulena*
24. Discuss about production of spirulina
25. Explain about life cycle of *Penicillium* sps and its importance in industry
26. Write an essay about mushroom cultivation
27. Explain about principle and application of biosensors
28. Give a detailed account on components involved and applications of biochips
29. Biofuel is an alternative source of commercial fuel – justify
30. Give an account on advantage of microbial protein over human health

UNIT IV

31. Explain about production of Butanol with diagram
32. Discuss about steps involved in beer production

33. Write an essay on production of various amino acids
34. Discuss about production of acetic acid
35. Write an essay about various types of vaccines in industrial level
36. Explain about production of *A. tumefaciens* vaccines
37. Discuss about method of producing X.gum in industry
38. Write an essay about production of microbial hormones occur
39. Explain about production of DPT
40. Draw a complete detail on production of various enzymes

UNIT V

41. Write an essay about production of cephalosporin
42. Discuss about production of Cyanocobalamin
43. Give an account on production of protease enzyme
44. Discuss about various microbial hormone production
45. Write in detailed about various human high value products of fermentation process
46. Explain about importance of Testosterone in industrial process
47. Explain about production of penicillin using rDNA technology
48. Submerged culture is preferred in fermentation process – Justify
49. Explain production of bio preservatives
50. Explain about role of microbes in conversion of substrate into product

SEMESTER-VI

Core XI Industrial Microbiology Sub Code:18UMIC62

Unit-I

Isolation, screening, preservation and improvement of industrially important microorganisms; Raw materials and media design for fermentation processes; Sterilization; Development of inoculums for industrial fermentations; Types of fermentation: Batch, Continuous, Dual or Multiple, Surface, Submerged, Aerobic and Anaerobic.

Unit-II

Fermenter- Design and types, Instrumentation and control-aeration and agitation. Recovery and purification of fermentation products. Enzymes and cell immobilization, Production of recombinant proteins having therapeutic and diagnostic applications: Insulin, Interferon, Somatotropin, Single cell protein.

Unit-III

Biology of industrial microorganisms. Streptomyces, Yeasts (Saccharomyces, Hansenula) Spirulina and Penicillium. Mushroom cultivation. Biosensors and Biochips. Biofuels from microbial sources.

Unit-IV

Alcohols (Ethanol and Butanol); Beverages (Beer and Wine); Amino acids (Glutamic acid and Lysine); Organic acids (Citric acid and acetic acid); Vaccines (Plant – Agrobacterium tumefaciens, Animal – Leptospirosis, Microbes - DPT).

Unit-V

Antibiotics (Penicillin, Cephalosporin and Streptomycin); Vitamins (Riboflavin and Cyanocobalamin); Production of enzymes (Protease, Amylase and Lipase); Biopolymers (Xanthan gum and PHB); Biopreservatives (Nisin); Production of Hormones (Testosterone and Androstenedione).

Books for reference:

2. Casida, L.E. 1986. Industrial Microbiology. Eastern Limited, New York.
3. Michael J., Waite, Neil L., Morgan, John S. Rockey and Gray Highton 2001. Industrial Microbiology An Introduction, Replika press Pvt. New Delhi.
4. Purohit, S.S., Kakrani, H.N., Saluja, A.K., 2006 Pharmaceutical Biotechnology. Student edition, Jodhpur.
5. Satyanarayana. U. 2013. Biotechnology. Books and Allied (P) Ltd, Kolkata.

III B.Sc. Microbiology

SEMESTER – VI

Core III – Environmental and Agricultural Microbiology

(For those who joined in July 2021 and after)

Sub code: 21UMIC63

QUESTION BANK

Section – A

Answer all questions:

(1 mark)

Unit – I:

1. The soil which is formed by weathering of soil-forming rocks is called as _____
(K1)

a) Sedentary soil b) Transported soil c) Residual soil d) Embryonic soil

2. _____ is a mixture of dark colloidal organic compounds relatively resistant to decomposition (K1)

a) Soil humus b) Inorganic colloid c) Organic colloid d) Soil

3. The dominant group of microorganisms found in the soil is _____ (K1)

a) fungi b) algae c) **bacteria** d) actinomycetes

4. The second most dominant group of microorganisms found in the soil is _____
(K1)

a) fungi b) algae c) bacteria d) **actinomycetes**

5. Bacteria that tolerate temperature less than 20 degree celsius is called _____ (K1)

a) Thermophiles b) Mesophiles c) **Psychrophiles** d) Basophiles

6. Actinomycetes are tolerant to _____ (K1)

a) **Acidity** b) Alkalinity c) Neutrality d) pH

7. Algae grow at an optimum pH range of _____ (K1)

a) 1-4 b) 5-6 c) **7-10** d) 10-14

8. Fungal count is high in _____ horizon (K1)

a) A b) O c) C d) **B**

9. Fungi dominate _____ soils (K1)
 a) neutral **b) acid** c) alkaline d) buffered
10. _____ are nematodes which feed on more than one type of food material (K1)
 a) Bacterivores **b) Omnivores** c) Fungivores d) Herbivores
11. The _____ population is always uniform and constant in soil (K1)
 a) **autochthonous** b) zymogenous c) fungal d) bacterial
12. The number of algae in soil ranges from _____ per gram of soil (K1)
 a) 10 – 100 **b) 100 – 10000** c) 100 – 1000 d) 1000 - 100000
13. _____ is a primary mineral (K1)
 a) vermiculite **b) feldspars** c) clay d) smectite
14. _____ are/is formed from the alteration and decomposition of primary minerals (K1)
 a) pyroxenes **b) secondary minerals** c) parent rock d) mica
15. _____ is when carbonic acid reacts with minerals and changes them to new minerals (K1)
 a) Oxidation b) Hydration c) Hydrolysis **d) Carbonation**
16. Hygroscopic water is in the form of _____ (K1)
 a) **vapour** b) water c) gas d) solid
17. Macro pore space has a diameter of more than _____ micrometer (K1)
 a) **60** b) 50 c) 40 d) 30
18. Micro pore space has a diameter of less than _____ micrometer (K1)
 a) 60 b) 50 c) 40 **d) 30**
19. Soil colour is influenced by the _____ (K1)
 a) inorganic matter **b) organic matter** c) humus d) litter
20. Each individual unit of soil structure is called _____ (K1)
 a) **ped** b) colloid c) shovel d) auger
21. CEC is _____ (K1)
 a) Cation Expel Capacity b) Cation Export Capacity
c) Cation Exchange Capacity d) Cation Equal Capacity
22. _____ is a mixture of dark, colloidal organic compound relatively resistant to decomposition (K1)
 a) Soil colloid **b) Soil Humus** c) Soil litter d) Soil organic matter
23. Microflora improve soil structure by improving the _____ (K1)
 a) soil aeration **b) soil texture** c) soil water d) CEC
24. Soil microflora improves _____ in soil (K1)

- a) **gaseous exchange** b) colour c) temperature d) water
25. In indirect bioleaching process bacteria produce _____ agent
 a) strong reducing **b) strong oxidizing** c) weak reducing d) weak oxidizing
26. The fungi used in bioleaching of copper and nickel is _____
 a) *Aspergillus oryzae* **b) *Aspergillus niger***
 c) *Aspergillus fumigatus* d) *Aspergillus flavus*
27. The fungi used in bioleaching of gold is _____
 a) *Aspergillus oryzae* b) *Aspergillus niger*
 c) *Aspergillus fumigatus* d) *Aspergillus flavus*
28. _____ is a process by which metals are dissolved from ore bearing rocks (K1)
 a) **Bioleaching** c) Bio geo chemical cycling d) Extraction d) Chemical cycling

Unit – II:

1. The most abundant sole source of carbon on earth is _____ (K1)
 a) chitin b) dextran **c) cellulose** d) starch
2. Earth crust have _____% of Carbon (K1)
 a) 0.05 b) 0.15 **c) 0.03** d) 0.09
3. CO₂ is predominantly present in _____ (K1)
a) air b) soil c) water d) rock
4. The major process that brings Carbon from environment is _____ (K1)
 a) Respiration **b) Photosynthesis** c) Decomposition d) Burning fossil fuel
5. Phosphorus cycle does not have _____ phase (K1)
 a) semi-solid **b) gaseous** c) aqueous d) solid
6. Phosphorus is the _____ abundant element in the Earth's crust (K1)
a) 11th b) 12th c) 14th d) 13th
7. Sulphur cycle is an/a _____ cycle (K1)
 a) oxidation b) reduction c) non oxidation reduction **d) oxidation reduction**
8. The gene responsible for root nodule formation is called _____ (K1)
 a) nif **b) nod** c) lux d) hyd
9. The enzyme responsible for nitrogen fixation _____ (K1)
a) Nitrogenase b) Luciferase c) Luminase d) Hydrogenase
10. _____ is a component of nucleic acids (K1)
 a) Sulphur **b) phosphates** c) amino acid d) protein
11. *Rhizobium japonicum* forms root nodule in _____ (K1)
a) soy bean b) Peas c) ground nut d) beans

12. Ammonia is oxidized to nitrite ion by _____ (K1)
 a) *Nitrobacter* **b) *Nitrosomonas*** c) *Rhizobium* d) *Azotobacter*
13. The amount of nitrogen present in earth's atmosphere is _____ (K1)
 a) **79%** b) 2% c) 50% d) 45%
14. The process of conversion of molecular nitrogen to ammonia is _____ (K1)
 a) **ammonification** b) nitrification c) denitrification d) mineralization
15. The blood red colour of nodular tissue in leguminous plants is due to the presence of _____ (K1)
 a) ferric oxide b) protein c) haemoglobin **d) leghaemoglobin**
16. Larger subunit of Nitrogenase enzyme is called _____ (K1)
 a) ferrous protein b) molybdenum
c) molybdenum ferrous protein d) ferrous molybdenum protein
17. Leghaemoglobin serves as an/a _____ carrier (K1)
 a) CO₂ b) hydrogen **c) oxygen** d) electron
18. Atmosphere contains _____% of Nitrogen (K1)
 a) 70 b) 65 c) 75 **d) 79**
19. Example for asymbiotic nitrogen fixation is _____ (K1)
 a) ***Azotobacter*** b) *Frankia* c) *Rhizobium* d) *Bacillus*

Unit III:

1. The influence of plant root on rhizosphere microbe and rhizosphere microbe on plant root is called _____ (K1)
 a) **Rhizosphere effect** b) Rhizosphere cause c) Rhizosphere support d) Rhizosphere affect
2. _____ is an ecological interaction between atleast two species where there is persistent contact between partners (K1)
 a) Amensalism b) Predation c) Mutualism **d) Symbiosis**
3. *Azolla* has symbiotic association with _____ (K1)
 a) *Nostoc* **b) *Anabaena*** c) *Tolypothrix* d) *Ulva*
4. Mutualism is a _____ interaction (K1)
 a) **beneficial** b) harmful c) predatory d) parasitic
5. _____ is a type of interaction where one partner is benefitted and the other one is neither harmed nor benefitted (K1)
 a) **Commensalism** b) Amensalism c) Predation d) Parasitism
6. In _____ one partner is harmed and the other is unaffected (K1)

a) Commensalism **b) Amensalism** c) Predation d) Parasitism

7. In competition, there occurs a/an _____ for energy sources and nutrients among the interacting microorganisms (K1)

a) scarcity b) abundance c) balance **d) competition**

8. _____ is a phenomenon where the predator engulfs or attacks the prey (K1)

a) Mutualism b) Parasitism **c) Predation** d) Amensalism

9. Parasite which lives outside the host cell is known as _____ (K1)

a) ectoparasite b) endoparasite c) exoparasite d) ect-endo parasite

10. Parasite which lives inside the host cell is known as _____ (K1)

a) ectoparasite **b) endoparasite** c) exoparasite d) ect-endo parasite

11. Commensalism is a _____ relationship

a) lateral b) bilateral **c) unilateral** d) trilateral

12. Lichens are organism having symbiotic association between _____ and _____ partner

a) algal & fungal b) viral & fungal c) algal & viral d) algal & algal

Unit – IV:

1. The _____ is a type of biological waste water treatment process to treat sewage (K1)

a) composting **b) activated sludge process** c) saccharification d) gasification

2. _____ is a chemical character of solid waste (K2)

a) Volatile solids b) Organic matter c) Temperature d) bottle

3. _____ is an example of coagulant-aids

a) alum **b) activated silica** c) soda ash d) iron salt

4. The particles which do not change their size, shape and weight are called as _____ particles

a) Flocculant **b) discrete** c) agglutinin d) biofloc

5. Composting is a _____ microbiological process

a) **aerobic** b) anaerobic c) facultative aerobic d) facultative anaerobic

Unit – V:

1. *Rhizobium* has _____ granules in its cell (K1)
a) Starch **b) Beta - hydroxy granules** c) Cellulose d) Alpha – hydroxyl granules
2. Cyanobacteria can be grown in _____ media (K1)
a) MS **b) BG11** c) B5 d) B21
3. Cyanobacteria fixes atmospheric nitrogen using it's _____ (K1)
a) cell wall b) DNA **c) heterocyst** d) enzyme
4. *Bacillus thuringiensis* produces an/a _____ (K1)
a) growth factor b) antibiotic **c) toxin** d) vitamin
5. *Azolla* is a/an _____ (K1)
a) Fungus b) Actinomycetes c) Algae **d) Fern**
6. *Azolla* and *Anabaena* has _____ association (K1)
a) symbiotic b) non symbiotic c) parasitic d) synregistic
7. The technique of seed dressing with bacteria is _____ (K1)
a) bacterization b) algalization c) curing d) inoculation
8. The pleomorphic forms of bacteria present inside the root nodules is _____ (K1)
a) capsule b) slime **c) bacterioids** d) bacterivars
9. The medium used for the mass production of *Azotobacter* inoculant is _____ (K1)
a) Pikovaskaya b) okans c) YEMA **d) Jensen**
10. The technique of seed dressing with algae is _____ (K1)
a) bacterization **b) algalization** c) curing d) inoculation
11. The control of disease by using a biological agent is _____ (K1)
a) Biopesticides b) Biofertilizers c) Bioleaching d) Biodegradation
12. The commercial trade name of *B. thuringiensis* is _____ (K1)
a) DIPEL b) TAIVIRIDAE c) NPV d) CMV
13. *Trichoderma viride* causes _____ in onion (K1)
a) green mold rot b) white mold rot c) red rot mold d) black mold rot
14. *Trichoderma viride* is a _____ (K1)
a) bio insecticide **b) bio fungicide** c) bio weedicide d) bio fungistat
15. _____ is a virus most frequently considered as controlling insect (K1)
a) NPV b) TMV c) CMV d) HIV

Section – B

Answer in about 50 words each:

(2 marks)

Unit I:

1. List down some green algae present in soil (K1)
2. Name the different horizons of soil (K1)
3. Define soil fertility (K1)
4. Define loam (K1)
5. Define soil pH (K1)
6. Define Cation Exchange Capacity (K1)
7. Name the father of soil microbiology (K1)
8. Write about soil water (K1)
9. Write about soil temperature (K1)
10. Write about soil texture (K1)
11. List down some factors which affect microbial population in soil (K1)
12. Define soil (K1)
13. Define soil aggregate (K1)
14. Define gravitational water (K1)
15. Define Heterotrophs (K1)
16. Define soil humus (K1)
17. Summarize about bioleaching (K2)

Unit-II:

1. Explain Biogeochemical cycle (K2)
2. Name the two types of biogeochemical cycle (K1)
3. Define Nitrogen fixation (K1)
4. Define symbiotic nitrogen fixation (K1)
5. Define diazotrophs (K1)
6. Define asymbiotic nitrogen fixation (K1)
7. Explain about nitrogenase enzyme (K1)
8. Write about hydrogenase enzyme (K1)
9. Write about root nodule formation (K1)
10. Write about biological nitrogen fixation (K1)
11. Explain Carbon cycle (K2)

12. Define Nitrogen cycle (K1)
13. Define Phosphorus cycle (K1)
14. Define Sulphur cycle (K1)

Unit – III:

1. Define Rhizosphere (K1)
2. Define rhizoplane (K1)
3. Define phylloplane (K1)
4. List down the types of Mycorrhiza (K1)
5. Write about VAM (K1)
6. List down some root exudates (K1)
7. Write about symbiosis (K1)
8. Define *Azolla* (K1)
9. List down some positive interaction between microbes (K1)
10. Explain mutualism (K2)
11. Explain commensalism (K2)
12. Explain amensalism (K2)
13. Explain competition (K2)
14. Explain predation (K2)
15. Explain parasitism (K2)

Unit – IV:

1. List the types of waste (K1)
2. Discuss about methanogenesis (K2)
3. Discuss the process of aerobic treatment in liquid waste treatment (K3)
4. Illustrate activated sludge process (K2)
5. Explain about trickling filtration (K2)
6. Discuss about tertiary treatment of liquid waste (K2)

Unit-V:

1. Define biopesticide (K1)
2. Write the uses of *Rhizobium* as a biofertilizer (K1)
3. Define biofertilizers (K1)
4. Define Blue Green algae (K1)
5. Write about *Azotobacter* (K1)
6. Write the uses of *Azotobacter* as a biofertilizer (K1)
7. Write the uses of *Azotobacter* as a biofertilizer (K1)

8. Explain about viral biopesticides (K2)
9. Differentiate NPV and CPV
10. Explain about bacterial biopesticides (K2)
11. Explain about fungal biopesticides (K2)

Section – C

Answer in about 200 words each:

(5 marks)

Unit-I:

1. Explain the chemical properties of soil (K2)
2. Discuss about the factors affecting the microbial flora of soil (K2)
3. Analyze the physical properties of soil (K4)
4. Construct an essay on microflora of soil (K3)
5. Explain Bioremediation (K2)
6. Explain about bacteria present in soil (K2)
7. Explain about fungi present in soil (K2)
8. Explain about algae present in soil (K2)
9. Explain about actinomycetes present in soil (K2)
10. Explain about nematodes present in soil (K2)

Unit II

1. Explain about Carbon cycle (K2)
2. Give a detailed outline on Sulphur cycle (K4)
3. Summarize about root nodule formation (K2)
4. Explain about Nitrogen cycle (K2)
5. Explain about Phosphorus cycle (K2)
6. Explain about Sulphur cycle (K2)
7. Give a detailed outline on nitrogenase (K4)
8. Give a detailed outline on hydrogenase (K4)
9. Give a detailed outline on nitrogen fixation by *Rhizobium* (K4)
10. Give a detailed outline on nitrogen fixation by *Azotobacter* (K4)

Unit III

1. Explain the Anabaena Azolla association (K2)
2. Interpret the microbial association in rhizosphere region(K2)
3. Describe about microbe – phyllosphere interaction.
4. Analyze microbial interaction in phyllosphere (K4)

5. Compare parasitism and predation (K4)
6. Explain about mutualism (K2)
7. Explain about amensalism (K2)
8. Produce the details about commensalism (K3)
9. Explain about competition (K2)
10. Produce the details about predation (K3)
11. Produce the details about parasitism (K3)

Unit V

1. Compile about NPV bio pesticide (K3)
2. Illustrate on *Azotobacter* bio fertilizer (K2)
3. Illustrate on *Rhizobium* biofertilizer (K2)
4. Illustrate on *Trichoderma viridae* biopesticide (K2)
5. Illustrate on BGA bio fertilizer (K2)
6. Illustrate on Azolla bio fertilizer (K2)
7. Illustrate on bacterial biofertilizer (K2)
8. Explain about CPV bio pesticide (K2)
9. Explain about viral biopesticide (K2)
10. Explain about *Bacillus thuringiensis* bio pesticide (K2)
11. Discuss about mass cultivation of cyanobacteria biofertilizer (K2)
12. Illustrate on fungal biopesticide (K2)

Section – D

Answer in about 400 words each:

(10 marks)

Unit I:

1. Analyze about the microbial flora of soil (K4)
2. Give a detailed outline on soil microorganisms (K4)
3. Analyze the physical properties of soil (K4)
4. Analyze the factors affecting microbial population (K4)
5. Analyze the chemical properties of soil (K4)
6. Give a detailed outline on the microbes involved in bioleaching (K4)
7. Evaluate the types of bioleaching (K5)
8. Analyze soil properties (K4)
9. Investigate about Bioleaching (K4)
10. Evaluate the physical and chemical properties of soil (K5)

Unit II:

1. Give a detailed outline on Phosphorus cycle (K4)
2. Analyze about nitrogen fixation (K4)
3. Analyze the importance of nitrogenase enzyme in nitrogen fixation (K4)
4. Give a detailed outline on Sulphur cycle (K4)
5. Give a detailed outline on root nodule formation (K4)
6. Give a detailed outline on Nitrogen cycle (K4)
7. Give a detailed outline on Carbon cycle (K4)
8. Analyze about symbiotic nitrogen fixation (K4)
9. Analyze the non-symbiotic nitrogen fixation (K4)
10. Analyze the importance of hydrogenase enzyme in nitrogen fixation (K4)

Unit-III:

1. Evaluate the Anabaena-Azolla association as an example of Phyllosphere interaction (K5)
2. Examine the microbial association in rhizosphere (K4)
3. Examine about microbe – phyllosphere interaction (K4)
4. Investigate about positive interaction between microbes (K4)

Unit-IV:

1. Discriminate about utilization of solid waste for mushroom production (K5)
2. Estimate the liquid waste water treatment (K5)

Unit V:

1. Evaluate bacterial bio fertilizer (K5)
2. Evaluate cyanobacterial bio fertilizer (K5)
3. Evaluate *Azotobacter* biofertilizer (K5)
4. Examine about viral bio pesticide (K4)
5. Examine about bio pesticide (K4)
6. Examine about fungal bio pesticide (K4)
7. Compose as essay on *Rhizobium* Bio fertilizer (K6)
8. Compose as essay on bio pesticides (K6)
9. Construct an essay on production of bacterial bio fertilizer (K6)
10. Construct an essay on production of algal bio fertilizer (K6)
11. Evaluate *Azolla* biofertilizer (K5)

ST.MARY'S COLLEGE (Autonomous), THOOTHUKUDI-628001

III B.Sc Microbiology – Semester VI

Core III- Microbial Biotechnology - 21UMIC64

Question Bank

SECTION – A

(1 Mark)

Choose the correct answer:

Unit-1

- 1) The term "Biotechnology" was coined by _____ (K1)
a) Joseph Lister b) **Karl Ereky** c) Plummer d) Sherman
- 2) _____ is the father of biotechnology. (K1)
a) **Louis Pasteur** b) Winogradsky c) Edward Jenner d) Bullock
- 3) _____ is the art of using living organisms to make desired goods. (K1)
a) Biology b) Bioinformatics c) **Biotechnology** d) Bio-Botany
- 4) _____ deals with the insertion of desired genes into host cells. (K1)
a) Agricultural Biotechnology b) Environmental Biotechnology
c) **r-DNA Technology** d) Fermentation Technology
- 5) _____ deals with the production of human health care products. (K1)
a) Environmental Technology b) Industrial Technology
c) r-DNA Technology d) **Pharmaceutical Technology**
- 6) _____ enzyme is also known as Cech-Wang RNA. (K1)
a) Lipase b) **Ribozyme** c) Abzymes d) Synzymes
- 7) _____ is used for joining of cut ends of DNA. (K1)
a) Taq DNA polymerase b) Restriction endo nuclease c) **DNA ligase** d) Protease
- 8) Enzyme molecules are absorbed on solid materials called _____ (K1)
a) **Careers** b) adsorption c) entrapment d) bonding
- 9) Milk whey contains _____ (K1)
a) sucrose b) **lactose** c) fructose d) glucose
- 10) Which was the 1st enzyme to be immobilized by adsorption method? (K1)
a) Protease b) Glucose isomerase c) **Invertase** d) Amylase

Unit-II

11. EPSP stands for _____ (K1)
- a) 3-enol pyruvate shikimate 5- phosphate synthetase
 - b) Enol pyruvate shikimate phosphate synthetase
 - c) **5-enol pyruvate shikimate 3- phosphate synthetase**
 - d) Ethylene pyruvate shikimate phosphate synthetase
12. Dolly was born on _____ (K1)
- a) 4th Feb 2003
 - b) **22nd Feb 1997**
 - c) 14th Feb 1997
 - d) 22nd Feb 2003
13. _____ is an example of the herbicide resistant plants. (K1)
- a) Glycophosphate
 - b) Cry gene
 - c) **Glyphosate**
 - d) BT toxin
14. Eating a piece of _____ to be enough to vaccinate the people against Hepatitis B. (K1)
- a) Transgenic tomato
 - b) transgenic potato
 - c) **transgenic banana**
 - d) transgenic tobacco
15. Transgenic rice can able to produce _____ by using rDNA technology. (K1)
- a) α - carotene
 - b) peptides
 - c) **β - carotene**
 - d) polypeptides
- 16) Transgenic plants carry desirable traits like _____ (K1)
- a) harmful genes
 - b) **herbicide resistance**
 - c) lactose intolerance
 - d) complementary genes
- 17) Insect pest resistance Bt-cotton plant was developed using _____ (K1)
- a) **transgenic technology**
 - b) somaclonal variation
 - c) micropropagation
 - d) somatic hybridization
- 18) Strains of *Bacillus thuringiensis* are being used for designing _____ (K1)
- a) biomineralization
 - b) biofertilizers
 - c) biometallurgical techniques
 - d) **bioinsecticidal plants**
- 19) Name the first transgenic virus resistant plant? (K1)
- a) Rice
 - b) Cotton
 - c) **Tobacco**
 - d) Tomato
- 20) Which of the following is supplemented with vitamin A in order to improve its nutritional quality? (K1)
- a) Cotton
 - b) Potato
 - c) Tomato
 - d) **Rice**

Unit III

- 21) SCP stands for _____ (K1)
- a) **Single Cell Protein**
 - b) Stress Cultivated Plant
 - c) Somatic Cultivated Plantlet
 - d) Soma Clonal Plants

- 22) Which of the following algae can be grown on wastewater? (K1)
 a) *Spirogyra* b) *Volvox* c) ***Spirulina*** d) *Chlamydomonas*
- 23) Which of the following is the most common source of SCP? (K1)
 a) Multicellular yeast b) **Single-celled yeast**
 c) Unicellular algae d) Unicellular bacteria
- 24) On which medium do certain bacteria grow to produce biogas? (K1)
 a) Lignin b) **Cellulose** c) Chitin d) Cheese
- 25) What do we collectively call the biogas producing bacteria? (K1)
 a) Archaeobacteria b) Cyanobacteria c) Eubacteria d) **Methanogens**
- 26) Lignocellulosic activities can be highly seen in which kind of microorganisms? (K1)
 a) Protozoa b) Viruses c) Algae d) **Actinomycetes**
- 27) Micro algae rich source of _____ (K1)
 a) Vitamins & minerals b) **Proteins** c) fats & oils d) Carbohydrates
- 28) _____ was first established the large scale production plant of *Spirulina*. (K1)
 a) Grinnel b) **Zarrouk** c) Plummer d) Sherman
- 29) _____ are known as microbial biosensors. (K1)
 a) Enzyme electrode b) Thermal biosensor
 c) **Immobilized cell biosensors** d) Optical biosensors
- 30) _____ is used to study protein expression patterns across different tumor samples. (K1)
 A) DNA micro array b) **Tissue micro array** c) Protein micro array d) Cell based micro array

Unit-IV

- 31) Which of the following metal is most susceptible to microbial corrosion? (K1)
 a) **Steel** b) Gold c) Copper d) Aluminium
- 32) _____ enzyme produced by fungi is responsible for breaking down collagen in leather. (K1)
 a) Lipase b) Amylase c) **Collagenase** d) Protease
- 33) _____ is oxidized to soluble form of copper. (K1)
 a) Chalcocite b) Chalcopyrite c) Covellite d) **all the above**
- 34) Which factor is responsible for chemical accumulation of the organism? (K1)
 a) Nutrient load b) **Lipophilicity** c) Temperature d) pH

- 35) _____ has the capacity to synthesize cellulase which degrades lignocelluloses to monomeric sugars & ethanol. (K1)
- a) *Clostridium thermocellum* b) *Saccharomyces cerevisiae*
 c) *Penicillium* d) *Mucor*
- 36) Which of the following is the most common bacteria used for bioleaching? (K1)
- a) Spirillum b) Coccus c) **Bacillus** d) Streptococcus
- 37) An oil press is called _____ (K1)
- a) expresser b) boiler c) **expeller** d) None
- 38) Which type of textile is more susceptible to microbial deterioration? (K1)
- a) **Natural fibers** b) Synthetic fibers c) Blended fibers d) All types of fibers
- 39) What is the term for the formation of yellow or brown spots on paper due to microbial activity? (K1)
- a) Fungal bloom b) Algal growth c) **Foxing** d) Rusting
- 40) Which type of wood is generally more resistant to biodeterioration? (K1)
- a) Softwood b) **Hardwood** c) Plywood d) Particleboard

Unit -V

- 41) The legal rights of ownership of intangible intellectual property is _____ (K1)
- a) **intellectual property rights** b) property rights
 c) intellectual property d) trademarks
- 42) WIPO means _____ (K1)
- a) World international property organization
 b) **World intellectual property organization**
 c) World innovative property organization
 d) World informative property organization
- 43) The copyright act and its amendment act was issued on _____ (K1)
- a) **1957, 1999** b) 1987, 1988 c) 1978, 1989 d) 1992, 1997
- 44) Patent is for limited time with annual fee usually _____ years (K1)
- a) **20 yrs** b) 15 yrs c) 25yrs d) 10yrs
- 45) _____referred to as the study of ethical issues emerging from biology and medicine (K1)
- a) Bio issues b) **Bioethics** c) Bio safety d) Biochemistry

46) _____ is prevention of large- scale loss of biological things specially ecology and human health. (K1)

- a) Bio issues b) Bioethics **c) Bio safety** d) Biochemistry

47) To prevent the contamination of microscopes and surrounding areas disinfect/clean used slides, prepared by student, with_____ (K1)

- a) 70% ethanol and lens paper** b) acetone and lens paper
c) 5% methylene blue and lens paper d) water and lens paper

48) Which of the following type of Personal Protective Equipment PPE is frequently used? (K1)

- a) Safety glasses b) Gloves c) Lab Coats **d) All of the above**

49) After a biohazard spill is covered with paper towels and disinfectant solution, it must sit for _____ minutes (K1)

- a) 5 b) 60 **c) 30** d)20

50) The desire to maintain a safe laboratory environment for all begins with _____ (K1)

- a) prevention** b) microbiology c) ubiquity d) accident

SECTION-B

Answer the following in about 50 words:

(2 marks)

Unit-I

1. Extend the definitions of biotechnology by EFP and IUPAC (K2)
2. Discuss the important scope of biotechnology (K2)
3. Explain enzymes (K2)
4. Discuss immobilization of enzymes (K2)
5. Summarize abzymes (K2)
6. Discuss ribozymes (K2)
7. Extend synzymes (K2)
8. Explain Cech-Waug RNA (K2)
9. Illustrate microcapsules. (K2)
10. Summarize liposomal entrapment (K2)

Unit -II

11. Describe transgenic plants. (K2)
12. Summarize transgenic animals. (K2)
13. Discuss herbicide resistant plants. (K2)

14. Illustrate insects resistant plants. (K2)
15. Explain bacteria resistant plants. (K2)
16. Summarize transgenic rice. (K2)
17. Discuss golden rice. (K2)
18. Illustrate edible vaccine. (K2)
19. Extend about bioplastic. (K2)
20. Summarize dolly. (K2)

UNIT III

21. Extend SCP. (K2)
22. Explain Spirulina. (K2)
23. Discuss microalgae. (K2)
24. Summarize biogas.(K2)
25. Describe about bio hydrogen. (K2)
26. Illustrate about biosensor. (K2)
27. Discuss biochips. (K2)
28. Summarize pharmaceutically valuable compounds. (K2)
29. Discuss the enzyme biosensor. (K2)
30. Explain optical biosensor. (K2)

Unit IV

31. Explain biodegradation. (K2)
32. Discuss bioaccumulation. (K2)
33. Explain biodeterioration. (K2)
34. Discuss bioremediation. (K2)
35. Summarize xenobiotics. (K2)
36. Explain phosphate reduction. (K2)
37. Explain nitrate reduction. (K2)
38. Summarize bioleaching. (K2)
39. Discuss heap leaching. (K2)
40. Summarize slope leaching. (K2)

Unit V

41. Describe IPR. (K2)

42. Classify the tools of IPR (K3)
43. Discuss copy rights. (K2)
44. Summarize patents. (K2)
45. Explain trade marks (K2)
46. Describe trade secrets. (K2)
47. Explain WTO (K2)
48. Explain GATT (K2)
49. Explain WIPO (K2)
50. Describe bioethics. (K2)

SECTION- C

Answer in about 200 words:

(6 mark)

Unit-I

1. Show the general introduction of biotechnology. (K3)
2. Simplify the scope of biotechnology. (K4)
3. Present the analytical uses of enzymes (K3)
4. Classify protease. (K2)
5. Demonstrate the production of protease (K3)
6. Present the importance of pectinase (K3)
7. Simplify physical adsorption (K4)
8. Diagram and explain the enzyme entrapment (K4)
9. Outline on encapsulation (K4)
10. Produce the applications of immobilized enzymes (K3)

Unit-II

11. Compile virus resistant transgenic plants and their benefits. (K3)
12. Experimentally prove the transgenic animals produced. (K3)
13. Compile herbicide resistant transgenic plants and their benefits. (K3)
14. Compile insect resistant transgenic plants and their benefits. (K3)
15. Compile bacterial resistant transgenic plants and their benefits. (K3)
16. Compile fungus resistant transgenic plants and their benefits. (K3)
17. Simplify about transgenic rice (K4)
18. Simplify edible vaccine (K4)

19. Compile about bioplastic (K3)
20. Apply ethical implications on transgenic animals. (K3)

Unit-III

21. Show the applications of single cell protein. (K3)
22. Apply the uses of spirulina (K3)
23. Demonstrate the production of baker's yeast (K3)
24. Construct open circulatory system (K3)
25. Construct oxidation pond system (K3)
26. Construct photobioreactor (K3)
27. Classify biosensors. (K3)
28. Show the applications of biosensors (K3)
29. Show the applications of biochips (K3)
30. Present the advantages and disadvantages of biochips. (K3)

Unit- IV

31. Compile microbes involved in degradation (K3)
32. Simplify the microbial degradation of phenolics (K4)
33. Produce the microbial degradation of metals. (K3)
34. Present the microbial degradation of sewage nutrients. (K3)
35. Compile the degradation of xenobiotics (K3)
36. Simplify bioaugmentation (K4)
37. Outline about bioaccumulation. (K4)
38. Compile microbial deterioration of paper. (K3)
39. Demonstrate metal corrosion (K3)
40. Outline about biomagnification. (K4)

Unit-V

41. Outline about Intellectual property rights (K4)
42. Classify the tools of IPR. (K3)
43. Compile the patenting of biological materials. (K3)
44. Compare GATT and WTO (K4)
45. Show the principles of bio safety (K3)
46. Compile copy rights and patenting (K3)

47. Compile trade mark and trade secrets (K3)
48. Show the principles of bioethics (K3)
49. Organize the bio safety levels. (K4)
50. Organize bio safety guidelines for microbiology laboratory. (K4)

SECTION- D

Answer in about 500 words:

(12 marks)

Unit-I

1. Construct important contributions in biotechnology explaining its historical development (K6)
2. Design the microbial production of protease (K6)
3. Construct the microbial production of pectinase (K6)
4. Formulate the microbial production of lipase (K6)
5. Compose therapeutic applications of enzymes. (K6)
6. Produce the industrial applications of enzymes (K6)
7. Evaluate the analytical and manipulative uses of enzymes (K5)
8. Produce the methods of immobilization (K6)
9. Construct the formulation of ribozymes from precursor mRNA. (K6)
10. Produce enzyme engineering with suitable examples. (K6)

Unit-II

11. Construct virus resistant transgenic plants and their benefits. (K6)
12. Prove the transgenic animals produced. (K5)
13. Construct herbicide resistant transgenic plants and their benefits. (K6)
14. Compose insect resistant transgenic plants and their benefits. (K6)
15. Compose bacterial resistant transgenic plants and their benefits. (K6)
16. Create the production of transgenic animal – Dolly (K6)
17. Design and produce transgenic rice (K6)
18. Produce edible vaccine (K6)
19. Create bioplastic (K6)
20. Evaluate the ethical implications on transgenic animals. (K5)

Unit-III

21. Formulate single cell protein and its applications. (K6)
22. Design the mass production of *Spirulina* (K6)

23. Develop the production of baker's yeast (K6)
24. Produce biogas and its applications (K6)
25. Produce bioethanol using lignocellulosic waste. (K6)
26. Formulate the biotechnological potential of *Spirulina*. (K6)
27. Develop pharmaceutically valuable compounds from micro algae. (K6)
28. Produce biohydrogen and its applications. (K6)
29. Formulate Biosensors and its types (K6)
30. Formulate Biochips and its applications (K6)

Unit- IV

31. Estimate the microbes involved in degradation (K5)
32. Evaluate the microbial degradation of phenolics (K5)
33. Compose the microbial degradation of metals. (K6)
34. Produce the microbial degradation of sewage nutrients. (K6)
35. Compose the degradation of xenobiotics (K6)
36. Formulate bioaugmentation process (K6)
37. Compose bioaccumulation process. (K6)
38. Formulate the microbial deterioration of paper and wood. (K6)
39. Discriminate about metal corrosion (K5)
40. Formulate the metal deterioration of paint and textile industry. (K6)

Unit-V

41. Formulate Intellectual property rights (K6)
42. Evaluate the tools of IPR. (K5)
43. Compose the patenting of biological materials. (K6)
44. Discriminate about GATT and WTO (K6)
45. Evaluate the principles of bio safety (K5)
46. Compose copy rights and patenting (K6)
47. Compose trade mark and trade secrets (K6)
48. Formulate the principles of bioethics (K6)
49. Construct the bio safety levels. (K6)
50. Generate bio safety guidelines for microbiology laboratory. (K6)

ST. MARY'S COLLEGE (AUTONOMOUS)

THOOTHUKUDI

DEPARTMENT OF PHYSICS

QUESTION BANK

2021 – 2024

SEMESTER I

CORE 1 – MECHANICS AND PROPERTIES OF MATTER -21UPHC11

SECTION– A

Unit I: Conservation Laws

1. An example of conservative force is
 - a) frictional force
 - b) viscous force
 - c) gravitational force**
 - d) all the above
2. A moving body is subjected to an additional force of 2 newton and the work done by the force on the body is 0.98 joule. Then, the kinetic energy of the body is
 - a) 0.49 J
 - b) 9.8J
 - c) 0.98 J**
 - d) 2/.98J
3. For a bob of a simple pendulum, moving to and fro the following is true:
 - a) P.E is minimum and K.E is maximum at its mean position
 - b) P.E is maximum and K.E is minimum at its extreme position
 - c) The sum of P.E and K.E remains constant throughout its motion
 - d) all the above**
4. The linear momentum of a particle is conserved when it is
 - a) moving in a force field like gravity
 - b) subjected to maximum force
 - c) moving in a viscous medium
 - d) subjected to no net force**
5. For a particle moving under central force, the following property of the particle remains conserved
 - a) energy
 - b) linear momentum
 - c) angular momentum**
 - d) velocity
6. In a system of particles, the average position of the particles, in which the position of each particle is given importance proportional to its mass represented by
 - a) centre of pressure
 - b) centre of mass**
 - c) centre of force
 - d) reduced mass
7. In a system of two interacting particles, the force between them depends only on
 - a) reduced mass
 - b) relative displacement of the particles**
 - c) the medium
 - d) the algebraic sum of the two masses
8. The reduced mass of a system of two particles of masses m_1 and m_2 , having mutual interaction is called so because
 - a) it is smaller than either m_1 or m_2**
 - b) it is smaller than m_1
 - c) it is smaller than m_2
 - d) it is never zero
9. The angular momentum of a body would remain constant under the following condition
 - a) net force of the body is zero
 - b) net torque on the body is zero**
 - c) the force acting on it is constant
 - d) the torque acting on it is constant
10. A central force F satisfies the condition
 - a) gradient of $F = 0$
 - b) curl of $F = 0$**
 - c) divergence of $F = 0$
 - d) all of the above

Unit II: Collisions and Projectiles

- When a particle is projected into space with a velocity u , making angle α with the horizontal, the velocity component that remains unaltered throughout the motion is
a) u b) g **c) $u \cos \alpha$** d) $u \sin \alpha$
- If u be the velocity of projection and α be the angle of projection of projectile, the range on horizontal plane is
a) $\frac{2u}{g} \sin \alpha$ b) $\frac{u^2 \sin^2 \alpha}{g}$ c) $\frac{u \sin^2 \alpha}{g}$ **d) $\frac{u^2 \sin 2\alpha}{2g}$**
- The angle of projection for maximum horizontal range of a projectile is
a) 30° **b) 45°** c) 60° d) 90°
- The path of a projectile in free space is
a) Upward straight line b) ellipse c) hyperbola **d) parabola**
- If u be the velocity of projection and α the angle of projection of a projectile, the velocity at the highest point reached is
a) $-u \sin \alpha$ b) zero c) $\frac{u^2 \sin^2 \alpha}{g}$ **d) $u \cos \alpha$**
- A large force acting for a small interval of time is
a) magnetic force b) frictional force **c) impulsive force** d) none of the above
- The impulse of a force is measured by
a) product of force and distance b) gain of kinetic energy
c) gain of momentum **d) the small displacement produced**
- If the direction of motion of each sphere before impact is along the common normal at the point of contact then the impact of the two spheres is said to be
a) elastic b) inelastic **c) direct** d) indirect
- Maximum value that the coefficient of restitution can have is
a) 1 b) -1 c) 0 d) 0.5
- Two perfectly elastic spheres, after collision, would exchange their velocities, provided they have
a) $e = 1$ b) no friction on the floor c) equal masses **d) a and c**

Unit III: Gravitation

- The value of G in S.I units is
a) 6.67×10^{-37} **b) 6.67×10^{-11}** c) 5.57×10^{-10} d) none
- The dimensions of G are
a) ML^3T^{-2} b) $M^{-1}LT^{-2}$ c) $M^{-1}L^2T^{-3}$ **d) $M^{-1}L^3T^{-2}$**
- The small spheres used in Boy's method are made up of
a) Gold b) silver c) lead d) none

4. The relation between g and G is
 - a) $g = 2G/R$
 - b) $g = G/R^2$
 - c) **$g = GM/R^2$**
 - d) $g = G/R$
5. The S.I unit of g is
 - a) m/s
 - b) **m/s^2**
 - c) ms
 - d) ms^2
6. Which one of the following statement about 'g' is wrong?
 - a) The value of 'g' is maximum at the place
 - b) The value of 'g' is minimum along the equator
 - c) **g increases with increase of altitude**
 - d) g decreases with increase of depth
7. If L is the length of equivalent simple pendulum, then its period of oscillation is
 - a) **$T = 2\pi\sqrt{L/g}$**
 - b) $T = 2\pi\sqrt{2L/g}$
 - c) $T = 2\pi\sqrt{L/2g}$
 - d) $T = 2\sqrt{L/g}$
8. Weight of a body (w) is given by
 - a) m^2g
 - b) **mg**
 - c) mg^2
 - d) none
9. The gravitational field (E) at a point distant r from a body of mass M is given by
 - a) GM/r^2
 - b) **GM/r**
 - c) GM^2/r
 - d) G/r
10. The gravitational potential (v) at a point distant r from a body of mass M is given by
 - a) GM/r^2
 - b) GM/r
 - c) **$-GM/r$**
 - d) none
11. The relation between gravitational potential (V) and gravitational field (E) is
 - a) $E = V^2/r$
 - b) $E = V/r$
 - c) **$E = -dV/dr$**
 - d) none
12. Work done in moving a unit mass between two points on an equipotential surface is
 - a) **0**
 - b) 1
 - c) 10
 - d) 1000
13. When the compound pendulum is suspended about its centre of gravity, the period is
 - a) 0
 - b) **1**
 - c) ∞
 - d) none
14. If the distance between the earth and the moon were doubled, the gravitational force between them would be
 - a) one half of the original value
 - b) **one fourth of the the original valule**
 - c) doubled
 - d) four times
15. The atmosphere is held to the earth by
 - a) winds
 - b) clouds
 - c) **gravity**
 - d) gravitational constant
16. The gravitational potential due to the earth is
 - a) **always negative**
 - b) always zero
 - c) always positive
 - d) always infinity
17. The weight of a body at the centre of the earth is
 - a) **zero**
 - b) infinity
 - c) $9.8 m/s^2$
 - d) 5kg
18. The mass of a body at the centre of the earth is
 - a) zero
 - b) infinity
 - c) **same as at other places**
 - d) 1/6

15. Shearing strain is also known as
 a) angle of twist b) **angle of shear** c) angle of time d) angle of strain
16. The relation between q, k and n is
 a) $9/q = 1/k + 3/n$ b) $1/3q = 1/n + 1/k$ c) $1/k = 1/3n + 1/4q$ d) None of above
17. The relation between q, n and σ is
 a) **$q = 2n(1 + \sigma)$** b) $n = 2q(1 + \sigma)$ c) $= 2q(1 + \sigma)$ d) $q = n(1 + \sigma)$
18. The modulus of elasticity is equal to
 a) **stress/strain** b) stress x strain c) stress- strain d) stress + strain
19. In a given torsion pendulum the ratio
 a) l / T is a constant b) l^2 / T is constant c) **l / T^2 is a constant** d) none of above
20. If n, k and σ represent rigidity modulus, bulk modulus and poisson's ratio then
 a) $\sigma = 9k - 2n / 9k + 2n$ b) **$\sigma = 3k - 2n / 6k + 2n$**
 c) $\sigma = 3k + 2n / 9k + 2n$ d) $\sigma = 3k + 2n / 6k + 2n$
21. Young's modulus (q), rigidity modulus (n), and poisson's ratio (σ) are related as
 a) $q = 2n / (1 + \sigma)$ b) $\sigma = 2q / (1 + n)$ c) **$q/n = 2(1 + \sigma)$** d) $2q = n(1 + \sigma)$
22. The dimensions of stress are
 a) MLT^{-2} b) **$ML^{-1}T^{-2}$** c) $ML^{-1}T^{-1}$ d) ML^2T^{-1}
23. Volume strain is ----- times the linear strain
 a) **3** b) 2 c) 1 d) 4
24. The layer of a beam neither elongated nor contracted is known as
 a) **neutral layer** b) bending layer c) bending axis d) none of above
25. The expression for bending moment is given by
 a) **qAK^2 / R** b) qL^2 / R c) q/R d) qak
26. The geometrical moment of inertia of a beam of circular cross section is
 a) **$\pi r^4 / 4$** b) $\pi r^3 / 3$ c) $\pi r^2 / 2$ d) none of above
27. A thin rod clamped horizontally at one end and loaded at the free end is called
 a) rectangular beam b) **cantilever** c) Loaded beam d) circular beam
28. The S-I unit of bending moment is
 a) N/m b) Nm c) **N/m^2** d) m
29. The geometrical moment of inertia of a rectangular beam is given by
 a) $bd^2 / 4$ b) **$bd^3 / 12$** c) $bd / 12$ d) none of above
30. 34) The depression (y) produced in a cantilever is given by
 a) $Mgl^2 / 3qI$ b) $g \times Mgl / qI$ c) **$Mgl^3 / 3qI$** d) $Mgl/2bdy$
31. If a beam is loaded at both the ends, the type of bending produced is
 a) **uniform bending** b) Non-uniform bending c) cantilever bending d) depression

32. If a beam is loaded at the center, the type of bending is called
 a) uniform bending b) Non-uniform bending c) cantilever bending d) none of above
33. The expression for depression produced in a rectangular beam subjected to non-uniform bending is
 a) $y = Mgl^3 / 4bd^3 q$ b) $y = Wl^2 / 4bd^3 q$ c) $y = Wl / bd^3 q$ d) $y = Mgl^3 / 4bd^2 q$
34. The expression for elevation produced in a beam subjected to non-uniform bending is
 a) $y = Wal^2 / 4ql$ b) $y = Wal^2 / 4q$ c) $y = Wal^2 / 8ql$ d) $y = Wal^3 / 4q$
35. The depression of cantilever is directly proportional to
 a) square of its length b) square root of its length c) its length d) **cube of its length**
36. In the case of bending of a rod
 a) **young's modulus comes into play** b) Rigidity modulus comes into play
 c) Bulk modulus comes into play d) None of the above comes into play
37. A rod is supported symmetrically on two knife edges and loaded in the middle
 a) The bending is said to be uniform
 b) **The bending is said to be non-uniform**
 c) each element in the bent beam will have same radius of curvature
 d) cantilever bending
38. In uniform bending there is ----- of beam when it is gradually loaded
 a) **elevation** b) depression c) neither
 d) first elevation and then depression
39. A beam is defined as a rod or bar of uniform cross section whose
 a) **length is very large compared to its breadth and thickness**
 b) length is same as thickness c) length is less than thickness
 d) length is less than breadth

Unit V: Viscosity and Surface Tension

1. Viscosity is also known as
 a) solid friction b) **liquid friction** c) external force d) friction
2. The smooth and orderly motion of a liquid is called
 a) turbulent motion b) **streamlined motion** c) non uniform motion d) uniform motion
3. The violent and disorderly motion of a liquid is called
 a) **turbulent motion** b) streamlined motion c) non uniform motion d) uniform motion
4. The viscous force is given by
 a) $F = \eta A^2 dv/dx$ b) $F = \eta A dv/dx$ c) **$F = -\eta A dv/dx$** d) $F = A dv/dx$
5. The S. I unit of coefficient of viscosity is
 a) N/m^2 b) **Nsm^{-2}** c) Nm d) N/m

6. The dimension of coefficient of viscosity are
 a) MLT^{-2} b) MLT^{-3} c) **$ML^{-1}T^{-1}$** d) MLT
7. Poiseuille's formula is given by
 a) **$V = \pi Pa^4/8l\eta$** b) $V = \pi Pa^2/8l\eta$ c) $V = 2\pi Pa/8l\eta$ d) $V = Pa^4/8l\eta$
8. Machine parts are jammed in winter due
 a) increase in surface tension of the lubricant
 b) **decrease in viscosity of the lubricant**
 c) increase in viscosity of the lubricant
 d) none of the above
9. Coefficient of viscosity is
 a) the ratio of stress to strain b) **the ratio of force to area**
 c) ratio of tangential stress per unit shearing strain d) none of the above
10. The unit of coefficient of viscosity is
 a) **poise** b) pascal c) newton d) curie
11. Viscosity is the property by virtue of which fluid tries to
 a) prevent a relative motion between adjacent layers
 b) **accelerate relative motion between its adjacent layers**
 c) concentrate at a point d) spread in all directions
12. The viscous drag in a liquid layer does not depend upon
 a) area b) velocity c) velocity gradient d) **nature of the liquid**
13. The maximum velocity of a liquid through a capillary tube upto which flow is streamlined does not depend upon
 a) **density of the liquid** b) radius of the tube
 c) viscosity of the liquid d) pressure of the liquid
14. Poiseuille's law for the liquid flow can be compared with ohm's law for current flow. Then $(8\eta l/\pi a^4)$ is analogous to
 a) **electrical resistance** b) e.m.f c) electrical current d) flow of charge
15. In a stream flow, the velocity at any point
 a) **does not vary with time** b) may vary in magnitude but not in direction
 c) may vary in direction but not in magnitude
 d) may vary both in direction and in magnitude
16. Force required to keep the surface of a liquid in a minimum surface area is known as
 a) **surface tension** b) surface energy c) workdone d) none
17. The S.I unit of surface tension is
 a) **N/m** b) N/m^2 c) Nm d) N

18. The dimension of surface tension are
 a) MLT^{-2} b) MLT^{-3} c) MT^{-3} d) ML^2T^2
19. The workdone in increasing the surface area of a liquid by unity is called as
 a) **surface energy** b) surface tension c) workdone d) pressure
20. The S.I unit of surface tension is given by
 a) J/m b) **J/m²** c) Jm d) -J/m²
21. As the temperature of a liquid increases, the surface tension of the liquid
 a) increases b) **decreases** c) no change d) none
22. The excess of pressure of a catenoid is
 a) 0 b) **1** c) σ d) none
23. The surface tension of a liquid at various temperatures can be determined by
 a) bending method b) laser method c) **Jaegar's method** d) elevation
24. The surface energy per unit area of a liquid surface is equal to
 a) viscosity b) **surface tension** c) pressure d) none
25. The spherical shape of a liquid drop is due to
 a) **surface tension** b) gravitational force c) viscosity d) surface energy.

SECTION - B

Unit I: Conservation Laws

1. Write a note on work done by a force?
2. What is power?
3. State work energy theorem.
4. What is energy? Distinguish between kinetic energy and potential energy.
5. What is a conservative force? Give its properties.
6. State the law of conservation of energy.
7. Explain the law of conservation of linear momentum.
8. Explain the law of conservation of angular momentum.
9. What is centre of mass of a system of particles. Give the expression for its position vector.

Unit II: Collisions and Projectiles

1. What is the expression for impact of a constant force?
2. What is an impulsive force? Give examples.
3. Distinguish between elastic and inelastic collision.
4. What do you mean by range of a projectile? Derive an expression for range on the horizontal plane.

5. What is time of flight of a projectile? Derive an expression for it.
6. Discuss the angle of projection for maximum range.
7. Derive an expression for the maximum height of a projectile (h).

Unit III: Gravitation

1. State Newton's law of gravitation
2. Give the dimension and unit of 'G'
3. Define gravitational field (E) and gravitational potential (V) at a point. Give the relation connecting them.
4. What is equipotential surface?
5. Define gravitational constant.
6. Define gravitational mass and inertial mass
7. What are the advantages of Cavendish's experiment?.
8. Define the intensity of gravitational field at a point.
9. What is the minimum time of oscillation of a compound pendulum?

Unit IV: Elasticity and Bending of Beams

1. Define stress
2. Define strain
3. Define modulus of elasticity
4. Define Hooke's law
5. Define poisson's ratio
6. Give the limiting values of poisson's ratio
7. Define Young's modulus of elasticity
8. Define bulk modulus of elasticity
9. Define rigidity modulus of elasticity
10. Give the expression for couple per unit twist
11. What is a beam?
12. What is bending moment?
13. What are neutral axis and neutral surface?
14. Define bending couple
15. What is the internal bending moment?
16. What is the flexural rigidity of the beam?
17. What is geometric moment of inertia?
18. What is geometric moment of inertia for circular bar?
19. What is geometric moment of inertia for rectangular bar?
20. What is the unit for stress?

Unit V: Viscosity and Surface Tension

1. Define forces of viscosity
2. What is viscous force?
3. Define coefficient of viscosity.
4. What are the units and dimensions of coefficient of viscosity?
5. What is streamlined motion?
6. What is turbulent motion?
7. Define critical velocity.
8. Define surface tension.
9. What are the units and dimensions of surface tension.
10. Define the range of molecular attraction.
11. What are the two kinds of molecular forces?
12. What is surface energy? How is it related to surface tension?
13. What is the work done in blowing a bubble?
14. What is the shape of the rain drop and a large drop of mercury?

SECTION - C

Unit I: Conservation Laws

1. State and explain work-energy theorem.
2. Prove that the workdone by a conservative force on a body is independent of the path followed by the body and work done around a closed path is zero.
3. A bullet of mass 10 gm is fired with a speed of 1000m/s from a freely hanging gun of mass 2 Kg. Calculate the recoil velocity of the gun
4. Explain conservative force and prove its properties. Also give examples of conservative force.
5. State and explain the laws of conservation of linear momentum and angular momentum.
6. Define centre of mass of a system of particles.
7. Two particles of masses 0.1 Kg and 0.3 Kg have at a time t , positions $2\mathbf{i} + 5\mathbf{j} + 13\mathbf{k}$ and $-6\mathbf{i} + 4\mathbf{j} - 2\mathbf{k}$ meter respectively. Calculate the instantaneous position of the centre of mass.
8. Calculate the reduced mass of the HCl molecule, given that the mass of the hydrogen atom = 1 a.m.u. and the mass of chlorine atom = 35.5 a.m.u. (1 a.m.u. = 1.6×10^{-27} Kg)
9. The internuclear distance between the two protons in a hydrogen molecule is 0.74 \AA . Calculate the moment of inertia of the hydrogen molecule about the axis of rotation passing through the centre of mass (given the mass of proton = 1.7×10^{-27} Kg)

Unit II: Collisions And Projectiles

1. Prove that the path of a projectile is a parabola.
2. Two blocks of masses 300 Kg and 200 Kg are moving towards each other along a frictionless surface with velocities of 50m/s and 100m/s respectively. Find the final velocities of each block if the collision is completely elastic.
3. Define impulse and show that it can be estimated from the change of momentum produced.
4. State and explain the laws of impact and define coefficient of restitution.
5. A body falls from a height of 19.6 m on a horizontal ground. If the coefficient of restitution is 0.7, find the height to which the ball would rise after rebounding thrice.
6. A heavy elastic ball falls freely from a height h and after two rebounds from the ground, it ascends to a height, equal to half the height from which it fell initially. Calculate the coefficient of restitution.
7. A smooth sphere of mass m impinges directly on another sphere of mass $3m$. If the velocities of the sphere after impact are 1m/s and 2m/s respectively in the same direction and if the coefficient of restitution is 0.5, find the velocities of the sphere before impact.
8. A body projected with a velocity of 25m/s at 30° to the horizontal just passes horizontally over the top of a tower. How far from the point of projection is the tower.

Unit III: Gravitation

1. What is equivalent length of simple pendulum for a compound pendulum?
2. Define gravitational field (E) and gravitational potential (V) at a point. Obtain the relation between them.
3. Determine the period of oscillation of the compound pendulum.
4. Describe equivalent compound pendulum.
5. Prove that in a compound pendulum there are four points collinear with the centre of mass of the pendulum about which it has the same period of oscillation. Hence obtain the length of the equivalent simple pendulum.
6. A uniform circular disc of 0.2m radius oscillates in its own plane about a point on its circumference. Calculate the period of oscillation.
7. Estimate the mass of the sun, assuming the orbit of the earth round the sun to be a circle. The distance between the Sun and the earth is 1.49×10^{11} m and $G = 6.66 \times 10^{-11} \text{ Nm}^2\text{kg}^{-2}$.
8. A body weighs 900 kg on the surface of the earth. How much will it weigh on the surface of Mars if its radius is one-ninth and mass one-half of the earth?

Unit IV: Elasticity and Bending of Beams

1. Explain the following
 - a) Hooke's law b) Poisson's ratio c) Elastic moduli
2. Explain the stress-strain curve
3. Obtain an expression for the work done per unit volume during Shearing strain.
4. Define Young's modulus of elasticity. Derive an expression for 'y'.
5. Define bulk modulus of elasticity, Derive an expression for 'k'.
6. Define rigidity modulus of elasticity Derive an expression for 'n'.
7. Derive an expression for Poisson's ratio.
8. Define stress, strain and modulus of elasticity.
9. What is meant by a beam? Explain the term neutral axis, neutral surface, plane of bending and bending moment of the beam.
10. Derive the expression for the young's modulus of the bar in uniform bending.
11. Derive the expression for the young's modulus of the bar in non-uniform bending.
12. Derive an expression for couple per unit twist.

Unit V: Viscosity and Surface Tension

1. Distinguish between streamlined and turbulent motion.
2. Define coefficient of viscosity of a liquid and give its dimensions.
3. Explain the terms a) terminal velocity b) critical velocity c) Reynold's number
4. Derive Poiseuille's formula by the method of dimensions.
5. Bring out the analogy between liquid flow and current flow.
6. Explain the term surface tension. Give example.
7. Why do drops spherical in shape?
8. How does surface tension vary with temperature?
9. Describe any two experiments to prove that a liquid surface behaves like a stretched elastic membrane.
10. Define surface energy. Show that the potential energy per unit area is surface energy
11. Calculate the work done in spraying a spherical drop of water of 10^{-3} m radius into Million droplets, all of the same size, the surface tension of water being 72×10^{-3} N/m.

SECTION – D

Unit I: Conservation Laws

1. State and prove the law of conservation of energy.
2. Explain conservative force and prove its properties. Show how it can be expressed as the negative space derivative of potential. Also give examples of conservative force.

3. What do you mean by two body problem? How can you reduce a two body problem into a single body problem?
4. Derive an expression for moment of inertia of a diatomic molecule in terms of its reduced mass. Also show how you would calculate the rotational energy of the diatomic molecule.
5. Show that, in a two particle system, force exerted by one particle on the other is equal to the product of the reduced mass of the system and the linear acceleration of one with respect to the other.

Unit II: Collisions and Projectiles

1. Derive an expression for impulse in direct impact.
2. In the case of direct elastic collision between two particles, show that there is maximum transfer of energy between them, when their masses are equal.
3. Derive the expressions for the velocities of two smooth spheres after a direct impact.
4. Derive an expression for the loss of kinetic energy in a direct impact.
5. Define 'time of flight' and 'range' of a projectile and derive expression for each of them for a projectile on a horizontal plane.
6. Derive an expression for range of a projectile on an inclined plane. Also calculate the maximum range.
7. Prove that the ratio of maximum range up an inclined plane to that down the plane is $(1 - \sin\beta)/(1 + \sin\beta)$ where β is the angle of the inclined plane.

Unit III: Gravitation

1. Describe Boy's method of determining G. Derive the formula used.
2. Give the theory of compound pendulum and explain how it is used to find 'g' at a place.
3. Find expression for gravitational potential and field due to a solid sphere at a point
(i) Outside the sphere (ii) inside the sphere (iii) On the sphere.
4. Find expression for gravitational potential and field due to a spherical shell at a point
(i) Outside the spherical shell (ii) inside the spherical shell (iii) On the spherical shell

Unit IV: Elasticity And Bending Of Beams

1. Derive an expression for the couple per unit twist .Also estimate the work done in twisting.
2. Derive an expression for the rigidity modulus of a wire using static torsion pendulum.
3. How will you determine the rigidity modulus of dynamic torsion pendulum?
4. Derive an expression for the bending moment

5. Derive an expression for elevation at the centre of a bar subjected to uniform bending
6. Derive an expression for depression at the centre of a bar subjected to non-uniform bending.
7. Explain with necessary theory, the method of determining the young's modulus of a bar by cantilever depression method.
8. Describe the experiment to determine the young's modulus of a bar subjected to non-uniform bending. Derive the formula you use.
9. Describe with necessary theory an experiment to determine the young's modulus of a bar by uniform bending.
10. Derive the formula to calculate the radius of curvature.
11. Describe with necessary the oscillation method to determine E for material of a cantilever.

Unit V: Viscosity and Surface Tension

1. Derive Poiseuille's expression for the rate of flow liquid in a capillary tube
2. Describe with necessary theory of Poiseuille's method to determine the coefficient of viscosity of a liquid
3. Derive Stoke's formula by dimensions. Also explain the Stokes' experiment. Derive expression for coefficient of viscosity of a liquid
4. Derive an expression for the excess of pressure inside a spherical liquid drop.
5. Derive an expression for the excess of pressure inside a synclastic surface.
6. Describe an experiment to study the variation of surface tension with temperature by Jaeger's method.
7. Prove that the excess of pressure on one side of a soap film of surface tension over that on the other side is given by $P = 2s(1/R_1 + 1/R_2)$
8. A drop of water of radius 10^{-4} m is split into 1000 equal tiny droplets. Find the mechanical work done. Calculate the excess of pressure inside each droplet, if the S.T of water is 75×10^{-3} N/m.

SECTION– A

Unit I: Elasticity

1. The S-I unit of stress is
 a) N/m **b) N/m^2** c) Nm d) None of the above
2. The S-I unit of strain is
 a) N/m b) N/m^2 c) Nm **d) No unit**
3. The ratio of increase in length to original length is called
 a) Stress **b) Strain** c) Young's modulus d) none of above
4. The restoring force per unit area of a body is called
a) stress b) Strain c) Young's modulus d) gravity
5. Which is more elastic?
a) Steel b) rubber c) cloth d) wire
6. Work done per unit volume during longitudinal strain is
 a) Stress x Strain b) $\frac{1}{3}$ x Stress x Strain
c) $\frac{1}{2}$ x Stress x Strain d) $\frac{1}{4}$ x Stress x Strain
7. The ratio of contraction strain to elongation strain is called
 a) Young's modulus b) rigidity modulus c) bulk modulus **d) poisson's ratio**
8. The ratio of stress to strain is called
 a) workdone **b) modulus of elasticity** c) force d) none of above
9. The couple per unit twist is given by
 a) **$\pi n a^4 / 2l$** b) $\pi n a^2 / 2l$ c) $\pi n a^3 / 2l$ d) none of above
10. The S-I unit of modulus of elasticity is
 a) N/m **b) N/m^2** c) Nm d) No unit
11. The S-I unit of couple is
 a) N/m b) N/m^2 c) **Nm** d) No unit
12. The period of Torsion pendulum is given by
 a) $T=2\pi\sqrt{T/m}$ b) $T=2\pi\sqrt{C/I}$ c) **$T=2\pi\sqrt{I/C}$** d) none above
13. The period of a seconds pendulum is
 a) 1s **b) 2s** c) 3s d) 4s
14. The dimensional formula for Young's modulus is
 a) MLT^{-1} b) MLT^{-2} c) **$\text{ML}^{-1}\text{T}^{-2}$** **d) MLT^{-3}**
15. Shearing strain is also known as
 a) angle of twist **b) angle of shear** c) angle of time d) angle of strain

16. The relation between q, k and n is
 a) $9/q = 1/k + 3/n$ b) $1/3q = 1/n + 1/k$ c) $1/k = 1/3n + 1/4q$ d) None of above
17. The relation between q, n and σ is
 a) $q = 2n(1 + \sigma)$ b) $n = 2q(1 + \sigma)$ c) $n = 2q(1 + \sigma)$ d) $q = n(1 + \sigma)$
18. The modulus of elasticity is equal to
 a) **stress/strain** b) stress x strain c) stress- strain d) stress + strain
19. In a given torsion pendulum the ratio
 a) l / T is a constant b) l^2 / T is constant c) **l / T^2 is a constant** d) none of above
20. If n, k and σ represent rigidity modulus, bulk modulus and poisson's ratio then
 a) $\sigma = 9k - 2n / 9k + 2n$ **b) $\sigma = 3k - 2n / 6k + 2n$**
 c) $\sigma = 3k + 2n / 9k + 2n$ d) $\sigma = 3k + 2n / 6k + 2n$
21. Young's modulus (q), rigidity modulus (n), and poisson's ratio (σ) are related as
 a) $q = 2n / 1 + \sigma$ b) $\sigma = 2q / 1 + n$ c) **$q/n = 2(1 + \sigma)$** d) $2q = n(1 + \sigma)$
22. The dimensions of stress are
 a) MLT^{-2} **b) $ML^{-1}T^{-2}$** c) $ML^{-1}T^{-1}$ d) ML^2T^{-1}
23. Volume strain is ----- times the linear strain
 a) **3** b) 2 c) 1 d) 4

Unit II: Bending of Beams

1. The layer of a beam neither elongated nor contracted is known as
 a) **neutral layer** b) bending layer c) bending axis d) none of above
2. The expression for bending moment is given by
 a) **qAK^2 / R** b) qL^2 / R c) q/R d) qak
3. The geometrical moment of inertia of a beam of circular cross section is
 a) **$\pi r^4 / 4$** b) $\pi r^3 / 3$ c) $\pi r^2 / 2$ d) none of above
4. A thin rod clamped horizontally at one end and loaded at the free end is called
 a) rectangular beam b) **cantilever** c) Loaded beam d) circular beam
5. The S-I unit of bending moment is
 a) N/m b) **Nm** c) N/m^2 d) m
6. The geometrical moment of inertia of a rectangular beam is given by
 a) $bd^2 / 4$ b) **$bd^3 / 12$** c) $bd / 12$ d) none of above
7. The depression (y) produced in a cantilever is given by
 a) $Mgl^2 / 3qI$ b) $g \times Mgl / qI$ c) **$4Mgl^3 / bd^3E$** d) $Mgl/2bdy$
8. If a beam is loaded at both the ends, the type of bending produced is
 a) **uniform bending** b) Non-uniform bending c) cantilever bending d) depression
9. If a beam is loaded at the center, the type of bending is called

- a) uniform bending b) **Non-uniform bending** c) cantilever bending d) none of above
10. The expression for depression produced in a rectangular beam subjected to non-uniform bending is
 a) $y = Mgl^3 / 4bd^3 q$ b) $y = Wl^2 / 4bd^3$ c) $y = Wl / bd^3$ d) $y = Mgl^3 / 4bd^2 q$
11. The expression for elevation produced in a beam subjected to uniform bending is
 a) $y = Wal^2 / 4ql$ b) $y = Wal^2 / 4q$ c) **$y = Wal^2 / 8ql$** d) $y = Wal^3 / 4q$
12. The depression of cantilever is directly proportional to
 a) square of its length b) square root of its length
 c) its length d) **cube of its length**
13. In the case of bending of a rod
 a) **young's modulus comes into play** b) Rigidity modulus comes into play
 c) Bulk modulus comes into play d) None of the above comes into play
14. A rod is supported symmetrically on two knife edges and loaded in the middle
 a) The bending is said to be uniform
 b) **The bending is said to be non-uniform**
 c) each element in the bent beam will have same radius of curvature
 d) cantilever bending
15. In uniform bending there is ----- of beam when it is gradually loaded
 a) **elevation** b) depression c) neither
 d) first elevation and then depression
16. A beam is defined as a rod or bar of uniform cross section whose -----
 a) **length is very large compared to its breadth and thickness**
 b) length is same as thickness c) length is less than thickness
 d) length is less than breadth

Unit III: Thermal Physics

1. Mean free path of molecule of a gas
 a. **depends on speed of the molecule** b. does not depend on speed of the molecule
 c. does not depend on temperature of the gas d. depend on square root of speed of the molecule
2. According to Dulong and Petit's law,
 a. **Cv is independent of temperature** b. Cv depends on temperature
 c. Cv depends on square of temperature d. $Cv \propto T^3$
3. The degree of freedom of a fly in space is
 a. 1 b. 2 c. **3** d. 5

4. The energy per degree of freedom at temperature T is
a. $\frac{1}{2} kT$ b. kT c. $\frac{3}{2}kT$ d. $\frac{1}{2}RT$
5. The ratio of specific heat capacity(γ) of a gas and the degree of freedom(X) of molecules in it are related as
a. $\gamma = 1 - 2/X$ **b. $\gamma = 1 + 2/X$** c. $\gamma = 2/X$ d. $\gamma = 2X$
6. The ratio of specific capacity is of a gas decreases as the atomicity of the gas
a. decreases **b. increases** c. remains constant d. tends to zero
7. The mean free path (λ) of molecules and pressure (P) of a gas are related as
a. $P\lambda = \text{constant}$ b. $P/\lambda = \text{constant}$ c. $\lambda/P = \text{constant}$ d. $P\lambda^2 = \text{constant}$
8. The transport of momentum across a plane in a gas due to molecular motion gives rise to
a. diffusion b. thermal conductivity **c. viscosity** d. osmotic pressure
9. According to kinetic theory of gases, the coefficient of viscosity of a gas is
a. independent of temperature **b. independent of pressure** c. depends on $T^{3/2}$ d. depends on $P^{-1/2}$
10. The thermal conductivity (K), the molar heat capacity (C_v) y, the coefficient of viscosity (η) and the molecular weight (M) of a gas are related as
a. $KM = \eta C_v$ **b. $KMC_v/\eta = 1$** c. $K/\eta = M/C_v$ d. $K/\eta = 1$
11. The direct evidence for random molecular motion is
a. sodium light b. Maxwellian distribution **c. Brownian motion** d. Mean free path η
12. The coefficient of diffusion of a gas varies with temperature T and pressure P as
a. $p^{3/2}/T = \text{constant}$ b. $PT = \text{constant}$ c. $T^{3/2}/P = \text{constant}$ d. $T^{1/2}P = \text{constant}$
13. The coefficient of viscosity of an ideal gas is
a. proportional to its density b. inversely proportional to its density
c. independent of its density d. none of the above
14. The ratio of coefficient of viscosity (η) of a gas to its diffusion coefficient (D) just equal it's
a. pressure **b. density** c. specific heat d. entropy
15. One of the important application of the study of Brownian motion is the determination of
a. the most probable velocity b. kinetic energy
c. mean velocity **d. Avogadro's Number**
16. The mean free path of the molecules of a gas at a given temperature and pressure is $2.0 \times 10^{-7} \text{ m}$. If the pressure is doubled, the new mean free path would be
a. $1 \times 10^{-7} \text{ m}$ b. $0.5 \times 10^{-7} \text{ m}$ c. $4 \times 10^{-7} \text{ m}$ d. $6.0 \times 10^{-7} \text{ m}$
17. The molecular free path is the effect of
a. intermolecular attraction **b. finite size of molecules** c. gravity d. viscosity

18. The mean free path will be less for

- a. **heavier gas** b. lighter gas c. ideal gas d. actual gas

Unit IV: Interference and Diffraction

1. Colours of thin film are due to _____.

- a) **interference** b) diffraction c) dispersion d) refraction

2. In an air wedge, the interference fringes have fringewidth that are _____.

- a) **directly proportional to wave length** b) inversely proportional to wavelength
c) directly proportional to separation at one end d) continuously varying from one end

3. For constructive interference, the path difference between interfering waves must be _____.

- a) **even multiples of $\lambda/2$** b) odd multiple of λ
c) even multiples of λ d) odd multiple of $\lambda/2$

4. The phenomenon of interference was discovered by _____.

- a) Huygens b) Newton c) Maxwell d) **Young**

5. When white light beam is incident on a thin air film enclosed between two glass plates, we get in the reflected beam _____.

- a) **coloured bands** b) dark and bright bands
c) no interference pattern d) interference pattern

6. If d is the thickness of a wire and l is the distance of the wire from the edge of an air wedge, the angle of the wedge is given by _____.

- a) dl b) l/d c) **d/l** d) $d/2l$

7. When light is reflected from the surface of a denser medium a phase – change of _____ occurs.

- a) 2π b) π c) $\pi/2$ d) $\pi/4$

8. For interference in air film at normal incidence the condition for brightness in reflected light is _____.

- a) $2t = 0$ b) $2t = \lambda/3$ c) **$2t = (2n-1)\lambda/2$** d) $2t = n\lambda$

9. Consider a monochromatic light passing through a plane transmission grating at oblique incidence. The deviation produced in the diffracted beam is minimum, when _____,

- a) the angle of incidence = angle of reflection
b) **the angle of incidence = angle of diffraction**
c) the angle of incidence = angle of refraction
d) the diffraction grating is rotated in clockwise direction.

10. The bending of light rays at any edge is known as _____.

- a) Interference b) **diffraction** c) polarization d) refraction

11. Light appears to travel in straight line because _____.
 a) it is not absorbed by the atmosphere b) it is reflected by the atmosphere
 c) **Its wavelength is very small** d) its velocity is large.
12. The resolving power of a grating does not depend upon _____.
 a) order of the spectrum b) **grating element**
 c) total number of lines in the grating d) width of the grating.
13. During oblique incidence on a grating the deviation produced in the diffracted beam is minimum when _____.
 a) $\theta = i/2$ b) $\theta + i = 0$ c) $(\theta + i)/2 = 0$ d) **$\theta = i$**
14. In transmission gratings lines are drawn on a _____.
 a) silver surface b) **glass surface** c) cold surface d) copper surface
15. The relation between the number of lines/metre (N) and the grating element (a + b) is given by _____.
 a) $N = a + b$ b) $N = a - b$ c) **$N = 1/(a + b)$** d) $N = 1/(a - b)$

Unit V: Ultrasonics

1. Ultrasonic waves having frequency greater than -----
 (a) **20000 Hz** (b) 2000 Hz (c) 2 Hz (d) 1000 Hz
2. Sonar works on the principle of -----
 (a) **echosounding** (b) reverberation (c) vibration (d) Oscillation
3. ----- is based on the principle of piezo-electric effect
 (a) **Quartz crystal** (b) cubic crystal
 (c) triclinic crystal (d) orthorhombic crystal
4. Ultrasonic frequencies of ----- can be generated by piezo electric method
 (a) **100 MHz** (b) 200 MHz (c) **500 MHz** (d) 600 MHz
5. ----- method cannot be used if ultrasonic waves is small
 (a) Sensitive flame (b) **Kundt's tube**
 (c) Quartz tube (d) Thermal detectors
6. Ultrasonic waves can be focused by lens formed from
 (a) **plastics or metals** (b) glass (c) stone (d) cork
7. The construction cost of magnetostriction effect is
 (a) **high** (b) low (c) minimum (d) maximum
8. If resonant frequency of piezoelectric oscillator is N, the velocity of ultrasonic waves is -----

 (a) $v = 2d$ (b) $v = 4Nd$ (c) **$v = 2Nd$** (d) $v = 6Nd$
9. frequency of ultrasonic waves in water is around is -----

- (a) 20,000Hz (b) 60,000Hz (c) 15,000Hz (d) **40,000Hz**

10. The metal used in the Magnetostriction is -----

- (a) **Nickel** (b) Iron (c) Gold (d) copper

SECTION-B

Unit I: Elasticity

1. Define stress.
2. Define strain.
3. Define modulus of elasticity.
4. Define Hooke's law.
5. Define poisson's ratio.
6. Give the limiting values of poisson's ratio.
7. Define Young's modulus of elasticity.
8. Define bulk modulus of elasticity.
9. Define rigidity modulus of elasticity.
10. Give the expression for couple per unit twist.

Unit II: Bending Moment

1. What is a beam?
2. What is bending moment?
3. What are neutral axis and neutral surface?
4. Define bending couple
5. What is the internal bending moment?
6. What is the flexural rigidity of the beam?
7. What is geometric moment of inertia?
8. What is geometric moment of inertia for circular bar?
9. What is geometric moment of inertia for rectangular bar?
10. What is the unit for stress?

Unit III: Thermal Physics

1. Define heat.
2. Give any two evidence for molecular motion.
3. Define mean free path.
4. Define transport phenomena.
5. Give the relation connecting thermal conductivity and viscosity of a gas.
6. Give the relation connection thermal conductivity and molecular diameter.
7. Give the relation between diffusion coefficient and viscosity of a gas.

Unit IV: Interference and Diffraction

1. What is meant by monochromatic waves?
2. Define 'interference' of light.
3. What is meant by interference fringes or \cos^2 fringes?
4. Define coherent sources.
5. What is meant by air-wedge?
6. Write the uses of air-wedge.
7. Define diffraction of light.
8. Define Fresnel diffraction.
9. Define Fraunhofer diffraction.
10. Define plane diffraction grating.
11. Define grating element.

Unit V: Ultrasonics

1. List out any two properties of ultrasonics
2. What is magnetostriction effect?
3. Give any two uses of Ultrasonics
4. Define Thermal Detectors.

SECTION – C

Unit I : Elasticity

1. Explain the following
 - a) Hooke's law
 - b) Poisson's ratio
 - c) Elastic moduli
2. Explain the stress-strain curve
3. Obtain an expression for the work done per unit volume during Shearing strain.
4. Define Young's modulus of elasticity. Derive an expression for 'y'.
5. Define bulk modulus of elasticity, Derive an expression for 'k'.
6. Define rigidity modulus of elasticity Derive an expression for 'n'.
7. Derive an expression for Poisson's ratio.
8. Define stress, strain and modulus of elasticity.

Unit II: Bending Moment

1. What is meant by a beam? Explain the term neutral axis, neutral surface, plane of bending and bending moment of the beam.
2. Derive the expression for the young's modulus of the bar in uniform bending.
3. Derive the expression for the young's modulus of the bar in non-uniform bending.
4. Derive an expression for couple per unit twist.

Unit III: Thermal Physics

1. Enumerate the evidences in favour of molecular motion in fluids. Explain each of the evidence briefly.
2. Derive an expression for mean free path. Explain Claussius and Maxwell's modification in the expression for mean free path.
3. Based on kinetic theory concept of molecular motion, derive an expression for Avagadro number N .
4. Explain degrees of freedom, giving examples.
5. State and explain Dulong and Petits law. Discuss its limitations. Show that it follows from the law of equipartition of energy.
6. Explain what physical quantity is transported and how it is transported in the following phenomena: i) viscosity of gases ii) thermal conductivity of gases and iii) diffusion of gases.
5. What are transport phenomena? How are they accounted for?
7. Discuss how viscosity of a gas depends on i) pressuer of the gas and ii) temperature of the gas.
8. Establish that $K/\eta = D$, for a gas, where K is the thermal conductivity, η its viscosity coefficient and D , the diffusion coefficient of the gas.
9. Discuss the dependence of thermal conductivity of a gas on i) pressure and ii) temperature of the gas.
10. Calculate the number of molecules in 1 m^3 volume of hydrogen at N.T.P. If the molecular diameter of hydrogen molecule at $2.24 \times 10^{-10} \text{ m}$, calculate the mean free path at N.T.P.
11. Calculate the mean velocity of the nitrogen molecules at N.T.P. Given that the density of nitrogen at N.T.P. is 1.2 kg/m^3 , its coefficient of viscosity is $1.7 \times 10^{-3} \text{ N/m}^2$ and the mean free path is $8.5 \times 10^{-8} \text{ m}$.
12. The mean free path of nitrogen molecule at a given temperature and pressure is $0.8 \times 10^{-7} \text{ m}$, while the concentration of the molecules is $2.7 \times 10^{25} \text{ molecules per m}^3$. Calculate the molecular diameter.
13. The diameter of helium atom is \AA . One mole of the gas is found to occupy 20×10^{-3} at 20 K temperature. Calculate i) the mean free path of the molecules ii) the number of collision per unit distance and iii) the collision frequency. ($R = 8.4 \text{ joule per Kelvin}$ and Avogadro number $= 6 \times 10^{23}$ per mole)
14. The coefficient of viscosity of oxygen is $1.95 \times 10^{-5} \text{ N-s/m}^2$ and the diffusion coefficient of oxygen is $1.22 \times 10^{-5} \text{ m}^2/\text{s}$. If the average molecular speed is 440 m/s , find the density and

mean free path of the molecules.

15. Calculate the mean free path of nitrogen at 27°C under a pressure of one atmosphere, if the molecular diameter of nitrogen is 3.5Å. (1 atmosphere = $1.01 \times 10^5 \text{ N/m}^2$)

Unit IV: Interference and Diffraction

1. Give the theory of interference in thin films and explain the colours of thin films.
2. Explain the formation of interference fringes by an air wedge and how the phenomenon of interference is used in testing the optical planeness of a glass surface.
3. Describe the construction and action of plane diffraction grating.
4. Distinguish between Fraunhofer and Fresnel class of diffraction.
5. Find the radii of the first three transparent zones of zone plate, whose focal length is 1 metre for $\lambda = 6000 \text{ Å}$. The focal length of the zone plate is $f = r_n^2/n\lambda$, where n is an odd integer such as 1, 3, 5,..... and r_n is the radius of the n^{th} half period zone.
6. A diffraction grating at normal incidence gives a line of wavelength 6000 Å in a certain order superimposed on another line of wavelength 4000 Å of the next higher order. The angle of diffraction is 30° . How many lines are there per unit length in the grating?
7. Define resolving power of grating. Derive an expression for resolving power of a grating.
8. Discuss the phenomenon of Fraunhofer diffraction at a single slit.
9. Define and explain the term “dispersive power of a grating”.

Unit V: Ultrasonics

1. What is Magnetostriction effect? Describe the magnetostriction method of producing ultrasonics
2. What is piezo electric effect? Describe the piezo electric method of producing ultrasonics
3. Explain non-destructive methods of material testing using ultrasonics namely pulse method and Acoustic rating method.
4. Describe the absorption and dispersion of Ultrasonics
5. Explain how ultrasonic waves are used to find the depth of sea and direction signalling
6. Describe how will you measure the velocity of blood flow
7. Explain the measurement of heart movement
8. What are the uses of Ultrasonics?

SECTION D

Unit I: Elasticity

1. Derive an expression for the couple per unit twist. Also estimate the work done in twisting.
2. Derive an expression for the rigidity modulus of a wire using static torsion pendulum.
3. How will you determine the rigidity modulus of dynamic torsion pendulum?

Unit II: Bending Moment

1. Derive an expression for the bending moment
2. Derive an expression for elevation at the centre of a bar subjected to uniform bending
3. Derive an expression for depression at the centre of a bar subjected to non-uniform bending.
4. Explain with necessary theory, the method of determining the young's modulus of a bar by cantilever depression method.
5. Describe the experiment to determine the young's modulus of a bar subjected to non-uniform bending. Derive the formula you use.
6. Describe an experiment to determine the young's modulus of a bar by uniform bending.
7. Derive the formula to calculate the radius of curvature.
8. Describe with necessary the oscillation method to determine E for material of a cantilever.

Unit III: Thermal physics

1. Obtain an expression for i) specific heat capacity of a gas at constant pressure ii) specific heat capacity of a gas at constant volume and iii) ratio of specific heat capacities of a gas, in terms of degrees of freedom.
2. Based on kinetic theory concept of molecular motion, derive an expression for coefficient of viscosity of a gas.
3. Based on kinetic theory concept of molecular motion, derive an expression for thermal conductivity of a gas.
4. Based on kinetic theory concept of molecular motion, derive an expression for diffusion coefficient of a gas.
5. Describe with relevant theory, Lee's Disc method of determining K for bad conductors.
6. Describe the experimental verification of Newton's law of cooling.

Unit IV: Interference and Diffraction

1. Explain the formation of interference fringes by an air wedge. Derive an expression for the fringe width. How can the above method be used to measure the diameter of a thin wire accurately?
2. Give the theory of plane transmission grating. Describe how it may be used to determine wavelength of light.
3. State and explain Raleigh criterion for resolution. Derive an expression for resolving power of grating.
4. Give the theory of zone plate. Obtain an expression for primary focal length of the zone plate.
5. How would you show that the zone plate has multiple foci? Give a comparison of the

performance of a zone plate with that of a convex lens.

Unit V: Ultrasonics

1. Explain piezo electric effect. Describe the piezo electric method of producing ultrasonic waves
2. Explain how ultrasonic waves are produced. Explain how the ultrasonic pulse technique is used for non -destructive testing materials write a short on SONAR
3. Explain how ultrasonics are used to find depth of the sea
4. Describe a method to produce ultrasonics. What are the applications of ultrasonics in Industry?
5. Explain the production of ultrasonics by magnetostriction and piezoelectric methods

ST. MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI - 628001
I B.SC. PHYSICS
SEMESTER I
PROFESSIONAL ENGLISH FOR PHYSICS - I

Subject Code: 21UPHPE1

QUESTION BANK

SECTION A

I. ANSWER THE BELOW QUESTIONS

When we hear the word "crystals," we usually think of coloured minerals. But those are not the only types of crystals. Graphite in pencils, table salt and snow are crystals, too. What all crystals have in common is an extremely well organized molecular structure. In a crystal, all of the atoms (or ions) are arranged in a regular grid pattern. For example, in the case of table salt (NaCl), the crystals are made up of cubes of sodium (Na) ions and chlorine (Cl) ions. Each sodium ion is surrounded by six chlorine ions. Each chlorine ion is surrounded by six sodium ions. It's very repetitive, which is exactly what makes it a crystal!

Different minerals have different molecular compositions. These molecular compositions form structures of different shapes. Table salt naturally forms cubic crystals. Quartz crystals, which are made up of silicon dioxide (SiO₂) molecules, form hexagonal prisms with hexagonal pyramids on either end. Snow is a form of ice crystal. It is made up of water (H₂O) molecules. These water molecules form flat hexagonal plane crystals.

1. Synonyms:

- a. Repetitive
- b. Molecules
- c. Compositions

2. Match the following:

- a. Graphite -Chlorine ion
- b. Sodium ion - Cubic crystals
- c. Table salt -Pencils

3. Fill in the blanks:

- a. Each chlorine ion is surrounded by_____sodium ions.
- b. Different minerals have different____compositions.
- c. Quartz crystals are made up of_____.

4. Rearrange the following words in proper order

- a. six/by/chlorine/is/sodium/surrounded/each/ions/ion
- b. of/a/ice/is/crystal/snow/form
- c. is/up/molecules/snow/water/made/of

5. Choose the right word:

- a. The atoms are arranged in a____(irregular/regular) grid pattern
- b. All crystals in common have_____(unorganised/well-organized) molecular structure.
- c. Different minerals have_____(different/indifferent)molecular compositions

II. Select the pair that has the same relationship as the original pair of words

Reflection : light

- a. movie : scene
- b. echo : sound
- c. sentiment : feeling
- d .iris : sight

III. Choose the option which expresses the meaning of the underlined idiom:

All formulae of Physics are at his fingertips.

- a. To take revenge
- b. Matter of shame
- c. Complete knowledge
- d. To keep away

IV. Fill in with the correct one word substitute for the following:

- i. A branch of Physics that studies the behavior and properties of light.
- ii. The quality of reflecting light and changing colour with reference to an opal.
- iii. The emission of light by a substance that has absorbed light or other electromagnetic radiation.
- iv. An electrically neutral group of two or more atoms held together by chemical bonds.
- v. An apparatus containing a movable mirror, used to reflect sunlight in a fixed direction.

V. Choose the most appropriate description about these three words:

Comets : Stars : Planets

- a. They are shining masses.
- b. They give out light.
- c. They are rotating from left to right.
- d. These are heavenly bodies

VI. Find the correctly spelt word:

- a. Satelite
- b. Sattelitel
- c. Satellitel
- d. Sattellitel

VII. Choose the one which best expresses the given sentence in passive voice:

James Watt discovered the energy of steam.

- a. The energy of steam was discovered by James Watt.
- b. The energy of steam discovered by James Watt.
- c. James Watt was discovered by the energy of steam.
- d. James Watt has discovered energy by the steam.

VIII. SPOT THE ERROR AND CORRECT THE SENTENCE

- a. The cattle is grazing near the farm
- b. The company was founded in the year of 1992
- c. Who are you talking to?
- d. He is superior than me in position

IX. Read each sentence to find out whether there is any grammatical error in it. The error, if any will be in one part of the sentence. The letter of that part is the answer. If there is no error, the answer is 'D'. (Ignore the errors of punctuation, if any).

1. (Solve as per the direction given above)

- a. one of the members
- b. expressed doubt if
- c. the minister was an atheist
- d. no error

2. (Solve as per the direction given above)

- a. My papa
- b. in bad mood
- c. Today
- d. No error

3. (Solve as per the direction given above)

- a. Do the roses in your garden smell?
- b. More sweetly

- c. Than those in ours?
- d. No error

X. Choose a word from the given alternatives, that is similar to given words and hence belongs to the same group.

Ohm : Watt : Volt

- a. Light
- b. Electricity
- c. Hour
- d. Ampere

XI. Read the following paragraph and answer the questions given below:

Earthquakes and tsunamis are sub-terrain phenomena and predicting this from space observations would be a great challenge. Space scientists of multiple nations should work together to use satellite deep penetration images to predict the earthquake or shock wave propagation. The focus must be on earthquake forecasting with an adequate warning so that people can move to safer areas .

Fill in the blanks:

1. Earthquakes and tsunamis are _____ phenomena.
2. Space scientists should work _____.
3. The focus must be on earthquakes _____.

XII. Choose the correct definition of these words and expressions in italics in the context they are used in the text

1. Useful in *erecting* proper beams to support...
 - i. Put together and set upright
 - ii. Stand straight
 - iii. create
2. this theorem *functions* as the basic principle...
 - i. celebrations
 - ii. acts or works
 - iii. a mathematical terminology

XIII. READ THE PASSAGE AND ANSWER THE QUESTIONS

Bio fuels are fuels made from crops which have just been harvested and from biomass,

which contains chemical energy stored from the sun. Bio fuel (also called agro fuel) is an abbreviation for bio-organic fuel. It describes any plant or animal which can burn and be used for fuel. Biomass from which bio fuel is made includes products like wood, sugarcane, manure and waste from agriculture. Coal and wood are also, used for energy but produce much more pollution in the atmosphere. They are fossil fuels too, made from dead plants and animals of long ago.

Fill in the blanks with the correct word from the passage

1. Bio fuels are converted into energy by the process of _____
2. _____ can be used as an alternative to petroleum in many products.
3. _____ is a power crop that is easily available.

State whether the following sentences are TRUE or FALSE

1. Biomass contains solar energy.
2. Grass is not used to make bio fuel.
3. Wood is both a fossil fuel and a bio fuel.

XIV. Frame 'Wh' Questions to the answers given below

- a. constant means curvature.
- b. Interferences of different colours.
- c. When two bubbles merge.

XV. Who am I?

- a. I am an ancient device that is used for arithmetic calculations.
- b. I am a device for increasing speed, especially the pedalina vehicle that controls the speed of the engine.
- c. I am a branch of science that deals with sounds.

XVI. Classify the following terms as devices, concepts or processes in the table

Raman Effect, Scattering, Crystal Structure, Acoustics, Optics of colloids, Prism, Diffraction		
Device	Process	Concept

XVII. Match the following:

- | | |
|----------------------|--|
| 1. Crystal Dynamics- | a frequency above the human ear's audibility limit |
| 2. Hypersonic | - the vibrational movement of atoms in the solid state |
| 3. Ultrasonic | - Speed of more than 5 Mach |
| 4. Optics | - concerned with the properties of sound. |
| 5. Acoustics | - studies the behaviour and light |

XVIII. Give specific information on the term given:

1. diffraction
2. Raman effect
3. ultrasonic

XIX. Unscramble the following words

- i) Naeoelcepsc
- ii) Ramanerdeetni
- iii) Oarcmlule

Section B**1. Unscramble the words with the given clue:**

- a. c r t k o e - Missile
- b. n a p e l t - heavenly body

2. Write sentences using the following terms:

- a. electron
- b. recoil
- c. urge
- d. discovery
- e. congress
- f. voyage
- g. Nucleus

3. Pick out the synonyms of the following terms from the given line:

A robot must protect its own existence as long as such protection does not conflict with the first or second Law.

- a. Disagreement -
- b. Alive –

4. Pick out the antonyms of the following terms from the given lines:

Mini drafter is a device with two scales set at right angles to each other .It combines the functions

of T square, set squares, scales, climograph and protractors.

- a. Parallel x
- b. Splits up x

5. Fill in with suitable prepositions:

White light is obtained_____using multiple semiconductors or a layer_____light emitting phosphor on the semiconductor device.

6. Fill in with suitable articles:

LED display is_____ screen display technology that uses a panel of LEDs as_____light source.

7. Rearrange the given words in the proper order:

- a. George Boole / by / introduced / was / Boolean Algebra
- b. First / Marie Curie / nobel / the / was / win / woman / to

8. Unscramble the words with the given clue:

- a. r t v o g i i a t n - force
- b. e l t c r n o - elementary particle

9. Write sentences using the following terms:

- a. frequency
- b. potential

10. Correct the error in the following sentences:

- a. Ethics are important.
- b. Where is my stockings?

11. Pick out the antonyms of the following terms from the given lines:

Nikola Tesla, a Serbian **immigrant** with extensive background in physics and engineering, received a **patent** for his alternating current (or AC) induction motor.

- a. Habitant x
- b. Limited x

12. Fill in with suitable articles:

Even though rockets were used in other parts of_____world, Tipu was able to take rocket technology to_____next level.

13. Fill in with suitable prepositions:

Curie did her work_____radioactivity and received her second Nobel Prize in Chemistry in 1911 for the isolation_____pure radium.

14. Frame two 'wh' questions to get the underlined words in the following line as the answer:

Rakesh went to the **Physics laboratory**.

15. Model auxiliaries:

- a. You..... Look at me when I am talking to you (could, should, would)
- b.be able to help you, but I'm not sure yet.(might ,would ,should)

16. Tense: The headmaster to talk to you (want , wants ,is wanting)

17. What is big bang theory?

18. What is galaxy?

19. Write the advantages and disadvantages of 5G network?

20. What are the uses of satellites?

21. Write some of the great achievements of the Indian space research organization.

22. Define the following terminologies

- a. Molecular Diffraction
- b. Infrared Spectra
- c. Photo detectors
- d. Opalescence
- e. Diffraction Grating

23. How are Black holes formed?

24. What is a Black hole? Why is NASA interested in it?

25. Explain the functionality of gravitational force with examples

26. Who invented cosmic Rays? What was his hypothesis?

27. Write a note on Wireless communication.

28. How did Newton identify the gravitational force?

29. How is space technology useful to use now a days?

30. How do we get signals for our Dish Antennas?

31. Give instruction to your classmates to open a G-mail account?

32. What is Mind Mapping?

33. What is Group Discussion?

34. What is smart technology?

SECTION-C

1. Study the following detailed graph on the use of electrical gadgets and answer the questions given below:(5 x 1 = 5)

- Which gadget was mostly used by people in 2017?
- What are the electrical gadgets mentioned in the graph?
- Which appliance has the least Usage in 2019?
- What are the uses of the electrical gadgets in today's world?
- What will the increase in the usage of electronic devices lead to?

2. a. Arrange the following sentences in the proper order:

- When a satellite is launched, the rocket begins by going slowly upwards through the air.
- However, the higher it goes, the less air it meets.
- Consequently, the rocket still does not become too hot.
- As the rocket goes higher, it travels faster.
- For the atmosphere becomes thinner.
- As a result there is less friction.

- b. A force of exists between everybody in the universe.

P : Normally it is very small but when the one of the bodies is a planet, like earth, the force is considerable.

Q : It has been investigated by many scientists including Galileo and Newton.

R : Everything on or near the surface of the earth is attracted by the mass of earth.

S : This gravitational force depends on the mass of the bodies involved.

The Proper sequence should be:

- a. PRQS b. PRSQ c. QSRP d. QSPR

3. Express your views on online classes by completing the following expressions:

- i) I think _____
- ii) I believe _____
- iii) It seems to me that _____
- iv) In my opinion _____
- v) I am convinced that _____

4. Read the following passage and draw a flow

chart.Process Of Making Photocopies

Static electricity enables a photocopier to produce almost instant copies of documents. At the heart of the machine is a metal drum which is given a negative charge at the beginning of the copying cycle. The optical system then projects an image of the document on the drum. The electric charge disappears where light strikes the metal surfaces, only dark parts of the image remain charged. Positively charged particles of toner powder are then applied to the drum. The charged parts of the drum attract the dark powder, which is then transferred to a piece of paper. A heater seals the powder to the paper and a warm copy of the document emerges from the photocopier.

- 5.** What do you think is the effect of mobile phones in the lives of students?
- 6.** Discuss about the image that you see below and what it indicates. How has technology influenced our lives?

7. Frame five 'wh' questions to get the underlined words in the following line as the answer:

Rakesh went to the **Physics laboratory****last week** because he had to **complete** his **electronics practicals**.

8. Share your memorable experiences with soap bubbles from your childhood to the present.

9. READ THE FOLLOWING PASSAGE AND ANSWER THE BELOW QUESTIONS

The ocean is never still. Whether observing from the beach or a boat, we expect to see waves on the horizon. Waves are created by energy passing through water, causing it to move in a circular motion. However, water does not actually travel in waves. Waves transmit energy, not water, across the ocean and if not obstructed by anything, they have the potential to travel across an entire ocean basin.

Waves are most commonly caused by wind. Wind-driven waves or surface waves, are created by the friction between wind and surface water. As wind blows across the surface of the ocean or a lake, the continual disturbance creates a wave crest. These types of waves are found globally across the open ocean and along the coast.

1. What creates a Wave Crest?
2. Write your own experience of admiring the waves.

10. Brief out the similarities and differences between biomass and bio fuel.

11. Write the definitions for the following words:

1. Barometer
2. Computer program
3. A flowchart
4. Gobar gas plant
5. Microphone

12. Write the use of the following electrical gadgets and their impact (Positive / and Negative) on the lives of people.

- a. Mobile Phone
- b. Microwave Oven
- c. Refrigerator
- d. Earphone
- e. Wi-Fi Route

13. READ THE FOLLOWING PASSAGE AND ANSWER THE BELOW QUESTIONS:

Artificial intelligence (AI) refers to the simulation of human intelligence in machines that are programmed to think like humans and mimic their actions. The term may also be applied to any machine that exhibits traits associated with a human mind such as learning and problem-solving. The ideal characteristic of artificial intelligence is its ability to rationalize and

take actions that have the best chance of achieving a specific goal. When most people hear the term artificial intelligence, the first thing they usually think of is robots. That's because big-budget films and novels weave stories about human-like machines that wreak havoc on Earth. Artificial intelligence is based on the principle that human intelligence can be defined in a way that a machine can easily mimic and execute tasks, from the most simple to those that are even more complex. The goals of artificial intelligence include learning, reasoning and perception. The applications for artificial intelligence are endless. The technology can be applied to many different sectors and industries. AI is being tested and used in the health care industry for dosing drugs and different treatment in patients and for surgical procedures in the operating room. Other examples of machines with artificial intelligence include computers that play chess and self-driving cars. Weak AI tends to be simple and single-task oriented, while strong AI carries on tasks that are more complex and human-like.

1. Are we becoming too dependent on robots? Justify your answer
2. Can Artificial Intelligence replace human intelligence? State reasons.
3. Do you think creating robots with human thinking skills is a good idea?
4. What kind of robot will you create in future if you get a chance? Why?

14. READ THE FOLLOWING PASSAGE AND WRITE A SUMMARY OF THE TEXT ON THE MYSTERY OF BLACK HOLES:

A black hole comes from the death of a large star (at least 10 times bigger than our Sun) Exploding at the end of its life in a supernova. The Sun, being too small, won't ever become a black hole, it will expand, contract and cool off in its death process. This is a simple explanation of what a black hole is and how astronomers identify them. The constant fusion of hydrogen to helium creates the energy and radiation from a star. A star is in a stable state for most of its life as the energy pushing out from the star balances with the gravitational force pulling in.

At the end of a star's life, stars like our Sun will continue fusing elements together like helium to carbon, carbon to neon, but not much further. Large stars will continue fusing elements until the star reaches iron. Iron is a very stable element, and gravity alone cannot compress it further. Iron builds up in the core, and the internal pressure of energy radiating outwards becomes out of balance with the pressure of gravity pulling inwards. The outer layers of the star are no longer supported by the radiation pressure of nuclear fusion, and the star's gravity pulls the outer layers into the core. When the incompressible core connects with the outer layer shockwave is sent through the densely packed star, which results in the fusion of other elements on the periodic table after iron.

Now the energy being released overwhelms the pressure of gravity, and the collapsing star explodes in a supernova, the largest explosion known. The lighter outer layers are flung off into space, and the remaining core can create a black hole. A black hole has so much mass tightly packed into a small space that, close up, its gravity is so strong that nothing nearby can escape it. To get away from a black hole, you'd have to travel faster than the speed of light, which isn't possible. The Cygnus X-1 blackhole formed when a large star caved in .It is pulling matter from the near by blue star.

15.READ THE PASSAGE AND WRITE THE USES OF SPACE TECHNOLOGY

Humans have a great fascination for space and attempted to explore it for a long period of time. During the later part of the 20th century, the man was able to overcome the force of gravity and developed rockets that can reach orbital velocity. This invention of space vehicles that can attain escape velocity paved the way for space exploration. During world war II the Germans developed missiles with a range of 200 miles. Immediately after the world war both the then Soviet Union and the USA began their missile and space programmes and competed for superiority in the space. The Soviet Union tasted success initially as it achieved both the milestones of launching the first satellite in 1957 and sending a human being to orbit earth in 1961. The USA stunned the world by its moon landing missions when astronaut Neil Armstrong in 1969 became the first human being to land in the moon. During the beginning of the 1970s satellites were used primarily for military purposes. Deep space exploration became the focus of the space powers as many satellites and robotic spacecraft were sent to explore the planets like Mars, Venus, Jupiter, and Saturn. Americans launched and deployed 'Sky Lab' the first space station which has altered the modes of deep space exploration. The 1980s marked the emergence of a new era in space technology when satellites were used to transmit television programmes and telecommunication signals. Satellites begin to influence human life in unprecedented ways as they played a pivotal role in communication, remote sensing and earth observation. In a way, satellites contributed immensely to the communication revolution and it continues to contribute to the evolution of communication systems.

The reusable space shuttles enhanced the possibilities of interplanetary missions and sending orbiters, landers, and rovers to various planets. Some rovers landed in asteroids and brought back material to earth. The world has witnessed the significance of satellites and space technology during the Gulf war, where the allied forces enjoyed the advantage of space science in gathering information about troop movements, possible missile attacks and precise navigation.

The progress of the war clearly indicated the dominance of the allied forces and the huge difference found was the advanced space technology. The end of the cold war marked the end of competition between the USA and the USSR in space. America and Russia along with other countries established an international space station, a research laboratory in space that collects data that contributes immensely to our understanding of the origin and evolution of galaxies, planets and other cosmological elements. Earth-orbiting satellites provide important services like weather forecasting, resource management and telecommunication. They also offer indispensable help in positioning and navigation.

16. Write in about 50 words without making corrections or refining your text the ways and means of saving electricity.

17. Write extended definitions for the following terms

- a. Radiation
- b. Rheostat
- c. Robot
- d. Scientist
- e. Sensor

19.

- a. How has technology influenced our lives?
- b. What is smart technology?

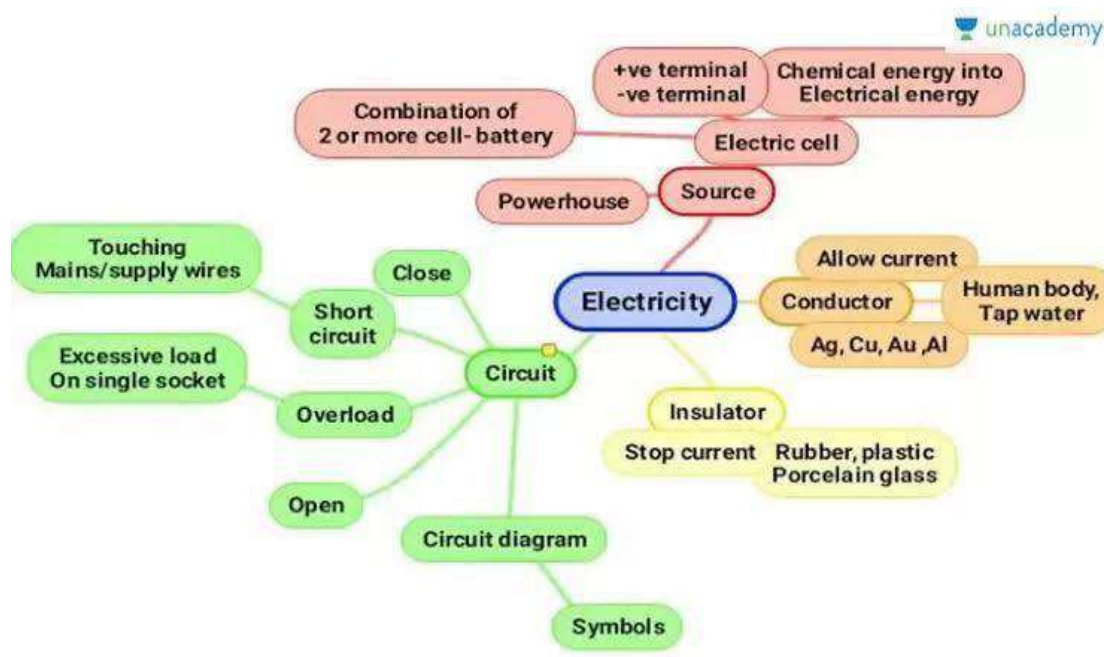

20. Based on the story, 'Too Bad' write an imaginary essay on the future of robotics in the field of medicine.

Section-D

1. "Science can only flower out when there is an internal urge. It cannot thrive under external pressure." Connect these words of Sir CV Raman with his actions
2. You are given the task of explaining the movement of planets to your classmates with the help of the given picture. Narrate the process and use a flow chart to explain.

3. Reflect your ideas on the following concept map:

4. Find at least 20 Physicists from the following grid.

FAMOUS PHYSICISTS WORDSEARCH

D	R	O	F	R	E	H	T	U	R	R	M	H	S	N	O	K	A	M	L

5. Read the following passage and answer the questions that follow.

APJ AbdulKalam's speech at IIT Madras 2010

Friends, before I begin my address I want to share a thought with all the youth present here. I have met, so far, 11 million youth like you in a decade's time, in India and abroad. I have seen their hopes, experienced their pains, walked with their aspirations and heard through their despair. All this experience made me learn something about them, which I would like to share with you: I learnt, every youth wants to be unique, that is, YOU! But the world all around you, is doing its best, day and night, to make you just "everybody else". Being like everybody else is convenient at the first glance, but not satisfying in the long vision.

The challenge, therefore, my young friends, is that you have to fight the hardest battle, which any human being can ever imagine to fight; and never stop fighting until you arrive at your destined place, that is, a UNIQUE YOU! Being unique will require excellence. Let us understand what is excellence in more detail. Excellence is a self-imposed self-directed life-long process. Excellence is not by accident. It is a process, where an individual, organization or nation, continuously strives to better oneself. The performance standards are set by themselves, they work on their dreams with focus and are prepared to take calculated risks and do not get deterred by failures as they move towards their dreams. Then they step up their dreams as they tend to reach the original targets. They strive to work to their potential, in the process, they increase their performance there by multiplying further their potential and this is an unending life cycle phenomenon. They

are not in competition with anyone else, but themselves. In this context, I will talk to you about four important aspects in life with my experiences. Aim in life, Acquiring Knowledge, Working Hard towards your dream even in the times of difficulty and then finally how to manage failures and success in life.

- a. What does the author mean when he says I have seen their hopes. Heard through their despair?
 - b. What does the author mean by “UNIQUEYOU”?
 - c. What does the world around you wants you to be according to the passage?
 - d. How according to the author APJ Abdul Kalam, the pursuit of excellence achieved?
 - e. What is the “unending life cycle phenomena” that the author is referring to?
6. Read the following passage and make notes using any one of the suitable methods of note making and summary the information.

PAPERBOOKS AND E-BOOKS

There is a growing concern that mass media and digital technologies have decreased the time spent on reading. Still, people all over the world still like books. Reading is a great pleasure because you have a chance to immerse into the exciting world and learn something new. Thousands of new books are published every year, and given the number of already existing books, every person has unlimited opportunities in selecting some interesting pieces of literary work. During the past several years, e-books have gained immense popularity around the world. Due to their accessibility and convenience, they easily won over the market and now successfully compete with traditional paperbooks. This essay will explore differences and similarities between e-books and paper books.

Despite all their visible differences, digital versions and paper books are similar in many ways. First, they both have the same text structure including the cover, title page, copyright page, table of content, chapters, etc. Second, they have the same function – provide readers with new information. Irrespective of the form, all readers use paper books and e-readers for the same purposes, that is, to study, relax, work, and learn.

At the same time, there are many differences between them too. E-books are sleek and thin, which makes them easier to carry. They have a huge capacity, meaning that users can download thousands of books in one gadget and spare themselves of the necessity of carrying large volumes. Some opponents of e-books claim that contrary to regular books, electronic devices are not so pleasant to smell and touch. They are made of plastic and metal that have no smell, whereas traditional books smell of paper, ink, dust, someone's perfumes, and many other things

related to their history. Some people love old library books for this unique, authentic smell that cannot be compared to the coldness and impersonality of digital devices.

To conclude, the selection of a form depends on the purpose, readers' taste, financial resources, etc. E-books and traditional books have their similarities and differences, and it seems there is no better choice. Ultimately, it is information that matters, so everything works as long as you can get it.

7. Write an essay on "How do you productively utilise the Covid-19 Lockdown period".
8. Write a narrative essay on the incident which created an impact on you.
9. Describe an essay in passion of life in four or five paragraphs.
10. Why technology is a bad thing for growing minds?
11. How technology has destroyed human interaction? Explain your views in four or five paragraphs.
12. Based on the story, 'Too Bad' write an imaginary essay on the future of robotics in the field of medicine.
13. Read the following passage and answer the questions;

Marie Curie was born in Poland she lived till she was twenty-She was the fifth child in her family. She had a difficult childhood as her parents and one of her died before she was fifteen as graduated from school. She was married to her colleague Pierre Curie and had two daughters. The couple discovered Radium and Polonium and worked together to study radioactivity for which they received the Nobel prize in Physics. Pierre was an exceptional physicist but died in an accident in 1903.

Marie was an excellent student managed to move to Paris to her higher degrees and start scientific work. She had to overcome severe financial difficulties in order to pursue interest in academics and research. Marie Curie was the first woman to win a Nobel Prize and also the first person to receive two Noble prizes. In 1935, another Nobel Prize would come to the family, as Curie's daughter Irene would win the Noble Prize in Chemistry with her husband for their work on artificial radioactivity. Curie's contributions to Nuclear Physics is immeasurable. She has also been an inspiration to girls all over the world to pursue a career in Physics and Chemistry.

Answer the following questions

1. Describe Curie's childhood.
2. Who discovered the electron? Which year was it discovered?
3. Briefly describe Marie Curie's contributions to the field of Science
14. The pie chart given below illustrates how internet users prefer to access the internet at home and in other places. Summarise the information in the pie chart by selecting and reporting the main features in four or five paragraphs.

15. READ THE FOLLOWING PASSAGE AND ANSWER THE QUESTIONS BELOW:

Can talking on a mobile phone be hazardous to your health? It is difficult to know for sure. Some research suggests that heavy users of mobile phones are at a greater risk of developing cancerous brain tumors. However, many other studies suggest that there are no links between cancer and mobile phone use. The main problem with current research is that mobile phones have only been popular since the 1990s. As a result, it is impossible to study long term exposure to mobile phones. This concerns many health professionals who point out that certain cancers can take over twenty years to develop. Another concern about these studies is that many have been funded by the mobile phone industry or those who benefit from it.

Over five billion people now use mobile phones daily, and many talk for more than an hour a day. Mobile phone antennas are like microwave ovens. While both rely on electromagnetic radiation (EMR), the radio waves in mobile phones are lower in frequency. Microwave ovens have radio wave frequencies that are high enough to cook food, and they are also known to be dangerous to human tissues like those in the brain. The concern is that the lower-frequency radio waves that mobile phones rely on may also be dangerous. It seems logical that holding a heat source near your brain for a long period is a potential health hazard.

Some researchers believe that other types of wireless technology may also be dangerous to human health, including cordless phones, wireless gaming consoles, and laptop or tablet computers with wireless connections. They suggest replacing all cordless and wireless devices with wired ones where possible. They also say that many cordless phones can emit dangerous levels of Electromagnetic Radiation even when they are not in use. They even suggest keeping electronic devices such as desktop and tablet computers out of the bedroom or at least six feet from the head while we're sleeping.

A growing number of health professionals worldwide are recommending that mobile phone users err on the side of caution but this cannot be accepted, until more definitive studies can be conducted. They use the example of tobacco to illustrate the potential risks. Many years ago, people smoked freely and were not concerned about the effects of cigarettes on their health. Today, people know that cigarettes cause lung cancer, though it is still unknown exactly how or why. Some doctors fear that the same thing will happen with mobile phones. In May 2016, the UK's Independent newspaper reported

on research by the US government's National Toxicology Program that showed a slight increase in brain tumors among rats exposed to the type of radio frequencies commonly emitted by mobile phones. This doesn't prove that mobile phones can cause brain tumors in humans, but it does show that it's possible. As a result, many experts now recommend texting or using headsets or speakerphones instead of holding a mobile phone to the ear.

- a. How does the usage of mobile phones affect our health?
- b. In what way does a cordless phone harm our body?
- c. What are the dangers caused by the microwave oven to humans?
- d. Why should electronic gadgets be kept out of the bedroom while sleeping?
- e. What was the finding of the US government's National Toxicology?

16. Why technology is a bad thing for growing minds? How technology has destroyed Human interaction? Explain your views in four or five paragraphs.

17. Imagine yourself as a student of Physics and you attend a Lab class, and you discuss the use of learning computer graphics and C++ with your friends.

18. Read and Write ten sentences about the significance of Newton's theory in Physics.

An apple inadvertently fell on his head as he was lightening up under the oak. He began to question at that moment about the natural force that drew the apple toward the ground. He assumed this is the force that keeps the moon on its orbit and helps the earth function properly. He called that force 'gravity' and he explained the gravity influence on all objects. Universe formation extends beyond human rationality, creativity, and imagination. Understanding how it (universe) functions, moves and changes over time is subtle. In the past, the celebrated scientists made an outstanding effort to explain the universe, and yet it persists in the present. Isaac Newton is the first person to think about Gravity and everyone knows an apple is falling from the tree. The advent of the 'Gravity Theory' has stated that gravity influences everything in the universe. Consequently, in his "The Treatise of Human Nature," David Hume is another man who believed that 'scientific concepts should be based on experience and evidence rather than on reason alone.' He also indicated that time doesn't occur separately from object movement. These philosophers lead to the study of relativity, Einstein himself wrote, "It is very possible that I would not have arrived at this solution without these philosophical studies." As a result of these ideas Albert Einstein has developed a new theory on two principles. First he said, 'for all observers, the laws of physics appear the same. Secondly, he calculated the speed of light remaining unchanged. The ultimate formation of relativity theory has emerged and he said time-space is one continuum; therefore, time and space cannot be separated from each

other. For this Einstein describes that gravity falls in relative terms. Hence he said gravity bend slight and the mathematical phenomena called 'Gravitational Lensing' emerges there.

SEMESTER II
CORE I – Thermal Physics and Optics- 21UPHC21

SECTION – A

Unit I: Laws of Thermodynamics

1. The differential form of the first law of thermodynamics is -----.
(a) $dQ=dU+dW$ (b) $dU=dW+dV$ (c) $dV=dW+dU$ (d) $dQ=dU+dT$
2. According to second law, efficiency cannot be greater than -----.
(a) 0 (b) **1** (c) 1.5 (d) 0.5
3. No entropy change takes place when pure crystalline solids react at -----.
(a) 100 K (b) 200 K (c) absolute zero (d) low temperatures
4. Entropy of a system is
(a) an intensive property (b) **an extensive property**
(c) an imaginary quantity (d) specific heat capacity
5. The S.I unit of entropy is
(a) J-K (b) **J /K** (c) W/K (d) Jm^2 /K
6. A given system's internal energy change is indicated by the change of
(a) entropy (b) **temperature** (c) pressure (d) volume
7. Entropy of an isolated system
(a) **remains constant** (b) can never decrease
(c) is independent of its temperature
(d) is independent of how much mass of the system is taken
8. When the temperature of a system does not change , the internal energy of the system
(a) changes very quickly (b) is proportional to square root of the temperature
(c) **remains constant** (d) is simply the potential energy of the molecules of the system
9. The mean free path (λ) of molecules and pressure (P) of a gas are related as
(a) **$P\lambda = \text{constant}$** (b) $P/\lambda = \text{constant}$ (c) $\lambda/P = \text{constant}$ (d) $P\lambda^2 = \text{constant}$
10. The coefficient of diffusion of a gas varies with temperature T and pressure P as
(a) $p^{3/2}/T = \text{constant}$ (b) $PT = \text{constant}$
(c) **$T^{3/2}/P = \text{constant}$** (d) $T^{1/2}P = \text{constant}$
11. The mean free path will be less for

- (a) **heavier gas** (b) lighter gas (c) ideal gas (d) actual gas
12. critical coefficient is -----
 (a) RT_c/PV_c (b) RT_c/P_cV (c) RT_c/PV (d) **RT_c/P_cV_c**
13. The ratio of coefficient of viscosity (η) of a gas to its diffusion coefficient (D) just equal to its
 (a) pressure (b) **density** (c) specific heat (d) entropy
14. According to Vander Waals $V_c =$ ----- for all gases.
 (a) 4b (b) 2b (c) **3b** (d) 5b

Unit II: Transfer of heat and low temperature physics

- Thermal conductivity in a solid is due to
 (a) collision of electrons in it (b) **collision of vibrating atoms**
 (c) movement of atoms in zig zag way (d) none of the above
- If λ be the thermal conductivity, ρ the density and C the specific heat capacity of a solid, its thermometric conductivity is
 (a) $\lambda\rho C$ (b) $\lambda\rho/C$ (c) **$\lambda/\rho C$** (d) $\rho C/\lambda$
- The unit of thermal conductivity is
 (a) W m/K (b) W K/m (c) **$W m^{-1}K^{-1}$** (d) Wm^{-1}
- Pressure of diffuse radiation is equals to
 (a) **$\frac{1}{3}$ X total energy density** (c) $\frac{1}{4}$ X total energy density
 (b) $\frac{1}{3}$ X total energy volume (d) $\frac{1}{4}$ X total energy volume
- The temperature at which the Joule – Thomson effect changes sign is called the -----
 (a) **Temperature of inversion** (c) critical temperature
 (b) ordinary temperature (d) low temperature
- At sufficiently low temperature, all gases show a -----effect.
 (a) Heating (b) **cooling** (c) inversion (d) expansion
- Inversion temperatures for hydrogen and helium are
 (a) $-27^\circ C$ and $-40^\circ C$ (b) $80^\circ C$ and $-240^\circ C$
 (c) $-8^\circ C$ and $-240^\circ C$ (d) **$-80^\circ C$ and $-240^\circ C$**
- To obtain cooling of a gas due to Joule – Kelvin expansion, the initial temperature of the gas must be

- (a) greater than Boyle temperature (b) less than Boyle temperature
 (c) **less than inversion temperature** (d) greater than inversion temperature
9. If a and b the Vander waal's constants, the temperature of inversion of a gas is given by
 (a) $8a/27Rb$ (b) $a/27b$ (c) **$2a/Rb$** (d) a/Rb^2
10. One of the applications of Joule – Kelvin effect is
 (a) production of low temperature near 1 kelvin
 (b) production of low pressure near 1 millibar
 (c) **liquefaction of gases**
 (d) superconductivity
11. Adiabatic demagnetization causes
 (a) **cooling** (b) heating (c) neither cooling nor heating (d) change of state
12. The temperature of inversion of helium is -----
 (a) 43 K (b) **33 K** (c) 32 K (d) 43 K
13. In adiabatic demagnetization method of cooling, the fall in temperature is proportional to
 (a) B (b) **B^2** (c) \sqrt{B} (d) $1/B$
14. ----- is used for the manufacture of fertilizers.
 (a) Helium (b) **Nitrogen** (c) Hydrogen (d) Argon

Unit III: Dispersion and Aberration

1. The ratio of angular dispersion to the deviation of mean ray is called as _____.
 a) **dispersive power** b) refractive index c) radius of curvature d) focal length
2. The condition for achromatism for two lenses in contact is _____.
 a) $\frac{\omega_1}{\omega_2} = -\frac{f_2}{f_1}$ b) $\frac{\omega_1}{\omega_2} = -\frac{f_1}{f_2}$ c) $\frac{\omega_1}{\omega_2} = \frac{f_2}{f_1}$ d) $\frac{\omega_1}{\omega_2} = \frac{f_1}{f_2}$
3. The departures of real images from the ideal images, in respect of the actual size, shape and position are called _____.
 a) **aberrations** b) approximation c) aperture d) average
4. The effect of rays from an object point not situated on the axis of the lens results in an aberration called _____.
 a) astigmatism b) anastigmat c) **coma** d) aplanatic
5. Light passes through a glass A beam of white light, when passes through a prism, is split up into the constituent colours. This phenomenon is called _____.
 a) **dispersion** b) dispersion medium c) deviation d) dispersive power

6. The deviation of the mean ray (green) when white prism ($n=1.5$) of angle $A = 6^\circ$ is _____.
 a) 9° b) 6° c) 3° d) 1.5°
7. The function of the prism in the constant deviation spectroscope is _____.
 a) **to turn the dispersed rays through 90° at the focus**
 b) to bring all colours into focus at the same time
 c) disperse the incident light without deviation
 d) to produce deviation without dispersion
8. When two prisms are combined to produce dispersion without deviation, the final mean ray coming out of the combination will be _____.
 a) plane polarized b) perpendicular to the incident ray
 c) **parallel to the incident ray** d) missing
9. The point at which image is formed due to a lens by marginal rays is different from that due to paraxial rays. The defect in the image thus produced is known as _____.
 a) circle of least confusion b) chromatic aberration c) **spherical aberration** d) coma
10. The dispersive power of a prism depends upon its _____.
 a) shape b) **material** c) angle d) height
11. The angular separation between two colours of a spectrum depends upon _____.
 a) **angle of deviation** b) angle of incidence c) size of the prism d) all the above three
12. The inability of a lens to form a point image of a point object on the axis is called _____.
 a) **spherical aberration** b) coma c) chromatic aberration d) lens defect
13. A combination of prisms which produces deviation without dispersion is called _____.
 a) direct vision prism b) zero deviation prism
 c) **achromatic combination** d) anomalous combination
14. Spherical aberration for a concave lens is _____.
 a) zero b) positive c) **negative** d) infinity
15. For achromatic combination of two lenses in contact, the lenses must be _____.
 a) both convex b) both concave
 c) **one convex and the other concave** d) neither convex nor concave
16. The ratio of the dispersive powers of the materials of the two lenses in contact for achromatism is equal to _____.
 a) the sum of the focal lengths of the lenses
 b) difference between the focal lengths of the lenses

- c) average of the focal lengths of the lenses
 d) **ratio of the focal lengths of the lenses**
17. The bending of a beam of light when it passes from one medium to another is _____.
 a) **refraction** b) reflection c) diffraction d) dispersion
18. A direct vision spectroscopy consists of _____.
 a) either two prisms or four prism b) **either three prisms or five prisms**
 c) both (a) and (c) are true d) none of the above
19. A direct vision spectroscopy is based upon _____.
 a) deviation without dispersion b) **dispersion without deviation**
 c) neither deviation nor dispersion d) all the above
20. Stops are used to minimize _____.
 a) chromatic aberration b) deviation c) **spherical aberration** d) dispersion
21. If the dispersion through a prism does not follow the order VIBGYOR it is called _____.
 a) rational dispersion b) angular dispersion
 c) anomalous dispersion d) **irrational dispersion**
22. The pair of conjugate points in the lens system free from spherical aberration and coma is _____.
 a) nodal points b) focal points c) aplanatic points d) principal points

Unit IV: Interference and Diffraction

1. Colours of thin film are due to _____.
 a) **interference** b) diffraction c) dispersion d) refraction
2. In an air wedge, the interference fringes have fringewidth that are _____.
 a) **directly proportional to wave length** b) inversely proportional to wavelength
 c) directly proportional to separation at one end d) continuously varying from one end
3. For constructive interference, the path difference between interfering waves must be _____.
 a) **even multiples of $\lambda/2$** b) odd multiple of λ
 c) even multiples of λ d) odd multiple of $\lambda/2$
4. The phenomenon of interference was discovered by _____.
 a) Huygens b) Newton c) Maxwell d) **Young**

5. When white light beam is incident on a thin air film enclosed between two glass plates, we get in the reflected beam _____.
 a) **coloured bands** b) dark and bright bands
 c) no interference pattern d) interference pattern
6. If d is the thickness of a wire and l is the distance of the wire from the edge of an air wedge, the angle of the wedge is given by _____.
 a) dl b) l/d c) **d/l** d) $d/2l$
7. In Newton's rings, the radii of the bright rings are proportional to _____.
 a) square of the odd natural numbers
 b) square of the even natural numbers
 c) **square root of the odd natural numbers**
 d) square root of the even natural numbers
8. When the movable mirror in Michelson's interferometer is moved through a distance $\lambda/2$ the number of fringes crossing the field of view is _____.
 a) 2 b) **1** c) 10 d) 0
9. In a Michelson's interferometer if the movable mirror is moved through a distance, 100 circular fringes cross the field of view. If the wavelength of light used is 6000 \AA , the distance moved is equal to _____.
 a) 3mm b) 0.3mm c) **0.03mm** d) 0.003mm
10. In a Michelson's interferometer _____.
 a) Movable mirror is half silvered
 b) stationary mirror is half silvered
 c) **rear side of the plane glass plate is half silvered**
 d) rear side of the compensating plate is half silvered.
11. When light is reflected from the surface of a denser medium a phase – change of _____ occurs.
 a) 2π b) **π** c) $\pi/2$ d) $\pi/4$
12. For interference in air film at normal incidence the condition for brightness in reflected light is _____.
 a) $2t = 0$ b) $2t = \lambda/3$ c) **$2t = (2n-1)\lambda/2$** d) $2t = n\lambda$
13. When the two mirrors of a Michelson's interferometer are perfectly perpendicular to each other _____ fringes will be observed.

- a) straight line b) inclined c) **circular** d) elliptical
14. To locate the central fringe in Michelson's interferometer experiment, one uses
 a) a sodium lamp b) a monochromatic source
 c) **a white light sourced**) incandescent lamp.
15. In a Michelson's interferometer when the movable mirror and the image of the stationary mirror are inclined, in the field of view, _____ fringes are seen.
 a) circular b) **straight line** c) elliptical d) parabola
16. Consider a monochromatic light passing through a plane transmission grating at oblique incidence. The deviation produced in the diffracted beam is minimum, when _____.
 a) the angle of incidence = angle of reflection
 b) **the angle of incidence = angle of diffraction**
 c) the angle of incidence = angle of refraction
 d) the diffraction grating is rotated in clockwise direction.
17. A given wave front, with respect to an external point can be divided into a number of half period zones. The radii of the second and third half period zones are in the ratio _____.
 a) 4:9 b) 2:3 c) $\sqrt{2}:\sqrt{3}$ d) $2\pi:3\pi$
18. When a zone plate is constructed, the area of the second half period zone is 0.002m. Then the area of the third half period zone in m^2 is _____.
 a) $0.002 \times \sqrt{3}$ b) $0.001 \times \sqrt{3}$ c) **0.002** d) 0.009
19. In the image forming property a zone plate resembles _____.
 a) a concave lens b) **a convex lens** c) a Polaroid d) a Plane mirror
20. The bending of light rays at any edge is known as _____.
 a) Interference b) **diffraction** c) polarization d) refraction
21. Light appears to travel in straight line because _____.
 a) it is not absorbed by the atmosphere b) it is reflected by the atmosphere
 c) **its wavelength is very small** d) its velocity is large.
22. The resolving power of a grating does not depend upon _____.
 a) order of the spectrum b) **grating element** c) total number of lines in the grating
 d) width of the grating.
23. The area of nth order zone in a zone plate is _____.
 a) directly proportional to n b) directly proportional to \sqrt{n} c) directly proportional to n^2
 d) **independent of n.**

24. During oblique incidence on a grating the deviation produced in the diffracted beam is minimum when _____.
 a) $\theta = i/2$ b) $\theta + i = 0$ c) $(\theta + i)/2 = 0$ d) **$\theta = i$**
25. The radii of the half period zones are directly proportional to _____.
 a) the square of the natural numbers b) **the square root of the natural numbers**
 c) the square of even natural numbers d) the square of odd natural numbers.
26. The focal length f_n of a zone plate is given by _____.
 a) $f_n = n\lambda/r_n$ b) $f_n = n\lambda/r_n^2$ c) **$f_n = r_n^2/n\lambda$** d) $f_n = r_n/n\lambda$
27. In transmission gratings lines are drawn on a _____.
 a) silver surface b) **glass surface** c) cold surface d) copper surface
28. The relation between the number of lines/metre (N) and the grating element (a + b) is given by _____.
 a) $N = a + b$ b) $N = a - b$ c) **$N = 1/(a + b)$** d) $N = 1/(a - b)$

Unit V: Polarisation

- Some media like cane sugar solution rotate the plane of vibration of the incident plane polarized light. This phenomenon is known as
 a) Double refraction b) polarization c) diffraction d) **optical activity.**
- In a circularly polarized light, the following parameter rotates along a circle about the direction of propagation of light:
 a) ether b) the ordinary ray c) **electric field** d) refractive index
- The velocities of ordinary and extra ordinary rays in a calcite crystals are the same
 a) **along the optic axis** b) perpendicular to the optic axis c) in all directions
 d) parallel to the optic axis
- During double refraction of light when the quartz crystal is slowly rotated about vertical axis, the ordinary image
 a) also rotates b) **remains stationary** c) disappears d) coincides with the extra-ordinary image.
- The ordinary and extraordinary rays produced by a quartz crystal are both
 a) **plane polarized** b) circularly polarized c) elliptically polarized d) partially polarized
- Quarter wave plate introduces a path-difference
 a) $\lambda/2$ b) **$\lambda/4$** c) λ d) 2λ

7. If n_o , n_e are the refractive indices for the ordinary and extraordinary rays, for a calcite crystal
 - a) $n_o = n_e$
 - b) $n_o > n_e$
 - c) $n_o < n_e$
 - d) $n_o = 2n_e$
8. If the intensity of light examined by an analyser varies between maximum and minimum, it is
 - a) ordinary light
 - b) circularly polarized light
 - c) **elliptically or partially polarized light**
 - d) plane polarized light.
9. If circularly polarized light is passed through a quarter wave plate, it becomes
 - a) elliptically polarized
 - b) **plane polarized**
 - c) partially polarized
 - d) ordinary light
10. The device that is used to produce plane polarized light is
 - a) **Nicol prism**
 - b) crystal
 - c) quarter wave plate
 - d) Half wave plate
11. Polarization of light proves
 - a) corpuscular nature of light
 - b) quantum nature of light
 - c) **transverse nature of light**
 - d) longitudinal nature of light

SECTION B

Unit I: Laws of Thermodynamics

1. State zeroth law of thermodynamics.
2. State first law of thermodynamics.
3. Write the Clausius statement of second law of thermodynamics.
4. Write Kelvin – Plank statement of second law of thermodynamics.
5. What is thermodynamic scale of temperature?
6. Define entropy.
7. Define reversible process.
8. Define irreversible process.
9. State third law of thermodynamics.
10. What is the efficiency of a heat engine?
11. Define mean free path.
12. Give the relation connecting thermal conductivity and viscosity of a gas.
13. Give the relation connection thermal conductivity and molecular diameter.
14. Define transport phenomena.
15. What are the demerits of Vander Waal's equation.

Unit II : Transfer of heat and low temperature physics

1. Define conduction.
2. Define convection.
3. Define radiation.
4. Define thermal conductivity.
5. State Newton's law of cooling.
6. Define diffusion.
7. Define viscosity.
8. Give the expression for ratio of specific heat capacity.
9. State Joule – Thomson effect.
10. Define liquefaction.
11. What is adiabatic demagnetization?
12. What is regenerative cooling?
13. Mention any two industrial applications of low temperature.
14. Define refrigeration.
15. What is a refrigerator?

Unit III: Dispersion and Aberration

1. Define dispersion.
2. What is meant by dispersive medium?
3. Define angular dispersion.
4. Define dispersive power of the prism.
5. What is meant by aberration of a lens?
6. What is spherical aberration in a lens?
7. What is chromatic aberration?
8. Mention the types of monochromatic aberration.
9. Define aplanatic points.
10. What are principal points?
11. What are principal planes?

Unit IV: Interference and Diffraction

1. What is meant by monochromatic waves?
2. Define 'interference' of light.
3. What is meant by interference fringes or \cos^2 fringes?
4. Define coherent sources.
5. Define 'division of wave front'
6. Define 'division of amplitude'.
7. What is meant by air-wedge?
8. Write the uses of air-wedge.
9. Write any two applications of Michelson's interferometer.
10. Give the relation between path difference and phase difference.
11. What are Newton's rings?
12. Define diffraction of light.
13. Define Fresnel diffraction.
14. Define Fraunhofer diffraction.
15. Define plane diffraction grating.
16. Define grating element.
17. What is the principle of zone plate?
18. What is wavefront?
19. What are half period zones?
20. Compare zone plate with a convex lens.
21. Define resolving power.

Unit V: Polarisation

1. What is double refraction?
2. Define specific rotation power.
3. Explain the production of plane polarized light.
4. State and explain Malus law.
5. Describe a Nicol prism.
6. What is optical activity?
7. Define Specific rotator power.

SECTION – C

Unit I: Laws of Thermodynamics

1. Derive an expression for mean free path.
2. Discuss the entropy change when ice converted into water
3. Derive an expression for entropy change when water converted into steam
4. Discuss the entropy change in a perfect gas

Unit II : Transfer of heat and low temperature physics

1. Verify the Newton's law of cooling.
2. Describe the Thomson's porous plug experiment.
3. List out the practical applications of low temperature.
4. Describe the methods for the liquefaction of hydrogen using Joule Thomson effect
5. Describe the methods for the liquefaction of helium using Joule Thomson effect
6. Describe adiabatic demagnetization.

Unit III: Dispersion and Aberration

1. Derive dispersive power of the material of the prism.
2. Give the theory and construction of a direct vision spectroscope.
3. Explain constant deviation spectroscope with neat diagram.
4. Explain what is meant by spherical aberration for a lens. How it is caused and what are the ways for its minimisation.
5. What are aplanatic points? Find an expression for the separation between the aplanatic points with respect to a spherical lens.
6. What is meant by coma? Also explain the ways for the removal of coma.
7. Calculate the focal length of a convex lens of crown glass (dispersive power = 0.012 and that of a concave lens of flint glass (dispersive power = 0.020) so that when placed in contact, they form an achromatic combination of focal length 30cm.

Unit IV: Interference and Diffraction

1. Give the theory of interference in thin films and explain the colours of thin films.

2. Explain the formation of interference fringes by an air wedge and how the phenomenon of interference is used in testing the optical planeness of a glass surface.
3. How can Newton's rings be used to determine the refractive index of a liquid? Derive the formula used.
4. Describe the types of fringes in Michelson's interferometer with the help of line diagram.
5. i) A water film ($n = 1.33$) in air is 3200\AA thick. It is illuminated with white light at normal incidence, what colour will it appear to be in first order maximum reflected light?
ii) Find the thickness of coating of MgF_2 (refractive index $n = 1.38$) on a camera lens, needed to produce minimum reflection of light corresponding to centre of visible spectrum ($\lambda = 5000\text{\AA}$).
6. Describe the construction and action of plane diffraction grating.
7. Distinguish between Fraunhofer and Fresnel class of diffraction.
8. Find the radii of the first three transparent zones of zone plate, whose focal length is 1 metre for $\lambda = 6000\text{\AA}$. The focal length of the zone plate is $f = r_n^2/n\lambda$, where n is an odd integer such as 1, 3, 5,..... and r_n is the radius of the n^{th} half period zone.
9. A diffraction grating at normal incidence gives a line of wavelength 6000\AA in a certain order superimposed on another line of wavelength 4000\AA of the next higher order. The angle of diffraction is 30° . How many lines are there per unit length in the grating?
10. Define resolving power of grating. Derive an expression for resolving power of a grating.
11. Discuss the phenomenon of Fraunhofer diffraction at a single slit.
12. Define and explain the term "dispersive power of a grating".

Unit V: Polarisation

1. Explain double refraction and optical activity.
2. Describe the construction and working of Laurent's half shade polarimeter.
3. Explain the construction, principle and use of quarter wave plate
4. Describe how a nicol prism can be used as an analyser.
5. The refractive index of glass is 1.50 and that of water is 1.33. What is the refractive index of glass with respect to water?
6. Define double Refraction and explain the experiment to demonstrate double refraction.
7. Explain Fresnel's explanation for the optical activity.

SECTION – D

Unit I: Laws of Thermodynamics

1. State and prove Carnot's theorem.
2. Derive an expression for the efficiency of a Carnot's engine..
3. Explain reversible and irreversible process with example.
4. Define entropy. Obtain an expression for change of entropy in reversible process.
5. Find the efficiency of a Carnot's engine working between 150°C and 50°C .
6. Find the efficiency of a Carnot's engine working between 227°C and 27°C .
7. Deduce the entropy of a perfect gas
8. Discuss the entropy change when ice converted into steam
9. Derive an expression for mean free path .
10. Based on kinetic theory, derive an expression for viscosity of a gas.
11. Based on kinetic theory, derive an expression for thermal conductivity of a gas.
12. Based on kinetic theory, derive an expression for coefficient of diffusion of a gas.

Unit II : Transfer of heat and low temperature physics

1. Determine the thermal conductivity of a bad conductor by Lee's disc method.
2. Determine the thermal conductivity of a good conductor by Forbe's method.
3. Determine the specific heat capacity of a liquid by the method of Newton's law of cooling.
4. Describe the Joule-Thomson's Porous Plug experiment with theory. How it has been utilized in the liquefaction of gases.
5. Derive an expression for the Joule Thomson cooling produced in a Vander Waal's gas.
6. Deduce an expression for the fall in temperature due to adiabatic demagnetization.
7. Discuss in detail about the refrigeration process .Also list out the requirement of a good refrigerant.
8. Derive Vander Waal's equation. Also deduce expression for critical constants in terms of Vander Waal's constants.
9. Describe with necessary theory the method of producing very low temperatures by adiabatic demagnetization.

Unit III: Dispersion and Aberration

1. Define the term “dispersive power”. Explain how two narrow angled prisms of different dispersive powers may be combined to produce dispersion without deviation and deviation without dispersion.
2. Obtain an expression of achromatic combination of two lenses (i) in contact and(ii) out of contact.
3. Obtain an expression of chromatic aberration of a lens in terms of dispersive power.

Unit IV: Interference and Diffraction

1. Explain the formation of interference fringes by an air wedge. Derive an expression for the fringe width. How can the above method be used to measure the diameter of a thin wire accurately?
2. Describe with necessary theory how you would determine the wavelength of monochromatic light using Newton’s rings.
3. Describe the construction and working of Michelson’s interferometer and also discuss the important applications of this interferometer.
4. Starting from the division of a plane wave –front into half-period elements, give Fresnel’s explanation of rectilinear propagation of light on this theory.
5. Give the theory of plane transmission grating. Describe how it may be used to determine wavelength of light.
6. State and explain Raleigh criterion for resolution. Derive an expression for resolving power of grating.
7. Give the theory of zone plate. Obtain an expression for primary focal length of the zone plate.
8. How would you show that the zone plate has multiple foci? Give a comparison of the performance of a zone plate with that of a convex lens.

Unit V: Polarisation

1. Give Fresnel's explanation for the optical activity. What is the specific rotator power? Describe Laurent's half-shade polarimeter method of determining the specific rotation of sugar solution.
2. Explain the production and theory plane, circular and elliptical polarised light with their special cases.
3. Describe the half-shade polarimeter. Explain the method of determining specific rotation of sugar solution with it.
4. Discuss the theory of quarter wave plate and half wave plate with neat diagram.

SECTION A

Unit I : Electrostatics

1. The electric field inside an electrical conductor with excess charge on its surface is
a) Infinity **b) zero** c) 120π d) depends on the value of charge
2. The electric flux emanating from an electric charge of (+q) coulomb is
a) q/ϵ_0 b) $q/\epsilon_0 \epsilon r$ c) q d) $q \epsilon_0$
3. The unit of electric field intensity is
a) N **b) N/C** c) V d) W
4. The total charge in a region can be found if the electric field is known over the whole of its bounding surface. This follows from
a) Ampere's law b) coulomb's law **c) Gauss law** d) Newton's law
5. Over an equipotential surface, the electric field intensity is
a) Everywhere normal to the surface
b) Everywhere tangential to the surface
c) Along any direction
d) Everywhere on the surface
6. The relation connecting potential gradient and electric field at a point is
a) $V = -dE/dx$ b) $V = dV/dx$ c) $E = dV/dx$ **d) $E = -dV/dx$**
7. Electric potential at a point in an electric field is a
a) Scalar quantity b) vector quantity c) complex quantity d) all the above
8. The electric field at the center of a charged sphere of radius r is
a) q b) $q/4\pi$ c) 4π **d) zero**
9. The work done to move an electric charge q on an equipotential surface of potential V is
a) qV b) q/V c) q/V^2 **d) zero**
10. When the distance between two equal charges is decreased to half and their magnitude of charge is also decreased to half, the force between them
a) Remains unaltered b) reduces to half
c) becomes double d) is made bigger four times
11. Bodies which allow the charge or electricity to pass through them are called

a)insulators **b)conductors** c) point charges d)capacitor

12. S.I unit of charge is _____.

a)coulomb b)newton c)volt d)tesla

13. An excess charge, placed on an insulated conductor, resides entirely on its _____surface.

a)outer b) inner c) whole d)Gaussian

14. The S.I unit of potential difference is_____.

a)volt b) coulomb c) newton d)weber

15. The potential at a point near an isolated positive charge is _____.

a)negative **b)positive** c)zero d)one

Unit II: Electromagnetism

1. The unit in which self inductance is expressed is

a) Ohm **b) henry** c) farad d) seimen

2. The self inductance of a toroidal solenoid is proportional to

a) N b) 1/N **c) N^2** d) $1/N^2$

3. The unit of magnetic flux is

a) Weber b) ampere c) tesla d) seimen

3. When a current I is passed through coil of self inductance L, the flux linked with the coil is

a) LI b) LI^2 c) $LI/2$ d) $LI^2/2$

4. The law of electromagnetic induction was given by

a) Faraday **b) Lenz** c) Fleming d) Ampere

4. The direction of the induced e.m.f in a conductor depends on the

a) Amount of flux cut b) flux linkage
c) rate of change of flux linkage d) flux density

5. The coefficient of coupling between two coils of self inductances L_1 and L_2 and of mutual inductance M is given by

a) $K=M/L_1 L_2$ b) $K= \sqrt{M/L_1 L_2}$ **c) $K= M/\sqrt{L_1 L_2}$** d) $K= \sqrt{M/ L_1 L_2}$

6. S.I unit of self-inductance is _____.

a)henry b)Tesla c)flux d)newton

7. The ratio $M/\sqrt{(L_1 L_2)}$ is known as _____ between the coils.

a)coefficient of coupling b)magnetic induction
c)mutual inductance d)Self Inductance

8. When the magnet is moved away from the coil, the galvanometer shows a deflection in the _____ direction.

- a) **opposite** b) positive c) negative d) zero

9. The _____ reduction factor of the galvanometer is expressed as C/nBA .

- a) volt b) **current** c) resistance d) deflection

10. The magnetic flux of a coil can be expressed as

- a) Ω b) μ c) Σ d) **Φ**

Unit III: Nuclear Physics

1. Nuclear force is the result of

- a) coulomb interaction b) sharing of charge
c) **exchange of pions** d) sharing of photons

2. One Fermi is

- a) 1×10^6 disintegration per second b) 1×10^{-10} m c) **1×10^{-15} m** d) 3×10^8 m

3. Isotopes are elements with

- a) same A, different Z b) same A, same Z
c) **same Z, different A** d) different A, different Z

4. Mirror nuclei are pairs of nuclei that have

- a) same A, but different Z and N b) same Z, but A and N interchanged
c) **same A, but N and Z interchanged** d) same A, but N and Z interchanged

5. Magnetic moment of a nucleus

- a) **$\mu = g \beta_n \sqrt{I(I+1)}$** b) $\mu = \beta_n \sqrt{I(I+1)}$
c) $\mu = \sqrt{I(I+1)}$ d) $\mu = 0$

6. If A is the mass number and M is the actual mass of the nuclides in a.m.u., the packing fraction f is given by

- a) $A = M(1+f)$ b) **$M = A(1+f)$**
c) $f = A(1+M)$ d) $f = M(1+A)$

7. Nuclear with integral spin are

- a) **bosons** b) fermions c) pions d) electrons

8. Nuclei with half integral spins are known

- a) bosons b) **fermions** c) pions d) electrons

9. Nucleus forces

- a) **short range attractive** b) electrostatic force
 a) long range attractive d) short range repulsive force
10. Magnetic moment of neutron is
 a) zero b) positive c) **negative** d) infinity
11. Nuclear forces are appreciable within the range of
 a) 1×10^{-11} m b) **1×10^{-8} m** c) 1×10^{-9} m d) 1×10^{-7} m
12. The _____ are not affected by the magnetic field
 a) **gamma rays** b) beta rays c) Alpha rays d) Alpha particle
13. _____ is the most stable element in the universe
 a) aluminium b) carbon c) **iron** d) copper
14. Binding energy of the deuterium nucleus is
 a) 4 MeV b) **2.2 MeV** c) 3.1 MeV d) 1.5 MeV
15. The radius of an atomic nucleus is proportional to (A for mass number)
 a) A b) A^2 c) $A^{1/2}$ d) $A^{1/3}$
16. ${}_{92}\text{U}^{238}$ require more excitation energy for fission then the binding energy released when another _____ is observed.
 a) **neutron** b) electron c) proton d) ions
17. ${}_{92}\text{U}^{238}$ undergoes fission only by reaction with fast neutrons whose kinetic energy exceed about 1 MeV
 a) 2 MeV b) 3 MeV c) **1 MeV** d) 5 MeV

Unit IV: Relativity and Wave Mechanics

1. According to special theory of relativity the velocity of light in free space is
 a) Dependent on observer's motion b) Independent of the motion of the source
 c) Independent of the motion of the observer
 d) **Independent of the motion of the source and the observer**
2. A circular object moves with high speed along the line of sight with respect to a stationary observer. The object would look like
 a) Circle b) straight line c) **ellipse** d) parabola
3. De Broglie introduced the concept of
 a) Protons b) electromagnetic waves c) **matter waves** d) supersonics
4. In quantum mechanics the motion of a particle is described in terms of

- [illegible]

Unit V: Digital Electronics

1. The binary equivalent of decimal 11 is
a) 1010 b) 1100 **c) 1011** d) 0111
2. A logic gate circuit that will give a 'high' output if any odd number of binary 1's are applied to the input is

- a) AND gate b) OR gate c) NOR gate **d) EX-OR gate**
3. The output of an inverter (NOT gate) is
 a) Negative of the input **b) Complement of the input**
 c) 2's complement of the input d) Parity of input
4. A NOR gate is ON only when all its inputs are
 a) ON b) positive c) high **d) low**
5. Which of the following logic gates would give a 'high' output whenever a 'low' input is applied to all its inputs terminals?
 a) OR b) AND **c) NAND** d) EX-OR
6. In a 2- input gate, if the input terminals are tied to a common input A, the output of the NAND will be _____
 a) A **b) A** c) 1 d) 0
7. The positive logic AND gate would function as the following when negative logic is followed
 a) NAND b) NOR **c) OR** d) EX-OR
8. In a half adder the sum output is same as that of
 a) Inverter b) NAND gate c) AND gate **d) EX-OR gate**
9. A binary number with _____ bits is known as byte.
 a)2 b)6 **c)8** d)10
10. A byte is sometimes called a _____.
a)character b)word c)byte d)nibble
11. A _____ is an example of natural binary device.
a)switch b)magnetic core c)tape d)transistor
12. The decimal number system is also known as _____.
a)base -10 system b)base-2 system c)binary system d)all the three

SECTION B

Unit I : Electrostatics

1. Define electric potential and electric field at a point.
2. State Gauss's law in electrostatics.
3. What is an equipotential surface?
4. Define coulomb's law.
5. State the law of conservation of electric charge.

6. What are point charges?
7. What is an electric dipole?

Unit II: Electromagnetism

1. Define magnetic flux and flux density.
2. Define self inductance of a coil and give its unit.
3. Define mutual inductance between a pair of coils and give its unit.
4. Define coefficient of coupling.
5. State and explain Lenz's law of electromagnetic induction.
6. What is back e.m.f?
7. Calculate the self inductance of a toroid of rectangular cross-section of number of turns 1000, given: $a=5\text{cm}$, $b=10\text{cm}$, $h=1\text{cm}$.

Unit III: Nuclear Physics

1. Define isotopes.
2. Define nuclear mass.
3. Define nuclear charge.
4. Describe quark.
5. Describe packing fraction.
6. Define mass defect.
7. Describe binding energy.
8. Define the nature of nuclear force.
9. Describe Soddy-Fajan's displacement law.
10. Define nuclear fission.
11. Define nuclear fusion.

Unit IV: Relativity and Wave Mechanics

1. What is meant by wave function? Give its significance.
2. What is Eigen function and Eigen value?
3. State the postulates of special theory of relativity.
4. What are the main features of Galilean transformation equations?
5. Calculate the de Broglie wavelength of an electron which has energy 12eV.

6. What is wave packet?

Unit V: Digital Electronics

1. What is the binary number that follows 0110, 1111?
 2. Solve the following equation for X, where $X_{10} = 11001001_2$
 3. Define bit.
 4. Define byte and nibble.
 5. Write binary numbers from 7 to 15.
 6. Explain 1's and 2's complement of a binary number.
 7. Convert the following decimal numbers into binary numbers. 39, 45
 8. Convert the following binary numbers into decimal numbers. 10011, 10101
- Add the following: i) 1010 and 1011 ii) 1111 and 1011
- Subtract the following: i) 1010 from 1111 ii) 111 from 100

SECTION C

Unit I: Electrostatics

1. State and prove Gauss law.
2. Explain equipotential surface by giving an example.
3. Derive the relation connecting electric field and electric potential.
4. State and prove coulomb's inverse square law for electrostatics.
5. Explain in detail about the applications of Gauss's law.

Unit II : Electromagnetism

1. State and explain Lenz's law of electromagnetic induction and derive an expression for induced charge and current.
2. Define coefficient of coupling and deduce an expression for it.
3. Derive an expression for self inductance of a toroidal solenoid.
4. A solenoid of length 30cm and area of cross section 10 sq.cm has 1000 turns wound over a core of constant permeability 600. Another coil at its middle. Calculate the mutual inductance between them.

5. Calculate the self-inductance of a solenoid having 1000 turns and length 1m. The area of cross section is 7cm^2 and the relative permeability of the core is 1000.

Unit III : Nuclear Physics

1. Explain the classification of nucleus.
2. Derive the expression for magnetic moment of nucleus.
3. Explain binding energy curve.
4. List out the characteristics of nuclear forces.
5. Explain half life period.
6. Explain mean life period.

Unit IV: Relativity and Wave Mechanics

1. What are the main features of Galilean transformation equations? Obtain Galilean transformation equations.
2. Explain De Broglie's theory of matter waves. Obtain an expression for De Broglie wavelength.
3. What is meant by wave function? What is its physical significance? What are the properties of wave function?
4. State and explain the postulates of quantum mechanics. Explain the terms 'Eigen function' and 'Eigen value'.

Unit V: Digital Electronics

1. Convert the following binary number into decimal number: 11010, 0011, 11001, 10110, 111.01 and 100100.101_2 .
2. Write equivalent binary number for the decimal numbers.
27, 121, 17.63, -15
3. Add the binary
 - a) 1011 and 1001
 - b) 1110001 and 1010101
 - c) 1111010 and 1001101
 - d) 111111 and 111
 - e) 0110 and 1001

4. Subtract the binary
 - a) $1111-1011$
 - b) 1101 from 11110
 - c) 1010 from 111
 - d) 111010 from 100011
 - e) 11010 from 11110
5. Use 2's complement method to perform the following binary subtractions:
 - a) $1111-1011$
 - b) $110011-100101$
 - c) $100011-111010$
 - d) $11011-10011.11$
6. State and explain De Morgan's laws.
7. Explain the working of a half adder.
8. Multiply the binary
 - i) 11.110×100.1
 - ii) 101.1×11.01
 - iii) 1111.0×1010.1

SECTION D

Unit I: Electrostatics

1. Derive an expression for electric field due to a spherical charge distribution at a point
(i) inside and (ii) outside the spherical charge.
2. Obtain an expression for the electric field at point due to a charged cylinder.

Unit II: Electromagnetism

1. Describe with relevant theory, Rayleigh's method to determine self inductance of a coil.
2. Describe with relevant theory, a method to determine the mutual inductance between a
of a coils.

Unit III: Nuclear Physics

1. Explain about natural radioactivity.
2. Explain about law of radioactive disintegration.

3. Write about the energy released in nuclear fission.

Unit IV: Relativity and Wave Mechanics

1. Derive Schrodinger's wave equation in time dependent form.
2. Derive Lorentz transformation equations and prove that space and time are interrelated quantities.

Unit V: Digital Electronics

1. Describe the AND logic gate. How can the DRL-AND logic be implemented using discrete components?
2. Describe the OR logic gate. How can the DRL-OR logic be implemented using discrete components?
3. Describe the NOT logic gate. How can the DRL-NOT logic be implemented using discrete components?
4. Explain how NOR gate works as a universal building block.
5. Explain how NAND gate works as a universal building block.

ST. MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI – 628001

QUESTION BANK

I B.SC., PHYSICS

SEMESTER II - PROFESSIONAL ENGLISH FOR PHYSICS-II

Subject Code: 21UPHPE2

SECTION A

1. Select the pair that has the same relationship as the original pair of words:

Degree : Temperature

- a. Nutrient : nourishment
- b. Scale : length
- c. Decibel : sound
- d. Headphones : conversation

2. Choose the option which expresses the meaning of the underlined idiom:

I need to recharge my batteries

- a. On the same wavelength
- b. Relax and recover my energy
- c. To be healthy and physically fit
- d. To keep away

3. Choose the most appropriate description about these three words:

Yellow:blue:red

- a. Primary colours.
- b. Secondary colours
- c. dispersion
- d. tertiary colours

4. Find the correctly spelt word:

- a. acceleration
- b. aceleration
- c. acceliration
- d. aceliration

5. Choose the one which best expresses the given sentence in passive voice:

Issac newton discovered the gravitational force.

- a. The gravitational force was discovered by Issac newton.
- b. The gravitational force discovered by Issac newton.
- c. Issac newton was discovered by the gravitational force.
- d. Issac newton has discovered force by the gravity.

6. Match each term to the best definition, description or characterization:

(elasticity, science, kinematics, scalar, friction)

- i. Resistance of two surfaces to move across each other_____.
- ii. A mathematical description of motion_____.
- iii. Physical quantity that is not associated with a direction_____.
- iv. _____is a method of discovery by empirical testing.
- v. A measure of the kinetic energy conserved in a collision is_____.

7. Add suitable affix to the word, 'certain'.

- a) discernain b) ascertain c) certainty d) uncertain

8. The history of Electronic Warfare takes us back _____ the end of World War II.

- a) into b) to c) at d) after

9. Direct skin contact with phosgene can result in (lesions / letions) similar to those from burns.

10. At room temperature (70° F), phosgene is _____ poisonous gas.

- a) an b) a c) the d) a or an

11. Find the correctly spelt word

- a) acylation b) asylation c) accylation d) acylasion

12. Fill in with the correct one word substitute for the following:

- A branch of Physics that studies the behavior and properties of light.
- The quality of reflecting light and changing colour with reference to an opal.
- The emission of light by a substance that has absorbed light or other electromagnetic radiation.
- An electrically neutral group of two or more atoms held together by chemical bonds.

- An apparatus containing a movable mirror, used to reflect sunlight in a fixed direction.

13. Give specific information on the term given:

- diffraction
- Raman effect
- ultrasonic

14. Unscramble the following words

- Naeoelcepsc
- Ramanerdeetni
- Oarcmlule

15. Spot the error and correct the sentence

- The cattle is grazing near the farm
- The company was founded in the year of 1992
- Who are you talking to?
- He is superior than me in position

16. Unscramble the words with a given clue:

- | | |
|---|-------------------------------|
| i. lluucasc – Russian physicist | Ans: Calculus |
| ii. rchoetne - same wavelength | Ans: coherent |
| iii. tithalemmaa – problem solving | Ans: mathematical |
| iv. agrriectd – high explosives | Ans: cartridge |
| v. obrost – person like machine | Ans: robots |
| vi. inovuolt – development process | Ans: evolution |
| vii. eregtroan – produces electricity | Ans: generator |
| viii. hcinmea – unpowered device | Ans: machine |
| ix. rtnucre – flow of electricity | Ans: current |
| x. aviotibnr – oscillation of particle | Ans: vibration |
| xi. ssiemnoi – released energy | Ans: emission |
| xii. rpmusect – distribution of light | Ans: spectrum |
| xiii. svibelni – hidden | Ans: invisible |
| xiv. qercyfneu – rate of occurrence | Ans: frequency |
| xv. iotelultv- rays from sun | Ans: ultra violet rays |
| xvi. Pioctla – vision | Ans: optical |
| xvii. rtdcuanrse- device which converts energy | Ans: transducer |

17. Write sentences using the following terms:

- **Accurate-** Ever more accurate sensors can track the contents of ocean water or assess food safety.
- **Relativity-** Many scientists believe that Einstein's Theory of Relativity limits the way we can travel through time and space, which excludes traveling to the past.
- **Speed-** It has a high speed autofocus that can shoot at up to eight frames per second.
- **Gravitational -** I showed how gravitational entropy can be defined in general.
- **Massive-** A massive explosion went off, shaking the ground beneath them
- **Mission-** This started out as a mission about us but has turned into a mission about you.
- **Observation-** There was helpful information for us to improve observation techniques.
- **Direction-** Every step must be in the right direction.
- **Coordinate-** Coordinates referred to this system are termed equatorial.
- **Infrared-** infrared is very useful in identifying single solvent accelerants
- **Electromagnet-** When the electromagnet was connected to the battery, the paper clips started moving closer to it.
- **Parallel-** The long axis of the wings, when at rest, lies parallel to the body axis.
- **Scanning-** Laser beam is used for scanning bar codes
- **Focus-** there is a focus of maximum temperature off the eastern coast of the United States.
- **Propelled-** They were being hit with rocket propelled grenades from all sides.
- **Electrical energy-** The absorption of heat was considered as representing an equivalent conversion of heat energy into electrical energy in the element.
- **Microphone-** At first it was usual to join the microphone transmitter in the direct circuit.

18. Pick out the synonyms of the following terms from the given lines:

1. A continuous electric current that periodically reverses direction, usually sinusoidally.
(a) **Periodically-** regularly
(b) **Sinusoidally-** sine wave
2. This entity as a source of nuclear energy.
(a) **Source-** origin
3. The attribute of matter by which it responds to electromagnetic forces responsible for all electrical phenomena, existing in two forms to which the signs negative and positive are arbitrarily assigned.
(a) **Attribute-** aspect
(b) **Assigned-** allocate

4. A substance, body, or system that conducts electricity, heat, etc.
(a) **Conduct- direct**
5. A radiation of high penetrating power that originates in outer space and consists partly of high-energy atomic nuclei.
(a) **Penetrate- pass through**
(b) **Radiation- diffusion of rays**
6. A deviation in the direction of a wave at the edge of an obstacle in its path.
(a) **Deviation- diverge**
(b) **Obstacle- difficulty**
7. The splitting of an atomic nucleus into approximately equal parts, either spontaneously or as a result of the impact of a particle usually with an associated release of energy.
(a) **Spontaneous- immediately**
(b) **Impact- effect**

19. Select the pair that has the same relationship as the original pair of words:

Light: longitudinal wave::

- a. Judge : courtroom
- b. Experimenter : result
- c. Professor : classroom
- d. Doppler effect : electromagnetic wave

20. Find what it is?

Many have heard it, but nobody has ever seen it. It will not speak back unless spoken to?

- a. echo
- b. reverberation
- c. reflection
- d. transmission

21. Choose the option which expresses the meaning of the underlined idiom:

My team is a well-oiled machine

- a. able to manage all
- b. Same ideas and opinions
- c. Works very smoothly together
- d. To keep away

22. Choose the correct clipped word for microphone:

- a. mike
- b. micro
- c. phone
- d. none of the above

23. Give one word substitute:

Tending to move away from the centre or axis_____

- a. Centrifugal
- b. Centripetal
- c. Axiomatic
- d. Awry

24. Choose the correct prepositions:

Our sir teaches Mathematics _____ Physics.

- a. across
- b. besides
- c. beside
- d. both

25. Choose the one which best expresses the given sentence in passive voice:

They have published all the details of the invention.

- a. All the details of the invention have been published by them.
- b. The publication of the details of invention was done by them
- c. All the details have been invented by the publishers.
- d. All the inventions have been detailed by them.

26. Choose the correct blended word:

Modulator + demodulator

- a. Mod
- b. Demod
- c. Modem
- d. Modulator

27. Find the correctly spelt word:

- a. Satelite
- b. Sattelite
- c. Satellite
- d. Sattellite

28. Choose the most appropriate description about these three words:

Green : violet :orange

- a. They are primary colours.
- b. These colours occur together in a rainbow
- c. They are made by mixing other colours
- d. These colours are not found in butterflies

Section B

1. Frame 'Wh' Questions to the answers given below

- a. constant means curvature.
- b. Interferences of different colours.

2. Who am I?

- a. I am an ancient device that is used for arithmetic calculations.
- b. I am a branch of science that deals with sounds.

3. Choose the correct definition of these words and expressions in italics in the context they are used in the text

- a. Useful in *erecting* proper beams to support...
 - i. Put together and set upright
 - ii. Stand straight
 - iii. create
- b. this theorem *functions* as the basic principle...
 - i. celebrations
 - ii. acts or works
 - iii. a mathematical terminology

4. Write sentences using the following terms:

- a. discovery
- b. nucleus

5. Model auxiliaries:

- a. You..... Look at me when I am talking to you (could, should, would)
- b. -----be able to help you, but I'm not sure yet.(might ,would ,should)

6. Write the use of the following electrical gadgets and their impact on the lives of people.

- a. Mobile Phone
- b. Microwave Oven

7. READ THE FOLLOWING PASSAGE AND ANSWER THE BELOW QUESTIONS

The ocean is never still. Whether observing from the beach or a boat, we expect to see waves on the horizon. Waves are created by energy passing through water, causing it to move in a circular motion. However, water does not actually travel in waves. Waves transmit energy, not water, across the ocean and if not obstructed by anything, they have the potential to travel across an entire ocean basin. Waves are most commonly caused by wind. Wind-driven waves or surface waves, are created by the friction between wind and surface water. As wind blows across the surface of the ocean or a lake, the continual disturbance creates a wave crest. These types of waves are found globally across the open ocean and along the coast.

- a. What creates a Wave Crest?
- b. Write your own experience of admiring the waves.

8. Write the definitions for the following words:

- a. Barometer
- b. Computer program

9. Unscramble the words with the given clue:

- a. r o p n o t- positive charge
- b. t e m g a n- lodestone

10. Write sentences using the following terms:

- a. terminal velocity
- b. projectile

11. Pick out the synonyms of the following terms from the given line:

Smart technology provides cognitive awareness to objects that were in the past considered inanimate.

- a. logical-
- b. motionless-

12. Pick out the antonyms of the following terms from the given lines:

Higgs boson is the fundamental particle associated with the Higgs field, field that gives mass to other particles such as electrons and quarks.

- a. Unimportant x
- b. Irrelevant x

13. Fill in with suitable prepositions:

Electric current is the flow ____ electric charge round the circuit. It depends ____ the potential difference and resistance.

14. Fill in with suitable articles:

Density is ____ measure of the compactness of the substance. It relates ____ mass of a substance to know how much space it takes up.

15. Choose the correct homonym from the pairs given below:

- a. The Earth's surface is made up of many tectonic _____ (plaits/plates)
- b. The _____ (wait/weight) of proton is 1.67×10^{-27} kg.

16. Unscramble the words with the given clue:

- a. h p e g o n s e – poisonous gas
- b. l c i a t o a n y - reaction

17. Write sentences using the following terms:

- a. interfere
- b. toxic

18. Pick out the synonyms of the following terms from the given line:

It is important for militaries to protect their assets and they are continuously upgrading their assets to thwart any attack on their ships and aircrafts.

- a. Safeguard -
- b. Prevent -

19. Pick out the antonyms of the following terms from the given lines:

During wartime, military aircrafts and ships are one of the prime targets with anti-ship and anti-aircraft missiles being used often.

- a. Unimportant x
- b. Irregular x

20. Fill in with suitable prepositions:

A runaway reaction ____ a tank caused the pressure relief system to vent large amounts ____ poisonous gas into the atmosphere.

21. Fill in with suitable articles:

Phosgene was used extensively as ____ choking agent and was responsible for ____ large majority of chemical warfare deaths.

22. Choose the correct homonym from the pairs given below:

- a. Without the application of barcodes, sales at stores would have been a very ____ (tedious , tedious) process.
- b. A ____ (foot, food) vendor found it difficult to keep track on the items he sold.

23. What is a PPT?

24. How to prepare an effective PPT?

25. What is a paraphrase?

26. Give the difference between Paraphrasing and Summarising.

SECTION C

1. Locate the following phrases in the text and rewrite the sentences without affecting their meanings:

Without the application of barcodes, sales at stores would have been a very tedious process. The barcodes help a lot in effectively keeping an eye over the sold out items in a store. The brain behind the invention of barcodes should certainly be a 'business' mind. Let us explore the history of the invention of barcodes. To start with, it is important to know what a barcode is.

Barcodes represent the object to which it is attached. These are machine readable. The thickness or the width of the parallel lines and the distance between them make the unique pattern of each barcode possible. Special devices called optical scanners are employed in scanning the barcodes.

The Need for Invention

Only when there is an urgent need for something, the world witnesses an invention. People tend to find a solution when there is the trace of a problem. In the history of the invention of barcodes, there was such a need as well. It all started with a small problem that a food vendor faced. A food vendor found it difficult to keep track on the items he sold and the rate of those food items that he kept for sale. He thought about finding a solution for his problem. He then requested the help of the Drexel Institute of Technology in 1948. Among all those who were working in that institution, Bernard Silver came forward to join hands with that food vendor in finding an effective and long standing solution for the problem.

1. keeping an eye
2. To start with
3. difficult to keep track
4. an effective and long standing solution

2. Give the meaning of the following words:

1. Synthesize
2. Extensively
3. Nausea
4. Lesions
5. Ensnare

3. Develop the hints and summarise the following

digital versions - paper books - similar - First, they- both have the same text structure - including the cover - title page - copyright page - table content - chapters etc. Second - they- same function - provide readers - new information - all readers use paper books - readers - for the same purposes - to study – relax - work and learn - same time - differences - a huge capacity- meaning - users – download - thousands of books - in one gadget - and spare themselves- of the necessity - of large volumes - Some opponents of e-books - claim regular books - electronic devices - not pleasant - to smell and touch - made of plastic - metal - no smell - traditional books - smell of paper - ink dust someone's perfume.

4. Write the definitions for the following words:

- i) Barometer
- ii) Microphone
- iii) Optics
- iv) Diffraction
- v) Rheostat

5. Study the picture given below. Write a description or an account of what it suggests to you.

Your essay may be about the subject of the picture, however there must be a clear connection between the picture and your description.

6. The pie chart given below illustrates how internet users prefer to access the internet at home and in other places. Summarise the information in the pie chart by selecting and reporting the main features in four or five paragraphs:

7. Read the following passage and write down the words that can convey the meanings of the four phrases given below:

What is certain about time is that it can't be separated from space.

Time and space are tightly woven together, not only in the extreme realms where the effects of relativity become important but also in the familiar landscape of everyday life. A year, for example, is a distance: the distance that the earth moves in its orbit around the sun. If the distance were longer or shorter, the time would be longer or shorter, too. A day, of course, corresponds to the distance more or less around the earth's circumference—and an hour is just a fraction ($1/24$) of that distance. The swing of a pendulum, the vibration of a quartz crystal or atom, anything that 'tells time' inevitably also moves through space. As Lincoln Barnett points out, "All measurements of time are really measurements in space, and conversely measurements in space depend on measurements of time."

1. The state of being relative to something else
2. Gravitationally curved trajectory of an object
3. The enclosing boundary of a curved geometric figure
4. Smallest unit of ordinary matter that forms a chemical element

8. Read the text and fill in the blanks with the suitable expressions taken from the text.

1. The swing of a _____ tells time.
2. A _____ is the most useful measure of distances to stars.
3. A year is the distance that the earth moves in its _____ around the sun.
4. The vibration of a _____ is an indication of time.

9. Read the passage and answer the questions that follow:

Advertising is a communication strategy designed to convince consumers to buy a company's products. Persuasive communication involves getting attention, generating interest, creating a desire for change and encouraging action. Persuasive communication may be defined as the kind of communication which is intended to change or affect or shape and reinforce certain responses from others. For instance, communicating messages in a way that yields favourable responses and results would classify as persuasive communication. When persuasion is done right, the outcome should feel natural and obvious. Persuasive ads are advertisements designed to elicit a desired action, usually purchasing a product. It is a type of social interaction that attempts to influence and change attitudes in an atmosphere of free choice. Persuasive techniques employed in commercial advertising and linguistic devices are used to realise them. Persuasive techniques are the features of rhetoric which is used for expressing logos, ethos and pathos. But still advertisers manipulate our attitude about products in order to sell. The contemporary world is invaded with advertisements essentially aimed to persuade the consumers to buy products or services, even those which they do not necessarily need. Therefore, in advertisements we can observe a wide range of persuasive techniques, like emotive words, inclusive language, pun, reciprocity, evidence whether they appear on television, radio, in newspapers, on the street or online display.

1. What is persuasive communication?
2. Create an advertisement for a watch using persuasive language
3. Write a slogan
4. List some of the persuasive techniques that a communicator adopts to succeed in his persuading act.

10. Arrange the following sentences in the right sequence of measurements as given by fitness trackers.

- It categorizes the movements into different activities and then generates more information based on these details. It is stored under different headings in the fitness tracker app.
- Wearable trackers continuously sense the movements of the body on a 3 axis accelerometer. The data is recorded throughout, since the time it is worn and powered up.
- The collected data is stored in the tracker for further processing. The data is transferred to the software associated with the fitness tracker.
- The data collected is later run through a personalized algorithm.

11. Make a mind map on the functions of electronic warfare technology.

Electronic warfare (EW) is any action involving the use of the electromagnetic spectrum (EM spectrum) or directed energy to control the spectrum, attack an enemy, or impede enemy assaults. The purpose of electronic warfare is to deny the opponent the advantage of—and ensure friendly unimpeded access to—the EM spectrum. EW can be applied from air, sea, land, and/or space by crewed and uncrewed systems, and can target communication, radar, or other military and civilian assets.

Electronic protection (EP) (previously known as electronic protective measures [EPM] or electronic counter-countermeasures [ECCM]) involves actions taken to protect friendly forces (personnel, facilities, and equipment) from any effects of friendly or enemy use of the electromagnetic spectrum that degrade, neutralize, or destroy friendly combat capability (EA). EP is the ability to defeat EA.

Flares are often used to distract infrared homing missiles to miss their target. The use of flare rejection logic in the guidance (seeker head) of an infrared homing missile to counter an adversary's use of flares is an example of EP. While defensive EA actions (jamming) and EP (defeating jamming) both protect personnel, facilities, capabilities, and equipment, EP protects from the *effects* of EA (friendly and/or adversary). Other examples of EP include spread spectrum technologies, use of restricted frequency lists, emissions control (EMCON), and low observability (stealth) technology.^[1]

Electronic warfare self-protection (EWSP) is a suite of countermeasure systems fitted primarily to aircraft for the purpose of protecting the host from weapons fire and can include, among others: directional infrared countermeasures (DIRCM, flare systems and other forms of infrared

countermeasures for protection against infrared missiles; chaff (protection against radar-guided missiles); and DRFM decoy systems (protection against radar-targeted anti-aircraft weapons).

12. Frame sentences of your own using the following words:

1. Navigation
2. Warfare
3. Technology
4. Decode

13. Design a flyer for market barcode machines.

14. List the functions of fitness trackers.

15. Why are fitness trackers not as commonly used as other electronic gadgets?

16. Discuss the given topic:

Advantages and disadvantages of fitness trackers.

17. Fill in the blanks and complete the following sentences:

- Music is a great source of entertainment _____
- Some people listen to music whenever they feel sad _____
- People say that music helps them to improve concentration _____
- Music is easily available online _____
- I prefer to listen to music with my Bluetooth headphones _____

18. Say whether the following statements are true or false, correct them if they are false:

- Wireless headphones connect to the phone using Bluetooth
- Electricity or any other source of power is not required for Wireless headphones
- There is a possibility to reduce noise while using headphones
- Noise is normally created by the wireless headphones
- Headphones use the same kind of circuits used in normal speakers

19. Provide the summary of the following passage in fifty words.

There is another optimization condition that can be considered for the T-coloring environment. The span of a T-colouring is the difference between the largest and smallest colour number used

in colouring the vertices of the graph. There are simple examples for which there is no colouring that uses the smallest number of colours and simultaneously achieves the smallest span. Further generalizations of this basic framework expand the idea of a T-colouring to a list T-colouring. Here the idea is that there are "blocked" frequencies which cannot be assigned to a vertex, so that in trying to achieve a colouring one must limit the choice at each vertex to a list of non-blocked colours (frequencies). As mathematical techniques are found to solve these more general colouring problems, attempts are made to "up the ante" and solve even more complex ones. Sometimes it is possible to show that the problems are so hard (i.e. NP-complete) that no fast algorithm is likely to be found to solve them. New ideas and approaches using colouring to solve applied problems are regularly being investigated. As we so often see, mathematical ideas and applications of mathematics grow in tandem.

20. Give an infographic on various punctuations used in English.

SECTION D

1. Write an essay on the applications of AI in the fields of health, education, agriculture and banking sectors.
2. Discuss the impact of similar industrial disasters on people's minds.

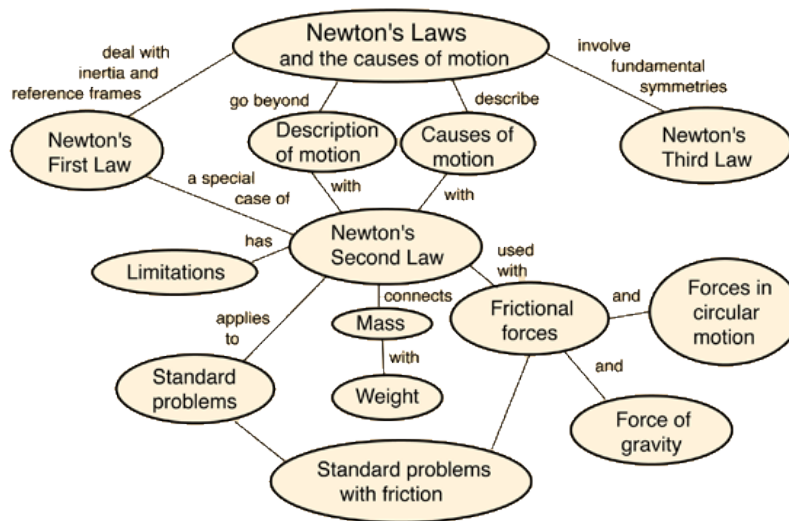

3. **With the help of the following passage, list out the places where barcodes are used and describe the ways in which they help people.**

On October 7, 1952, the patent for the invention of barcodes was filed by Bernard Silver and Norman Woodland. They designed a barcode that was similar to a bull's eye with a series of concentric circles that were non-overlapping but still closely packed. But, the basic symbol of barcodes is described with a straight line pattern. The symbol had four white lines on a darker background. The first line was a datum line and the other lines that followed it were designed in accordance with the first one. The coding of information was purely based on the presence or absence of these four lines. The number of lines was directly proportional to the number of possible classifications. The more the number of lines, the more was the possible number of

classifications. With the presence of just 10 lines, it was found that 1023 classifications can be made possible, a superb kind of discovery born out of all of their creative minds.

4. Discuss in detail about the basic capitalization rules.
5. Write a narrative essay on the incident which created an impact on you.
6. Reflect your ideas on the following concept map.

7. Artificial Intelligence will soon become capable of authoring books. Express your opinions in a paragraph of about 200 words.
8. Compare and contrast artificial intelligence and human intelligence.
9. Write a script based on Ada's experience while working on the analytical Engine.
10. Attempt to design a brochure for Ada's Analytical Engine.
11. Discuss about the use and significance of fitness trackers in the modern world.
12. Discuss the importance of digital electronics in creating a healthy life style.
13. Read the following passage which is an introduction to the essay on mathematics and cellphones. Try to understand the key elements of introduction and write an introduction to the essay titled, "Internet Security is Inevitable"

Mathematics has played an increasingly large role in the development of new technologies. Among the most visible of new technologies, which is dramatically changing the way people interact and communicate with each other, is the emergence of cheap and increasingly reliable cell phone service.

SEMESTER III

Core I – Electricity and Electromagnetism - 21UPHC31

SECTION A

Unit I: Steady currents and Thermo Electricity

- The unit of current density is-----
a) **A/m²** b) A/m c) N/m² d) N/m
- In any network of conductors the algebraic sum of the----- meeting at any point is zero
a) Voltage b) **Current** c) Electric field d) Ampere
- For a given temperature of the cold junction, the temperature of the hot junction for which the thermo emf becomes maximum is called the-----
a) **Inversion temperature** b) Neutral Temperature
c) Temperature Coefficient d) Critical temperature
- The reciprocal of the conductivity is called the-----
a) **Resistivity** b) Electrical conductivity c) Current density d) Electrical conduction
- The algebraic sum of ----- meeting at any point is zero.
a) Voltage b) **Current** c) Resistance d) Electric field.

Match the following:

- | | |
|---|----------------------------------|
| 1. Current | – dq / dt |
| 2. Current density | – $(q/t) / A = nev_d$ |
| 3. Unit of current density | – A/m^2 |
| 4. Equation of continuity | – $\text{div } J + d\rho/dt = 0$ |
| 5. Ohm's law | – $J = \sigma E$ |
| 6. Power | – $i^2 R = iv = v^2/R$ |
| 7. Condition for the balance of the bridge. | – $P/Q = R/S$ |
| 8. Correction for ammeter reading | – $(El_1/IR) - A_1$ |
| 9. Correction to low range voltmeter | – $(El_1/l) - V_1$ |
| 10. Correction to high range voltmeter | – $((P+Q)/P) (El_1/l)$ |
| 11. Law of intermediate temperatures | – $E_1^3 = E_1^2 + E_2^2$ |
| 12. Neutral temperature | – thermo emf becomes maximum |
| 13. Positive Thomson effect | – Ag, Zn, Sb, Cd. |

14. Negative Thomson effect – Pt, Ni, Co, Bi.
 15. Zero Thomson effect – Pb
 16. Peltier coefficient – π

Unit II: Magnetic properties and Magnetostatics

- Flux per unit area is defined as
 a) **magnetic induction** b) magnetization c) magnetic field intensity d) ampere
- Magnetic permeability k is defined as
 a) M/H b) H/M c) **B/H** d) H/B
- Dipole moment induced per unit volume of a magnetic material is
 a) Magnetic induction b) magnetic susceptibility c) **magnetisation** d) torque
- Ballistic galvanometer is meant for measuring
 a) Steady current b) large current c) **momentary charge** d) deflection
- The relative permeability and susceptibility of a magnetic material are related as
 a) $\chi = 1 + \mu$ b) $\mu_r = 1 - \chi$ c) **$\mu_r = 1 + \chi$** d) $\mu_r = \chi / H$
- Magnetic induction is
 a) **flux per unit area** b) total normal flux c) dipole moment per unit volume
 d) magnetic susceptibility.
- Dipole moment induced per unit volume of a magnetic material is
 a) Magnetic induction b) magnetic susceptibility c) **magnetisation** d) torque
- For a ferromagnetic substance, relative permeability μ_r is
 a) $\mu_r \ll 1$ b) **$\mu_r \gg 1$** c) $\mu_r = 0$ d) $\mu_r = 1$
- Flux per unit area is defined as
 a) **magnetic flux density** b) magnetization c) magnetic field intensity d) ampere
- Magnetic susceptibility k is defined as
 a) **M/H** b) H/M c) B/H d) **H/B**

Match the following:

- Ballistic reduction factor - $K = (T/2\pi) (C/NBA)$
- Logarithmic decrement - $\lambda = (2.303/10) \log_{10} (\theta_1/\theta_{11})$
- Magnetisation - $M = m / v$
- Magnetic field intensity - $H = (B/\mu_0 - M)$

5. Magnetic susceptibility - $\chi_m = M/H$

Unit III: Electromagnetic Induction

- The direction of the induced e.m.f in a circuit is given by
a) Faraday's law b) Fleming's rule c) **Lenz's law** d) Lorentz rule
- The unit, in which self inductance is expressed as
a) ohm b) **henry** c) per henry d) seimen
- When the rate of change of current in the primary coil is 2 A/s, the induced e.m.f. in the secondary coil is 2millivolt . Then, the mutual inductance between the two coils is
a) 2 mH b) **1 mH** c) 0.5 mH d) 1 H
- When a constant current of 1 ampere is flows through a self inductance coil of 10 millihenry, the back e.m.f produced in the coil is
a) 1 volt b) 1/10 volt c) 10^{-2} d) **zero**
- The magnitude of the induced e.m.f in a conductor depends on the
a) Amount of flux cut b) flux linkage c) **rate of change of flux linkage**
d) flux density of a magnetic field
- The law of electromagnetic induction was given by
a) Faraday b) **Lenz** c) Fleming d) Ampere
- When electric current starts growing in a coil of wire, the back e.m.f. in the coil depends on
a) self inductance of the coil b) current in the coil c) rate of change of current in the coil
d) **the self inductance and rate of change of current in the coil**
- The self inductance of a solenoid is proportional to (N for total number of turns)
a) N b) 1/N c) **N^2** d) $1/N^2$
- When a current I is passed through coil of self inductance L, the flux linked with the coil is
a) **LI** b) LI^2 c) $LI^2/2$ d) L/I

Match the following:

- | | |
|----------------------------------|-------------------------------|
| 1. Faraday law | – $e = d\phi / dt$ |
| 2. Lenz's law | – $e = - d\phi / dt$ |
| 3. Self inductance of the toroid | – $L = \mu_0 N^2 A / L$ henry |
| 4. Coefficient of coupling | – $K = M / \sqrt{(L_1 L_2)}$ |

Unit IV: Alternating Current

1. The phase angle between the voltage vector and current vector for a resistance in an a.c circuit is
a) one b) π c) $\pi / 2$ d) **zero**
2. Wattless current is called so because while it is flowing through the circuit element it causes
a) no phase change between voltage and current vectors
b) no voltage to appear across the element
c) **no power consumption in the circuit** d) phase angle between current and voltage.
3. The phase difference between current and voltage in a parallel LR circuit with d.c. voltage is
a) **$\tan^{-1}(RC \omega)$** b) $\tan^{-1}(RC / \omega)$ c) $\tan^{-1}(L/R)$ d) zero
4. At resonance, the current in a series resonant circuit is
a) **maximum** b) minimum c) zero d) constant
5. Power factor of a pure capacitor is
a) 1 b) **0** c) 0.5 d) 0.707
6. A series resonance circuit is called acceptor circuit because at the resonance frequency it
a) allows maximum impedance b) **allows maximum current**
c) allows minimum transfer of power d) both a and b.
7. Power factor of resistor is
a) **one** b) 70.7% c) 0.25% d) 29.3%
8. In a pure inductive a.c. circuit, the current
a) **lags behind e.m.f. by 90°** b) leads emf by 90°
c) is in phase with e.m.f. d) None of the above
9. At resonance, a series resonant circuit behaves as
a) purely inductive circuit b) purely capacitive circuit
c) **purely resistive circuit** d) a high Q circuit
10. Power factor for a pure inductor is
a) **0** b) 0.5 c) 1 d) 0.707
11. In an LCR parallel circuit, Q factor indicates
a) **voltage magnification** b) current magnification c) resonance frequencies d) real power

Match the following:

- | | |
|------------------------|--------------------------------|
| 1. Form factor of a.c. | – 1.11 |
| 2. Power factor | – $\cos \phi$ |
| 3. Power factor | – True power / apparent power. |

4. Voltage magnification – Q – factor of the coil.
5. Low voltages into higher voltages – Step-up-transformer.
6. High voltages into Lower voltages – Step-down-transformer

Unit V: Transformers and A.C Bridges

1. At higher frequencies the flow of current through bars is
 - a) Uniform throughout the cross-section
 - b) concentrated along the centre
 - c) concentrates on the outer layers**
 - d) none of the above
2. For step down transformer the number of turns in primary is
 - a) less than that in the secondary
 - b) much less than that in the secondary
 - c) more than that in the secondary**
 - d) none of the above
3. For An ideal transformer on load
 - a) $\frac{E_p}{E_s} = \frac{N_p}{N_s}$
 - b) $\frac{E_p}{E_s} = \frac{N_s}{N_p}$
 - c) both (a) and (b)
 - d) none of (a) and (b)
4. The laminations of the transformer are there to
 - a) increase impedance
 - b) reduce transients
 - c) reduce eddy currents**
 - d) increase the transformer ratio efficiently
5. Transformers are least affected by
 - a) copper loss
 - b) iron losses
 - c) hysteresis
 - d) mechanic losses**
6. An ideal transformer does not change
 - a) power
 - b) current
 - c) voltage
 - d) none of the above
7. Most commonly AC bridge circuit used for measurement of capacitance is
 - a) Mexwell Wein bridge
 - b) Hay's bridge
 - c) De-saughty bridge
 - d) Schering bridge**
8. A Maxwell bridge is used for the measurement of
 - a) inductance only**
 - b) capacitance only
 - c) both inductance and capacitance
 - d) none of these
9. Wein bridge finds application in
 - a) Harmonic distortion analyser
 - b) Resistance measurement
 - c) Frequency measurement**
 - d) None of these
10. Copper losses may be minimized by keeping
 - a) the ohmic resistance of the winding very small**
 - b) core is made of laminated sheets of soft iron insulated from each other
 - c) soft iron core having a thin hysteresis loop

- d) wound the primary and secondary coils around a closed ring type iron core effectively
11. Iron losses may be minimized by keeping
- a) the ohmic resistance of the winding very small
 - b) core is made of laminated sheets of soft iron insulated from each other**
 - c) soft iron core having a thin hysteresis loop
 - d) wound the primary and secondary coils around a closed ring type iron core effectively
12. Hysteresis losses may be minimized by keeping
- a) the ohmic resistance of the winding very small
 - b) core is made of laminated sheets of soft iron insulated from each other
 - c) soft iron core having a thin hysteresis loop**
 - d) wound the primary and secondary coils around a closed ring type iron core effectively
13. Magnetic losses may be minimized by keeping
- a) the ohmic resistance of the winding very small
 - b) core is made of laminated sheets of soft iron insulated from each other
 - c) soft iron core having a thin hysteresis loop
 - d) wound the primary and secondary coils around a closed ring type iron core effectively**

SECTION B

Unit I: Steady currents and Thermo Electricity

1. Define current density.
2. State Ohm's Law.
3. State Kirchhoff's current law.
4. State Kirchhoff's voltage law.
5. Define Seebeck effect.
6. Define Thomson effect.
7. Define Peltier effect.
8. Define Thomson Coefficient.
9. State law of intermediate metals.
10. State law of successive temperature.
11. What is meant by thermocouple?
12. Write the expression for current density.

Unit II: Magnetic properties and Magnetostatics

1. Define magnetic induction.
2. Define Magnetization.
3. Define Magnetic field intensity.
4. What is the relation connecting the magnetic vectors B , H and M ?
5. Define magnetic susceptibility.
6. Define magnetic permeability.
7. What is meant by logarithmic decrement?
8. Define Ballistic reduction factor.
9. What are the conditions for a moving coil galvanometer to be dead beat?
10. What are the conditions for a moving coil galvanometer to be ballistic?
11. What is the principle of moving coil Ballistic Galvanometer?
12. What are the two types of Ballistic Galvanometer?
13. What is meant by charge sensitivity?

Unit III: Electromagnetic Induction

1. Define induced emf.
2. Define electromagnetic induction.
3. State Faraday's law.
4. State Lenz's law.
5. What is meant by self induction?
6. Write the expression for induced current.
7. Define mutual inductance between pair of coils.
8. What is eddy current?
9. Define back emf induced in the coil.
10. Give any two uses of eddy currents.

Unit IV: Alternating Current

1. Define the terms: Time period, amplitude and frequency.
2. Define peak value of an alternating current or emf.
3. Derive an expression for peak value of alternating current.

4. Derive an expression for mean value of alternating current.
5. Derive an expression for root mean value of alternating current.
6. Define form factor.
7. Derive an expression for effective value of alternating current.
8. Derive an expression for mean value of AC voltage.
9. Derive an expression for RMS value of alternating voltage.
10. Define impedance.
11. Define reactance and admittance.
12. What is meant by resonant frequency?
13. Why the LCR series resonance circuit is called as an acceptor circuit?
14. Why the LCR parallel resonance circuit is called as a rejecter circuit?
15. Define Q-factor.
16. Define power factor.
17. What is meant by wattless current?
18. Define voltage magnification.

Unit V: Transformers and A.C Bridges

1. Define coupled circuit.
2. Define simple coupled circuits.
3. Define complex coupled circuits.
4. What is transformer?
5. Write the conditions for step up and step down transformers.
6. Define core type transformers.
7. Define shell type transformers.
8. Define transformer ratio.
9. Write a short note on copper losses in transformer.
10. Write a short note on iron losses in transformer.
11. Write a short note on hysteresis losses in transformer.
12. Write a short note on magnetic losses in transformer.

SECTION C

Unit I: Steady currents and Thermo Electricity

1. Define current and current density. Derive an expression for current density.
2. Obtain an expression for an equation of continuity.
3. State and prove Kirchoff's laws.
4. Explain about the application Kirchoff's laws to Wheatstone network.
5. Write the principle of potentiometer.
6. How will you calibrate the ammeter using potentiometer?
7. How will you calibrate the low range voltmeter using potentiometer?
8. How will you calibrate the high range voltmeter using potentiometer?
9. How will you measure the thermo emf using potentiometer?
10. Explain in detail about Seebeck effect.
11. Explain Thomson effect.
12. Define Thomson coefficient. Describe an experiment to demonstrate Thomson effect.
13. What is meant by Peltier effect? How would you demonstrate it experimentally?

Unit II: Magnetic properties and Magnetostatics

1. Define the magnetic vectors: intensity of magnetization (M), intensity of magnetic field (H) and magnetic induction (B). Obtain the relation connecting the three magnetic vectors M , H and B .
2. Define magnetic permeability and susceptibility. Derive the relation connecting them.
3. Explain 'logarithmic decrement' and 'damping correction' in moving coil ballistic galvanometer.
4. Describe, with circuit diagram, the method of determining charge sensitivity of moving coil ballistic galvanometer.
5. An iron rod 0.2 m long, 10×10^{-3} m in diameter has relative permeability of 1×10^3 . It is placed inside a long solenoid having 30 turns per metre. If a current of 0.5 A is passed through the solenoid. Find the magnetic moment of the rod.
6. A magnetic field of intensity 2000 ampere turns per metre produces a flux density of 8π weber per metre² in a bar of iron. Calculate its relative permeability and susceptibility?
7. A magnetic field of intensity 1000 ampere turns per metre produces a flux density of 4π weber per metre² in a bar of iron. Calculate its relative permeability and susceptibility.

Unit III: Electromagnetic Induction

1. Explain the phenomenon of electromagnetic induction, Faraday's law and Lenz's law of electromagnetic induction.
2. Define self inductance. Derive an expression for self inductance of a long solenoid.
3. Derive the expression for induced charge and current.
4. Obtain an expression for self inductance of toroidal coil of rectangular cross-section.
5. Obtain an expression for self inductance of toroidal coil of circular cross-section.
6. Derive Neumann formula for mutual inductance.
7. Obtain an expression for mutual inductance of two coaxial solenoids.
8. Calculate the self inductance of coil of 100 turns if a current of 3 Ampere produces a magnetic flux of 6×10^{-5} weber throughout the coil?
9. A solenoid having a core of cross section $4 \times 10^{-4} \text{ m}^2$ half air and half iron (relative permeability 500) is 0.22 m long. If the number of turns on it is 1000, calculate the coefficient of self induction of the solenoid.
10. Two coils have self inductances $L_1 = 500\text{mH}$ and $L_2 = 800\text{mH}$. There exists a coefficient of coupling of 0.5 between them. Find their mutual inductance. If an e.m.f of volts is induced in one coil, find the time rate of change of current in the other.
11. A solenoid of length $30 \times 10^{-2}\text{m}$ and radius $3 \times 10^{-2}\text{m}$ has 2000 turns per metre. If a current of 1 ampere is passed through it, calculate the magnetic flux through the coil and self inductance of the coil.
12. Discuss about eddy currents.
13. Write the uses of eddy currents.

Unit IV: Alternating Current

1. Explain how the current and emf varying in AC circuit containing resistance only.
2. Explain how the current and emf varying in AC circuit containing inductance only.
3. Explain how the current and emf varying in AC circuit containing capacitance only.
4. Obtain an expression for instantaneous current, impedance and power factor of an a.c. circuit with capacitor and resistor connected in series?
5. Obtain an expression for instantaneous current, impedance and power factor of an a.c. circuit with inductance and resistor connected in series?

6. Explain the characteristics of the series resonance circuit.
7. Explain the characteristics of the parallel resonance circuit.
8. Describe two applications of (i) Series resonant circuit and (ii) parallel resonant circuit.
9. Show that the power factor of pure inductive or capacitive circuit is zero.
10. Explain 'wattless current' in A.C circuits.
11. Describe the construction, principle and use of choke.
12. Show that true power = apparent power x power factor.

Unit V: Transformers and A.C Bridges

1. Show that the effective impedance of the primary circuit is modified when it is coupled inductively with a secondary circuit.
2. What are energy losses in transformer? How are they reduced?
3. Deduce the condition of balance for A.C bridge.
4. Give the theory and working of Maxwell's bridge. How would you use it to determine the inductance of a coil.
5. How would you use Owen bridge method to determine the inductance of a coil?
6. How would you use De Sauty's AC bridge method to determine the capacitance?
7. How would you use Wein's bridge method to measure the capacitance?
8. How would you use Schering bridge method to measure the capacitance?

SECTION D

Unit I: Steady currents and Thermo Electricity

1. Explain with necessary theory how a Carey Foster bridge may be used to compare two nearly equal resistances. Hence show how the specific resistance of the material of the wire can be determined?
2. Derive the expression for Peltier and Thomson coefficients.
3. Explain the theory of potentiometer. How will you use it to calibrate an ammeter?
4. How will you use the potentiometer to calibrate a low and high range voltmeter?
5. Explain thermodynamics of thermocouple in detail.

Unit II: Magnetic properties and Magnetostatics

1. Explain the principle, construction and theory of moving coil ballistic galvanometer.
2. Give the theory of moving coil B.G. Explain how damping correction is applied?
3. Describe, with relevant theory, the method of determining absolute capacity of a capacitor using B.G.

Unit III: Electromagnetic Induction

1. Describe, with relevant theory, Rayleigh's method of self inductance of a coil.
2. Describe with relevant theory, a method to determine mutual inductance of a pair of coils, using B.G.
3. Obtain an expression for self inductance of toroidal coil of rectangular and circular cross-section.
4. Discuss about eddy currents. Write its uses.

Unit IV: Alternating Current

1. Give the theory of series resonance circuit. Obtain the expression for resonance frequency.
2. Give the theory of parallel resonance circuit. Obtain the expression for resonance frequency.
3. Obtain an expression for (i) resonance frequency (ii) impedance and (iii) Q factor. Why this circuit is called a acceptor circuit?
4. Give the theory of choke coil. Why a choke is considered superior to a resistor?
5. Explain the terms power factor and wattles current in an AC Circuit. Derive an expression for power and power factor. When the current is entirely wattles?

Unit V: Transformers and A.C Bridges

1. Examine with relevant theory, Anderson's bridge for finding the self inductance of the coil.
2. Outline the Robinson's bridge for determining the frequency of an A.C. source.
3. Prove that $\frac{V_s}{V_p} = \frac{N_s}{N_p}$ using theory of transformer.
4. Give the detailed theory of transformer.

SECTION– A

Unit I: Elasticity

1. The S-I unit of stress is
 a) N/m **b) N/m^2** c) Nm d) None of the above
2. The S-I unit of strain is
 a) N/m b) N/m^2 c) Nm **d) No unit**
3. The ratio of increase in length to original length is called
 a) Stress **b) Strain** c) Young's modulus d) none of above
4. The restoring force per unit area of a body is called
a) stress b) Strain c) Young's modulus d) gravity
5. Which is more elastic?
a) Steel b) rubber c) cloth d) wire
6. Work done per unit volume during longitudinal strain is
 a) Stress x Strain b) $\frac{1}{3}$ x Stress x Strain
c) $\frac{1}{2}$ x Stress x Strain d) $\frac{1}{4}$ x Stress x Strain
7. The ratio of contraction strain to elongation strain is called
 a) Young's modulus b) rigidity modulus c) bulk **modulus** **d) poisson's ratio**
8. The ratio of stress to strain is called
 a) workdone **b) modulus of elasticity** c) force d) none of above
9. The couple per unit twist is given by
 a) **$\pi n a^4 / 2l$** b) $\pi n a^2 / 2l$ c) $\pi n a^3 / 2l$ d) none of above
10. The S-I unit of modulus of elasticity is
 a) N/m **b) N/m^2** c) Nm d) No unit
11. The S-I unit of couple is
 a) N/m b) N/m^2 c) **Nm** d) No unit
12. The period of Torsion pendulum is given by
 a) $T=2\pi\sqrt{T/m}$ b) $T=2\pi\sqrt{C/I}$ c) **$T=2\pi\sqrt{I/C}$** d) none above
13. The period of a seconds pendulum is
 a) 1s **b) 2s** c) 3s d) 4s
14. The dimensional formula for Young's modulus is
 a) MLT^{-1} b) MLT^{-2} c) **$\text{ML}^{-1}\text{T}^{-2}$** **d) MLT^{-3}**
15. Shearing strain is also known as
 a) angle of twist b) **angle of shear** c) angle of time d) angle of strain

16. The relation between q, k and n is
 a) $9/q = 1/k + 3/n$ b) $1/3q = 1/n + 1/k$ c) $1/k = 1/3n + 1/4q$ d) None of above
17. The relation between q, n and σ is
 a) $q = 2n(1 + \sigma)$ b) $n = 2q(1 + \sigma)$ c) $n = 2q(1 + \sigma)$ d) $q = n(1 + \sigma)$
18. The modulus of elasticity is equal to
 a) **stress/strain** b) stress x strain c) stress- strain d) stress + strain
19. In a given torsion pendulum the ratio
 a) $1/T$ is a constant b) l^2/T is constant c) **l/T^2 is a constant** d) none of above
20. If n, k and σ represent rigidity modulus, bulk modulus and poisson's ratio then
 a) $\sigma = 9k - 2n / 9k + 2n$ **b) $\sigma = 3k - 2n / 6k + 2n$**
 c) $\sigma = 3k + 2n / 9k + 2n$ d) $\sigma = 3k + 2n / 6k + 2n$
21. Young's modulus (q), rigidity modulus (n), and poisson's ratio (σ) are related as
 a) $q = 2n / 1 + \sigma$ b) $\sigma = 2q / 1 + n$ c) **$q/n = 2(1 + \sigma)$** d) $2q = n(1 + \sigma)$
22. The dimensions of stress are
 a) MLT^{-2} **b) $ML^{-1}T^{-2}$** c) $ML^{-1}T^{-1}$ d) ML^2T^{-1}
23. Volume strain is ----- times the linear strain
 a) **3** b) 2 c) 1 d) 4

Unit II: Bending of Beams

1. The layer of a beam neither elongated nor contracted is known as
 a) **neutral layer** b) bending layer c) bending axis d) none of above
2. The expression for bending moment is given by
 a) **qAK^2 / R** b) qL^2 / R c) q/R d) qak
3. The geometrical moment of inertia of a beam of circular cross section is
 a) **$\pi r^4 / 4$** b) $\pi r^3 / 3$ c) $\pi r^2 / 2$ d) none of above
4. A thin rod clamped horizontally at one end and loaded at the free end is called
 a) rectangular beam b) **cantilever** c) Loaded beam d) circular beam
5. The S-I unit of bending moment is
 a) N/m b) **Nm** c) N/m^2 d) m
6. The geometrical moment of inertia of a rectangular beam is given by
 a) $bd^2 / 4$ b) **$bd^3 / 12$** c) $bd / 12$ d) none of above
7. The depression (y) produced in a cantilever is given by
 a) $Mgl^2 / 3qI$ b) $g \times Mgl / qI$ c) **$4Mgl^3 / bd^3E$** d) $Mgl/2bdy$
8. If a beam is loaded at both the ends, the type of bending produced is
 a) **uniform bending** b) Non-uniform bending c) cantilever bending d) depression
9. If a beam is loaded at the center, the type of bending is called

- a) uniform bending b) **Non-uniform bending** c) cantilever bending d) none of above
10. The expression for depression produced in a rectangular beam subjected to non-uniform bending is
 a) $y = \frac{Mgl^3}{4bd^3 q}$ b) $y = \frac{Wl^2}{4bd^3}$ qc) $y = \frac{Wl}{bd^3}$ yd) $y = \frac{Mgl^3}{4bd^2 q}$
11. The expression for elevation produced in a beam subjected to uniform bending is
 a) $y = \frac{Wal^2}{4ql}$ b) $y = \frac{Wal^2}{4q}$ c) **$y = \frac{Wal^2}{8ql}$** d) $y = \frac{Wal^3}{4q}$
12. The depression of cantilever is directly proportional to
 a) square of its length b) square root of its length
 c) its length d) **cube of its length**
13. In the case of bending of a rod
 a) **young's modulus comes into play** b) Rigidity modulus comes into play
 c) Bulk modulus comes into play d) None of the above comes into play
14. A rod is supported symmetrically on two knife edges and loaded in the middle
 a) The bending is said to be uniform
 b) **The bending is said to be non-uniform**
 c) each element in the bent beam will have same radius of curvature
 d) cantilever bending
15. In uniform bending there is ----- of beam when it is gradually loaded
 a) **elevation** b) depression c) neither
 d) first elevation and then depression
16. A beam is defined as a rod or bar of uniform cross section whose -----
 a) **length is very large compared to its breadth and thickness**
 b) length is same as thickness c) length is less than thickness
 d) length is less than breadth

Unit III: Thermal Physics

1. Mean free path of molecule of a gas
 a. **depends on speed of the molecule** b. does not depend on speed of the molecule
 c. does not depend on temperature of the gas d. depend on square root of speed of the molecule
2. According to Dulong and Petit's law,
 a. **C_v is independent of temperature** b. C_v depends on temperature
 c. C_v depends on square of temperature d. $C_v \propto T^3$
3. The degree of freedom of a fly in space is
 a. 1 b. 2 c. **3** d. 5

4. The energy per degree of freedom at temperature T is
a. $\frac{1}{2} kT$ b. kT c. $\frac{3}{2}kT$ d. $\frac{1}{2}RT$
5. The ratio of specific heat capacity(γ) of a gas and the degree of freedom(X) of molecules in it are related as
a. $\gamma = 1 - 2/X$ **b. $\gamma = 1 + 2/X$** c. $\gamma = 2/X$ d. $\gamma = 2X$
6. The ratio of specific capacity is of a gas decreases as the atomicity of the gas
a. decreases **b. increases** c. remains constant d. tends to zero
7. The mean free path (λ) of molecules and pressure (P) of a gas are related as
a. $P\lambda = \text{constant}$ b. $P/\lambda = \text{constant}$ c. $\lambda/P = \text{constant}$ d. $P\lambda^2 = \text{constant}$
8. The transport of momentum across a plane in a gas due to molecular motion gives rise to
a. diffusion b. thermal conductivity **c. viscosity** d. osmotic pressure
9. According to kinetic theory of gases, the coefficient of viscosity of a gas is
a. independent of temperature **b. independent of pressure** c. depends on $T^{3/2}$ d. depends on $P^{-1/2}$
10. The thermal conductivity (K), the molar heat capacity (C_v) y, the coefficient of viscosity (η) and the molecular weight (M) of a gas are related as
a. $KM = \eta C_v$ b. $KMC_v/\eta = 1$ c. $K/\eta = M/C_v$ d. $K/\eta = 1$
11. The direct evidence for random molecular motion is
a. sodium light b. Maxwellian distribution **c. Brownian motion** d. Mean free path η
12. The coefficient of diffusion of a gas varies with temperature T and pressure P as
a. $p^{3/2}/T = \text{constant}$ b. $PT = \text{constant}$ c. $T^{3/2}/P = \text{constant}$ d. $T^{1/2}P = \text{constant}$
13. The coefficient of viscosity of an ideal gas is
a. proportional to its density b. inversely proportional to its density
c. independent of its density d. none of the above
14. The ratio of coefficient of viscosity (η) of a gas to its diffusion coefficient (D) just equal it's
a. pressure **b. density** c. specific heat d. entropy
15. One of the important application of the study of Brownian motion is the determination of
a. the most probable velocity b. kinetic energy
c. mean velocity **d. Avogadro's Number**
16. The mean free path of the molecules of a gas at a given temperature and pressure is $2.0 \times 10^{-7} \text{ m}$. If the pressure is doubled, the new mean free path would be
a. $1 \times 10^{-7} \text{ m}$ b. $0.5 \times 10^{-7} \text{ m}$ c. $4 \times 10^{-7} \text{ m}$ d. $6.0 \times 10^{-7} \text{ m}$
17. The molecular free path is the effect of
a. intermolecular attraction **b. finite size of molecules** c. gravity d. viscosity

18. The mean free path will be less for

- a. **heavier gas** b. lighter gas c. ideal gas d. actual gas

Unit IV: Interference and Diffraction

1. Colours of thin film are due to _____.

- a) **interference** b) diffraction c) dispersion d) refraction

2. In an air wedge, the interference fringes have fringewidth that are _____.

- a) **directly proportional to wave length** b) inversely proportional to wavelength
c) directly proportional to separation at one end d) continuously varying from one end

3. For constructive interference, the path difference between interfering waves must be _____.

- a) **even multiples of $\lambda/2$** b) odd multiple of λ
c) even multiples of λ d) odd multiple of $\lambda/2$

4. The phenomenon of interference was discovered by _____.

- a) Huygens b) Newton c) Maxwell d) **Young**

5. When white light beam is incident on a thin air film enclosed between two glass plates, we get in the reflected beam _____.

- a) **coloured bands** b) dark and bright bands
c) no interference pattern d) interference pattern

6. If d is the thickness of a wire and l is the distance of the wire from the edge of an air wedge, the angle of the wedge is given by _____.

- a) dl b) l/d c) **d/l** d) $d/2l$

7. When light is reflected from the surface of a denser medium a phase – change of _____ occurs.

- a) 2π b) π c) $\pi/2$ d) $\pi/4$

8. For interference in air film at normal incidence the condition for brightness in reflected light is _____.

- a) $2t = 0$ b) $2t = \lambda/3$ c) **$2t = (2n-1)\lambda/2$** d) $2t = n\lambda$

9. Consider a monochromatic light passing through a plane transmission grating at oblique incidence. The deviation produced in the diffracted beam is minimum, when _____,

- a) the angle of incidence = angle of reflection
b) **the angle of incidence = angle of diffraction**
c) the angle of incidence = angle of refraction
d) the diffraction grating is rotated in clockwise direction.

10. The bending of light rays at any edge is known as _____.

- a) Interference b) **diffraction** c) polarization d) refraction

11. Light appears to travel in straight line because _____.
 a) it is not absorbed by the atmosphere b) it is reflected by the atmosphere
 c) **Its wavelength is very small** d) its velocity is large.
12. The resolving power of a grating does not depend upon _____.
 a) order of the spectrum b) **grating element**
 c) total number of lines in the grating d) width of the grating.
13. During oblique incidence on a grating the deviation produced in the diffracted beam is minimum when _____.
 a) $\theta = i/2$ b) $\theta + i = 0$ c) $(\theta + i)/2 = 0$ d) **$\theta = i$**
14. In transmission gratings lines are drawn on a _____.
 a) silver surface b) **glass surface** c) cold surface d) copper surface
15. The relation between the number of lines/metre (N) and the grating element (a + b) is given by _____.
 a) $N = a + b$ b) $N = a - b$ c) **$N = 1/(a + b)$** d) $N = 1/(a - b)$

Unit V: Ultrasonics

1. Ultrasonic waves having frequency greater than -----
 (a) **20000 Hz** (b) 2000 Hz (c) 2 Hz (d) 1000 Hz
2. Sonar works on the principle of -----
 (a) **echosounding** (b) reverberation (c) vibration (d) Oscillation
3. ----- is based on the principle of piezo-electric effect
 (a) **Quartz crystal** (b) cubic crystal
 (c) triclinic crystal (d) orthorhombic crystal
4. Ultrasonic frequencies of ----- can be generated by piezo electric method
 (a) **100 MHz** (b) 200 MHz (c) **500 MHz** (d) 600 MHz
5. ----- method cannot be used if ultrasonic waves is small
 (a) Sensitive flame (b) **Kundt's tube**
 (c) Quartz tube (d) Thermal detectors
6. Ultrasonic waves can be focused by lens formed from
 (a) **plastics or metals** (b) glass (c) stone (d) cork
7. The construction cost of magnetostriction effect is
 (a) **high** (b) low (c) minimum (d) maximum
8. If resonant frequency of piezoelectric oscillator is N, the velocity of ultrasonic waves is -----

 (a) $v = 2d$ (b) $v = 4Nd$ (c) **$v = 2Nd$** (d) $v = 6Nd$
9. frequency of ultrasonic waves in water is around is -----

- (a) 20,000Hz (b) 60,000Hz (c) 15,000Hz (d) **40,000Hz**

10. The metal used in the Magnetostriction is -----

- (a) **Nickel** (b) Iron (c) Gold (d) copper

SECTION-B

Unit I: Elasticity

1. Define stress.
2. Define strain.
3. Define modulus of elasticity.
4. Define Hooke's law.
5. Define poisson's ratio.
6. Give the limiting values of poisson's ratio.
7. Define Young's modulus of elasticity.
8. Define bulk modulus of elasticity.
9. Define rigidity modulus of elasticity.
10. Give the expression for couple per unit twist.

Unit II: Bending Moment

1. What is a beam?
2. What is bending moment?
3. What are neutral axis and neutral surface?
4. Define bending couple
5. What is the internal bending moment?
6. What is the flexural rigidity of the beam?
7. What is geometric moment of inertia?
8. What is geometric moment of inertia for circular bar?
9. What is geometric moment of inertia for rectangular bar?
10. What is the unit for stress?

Unit III: Thermal Physics

1. Define heat.
2. Give any two evidence for molecular motion.
3. Define mean free path.
4. Define transport phenomena.
5. Give the relation connecting thermal conductivity and viscosity of a gas.
6. Give the relation connection thermal conductivity and molecular diameter.
7. Give the relation between diffusion coefficient and viscosity of a gas.

Unit IV: Interference and Diffraction

1. What is meant by monochromatic waves?
2. Define 'interference' of light.
3. What is meant by interference fringes or \cos^2 fringes?
4. Define coherent sources.
5. What is meant by air-wedge?
6. Write the uses of air-wedge.
7. Define diffraction of light.
8. Define Fresnel diffraction.
9. Define Fraunhofer diffraction.
10. Define plane diffraction grating.
11. Define grating element.

Unit V: Ultrasonics

1. List out any two properties of ultrasonics
2. What is magnetostriction effect?
3. Give any two uses of Ultrasonics
4. Define Thermal Detectors.

SECTION – C

Unit I : Elasticity

1. Explain the following
 - a) Hooke's law
 - b) Poisson's ratio
 - c) Elastic moduli
2. Explain the stress-strain curve
3. Obtain an expression for the work done per unit volume during Shearing strain.
4. Define Young's modulus of elasticity. Derive an expression for 'y'.
5. Define bulk modulus of elasticity, Derive an expression for 'k'.
6. Define rigidity modulus of elasticity Derive an expression for 'n'.
7. Derive an expression for Poisson's ratio.
8. Define stress, strain and modulus of elasticity.

Unit II: Bending Moment

1. What is meant by a beam? Explain the term neutral axis, neutral surface, plane of bending and bending moment of the beam.
2. Derive the expression for the young's modulus of the bar in uniform bending.
3. Derive the expression for the young's modulus of the bar in non-uniform bending.
4. Derive an expression for couple per unit twist.

Unit III: Thermal Physics

1. Enumerate the evidences in favour of molecular motion in fluids. Explain each of the evidence briefly.
2. Derive an expression for mean free path. Explain Claussius and Maxwell's modification in the expression for mean free path.
3. Based on kinetic theory concept of molecular motion, derive an expression for Avagadro number N .
4. Explain degrees of freedom, giving examples.
5. State and explain Dulong and Petits law. Discuss its limitations. Show that it follows from the law of equipartition of energy.
6. Explain what physical quantity is transported and how it is transported in the following phenomena: i) viscosity of gases ii) thermal conductivity of gases and iii) diffusion of gases.
5. What are transport phenomena? How are they accounted for?
7. Discuss how viscosity of a gas depends on i) pressuer of the gas and ii) temperature of the gas.
8. Establish that $K/\eta = D$, for a gas, where K is the thermal conductivity, η its viscosity coefficient and D , the diffusion coefficient of the gas.
9. Discuss the dependence of thermal conductivity of a gas on i) pressure and ii) temperature of the gas.
10. Calculate the number of molecules in 1 m^3 volume of hydrogen at N.T.P. If the molecular diameter of hydrogen molecule at $2.24 \times 10^{-10} \text{ m}$, calculate the mean free path at N.T.P.
11. Calculate the mean velocity of the nitrogen molecules at N.T.P. Given that the density of nitrogen at N.T.P. is 1.2 kg/m^3 , its coefficient of viscosity is $1.7 \times 10^{-3} \text{ N/m}^2$ and the mean free path is $8.5 \times 10^{-8} \text{ m}$.
12. The mean free path of nitrogen molecule at a given temperature and pressure is $0.8 \times 10^{-7} \text{ m}$, while the concentration of the molecules is $2.7 \times 10^{25} \text{ molecules per m}^3$. Calculate the molecular diameter.
13. The diameter of helium atom is \AA . One mole of the gas is found to occupy 20×10^{-3} at 20 K temperature. Calculate i) the mean free path of the molecules ii) the number of collision per unit distance and iii) the collision frequency. ($R = 8.4 \text{ joule per Kelvin}$ and Avogadro number = 6×10^{23} per mole)
14. The coefficient of viscosity of oxygen is $1.95 \times 10^{-5} \text{ N-s/m}^2$ and the diffusion coefficient of oxygen is $1.22 \times 10^{-5} \text{ m}^2/\text{s}$. If the average molecular speed is 440 m/s , find the density and

mean free path of the molecules.

15. Calculate the mean free path of nitrogen at 27°C under a pressure of one atmosphere, if the molecular diameter of nitrogen is 3.5Å. (1 atmosphere = $1.01 \times 10^5 \text{ N/m}^2$)

Unit IV: Interference and Diffraction

1. Give the theory of interference in thin films and explain the colours of thin films.
2. Explain the formation of interference fringes by an air wedge and how the phenomenon of interference is used in testing the optical planeness of a glass surface.
3. Describe the construction and action of plane diffraction grating.
4. Distinguish between Fraunhofer and Fresnel class of diffraction.
5. Find the radii of the first three transparent zones of zone plate, whose focal length is 1 metre for $\lambda = 6000 \text{ Å}$. The focal length of the zone plate is $f = r_n^2/n\lambda$, where n is an odd integer such as 1, 3, 5,..... and r_n is the radius of the n^{th} half period zone.
6. A diffraction grating at normal incidence gives a line of wavelength 6000 Å in a certain order superimposed on another line of wavelength 4000 Å of the next higher order. The angle of diffraction is 30° . How many lines are there per unit length in the grating?
7. Define resolving power of grating. Derive an expression for resolving power of a grating.
8. Discuss the phenomenon of Fraunhofer diffraction at a single slit.
9. Define and explain the term “dispersive power of a grating”.

Unit V: Ultrasonics

1. What is Magnetostriction effect? Describe the magnetostriction method of producing ultrasonics
2. What is piezo electric effect? Describe the piezo electric method of producing ultrasonics
3. Explain non-destructive methods of material testing using ultrasonics namely pulse method and Acoustic rating method.
4. Describe the absorption and dispersion of Ultrasonics
5. Explain how ultrasonic waves are used to find the depth of sea and direction signalling
6. Describe how will you measure the velocity of blood flow
7. Explain the measurement of heart movement
8. What are the uses of Ultrasonics?

SECTION D

Unit I: Elasticity

1. Derive an expression for the couple per unit twist. Also estimate the work done in twisting.
2. Derive an expression for the rigidity modulus of a wire using static torsion pendulum.
3. How will you determine the rigidity modulus of dynamic torsion pendulum?

Unit II: Bending Moment

1. Derive an expression for the bending moment
2. Derive an expression for elevation at the centre of a bar subjected to uniform bending
3. Derive an expression for depression at the centre of a bar subjected to non-uniform bending.
4. Explain with necessary theory, the method of determining the young's modulus of a bar by cantilever depression method.
5. Describe the experiment to determine the young's modulus of a bar subjected to non-uniform bending. Derive the formula you use.
6. Describe an experiment to determine the young's modulus of a bar by uniform bending.
7. Derive the formula to calculate the radius of curvature.
8. Describe with necessary the oscillation method to determine E for material of a cantilever.

Unit III: Thermal physics

1. Obtain an expression for i) specific heat capacity of a gas at constant pressure ii) specific heat capacity of a gas at constant volume and iii) ratio of specific heat capacities of a gas, in terms of degrees of freedom.
2. Based on kinetic theory concept of molecular motion, derive an expression for coefficient of viscosity of a gas.
3. Based on kinetic theory concept of molecular motion, derive an expression for thermal conductivity of a gas.
4. Based on kinetic theory concept of molecular motion, derive an expression for diffusion coefficient of a gas.
5. Describe with relevant theory, Lee's Disc method of determining K for bad conductors.
6. Describe the experimental verification of Newton's law of cooling.

Unit IV: Interference and Diffraction

1. Explain the formation of interference fringes by an air wedge. Derive an expression for the fringe width. How can the above method be used to measure the diameter of a thin wire accurately?
2. Give the theory of plane transmission grating. Describe how it may be used to determine wavelength of light.
3. State and explain Raleigh criterion for resolution. Derive an expression for resolving power of grating.
4. Give the theory of zone plate. Obtain an expression for primary focal length of the zone plate.
5. How would you show that the zone plate has multiple foci? Give a comparison of the

performance of a zone plate with that of a convex lens.

Unit V: Ultrasonics

1. Explain piezo electric effect. Describe the piezo electric method of producing ultrasonic waves
2. Explain how ultrasonic waves are produced. Explain how the ultrasonic pulse technique is used for non -destructive testing materials write a short on SONAR
3. Explain how ultrasonics are used to find depth of the sea
4. Describe a method to produce ultrasonics. What are the applications of ultrasonics in Industry?
5. Explain the production of ultrasonics by magnetostriction and piezoelectric methods

SECTION A

Unit I: Measurement and error

1. The closeness with which an instrument reading approaches the true value of the variable being measured is called ____
a) **accuracy** b) precision c) resolution d) error
2. A measure of reproducibility of the measurement is called ____
a) resolution b) accuracy c) error d) **precision**
3. The smallest change in the measured value is ____
a) error b) precision c) accuracy d) **resolution**
4. ____ is the deviation from the true value of the measured variable.
a) precision b) **error** c) resolution d) accuracy
5. An indication of precision of the measurement is obtained from the number of
a) odd numbers b) **significant figures** c) even numbers d) integers
6. The greater the number of significant figures, the greater is the ____ of measurement.
a) resolution b) accuracy c) error d) **precision**
7. ____ errors mainly cover human mistakes.
a) random b) **gross** c) systematic d) static
8. ____ errors are due to the shortcomings of the instruments.
a) random b) gross c) **systematic** d) static
9. ____ errors occur due to unknown causes.
a) **random** b) gross c) systematic d) static
10. ____ errors are caused due to the physical laws governing the instrument.
a) random b) gross c) systematic d) **static**
11. The most probable value of a measured variable is the ____ of the number of readings taken.
a) deviation b) standard deviation c) mean deviation d) **arithmetic mean**
12. ____ is the departure of the given reading from the arithmetic mean.
a) precision b) **deviation** c) resolution d) accuracy
13. The most probable value of the true reading is the ____ of mean reading.

- a) precision b) deviation c) **central value** d) accuracy
14. The limits of the deviations from the specified values are known as _____ errors.
a) random b) gross c) systematic d) **guarantee**
15. The number of significant figures in 0.002 is _____.
a) **1** b) 2 c) 3 d) 4
16. _____ errors can be positive or negative.
a) **random** b) gross c) systematic d) static

Unit II: Electrodes

- The voltage developed at an electrode electrolyte interface is designated as the _____ potential.
a) electrolyte b) **electrode** c) terminal d) net
- The electrodes in which no net transfer of charge occurs across the metal electrolyte interface are called as perfectly _____ electrodes.
a) **polarised** b) non-polarised c) ionized d) non-ionized
- The electrodes in which unhindered exchange of charge is possible are called as perfectly electrodes.
a) polarised b) **non-polarised** c) ionized d) non-ionized
- The half-cell potential developed can be expressed by _____ equation.
a) normal b) Gaussian c) **Nernst** d) distribution
- In dilute solutions, the values of the activity coefficients of the ion on the two sides of the membrane are _____.
a) **1** b) 2 c) 3 d) 4
- The ECG electrode contact impedance on dry skin is about _____.
a) 0.1 k Ω b) **100 k Ω** c) 10 k Ω d) 5 k Ω
- The equivalent capacitance component on dry skin is about _____ microfarad.
a) 1 b) 0.1 c) **0.01** d) 10
- The half cell potential of silver chloride electrode is _____.
a) 5 mV b) **2.5 mV** c) 10 mV d) 7.5 mV
- Larger area surface electrodes are used to sense _____ potentials.
a) EEG b) **ECG** c) EMG d) EVG
- The multipoint electrode contains nearly _____ fine active contact points.

- a) 10 b) 100 c) **1000** d) 10000
11. A neutral solution has a pH of ____
 a) 5 b) **7** c) 6 d) 8
12. The solution is basic when the pH is more than ____
 a) 5 b) **7** c) 6 d) 8
13. The solution is acidic when the pH is less than ____
 a) 5 b) **7** c) 6 d) 8
14. The hydrogen electrode can be used to measure the ____ of body fluids.
 a) **pH** b) density c) concentration d) solubility

Unit III: Microscope

1. In TEM, the resolution and magnification of the image is ____.
 a) low b) too low c) high d) **too high**
2. In an optical microscope, the magnifying power attainable is about ____.
 a) 2X b) 20 X c) 200X d) **2000X**
3. Electrons have wavelength ____ times stronger than visible light.
 a) 10^6 b) **10^5** c) 10^7 d) 10^9
4. ____ works like a slide projector.
 a) SEM b) **TEM** c) Both a & b d) STEM
5. ____ can be used to examine specimens of large thickness.
 a) **SEM** b) TEM c) Both a & b d) STEM
6. ____ is a time consuming process.
 a) SEM b) **TEM** c) Both a & b d) STEM
7. ____ is used to find the dimensions of powders or nanotubes.
 a) SEM b) **TEM** c) Both a & b d) STEM
8. ____ is used in metallurgy and biological sciences.
 a) SEM b) **TEM** c) Both a & b d) STEM

Unit IV: Specialized and Advances in Medical Instruments

1. The normal temperature of the human body is ____
 a) 27°C b) 17°C c) 47°C d) **37°C**
2. In fluoroscopy, X- ray image is developed by ____ effect.
 a) Doppler b) **photoelectric** c) piezoelectric d) Guassian

3. In fluoroscopy, _____ resolution in images can be obtained.
a) low b) too low c) high d) **fair**
4. _____ unit performs mathematical operations and decision making functions.
a) control b) central processing c) **arithmetic** d) timing
5. The _____ unit is the most complex chip and functions as a complete computer on a chip.
a) control b) **central processing** c) arithmetic d) timing
6. Computers are widely used to diagnose the state of the _____.
a) heart and eye b) kidney and liver c) **heart and brain** d) brain and liver
7. Movement of organs cannot be observed in _____.
a) angiography b) **radiography** c) holography d) fluoroscopy
8. The _____ unit consists of a keyboard of alphanumeric.
a) control b) **input** c) arithmetic d) output
9. The _____ unit consists of a set of 8 terminal pins.
a) control b) input c) arithmetic d) **output**
10. The process of reducing the quantity of data is called as _____.
a) data processing b) **data reduction**
c) data collection d) data matching
11. The patient dose is _____ in fluoroscopy.
a) low b) too low c) **high** d) fair
12. SEM can be used to obtain _____ image of an object.
a) 2D b) **3D** c) 7D d) 9D
13. In cryogenic surgery, tissues can be killed when their temperature is below _____.
a) -27°C b) -17°C c) **-20°C** d) -37°C

Unit V: Displays and Oscilloscope

1. When displaying large quantities of alpha numeric data, the read out system employed most commonly is a _____.
a) LCD b) **CRT** c) LED d) LVD
2. _____ is a passive display characterized by very low power consumption and good contrast ratio.
a) **LCD** b) CRT c) LED d) LVD
3. The electric field required to activate LCDs is typically of the order of _____.

- a) **10^2 V/cm** b) 10^5 V/cm c) 10^3 V/cm d) 10^4 V/cm
4. _____ is the best material used for photographing from the CRT screen.
 a) P12 phosphor b) C12 carbon c) **P11 phosphor** d) C13 carbon
5. A CRT having a number 5 GPI indicates _____ inch tube.
 a) 4 b) 2 c) 1 d) **5**
6. The CRT requires a heater voltage of 6.3V a.c or d.c at _____.
 a) 400 mA b) **600 mA** c) 800 mA d) 200 mA
7. _____ amplifier is a wide band amplifier.
 a) horizontal b) axial c) **vertical** d) equatorial
8. LCD operates at low voltages ranging from _____.
 a) 0-10 V b) 1-10 V c) 0-20 V d) **1-15 V**
9. The LCD comprises of a thin layer of NLC fluid about _____ thick.
 a) 20 μm b) **10 μm** c) 18 μm d) 15 μm
10. The heart of the CRO is the _____.
 a) LCD b) **CRT** c) LED d) LVD

SECTION B

Unit I: Measurement and error

1. What are the three general classes of errors?
2. Define static and dynamic error.
3. What is an instrument?
4. What are significant figures?
5. List out the types of error.
6. What is an instrumental error?
7. Define average deviation.
8. How can instrumental errors be avoided?
9. Define gross error.
10. What are the characteristics of precision?
11. Give the differences between accuracy and precision.

Unit II: Electrodes

1. What are artifacts?
2. Give a note on pCO₂ electrode.
3. List the types of electrodes.
4. What is the purpose of electrode paste?
5. Define electrode potential.
6. What are chemical electrodes?
7. What are micro electrodes?
8. Express the Nernst equation for half cell potential.
9. What are perfectly polarized electrodes?
10. What are perfectly non polarized electrodes?
11. Give a note on electrode material.

Unit III: Microscope

1. What is data handling capacity?
2. State the principle of TEM.
3. What is an electron microscope?
4. List the types of electron microscope.
5. State the principle of electron microscope.
6. State the principle of SEM.
7. Give any two advantages of SEM.

Unit IV: Specialised and Advances in Medical Instruments

1. What are endoscopes?
2. Classify endoscopes on the basis of location and condition of cavity.
3. Write a note on Angiography.
4. What are the advantages of laser surgery?
5. What is data handling capacity?

6. What is the role of computer in the analysis of EEG and ECG.
7. Give a note on cryogenic surgery.
8. What is data reduction?

Unit V: Displays and Oscilloscope

1. Name the commonly used displays in the digital electronic field
2. List the characteristics of LCD
3. What are the major components of a CRO?
4. What is the use of trigger circuit in an oscilloscope?
5. What is a LCD?
6. Classify displays on the basis of their display size and physical dimension.
7. List the important features of LCD.
8. Give a note on nematic liquid crystal.
9. Name the two important crystal materials important in display technology.

SECTION C

Unit I: Measurement and Error

1. Distinguish accuracy from precision.
2. Give a note on systematic errors.
3. Write about average deviation and standard deviation.
4. Give the rules in writing significant figures.

Unit II: Electrodes

1. Discuss about pH electrode with diagram.
2. Give a note on depth and needle electrode.
3. Derive an expression for half cell potential.
4. Discuss the purpose of electrode paste.

Unit III: Transducers and Microscope

1. Compare optical microscope with electron microscope.
2. List out the applications of TEM.

3. Distinguish SEM from TEM.
4. Write the advantages and limitations of TEM.

Unit IV: Specialised and Advances in Medical Instruments

1. List out the special instructions in the manuals of endoscopes regarding equipment care.
2. Give a note on cryogenic surgery.
3. What are the various applications of microcomputer and microprocessor in medicine?
4. Distinguish radiography from fluoroscopy.
5. Discuss the various medical applications of laser.

Unit V: Displays and Oscilloscope

1. Name the commonly used displays in the digital electronic field and classify them.
2. Write a note on display devices.
3. List the important features of LCDs.
4. Explain the basic diagram of a CRT.
5. Discuss about the features of CRT.

SECTION D

Unit I: Measurement and error

1. What is statistical analysis? Discuss in detail about the different statistical treatments of data.
2. Write in detail about gross errors and random errors.
3. Discuss in detail about accuracy and precision with suitable examples.

Unit II: Electrodes

1. What are chemical electrodes? Explain hydrogen electrode.
2. Discuss about the various types of surface electrodes with suitable diagrams.
3. What are chemical electrodes? Explain pH electrode.
4. Discuss half cell potential. Give the surface electrode equivalent circuit and Nernst equation.

Unit III: Transducers and Microscope

1. Discuss about SEM in detail. Mention its advantages and disadvantages.
2. Explain with neat diagram the principle, construction working and applications of TEM.

Unit IV: Specialised and Advances in Medical Instruments

1. Explain about computerised tomography.
2. Discuss the various applications of digital computers and microprocessors in medicine.
Explain the types of endoscopes and Outline the special instructions in the manuals of endoscopes regarding equipment care.

Unit V: Displays and Oscilloscope

1. Write in detail about LCD.
2. Describe the block diagram of oscilloscope.
3. Explain the basic block diagram of a simple CRO.

ST.MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI

QUESTION BANK

II B.Sc., B.Com., B.A - SEMESTER III

NME-APPLIED PHYSICS – I — 21UPHN31

(for those who joined in July 2021 and after)

SECTION A

Unit I: Domestic Wiring

1. House wiring deals with the distribution of electric power at _____ volts for a single phase.
a) **230** b) 440 c) 330 d) 250
2. In domestic wiring _____ plug only should be used.
a) **3 pin** b) 4 pin c) 5 pin d) 2 pin
3. _____ cutting pliers are used to cut the wires terminating into holders.
a) **long-nose** b) diagonal c) side cutting d) square
4. _____ type of wiring is suitable for damp climate and not for hot weather.
a) **C.T.S wiring** b) metal sheathed wiring
c) conduit wiring d) clear wiring
5. _____ prevents the rubber sticking to the conductor.
a) armouring b) **printing** c) combining d) finning
6. _____ wire should be prepared by a fuse of suitable rating.
a) live b) fuse c) earth d) **metal**
7. _____ wire is always earthed to maintain line voltage constant.
a) **neutral** b) phase c) ground d) positive
8. Thinner the wire element in the fuse, _____ is the current rating.
a) bigger b) **smaller** c) zero d) very bigger
9. A fuse consists of _____ base.
a) ceramic b) **clay** c) plastic d) porcelain
10. A VIR consists of tinned _____ wire.
a) aluminium b) **copper** c) iron d) steel

Unit II: Electrical Appliances

1. In an electric bell, the contact points are made up of _____.
a) **tungsten** b) iron c) cobalt d) steel

2. The heat is conveyed to the bottom of the iron box by _____.
 - a) radiation and convection
 - b) **radiation & conduction**
 - c) convection & conduction
 - d) diffusion & radiation
3. The hot plate is used in _____.
 - a) kitchen
 - b) **laboratories**
 - c) fan connection
 - d) metal plate
4. The kettle consists of a _____ heating element.
 - a) **nichrome**
 - b) porcelain
 - c) cast iron
 - d) metal cave
5. A vibrating strip, called _____ is hinged near the poles of the electromagnet.
 - a) **armature**
 - b) striker
 - c) gong
 - d) coil
6. In an automatic electric iron, a _____ is provided additionally.
 - a) pressure plate
 - b) **thermostat**
 - c) chromium plate
 - d) covering case
7. Slow blow fuses are used in circuits with _____.
 - a) oven
 - b) fan
 - c) washing machine
 - d) **an electrical motor**
8. Heating element consists of _____.
 - a) Copper wire
 - b) **nichrome wire**
 - c) chromium
 - d) porcelain
9. When a soldering iron does not function properly, the _____ should be tested for continuity using a multimeter.
 - a) pressure plate
 - b) chromium plate
 - c) sole plate
 - d) **heating element coil**
10. The hot plate is used in _____.
 - a) kitchen
 - b) **laboratories**
 - c) fan connection
 - d) metal plate
11. When a.c. is passed through the stator windings, a rotating _____ is produced in the front of the pole pieces of the stator.
 - a) **Magnetic field**
 - b) electric field
 - c) capacitance
 - d) resistance

Unit III: Air Conditioning

1. The liquid refrigerant used in air conditioners boils at _____.
 - a) - 5° to 2°c
 - b) - 9°c to 1°c
 - c) **-7°c to 4°c**
 - d) - 10°c to 5°c
2. Refrigeration is transferring heat from a source to a _____.
 - a) sample
 - b) zinc
 - c) **sink**
 - d) engine
3. The entropy of the sink increases and the entropy of the source _____ as heat is added to it.
 - a) increases
 - b) **decreases**
 - c) constant
 - d) zero
4. _____ is not a refrigerant because it is merely a carrier of sensible heat.
 - a) **water**
 - b) liquid
 - c) oil
 - d) gases
5. Refrigerant -12 has a boiling point of -----at atmospheric pressure.
 - a) **-30°C**
 - b) -40°C
 - c) -50°C
 - d) -60°C

6. _____ is a device in which the refrigerant is boiled at low pressure.
 a) compressor b) **evaporator** c) refrigerant d) air conditioner
7. _____ is the heart of the refrigerating system.
 a) evaporator b) **compressor** c) ice plant d) condenser
8. The commercial freezers are above _____ in volume.
 a) 9 m^3 b) **8 m^3** c) 10 m^3 d) 5 m^3
9. The ice cans are made up of _____
 a) copper b) **zinc** c) aluminium d) platinum
10. The temperature of the brine solution for ice formation is from-----
 a) **$-7 \text{ to } 10^\circ\text{C}$** b) $-8 \text{ to } 5^\circ\text{C}$ c) $-4 \text{ to } 4^\circ\text{C}$ d) $-10 \text{ to } 1^\circ\text{C}$
11. When the rate of evaporation is _____, it will lower the suction pressure in the coil.
 a) Increases b) **decreases** c) below 0°C d) above 0°C
12. The water in the tank gets cooled since heat from it is removed by the _____ of the unit.
 a) Evaporator b) freezer c) condenser d) **refrigerant**
13. A properly designed compressor will develop upto _____ more capacity with R_{22} than with R_{12} .
 a) **60%** b) 70% c) 80% d) 90%

Unit IV: Laser

1. The first ruby laser was invented by _____.
 a) **Dr T.H.Maiman** b) Maxwell c) Marconi d) Faraday
2. An atom in ground state with energy E_1 absorbs an incident photon of energy----- to get excited to a higher energy state.
 a) h/c b) h c) h/λ d) **$h\nu$**
3. Stimulated emission is also known as the _____.
 a) induced absorption b) **induced emission**
 c) induced radiation d) induced diffraction
4. In population inversion condition, the number of atoms N_2 at a higher energy state is-- _____ the number of atoms N_1 at a lower energy state.
 a) less than b) **greater than** c) equal to d) not equal to
5. _____ is the process of supplying energy to the laser medium to achieve a state of population inversion.
 a) monochromatic b) coherent c) intensity d) **pumping action**
6. Electric discharge method of pumping is used in gas lasers like _____.
 a) **Argon laser** b) Ga-As laser c) ruby laser d) Nd-YAG laser

7. The divergence of laser beam is _____.
 a) very large b) **very small** c) zero d) infinity
8. A laser beam has a very little wavelength of the order of _____.
 a) 2 nm b) 10 nm c) 100 nm d) **1nm**
9. The light emitted from a laser source has _____.
 a) same frequency b) same phase c) same direction d) **all the above**
10. A laser beam can be focussed to a very small region of about _____ diameter.
 a) 0.5 μm b) 0.6 μm c) **0.7 μm** d) 0.8 μm

Unit V - Applications of Laser

1. For a material processing job with laser in order to obtain small size focused spot, the laser chosen should have
 a) **Small wave length** b) large wave length
 c) High intensity d) large beam width
2. Drilling with laser is accomplished by the evaporation of material heated. This is carried out by
 a) Laser with constant intensity b) **Laser with powerful pulse in series**
 c) Continuous wave laser d) all the above
3. For drilling narrow deep holes through brittle materials like ceramics or Silicon, the type of laser used is
 a) CO_2 b) N_2 c) He-Ne d) **Ruby**
4. The jet of oxygen gas used in laser cutting set-up does the following job:
 a) **Expels the molten material** b) Reduces the material
 c) Decreases melting point d) increase thermal conductivity of the material
5. Laser cutting has been used in textile industry for cutting cloth because
 a) It is attractive (b) It gives edge finish
 c) folding become easier (d) **it is most economical**
6. The most commonly used laser for welding purpose is
 a) **Nd-YAG** b) N_2 c) Ruby d) He-Ne
7. For laser welding, the following laser is unsuitable
 a) Continuous wave lasers b) **Q-switched pulse lasers**
 c) dye lasers d) any kind of laser
8. An example of low-pressure laser used for laser welding is
 a) He-Ne b) Ruby c) Dye d) **HF**

9. In remote sensing, a part from Raleigh scattering and Raman scattering, intensity variations of scattered light are attributed to
- a) doppler effect
 - b) **induced fluorescence**
 - c) stimulated emission
 - d) Sunset
10. The _____ parameters that are responsible for dispersion of pollutants in air are wind speed, turbulence and lapse rate.
- a) **meteorology**
 - b) astrology
 - c) geology
 - d) seismology

SECTION B

UNIT I: Domestic Wiring

1. Define domestic wiring.
2. What are V.I.R wires?
3. Define lead sheathed wires.
4. What are cables?
5. Describe a fuse element.
6. How will you test fuse?
7. Define conduit wiring.
8. Define hack-saw.
9. Describe scratch awl.
10. What are slow-blow fuses?

Unit II: Electronic appliances

1. What is thermostat?
2. Draw a neat sketch of electric bell.
3. List out the essential parts of an electric iron.
4. Define armature.
5. Describe how a hot plate functions.
6. List out the reasons of faulty fan.
7. Draw a neat sketch of electric iron.

Unit III: Air Conditioning

1. What is air conditioning?
2. What is a refrigerant? Give example
3. Define R₁₂ refrigerant.
4. Define R₂₂ refrigerant.

5. What is an evaporator?
6. What is a freezer? How are freezers useful?
7. Why water is not used as a refrigerant?
8. Define refrigerating cycle.
9. List out the dependence of capacity of the direct expansion coil evaporator.
10. Write about the function of a compressor.

Unit IV: Laser

1. What is LASER?
2. What is stimulated emission?
3. What is meant by population inversion?
4. What is pumping action in laser?
5. What is optical pumping?
6. What is spontaneous emission?
7. What is stimulated absorption?
8. What are the conditions of population inversion?
9. What is meant by active material in laser?
10. Define coherence of laser.

Unit V -Applications of Laser

1. What is laser drilling?
2. What is laser welding?
3. Define key-hole.
4. What are the three methods in laser welding?
5. What is laser cutting?
6. Write the advantages of laser cutting.
7. Draw a neat sketch of an experimental welding.
8. What are primary and secondary pollutants?
9. Give the characteristic frequencies of various functional groups.
10. Define Raleigh scattering.

SECTION C

UNIT I: Domestic Wiring

1. What precautions ought to be observed in handling tools used for wiring?
2. Write about VIR and PVC cables.

3. Explain the different type of wires.
4. Describe the various systems of domestic wiring
 - i) CTS wiring ii) conduit wiring
5. Describe the common types of fuse.

Unit II: Electronic appliances

1. How can you service an electric iron?
2. Describe how an electric kettle works.

Unit III: Air Conditioning

1. Define air conditioning and explain its principle.
2. Write about refrigerating cycle.
3. Describe a freezer unit and explain how it works.
4. How does a water cooler function?

Unit IV: Laser

1. What are the basic components of laser?
2. Explain the concept of laser.
3. Describe population inversion and how can it be achieved?

Unit V -Applications of Laser

1. Explain what “key-hole” in welding is. Describe how key-hole is done.
2. Explain the methods of laser welding giving the advantages.
3. Explain the methods of laser drilling giving the advantages.
4. Describe how welding is done with multi kilowatt laser. Also explain how spot welding is done. Where are spot welding used?
5. Write about air pollution monitoring.

SECTION D

UNIT I: Domestic Wiring

1. Describe the common types of tools used in domestic wiring.
2. Explain in detail about fuses.
3. Write about wires and cables.

Unit II: Electronic appliances

1. Draw a neat sketch to show the electrical connection of a fan. Explain the principle of working of a ceiling fan.

2. Describe an electric bell and explain how it works.

Unit III: Air Conditioning

1. Explain the principle of refrigerants and obtain an expression for the coefficient of performance.
2. Describe the function of an evaporator in a refrigerating system.
3. Describe the construction of an ice plant and give its working details.
4. Describe the construction and working of water cooler and freezer.

Unit IV: Laser

1. Explain the principle of spontaneous and stimulated emission.
2. Explain in detail about characteristics of laser.
3. Write about pumping action.

Unit V-Applications of Laser

1. Explain the methods of laser welding and its advantages.
2. Explain the methods of laser drilling and its advantages.
3. Describe the method of laser cutting of metals and non-metals.
4. Describe the principle and method of air pollution and water pollution studies with laser.
6. Explain what is remote-sensing. What are the applications of remote-sensing?

ST. MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI - 628001

II B.SC., PHYSICS

SEMESTER III

Self Study Paper

Maintenance of Electronic Equipment and Photography

Question Bank

Course Code: 21UPHSS1

-
1. What are active components?
 2. List the uses of capacitors.
 3. What is the use of multimeter?
 4. Describe the construction of LCD
 5. What is an AFO?
 6. List the types of camera lens.
 7. Write about the applications of A.F and R.F oscillators
 8. What is the aperture of camera?
 9. Define film speed.
 10. Explain the principle of a capacitor.
 11. Describe LCD for instruments.
 12. Discuss the basic requirements of a transducer.
 13. Describe leaf shutter.
 14. Write about flash photography.
 15. Explain in detail, soldering techniques.
 16. Describe the principle, construction and working of CRO.
 17. Discuss about the important parts of a camera and give their functions.
 18. Write about various types of filters in photography
-

SEMESTER- IV

Core I - Electronics and Communication -2 1UPHC41

SECTION A

Unit I : Linear Circuit Analysis

1. An ideal voltage source is one which has_____
a) very high r **b) zero r** c) very low r d) infinite r
2. An ideal current source is one whose internal resistance is_____
a) very high b) very low **c) infinity** d) zero
3. One of the following is a linear circuit element._____
a) inductance b) capacitance **c) resistance** d) diode
4. Norton's equivalent of a complicated circuit with a load consists of _____
a) ideal voltage source with a parallel resistor **b) ideal current source with a parallel resistor**
c) ideal voltage source with a series resistor d) ideal current source with a series resistor
5. A constant source supplies a current of 300 mA to a load of 1 K Ω . When the load is changed to 100 Ω , the load current will be_____
a) 3 A b) 30 mA **c) 300 mA** d) 600 mA
6. While thevenizing a circuit between two terminals, the Thevenin's voltage equals_____
a) short –circuit terminal voltage **b) open- circuit terminal voltage**
c) e.m.f of the battery nearest to them d) net voltage available in the circuit
7. Thevenin's resistance R^{th} is found_____
a) between any two open terminals b) by short circuiting the given two terminals
c) by removing voltage source d) between the same open terminals as for V^{th}
8. A two terminal network is reduced to an equivalent circuit having a current source with a parallel resistance connected between the same two terminals. This is made possible with the help of_____
a) superposition theorem **b) Norton's theorem**
c) Thevenin's theorem d) Maximum power transfer theorem
9. For maximum power transfer from a network to a load, the complex conjugate of the Thevenin's impedance of the network must be same as_____
a) Norton impedance of the network b) complex conjugate of the load impedance
c) real part of load **d) load impedance**
10. Thevenin's equivalent of a circuit consists of_____
a) single current source and single voltage source **b) voltage source with a series resistance**
c) current source with a parallel resistance d) voltage source with a parallel resistance

11. Norton's equivalent of a complicated circuit facing a load consists of _____
 a) ideal voltage source and parallel resistor **b) ideal current source and parallel resistor**
 c) ideal voltage source and series resistor d) ideal current source and series resistor
12. Which one of the following is a non-linear circuit element? _____
 a) **diode** b) inductor c) transistor d) display device
13. The Norton's equivalent circuit consists of 2 A current source in parallel with a 5Ω resistor. The Thevenin's equivalent of this circuit has a voltage source in series with a 5Ω resistor of voltage _____
 a) 5 V **b) 2.5 V** c) 10 V d) 20 V
14. Superposition theorem can be applied only to circuits having _____
 a) non-linear elements b) passive elements **c) linear elements** d) resistors

Unit II: Transistors

1. A transistor has
 a) one pn junction **b) two pn junction** c) three pn junctions d) none of the above
2. The base of a transistor is _____ doped.
 a) heavily b) moderately **c) lightly** d) none of the above
3. A transistor is a _____ operated device.
 a) **current** b) voltage c) both current and voltage d) none of the above
4. At the base-emitter junction of a transistor, one finds _____
 a) reverse bias b) a wide depletion layer **c) low resistance** d) none of the above
5. The collector-base junction in a transistor has _____
 a) forward bias at all times **b) reverse bias at all times** c) low resistance d) none
6. If the value of α is 0.9, then value of β is _____
 a) 9 b) 0.9 c) 900 **d) 90**
7. In the zero signal conditions, a transistor sees _____ load.
 a) **d.c** b) a.c c) both a.c and d.c d) none of the above
8. RC coupling is used for _____ amplification.
 a) **voltage** b) current c) power d) none of the above
9. A single stage transistor amplifier contains _____ and associated circuitry.
 a) two transistors **b) one transistor** c) three transistors d) none of the above
10. The phase difference between the output and input voltages of a CE amplifier is _____
 a) **180°** b) 0° c) 90° d) 270°
11. It is generally desired that a transistor should have _____ input impedance.
 a) low b) very low **c) high** d) very high

12. When an a.c signal is applied to an amplifier, the operating point moves along _____
 a) d.c load line **b) a.c load line** c) both a.c and d.c d) none of the above
13. The input capacitor in an amplifier is the _____ capacitor.
 a) **coupling** b) bypass c) leakage d) none of the above
14. The point of intersection of a.c and d.c load lines is called _____
 a) saturation point b) cut off point **c) operating point** d) none of the above
15. The slope of a.c load line is ____ that of d.c load line.
 a) the same as **b) more than** c) less than d) none of the above
16. The purpose of capacitors in a transistor amplifier is to _____
 a) protect the transistor b) cool the transistor
c) couple or bypass a.c component d) provide biasing
17. In the d.c equivalent circuit of a transistor amplifier, the capacitors are considered _____
 a) short **b) open** c) partially short d) none of the above
18. In a CE amplifier, voltage gain = _____ x R_{AC}/R_{in}
 a) α **b) β** c) $1+\alpha$ d) $1+\beta$
19. In practice, the voltage gain of an amplifier is expressed in _____
 a) volt b) numbers **c) db** d) none of the above
20. If the power and current gains of a transistor amplifier are 16500 and 100 respectively, then voltage gain is _____
 a) **165** b) 16 c) 100 d) none of the above

Unit III : Operational Amplifiers

1. An ideal op-amp has _____
 a) infinite voltage gain b) infinite R_i c) zero R_o **d) all the above**
2. Virtual ground is any point in the circuit that has _____
a) zero voltage and draws zero current b) zero voltage and draws any amount of current
 c) any amount of voltage and draws zero current d) all the above
3. With zero volt on both inputs, an op-amp ideally should produce an output equal to _____
 a) the positive supply voltage b) the negative supply voltage
c) zero d) The CMRR
4. When negative feedback is used, the gain-bandwidth product of an op-amp is _____
 a) increases b) decreases **c) remains the same** d) fluctuates
5. In an integrator using op-amp, the feedback element is _____
 a) resistor **b) capacitor** c) zener diode d) voltage divider
6. In a differentiator using op-amp, the feedback element is _____

- a) **resistor** b) capacitor c) zener diode d) voltage divider
7. When the input to a differentiator with op-amp is triangular wave form, the output is _____
 a) a d.c. level b) an inverted triangle
 c) **square wave form** d) first harmonic of input
8. In a summing amplifier using op-amp, the currents passing through resistors on the input side are such that _____
 a) they pass through all resistors equally
 b) they carried each other at the virtual ground
 c) **current in one branch does not affect the currents in other branches**
 d) all the above
9. CMRR of an op-amp is the ratio _____
 a) $\frac{\text{differential gain } (A_d)}{\text{common mode gain } (A_c)}$ b) $\frac{\text{common mode gain } (A_d)}{\text{differential gain } (A_c)}$ c) $A_d - A_c$ d) $A_c - A_d$
10. Power bandwidth of an op-amp is equal to _____
 a) $\frac{\text{slew rate}}{2\pi V_{max}}$ b) $\frac{2\pi V_{max}}{\text{slew rate}}$ c) slew rate d) $\frac{\text{Power}}{\text{bandwidth } h}$
11. The main purpose of using voltage follower is to have _____
 a) high voltage gain b) low voltage gain
 c) unity gain d) **impedance matching**
12. In an inverting op-amp circuit, the feedback resistor is increased four times. The current through that resistor will be _____
 a) increased four times b) decreased one fourth
 c) **the same as before** d) zero
13. The input off-set voltage of an op-amp is _____
 a) the output voltage, when the inputs are shorted
 b) the output voltage, when the inputs are earthed
 c) **the voltage to be applied between the two input voltage to null the output**
 d) the output voltage, without giving power supply to the op-amp
14. Negative feedback has the effect of increasing the input impedance of amplifiers by a factor of _____
 a) $A\beta$ b) β c) $(A\beta - 1)$ d) **$(A\beta + 1)$**

Unit IV : Amplitude Modulation and Transmission

1. In an A.M. wave, useful power is carried by
 (a) carrier wave (b) **side bands** (c) both (a) and (b) (d) none of the above
2. In amplitude modulation, the bandwidth is frequency the audio signal
 (a) thrice (b) four times (c) **twice** (d) equal to

15. The maximum transmission efficiency of an AM signal is
 (a) 64.4% **(b) 33.33%** (c) 56.66% (d) 75.55%
16. At 100% modulation, the power in each side band is _____ that of the carrier.
 (a) 50% (b) 40% (c) 60% **(d) 25%**
17. Over modulation results in
 (a) weakening of the signal (b) excessive carrier power \
(c) distortion (d) none of the above
18. If modulation is 100%, then signal amplitude is _____ amplitude carrier.
(a) equal to (b) greater than (c) less than (d) none.
19. As the modulation level is increased, the carrier power
 (a) is increased **(b) remains the same**
 (c) is decreased (d) none of the above
20. If level of modulation is increased, _____ power is increased.
 (a) carrier **(b) side band** (c) carrier as well as side band (d) none
21. A 50 kW carrier is to be amplitude modulated to a level of 85%. The carrier power after modulation is
 (a) **50 Kw** (b) 5kW (c) 8kW (d) 25kW
22. A carrier is simultaneously modulated by two sine waves with modulation indices of 0.4 and 0.3
 The resultant modulation will be
 (a) 1 (b) 0.7 **(c) 0.5** (d) 0.35
23. In a DSB-SC system with 100% modulation, the power saving is
 (a) 100% **(b) 66%** (c) 75% (d) 33.3%
24. A 10 kW carrier is simultaneously modulated by two carriers corresponding to a modulation index of 30% and 40% respectively. The total radiated power is
 (a) 11.25kW **(b) 12.5kW.** (c) 15 kW (d) 17kW
25. If the carrier wave of 100% modulated AM wave is suppressed, the percentage of power saving will be
(a) 50 (b) 150 (c) 100 (d) 66.66

Unit V : Amplitude Modulation – Reception

1. Demodulation is done in
 (a) receiving antenna (b) transmitter **(c) radio receiver** (d) transmitting antenna.
2. A superheterodyne receiver with IF 450 kHz is tuned to a signal at 1200 kHz. The image frequency is
(a) 2100 kHz (b) 900 kHz (c) 750 kHz (d) 1650 kHz

3. Sensitivity of a receiver depends upon the receiver's over all
- (a) bandwidth (b) selectivity (c) noise response (d) **gain**
4. A mixer in a superheterodyne receiver has a signal input 50 MHz frequency and a local oscillator frequency of 59 MHz. The IF is
- (a) **9 MHz** (b) 50 MHz (c) 59 MHz (d) 109 MHz
5. A high Q tuned circuit will permit a radio receiver to have high
- (a) fidelity (b) frequency range (c) sensitivity (d) **selectivity**
6. In TV transmission, picture signal is
- (a) frequency (b) phase (c) **amplitude** (d) none of the above
7. In a radio receiver, noise is generally developed at
- (a) IF stage (b) receiving antenna (c) audio stage (d) **RF stage.**
8. The signal voltage induced in the aerial of a radio receiver is of the order of
- (a) mV (b) **μ .** (c) V (d) none of the above
9. Superheterodyne principle refers to
- (a) using a large number of amplifier stages (b) using a push-pull circuit
- (c) **obtaining lower fixed intermediate frequency** (d) none of the above
10. If a radio receiver amplifies all the signal frequencies equally well, it is said to have high
- (a) sensitivity (b) selectivity (c) distortion (d) **fidelity**
11. Most of the amplification in a superheterodyne receiver occurs at _____ stage
- (a) **IF** (b) RF amplifier (c) audio amplifier (d) detector
12. The letters AVC stands for
- (a) audio voltage control (b) abrupt voltage control
- (c) **automatic volume control** (d) automatic voltage control
13. The superheterodyne principle provides selectivity at
- (a) RF (b) **IF** (c) audio (d) before RF stage
14. In superhet receiver, the input at mixer stage is. Modulated
- (a) IF and RF (b) RF and AF
- (c) IF and AF (d) **RF and local oscillator signal**
15. In a superhet receiver, the difference frequency is chosen as the IF rather than the sum frequency because
- (a) difference frequency is closer to oscillator frequency
- (b) **lower frequencies are easier to amplify**
- (c) only the difference frequency can be modulated
- (d) None of the above

16. The diode detector in an AM radio receiver is usually found
(a) before the first RF stage (b) after the first RF stage
(c) **after several stages of amplification** (d) none of the above
17. In a TRF receiver, the RF and detection stages are tuned to
(a) **radio frequency** (b) IF
(c) audio frequency (d) none of the above
18. The intermediate frequency in a standard AM receiver is
(a) 455Hz (b) **455 kHz** (c) 4.55 MHz (d) none of the above
19. The function of an AM detector circuit is to
(a) rectify the input signal (b) discard the carrier
(c) provide audio signal (d) **all of the above**
20. Which of the following should be used in order to prevent overloading on the last IF amplifier in a receiver?
(a) variable selectivity (b) **variable sensitivity**
(c) double conversion (d) squelch
21. When the station tuned by a receiver is not transmitting, the receiver's output can remain cut-off. This is due to the action of
(a) AGC (b) **squelch** (c) LSI (d) discriminator

SECTION – B

Unit I - Linear Circuit Analysis

1. What is meant by electric power?
2. Define active and passive elements.
3. What is meant by non-linear circuit analysis?
4. What is meant by linear circuit analysis?
5. Define Norton's theorem.
6. State maximum power transfer theorem.

Unit II – Transistors

1. How will you bias a transistor?
2. What is transistor biasing?
3. What do you understand by d.c. and a.c. load lines ?
4. Define Q point.

5. Why is CE mode preferred over CB mode?
6. Define amplification factor.
7. What are the characteristics of a good transistor?

Unit III – Operational Amplifiers

1. What is an op-amp? Why is it called so?
2. What is meant by input and output impedance of an op-amp?
3. Give the equivalent circuit and circuit symbol of an ideal op-amp. Define slew rate.
4. Define common mode rejection ratio. What is its significance?
5. In what respect the practical operational amplifier is different from an ideal op-amp?
6. Define off-set voltage. Describe the off-set null arrangement with an op-amp.
7. What is meant by slew rate of an op-amp? What does it signify?
8. Why are inverting op-amp circuits more popular?
9. State the uses of a summing amplifier, employing op-amp.

Unit IV – Amplitude Modulation and Transmission

1. What is meant by modulation?
2. What is meant by frequency modulation?
3. What are the limitations of amplitude modulation?
4. Give the elements of a communication system.
5. Define signal to noise ratio.
6. What is the need for modulation?

Unit V – Amplitude Modulation - Reception

1. What is the main function of a communication receiver?
2. What are the advantages of diode detectors?
3. What is demodulation?
4. Give the uses and applications of QAM.
5. Give the disadvantages of QAM.
6. What is automatic gain control?

SECTION – C

Unit I - Linear Circuit Analysis

1. Write a note on ideal voltage source.
2. Write a note on ideal current source.
3. State and explain superposition theorem.
4. State and explain Norton's theorem.

5. Explain how it is possible to convert Thevenin equivalent circuit into a Norton equivalent circuit and vice versa.
6. Define the h-parameters for a two port network.
7. Using Thevenin's theorem, find the current through 2 ohm resistance galvanometer in the Wheatstone's network.
8. A generator develops 200V and it has an internal resistance of 100 Ohm. Find the power delivered to a load of (i) 100 Ohm and (i) 300 Ohm.
9. Find the current through the resistor R_2 of the network shown in the figure using Thevenin's theorem.

10. In the circuit shown, find the current through the 20 ohm resistor applying Norton's theorem.

Unit II – Transistors

1. Discuss the current components in a p-n-p and in an n-p-n transistor.
2. Describe the p-n junction diode under forward bias.
3. Obtain the relation between alpha and beta of a transistor.
4. Explain the action of transistor. Derive the relation connecting α and β of a transistor.
5. Give the three modes of transistor configuration.
6. Describe collector feedback bias.

Unit III– Operational Amplifiers

1. List the characteristics of an ideal op-amp.
2. Distinguish between the open loop gain and the closed loop gain of an op-amp.
3. List the applications of operational amplifier.
4. Describe a difference operational amplifier. Derive an expression for its voltage.
5. Describe an inverting operational amplifier. Derive an expression for its voltage gain.

Unit IV – Amplitude Modulation and Transmission

1. What is meant by modulation? Explain the three kinds of modulation.
2. Derive an expression for modulation index in terms of maximum and minimum amplitude of AM wave.
3. What are the limitations of amplitude modulation?
4. What are the advantages of frequency modulation?
5. What are the advantages of having intermediate frequency for radio reception?
6. Write about frequency modulation.
7. Describe the transmission of radio waves.
8. Explain the function of high level AM transmitter.

Unit V – Amplitude Modulation – Reception

1. Write about quadrature amplitude modulation.
2. What is demodulation? How is it done with an envelope detector?
3. With block diagram, explain Straight receiver.
4. Discuss the characteristics of a good radio receiver.
5. Explain tracking in superheterodyne receiver.

SECTION – D

Unit I - Linear Circuit Analysis

1. State and prove Thevenin's theorem.
2. State and prove Maximum power transfer theorem.
3. Write a note on ideal voltage source and ideal current source.
4. Show that the maximum power that can be delivered to a load is just one half the power generated in the network driving the load.
5. State and prove Norton's theorem.

Unit II – Transistors

1. What are the main features of a junction transistor? Define transistor alpha and beta of a transistor and show how they are related. Discuss the current components in a p-n- p and in n- p-n transistor.
2. Draw the input, output and transfer characteristics of a transistor in CE mode. Explain the behaviour of transistor with the help of the above characteristics.

3. What are the main features of a junction transistor? Define transistor alpha, beta and gamma of a transistor and show how they are related. Discuss the current components in a p-n- p and in n- p-n transistor.
4. Discuss in detail about fixed bias circuit.

Unit III – Operational Amplifiers

1. Draw the circuit diagram of an integrator and a differentiator using op-amp. Sketch the output waveform in each case when the input voltage is a square wave. State the applications of i) an integrator ii) a differentiator, employing op-amp.
2. Explain how an op-amp can be used as an inverting and summing. Obtain expression of output in each case.
3. Discuss in detail about the pin out configuration and characteristics of an ideal opamp.

Unit IV – Amplitude Modulation and Transmission

1. Describe an A.M. modulator circuit with transistor and give the limitations of amplitude modulation.
2. Obtain an expression for varying voltage of an amplitude modulated wave and the total power of the AM wave. Discuss the waveform and sidebands in it.
3. Draw the circuit diagram of an AM modulator using transistor and explain its working. Obtain an expression for the output signal of the modulator.
4. Explain the principle of demodulation. Draw the circuit diagram of an envelope detector and explain how it works.

Unit V – Amplitude Modulation - Reception

1. Describe the reception of radio waves, using superheterodyne radio receiver.
2. Giving the block diagram of a superheterodyne radio receiver, explain the function of various units in it.
3. Discuss the choice of intermediate frequency in a superheterodyne receiver.
4. Describe the principle and working of double frequency conversion AM receiver.

SECTION A

Unit I : Electrostatics

1. The electric field inside an electrical conductor with excess charge on its surface is
a) Infinity **b) zero** c) 120π d) depends on the value of charge
2. The electric flux emanating from an electric charge of (+q) coulomb is
a) q/ϵ_0 b) $q/\epsilon_0 \epsilon r$ c) q d) $q \epsilon_0$
3. The unit of electric field intensity is
a) N **b) N/C** c) V d) W
4. The total charge in a region can be found if the electric field is known over the whole of its bounding surface. This follows from
a) Ampere's law b) coulomb's law **c) Gauss law** d) Newton's law
5. Over an equipotential surface, the electric field intensity is
a) Everywhere normal to the surface
b) Everywhere tangential to the surface
c) Along any direction
d) Everywhere on the surface
6. The relation connecting potential gradient and electric field at a point is
a) $V = -dE/dx$ b) $V = dV/dx$ c) $E = dV/dx$ **d) $E = -dV/dx$**
7. Electric potential at a point in an electric field is a
a) Scalar quantity b) vector quantity c) complex quantity d) all the above
8. The electric field at the center of a charged sphere of radius r is
a) q b) $q/4\pi$ c) 4π **d) zero**
9. The work done to move an electric charge q on an equipotential surface of potential V is
a) qV b) q/V c) q/V^2 **d) zero**
10. When the distance between two equal charges is decreased to half and their magnitude of charge is also decreased to half, the force between them
a) Remains unaltered b) reduces to half
c) becomes double d) is made bigger four times
11. Bodies which allow the charge or electricity to pass through them are called

a)insulators **b)conductors** c) point charges d)capacitor

12. S.I unit of charge is _____.

a)coulomb b)newton c)volt d)tesla

13. An excess charge, placed on an insulated conductor, resides entirely on its _____surface.

a)outer b) inner c) whole d)Gaussian

14. The S.I unit of potential difference is_____.

a)volt b) coulomb c) newton d)weber

15. The potential at a point near an isolated positive charge is _____.

a)negative **b)positive** c)zero d)one

Unit II: Electromagnetism

1. The unit in which self inductance is expressed is

a) Ohm **b) henry** c) farad d) seimen

2. The self inductance of a toroidal solenoid is proportional to

a) N b) 1/N **c) N^2** d) $1/N^2$

3. The unit of magnetic flux is

a) Weber b) ampere c) tesla d) seimen

3. When a current I is passed through coil of self inductance L, the flux linked with the coil is

a) LI b) LI^2 c) $LI/2$ d) $LI^2/2$

4. The law of electromagnetic induction was given by

a) Faraday **b) Lenz** c) Fleming d) Ampere

4. The direction of the induced e.m.f in a conductor depends on the

a) Amount of flux cut b) flux linkage
c) rate of change of flux linkage d) flux density

5. The coefficient of coupling between two coils of self inductances L_1 and L_2 and of mutual inductance M is given by

a) $K=M/L_1 L_2$ b) $K= \sqrt{M/L_1 L_2}$ **c) $K= M/\sqrt{L_1 L_2}$** d) $K= \sqrt{M/ L_1 L_2}$

6. S.I unit of self-inductance is _____.

a)henry b)Tesla c)flux d)newton

7. The ratio $M/\sqrt{(L_1 L_2)}$ is known as _____ between the coils.

a)coefficient of coupling b)magnetic induction
c)mutual inductance d)Self Inductance

8. When the magnet is moved away from the coil, the galvanometer shows a deflection in the _____ direction.

- a) **opposite** b) positive c) negative d) zero

9. The _____ reduction factor of the galvanometer is expressed as C/nBA .

- a) volt b) **current** c) resistance d) deflection

10. The magnetic flux of a coil can be expressed as

- a) Ω b) μ c) Σ d) **Φ**

Unit III: Nuclear Physics

1. Nuclear force is the result of

- a) coulomb interaction b) sharing of charge
c) **exchange of pions** d) sharing of photons

2. One Fermi is

- a) 1×10^6 disintegration per second b) 1×10^{-10} m c) **1×10^{-15} m** d) 3×10^8 m

3. Isotopes are elements with

- a) same A, different Z b) same A, same Z
c) **same Z, different A** d) different A, different Z

4. Mirror nuclei are pairs of nuclei that have

- a) same A, but different Z and N b) same Z, but A and N interchanged
c) **same A, but N and Z interchanged** d) same A, but N and Z interchanged

5. Magnetic moment of a nucleus

- a) **$\mu = g \beta_n \sqrt{I(I+1)}$** b) $\mu = \beta_n \sqrt{I(I+1)}$
c) $\mu = \sqrt{I(I+1)}$ d) $\mu = 0$

6. If A is the mass number and M is the actual mass of the nuclides in a.m.u., the packing fraction f is given by

- a) $A = M(1+f)$ b) **$M = A(1+f)$**
c) $f = A(1+M)$ d) $f = M(1+A)$

7. Nuclear with integral spin are

- a) **bosons** b) fermions c) pions d) electrons

8. Nuclei with half integral spins are known

- a) bosons b) **fermions** c) pions d) electrons

9. Nucleus forces

- a) **short range attractive** b) electrostatic force
 a) long range attractive d) short range repulsive force
10. Magnetic moment of neutron is
 a) zero b) positive c) **negative** d) infinity
11. Nuclear forces are appreciable within the range of
 a) 1×10^{-11} m b) **1×10^{-8} m** c) 1×10^{-9} m d) 1×10^{-7} m
12. The _____ are not affected by the magnetic field
 a) **gamma rays** b) beta rays c) Alpha rays d) Alpha particle
13. _____ is the most stable element in the universe
 a) aluminium b) carbon c) **iron** d) copper
14. Binding energy of the deuterium nucleus is
 a) 4 MeV b) **2.2 MeV** c) 3.1 MeV d) 1.5 MeV
15. The radius of an atomic nucleus is proportional to (A for mass number)
 a) A b) A^2 c) $A^{1/2}$ d) $A^{1/3}$
16. ${}_{92}\text{U}^{238}$ require more excitation energy for fission then the binding energy released when another _____ is observed.
 a) **neutron** b) electron c) proton d) ions
17. ${}_{92}\text{U}^{238}$ undergoes fission only by reaction with fast neutrons whose kinetic energy exceed about 1 MeV
 a) 2 MeV b) 3 MeV c) **1 MeV** d) 5 MeV

Unit IV: Relativity and Wave Mechanics

1. According to special theory of relativity the velocity of light in free space is
 a) Dependent on observer's motion b) Independent of the motion of the source
 c) Independent of the motion of the observer
 d) **Independent of the motion of the source and the observer**
2. A circular object moves with high speed along the line of sight with respect to a stationary observer. The object would look like
 a) Circle b) straight line c) **ellipse** d) parabola
3. De Broglie introduced the concept of
 a) Protons b) electromagnetic waves c) **matter waves** d) supersonics
4. In quantum mechanics the motion of a particle is described in terms of

1. The binary equivalent of decimal 11 is
a) 1010 b) 1100 **c) 1011** d) 0111
2. A logic gate circuit that will give a 'high' output if any odd number of binary 1's are applied to the input is

- a) AND gate b) OR gate c) NOR gate **d) EX-OR gate**
3. The output of an inverter (NOT gate) is
 a) Negative of the input **b) Complement of the input**
 c) 2's complement of the input d) Parity of input
4. A NOR gate is ON only when all its inputs are
 a) ON b) positive c) high **d) low**
5. Which of the following logic gates would give a 'high' output whenever a 'low' input is applied to all its inputs terminals?
 a) OR b) AND **c) NAND** d) EX-OR
6. In a 2- input gate, if the input terminals are tied to a common input A, the output of the NAND will be _____
 a) A **b) A** c) 1 d) 0
7. The positive logic AND gate would function as the following when negative logic is followed
 a) NAND b) NOR **c) OR** d) EX-OR
8. In a half adder the sum output is same as that of
 a) Inverter b) NAND gate c) AND gate **d) EX-OR gate**
9. A binary number with _____ bits is known as byte.
 a)2 b)6 **c)8** d)10
10. A byte is sometimes called a _____.
a)character b)word c)byte d)nibble
11. A _____ is an example of natural binary device.
a)switch b)magnetic core c)tape d)transistor
12. The decimal number system is also known as _____.
a)base -10 system b)base-2 system c)binary system d)all the three

SECTION B

Unit I : Electrostatics

1. Define electric potential and electric field at a point.
2. State Gauss's law in electrostatics.
3. What is an equipotential surface?
4. Define coulomb's law.
5. State the law of conservation of electric charge.

6. What are point charges?
7. What is an electric dipole?

Unit II: Electromagnetism

1. Define magnetic flux and flux density.
2. Define self inductance of a coil and give its unit.
3. Define mutual inductance between a pair of coils and give its unit.
4. Define coefficient of coupling.
5. State and explain Lenz's law of electromagnetic induction.
6. What is back e.m.f?
7. Calculate the self inductance of a toroid of rectangular cross-section of number of turns 1000, given: $a=5\text{cm}$, $b=10\text{cm}$, $h=1\text{cm}$.

Unit III: Nuclear Physics

1. Define isotopes.
2. Define nuclear mass.
3. Define nuclear charge.
4. Describe quark.
5. Describe packing fraction.
6. Define mass defect.
7. Describe binding energy.
8. Define the nature of nuclear force.
9. Describe Soddy-Fajan's displacement law.
10. Define nuclear fission.
11. Define nuclear fusion.

Unit IV: Relativity and Wave Mechanics

1. What is meant by wave function? Give its significance.
2. What is Eigen function and Eigen value?
3. State the postulates of special theory of relativity.
4. What are the main features of Galilean transformation equations?
5. Calculate the de Broglie wavelength of an electron which has energy 12eV.

6. What is wave packet?

Unit V: Digital Electronics

1. What is the binary number that follows 0110, 1111?
 2. Solve the following equation for X, where $X_{10} = 11001001_2$
 3. Define bit.
 4. Define byte and nibble.
 5. Write binary numbers from 7 to 15.
 6. Explain 1's and 2's complement of a binary number.
 7. Convert the following decimal numbers into binary numbers. 39, 45
 8. Convert the following binary numbers into decimal numbers. 10011, 10101
- Add the following: i) 1010 and 1011 ii) 1111 and 1011
- Subtract the following: i) 1010 from 1111 ii) 111 from 100

SECTION C

Unit I: Electrostatics

1. State and prove Gauss law.
2. Explain equipotential surface by giving an example.
3. Derive the relation connecting electric field and electric potential.
4. State and prove coulomb's inverse square law for electrostatics.
5. Explain in detail about the applications of Gauss's law.

Unit II : Electromagnetism

1. State and explain Lenz's law of electromagnetic induction and derive an expression for induced charge and current.
2. Define coefficient of coupling and deduce an expression for it.
3. Derive an expression for self inductance of a toroidal solenoid.
4. A solenoid of length 30cm and area of cross section 10 sq.cm has 1000 turns wound over a core of constant permeability 600. Another coil at its middle. Calculate the mutual inductance between them.

5. Calculate the self-inductance of a solenoid having 1000 turns and length 1m. The area of cross section is 7cm^2 and the relative permeability of the core is 1000.

Unit III : Nuclear Physics

1. Explain the classification of nucleus.
2. Derive the expression for magnetic moment of nucleus.
3. Explain binding energy curve.
4. List out the characteristics of nuclear forces.
5. Explain half life period.
6. Explain mean life period.

Unit IV: Relativity and Wave Mechanics

1. What are the main features of Galilean transformation equations? Obtain Galilean transformation equations.
2. Explain De Broglie's theory of matter waves. Obtain an expression for De Broglie wavelength.
3. What is meant by wave function? What is its physical significance? What are the properties of wave function?
4. State and explain the postulates of quantum mechanics. Explain the terms 'Eigen function' and 'Eigen value'.

Unit V: Digital Electronics

1. Convert the following binary number into decimal number: 11010, 0011, 11001, 10110, 111.01 and 100100.101_2 .
2. Write equivalent binary number for the decimal numbers.
27, 121, 17.63, -15
3. Add the binary
 - a) 1011 and 1001
 - b) 1110001 and 1010101
 - c) 1111010 and 1001101
 - d) 111111 and 111
 - e) 0110 and 1001

4. Subtract the binary
 - a) $1111-1011$
 - b) 1101 from 11110
 - c) 1010 from 111
 - d) 111010 from 100011
 - e) 11010 from 11110
5. Use 2's complement method to perform the following binary subtractions:
 - a) $1111-1011$
 - b) $110011-100101$
 - c) $100011-111010$
 - d) $11011-10011.11$
6. State and explain De Morgan's laws.
7. Explain the working of a half adder.
8. Multiply the binary
 - i) 11.110×100.1
 - ii) 101.1×11.01
 - iii) 1111.0×1010.1

SECTION D

Unit I: Electrostatics

1. Derive an expression for electric field due to a spherical charge distribution at a point
(i) inside and (ii) outside the spherical charge.
2. Obtain an expression for the electric field at point due to a charged cylinder.

Unit II: Electromagnetism

1. Describe with relevant theory, Rayleigh's method to determine self inductance of a coil.
2. Describe with relevant theory, a method to determine the mutual inductance between a
of a coils.

Unit III: Nuclear Physics

1. Explain about natural radioactivity.
2. Explain about law of radioactive disintegration.

3. Write about the energy released in nuclear fission.

Unit IV: Relativity and Wave Mechanics

1. Derive Schrodinger's wave equation in time dependent form.
2. Derive Lorentz transformation equations and prove that space and time are interrelated quantities.

Unit V: Digital Electronics

1. Describe the AND logic gate. How can the DRL-AND logic be implemented using discrete components?
2. Describe the OR logic gate. How can the DRL-OR logic be implemented using discrete components?
3. Describe the NOT logic gate. How can the DRL-NOT logic be implemented using discrete components?
4. Explain how NOR gate works as a universal building block.
5. Explain how NAND gate works as a universal building block.

- _____ refers to plant and animal matter from which energy is released due to heating or chemical reaction.
a) Geothermal b) Oil c) Natural gas d) **Biomass**
- The sun continuous to emit enormous energy at the rate of about _____ Joule per second
a) 4×10^{27} b) 4×10^{28} c) 4×10^{29} d) **4×10^{26}**
- The whole set-up of solar water heater is kept inclined at an angle of _____ to the horizontal at the place on the terrace of the building to receive solar radiation.
a) **15°** b) 45° c) 35° d) 30°
- Salt gradient can be maintained by adding 50gm of _____ per square metre per day.
a) nitrate b) **magnesium chloride**
c) potassium chloride d) hydrogen sulphate
- Solar stills can deliver _____ litres of distilled water everyday for each square metre area.
a) 5-7 b) 5 c) 6 d) **2-4**
- Solar energy reaches the earth by the process of
a) conduction b) convection c) **radiation** d) all the above
- The origin of solar energy is
a) nuclear fission in the sun b) **nuclear fusion in the sun**
c) explosion in the sun d) all the above
- An example of conventional energy source is
a) tidal b) solar c) wind d) **coal**
- An example of non-conventional source of energy
a) coal b) **wind** c) oil d) natural gas
- Fossil fuels refers to
a) coal b) oil c) natural gas d) **all the above**

SECTION B

1. Define solar energy.
2. What is conventional energy?
3. Define non-conventional energy.
4. Describe proton-proton cycle.
5. How C^{12} play the role of catalyst in the carbon-nitrogen cycle?
6. List out the applications of solar energy.
7. Define conventional energy sources.
8. Draw a neat sketch of water desalination.
9. What are the merits of solar cooker?

SECTION C

1. Explain box type solar cooker.
2. Analyze the solar crop dryers.
3. Write about water desalination.

SECTION D

1. Analyze the solar water heater.
2. Give the construction, working and applications of a solar pond.
3. Explain about solar energy.

UNIT II: ENERGY PHYSICS – II

SECTION A

1. An non polluting energy source is
a)solar energy b)windmill c)hydel plant **d)all the above**
2. Wind farms are most prominent in the states
a) Tamil nadu and Gujarat b) Himachal Pradesh and West Bengal
c) Madhya Pradesh and Assam d) Uth ranchal and West Bengal
3. An non polluting energy source is
a) solar energy b) windmill c) hydel plant **d) all the above**
4. Visible Light having wavelength below _____ is observed by the green chlorophyll
a) 6000Å **b)7000Å** c) 8000Å d) 9000Å

5. Formation of _____ is called the dark reaction
 (a) splitting of H_2O (b) **starch** (c) chemical energy (d) chlorophyll
6. The main process in digestion is an aerobic fermentation of organic materials in the
 a) **absence of oxygen**
 b) presence of oxygen
 c) absence of Nitrogen
 d) presence of nitrogen
7. Biogas is a mixture of _____ produced by bacterial degradation of organic matter.
 a) Hydrogen and nitrogen
 b) Hydrogen and carbon dioxide
 c) Nitrogen and carbon dioxide
 d) **Methane and carbon dioxide**
8. Biogas is a clean unpolluted and cheap source of energy in
 a) **rural areas**
 b) urban areas
 c) canurbation
 d) metropolitan area
9. The best PH value for fermentation and normal gas production lies between
 a) 5 to 9 b) **6.5 to 8** c) 3 to 10 d) 4 to 8.5
10. Geothermal Reservoir are formed that depth of
 a) **500m to 3000m** b) 200m to 2000m c) 400m to 2500m d) 100m to 2500m
11. The temperature of the earth's crust is found to increase by about _____ per kilometre depth.
 a) $20^{\circ}C$ b) $40^{\circ}C$ c) **$30^{\circ}C$** d) $50^{\circ}C$
12. Windy areas having an annual mean speed of _____ exist on the coastal stretch in Gujarat.
 a) 10m/s b) 9m/s c) 8m/s d) **7m/s**
13. The ocean has the potential of thermal gradient energy as large as
 a) **$1 \times 10^{13} W$** b) $2 \times 10^{15} W$ c) $2 \times 10^{13} W$ d) $1 \times 10^{15} W$

SECTION B

1. Define photosynthesis.
2. List out the classification of biomass.

3. List out the applications of wind energy.
4. Write the conditions necessary for photosynthesis.
5. Define biomass energy.
6. What is the process of solar energy?
7. Define biomass conversion digestion process.
8. Define geothermal energy.

SECTION C

1. Explain about Geothermal energy.
2. Explain the biomass conversion process.
3. Write about photosynthesis.
4. Write about wind energy.

SECTION D

1. Explain Ocean Thermal Energy Conversion.
2. Explain biomass energy with the classification.
3. Explain geothermal power plant.
4. Explain about wind energy and wind farm.

Unit III: MEDICAL PHYSICS

SECTION A

1. Images from _____ are used in nuclear medicine to detect regions of biological activity.
(a) camera (b) Alpha camera (c) beta camera (d) **Gamma cameras**
2. A short lived isotope such as _____ is administrated to the patient.
(a) **Iodine** (b) sodium (c) sulphur (d) phosphorus
3. Total body irradiation is a radio therapy technique used to prepare the body to receive a _____ transplant.
(a) kidney (b) liver (c) **bone marrow** (d) heart
4. Magnetic resonance imaging instrument uses powerful magnets to polarize and excite _____ nuclei
(a) atomic (b) **hydrogen** (c) nitrogen (d) oxygen

5. Endoscopy is a vehicle for minimally _____ surgery.
 (a) vascular (b) neuro (c) hand (d) **invasive**
6. The signals that make the heart muscles fibre contract come from the _____.
 (a) Lymph (b) **sinoatrial** (c) atomic (d) nuclear
7. A _____ consists of a battery and pulse generator
 (a) ECG (b) EEG (c) **pacemaker** (d) endoscopy
8. A sphygmomanometer is used to
 (a) **measure the blood pressure**
 (b) measure the electrical activity of brain
 (c) measure the sugar content in blood
 (d) count the red corpuscles in blood
9. The pacemaker is connected to the heart through _____ insulated wires
 (a) 1 - 4 (b) 1 - 5 (c) 1 - 6 (d) **1 - 3**
10. _____ maybe program to increase or decrease heart rate to match your activities
 (a) single chambered pacemaker
 (b) dual chambered pacemaker
 (c) **Rate responsive pacemakers**
 (d) cardiac resynchronization therapy pacemaker
11. Cardiac resynchronization therapy pacemakers have _____ leads.
 (a) four (b) five (c) six (d) **three**

SECTION B

1. Define Electroencephalogram (EEG).
2. Define nuclear medicine.
3. Discuss the types of pace makers.
4. Describe sphygmomanometer.
5. Describe radiation therapy.

SECTION C

1. Define radiation therapy. Explain the Magnetic Resonance Imaging.
2. Compile the uses of endoscopy.
3. Explain about Sphygmomanometer.
4. Write about Magnetic Resonance Imaging.

SECTION D

1. Explain ECG (electrocardiogram).
2. Explain about EEG (Electrocardiogram).
3. Write about cardiac pacemaker.

Unit IV: FIBRE OPTICS

SECTION A

1. A bundle of optical fibres consists of _____ of individual fibre wires.
a) billions b) millions c) **thousands** d) hundreds
2. Optical fibre consists of an inner cylinder made of _____.
a) iron b) **plastic** c) rubber d) silicon
3. _____ obeys the laws of reflection and refraction of light waves.
a) **Optic fibre** b) critical angle c) acceptance angle d) numerical aperture
4. The light that travels within a _____ defined by the acceptance angle is confined and guided.
a) circle b) **cone** c) surface d) line
5. _____ denotes the light gathering capability of the optical fibre.
a) Acceptance angle b) Critical angle
c) **Numerical aperture** d) Acceptance cone
6. The _____ must be excited with laser diodes.
a) optic fibre b) step index fibre c) multimode fibre d) **single mode fibre**
7. Electrical pulses are transformed into an optical signal with the help of _____.
a) a carrier b) **optical transmitter** c) photo detector d) receiver
8. The _____ detects the optical signal and converts it into pulses of electric current.
a) **photo detector** b) light c) transmitter d) analog signal
9. The _____ is covered by a jacket that protects the fibre from moisture and abrasion.
a) core b) **cladding** c) cable d) inner surface
10. The light should be incident at an angle greater than the _____.
a) Refractive angle b) angle of incidence c) refractive index d) **critical angle**

SECTION B

1. Define fibre optics.
2. Write the condition for total internal reflection.
3. Describe acceptance angle.
4. Define numerical aperture.
5. Discuss the types of optical fibre.
6. Describe acceptance cone.
7. Explain light wave communication.

SECTION C

1. Explain the principles of light in fibre optics.
2. Explain the classification of optical fibre.
3. Discuss the total internal reflection in optic fibre.
4. Compile the applications of fibre optic communication.

SECTION D

1. Explain the propagation of light in optical fibres.
2. Examine the fibre optic communication links.

Unit V: NANOMATERIALS

SECTION A

1. The thickness of a single human hair is
a) 70,000 nm b) 60,000 nm c) **80,000 nm** d) 50,000 nm
2. The thickness of a red blood cell is
a) **7000 nm** b) 8000 nm c) 9000 nm d) 5000 nm
3. The particle size in a nanomaterial is
a) 5 nm b) 9 nm c) **1 nm** d) 3 nm
4. The shape of the nano dots
a) **cylindrical** b) cube c) triangle d) circle
5. The fullerence consists of an empty cage of carbon atoms
a) 50 b) **60** c) 70 d) 80
6. An examples of top-down process
a) **Ball milling** b) sol-gel
c) chemical vapour deposition d) slow evaporation

7. The carbon nanotubes are the wires of pure carbon like rolled sheets of
 - a) calcite
 - b) nicol
 - c) **graphite**
 - d) cobalt
8. The laser pulse of high intensity and energy is used to evaporate
 - a) hydrogen
 - b) nitrogen
 - c) **carbon**
 - d) oxygen
9. The target material graphite contains small amount of
 - a) silver
 - b) aluminium
 - c) gold
 - d) **nickel**
10. The diameter of single walled carbon nanotubes
 - a) 10-30 nm
 - b) **10-20 nm**
 - c) 20-30 nm
 - d) 0-10 nm
11. In an example of Dispersed state nanoparticles
 - a) **Phosphors**
 - b) sensors
 - c) DNA ships
 - d) insulators
12. Biosensitive nanoparticles are used for tagging of
 - a) biosensors
 - b) **DNA chips**
 - c) Synthetic bone
 - d) photonic crystals

SECTION B

1. What are nanophase materials?
2. Mention different forms of nanomaterials.
3. What are two routes through which nanoparticles can be synthesized?
4. What is the principle of pulsed laser deposition technique?
5. Define fullerenes.

SECTION C

1. Explain the different forms of nanomaterials.
2. Discuss the synthesis of nanomaterials.
3. Describe the special features of nanophase materials.
4. Mention the advantage of pulsed laser deposition technique.

SECTION D

1. Explain the principle, construction, working and advantage of pulsed laser deposition technique.
2. Discuss applications of nanomaterials in various fields.

St. Mary's College(Autonomous), Thoothukudi
Question Bank
Semester IV – Self study paper
Electrical Appliances and Wiring - 21UPHSS2

1. What are essential tools for wiring?
2. What are VIR wires ?
3. What are C.T.S wires?
4. What are cables?
5. What is earthing? What is the need for good earthing?
6. What are fuses?
7. Describe fuse elements
8. What precautions ought to be observed in handling tools used for wiring?
9. Mention the systems of wiring used for domestic purposes
10. Describe the earthing through (i) G.I pipe (ii) through a plate
11. What are the essential requirements of a fuse holder?
12. What are slow blow fuses? Where are they used?
13. Describe the common type of fuse
14. Describe how you service an electric iron.
15. Describe how an electric kettle works
16. Describe how a hot plate functions
17. Describe the electric bell and explain how it works
18. Draw a neat sketch of the washing machine and label the various parts in it.
19. Describe the general rules for wiring
20. Describe the various systems of domestic wiring
21. What are the tests to be carried out on wiring installation before commissioning
22. Describe with a neat sketch the working of a washing machine
23. Describe squirrel cage motor
24. Describe coil winding set –up
25. Explain the transformer winding
26. Explain the working of a starter in a.c motors
27. Compare single phase and three phase motors
28. Derive the emf equation of a transformer
29. What is air conditioning
30. What is refrigerant? Give an example
31. What is an evaporator? Explain the function of it in refrigerating system
32. Describe an air conditioner unit
33. How does a water cooler function?
34. Explain the principle of refrigeration and obtain an expression for coefficient of performance
35. Describe a freezer unit and explain how it works
36. Describe the construction of an ice plant and give its working details

ST. MARY'S COLLEGE (Autonomous) - Thoothukudi.

III B.Sc. Physics/ Chemistry

Semester V

Common Core

Material Science

Sub. Code: 21UPCC51

Crystal structure and crystal imperfection

Section A

1. Which of the following is not true about the solid state?

- a) they have definite shape and volume
- b) they have high density and low compressibility
- c) they have high attractive forces among molecules
- d) they have high vapour pressure

(Ans: d)

2. Amorphous solids do not have _____

- a) Sharp melting point
- b) Characteristic geometrical shape
- c) Regularity of the structure
- d) All of these

(Ans: d)

3. A crystalline solid has _____

- a) No sharp melting point
- b) definite geometrical shape
- c) Isotropy in properties
- d) atoms or molecules arranged in random manner

(Ans: b)

4. One among the following is an example of amorphous solid

- a) Table salt
- b) Diamond
- c) Plastic
- d) Graphite

(Ans: c)

5. A cell with an interior point is called

- a) Primitive cell
- b) Cubic cell
- c) Body centered cell
- d) None of these

(Ans: c)

6. In BCC unit cell the coordination number is _____.

- a) 4
- b) 6
- c) 8
- d) 12

(Ans: c)

7. Total number of Bravais lattices in cubic crystal system is _____

- a) 1
- b) 2
- c) 3
- d) 4

(Ans: c)

8. Each sodium ion is surrounded by -----chloride ion in NaCl crystal.

- a) 3
- b) 4
- c) 5
- d) 6

(Ans: d)

10. Point defect is represented as ----- dimensional imperfection.

- a) zero
- b) one
- c) two
- d) three

(Ans: a)

11. Which among the following is an example of molecular crystal?

- a) Dry ice
- b) diamond
- c) CsCl
- d) NaCl

(Ans: a)

Section B

(2 marks)

1. What is a face centered unit cell?
2. Restate Miller indices
3. What is centre of symmetry?
4. Enumerate the defects present in crystals.
5. Define isotropy
6. Define anisotropy
7. Define elements of symmetry.
8. Define ionic crystal.
9. Define lattice energy.
10. Restate crystal defect.
11. Define liquid crystal.

Section C (5 marks)

1. Explain briefly the elements of symmetry present in a crystal.
2. Enumerate the steps involved in the calculation of miller indices of a crystal plane.
3. Explain in detail (i) Metallic crystal (ii) solar cells
4. Compile the principle of semiconductors and its significance in the preparation of solar cells.
5. Examine the different types of defects formed in the crystal with neat diagram.
6. Sketch neatly and explain the Born Haber cycle for the determination of lattice energy of NaCl.
7. Explain the types of liquid crystal.

(8 marks)

- ## Unit II New materials

10. _____ materials is the ability of materials to change its optical properties.
a) Electrochromic b) Piezoelectric c) Electrostrictive d) Rheological (Ans: a)

Section B

2 marks

1. What are shape memory alloys?
2. What are biomaterials? Give examples.
3. Enumerate any two applications of metallic glasses.
4. What are smart materials?
5. Mention the different types of high temperature materials.
6. List out any four advantages of shape memory alloys?
7. Express the term intermetallic compound with an example.
8. List the components of smart materials.
9. Summarize the types of dental cement.
10. List the properties of smart materials

Section C

(5 marks)

1. Define i) shape memory effect ii) pseudoelasticity
2. What are high temperature materials? Explain briefly.
3. Explain the importance of intermetallic compounds.
4. Appraise the components present in smart material and write their applications, merits and demerits.
5. Classify biomaterials. Explain briefly the significance of metals & alloys and ceramics in the field of biomaterials
6. Explain dental cement and its types.

Section D

1. What are metallic glasses? Enumerate its properties and applications.
2. Explain biomaterials in detail.
3. What are shape memory alloys? Explain their types, transformation mechanism and applications.
4. Explain the properties and preparation of intermetallic compounds.
5. Explain smart materials.

Unit-III X-rays

1. When a beam of X-rays is allowed to fall on a crystal, if the diffracted waves are out of phase are caused on the photographic plate.
a) Bright spots b) yellow spots c) dark spots d) holes (Ans: c)
2. when a beam of X-rays is allowed to fall on a crystal, if the diffracted waves are in the same phase__are caused on the photographic plate.
a. bright spots
b. dark spots
c. yellow spots
d. holes (Ans: a)
3. In Bragg's equation $n\lambda = 2d \sin\theta$, 'n' represents
a. the number of moles b) the principal quantum number
b. c) the Avogadro's number d) the order of reflection (Ans: d)

4. The diffraction angle, θ of a distorted crystal can be measured using _____ method.
a) rotating crystal b) rotating mirror c) powder d) Laue (Ans: c)
5. The study of crystal structure with the help of X-rays is called _____.
a) X-ray crystallography
b) X-ray pictography
c) X-ray mechanism
d) X-ray monograph (Ans: a)
6. When a beam of X-rays is allowed to fall on a crystal, if the diffracted waves are out of phase _____ are caused on the photographic plate.
a) bright spots
b) dark spots
c) yellow spots
d) holes (Ans: b)
7. X-rays are determined as electromagnetic rays by
a) Laue b) Bragg c) Newton d) **Coolidge**
8. The continuous spectrum of x-rays is due to
a) **Bremsstrahlung effect** b) Laue effect c) Compton effect d) Thomson effect
9. The wavelength of x-rays are
a) **10 – 0.5 Å** b) 100 - 10 Å c) 1 - 1000 Å d) 500 nm
10. The longer wavelength of x-rays are called as
a) Hard x-rays b) **soft x-rays** c) line spectrum d) continuous spectrum
11. The smoothly varying curves represent ----- spectrum
a) line b) continuous c) **characteristic** d) peaks
12. The superimposed lines in the continuous background constitute ----- spectrum
a) line b) continuous c) **characteristic** d) peaks
13. The sharp peaks represent ----- spectrum
a) **line** b) continuous c) characteristic d) peaks
14. The Compton wavelength is
a) **h / mc** b) hc / m c) m / hc d) h / mcv
15. Crystals having regular and periodic arrangement of atoms are called as ----- solids
a) **crystalline** b) amorphous c) anisotropic d) lattice

Section B

2marks

1. What is the mechanism of X-ray production?
2. What are characteristic X-rays?
3. State Mosley's law.
4. What is Compton effect?
5. Define Compton wavelength of electron
6. What is X-ray crystallography?
7. Write Bragg equation.
8. Name any two methods for the measurement of diffraction angle.

Section C

1. Explain briefly the experimental methods of X-ray study diffraction by Laue method.
2. Explain briefly the experimental method of X-ray study diffraction by rotating crystal method.
3. Give an account of the production, properties and applications of X-rays. What factors influence (i) cut off wavelength (ii) the wavelength of lines emitted from an x-ray tube.
4. Distinguish between continuous and characteristic x-ray spectrum and explain them.
5. Describe Moseley's work on x-rays. What is Moseley's law? What is its importance?
6. The potential difference across an X-ray tube is 10^5 volt. What is the maximum frequency of x-rays emitted? What is the corresponding wavelength?
7. Monochromatic X-radiation of wavelength of 0.124 \AA , undergoes Compton effect from a carbon block. Calculate the wavelength that is scattered through 180° .
8. Photon of energy 1.02 MeV undergoes Compton scattering through 180° . Calculate the energy of the scattered photon.
9. Explain why Compton effect is experimentally not observed for visible rays.
10. Explain the presence of unmodified line in Compton scattering. (when a photon collides with bound electron, its wavelength does not change)
11. Explain why the Compton shift of wavelength is independent of the scattering material.
12. An x-ray is found to have its wavelength doubled on being scattered through 90° . Calculate its wavelength.

Section D

1. Derive Bragg's equation. Describe briefly the experimental set up of rotating crystal method for the measurement of diffraction angle.
2. Explain briefly (i) Laue method (ii) powder method
3. Give theory of Compton effect and briefly explain its experimental verification.
How are modified and unmodified lines in the scattered beam accounted for?
4. State Moseley's law. Describe the importance of Moseley's work on X-rays.
5. Describe the principle of production of X-rays
6. What are X-ray spectra? Explain the origin of continuous X-ray spectra
7. What are characteristic X-ray spectra? How do they originate and how are they produced.
8. Find the wavelength of Compton. Given the mass of proton as $1.67 \times 10^{-27} \text{ Kg}$.
9. A monochromatic wave of wavelength of 1.24 \AA is viewed at an angle of 60° to the diffraction of incidence on a carbon slab. Calculate the Compton shift in wavelength.

Unit-IV Magnetic and dielectric materials

1. Materials not having permanent magnetic dipoles are

- a) paramagnetic b) ferromagnetic c) ferrimagnetic d) diamagnetic **(Ans:d)**

2. When a diamagnetic material is placed inside an external magnetic field

- a) induced magnetic dipoles act along the applied field direction
b) induced magnetic dipoles act opposite to the applied field direction
c) induced magnetic dipoles act perpendicular to the applied field direction
d) there will be not induced magnetic dipoles **(Ans:b)**

3. Diamagnetic susceptibility is -----.

- a) large, negative b) small , positive c) small , negative d) large , positive **(Ans:c)**

4. Which of the following statement is wrong?

- a) Diamagnetic property is independent of temperature
b) paramagnetic property is dependent of temperature
c) paramagnetic property is independent of temperature
d) ferromagnetic property is dependent of temperature **(Ans:c)**

5. Magnetic susceptibility is equal to

- a) The ratio of the magnetic induction in the sample to the applied magnetic field theory
b) magnetic moment per unit volume
c) the ratio of the intensity of magnetization produced in the sample to the magnetic field intensity producing it.
d) the ratio of the magnetic field intensity to the intensity of magnetization **(Ans:c)**

6. The unit of magnetic field intensity is

- a) A/m b) H/m c) Wb m⁻² d) no unit **(Ans:a)**

7. Magnetic induction B is related to magnetic field intensity H by the relation

- a) $B = \mu^0 (H - M)$ b) $B = \mu^0 (H / M)$ c) $B = \mu^0 (M/H)$ d) $B = \mu^0 (H+M)$ **(Ans:d)**

8. One Bohr magneton equals -----.

- a) $9.27 \times 10^{-24} \text{ A-m}^2$ b) $9.1 \times 10^{-31} \text{ A-m}^2$
c) $9.27 \times 10^{-16} \text{ A-m}^2$ d) $9.1 \times 10^{-24} \text{ A-m}^2$ **(Ans:a)**

9. The transition from the ferromagnetic to the paramagnetic state is named after

- a) Curie b) Curie – Weiss c) Neel d) Debye **(Ans:a)**

10. The temperature at which the transition of antiferro to para magnetism takes place is called----- temperature.

- a) Curie – Weiss b) Curie c) debye d) Neel **(Ans:d)**

11.The displacement of charged particles results in -----polarisation.

- a)electronic b) ionic c) orientation d) space charge **(Ans:a)**

12.Thepolarisation of ions sets in when the frequency of applied voltage is less than --.

- a) 10^5 Hz b) 10^{10} Hz c) 10^{13} Hz d) 10^{15} Hz **(Ans:c)**

13. The space charge polarisation is dependent on -----.

- a) temperature b) volume c) pressure d) concentration **(Ans:a)**

14. The permanent dipoles do not interact among themselves in ----- materials.

- a) paramagnetic b) diamagnetic c) ferromagnetic d) ferrimagnetic **(Ans: a)**

15.Special type of interaction called exchange coupling is observed in----- --.

- a) paramagnetic b) diamagnetic c) ferromagnetic d) ferrimagnetic **(Ans: c)**

16.Diamagnetic susceptibility is independent of----- --.

- a) temperature b) pressure c) frequency d)magnetic moment **(Ans: a)**

17.The change in the dimension of a ferromagnetic material when it is magnetised is known as --
-----.

- a) retentivity b) coercivity c) hysteresis d) magnetostriction **(Ans:d)**

18.Dielectrics are-----

- a) insulators b) conductors
c) n-type semiconductor d) p-type semiconductor **(Ans: a)**

19.Dielectric constant of ceramics is of the order of

- a) 1to 4 b) 4 to 10 c) 1 to 10 d) 4 to 6 **(Ans: b)**

Section B**2marks**

1. Define magnetisation.
2. Define magnetic induction
3. Define magnetic permeability.
4. Define magnetic susceptibility.
5. Define hysteresis.
6. Define the term retentivity.
7. Define the term coercivity.
8. Define the MR effect.
9. Define magnetostriction.
10. Define dielectric constant.
11. Define relaxation time.

Section C**5 marks**

1. What is diamagnetism? List out the properties of diamagnetic materials.
2. What is paramagnetism? List out the properties of paramagnetic materials.
3. What is ferromagnetism? What are the distinguishing features of ferromagnetism?
4. Explain hysteresis loop observed in Ferromagnetic material.
5. Explain the properties of ferri magnetic materials
6. Explain the properties of antiferromagnetic materials
7. Differentiate hard and soft magnetic materials.
8. Explain ionic and orientation polarization.
9. Describe the frequency dependence of various polarization processes in dielectric materials.
10. Describe the effect of temperature on dielectric constant.

Section D

1. Explain the Langevin theory of diamagnetism.
2. Explain the theory of paramagnetism.
3. Explain in detail domain theory of ferromagnetism.
6. Explain in detail the four types of energy involved in the process of domain growth.
5. Explain in detail the applications of magnetic materials.
7. Explain the origin of different kinds of polarization. Derive the expression for Langevin-Debye equation.
8. Obtain an expression for internal field seen by an atom in an infinite array of atoms subjected to an external field. Derive Clausius – Mosotti equation in dielectrics subjected to static fields
9. Explain in detail the classification of insulating materials.

Unit- V Nanomaterials

1. Nanoscience is the study of manipulation of materials at ----- scales.
a) millimeter b) nanometer c) micrometer d) centimeter **(Ans:b)**
2. When the axis of the tube is perpendicular to C-C bonds of the carbon hexagons, the structure is referred as----- --.
a) Armchair b) Zig-zag c) Chiral d) Single-wall **(Ans:b)**
3. 1 nm =----- --.
a) 10^{-6} m b) 10^{-9} m c) 10^9 m d) 10^6 m **(Ans:b)**
4. Non-magnetic materials become magnetic when the cluster size reduces to ----- atoms.
a) 80 b) 150 c) 200 d) 250 **(Ans:a)**
5. Hardness of a nano copper material is----- when compared to the hardness of ordinary copper.
a) greater b) lesser c) same d) becomes elastic **(Ans:a)**
6. Nano dots are almost----- in shape.
a) spherical b) rectangular c) triangular d) spherical or cubical **(Ans:d)**

7. The size of the powder particles put inside container in ball milling method should be -----.
- a) less than 100 μm b) less than 50 μm c) greater than 50 μm d) equal to 100 μm **(Ans:b)**
8. Plasma arcing method is mainly used for the production of-----.
- a) Fullerenes b) nano dots c) carbon rods d) nano rods **(Ans:a)**
9. Inter particle spacing----- with decrease in grain size.
- a) Increases b) decreases c) reduced to zero d) unaltered **(Ans:b)**
10. Magnetic moment of nano particles----- with decrease in coordination number.
- a) Increases b) decreases c) unaltered d) becomes non magnetic **(Ans:a)**
11. Diamond is one crystalline form of-----.
- a) Carbon b) silver c) nickel d) gold **(Ans:a)**
12. The structure obtained when the axis of the tube is parallel to C-C bonds is
- a) arm chair b) zigzag c) chiral d) spherical **(Ans:a)**
13. _____ is required to produce nano tubes in carbon arc discharge method.
- a) 3700⁰ C b) 2500⁰ C c) 1500⁰ C d) 1000⁰ C **(Ans:a)**
14. Nanoparticulate ZnO is used in the manufacture of-----.
- a) CDs b) sunscreen c) switches d) robots **(Ans:b)**
15. The catalyst used in pulsed laser deposition method is -----.
- a) nickel and cobalt b) nickel and iron c) iron and bismuth d) nickel and aluminium **(Ans:a)**
16. The size of the nanoparticles is in the order of-----.
- a) 10⁻¹⁰m b) 10⁻⁹m c) 10⁻⁸m d) 10⁻⁷m **(Ans: b)**
17. In DCAD method electrodes are made of-----.
- a) graphite b) copper c) nickel d) zinc **(Ans:a)**

Section B (2marks)

1. Define nanotechnology.
2. Mention few examples for nano materials.
3. What are the two routes through which nano particles can be synthesized?

4. Mention few techniques for synthesis of nano phase materials
5. What is sol-gel?
6. Mention few properties that drastically change with materials in nano phase.
7. How does the magnetic property change with material in nanophase?
8. Write a note on mechanical properties of nano phase material
9. What are the advantages of ball milling?
10. Mention the advantages of chemical vapour deposition technique.
11. What are the different crystalline forms in which carbon exists?
12. Mention different structures of carbon nano tubes.
13. What are chiral, arm chair and zig zag structure of nano tube?
14. What are single walled CNT (SWCNT) and multi walled CNT(MWCNT)?
15. Mention techniques used to produce carbon nano tubes (CNT)
16. Mention any two mechanical properties of CNT
17. Mention few physical properties of CNT
18. Mention any four applications of CNT.
19. Give the applications of nanoparticles in dispersed state and consolidated state.

Section C (5 marks)

1. Explain the physical properties of nanophase particles.
2. Explain the three types of nanotube structures.
3. What are nanophase materials? Discuss the mechanical behavior of nanostructured material.
4. What are nanophase materials? How do their magnetic properties vary with geometry?
5. Explain with neat sketch the plasma arcing method to produce nano particle.
6. Explain with neat sketch the electrodeposition method used to produce nanofilms.

Section D

- 1.Explain with a neat sketch the Ball milling method used to produce nanophase materials.
- 2.Explain the sol-gel method of preparing nano phase material and mention its advantages
- 3.What are the two types of vapor phase deposition? Describe chemical vapor phase deposition technique used to produce nanomaterials.
- 4.Explain the different properties which change significantly in materials at nano phase.
- 5.Explain the fabrication of carbon nanotubes using electric arc discharge method
- 6.Explain the fabrication of carbon nanotubes using pulsed laser deposition method
- 7.Explain the fabrication of carbon nanotubes using chemical vapour deposition method.
- 8.Discuss the electrical, mechanical,physical,chemical and thermal properties of CNT.
- 9.Explain in detail the applications of CNT.
- 10.Discuss applications of nanophase materials in various fields.

SECTION – A

Unit 1 : Number System

1. The hexadecimal equivalent of decimal number 141 is
(a) 7C (b) 8D (c) 8F (d) 9A
2. NAND gate is equivalent to
(a) NOR gate (b) AND gate (c) Bubbled OR gate (d) Bubbled AND gate
3. The 1's complement of the binary number 100101 is
(a) 01010 (b) 00111 (c) 01011 (d) 011010
4. The output of an inverter (NOT gate) is
(a) Negative of the input (b) complement of the input (c) 2's complement of the input
(d) Parity of the input.
5. The binary equivalent of decimal 11 is
(a) 1011 (b) 1100 (c) 1110 (d) 1111
6. Which of the following logic gates would give a 'low' output whenever high inputs are applied to all its terminals?
(a) OR (b) AND (c) NAND (d) EX - OR
7. How many input words are there in the truth table of a six – input OR gate?
(a) 6 (b) 32 (c) 64 (d) 128
8. One of the following can function as a binary device:
(a) resistor (b) diode (c) transistor (d) inductor
9. A NOR gate is ON only when all the inputs are
(a) ON (b) Positive (c) High (d) Low
10. If each successive code number differs from its preceding code number by a single unit, then this code is called
(a) BCD Code (b) Gray Code (c) Weighted Code (d) Binary Code
11. Excess – 3 Code for binary 0111 is
(a) 1110 (b) 0011 (c) 1011 (d) 1010
12. Gray code for the binary number 110010
(a) 110001 (b) 101011 (c) 101011 (d) 111100
13. What would be displayed on a hexadecimal counter, if its count were advanced by one from 39FF
(a) 4000 (b) 3A00 (c) 3900 (d) 4400
14. Half Adder is a
(a) Combinational circuit (b) Sequential circuit (c) Half of full Adder (d) all the above
15. How many outputs are required to implement a full subtractor
(a) 1 (b) 2 (c) 3 (d) 4

Unit II: Logic gates and Boolean Algebra

1. A logic gate circuit that will give a high output only when odd number of binary 1's are applied to

the input

- (a) AND gate (b) OR gate (c) NOR gate (d) Ex- OR
2. A NOR gate is ON only when all its inputs are
(a) High (b) Low (c) positive (d) negative
3. The Boolean expression $A \cdot B = Y$ is a representation of output of logic gate
(a) AND (b) OR (c) NAND (d) NOR
4. How many possible combination of inputs are there in the truth table of 4 input OR gate
(a) 32 (b) 64 (c) 16 (d) 24
5. The law that reveals that a NAND gate is equivalent to a bubbled OR gate is
(a) Absorption law (b) Associative law (c) distributive law (d) De Morgan's law
6. According to Boolean postulates $A + (A \cdot B) =$
(a) $A + B$ (b) $A - B$ (c) $A \cdot B$ (d) A
7. The binary equivalent of decimal 11 is
(a) 1011 (b) 1100 (c) 1110 (d) 1111
8. Positive logic AND gate becomes what gate when negative logic is applied
(a) NAND gate (b) OR gate (c) NOR gate (d) Ex- OR gate
9. In general, logic gates whose all output entries are logic '1' except for one entry that is logic '0' are
(a) AND , OR (b) NAND , OR (c) NAND , NOR (d) NOR , AND
10. The logic gate under consideration is such that irrespective of number of inputs, there is only one input combination that produces a logic '1' state at the output. Also, shorting all inputs of this gate to get a one-input one-output logic circuit provides NOT function. The gate is
(a) AND (b) NAND (c) NOR (d) OR

Unit III: Arithmetic circuits, Flip Flops and Multivibrators

1. In JK – FF, J and K terminals are held together at 1 state. When clock input is given the Flip flop function as
(a) D-FF (b) **T-FF** (c) J-k/M-S (d) JK-FF
2. The racing problem in JK flip flop can be avoided by using at the input clock.
(a) an integrator (b) **a differentiator** (c) a multivibrator (d) an AND gate
3. What is the other name of a flip – flop?
(a) Monostable MV (b) **bistable MV** (c) astable MV (d) Schmit trigger
4. If $J = 1; K = 1$ in a JK flip flop and input clock frequency is 2MHz, the Q-output frequency will be
(a) 2MHz (b) **1 MHz** (c) 0.5MHz (d) 4MHz
5. When the input condition $J = 1, k = 1$ is applied to the JK flip-flop, on arrival of the clock Pulse, the flip-flop will
(a) Produce racing (b) **toggle** (c) be invalid (d) be set
6. The pulse width of a monostable multivibrator with $R = 2M\Omega$ and $C = 1\mu F$ is
(a) 1.2s (b) **2.2s** (c) 1.0s (d) 555s
7. Which multivibrator can be used as a time delay unit?

- (a) **Monostable** (b) astable (c) bistable (d) all the above
8. Which two multivibrator types require external triggering?
(a) astable, monostable (b) **monostable, bistable** (c) bistable, astable (d) all the above
9. The RS flip flop is Multivibrator
(a) **bistable** (b) astable (c) Schmitt trigger (d) monostable
10. Name the universal flip-flop
(a) RS (b) D (c) **JK** (d) M/S
11. A circuit that will generate an output pulse for each input trigger is
(a) astable multivibrator (b) **monostable multivibrator**
(c) bistable multivibrator (d) all the above
12. The duty cycle of a periodic pulse wave form is
(a) **ratio of pulse width time to period** (b) ratio of period to pulse width time
(c) integrated value of the waveform (d) none of the above
13. Which multivibrator is useful for harmonic generation of square wave?
(a) monostable (b) . bistable (c) **astable** (d) all the above
14. The pulse width of a monostable multivibrator with $R=2M$ ohm and $C=1$ micro F is
(a). 1.2 s (b). **2.2 s** (c) 1.0 s (d) 555 s
15. If $J=1$, $K=1$ in a JK flip flop and input clock frequency is 2MHz, the Q-output frequency will be
(a) produce racing (b) **toggle** (c) be invalid (d) be set
16. If $J=1$, $K=1$ in a JK flip flop and input clock frequency is 2MHz, the Q-output frequency will be
(a) 2 MHz (b) **1MHz** (c) 0.5 MHz (d) 4 MHz
17. In a J-K master slave flip flop, the master is inactive and the slave is active when the control clock pulse goes
(a) high (b) **low** (c) inactive (d) on increasing in width
18. The racing problem in JK flip flop can be avoided by using at the input clock
(a) an integrator (b) **a differentiator** (c) a multivibrator (d) an AND gate
19. A frequency divider with D-FF can be constructed by connecting the terminals
(a) Q and D (b) **Q and D** (c) \bar{Q} and clock (d) \bar{Q} and Q
20. In JK-FF, J and K terminals are held together at 1 state. When clock input is given, the flip-flop will function as
(a) D-FF (b) **T-FF** (c) J-K/M-S (d) JK-FF
21. Name the universal flip flop
(a) D-FF (b) RS-FF (c) T-FF (d) **JK-FF**
22. Which flip flop has one data input?
(a) RS (b) **D** (c) JK (d) M/S
23. The output of Schmitt trigger is
(a) **rectangular pulse** (b) triangular pulse (c) clock pulse (d) all the above
24. Schmitt trigger is a
(a) monostable circuit (b) **bistable circuit** (c) astable circuit (d) all the above
25. Glitch is

- (a) toggling at the output of a gate (b) an interfacing problem in A/D conversion
 (c) a type of code (d) **unwanted signal at the output of a gate**
26. The maximum clock frequency that can be used with a logic gate having a propagation of 75 ns is
 (a) **13.3 MHz** (b) 7.5 MHz (c) 75 MHz (d) 6.3 MHz

Unit IV : Karnaugh Map And Combinational Circuit Its Applications

- AND ing maxterms is denoted
 (a) π (b) ϵ (c) S (d) M
- The circuit that checks the parity at the receiver is called a
 (a) **Parity checker** (b) Parity generator (c) Parity corrector (d) Parity number
- The adjacent columns or rows of a K-map change by how many literals
 (a) **1** (b) 2 (c) 3 (d) 4
- The excess – 3 code for decimal number 9 is
 (a) 1011 (b) 1001 (c) 1010 (d) **1100**
- The output of a parity generator reads 10110. The parity of the output is
 (a) **Odd** (b) Even (c) Zero (d) Undetermined
- Each term in the sum – of – products form in the switching function containing all variables of the function is known as
 (a) Maxterm (b) **minterm** (c) quadterm (d) leading term
- In a 4 variable K map, an octet appearing on the map would eliminate how many variables?
 1 (b) 2 (c) 3 (d) **2**
- AND ing maxterms is denoted by
 (a) π (b) ϵ (c) S (d) M
- The adjacent columns or rows of a K-map change by how many literals
 (a) 1 (b) 2 (c) 3 (d) 4
- Each term in the sum of products form in the switching function containing all variables of the function is known as
 (a) Maxterm (b) minterm (c) quadterm (d) leading term
- Each term in the product of sums form in the switching function containing all variables of the function is known as
 (a) Maxterm (b) minterm (c) quadterm (d) leading term
- In a 4 variable K map , an octet appearing on the map would eliminate how many variables?
 (a) 1 (b) 2 (c) 3 (d) 4

Unit V: Shift Registers, Counters and A/D and D/A conversion

- A decade counter can count
 (a) from 1 to 10 (b) from 0 to 10 (c) from 1 to 9 (d) **from 0 to 9**
- The modulus of a binary counter with 4 flip-flop is

- (a) 4 (b) 8 (c) 12 (d) **16**
7. The maximum number of output combinations generated by a counter is known as its
(a) Maximum count (b) division factor (c) **modulus** (d) AND logic
8. A group of memory elements that store a word is known as
(a) **register** (b) ring counter (c) a Flip flop (d) all the above
9. A 3 bit binary counter can count decimals
(a) **From 0 to 7** (b) from 1 to 8 (c) from 0 to 8 (d) from 0 to 9
10. One example of decoder is
(a) T.V. screen (b) **seven –segment display** (c) RAM (d) A/d converter
11. A ripple counter is an example of
(a) Synchronous counter (b) **asynchronous counter** (c) PROM (d) interfacing unit
8. An important application of a shift register is to generate
(a) Pulse (b) **binary sequence** (c) hexadecimal sequence (d) parity
9. A decade counter is also referred to ascounter
(a) a BCD (b) **Mod 10** (c) BCD – decade (d) XS3
10. One example of encoder is
(a) Stair – case switch (b) punched paper (c) **key – board of a computer** (d) TV screen
11. A decade counter can counter
(a) from 1 to 10 (b) from 0 to 10 (c) from 1 to 9 (d) **from 0 to 9**
12. A 3-bit binary counter can count decimals
(a) **from 0 to 7** (b) from 1 to 8 (c) from 0 to 8 (d) from 1 to 7
13. How many FFs are required to construct a mod -12 counter?
(a) 3 (b) **4** (c) 5 (d) 6
14. Digital to analog conversion is an important ----- process in many applications
(a) **Interface** (b) digitalized (c) normal (d) control
16. ----- is an example of an interfacing circuit as it converts a sine wave into a pulse waveform.
(a) oscillator (b) **Schmitt trigger** (c) power supply (d) CRO
19. The process of converting a number of digital input signals to one equivalent analogue voltage is known as -----
(a) **D/A conversion** (b) A/D conversion (c) generator (d) oscillator
20. ----- is the process by which the value of an analogue voltage is converted to equivalent digital signal
(a) D/A conversion (b) **A/D conversion** (c) generator (d) oscillator
21. The decimal number 18 is expressed in BCD form as
(a) 0001 0110 (b) **0001 1000** (c) 1000 0001 (d) 1000 1000
22. The excess – 3 code for the binary number 0111 is
(a) 1000 (b) 1001 (c) **1010** (d) 1110
23. The logic gate that can be used as parity checker is
(a) AND (b) NAND (c) **EX – OR** (d) NOR

24. In the half adder, the sum output is the same as that of
 (a) Inverter (b) NAND gate (c) AND gate (d) **EX – OR gate**
25. A logic circuit that can add three bits at a time is known as
 (a) half adder (b) **full adder** (c) encoder (d) decoder

SECTION B

Unit I : Number system

1. Convert binary 10101 into equivalent decimal
2. Find decimal equivalent 101.1101
3. Subtract 01101 from 11011, using 1's complement method
4. Find the binary number for hexadecimal number D2E.8
5. Convert hexadecimal F8E6.39 into equivalent decimal
6. Convert 72905 to hexa decimal system.
7. What is meant by base or radix of a computer system?
8. Define bit, byte and nibble.
9. Write binary numbers from 7 to 15

Unit II: Logic Gates and Boolean Algebra

1. Draw the logical circuit for the expression $Y = A'B'C' + A'B'C + A'BC + ABC'$
2. Symbolic representation of gates OR, AND and NOT
3. What are the advantages of digital circuits over analog circuits?
4. Show that $A + AB = A$, using Boolean algebra
5. State De Morgan's laws
6. What are the characteristics of logic gates?
7. Define fan in and fan out.
8. What is duality theorem
9. What is an AND gate. Give its truth table and logical symbol
10. What is an Ex- OR gate? Give its truth table and logical symbol.
11. Distinguish between gate and Switch.
12. What is buffer? What is its use?
13. What are the advantages of digital circuits over analog circuits?
14. Show that $A = A + AB$, using Boolean algebra
15. State Demorgan's laws
16. What is half subtractor? Give its symbol and truth table

Unit III: Arithmetic circuits, Flip Flops and Multivibrators

1. Define a Flip Flop.
2. What is T flip flop? Give its truth table.
3. What are the different types of flip-flop?

4. Define race around condition.
5. Name the ways to overcome the racing problem.
6. What is a D flip flop. Give its logic symbol and truth table
7. What is edge-triggered flip-flop?
8. What is a master-slave flip-flop?

Unit IV: Karnaugh map and combinational circuit applications

1. What is Karnaugh Map?
2. Find the minterms of the logical expression $Y = A'B'C' + A'B'C + A'BC + ABC'$
3. Write the maxterms corresponding to the logical expression
4. What are called don't care conditions?
5. What is a prime implicant?
6. What is an essential implicant?
7. What is min term?
8. What is max term?
9. What is multiplexer? Give its logic symbol
10. What is De-multiplexer? Give its truth table
11. What is an encoder?
12. What is a decoder?

Unit V: Shift Registers, Counters and A/D and D/A conversion

1. What is a register?
2. What are the types of shift registers?
3. What is a counter?
4. State the types of counters
5. Give the comparison between synchronous & Asynchronous counters.
6. What do you mean by modulus of a counter?
7. Draw the circuit for a three bit counter to count from 0 to 7 .
8. What is a Modulo – N counter
9. Draw the circuit for a parallel – in, serial – out shift register
10. Give the uses of counters.
11. What is a D/A converter?
12. What is linearity in a D/A converter?
13. What is quantization error?
14. Define settling time.
15. Define percentage of resolution
16. What are the characteristics of A/D converters?

SECTION – C

Unit I: Number System

1. What is an Ex-Or gate. Give its logic symbol, truth table, Boolean expression and
2. Implementation using basic gates.
3. What is a NOT gate? How will you implement the same using transistor?
4. What are the characteristics of the logic gate?
5. Construct an Half Adder using NAND gates only.
6. Implement the basic logic gates by using NOR only.
7. Convert $(125)_{10}$ and $(47)_{10}$ to binary and perform subtraction by 2's complement method.
8. Convert $(547)_8$ to decimal, binary and hexadecimal.
9. Use 2's complement method to perform the following binary subtractions.
i) $110011-100101$ ii) $100011-111010$ iii) $11011-10011.11$
10. Convert the following decimal numbers to binary number. i) 37.31 ii) 6.215.

Unit II: Logic Gates and Boolean Algebra

1. Simplify $y = \bar{A}\bar{B}\bar{C} + \bar{A}B\bar{C} + A\bar{B}\bar{C} + AB\bar{C}$
2. Simplify the following expressions using Boolean Algebra
i) $X = AB + A(B+C)$ ii) $L = A(\bar{A} + B)$
3. Design an half adder circuit using NAND gates only.
4. Design full adder circuits using NAND gates only.
5. Obtain the sum – of – products for the logic function.
 $f = (A+C+DC)(B+BC+D)$
6. Convert the following into sum – of – products form:
 $(a+b)(b+c)(a+c)$
7. What is a BCD code? Explain
8. Convert decimal 23.6 to binary number.
9. Explain 2's complement method of subtraction.
10. Explain 1's complement method of subtraction.
11. State and prove De-Morgan's theorem
12. Describe with necessary logic circuit, the functioning of parallel subtractor, using 2's complement system.
13. What is half subtractor? How it can be implemented?

Unit III :Timer 555 ,Flip-Flops and Multivibrators

1. Explain how a JK flip flop can be converted with D flip-flops.
2. Explain the working of a divide by 2 counter with D flipflop.
3. Describe a clocked R-S flip flop and give its output wave form.
4. Describe the construction, working and truth table of a D-Flip flop.

5. With a neat sketch, describe the functional diagram of 555 timer.
6. Giving truth table, explain the operation of T- flip flop.
7. Describe the R-S flip – flop and explain its operation, giving truth table. Why is R = 1;
14. S = 1 disallowed in an R-S flip-flop.
8. What is ‘racing problem’ with the J-K flip – flop/can it be avoided.
9. Describe the frequency and duty cycle of the astable multivibrator using 555 timer,
15. given that $R_A = 7.5 \times 10^3 \text{ ohm} = R_B$ and $C = 0.1 \text{ } \mu\text{F}$.

Unit IV: Karnaugh map and combinational circuits

1. Simplify the following Boolean function in product-of-sum form, using K-map.
 $F(A,B,C,D) = \Sigma m(0,1,2,5,8,9,10)$
2. What is the advantage of forming pair,quad or octet in a karnaugh map?
3. Obtain the simplified expression in product – of – sums using karnaugh map: $F(x,y,z) = \pi M(0,1,4,5)$
4. Simplify the switching function given below using karnaugh map. $Y = \overline{A}\overline{B}C + A\overline{B}C + AB\overline{C} + ABC$
5. Reduce to simplest POS form and implement in NAND logic: $E = \Sigma m(0,1,3,4,5,6,7,13,15)$
6. Convert the following function in sum-of-products form into product of maxterms form: $F = xy + \overline{x}z$
7. Design a circuit by following the k-map simplification procedure and draw it, using NAND only for the function $Z = \overline{A}\overline{B}C + A\overline{B}C + AB\overline{C} + ABC$
8. Using karnaugh map, simplify the expression $Y = \overline{A}\overline{B}CD + \overline{A}BC\overline{D} + \overline{A}BCD + AB\overline{C}\overline{D} + ABC\overline{D} + AB\overline{C}D + ABCD$ and design a combinational network for the simplified expression.
9. Simplify the following Boolean function in sum-of-products form. $F(A,B,C,D) = \Sigma m(0,1,2,5,8,9,10)$
10. Simplify the following Boolean function in products -of- sum form. $F(A,B,C,D) = \Sigma m(0,1,2,5,8,9,10)$

Unit V: Counters ,Registers and conversion

1. Describe the working of the shift register using two flip-flops.
2. What is meant by synchronous counter? Describe the working of ripple counter.
3. What is a register? Explain the difference between serial input serial output and parallel input parallel output.
4. Explain the working of 4 – bit serial in, serial out shift register using D-flip flop.
5. How are flip-flops useful for construction of counters. Explain the terms ‘resolution accuracy’ and ‘settling time’ in D/A converters
6. What is meant by quantization error and how it can be reduced?
7. What are the performance characteristics of D/A converter?
8. Discuss the factors that limit the rate response of D/A converter.
9. How many output levels are possible in a two bit D/A converter? If this two bit D/A converter spans the range 0 to 3 volt, what is its resolution?
10. What is the resolution of an eight bit A/D converter

SECTION – D

Unit I : Number System

1. Define bit, byte and nibble. How many bits are there in two bytes?
2. Explain 1's and 2's complement of a binary number
3. Explain how binary subtraction is carried out using 1's and 2's complement method
4. Explain 1's and 2's complement of a binary number
5. Write the equivalent binary number for the for the decimal numbers
(i) 27 (ii) 121 (iii) 17.63 (iv) -15
6. Add the binary
(a) 1011 and 1001 (b) 111 0001 and 101 0101 (c) 111 1010 and 100 1101
(d) 111 111 and 111
7. Subtract the binary
(a) 1101 from 1 1110 (b) 1010 from 111 (c) 11 1010 from 10 0011
8. Use 1's and 2's complements to perform the following binary subtractions
(i) 1111 -1011 (ii) 1 1101 – 10011.11 (iii) 11 0011 – 10 0101
9. What are the hexa decimal numbers that follow each of these?
ABCD, 7F3F, BEEF
10. Convert the following binary numbers into hexa decimal numbers
(a) 1000 1100 (b) 0011 1011 (c) 1111 1010 0110
11. Convert the following hexa decimal numbers into binary numbers
(a) E5 (B) 84D (c) 74F4 (d) -17 (e) 8A.9
12. Convert the following hexa decimal numbers into decimal numbers
2F49, 7FE4, F8E6, B3D.8
13. What is the hexadecimal equivalent of decimal 62329, 650, 16389, 65535
14. What is BCD adder? Giving logical circuit, describe the working of 4-bit BCD adder.
15. What is excess -3 code? Explain excess-3

Unit II: Logic gates and Boolean Algebra

1. NOR gate is acting as the universal gate – Explain.
2. Explain in detail a Full adder circuit. Obtain expressions for the SUM and the CARRY output.
3. Construct all logic gates using NAND gate.
4. What is an universal gate? Explain the AND, NAND, EX-OR and EX_NOR gates implementation using only NOR gates.
5. Describe the function of a full adder and obtain the expressions for the SUM and Carry output
6. Describe how a full adder could be constructed with the help of XOR gate, AND gates and OR gates.
7. Explain the principle of working of parallel binary adder. Describe the construction of parallel binary adder using three full adders, giving block diagram.
8. Explain with block diagram the functioning of a parity checker?

9. Explain the principle of working of parallel binary subtractor. Describe the construction of parallel binary subtractor using 2's complement method
10. Explain parity checker and parity generator. Where are these circuits used?

Unit III: 555 Timer, Flip flops and Multivibrators

1. How would you implement the R-S flip-flop using NAND gates? Sketch the timing diagram of the R-S flip-flop.
2. Describe the function of clocked R-S flip-flop. Write a note on edge triggering.
3. Explain the operations of R-S master slave flip-flop.
4. Explain the operation of J-K master slave FF with a neat circuit diagram. Also draw the timing diagram.
6. Explain the operation of a JK flip-flop giving truth table. What is meant by racing
5. Problem? How can it be avoided?
6. With a neat circuit diagram, explain the working of a monostable multivibrator using 555 timer.
7. Derive an expression for the width and period of the output pulse.
8. Explain how 555 timer can be used as an astable multivibrator. Deduce an expression for the frequency of the output **wave**.

Unit IV : Karnaugh map and combinational circuits

1. What is multiplexer? What are its applications? Explain the working of a 4-to-1 line multiplexer. Draw the logic circuit and truth table.
2. What is demultiplexer? Explain the working of a 1-to-4 line multiplexer. Draw the logic circuit and truth table.
3. What is an Encoder? Draw and explain BCD to decimal encoder
4. What is an decoder? Draw and explain BCD to decimal decoder
5. Explain the operation of seven segment decoder

Unit V : Registers, counters and A/D and D/A conversion

1. 1. What is a register? Explain giving block diagram the construction and operation of
 - (a) serial in, serial out
 - (b) Parallel in, serial out
 - (c) Parallel in, parallel out
 - (d) serial in , serial out
2. What is decade counter? Describe giving block diagram the function of the decade counter
3. Explain giving block diagram the operation of ring counter
4. Explain giving block diagram the operation of ripple counter
5. Draw and explain the function of a 3 bit binary counter with timing diagrams.
6. Describe, giving block diagram, the working of up/down counter.
7. Explain the working of 4-bit up down asynchronous counter with logic diagram and waveform.
8. Explain the working of the serial transfer shift register with the aid of block diagram.
9. Explain how modulo – 12 counter could be constructed using 4 – bit binary counter.

10. What is a mod -10 counter? Describe giving a block diagram , the function of mod -10 counters?
11. Point out the purpose of having buffers and inverters in register with parallel load.
12. Explain the function of A/D converter, defining its resolution and accuracy. What is meant by quantization error and how it can be reduced?

UNIT I – TOKENS AND EXPRESSIONS

Section –A

Choose the correct answer:

1. Every C++ program must have
 - a) any type of function
 - b) no function
 - c) **only one main() function**
 - d) many main () functions
2. C++ variable
 - a) **can be declared anywhere in the program**
 - b) can be declared only at the beginning of the scope
 - c) all are declared as private
 - d) need not be declared
3. When the continue statement is executed within a loop, the control goes to
 - a) the next statement in the loop
 - b) **the top of the loop**
 - c) the beginning of the program
 - d) the end of the program
4. ----- function is to allocate memory dynamically at run time.
 - a) **new ()**
 - b) calloc ()
 - c) pointer ()
 - d) free ()
5. The ----- returns a value of type into the operating system.
 - a) arg ()
 - b) main()
 - c) **return ()**
 - d) int ()
6. The reference variables is used to
 - a) compare any two variables
 - b) Refer that variable with currently declared variable
 - c) **Provide an alternative name for a previously defined variable**
 - d) Interchange the values in between the variables
7. Delete command is used to
 - a) **Free memory space**
 - b) Delete the variables within the class
 - c) Delete the variables within the constructor
 - d) Delete the values of the variable within the constructor
8. Size of the character array should be
 - a) same as the number of characters in the string
 - b) **one larger than the number of characters in the string**
 - c) one smaller than the number of characters in the string
 - d) not related to the number of characters in the string
9. When the break statement is executed inside a loop, which one of the following occurs?
 - a) control goes to the end of the program
 - b) control leaves the function that contains the loop

- c) **causes the exit from the innermost loop containing it**
- d) causes an exit from all the nested loop
- 10. Which of the following control expressions are valid for 'if' statement?
 - a) an integer expression **b) a Boolean expression**
 - c) either (a) or (b) d) neither (a) or (b)
- 11. Which of the following are not keywords?
 - a) switch b) integer c) default **d) object**
- 12. Which of the following keywords were added by C++?
 - a) explicit b) enum **c) both a & d** d) typename
- 13. The operator >> is known as----- operator
 - a) insertion **b) extraction** c) enum d) struct

Section – B

1. Who designed C++ programming language?
2. What is a token?
3. Name any five keywords in C++.
4. Write a sample program to find the average of two numbers.
5. List the classification of basic data types in C++.
6. Write a short note on declaration of variables.
7. Write a short note on dynamic initialization of a variable.
8. What is a reference variable in C++?
9. Define manipulators. Give a suitable example.
10. What are the different types of operators in C++?
11. What is the scope resolution operator?
12. What are the expressions used in C++.
13. Declare the syntax of logical expressions.
14. Write a syntax and example of for loop.
15. Enumerate the rules of naming identifiers in C++.
16. Write a syntax and example for declaring constant in C++.

Section – C

1. What are the applications of scope resolution operator :: in C++ ?
2. When will you make a function inline? Why?
3. What are manipulators? Explain with examples.
4. What is the advantage of passing arguments by reference?
5. In C++, a variable can be declared anywhere in the scope. What is the significance of the feature?
6. Write a note on memory management operators.
7. Write short notes on following (i) Arrays (ii) Functions (iii) Pointers
8. Describe the two ways of creating symbolic constants in C++.
9. Explain the three basic control structures used in C++.
10. Explain the dynamic initialization of variables in C++.
11. What is a reference variable? What is its major use?

Section – D

1. Write a program to solve the quadratic equation using nested if else structure.
2. Explain different types of expressions available in C++. Give examples.
3. Explain, with example, the branching and looping control structures in C++.
4. Explain a) Symbolic constants and b) Dynamic initialization of variables in detail.
5. Explain a) Scope resolution operator and b) Manipulators in detail.
6. Write a program to display the name of the day using switch case statement.
7. Write a program to perform simple arithmetic operations using do while statement.
8. Write a program to find the sum of the series $1 + 3 + 5 + \dots + n$ using for loop.

UNIT II - FUNCTIONS, CLASSES AND OBJECTS

Section –A

Choose the correct answer:

1. A member function only can be defined _____
a) inside a class b) outside a class **c) both inside and outside** d) no where
2. The _____ can be used as member variables in a class.
a) Function **b) Arrays** c) Member d) Operator
3. A _____ member function can be called using the class name.
a) variable **b) static** c) object d) count
4. By default the members of a class are
a) **private** b) public c) protected d) none of the above
5. In C++, void display (); this statement means that
a) **The function does not pass any parameters** b) The function can pass many parameters
c) either (a) or (b) d) Neither (a) or (b)
6. Which of the following cannot be passed to a function?
a) Reference variable **b) Arrays** c) Class objects d) Header files
7. In a class, a member declared as _____ is not accessible from outside the class.
a) public **b) private** c) protected d) none of the above
8. _____ can be defined as class objects which can be then manipulated like built –in types.
a) function **b) string** c) variable d) member
9. The general format for calling a member function is
a) **object-name.function-name (actual-arguments);**
b) object-name.function-name (actual-arguments)
c) function-name.object-name (actual-arguments);
d) function-name.object-name (actual-arguments)
10. A copy of the entire object is passed to the functions is called as
a) pass by reference b) pass by operator c) pass by class **d) pass by value**
11. A member function can be called by using its name inside another member function of the same class is called as

- a) Private member function **b) Nesting of member function**
c) Static member function d) Arrays within a class
12. Which of the following is not a valid access specifier?
- a) private b) public c) protected **d) mutable**

State True or False

13. Several different classes can use the same function name. **True**
14. A function cannot return an object. **False**
15. A member function can call another member function directly, without using the dot operator. **True**

Section – B

1. What is a class?
2. What is an object?
3. What is a member function in C++?
4. Write a simple program to arrange array elements.
5. When a class member is defined outside the class, which operator can be used to associate the function definition to a particular class?
6. Write the general form of a class declaration.
7. What is meant by nesting of member function?
8. Explain objects as function arguments in C++.
9. Why main function is special in C++?
10. What is an inline function?
11. Write a syntax and example of function declaration.

Section – C

1. What are objects? How are they created?
2. Define Nesting of member function. Explain with an appropriate example.
3. Write about inline functions.
4. Explain the concepts of call by reference and return by reference.
5. Write about private member functions.
6. Explain arrays within a class in C++.
7. Explain arrays of objects in C++.
8. What are default arguments? Explain with a sample program.
9. Explain objects as function arguments with the program.
10. Write a program for returning objects in C++.

Section – D

1. What is a class? How will you define member function of a class? Explain in detail.
2. With examples, explain: a) Arrays of objects b) Object as function arguments.
3. Explain how (i) an object is received as a function argument and (ii) returning objects with suitable program.
4. What are objects? How is created? How will you define member functions of a class?

Explain in detail.

5. Explain (i) call by reference and (ii) return by reference with suitable program.
6. Write a program for nesting of member functions.

UNIT III - CONSTRUCTORS AND OPERATOR OVERLOADING

Section –A

Choose the correct answer:

1. Constructors should be declared in a
 - a) private section
 - b) protected section
 - c) **public section**
 - d) all the above
2. For automatic initialization of objects, these are used
 - a) classes
 - b) functions
 - c) **constructors**
 - d) pointers
3. A function used to deallocate memory
 - a) constructor
 - b) **destructor**
 - c) derived class
 - d) none
4. A destructor is preceded by
 - a) ;
 - b) :
 - c) ~
 - d) //
5. integer (integer &i); is an example of ----- constructor.
 - a) default
 - b) multiple
 - c) **copy**
 - d) dynamic
6. Allocation of memory to objects at the time of their construction is known as ----- construction of objects.
 - a) default
 - b) multiple
 - c) copy
 - d) **dynamic**
7. Which of the following constructor related concepts is nonrelevant in C++?
 - a) default
 - b) multiple
 - c) copy
 - d) **virtual**
8. Friend functions have full access to ----- members of a class.
 - a) **private**
 - b) public
 - c) protected
 - d) friend
9. The overloaded operator must have at least -----operand that is user defined type.
 - a) two
 - b) three
 - c) zero
 - d) **one**
10. When an object is created and initialized at the same time, a -----constructor gets called.
 - a) default
 - b) multiple
 - c) **copy**
 - d) dynamic
11. _____ functions must be either member functions or friend functions.
 - a) vector
 - b) **operator**
 - c) overloading
 - d) comparison
12. Inheritance refers
 - a) Deriving base class from old one
 - b) Give two classes are having same type
 - c) **Deriving new class from old one**
 - d) Either (a) or (c)
13. Objects of one class acquiring the properties of objects of another class is known as
 - a) abstraction
 - b) **inheritance**
 - c) encapsulation
 - d) overloading
14. A class inheriting properties from more than one class is known as
 - a) **multiple inheritance**
 - b) multilevel inheritance
 - c) hierarchical inheritance
 - d) single inheritance

State True or False

12. Constructors do not return any values. **True**
13. A default constructor is a constructor that requires no parameters. **True**

14. A constructor has the same name as that of a class. **True**
15. Destructors never take any argument. **True**

Section – B

1. What is a constructor?
2. Name the constructors used in C++.
3. Write a sample program to define parameterized constructor.
4. What are the special characteristics of constructor functions?
5. What is a copy constructor?
6. Write the general syntax for multiple constructors in a class.
7. What is a destructor?
8. Write any four special characteristics of constructors.
9. Write the importance of destructors.
10. Define inheritance.
11. What are the different forms of inheritance?
12. Define derived class.
13. Define multiple inheritance.
14. Write a short note on hierarchical inheritance.
15. Write the general form of multilevel inheritance.
16. Draw the pictorial diagram of hybrid inheritance.

Section – C

1. How to use multiple constructors in a class? Explain with example.
2. Explain the concept of parameterized constructor with the suitable program.
3. Explain dynamic constructor.
4. Explain copy constructor.
5. Describe the importance of destructors?
6. Write about inheritance.
7. Write a C++ program incorporating single inheritance.
8. Explain: Hybrid Inheritance with suitable example.
9. Explain: Multilevel Inheritance with suitable example.
10. With neat illustrations explain the concept of multiple inheritance.

Section – D

1. What is a constructor? Describe in detail, multiple and copy constructors and their uses.
2. Describe in detail, parameterized and dynamic constructors and their uses.
3. Explain how to manipulate the strings using operators?
4. What is inheritance? With neat illustrations, explain the concept of multiple and hybrid inheritance.
5. Explain: (i) Hierarchical inheritance (ii) Hybrid inheritance in detail.

Unit IV Microprocessor Architecture

1. The physical components of the microprocessor (system) are called _____
a) Software b) **hardware** c) Program d) microprocessor
2. The set of instruction written for the microprocessor to perform a task is called _____
program b) software c) instruction code d) language
3. A group of program is called _____
a) **software** b) program c) language d) binary digits
4. A microprocessor used for computing and data processing is called _____
a) embedded system b) **reprogrammable system** c) hardware d) ALU
5. A microprocessor that performs specific task is called _____
a) hardware b) memory c) **embedded system** d) reprogrammable system
6. _____ is an abbreviation for the term binary digits
a) **bits** b) binary c) word d) nibble
7. Group of bits is called _____
a) bits b) c) byte d) **word**
8. _____ is with space for a fixed nibble number of binary numbers on each line generally made of semi conducting material
a) microprocessor b) **memory** c) input d) program
9. Instructions that load or manipulate 8-bit data directly are
a) 1-byte instruction b) **2- byte instruction**
c) 3-byte instruction d) 4-byte instruction
10. ____ is a group of lines used to transfer bits between the microprocessor and other components of the computer system
a) memory b) **bus** c) microcontroller d) microcomputer
11. The 8085 is an ----- microprocessor.
a) **8-bit** b) 16-bit c) 32-bit d) 64-bit
12. Several register arranged in a sequence is called _____
a) input b) hardware c) output d) **memory**
13. 8-bit registers on a semi conductor chip is known as _____
a) 8-bit memory b) **1K byte memory** c) nibble d) byte
14. Devices such as Keyboard, simple switches used to enter instructions and data into memory is called
a) output devices b) compiler c) interpreter d) **input devices**
15. The result can be displayed by a _____ device.
a) **output devices** b) input c) memory d) register
16. Peripheral - Mapped I/O is also known as -----
a) **Memory mapped I/O** b) I/O - mapped I/O c) Buffer d) Data bus
17. The opcode in the instruction MOV H,L is
a) H b) H,L c) **MOV** d) both b and c
18. The address bus is -----
a) **Unidirectional** b) bidirectional c) either a or b d) both a and b
19. _____ performs arithmetic and logical operations
a) control unit b) memory c) output d) **ALU**
20. The timing of the communication process is controlled by a group of circuit called the
a) memory b) CPU c) ALU d) **control unit**
21. A computer with a microprocessor as its CPU is known as _____

- a) micro processor b) CPU c) micro controller d) **micro computer**
22. _____ is essentially an entire computer on a single chip
a) micro computer b) micro processor c) **micro controller** d) CPU
23. Integrating the circuits of logical gate on a single chip known as
a) **small scale Integration (SSI)** b) medium scale Integration (MSI)
c) Large scale Integration (LSI) d) Super Large Scale Integration (SLSI)
24. Fabrication of more than 100 gates on a single chip is called
a) **medium scale Integration (MSI)** b) small scale Integration (SSI)
c) Large scale Integration (LSI) d) Super Large Scale Integration (SLSI)
25. Fabrication of more than 1000 gates on a single chip is called
a) small scale Integration (SSI) b) **large scale Integration (LSI)**
c) super Large scale Integration (SLSI) d) very Large Scale Integration (VLSI)
26. _____ is a component of the micro computer
a) CPU b) microcomputer c) micro controller d) **micro processor**
27. The _____ is a communication path between the microprocessor and peripherals.
a) CPU b) **system bus** c) memory d) input
28. The _____ is used to store programs that do not need alteration
a) **ROM** b) RAM c) memory d) register
29. The _____ memory is known as user memory
a) ROM b) **R/WM** c) register d) memory
30. _____ is used to store user programs and data
a) ROM b) **R/WM** c) register d) memory
31. The hexadecimal keyboard has _____ data keys
a) 8 b) 32 c) 4 d) **16**
32. A _____ is a group of eight bits
a) **byte** b) nibble c) bit d) word
33. The term _____ stands for a group of four bits
a) byte b) **nibble** c) bit d) word
34. A byte has _____ nibble
a) **2** b) 4 c) 6 d) 8
35. Machine independent languages are called
a) mnemonic b) instruction c) assembly language d) **high level language**
36. Machine-like words to represent the binary instruction of a machine is called
a) mnemonic b) instruction
c) **assembly language** d) high level language
37. An _____ is a binary pattern entered through an input in memory to command the microprocessor to perform a specific task.
a) **Instruction** b) mnemonic c) assembly language d) program
38. 8085 microprocessor has _____ bit patterns
a) **246** b) 256 c) 286 d) 276
39. 8085 microprocessor has _____ different instruction for performing various operation
a) 76 b) 72 c) **74** d) 78

40. The _____ is a program that translates mnemonics entered by the ASCII keyboard into the corresponding binary code
 a) **Assembler** b) interpreter c) compiler d) ASCII
41. Primary advantage of high level language is in _____
 a) compact b) requires less memory c) **debugging progress** d) efficient
42. The interaction between the hardware and software is managed by a set of programs called _____
 a) Software b) **operating system** c) op code d) memory
43. _____ are necessary to interconnect the components of a bus-oriented system
 a) Logic devices b) Tri-state devices c) Electronic devices d) **Interfacing devices**
44. _____ has a third line called enable
 a) Logic devices b) **Tri-state devices** c) Electronic devices d) Interfacing devices
45. When the enable is low, the inverter stays in the _____ state.
 a) Zero b) Low impedance c) **High impedance** d) none
46. The _____ is a logic circuit that amplifies the current or power.
 a) And b) OR c) NOR d) **Buffer**
47. Buffer is also known as _____
 a) **Driver** b) Inverter c) Counter d) Converter
48. _____ is known as line driver or line receiver
 a) **74LS244** b) 74LS48 c) 74LS90 d) 74LS24
49. The data bus of a microprocessing computer system is _____
 a) Mono directional b) **bidirectional** c) directional d) none
50. _____ is called as octal bus transceiver
 a) 74LS244 b) 74LS254 c) 74LS45 d) **74LS245**
51. _____ is a logic circuit that identifies each combination of the signals present at its input.
 a) **Decoder** b) multiplexer c) counter d) inverter
52. Decoders have active _____ output lines
 a) **Low** b) high c) value of d) number of
53. Decoders are also called as _____
 a) **Demultiplexer** b) Inverter c) Multiplexer d) operator
54. _____ is a logic circuit that provides the appropriate code as output for each input signal
 a) Decoder b) Buffer c) coder d) **Encoder**
55. _____ can resolve the problem of simultaneous inputs
 a) Decoder b) Buffer c) coder d) **priority encoder**
56. Encoders are commonly used in _____
 a) Mouse b) Monitor c) CPU d) **Key board**
57. _____ is called as 8 to 30 priority encoder
 a) 74LS18 b) 74LS145 c) **74LS148** d) 74LS147
58. D-flip flop is also called as _____
 a) Input latch b) output latch c) **transparent latch** d) none
59. A latch is commonly used to interface _____
 a) Input device b) **output device** c) both d) none
60. Latch can also be viewed as _____ in a memory chip.
 a) **Register** b) Counter c) Encoder d) decoder

61. The 8085 microprocessor can almost qualify as a _____
 a) CPU b) UPU c) NPU d) **MPU**
62. The _____ is an 8-bit general purpose microprocessor
 a) 8085C b) 8085 c) 8080 d) **8085A**
63. The 8085 has 16 signal lines that are used as _____
 a) Register b) coder c) counter d) **address bus**
64. The signal lines _____ are bidirectional
 a) AD₇ b) AD₀ c) **AD₇-AD₀** d) none
65. _____ is a positive going pulse generated every time the 8085 begins its operation
 a) Enable line b) Address line c) Enable d) **Address latch enable**
66. _____ is a read control signal
 a) Write b) learn c) latch d) **Read**
67. _____ is a write control signal
 a) **Write** b) learn c) latch d) Read
68. S₁ and S₀ are called as _____
 a) Logic signal b) Electronic signal c) **status signal** d) none
69. The 8085 has five interrupt signals that can be used to interrupt a _____
 a) Operation b) signal c) memory d) **program**
70. _____ is the signal that indicates when the MPU is reset
 a) Reset IN b) RESET c) **RESET OUT** d) none
71. The 8085 microprocessor requires one external operation fetching a machine code from
 a) Latch b) operator c) counter d) **memory location 2005H**
72. The entire operation – fetching, decoding, executing requires _____
 a) Two clock period b) clock periods
 c) many clock period d) **four clock period**
73. _____ is defined as the time required completing the execution of an instruction
 a) T-state b) Machine cycle c) clock period d) **Instruction cycle**
74. _____ is defined as the time required completing one operation of accessing memory
 a) T-state b) **Machine cycle** c) clock period d) Instruction cycle
75. _____ is defined as one sub division of the operation performed in one clock period
 a) **T-state** b) Machine cycle c) clock period d) Instruction cycle
76. _____ flag is used with signed numbers
 a) **Sign flag** b) zero flag c) parity flag d) carry flag
77. _____ is set if the ALU operation results in 0.
 a) Sign flag b) **zero flag** c) parity flag d) carry flag
78. _____ is a status signal used to differentiate between I/O and memory operations.
 a) Read b) RD c) ALE d) **IO/M**
79. _____ is commonly used to increase the driving capability of the data bus and the address bus
 a) Encoder b) multiplexer c) Decoder d) **Buffer**
80. _____ indicates the operation status on the status lines
 a) Processor b) computer c) Register d) **Micro processing unit (MPU)**

Section B

1. What is microprocessor architecture?
2. What are three operations in 8085 microprocessor?
3. What is MPU and its function?
4. Write a simple program for internal data operations?
5. What are input and output devices?
6. Write the two limitations of 8085 MPU?
7. What is multiplexed address bus?
8. What are the individual pins in peripheral operations?

Section C

1. Explain about the operating systems
2. Explain low level languages
3. Explain about input and output devices of microcomputer
4. Explain the various types of Flags used in 8085 μ p.
5. Explain the generation of control signals.
6. Explain the various types of instruction formats used in 8085.
7. Differentiate between memory mapped I/O and Peripherals Mapped I/O.
8. Explain about the input and output devices?
9. Write a program to perform the following functions and verify the output.
 - i) Load the numbers 8B H in register D and 6F H in register C.
 - ii) Increment the content of register C by one.
 - iii) Add the contents of registers C & D and display the sum at the output PORT1.
10. Write a program to perform the following functions.

Load the hexadecimal numbers 9B H and A7 H in registers D and E respectively and add the numbers and display the sum at the output PORT1.

Section D

1. Explain the 8085 microprocessor instruction set
2. Give a note on microprocessor with a block diagram and explain its components
3. Explain microprocessor architecture and its operations?
4. Draw the block diagram of Intel 8085 architecture and explain its pin configuration.
5. Explain microprocessor initiated operands and 8085 bus organization
6. Explain in brief the internal data operation of 8085 microprocessor
7. Explain the internal data operations and peripheral operations
8. Explain the logic devices used for interfacing.

Unit V- Programming the 8085

1. _____ is a set of instructions written in the mnemonics of a given microprocessor
 - a) **An assembly language program**
 - b) C++
 - c) FORTRAN
 - d) C
2. The 8085 instruction is classified into _____ different groups
 - a) 4
 - b) **5**
 - c) 6
 - d) 7
3. The hardware model of a microprocessor shows _____ components
 - a) **3**
 - b) 2
 - c) 1
 - d) 5
4. The hardware components of a microprocessor are
 - a) ALU and control
 - b) control

- c) ALU and register array
- d) **ALU, control and register array**
5. 8 bit register can be called an _____
a) Register b) memory c) processor d) **accumulator**
6. The hardware model of a computer has _____ major segments
a) **2** b) 3 c) 1 d) 4
7. The hardware segments are connected with various internal connections called an _____
a) Wire b) cable c) data d) **internal bus**
8. The arithmetic and logic operations are performed in the _____
a) **ALU** b) array c) register d) accumulator
9. Results are stored in the _____
a) ALU b) array c) register d) **accumulator**
10. The 8085 hardware model has _____ buses.
a) **3** b) 2 c) 5 d) 4
11. The 16-bit address bus is _____
a) **Unidirectional** b) bidirectional c) straight d) narrow
12. The 8-bit data bus is _____
a) Unidirectional b) **bidirectional** c) straight d) narrow
13. _____ bus is for timing signal
a) Address bus b) data bus c) **control bus** d) array bus
14. _____ bus is used to send out memory addresses
a) **16 bit address bus** b) 8 bit data bus
c) control bus d) array bus
15. _____ bus is used to transfer data
a) 16 bit address bus b) **8 bit data bus**
c) control bus d) array bus
16. The 8085 programming model has _____ registers
a) **6** b) 5 c) 4 d) 3
17. The registers in 8085 programming model can store _____ data
a) **8 bit** b) 4 bit c) 5 bit d) 9 bit
18. The registers are combined as register pairs to perform _____ bit operations
a) 11 b) 12 c) 13 d) **16**
19. The accumulator is also identified as _____
a) Register B b) register c c) register D d) **register A**
20. The ALU includes _____ flipflops
a) **5** b) 4 c) 3 d) 1
21. The most commonly used flags are
a) Carry, sign and parity b) sign, parity and Auxiliary carry
c) **zero, carry and sign** d) Zero, sign, Auxiliary carry
22. The microprocessor uses the _____ to test data conditions
a) **Flags** b) register c) array d) data
23. Flag is set to 1 when the result is zero
a) Carry b) **zero** c) sign d) parity
24. _____ flag is set when an arithmetic operation results in a carry
a) **Carry** b) zero c) sign d) parity
25. _____ flag is set if bit D₇ of the result = 1
a) Carry b) zero c) **sign** d) parity
26. _____ flag is set when the result has an even number of 1s.
a) Carry b) zero c) sign d) **parity**
27. _____ flag is set when carry is generated by digit D₃ and passed to digit D₄

- a) CY b) **AC** c) S d) Z
28. _____ flag is used internally for BCD operations
a) Carry b) sign c) parity d) **auxillary card**
29. Which flag is not associated with jump instruction?
a) CY b) Z c) P d) **AC**
30. The microprocessor uses the _____ register to sequence the execution of the instruction
a) **Program counter** b) B c) D d) Stack pointer
31. When a byte is being fetched, the program counter is incremented by ----to point to the next memory location
a) 2 b) **1** c) 3 d) 4
32. The stack pointer points to a memory location in R/W memory called the _____
a) Halt b) drive c) **stack** d) pointer
33. An _____ is a binary pattern designed inside a microprocessor to perform a specific function
a) **Instruction** b) data c) stack d) pointer
34. No contents of two other registers can be _____ directly
a) **Added or subtracted** b) incremented c) divided d) multiplied
35. Each bit in the accumulator can be shifted either left or right to the next position by using _____ logical operation
a) **Rotate** b) move c) compare d) complement
36. _____ are an important aspect of the decision making process in programming
a) Rotate b) move c) **conditional jumps** d) compare
37. _____ instruction is a machine control function
a) Rotate b) move c) jump d) **halt**
38. 'Do nothing' is a _____ operation
a) Arithmetic b) **control** c) Branching d) logical
39. In _____ operation the contents of the source are not destroyed only the contents of the destination are changed
a) **Data transfer** b) control c) logical d) Arithmetic
40. The _____ instructions do not affect the flags
a) **Data transfer** b) control c) logical d) branching
41. _____ and _____ are the two parts of instruction
a) Data transfer and control b) opcode and control
c) **opcode and operand** d) opcode and control
42. The method of specifying an operand (directly, indirectly etc) is called the _____
a) Operating mode b) **addressing mode** c) control mode d) transfer mode
43. The instruction set is classified into _____ groups according to the word size
a) 1 b) 2 c) 4 d) **3**
44. A _____ includes the opcode and the operand in the same byte
a) **1 byte instruction** b) 2 byte instruction
c) 3 byte instruction d) 4 byte instruction
45. In a 2 byte instruction the first byte specifies the _____
a) **Opcode** b) operand c) data d) constant
46. In a 2 byte instruction the second byte specifies the _____
a) **Operand** b) opcode c) data d) constant
47. In a 3 byte instruction the first byte specifies the _____
a) Operand b) **opcode** c) data d) address

48. The second and third byte of a 3 byte instruction specifies
 - a) Operand
 - b) opcode
 - c) **address**
 - d) data
49. In a 3 byte instruction the _____ byte is the lower order address
 - a) **Second**
 - b) first
 - c) third
 - d) none
50. In a 3 byte instruction the third byte is the _____ order address
 - a) **Higher**
 - b) lower
 - c) medium
 - d) none
51. The 7 bit alphanumeric code is called _____
 - a) BCD code
 - b) **ASCII code**
 - c) signed integer
 - d) unsigned integer
52. _____ code is used for decimal numbers
 - a) **BCD code**
 - b) ASCII code
 - c) signed integer
 - d) unsigned integer
53. In signed interger, the largest positive integer that can be processed by the 8085 at one time is _____
 - a) **7FH**
 - b) 6FH
 - c) 8FH
 - d) 3FH
54. The largest number in unsigned integer is
 - a) AAH
 - B) ABH
 - c) **FFH**
 - d) AFH
55. An assembly language program, block 4 is called
 - a) Copy operations
 - b) Arithmetic operation
 - c) **Machine control operation**
 - d) memory operation
56. In translation of block into mnemonics, the block 3 is used to
 - a) **Display accumulators contents at port OIH**
 - b) Load register
 - c) Load register B
 - d) Add 2 bytes and save in sum A
57. To convert mnemonics into hexcode, the code in 8085/8080A instruction set is called
 - a) Memory storage
 - b) **hard assembly**
 - c) operations
 - d) machine code
58. In order to store the program in R/W memory of single board micro computer we need to know _____ and
 - a) Mnemonics and hex code
 - b) **memory address and output port**
 - c) machine code and hex code
 - d) data and operations
59. In R/W memory, to enter the program we have to reset the system by pushing
 - a) Hex key
 - b) store key
 - c) **reset key**
 - d) memory
60. _____ are commands to the microprocessor to copy 8 bit data from a source into a destination
 - a) **Addressing mode**
 - b) buffer
 - c) Data bus
 - d) Address bus
61. The sources and destination are _____
 - a) opcode
 - b) **operand**
 - c) Instructions
 - d) Data
62. The various formats of specifying, the operand are called _____
 - a) Instructions
 - b) **Addressing mode**
 - c) Memory
 - d) Data
63. MV1 opcode the letter I suggest that the second byte is _____
 - a) Register
 - b) memory
 - c) Accumulator
 - d) **Data**
64. In arithmetic operations such as addition and subtraction the contents of registers are operated with the contents of _____ and stored in _____
 - a) **accumulators and accumulator**
 - b) accumulator and register
 - c) Register and accumulator
 - d) accumulator and memory location
65. The instruction _____ add 16 bit data directly in register pairs
 - a) **DAD**
 - b) MV1
 - c) MOV
 - d) ADD
66. Increment and decrement can be performed in _____ itself
 - a) flipflop
 - b) flags
 - c) Data
 - d) **registers**
67. Arithmetic instructions assume implicitly that the _____ is one of the operands
 - a) Data
 - b) Register
 - c) **accumulator**
 - d) flags
68. The instructions INR and DCR affects _____ flags
 - a) zero
 - b) **CY**
 - c) sign
 - d) reset

69. In addition if the sum is larger than 8 bite the sets _____ flag
 a) **carry** b) zero c) sign d) reset
70. _____ are flip flops that set or reset after the execution of arithmetic and logic operations
 a) **flag** b) register c) accumulator d) Address line
71. After an operation, one or more flags may be used to change direction of the program sequence by using _____-instruction
 a) call b) return c) Halt d) **Jump**
72. The position of the sign flag in the flag register is _____
 a) D₀ b) **D₇** c) D₆ d) D₂

Section B

1. What are the elements of 8085 programing model?
2. What is an accumulator?
3. What is an instruction set in 8085?
4. What are the four operations in 8085 instruction set?
5. Mention any three types of Data operations?
6. Write a simple program for one byte instruction?
7. Write the instruction for data transfer operation?
8. What is Machine code?
9. Write any four instructions in arithmetic operations?
10. What are the three categories of Branch Operation?

Section C

1. Write about 8085 Hardware model?
2. Explain different types of addressing modes.
3. List out the opcodes of logic operation with their description
4. Write down the instructions of the logic operations
5. Explain logic AND, OR, Exclusive OR and NOT gate operations.
6. Explain the mnemonics used for arithmetic operations.
7. Explain arithmetic instructions with their description.
8. Explain Branch operations.
9. Explain Stack pointer
10. Explain Restart instruction
11. Explain conditional call & instructions.

Section D

1. Explain the programming model of 8085
2. Write a note on instruction, Data Format, and storage of 8085
3. Write the step on how to write, assemble and execute simple program
4. Explain data transfer operations
5. Explain various types of addressing modes.
6. Explain the various arithmetic instructions with examples.
7. Write a note on data transfer operations with example
8. Write a note on arithmetic operations with example
9. Write a note on logical operations.

ST. MARY'S COLLEGE (AUTONOMOUS), THOOTHUKUDI
QUESTION BANK
III B.Sc. PHYSICS
CORE ELECTIVE – RENEWABLE ENERGY SOURCES-21UPHE51
(For those who joined in July 2021 and after)

SECTION – A

UNIT I: Solar Energy

1. The electromagnetic waves radiated by the sun have wavelengths in the range
(a) **0.2 – 0.4 micrometers** (b) 0.4 – 0.6 micrometers
(c) 0.2 – 0.6 micrometers (d) 0.6 – 0.8 micrometers
2. The solar energy reaches the earth by the process called
(a) Conduction (b) convection
(c) **radiation** (d) conduction and radiation
3. The ozone layer absorbs
(b) infrared waves (b) **UV rays**
(c) radio waves (d) microwaves
4. The instrument that measures only direct radiation is
(c) **pyrheliometer** (b) pyranometer
(c) pyrometer (d) pyrgeometer
5. The sun radiates solar energy in the form of
(d) **electromagnetic waves** (b) radioactive waves
(c) magnetic waves (d) thermal waves
6. The value of the solar constant is
(a) **1353 W/m²** (b) 2000 W/m²
(c) 1030 W/m² (d) 5300 W/m²
7. The black surface of the pyranometer
(a) reflects radiation (b) **absorbs radiation**
(c) transmits radiation (d) all the above
8. The solar radiation received from the entire hemisphere can be measured by a
(a) **pyranometer** (b) pyrgeometer
(c) pyrheliometer (d) pyrometer
9. The sun shine recorder uses a long-curved card for measuring sunshine during
(a) **summer** (b) winter (c) spring (d) autumn
10. The sun shine recorder uses a short-curved card for measuring sunshine during
(a) **winter** (b) summer (c) equinox (d) spring
11. The term solarimeter is used instead of
(a) **pyranometer** (b) pyrometer
(c) pyrheliometer (d) pyradiometer
12. Pyranometers operate on
(a) **Thermopile effect** (b) Joule effect
(c) Thomson effect (d) Peltier effect
13. The diameter of the sun is
(a) **1.39 x 10⁶ km** (b) 1.36 x 10⁹ km
(c) 1.93 x 10⁶ km (d) 1.96 x 10³ km

14. The diameter of the earth is
 (a) 1.24×10^7 km (b) **1.27×10^4 km**
 (c) 1.42×10^7 km (d) 1.47×10^2 km
15. Solar radiation reaching the top of the atmosphere consists of ----- percent of UV radiation.
 (a) 55 (b) 99 (c) **8** (d) 60
16. The mean distance between the earth and sun is _____
 (a) 2×10^8 km (b) 0.50×10^8 km (c) 1.60×10^8 km (d) **1.50×10^8 km**
17. The sun subtends an angle of only _____ minutes at the earth's surface.
 (a) **32** (b) 42 (c) 22 (d) 52
18. Position of the sun directly overhead is called _____
 (a) air mass (b) diffuse radiation (c) **Sun at Zenith** (d) attenuation
19. The rate at which solar energy arrives at the top of the atmosphere is called the
 (a) solar radiation (b) scattering (c) **solar constant** (d) diffuse radiation
20. The total solar radiation received at any point on the earth's surface is referred to as ___ at that point.
 (a) **Isolation** (b) total radiation (c) diffuse radiation (d) beam radiation
21. The highest temperature recorded in a solar pond is
 (a) 300°C (b) 204°C (c) **108°C** (d) 208°C
22. Depending on location, water clarity and temperature the solar pond can capture _____ % of the solar energy
 (a) 50 (b) 100 (c) **10-20** (d) 50-100
23. In ----- zone of solar pond salinity increases with depth.
 (a) surface convective zone (b) **non-convective zone**
 (c) storage zone (d) lower zone
24. Each sq. m. of pond surface area can supply one half of two giga joules of thermal energy per year at temperature from
 (a) **$40 - 80^\circ\text{C}$** (b) $20 - 60^\circ$ (c) $100 - 150^\circ$ (d) $10 - 150^\circ$

UNIT II: Wind Energy

1. The wind speed is measured using an instrument called
 (a) Pyranometer (b) pyr heliometer (c) **anemometer** (d) wind vane
2. The horizontal axis and vertical axis are the types of
 (a) nuclear reactor (b) solar cell (c) **wind mill** (d) biogas reactor
3. The wind speed increases with
 (a) **height** (b) latitude (c) direction (d) topography
4. If the wind velocity is doubled, the power increases by a factor of
 (a) 7 (b) **8** (c) 4 (d) 9
5. The wind turbines will stop in a few seconds by _____ the blades directly into the wind.
 (a) flickering (b) gauging (c) racing (d) **feathering**
6. Revolving blades generate _____ that can be heard in the immediate vicinity of the installation.
 (a) **noise** (b) sound (c) signal (d) echo
7. The minimum wind speed required to generate power from the wind mill is
 (a) **3.5 m/s** (b) 35 m/s (c) 350 m/s (d) 0.35 m/s
8. The fraction of the free flow wind power that can be extracted by a rotor is called the
 (a) wind speed (b) power generator (c) **power coefficient**
 (d) power of the wind
9. Aeroturbines convert energy in moving air to _____ energy.
 (a) wind (b) solar (c) mechanical (d) **rotary mechanical**

10. If there are long periods of calm the WECS reliability will be
(a) higher (b) zero (c) **lower** (d) none of the above
11. Wind energy conversion devices are commonly known as
(a) rotor (b) wind stream (c) vines (d) **wind turbines**
12. The combination of wind turbines and generators is often referred to as
(a) **auto generator** (b) wind stream (c) rotors (d) tails

UNIT III: Energy Conservation

1. The exhaust steam from the back pressure turbine is used for
(a) **crop drying** (b) fish farming (c) space heating (d) evaporating water
2. The glass industry represents the highest heat rejection grading with the temperature of
(a) 300°C (b) 400°C (c) **500°C** (d) 700°C
3. Pottery kilns provide waste heat at
(a) **350°C** (b) 450°C (c) 750°C (d) 850°C
4. The primary objective of energy audit is to determine ways to reduce energy
(a) **Consumption** (b) conservation (c) combustion (d) equipments
5. In the topping cycle process, steam pressure requirements vary widely between
(a) 0.2 and 20 bar (b) 0.3 and 40 bar (c) 0.4 and 30 bar (d) **0.5 and 40bar**
6. In the drying process, the drums normally rotate at
(a) 400°C (b) 300°C (c) **200°C** (d) 100°C
7. The co-generation plant efficiency $\eta_{co} =$
(a) **$E + \Delta H_s / Q_A$** (b) $E - \Delta H_s / Q_A$ (c) $E \cdot \Delta H_s / Q_A$ (d) $E / \Delta H_s / Q_A$
8. Energy conservation is the energy demand management that aims at increasing the
(a) Grading (b) loss (c) **efficiency** (d) input
9. The major production process in energy conservation through large scale capital expenditure for obtaining savings from
(a) (30-90%) (b) (20-50 %) (c) **(20-90%)** (d) (30- 50%)
10. Equipment which can abstract sensible heat from one stream of flowing fluid and supply it to another is called
(a) Heat regenerators (b) heat pipe (c) stirling engine (d) **heat recuperators**
11. The primary requirement to control any physical condition is to know its
(a) Usage (b) **value** (c) efficiency (d) principle
12. The most highly developed topping cycle is the
(a) Diesel engine (b) dual fuel engine (c) **gas turbine** (d) gas engine
13. The temperature at which heat is taken up in a steam turbine is limited to about
(a) 550°C (b) 545°C (c) 520°C (d) **540°C**
14. Substitution of energy with capital, labour, material and time is called
(a) **Energy conservation** (b) energy production (c) energy usage
(d) energy consumption
15. The energy measurement and energy monitoring are the basic necessary steps for
(a) Energy loss (b) **energy audit** (c) energy input (d) energy conservation

UNIT IV: Biomass Energy

1. Biomass can be fermented anaerobically to obtain gaseous fuel called
(a) bio fuel (b) **biogas** (c) residue (d) alcohol
2. Domestic refuse can be dried and burnt to provide heat or converted into low calorific value gas by
(a) **Pyrolysis** (b) autolysis (c) putrefaction (d) combustion
3. The technology used in the conversion of grains and sugar crops into ethanol
(a) Combustion (b) putrefaction (c) **fermentation** (d) conversion

4. Biogas consists of

- (a) methane only (b) carbon dioxide only (c) methane & carbon monoxide
(d) **methane, carbon-dioxide and some impurities**

5. The producer gas in a biomass plant is

- (a) a mixture of petroleum and oxygen (b) a mixture of water vapour and air
(c) a mixture of hydrogen and oxygen (d) **a mixture of CO, CO₂, H₂ and N₂**

6. For a biomass gasifier, the conversion efficiency is

- (a) **75%** (b) 10% (c) 2.5% (d) 0.25%

7. The least developed process of the wet biomass conversion is

- (a) Fermentation (b) anaerobic digestion
(c) distillation (d) **chemical reduction**

8. Photosynthesis is

- (a) an oxidation reaction (b) a reduction reaction
(c) **a reduction and oxidation reaction** (d) none of these

9. The fats, starches and proteins contained in cellulosic biomass are broken down into simple compounds in

- (a) Acid formation (b) **enzymatic hydrolysis**
(c) methane formation (d) fermentation

UNIT V: Geothermal Energy

1. The ocean temperature is around 5°C at a depth of

- (a) **200m** (b) 500m (c) 1000m (d) 2000m

2. The principle of OTEC is

- (a) forced convection (b) **heat engine**
(c) Joule-Kelvin effect (d) evaporation at low pressure

3. Magma is present at depths greater than -----

- (a) 50-60 km (b) **24-40 km** (c) 80 km (d) 50 km

4. The hot magma near the surface solidifies into-----

- (a) **igneous rock** (b) molten rock (c) geysers fumarols

5. The gaseous fuel obtained from the fermentation of biomass is -----

- (a) **biogas** (b) CO₂ (c) methane (d) biofuel

6. Each kg of organic material is expected to yield L of biogas. (a) 1000

- (a) **450-500** (b) **550** (c) 300 (d) 900

SECTION B

UNIT I: Solar Energy

1. Define Solar constant.
2. Give the composition of solar radiation reaching the earth at sea level.
3. What are the three units of solar constant?
4. What are beam radiation and diffuse radiation?
5. What is a pyranometer?
6. What is a pyrliometer?
7. What is a sunshine recorder?
8. What is a solarimeter?
9. What is isolation?

10. What is solar radiation?
11. What are the major drawbacks to the extensive application of solar energy?
12. Mention few components of the atmosphere and the radiations absorb.
13. What is greenhouse effect?
14. List the three designs of solar cooker.
15. Write any three advantages of green houses.
16. Write the types of green houses.
17. Define solar pond.

UNIT II: Wind Energy

1. Define wind power.
2. Write the expression for wind power.
3. What are the three factors that determine the output of wind energy convertor?
4. Write the advantages of WECS.
5. Write the disadvantages of WECS.
6. What are the two types of noise produced by wind farms?
7. What is a rotor?
8. What are the characteristics of a good wind power site?
9. What is the purpose of a controller?
10. What are the sub-coordinates of windmill?
11. List the components involved in control system?
12. Name the types of towers?
13. Write any 2 advantages & disadvantages of WECS?
14. Write any four application of wind energy?
15. List out the safety systems of wind turbines?
16. List out the environmental aspects of wind turbines?

UNIT III: Energy Conservation

1. Define maximum thermodynamic efficiency.
2. Define energy audit.
3. What is energy conservation?
4. What are the types of energy audit?
5. Write any five energy saving devices eligible for higher depreciation.
6. Write any five renewable energy devices eligible for higher depreciation.
7. What is co-generation plant efficiency?
8. What are heat recuperators?
9. What are the general techniques of measurement?
10. Write any 2 main uses of heat recuperators?
11. What are the types of co-generation?

UNIT IV: Biomass Energy

1. What is bio-fuels?
2. What are the three categories involved in bio-mass fuels?
3. Define anaerobic digestion.
4. What is pyrolysis?

UNIT V: Geothermal Energy

1. Write a short note on magma.
2. What is geothermal energy?
3. Define biomass.
4. What is chemical reduction?
5. Define liquefaction.
6. What is enzymatic hydrolysis in aerobic digestion.
7. Mention few advantages of aerobic respiration.
8. What are the factors affecting bio digestion?
9. Mention three geothermal sources.
10. Write the merits and demerits of OTEC.

SECTION – C

UNIT I: Solar Energy

1. Define solar constant. What is its standard value?
2. Describe sunshine recorder.
3. With a neat diagram, explain the working of pyranometers.
4. Write notes on beam and diffuse radiation at the earth's surface.
5. Write a note on solar radiation data.
6. With a neat diagram, explain the working of pyrliometers.
7. Write a note on absorption and scattering. Also draw the solar spectrum outside the atmosphere.
8. Write a note on solar greenhouses.
9. Draw the neat sketch of solar water still and explain how pure water can be obtained by distillation.
10. Explain the three zones in the solar pond.
11. Write the applications of solar pond.

UNIT II: Wind Energy

1. How are WEC systems classified?
2. Explain the features of safety systems.
3. Explain how the wind turbine affects the environment.
4. What is the basic principle of wind energy conversion?
5. Derive the expression for power developed due to wind.
6. Describe the main applications of wind energy.
7. Explain the classification of WECS Systems?
8. What are the Advantages & Disadvantages of WECS?
9. Describe the applications of wind energy?
10. List & explain the safety systems of wind turbines?
11. Describe the environmental aspects of wind turbines?

UNIT III: Energy Conservation

1. List out the main uses of heat recuperators.
2. Explain briefly about the types of energy audit.
3. Define co-generation and its types.
4. Explain briefly about heat regenerators.
5. List the renewable energy devices eligible for higher depreciation.
6. Give the principles of energy conservation.

UNIT IV: Biomass Energy

1. Explain the generation of bio-gas using anaerobic fermentation.
2. Write the advantages of anaerobic digestion?
3. Explain the photosynthesis process involved in bio-mass energy concept.
4. What are biogas plants? Describe briefly the various types of biogas plants.
5. Write about the classification of biomass energy.

UNIT V: Geothermal Energy

1. Discuss the nature, applications, merits and demerits of geothermal energy.
2. Explain ocean thermal energy conversion (OTEC).
3. What is tidal energy? Describe how energy is harnessed from tides.
4. Write the merits and demerits of tidal energy.
5. Describe, giving suitable diagram, an ocean thermal energy (OTEC) power plant.

SECTION – D

UNIT I: Solar Energy

1. Describe about solar radiation at the earth's surface.
6. Explain in detail about solar radiation measurements.
7. Describe in detail about the box type solar cooker and discuss the merits and demerits.
8. Discuss in detail about the collection of solar energy and sensible heat using solar pond.
5. Explain in detail about the construction and working of solar pond.
6. Write in detail about the solar energy storage systems.

UNIT II: Wind Energy

1. Describe the main considerations in selecting a site to install wind mills.
2. Discuss in detail about the basic Components of a WECS (Wind Energy Conversion System).
3. Discuss the safety systems and environmental aspects of WECs.
4. Write about the classification, advantages and disadvantages of WECs.

UNIT III: Energy Conservation

1. Describe in detail about the co-generation systems with neat sketch.
2. Define heat recuperators and list out the main uses of heat recuperators.
3. Discuss about cogeneration and waste heat utilization.
4. Write about instrumentation and control in energy conservation.

UNIT IV: Biomass Energy

1. Explain in detail about the working of biomass conversion technologies.
2. Explain the types of biogas plants.
3. Enumerate with neat Sketch, the floating dome biogas plant and its functioning.
4. Enumerate with neat Sketch, Deena Bhandu model of biogas plant and its functioning.
5. Explain the principle and process of wood gasification.
6. What are the advantages and disadvantages of biomass as energy source?

UNIT V: Geothermal Energy

1. What is geothermal energy? Describe, with neat sketch, a geothermal power plant. Explain its functioning. Why is geothermal energy considered as renewable energy?
2. What is ocean wave energy? Describe, giving neat sketch, oscillating water column wave energy conversion system to harness ocean wave energy.

1. Define Hemodynamic and discuss plasma skimming.
2. Discuss Newton's in terms of biodynamics.
3. Write about the strength of bones.
4. Discuss about work of breathing
5. Express continuity equation.
6. Discuss Newton's laws that universally characterize motion of a living system
7. Explain how Doppler shift can be used to determine the velocity of blood flow.
8. Explain diffusion of gases using Fick's law.
9. Discuss in detail about the non linearity of ear response.
10. Write about spherical aberration and chromatic aberration .
11. Discuss about the transportation of CO₂ in blood.
12. Write about Dalton's law of partial pressure.
13. Show that the muscle shortens in such a way that extended momentum of the muscle load system remains conserved.
14. Derive pressure flow relation from Poiseuille's formula.
15. Outline the basic terminology and features of the physiology of respiration in humans.
16. Discuss and in detail the physiological characteristics of sound.
17. Discuss about the wave nature of light.
18. Write in detail about polarisation and vision.
19. Discuss about the retina and the mechanism of photo reception.

SECTION - A

Unit I: Relativity

1. Three fundamental concepts of physics space, mass and time are all absolute and -----
a. Invariant b. variant c. same d. non variant
2. Unaccelerated reference frames are----- frames
a. Galilean frames b. **non-inertial frames** c. Newtonian frames d. Ether
3. Accelerated frames are called ----- frames
a. Inertial b. non inertial c. Ether d. Newtonian
4. According to ----- relativity the fundamental laws and principles are identical in all frames of reference
a. Newtonian b. Galilean c. Rutherford d. Ether
5. The acceleration is ----- under Galilean transformation
a. Variant **b. invariant** c. non variant d. same
6. The transformation of x in s to x' in s' is -----
a. $x' = x - ut$ b. $x' = x + ut$ c. $x' = 2x + ut$ d. $x' = x - 2ut$
7. Light propagates through ----- as the sound waves propagates through air
a. Ether b. gas c. glass d. vapour
8. In Michelson-Morley experimental the half silvered glass plate placed at an angle of ----- to a beam
a. 45° b. 90° c. 135° d. 25°
9. The principle of constancy of the speed of light is given by-----
from Michelson-Morely experiment
a. Einstein b. Newton c. Galileo d. Johnson
10. ----- propounded the theory of relativity in 1905.
a. Newton b. Galileo **c. Einstein** d. Michelson
11. Based on the new concept of invariance of light velocity in free space ----- transformation equation are introduced.
a. Lorentz **b. Galilean** c. Newton d. Einstein
12. The shortening or contraction in the length of an object along its direction of motion is known as ----- contraction
a. Lorentz – Fitzgerald b. Galilean –f c. Einstein – f d. Lorentz

13. In length contraction, a body which appears square to an observer at rest relative to it, will appear ----- to a moving observer.
a. Rectangle b. enboid c. cone d. spherical
14. The length contraction is -----
a. Reciprocal **b. directly $\propto l$** c. negative d. inversely $\propto l$
15. Addition of any velocity to velocity of light c , reproduces of -----
a. c **b. $c+v$** c. $c-v$ d. $c+2v$
16. The relativistic mass formula for variation is -----
a. $m = m_0 / \sqrt{1-v^2/c^2}$ b. $E = mc^2$ c. $m = m_0 (1-v^2/c^2)$ d. $m = m_0 (1-v^2/c^2)^{1/2}$
17. Force is defined as rate of change of -----
a. velocity b. acceleration **c. momentum** d. energy
18. The Einstein's mass energy equation is -----
a. $E = mc^2$ b. $E = hv$ c. $E = m_0 / \sqrt{1-v^2/c^2}$ d. $E = 1/2mv^2$
19. The rest energy of an electron is ----- joules
a. $8.2 \times 10^{-14} \text{ J}$ b. $8.2 \times 10^{-10} \text{ J}$ c. $8 \times 10^{-14} \text{ J}$ d. $8.2 \times 10^{-19} \text{ J}$
20. The relation connecting total energy, rest energy and momentum is -----
a. $E = m_0^2 c^4 + p^2 c^2$ b. $E = m_0^2 (c^4 + p^2 c^2)$ c. $E = c^4 (m_0^2 + p^2)$ d. $E = m_0^2 p^2 c^2$
21. The four dimensional manifold which appears as a linking together of space and time is known as ----- world.
a. Minkowski world b. Galilean c. Rutherford d. Newton
22. The value of one unit of energy is -----
a. 931 MeV b. 900 MeV c. 941 MeV d. 391 MeV

Unit II: Atomic Structure and Spectra

1. The ground state energy of an atom is
a) -13.6 eV b) 13.6eV c) 13.6 MeV d) -13.6MeV
2. Brackett and Pfund series lie in the very ----- of the hydrogen spectrum
a) **far infrared region** b) visible region c) ultraviolet region d) near infrared region
3. Linear momentum of the electron
a) **mv** b) mc c) $2mv$ d) mc^2
4. The de-broglie wavelength of the electron is
a) **h/mv** b) mhv c) v/m d) mc
5. The atom model based on quantized vectors is
a) Bohr atom model b) Rutherford's atom model
c) **vector atom model** d) Thomson atom model

6. The principal quantum number can take only
 - a) **integral values**
 - b) half integral values
 - c) $\frac{1}{2}$
 - d) 0
7. The possible values of magnetic momentum quantum number are
 - a) $\frac{1}{2}(l+1)$
 - b) **$(2l + 1)$**
 - c) $(l + 1)$
 - d) $(l + \frac{1}{2})$
8. According to pauli's exclusion principle, no two electrons can have the same ----- quantum numbers
 - a) **four**
 - b) two
 - c) six
 - d) three
9. The maximum number of electrons in a shell is
 - a) **$2n^2$**
 - b) n^2
 - c) $2n$
 - d) $n/2$
10. In a periodic table the horizontal rows are called as
 - a) rows
 - b) groups
 - c) elements
 - d) **periods**
11. The splitting of spectral lines into two or three lines is called
 - a) **normal Zeeman effect**
 - b) anomalous Zeeman effect
 - c) lande's factor
 - d) gyromagnetic ratio.

Unit III: X- Rays

1. X- rays are determined as electromagnetic rays by
 - a) Laue
 - b) Bragg
 - c) Newton
 - d) **Coolidge**
2. The continuous spectrum of x-rays is due to
 - a) **Bremsstrahlung effect**
 - b) Laue effect
 - c) Compton effect
 - d) Thomson effect
3. The wavelength of x-rays are
 - a) **$10 - 0.5 \text{ \AA}$**
 - b) $100 - 10 \text{ \AA}$
 - c) $1 - 1000 \text{ \AA}$
 - d) 500 nm
4. The longer wavelength of x-rays are called as
 - a) Hard x-rays
 - b) **soft x-rays**
 - c) line spectrum
 - d) continuous spectrum
5. The smoothly varying curves represent -----spectrum
 - a) line
 - b) continuous
 - c) **characteristic**
 - d) peaks
6. The superimposed lines in the continuous background constitute ----- spectrum
 - a) line
 - b) continuous
 - c) **characteristic**
 - d) peaks
7. The sharp peaks represent ----- spectrum
 - a) line
 - b) continuous
 - c) characteristic
 - d) peaks
8. The Compton wavelength is
 - a) **h/mc**
 - b) hc/m
 - c) m/hc
 - d) h/mcv
9. Crystals having regular and periodic arrangement of atoms are called as ----- solids
 - a) **crystalline**
 - b) amorphous
 - c) anisotropic
 - d) lattice

Unit IV: Wave Properties of Matter

- Interference diffraction of light are produced as a result of interaction of ----- with light .
a.light **b.wave** c.particle d. matter
- Blackbody radiation, Compton Effect are produced by interaction of ----- with matter
a.radiation b.wave c.particle d.light
- The particle of energy radiated in blackbody radiation is -----
a.**quanta or photons** b. \bar{e} c.protons d.neutrons
- Radiation exhibits -----character
a.dual b.single c.solitarily d.multiple
- The relation connecting total relativistic energy and relativistic Momentum p of the particle of mass m_0 is-----
a. $E^2=p^2c^2+m_0^2c^4$ b. $E^2=p^2c^2$ c. $E=p^2c^2+m_0c^2$ d. $E=pc+m_0^2c^4$
- Relation connecting λ & p is-----
a. $\lambda=h/p$ b. $\lambda=hp$ c. $\lambda=p$ d. $\lambda=kp$
- The De Broglie's wavelength is-----
a. $\lambda=h/mv$ b. $\lambda=h/v$ c. $\lambda=hmv$ d. $\lambda=v/mh$
- Relation between p & k is-----
a. $p=\hbar k$ b. $p=\hbar\lambda$ c. $p=h\lambda$ d. $p=c\lambda$
- The relation between ω & v is-----
a. $\omega=2\pi v$ b. $\omega=v$ c. $\omega=2\pi/v$ d. $v=2\pi/\omega$
- The wave velocity is also called as -----velocity
a. phase b.linear c.angular d.negative
- The relation between propagation constants and phase velocity-----
a. $k=\omega/p$ b. $k=\omega v_p$ c. $k=v_p$ d. $k=v_p/\omega$
- Relation connecting v_p & v_g is -----
a. $V_g=v_p+kdv_p/dk$ b. $v_g=v_p$ **c. $v_g=v_p-k dv_p/dk$** d. $v_g+v_p=k dv_p/dk$
- Relation between E & ω is -----
a. $E=\hbar\omega$ b. $E=h\omega$ c. $E=h/10$ d. $E=\hbar\hbar\omega$
- In a medium in which there is no dispersion group velocity
a. $V_g=v_p$ b. $V_g \neq v_p$ c. $V_g = -v_p$ d. $V_g < v_p$
- For a non-relativistic particle the phase velocity is -----the particle velocity

- a.half b.twice c.equal to d.greater then
16. For a non-relativistic particle the group velocity v_g -----
a. $V_g=v$ b. $v_g=-v$ c. $V_g=1/v$ d. $V_g=-1/v$
17. The scattering angle that confirms the diffraction of \bar{e} is-----
a. $\theta=50^\circ$ b. $\theta=30^\circ$ c. $\theta=60^\circ$ d. $\theta=90^\circ$
18. The maximum P.D which produces maximum emergent diffraction of \bar{e} is-----
a. 54V b. 7.7eV c. 13.6eV d. 50eV
19. The Bragg's law is-----
a. $2d \sin\theta=n\lambda$ b. $2d \sin\theta=\lambda$ c. $2\sin\theta=\lambda d$ d. $\sin\theta=2\lambda d$
20. The Bhor's quantization condition -----
a. $L=n\hbar/2\pi$ b. $L=h/2$ c. $L=h/\pi$ d. $L=\hbar\lambda$
21. The uncertainty relation for energy & time is-----
a. $\Delta E=\Delta t\geq\hbar$ b. $\Delta E, \Delta t=\hbar$ c. $\Delta E, \Delta t>\hbar$ d. $\Delta E, \Delta t\leq\hbar$
22. ----- for position & momentum is
a. $\Delta x \cdot \Delta p > \hbar$ b. $\Delta E=\Delta t=\hbar$ c. $\Delta E, \Delta t>\hbar$ d. $\Delta E, \Delta t\leq\hbar$
23. The amplitude of the wave packet representing the particle's motion is called ----- of the particle
a. group velocity b. phase velocity c. linear velocity d. angular velocity
24. The general form of the function Ψ is
a. $A+iB$ b. $A-iB$ c. $A+B$ d. $A-B$
25. The wave function is -----function
a. continuous & single valued b. descriptive & single valued
c. continuous & multi valued d. descriptive & multi valued
26. The normalization condition is-----
a. $\int \Psi^* \Psi dx=1$ b. $\Psi^* \Psi dx$ c. $\int \Psi^* \Psi dx \neq 1$ d. $\Psi^* \Psi dx \neq 1$
27. The function Ψ and its derivatives are continuous finite and single valued the wave function is ----
a. well behaved wave function b. wave function
c. wave velocity d. wave packet
28. E is related h frequency ν as
a. $E=h\nu$ b. $E=p\nu$ c. $E=\hbar\nu$ d. $E=v$
29. Relation between λ and p is
a. $p=h/\lambda$ b. $p=h\lambda$ c. $p=\hbar\lambda$ d. $p=L\lambda$
30. The operator for variable momentum is

- a. λ b. $-\frac{i}{\hbar} \frac{\partial}{\partial t}$ c. $-\hbar(\frac{\partial}{\partial x})$ d. $i\hbar \frac{\partial}{\partial t}$
31. What is the eigen value of $y=e^{3x}$,
 a. **9** b. 3 c. 1 d. 0
32. The momentum eigen value is
 a. **$\hbar k$** b. $\hbar \lambda$ c. $k \lambda$ d. $L \lambda$

Unit V: Development of Quantum Mechanics

- To explain the distribution of energy in the spectrum of black body, Planck propose

 a.**quantum** b. photon c. electron d. neutron
- A body having a surface which can absorb all the radiation incident on it is called -----
 a.**Perfect black body** b. Imperfect black body
 c. Radiated black body d. Irradiated black body
- For a perfect black body the absorptivity is-----
 a. **1** b. 2 c. -1 d. -2
- For a perfect black body the emissivity is -----
 a. **1** b. 2 c. -1 d. -2
- Lamp black can absorb about ----- % of radiation incident on it.
 a. **96** b. 100 c. 98 d. 60
- Platinum black can absorb about -----% of radiation incident on it.
 a. 96 b. 100 c. **98** d. 60
- Radiation entering through the hole suffers ----- reflections at the inner Surface.
 a.**Multiple** b. Single c. Two d. Five
- An instrument use for measurement of radiation is -----
 a. **bolometer** b. sonometer c. thermometer d. galvanometer
- The intensities of the radiation of different wavelengths are measured using ----- spectrometer.
 a.**IR** b. UV c. Na d. X-ray
- The unit of E_λ is-----
 a. **$1 \text{ w/m}^2/\text{\AA}$** b. $5 \text{ w/m}^2/\text{\AA}$ c. $1 \text{ w/cm}^2/\text{\AA}$ d. 1 w/m/A°
- In weins radiation formula, emissive power is inversely α to -----power of its wavelength.
 a.**5th** b. 25 th c. 3rd d. 1st
- The discrepancy between theoretical conclusion and the experimental result in Rayleigh Jeans Law is called ----- catastrophe.

- a. UV b. IR c. γ – ray d. β -ray

12. Planck assumed the atoms in black body behaved like----- oscillators.

- a. **Simple harmonic** b. emitter coupled c. feedback d. RC coupled

13. The quantum energy is -----

- a. **$h\nu$** b. hc c. $h\lambda$ d. $\hbar\nu$

12. Stefan Boltzman law $E \propto \sigma$ -----

- a. **T^4** b. T^2 c. T d. $T^{1/4}$

13. σ is called as ----- constant .

- a. **Stefan's** b. Rutherfords c. Millikans d. Boys

14. When an electromagnetic radiation is incident on a metal surface -----are emitted from it.

- a. **Electrons** b. Neutrons c. Protons d. Nucleons

15. In photo electric effect the \bar{e} emitted are called -----

- a. **photo electrons** b. excited electrons c. positrons d. proelectrons

16. Sodium gives the photo electric effect when exposed to radiation of wavelength smaller than -----

- a. **5455\AA** b. 5480\AA c. 5890\AA d. 4460\AA

17. ----- produces photo electric effect when exposed to all radiations of wavelengths smaller than 6438\AA .

- a. **caesium** b. iron c. copper d. zinc

22. The retarding potential difference V_0 which reduces the photo electric current to zero is called ----- potential for the photo electrons.

- a. **stopping** b. excited c. retarding d. effective

23. A radiation of frequency ν consists of stream of quant of energy.

- a. $h\nu$ b. mc^2 c. $\hbar\omega$ d. $n\nu^2$

24. The relation connecting wave number $\bar{\nu}$ and wavelength is-----

- a. **$\bar{\nu}=1/\lambda$** b. $\bar{\nu}=\lambda$ c. $\bar{\nu}=1/\lambda^2$ d. $\bar{\nu}=3\lambda$

25. The value of Rydberg constant is-----

- a. **1.097×10^7** b. 1.097 c. 1.097×10^{-7} d. 1×10^7

26. Reor the Balmer series in the visible region n_1 is -----

- a. **2** b. 1 c. 3 d. 4

27. Lyman series lies in the -----region

- a. **uv** b. IR c. visible d. far uv

28. The radius of the nucleus of an atom is -----

- a. **10^{-14} m** b. 10^{-10} m c. 10^{-7} m d. 10^{14} m

29. The magnitude of 'L' of the electrons orbital angular momentum is-----multiple of $\frac{h}{2\pi}$
a.integral b.half integral c.even d.odd
30. The total energy E_1 of the \bar{e} in the first Bhor orbit is -----
a.-13.6eV b.+13.6eV c.0 d.7.7eV
18. 30.The energy in eV required to remove and \bar{e} from the ground state to infinity is called ---
 ----potential
a.ionisation b.excited c.stopping d.retarding
19. Ionisation potential for hydrogen atom is----- MeV
a.13.6 b.-13.6 c.4.4 d.8.8
20. A free particle is one for which
a) P.E =0 b) K.E =0 **c)K. E can be anything** d) total energy is discrete
21. The wave function in the region of infinite potential is
 a) infinite b) oscillatory c) finite **d) zero**
22. The discrete energy levels of a particle bound in a one dimensional infinite potential well are in the ratio
a) 1:4:9 b) 1:2:3 c) 2:3:4 d) 1:5:7
23. Wave mechanics for tunnel effect predicts the probability of penetration of a particle Through a potential barrier, whose height
a) larger than particle's energy b) smaller than particle's energy
 c) equal to particle's energy d) infinite.
24. The wave function of a particle encountering a finite potential step behave inside the step as if
b) it is exponentially decaying
 a) it is oscillatory c) it is stationary d) vanishes at the boundary

SECTION B

Unit 1: Relativity

1. What is meant by transformation?
2. Write the three Galilean transformation equation
3. What is the aim of the Michelson Morley experiment?
4. What are the postulates of the special theory of relativity?
5. What is length contraction?
6. What is time dilation?
7. Calculate the energy equivalent of 1 gm of matter

8. State Einstein mass energy equation

Unit II: Atomic Structure and Spectra

1. State the postulates of Bohr's atom model.
2. What are the two features of vector atom model?
3. What are the applications of spatial quantization?
4. State Pauli's exclusion principle.
5. What is Zeeman Effect?
6. What is anomalous Zeeman Effect?
7. Give electron configuration of Lithium and hydrogen.
8. Define Bohr electron magnetron.
9. Explain the magnetic dipole moment due to spin.

Unit III: X-Rays

1. What is the mechanism of X-ray production?
2. State Bragg's law for X-ray diffraction
3. What are characteristic X- rays?
4. State Mosley's law.
5. What is Compton Effect?
6. Define Compton wavelength of electron
7. Explain Bremsstrahlung effect.
8. Write the importance of the study of Compton Effect.

Unit IV: Wave properties of matter

1. Define phase velocity.
2. Define group velocity.
3. Write the relation between Group velocity and phase velocity.
4. Write the consequences of De Broglie's concepts.
5. Define Quantization condition for the angular momentum of the electron in the hydrogen Atom.
6. Explain the energies of the particle in space.
7. Explain the phase velocity in non-relativistic particle
8. Explain the phase velocity in relativistic particle?
9. Explain the group velocity in relativistic particle?
10. Explain the group velocity in non-relativistic particle?

11. State Heisenberg's Uncertainty Principle
12. Write the dimension of $\Psi(x, y, z, t)$
13. Explain the normalization of wave function
14. Explain Eigen function, Eigen value
15. Define exception value
16. Write any three postulates of quantum mechanics
17. Define probability density
18. Define probability current density
19. Write the limitation of wave function Ψ

Unit V: Development of Quantum Mechanics

1. Define black body radiation
2. Define emissive power
3. Define Wein's Radiation formula
4. Define Rayleigh –Jeans law
5. Define Planck's quantum theory
6. Write the four consequence of planck's law
7. What is meant by Photoelectric effect?
8. What are the failure of classical mechanics to explain the photoelectric effect?
9. State the Ritz combination principle
10. Draw the energy level diagram of hydrogen atom
11. What are the limitation of Bohr's theory?
12. Explain the Eigen value of energy of one dimensional box
13. Define degree of degeneracy
14. Explain the wave equation for the particle of one dimensional box

SECTION C

Unit I: Relativity

1. State the postulates of relativity.
2. Obtain Galilean transformation equations.
3. State the significance of negative result of Michelson – Morley experiment.
4. Show that the equation $E = mc^2$ is dimensionally consistent.
5. Derive the relation connecting relativistic momentum and energy.
6. Describe the experimental set up of Michelson – Morley experiment
7. Show that the velocity of light is invariant under Lorentz transformation equations
8. Explain 'time dilation' as an effect of relativity

9. Explain Lorentz – Fitzgerald contraction in relativity
10. Deduce velocity addition theorem in relativity.
11. Explain kinetic energy, rest energy and total energy of a relativistic particle.
12. Show that 1 atomic mass unit equals 931 MeV

Unit II: Atomic Structure and Spectra

1. The calcium line of wavelength 4226.3\AA exhibits normal Zeeman splitting when placed in uniform magnetic field of 4 Wb/m^2 . Calculate the wavelength of three components of normal Zeeman pattern and the separation between them
2. The wavelength of the second line of the Balmer series in the hydrogen spectrum is 4861\AA . Calculate the wavelength of the first line.
3. Why does the normal Zeeman Effect occur only in atoms with an even number of electrons?
4. If the Rydberg constant is $1.097 \times 10^7/\text{m}$, what are the wavelengths of the first three lines of the Paschen series?
5. The Rydberg constant for hydrogen is $10967700/\text{m}$. Calculate the short and long wavelength limits of Lyman series.
6. Calculate the radii of the first, second and third permitted electron Bohr – orbits in a hydrogen atom.
7. Calculate the value of Rydberg constant, assuming that wavelength of $\text{H}\alpha$ line is 6563\AA .
8. State and explain Pauli's exclusion principle as applied to electrons in atoms. Describe how this principle assists in the interpretation of the periodic system of the elements.
9. Describe L-S and J-J coupling

Unit III: X-Rays

1. Give an account of the production, properties and applications of X-rays. What factors influence (i) cut off wavelength (ii) the wavelength of lines emitted from an x-ray tube.
2. Describe Laue's experiment and point out its significance.
3. Describe how the x-ray spectrometer can be used to study the structure of crystals.
4. Distinguish between continuous and characteristic x-ray spectrum and explain them.
5. Describe Moseley's work on x-rays. What is Moseley's law? What is its importance?
6. The potential difference across an X-ray tube is 10^5 volt. What is the maximum frequency of x-rays emitted? What is the corresponding wavelength?
7. Monochromatic X-radiation of wavelength of 0.124\AA , undergoes Compton Effect from a carbon block. Calculate the wavelength that is scattered through 180° .

8. Photon of energy 1.02 MeV undergoes Compton scattering through 180° . Calculate the energy of the scattered photon.
9. Explain why Compton Effect is experimentally not observed for visible rays.
10. A photon recoils back after striking an electron at rest. What is the change in the wavelength of the photon?
11. Explain the presence of unmodified line in Compton scattering. (when a photon collides with bound electron, its wavelength does not change)
12. Explain why the Compton shift of wavelength is independent of the scattering material.
13. An x-ray is found to have its wavelength doubled on being scattered through 90° . Calculate its wavelength.

Unit IV: Wave Properties of Matter

1. Derive the relation between phase velocity and group velocity.
2. Explain the de Broglie's concept of matter waves.
3. Calculate the momentum of an electron having de Broglie wavelength of $6.6 \times 10^{-11} \text{ m}$.
4. An electron initially at rest is accelerated by a potential difference of 5000 V. Find the de Broglie wavelength.
5. Find the de Broglie wavelength of 15 KeV protons. ($m_p = 1.67 \times 10^{-27} \text{ Kg}$)
6. What is the wavelength of the wave associated with an electron having kinetic energy 100 eV?
7. Calculate the de Broglie wavelength of an electron which has energy 12 eV.
8. State and Prove Heisenberg's Uncertainty principle. Discuss the physical importance.
9. By differentiating this equation and using the expression for non-relativistic total Energy, obtain the one dimensional time dependent Schrodinger wave equation.
10. State the postulates of quantum mechanics
11. Using time dependent form of the wave function deduce operators for momentum and Energy.
13. What is Eigen value and Eigen function? Explain with examples.
12. Show that $\langle x P_x \rangle - \langle P_x x \rangle = \hbar/i$
13. Explain the expectation value of a physical quantity.
14. (a) Write down the time dependent and time independent Schrodinger wave Equations for a particle.
(b) Solve the Schrodinger wave equations for a particle moving in a rectangular Potential box and obtain its energy levels. Show that the eigenvalues of energy are discrete.

15. Find the energies of the six lowest energy - levels of a particle in a cubical box. Which of the levels are degenerate.
16. Determine the degree of degeneracy of the energy level $38\pi^2\hbar^2/2mL^2$ of a particle in a cubical potential box.

Unit V: Development of Quantum Mechanics

1. What was Planck's hypothesis to explain the spectral distribution of the intensity of radiation from a black body?
2. Derive Planck's radiation law.
3. From Planck's radiation law, derive Stefan – Boltzman law
4. Based Planck's radiation law, derive Wein's displacement formula.
5. Explain the photoelectric effect. In what way does the classical physics fails to explain the photoelectric effect?
6. Explain the photoelectric effect. A photon of energy 12eV falls on molybdenum whose work function is 4.15 eV. Find the stopping potential.
7. State the postulates of Bohr's theory of hydrogen atom.
8. Show that the radius of a Bohr orbit of the electron in the hydrogen atom is directly proportional to the principal quantum number.
9. Obtain the energy of the electron in a stationary orbit in the hydrogen atom.
10. Show that the energy of the electron in a stationary orbit in the hydrogen atom is inversely proportional to the radius of the orbit.
11. Draw the energy level diagram of the hydrogen spectrum according to Bohr's theory and explain Lyman and Balmer series of hydrogen atom.
12. Draw the energy level diagram of the hydrogen spectrum according to Bohr's theory and explain Paschen and Bracket series of hydrogen atom.
13. Calculate the radius of the first Bohr orbit of the electron in the hydrogen atom
14. Calculate the total energy of the electron in the second orbit in electron volt.
15. Given that the total energy of the electron in the first Bohr's orbit is -13.6 eV. Calculate the energy of the electron in the second, third and fourth orbits.
16. Deduce Einstein's Photo electric equation

SECTION D

Unit I: Relativity

1. Describe with relevant theory Michelson – Morley experiment. Discuss the significance of negative result of Michelson – Morley experiment
2. Based on the theory of relativity derive the Lorentz transformation equations.

3. Derive an expression for the variation of mass with velocity
4. Derive Einstein's mass energy equation. Give examples for conversion of mass into energy and energy into mass.

Unit II: Atomic Structure and Spectra

1. Describe the vector model of the atom and explain the different quantum numbers associated with it.
2. Write down the electron configuration for Cu (29) employing modern symbolism and explain it.
3. What is Pauli's exclusion principle? On the basis of this principle explain the configuration of electrons in atoms.
4. Describe the Stern and Gerlach experiment and indicate the importance of the results obtained.
5. How will you explain the D1 and D2 doublet of sodium spectrum on the basis of electron spin?
6. What is Zeeman Effect? Describe the experimental arrangement for studying the Zeeman Effect. Use classical ideas to explain normal Zeeman Effect. Derive the expression for Zeeman shift.
7. Outline the quantum theory of Zeeman shift. Illustrate your answer with specific reference to sodium line.
8. Explain clearly the phenomenon of anomalous Zeeman Effect.
9. Derive an expression for Lande's splitting factor and explain anomalous Zeeman effect of sodium doublet lines D1 and D2 with its help.
10. In Stern and Gerlach experiment a beam of atoms is passed through an inhomogeneous magnetic field. What will happen if ions are used instead of atoms?

Unit III: X- Rays

1. Derive Bragg's law for X- Rays diffraction in crystals. How is it verified? Describe and explain the X-ray spectrometer method of determining wavelength of x-rays.
2. Give theory of Compton effect and briefly explain its experimental verification.
How are modified and unmodified lines in the scattered beam accounted for?
3. Derive Bragg's law for X-ray diffraction. Describe Bragg's Spectrometer.
4. State Moseley's law. Describe the importance of Moseley's work on X- rays.
5. Describe the principle of production of X – rays
6. What are X-ray spectra? Explain the origin of continuous X- ray spectra

7. What are characteristic X-ray spectra? How do they originate and how are they produced.
8. Find the wavelength of Compton. Given the mass of proton as 1.67×10^{-27} Kg.
9. A monochromatic wave of wavelength of 1.24 \AA is viewed at an angle of 60° to the diffraction of incidence on a carbon slab. Calculate the Compton shift in wavelength.

Unit IV: Wave Properties of Matter

1. Discuss the nature of de Broglie wave associated with a particle in motion. Obtain an expression for the de Broglie wavelength associated with a particle of mass m moving with the velocity v .
2. Describe the Davisson and Germer experiment for the study of the diffraction of electrons. Show that the results of this experiment are closely in agreement with the de Broglie wavelength of electrons in motion.
3. Describe the phase velocity and group velocity of the de Broglie wave associated with relativistic and non relativistic particle.
4. Derive the analytical expression for group of waves and obtain the relation between group velocity (V_g) and phase velocity (V_p).
5. Derive Schrodinger's wave equation in (i) time dependent and (ii) time independent forms.
6. Define probability density and probability current density. Derive an expression for probability current density.
7. Explain the normalization condition of a wave function and Explain the expectation value of a physical quantity.
8. Explain the orthogonal and orthonormal properties of wave function

Unit V: Development of Quantum Mechanics

1. Based on Planck's quantum theory derive Planck's radiation law. Describe the consequences of Planck's law
2. Explain the photoelectric effect. Outline the basic facts of the photoelectric effect.
3. Discuss the inadequacy of the wave theory of light to explain the effect.
4. Define the terms (i) threshold frequency (ii) photoelectric work function (iii) stopping potential. Deduce Einstein's photoelectric equation.
5. Draw the energy level diagram of the complete hydrogen spectrum according to Bohr's theory and explain all the spectral series of hydrogen atom.
6. Assuming the postulates of Bohr's theory of the hydrogen atom, derive expressions for (i) radius of a Bohr's orbit (ii) energy of electron in Bohr's n^{th} orbit

7. Using standard values of the physical constants, calculate the frequency of revolution of the orbital electron in the first orbit. State Ritz combination principle. Show on the basis of the principle how could new series be predicted by taking example of $H\alpha$ and $H\beta$ lines of Balmer Series.
8. A particle of mass m is confined in a field free region between impenetrable walls at $x=0$ and $x=a$. Show that the stationary energy levels of the particle are given by $E_n = \frac{n^2 \pi^2 \hbar^2}{2ma^2}$, Obtain the corresponding wave functions.
9. (a) Solve the Schrodinger equations for the linear harmonic oscillator and obtain its energy –levels.
10. (b) compare the energy –levels obtained quantum mechanically with those obtained by classical mechanics and old quantum theory.
11. Solve the Schrodinger wave equations for a particle moving in a one dimensional potential box of infinite depth and obtain its energy levels. Show that the eigenvalues of energy are discrete.

SECTION A

Unit I: Atomic Structure

- The ground state energy of an atom is
a) **-13.6 eV** b) 13.6eV c) 13.6 MeV d) -13.6MeV
- Brackett and Pfund series lie in the very ----- of the hydrogen spectrum
a) **far infrared region** b) visible region c) ultraviolet region d) near infrared region
- Linear momentum of the electron
a) **mv** b) mc c) 2mv d) mc^2
- The de-broglie wavelength of the electron is
a) **h/mv** b) mhv c) v/m d) mc
- The atom model based on quantized vectors is
a) Bohr atom model b) Rutherford's atom model c) **vector atom model**
d) Thomson atom model
- The principal quantum number can take only
a) **integral values** b) half integral values c) $\frac{1}{2}$ d) 0
- The possible values of magnetic momentum quantum number are
a) $\frac{1}{2}(l+1)$ **b) $(2l + 1)$** c) $(l + 1)$ d) $(l + \frac{1}{2})$
- According to pauli's exclusion principle, no two electrons can have the same -----
quantum numbers
a) **four** b) two c) six d) three
- The maximum number of electrons in a shell is
a) **$2n^2$** b) n^2 c) 2n d) $n/2$
- In a periodic table the horizontal rows are called as
a) rows b) groups c) elements **d) periods**
- The splitting of spectral lines into two or three lines is called
a) **normal Zeeman effect** b) anomalous Zeeman effect
c) lande's factor d) gyromagnetic ratio.

Unit II: Introduction to Nucleus

- The radius of an atomic nucleus is proportional to (A mass number)
a) A b) A^2 c) $A^{1/2}$ d) **$A^{1/3}$**
- The density of atomic nucleus is independent of

- a) radius b) mass number c) **atomicity** d) spin
3. The nuclear magnetic moment is due to
 a) spin of nucleus b) net charge of nucleus
 c) spin and charge of nucleus **d) orbital motion of electrons**
4. The expression for nuclear magneton is
a) $\frac{eh}{4\pi m_e}$ b) $2\pi m/eh$ c) $e/2mc$ d) $\frac{1}{2}h\pi$
5. The magnetic moment of neutron is
 a) one Bohr magneton **b) one nuclear magneton** c) zero d) negative
6. Nuclei with same atomic number are called as
a) isotopes b) isobars c) isotones d) isomers
7. The mean radius of an atomic nucleus is of the order of
 a) **10^{-14} m** b) 10^{-12} m c) 10^{-10} m d) 10^{-8} m
8. Stable nuclei are more pronounced with
a) even-even pair of protons and neutrons b) even-odd pair of protons and neutrons
 c) odd-even pair of protons and neutrons d) odd-odd pair of protons and neutrons
9. The spin value of deuteron is
 a) $1/2$ b) $-1/2$ c) $3/2$ **d) 1**
10. Which of the following is not a magic number
 a) 2 b) 8 **c) 38** d) 50
11. The binding energy curve shows B/A to be constant for mass numbers ranging from 12 to 240. That is, nuclear forces have the property of
 a) saturation **b) short range** c) long range d) harmonically varying property.
12. Nuclear forces are appreciable within the range of
a) 1×10^{-15} m b) 1×10^{-8} m c) 1×10^8 m d) 1×10^{-10} m
13. Mirror nuclei are pair of nuclei that have
 a) same A but different Z and N b) same Z but A and N are interchanged
c) same A but Z and N are interchanged d) same N but A and Z are interchanged
14. According to meson theory of nuclear forces, the force that holds nucleons together arises due to
 a) exchange of electrons **b) exchange of pions**
 c) some unknown force d) none of the above
15. The spin of proton is
 a) **$1/2$** b) $-1/2$ c) $h/2$ d) $-h/2$

Unit III: Radioactivity

- The mean life and disintegration constant are related as
 - $T = 1/\lambda$**
 - T/λ
 - $T = 0.693/\lambda$
 - $\lambda T = 0$
- 1 curie of radioactivity means
 - 3×10^8 disintegration per second
 - 1 disintegration per second
 - 3.7×10^{10} disintegration per second**
 - 1×10^2 disintegration per second
- As a result of alpha decay, the mass number A of a nucleus and atomic number Z of the atom undergo changes as follows
 - A increases by 4 and Z decreases by 2
 - A decreases by 4 and Z increases by 2
 - A increases by 4 and Z increases by 2
 - A decreases by 4 and Z decreases by 2**
- The age of Taj Mahal has been recently confirmed by
 - half-life period
 - mean life period
 - radio carbon dating**
 - disintegration constant
- The unit of radioactivity is
 - Becquerel**
 - cavandish
 - newton
 - ampere
- As a result of β decay, the atomic number of the element ----- by one.
 - increases**
 - decreases
 - remains the same
 - none of the above
- Ionizing power is maximum for
 - α**
 - β
 - γ
 - X-rays
- Penetrating power is the highest for
 - α
 - β
 - γ**
 - X-rays
- The radio – carbon dating is used to
 - estimate the age**
 - diagnosis the disease
 - give therapy
 - increase the yielding
- According to Geiger Nuttal law the range R of α particle and its decay constant λ are related as
 - $\log \lambda = A + B \log R$**
 - $\log A = B + \log \lambda$
 - $\log B = A + \log \lambda$
 - $\log \lambda = A - B \log R$

Unit IV: Nuclear Reactions

- The energy change due to rearrangement of neutrons and protons is of the order of
 - eV
 - MeV**
 - meV
 - GeV

2. A nuclear reaction can take place under the influence of
a) external pressure b) external magnetic force c) external electric field
d) internal force due to projectile and target nucleus
3. A nuclear reaction conserves
a) energy only b) momentum only
c) angular momentum only d) **energy and momentum**
4. Quantity not conserved in a nuclear reaction is
a) Charge b) Mass c) Energy **d) Dipole moment**
5. Exothermic nuclear reaction is one in which
a) $Q > 0$ b) $Q < 0$ c) $Q = 0$ d) none
6. When a compound nucleus decays, the decay mode will depend on
a) the number of protons in it b) the number of neutrons in it
c) its excitation energy d) the particles that form the nucleus
7. Energy released in fusion is due to
a) larger binding energy per nucleon of the product nucleus
b) smaller mass defect in the product nucleus
c) high temperature created d) all the above
8. When four protons fuse together to form Helium nucleus, the energy released per fusion is
a) 931 MeV b) 200 MeV **c) 25.7 MeV** d) 31.7 MeV
9. Energy released by process of fission of one nucleus of Uranium
a) 200 MeV b) 930 MeV c) 25.7 MeV d) 31.7 MeV
10. The deuterium nucleus consists of
a) a neutron and two protons b) two neutron and a proton
c) two neutrons only d) **a neutron and a proton**
11. The radio isotope of Phosphorous finds application in
a) industry **b) agriculture** c) cancer d) aging of earth
12. The radio isotope I^{131} is used in the diagnosis of
a) cancer **b) thyroid** c) industry c) agriculture
13. Which of the following is a moderator?
a. Nitrogen b. Oxygen **c. graphite** d. Lead
14. Pick out the element which leaves as a catalyst in a Carbon – Nitrogen cycle.
a. O^{16} b. H^2 c. C^{12} d. N^{14}

Unit V: Particle Accelerators and Detectors

- The type of machine in which frequency of the electric field is kept constant and magnetic field is varied is called
a. Synchrotron b. Linear accelerator c. Betatron d. Synchrocyclotron
- The type of machine in which frequency of the electric field is varied and magnetic field is kept constant is called
a. Synchrotron b. Linear accelerator c. Betatron **d. Synchrocyclotron**
- In a cyclotron the time taken by ion to travel semicircular path should be equal
a. $\frac{T}{2}$ b. T c. 2T d. T^2
- The length of gaps in a linear accelerator is proportional to
a. 1: 2: 3 **b. $1: \sqrt{2}: \sqrt{3}$** c. 1: 2: $\sqrt{3}$ d. $1: \sqrt{2}: 3$
- The velocity of the ions inside the drift tubes is
a. increases b. decreases **c. constant** d. doubled
- Name the gas used in Ionization chamber
a. Sulphurdioxide b. Oxygen b. Nitrogen d. Hydrogen
- Name the gas filled in Ionization chamber to detect neutron
a. Sulphurdioxide **b. Borontrifluoride vapour** b. Nitrogen d. Hydrogen
- For detecting gamma rays the walls of the ionization chamber are made up of
a. High atomic number material b. Low atomic number material
c. medium atomic number material d. ploy vinyl material
- Write down the equation which represents the betatron condition
a) $\oint \mathbf{B} \cdot d\mathbf{l} = 2\pi r^2 \frac{dB}{dt}$ (b) $\oint \mathbf{B} \cdot d\mathbf{l} = \pi r^2 \frac{dB}{dt}$ (c) $\oint \mathbf{B} \cdot d\mathbf{l} = 2\pi r \frac{dB}{dt}$ (d) $\oint \mathbf{B} \cdot d\mathbf{l} = 3\pi r^2 \frac{dB}{dt}$
- Modified form of Lawrence cyclotron
a. Synchrocyclotron b. Synchrotron c. Bevatron d. Betatron
- The path of α particle in cloud chamber is
a. thin b. crooked **c. thick straight and sharply defined** d. thin and crooked

SECTION B

Unit I: Atomic Structure

- What are the two features of vector atom model?
- What are the applications of spatial quantization?
- State Pauli's exclusion principle.

4. What is Zeeman effect?
5. What is anomalous Zeeman effect?
6. Give electron configuration of Lithium and hydrogen.
7. Define Bohr electron magnetron.
8. Explain the magnetic dipole moment due to spin
9. Explain the selection of vector atom model.
10. Explain the intensity rules of vector atom model.

Unit II: Introduction to Nucleus

1. What is the relation between mass number, atomic number and neutron number?
2. Name the nucleus of the light isotope of hydrogen.
3. Define isotopes.
4. Define isobars.
5. Define isotones.
6. Define isomers.
7. What are called mirror nuclei? Give example.
8. What is the relation between mass number and radius of a nucleus?
9. Define: Packing fraction
10. Define Binding energy.
11. What is nuclear spin?
12. What is mass defect?
13. Define 'range' of nuclear force.
14. What do you mean by nuclear force?
15. What are magic numbers?

Unit III: Radioactivity

1. What is natural radioactivity?
2. State the exponential decay law in radioactivity.
3. Define 'activity' of a radioactive sample.
4. What is the transient equilibrium in disintegration?
5. What is the condition for secular equilibrium in disintegration?
6. Define one Curie.
7. Define one Becquerel of radioactivity.
8. Define disintegration energy.

9. Define half-life.
10. Define mean life.
11. Define radio carbon dating.
12. What are alpha rays?
13. Define 'range' of alpha particle.
14. State Geiger law.
15. State Geiger Nuttall law.

Unit IV: Nuclear Reactions

1. What is a nuclear reaction? Write down the general scheme of nuclear reaction according to Bohr.
2. How can a nuclear reaction be represented? Give an example.
3. Define Q-value of a nuclear reaction.
4. What is an exothermic reaction?
5. What is an endothermic reaction?
6. Define cross section of a nuclear reaction. State its unit.
7. Define induced radioactivity.
8. What is nuclear fusion?
9. Define nuclear fission.
10. What is a chain reaction?
11. Define thermo- nuclear reaction.
12. Define plasma.
13. What is a magnetic bottle? Define breeding.
14. Write down the purpose of using neutron reflectors.
15. Write down the advantages of using nuclear fusion as an energy source.

Unit V: Particle Accelerators and Detectors

1. Write down the limitations of Linear accelerator.
2. Define efficiency of a counter.
3. Define plateau region for an ionization chamber
4. List out the advantages of Geiger Muller counter.
5. Write down the limitations of Wilson cloud chamber.
6. Write down the advantages of cloud chamber.
7. Write down the principle of Wilson cloud.

SECTION C

Unit I: Atomic Structure

1. The calcium line of wavelength 4226.3\AA exhibits normal Zeeman splitting when placed in uniform magnetic field of 4 Wb/m^2 . Calculate the wavelength of three components of normal Zeeman pattern and the separation between them.
2. Why does the normal Zeeman effect occur only in atoms with an even number of electron?
3. State and explain Pauli's exclusion principle as applied to electrons in atoms.
Describe how this principle assists in the interpretation of the periodic system of the elements.
4. Describe L-S and J-J coupling.
5. Calculate the magnetic dipole moment of an electron due to orbital and spin motion
6. Explain the selection and intensity rules of vector atom model.
7. Explain the fine structure of sodium line.
8. State and explain Larmors theorem.
9. Explain Paschen Back effect.
10. State and explain Stark effect.

Unit II: Introduction to Nucleus

1. Explain the nuclei stability on the basis of binding energy.
2. What are the characteristics attributed to nuclear force by Yukawa theory?
3. Give number of neutrons and protons in each of the following
 ${}_3\text{Li}^6$, ${}_{10}\text{Ne}^{22}$; ${}_{40}\text{Zr}^{94}$, ${}_{72}\text{Hf}^{180}$
4. What happens to the atomic number and mass number of a nucleus when it a) emits an alpha particle, b) emits an electron, c) emits a positron, d) captures an electron.
5. Why electrons cannot be present inside the nucleus?
6. What are assumptions of liquid drop model of nucleus?
7. Write the expression for nuclear magnetic moment. What is its unit?
8. Explain proton-electron hypothesis of nuclear composition.
9. Explain proton-neutron hypothesis of nuclear composition.
10. Explain briefly the classification of neutron.
11. Explain briefly elastic and inelastic collision occurring during neutron interactions with nuclei.

Unit III: Radioactivity

1. Explain the terms, decay constant, half-life and average life as applied to a radioactive substance. Find the relation between them.
2. Show that number of atoms of a given radioactive substance decreases exponentially.
3. State and explain Soddy Fajans displacement law with example.
4. Define half-life period. Derive an expression for it.
5. Give an account of units of radioactivity.
6. Explain in detail the law of successive disintegration.
7. Mention the properties of α rays.
8. Mention the properties of β rays.
9. Mention the properties of γ rays.
10. Give the theory of alpha decay and point out the main features of the decay.

Unit IV: Nuclear Reactions

1. Derive an expression for threshold energy of an endoergic reaction.
2. Explain with examples transmutation by alpha particles.
3. Explain with examples transmutation by protons.
4. Explain with examples transmutation by deuterons
5. Explain with examples transmutation by neutrons.
6. What are the advantages of using neutrons as projectiles for effecting artificial transmutation
7. Distinguish between nuclear fusion and fission.
8. Explain in detail the sources of stellar energy.
9. Explain briefly controlled thermal nuclear reactions.

Unit V: Particle Accelerators and Detectors

1. Discuss about the limitations of Cyclotron and methods to overcome this limitations.
2. Explain the construction and working of Synchrocyclotron.
3. Give an account of the mode of operation of a scintillation counter.

SECTION D

Unit I: Atomic Structure

1. Describe the vector model of the atom and explain the different quantum numbers associated with it. Write down the electron configuration for Cu (29) employing

modern symbolism and explain it.

2. Describe Pauli's exclusion principle and use it to find distribution of electrons in different shells
3. State and explain Pauli's exclusion principle? How is it used to explain the classification of elements according to periodic table?
4. Describe the Stern and Gerlach experiment and indicate the importance of the results obtained.
5. How will you explain the D1 and D2 doublet of sodium spectrum on the basis of electron spin?
6. What is Zeeman Effect? Describe the experimental arrangement for studying the Zeeman effect. Use classical ideas to explain normal Zeeman effect. Derive the expression for Zeeman shift.
7. Outline the quantum theory of Zeeman shift. Illustrate your answer with specific reference to sodium line.
8. Explain clearly the phenomenon of anomalous Zeeman Effect.
9. Derive an expression for Lande's splitting factor and explain anomalous Zeeman effect of sodium doublet lines D1 and D2 with its help.

Unit II: Introduction to Nucleus

1. Write down the general properties of nucleus.
2. Describe the main features of the binding energy curve and explain how the curve accounts for the fission and nuclear fusion processes.
3. Explain the salient features of the liquid drop model of nucleus. Hence give a qualitative explanation for nuclear fission
4. Describe the main features of shell model of nucleus. What are the experimental evidences that support this model?
5. Explain how the shell model of nucleus accounts for magic numbers and magnetic moment of nuclei.
6. Derive Weizsacker's formula for binding energy of nucleus.
7. Explain the properties of nuclear forces and describe meson theory of nuclear forces.
8. Explain basic properties of neutron.

Unit III: Radioactivity

1. Give an account of successive disintegration of radioactive isotope and obtain the condition for secular equilibrium.
2. Define mean life period and derive the expression for it.
3. Explain Rutherford and Soddy's theory of radioactive decay. How is the half-life period defined?
4. Describe an experiment to determine the charge and mass of α particle.
5. Describe an experiment for measuring the value of e/m in the case of β particles.

Unit IV: Nuclear Reactions

1. Define nuclear reactions. Explain with suitable examples the main types of nuclear reactions.
2. Explain with examples transmutation by alpha particles, protons, deuterons, neutrons.
3. Write an essay on nuclear fission and its important applications.
4. Write an essay on thermo nuclear reactions.
5. Describe the construction and working of a nuclear reactor. When is the reactor said to be critical?

Unit V: Particle Accelerators and Detectors

1. Explain the construction and working of a linear accelerator.
2. Explain the construction and working of a cyclotron.
3. Explain the construction and working theory of a betatron.
4. Explain the construction and working of Ionization chamber
5. Describe the Geiger- Muller counter and explain its working as a particle detector..
6. Explain principle description and working of Wilson cloud chamber.

St. Mary's College (Autonomous), Thoothukudi-628001
III B. Sc., Physics
Semester VI – Question Bank
Core III – Optoelectronics and Fibre Optics Communication
Subject Code:21UPHC63

SECTION A

UNIT I:

1. Energy band of a crystal is produced due to
 - a. excess energy supplied to the crystal
 - b. presence of impurity atoms in it
 - c. interaction of nearby atoms in it**
 - d. isolated atoms in it
2. The band gap energies of germanium and silicon semiconductors are respectively as
 - a. 4.1 eV and 0.67 eV
 - c. 0.67 eV and 1.1 eV**
 - b. 1 eV and 1.5 eV
 - d. 1.5 eV and 1 eV
3. The density of states of electrons in the conduction band increase with electron energy (E) in proportion to
 - a. E
 - b. $E^{1/2}$**
 - c. $E^{3/2}$
 - d. E^2
4. In intrinsic semiconductor the Fermi energy lies
 - a. nearer the conduction band edge
 - b. nearer the valence band edge
 - c. at the middle of the forbidden band**
 - d. anywhere in the forbidden band
5. The intrinsic concentration of electrons (or holes) in silicon at room temperature is about
 - a. 1.5×10^{10} per cm^3**
 - c. 1.5×10^6 per cm^3
 - b. 1.24×10^{15} per cm^3
 - d. 100 per cm^3
6. The number of free electrons per unit volume of a semiconductor in the energy range dE is
 - a. the product of Fermi energy and probability of occupancy
 - b. the product of density of states and Fermi energy
 - c. the product of density of states and probability of occupancy**
 - d. the product of Fermi energy and energy of one electron
7. The density of states of electron in the conduction band is strongly dependent on temperature of the semiconductor through
 - a. effective density of states**

- b. exponential term in the expression for it
 - c. Fermi energy
 - d. band gap energy
8. The unit of luminous flux is
- a. milli-watt**
 - b. Million electron volt
 - c. joule
 - d. milli-ampere
9. The hole mobility is
- a. V^2/E
 - b. V/E**
 - c. $V/2E$
 - d. E/V
10. Due to applied field, charge carriers move and create
- a. diffusion current
 - b. drift current**
 - c. mobility of holes
 - d. nothing
11. In an intrinsic semiconductor, the number of electrons and holes remain
- a. equal**
 - b. unequal
 - c. Zero
 - d. one
12. Pure semiconductors are called
- a. intrinsic**
 - b. extrinsic
 - c. P-type
 - d. n-type
13. Refractive index of silicon at 2.15 μm wavelength of light is
- a. 1.5
 - b. 1.33
 - c. 3.45**
 - d. 8.15
14. In an extrinsic semiconductor, as Fermi level moves closer to the conduction band, the electron concentration in the conduction band increases
- a. linearly
 - b. exponentially**
 - c. twice
 - d. in the same rate as in valence band
15. When a semiconductor is excited, the electron-hole pair is created due to
- a. transfer of electron from valence band to the conduction band of energies**
 - b. addition of impurity atoms
 - c. injection of electrons to the material
 - d. none of the above
16. The effective mass of electron near the top of the valence band is
- a. zero
 - b. rest mass of electron itself
 - c. positive**
 - d. negative

17. A semiconductor that contains both donors and acceptors in the same semiconductor region is known as
- a. **compensated semiconductor**
 - b. extrinsic semiconductor
 - c. insulator
 - d. intrinsic semiconductor
18. There is negligible absorption of visible light by NaCl crystal because its
- a. band gap energy is small
 - b. band gap energy is zero
 - c. **band gap energy is large**
 - d. impurity concentration is small
19. When a photon of energy less than the band gap energy of a semiconductor is incident on it, the photon
- a. is absorbed by the semiconductor
 - b. **passes through the semiconductor**
 - c. is reflected by the semiconductor
 - d. momentum is changed
20. An example of direct band gap semiconductor is
- a. silicon
 - b. germanium
 - c. GaP
 - d. **Ga As**
21. An impurity or defect level that can capture either an electron or a hole but not both at a time is known as
- a. absorption
 - b. Fermi level
 - c. **trap**
 - d. lasing level
22. When a semiconducting material is doped with p-type impurity atoms, its Fermi level
- a. is unaffected
 - b. **shifts towards valence band**
 - c. shifts towards the conduction band
 - d. disappears
23. When pentavalent impurities are added to silicon
- a. p-type semiconductor is formed
 - b. no covalent bond is formed
 - c. **n-type semiconductor is formed**
 - d. the material evaporates
24. Resistivity of a semiconductor depends upon
- a. **its atomic number**
 - b. its shape
 - c. both shape and atomic number
 - d. its length

25. Conduction band is

- a. always located at the top of the crystal
- b. is also known as forbidden gap
- c. rarely found in semiconductors
- d. **a range of energies corresponding to the energies of the free electrons**

UNIT II:

1. The principle of working of laser diode is

- a. population inversion
- b. optical pumping
- c. induced emission
- d. **electron-hole recombination**

2. In laser diode, stimulated emission is produced due to

- a. **collision of already produced photons with excited atoms**
- b. applied excitation voltage
- c. high intensity of light falling on it
- d. all the above

3. LED works under

- a. **forward bias condition**
- b. reverse bias condition
- c. avalanche breakdown
- d. zener breakdown

4. When a photon having energy equal to the difference between two states E_2 and E_1 ($E_2 > E_1$) interacts with the atom in the upper energy state, causing it to return to lower energy state with creation of a second photon, the phenomenon is known as

- a. optical pumping
- b. population inversion
- c. spontaneous emission
- d. **stimulated emission**

5. In laser, population inversion can be achieved by

- a. photon excitation
- b. direct electron excitation
- c. chemical reactions
- d. **all the above**

6. The length of resonant cavity in a laser for stimulated emission must be an integral multiple of

- a. λ
- b. **$\lambda/2$**
- c. $\lambda/4$
- d. 2λ

7. The output of Ruby laser is

- a. **a series of very short spikes**
- b. a series of rectangular pulses
- c. a continuous light
- d. all the above

8. The function of helium in the He-Ne laser is

- a. **to enhance the excitation of neon atoms**

- b. to moderate the speed of neon atoms
 - c. to produce light by electronic transitions
 - d. none of the above
9. A laser system in which population inversion is achieved by means other than optical pumping is
- a. Ruby laser
 - b. Helium-Neon laser
 - c. **Carbon-di-oxide laser**
 - d. YAG laser
10. In four level solid state laser (YAG), the excitation of atoms is done
- a. by discharge of electricity
 - b. by Xenon flash lamp
 - c. **by optical pumping with LED**
 - d. by all the above methods
11. In CO₂ laser, the active element is a mixture of helium, nitrogen and carbon-di-oxide, taken in the ratio
- a. **5:4:1**
 - b. 1:4:5
 - c. 4:1:5
 - d. 4:5:1
12. The gallium -arsenide region (active region) of a semiconductor laser has to have higher refractive index than the nearby layers in order that
- a. **optical radiation produced in it is confined within itself**
 - b. light may be lost sideways
 - c. deviation of light takes place in a given direction
 - d. the lasing action may be stable
13. For use in optical radar systems, the laser suitable is
- a. Ruby laser
 - b. **CO₂ laser**
 - c. He-Ne laser
 - d. semiconductor laser
14. In optical couplers, the phototransistor is activated by
- a. forward bias
 - b. reverse bias
 - c. **light from photodiode in them**
 - d. external radiation falling on the coupler
15. A high degree of electrical isolation between triggering current and control device is achieved by the use of
- a. SCR
 - b. thyristor
 - c. **optoelectronic coupler**
 - d. photo detector
16. Which of the following is not applicable for laser?
- a. **no turning arrangement**
 - b. higher emission efficiency
 - c. narrow spectral width
 - d. provision for confinement

17. The first working laser was built in
- a. 1916
 - b. 1960
 - c. **1906**
 - d. 1966
18. The power output from CO₂ laser is about
- a. 1 mW
 - b. 10 mW
 - c. **10 kW**
 - d. 10 mega watt
19. The wavelength of He-Ne laser in visible region is
- a. **632.8 nm**
 - b. 700 nm
 - c. 589.4 nm
 - d. 432.8 nm
20. The wavelength of Ruby laser is
- a. 700 nm
 - b. 432.8 nm
 - c. **643.8 nm**
 - d. 10.8 nm
21. To cut a hard material, the type of laser used is
- a. **CO₂**
 - b. Ruby
 - c. solid state
 - d. He - Ne
22. The radiation used for fibre optic communication is
- a. visible light
 - b. ultraviolet
 - c. **infrared**
 - d. microwave
23. The wavelength of radiation for optical communication is in the range
- a. 0.4 - 0.7 μm
 - b. 0.15 - 0.38 nm
 - c. 100 - 300 nm
 - d. **0.8 - 1.7 μm**
24. Laser beam is
- a. coherent
 - b. monochromatic
 - c. narrow width
 - d. **all the above**
25. In Ruby laser, chromium ions, doped in the ruby rod
- a. absorbs red light
 - b. **absorbs green light**
 - c. absorbs blue light
 - d. all the above
26. To produce stimulated emission, there is a need of
- a. **external pumping**
 - b. no external pumping
 - c. no population inversion
 - d. no medium
27. Cavity resonator is used in
- a. photodiode
 - b. optical coupler
 - c. thermistor
 - d. **laser**

28. Laser is basically an

- a. amplifier
- b. inverter
- c. electrical device
- d. optical oscillator**

29. Wider band gap materials have their refractive index

- a. small**
- b. large
- c. zero
- d. infinity

UNIT III:

1. The dark current in a photodiode is due the
 - b. forward bias
 - c. thermally generated majority carriers in depletion region
 - d. thermally generated minority carriers in depletion region**
 - e. light activated electrons in depletion region
2. The dark current in a photodiode is independent of
 - a. the applied reverse bias**
 - b. the depletion region width
 - c. the light intensity falling on it
 - d. none of the above
3. The p+ region of a photodiode must be kept very thin in order that
 - a. the junction capacitance may be feeble
 - b. the penetration of current carriers is easier
 - c. the light may be penetrated well into the depletion region**
 - d. the doping material may be saved
4. The bandwidth in a photodiode is the inverse of the
 - a. depletion layer width
 - b. time taken for photogenerated carriers to drift across the depletion region**
 - c. forbidden band gap of the semiconductor
 - d. activation time
5. The responsivity of photodiode is the ratio of
 - a. incident optical power to photo current generated
 - b. minority carrier concentration of p-type material to the of n-type material
 - c. the drift time to the period of a.c applied
 - d. the photo current generated to the incident optical power**
6. The conversion efficiency of a photo diode depends on
 - a. the width of the depletion region**
 - b. concentration of the n- type material used
 - c. concentration of the p-type material

- d. intensity of light used
7. In a p-i-n photodiode, the depletion region is formed in such a way that
- a. it extends across the junction
 - b. it extends throughout the material
 - c. it extends beyond the intrinsic region**
 - d. it extends across the n^+ region
8. For high speed response of a p-i-n diode, the depletion layer width must be kept
- a. large
 - b. **small**
 - c. equal to the p^+ region
 - d. equal to the n^+ region
9. The GaAs diode emits light under forward bias, whereas a silicon (Si) diode does not. This is because
- a. Si is direct band gap material
 - b. GaAs has indirect band gap material
 - c. Si is indirect band gap energy**
 - d. Si has small band gap material
10. The avalanche photodiode is operated under
- a. forward bias condition
 - b. reverse bias condition**
 - c. zener breakdown condition
 - d. none of these
11. The special feature of avalanche photodiode is
- a. it can emit monochromatic light
 - b. it can be operated under any bias
 - c. it has internal current gain**
 - d. all the above
12. The resistance of photo thermistor varies in such a way that
- a. it increases with temperature
 - b. it increases with light intensity
 - c. it decreases with light intensity**
 - d. it decreases with temperature
13. The principle of working of photomultiplier tube is
- a. diode action
 - b. transistor action
 - c. secondary emission of electron**
 - d. thermionic effect
14. To be used as photo detector, PIN diode should be connected in
- a. forward bias
 - b. reverse bias**
 - c. no bias
 - d. none of the above

15. The phototransistor is capable of operation over the incident wavelength band between

- a. **0.9 to 1.3 micrometer**
- b. 0.9 to 1.3 millimeter
- c. 9 to 13 micrometer
- d. 9 to 13 millimeter

16. Photo detectors, used in optical fiber are

- a. **APD, PIN**
- b. PIN, gunn diode
- c. APD, gunn diode
- d. None

17. Responsivity of a photodiode is expressed in

- a. **A/W**
- b. W/A
- c. V/w
- d. lux

UNIT IV:

1. Single mode optical fibers are fabricated by keeping

- a. diameter small and the difference of refractive index between core and cladding large
- b. diameter large and the difference of refractive index large
- c. **diameter small and the difference of refractive index small**
- d. diameter large and the difference of refractive index small

2. If n_1 and n_2 are the refractive indices of core and cladding material respectively of an optical fibre, its numerical aperture of the fiber (N.A.) is

- a. $(n_1 - n_2)$
- b. n_1^2 / n_2^2
- c. **$(n_1^2 - n_2^2)^{1/2}$**
- d. $(n_1 - n_2)^{1/2}$

3. In a graded index fiber (GRIN), the core refractive index profile from its peak value at the axis falls off

- a. gradually
- b. exponentially
- c. abruptly
- d. **parabolically**

4. If B_1 and B_2 are communication band widths of single mode and multimode fiber respectively, then

- a. **$B_1 > B_2$**
- b. $B_1 < B_2$
- c. $B_1 = B_2$
- d. $B_1 = B_2 = \alpha$

5. The condition for single mode operation with a step-index optical fiber is that the V - parameter should be less than or equal to

- a. **2.405**
- b. 4.205
- c. 11.621
- d. 1.06.

6. The significance of V - parameter of an optical fiber is that

- a. it represents band width
- b. **it indicates the number of modes that the fiber can support**

- c. it represents the attenuation given by the fiber
 - d. all the above
7. The nature of the core material of optical fiber is
- a. crystalline
 - b. metallic
 - c. air - core
 - d. amorphous**
8. The pulse broadening at the receiving end of the optical fiber is due to
- a. reflection
 - b. refraction
 - c. dispersion**
 - d. deviation
9. The instrument used for characterisation of optical fiber is
- a. CRO
 - b. interferometer
 - c. optical fiber
 - d. OTDR**
10. The wavelength region serving as optical window, suitable for operating communication link with minimum attenuation, is between
- a. 1.30 μm and 1.55 μm**
 - b. 0.68 μm and 1.8 μm
 - c. 3.7 μm and 7.2 μm
 - d. 1.3 μm and 7.2 μm
11. Light propagates along optical fibre by
- a. total external scattering
 - b. dispersion
 - c. total internal diffusion
 - d. total internal reflection**
12. Transmission of signal through optical fibre is in the form of
- a. sound
 - b. electricity
 - c. light**
 - d. nuclear pulse.
13. Attenuation in optical fibre can be measured in
- a. dB / km**
 - b. dB/ m
 - c. k dB / m
 - d. none
14. Fresnel losses are losses due to
- a. diameter
 - b. change in the medium**
 - c. Numerical aperture
 - d. none of the above
15. In optical communication, repeaters are used to
- a. amplify the signal
 - b. reshape the signal
 - c. both for (a) and (b)**
 - d. neither of (a) and (b)
16. Dispersion in silica fibre is minimum at $\lambda =$
- a. 850 nm
 - b. 1300 nm**
 - c. 4000 nm
 - d. 589 nm
17. The V - parameter of an optical fibre is 50. The number of modes in the fibre is

- a. 50
 - b. 250
 - c. **1250**
 - d. 2500
18. Scattering loss in optical fibre varies with wavelength as
- a. $1/\lambda$
 - b. $1/\lambda^2$
 - c. $1/\lambda^3$
 - d. **$1/\lambda^4$**
19. Above cut off wavelength, light wave in an optical fibre propagates in
- a. **fundamental mode**
 - b. zig - zag way
 - c. multimode
 - d. none of the above
20. The V - parameter is a
- a. wave property
 - b. wave propagation property
 - c. **wave guide property**
 - d. all the above
21. Numerical aperture is
- a. independent of refractive indices of core and cladding
 - b. **independent of core diameter**
 - c. proportional to wavelength of light used
 - d. none of the above
22. In an optical fiber, absorption loss is due to
- a. **impurities in the fiber**
 - b. changes in density of the fiber
 - c. uneven rates of cooling
 - d. microscopic cracks in the cladding

UNIT V:

1. Pulse Amplitude Modulation is
 - a. a pulse system immune from noise
 - b. **an analog system**
 - c. a digital system
 - d. all the above
2. In pulse amplitude modulation, a suitable sampling rate for a signal containing frequency components between 40 Hz and 4 KHz would be
 - a. **8 KHz**
 - b. 80 Hz
 - c. 90 Hz
 - d. 4.04 KHz
3. Digital modulation methods are considered superior to analog modulation methods because they are
 - a. of low-cost production
 - b. of wider band width
 - c. **immune to channel noise**
 - d. all the above
4. The essential part of an optical isolator is
 - a. optoelectronic coupler
 - b. **OTDR**

- c. splicer
 - d. **quarter wave plate**
5. In an FM - IM modulation parameter converter, the function of the skirt filter is
- a. to remove the signal frequency
 - b. to add a new frequency to I.M
 - c. **to remove the carrier frequency**
 - d. to maintain the original form of FM
6. Modulations used in fibre optic communications are
- a. PIM
 - b. ASK
 - c. **ASK & PCM**
 - d. none
7. Which communication system requires more band width?
- a. **digital**
 - b. analog
 - c. radio
 - d. refer
8. The refractive index of certain crystals changes linearly with the external electric field. This effect is known as
- a. Frenkel effect
 - b. Kerr effect
 - c. Schottky effect
 - d. **Pockels effect**
9. The direct intensity modulation is different from other types of modulations in that
- a. **it requires no electrical modulation or demodulation**
 - b. it requires frequency modulation scheme only
 - c. it keeps the intensity of light constant
 - d. all the above
10. In acousto - optic modulator, the optic plane wave front and the acoustic plane wave front in the acousto-optic medium are such that
- a. they are parallel to each other
 - b. **they are perpendicular to each other**
 - c. they pass with the same velocity
 - d. they cancel each other always
11. Optical communication is possible with minimum attenuation with
- a. UV
 - b. visible
 - c. **IR**
 - d. X-rays
12. A form of modulation which uses a group of pulses to represent certain values of modulating signal is
- a. **pulse code modulation**
 - b. pulse rate modulation
 - c. pulse intensity modulation
 - d. pulse with modulation

13. Which of the following is the transmission frequency in optical fibre?

- | | |
|---------------|----------------------|
| a. 1011 hertz | c. 1014 hertz |
| b. 108 hertz | d. zero |

SECTION B

UNIT I:

1. Define band gap.
2. What is an electron hole pair?
3. Differentiate direct band gap semiconductor from indirect band gap semiconductor.
4. What is an intrinsic semiconductor?
5. Define hole in a semiconductor.
6. What is an extrinsic semiconductor?
7. Write about donor impurity and acceptor impurity.
8. Define mobility.
9. How would you define current density.
10. Define electrical conductivity.
11. What is optical absorption.
12. Define optical absorption coefficient.

UNIT II:

1. What is an LED?
2. Define population inversion.
3. What is stimulated emission?
4. What are the conditions to achieve laser action?
5. List out the methods of pumping.
6. What are the characteristics of laser?
7. Give the uses of carbon dioxide laser.
8. What is an optoelectronic coupler?

UNIT III:

1. What is the need for optical detectors?
2. What is a photodiode?
3. Define dark current.
4. Draw the structure of photodiode.
5. Draw the reverse voltage characteristics of Ge diode.
6. Give the uses of photodiode.
7. Define sensitivity.

8. Define speed of response.
9. Give the uses of phototransistor.
10. State the principle of photomultiplier.
11. What is a photo thermistor?
12. Give the uses of photo thermistor.

UNIT IV:

1. Give the different types of fibers.
2. Draw the diagram for multimode graded index fibers.
3. List out the different types of step index fibers?
4. Define step index multimode fibers.
5. Define step index single mode fibers.
6. Write a short note on graded index fibers.
7. Write any two differences between step index fiber and graded index fiber.
8. Write any two differences between single mode fiber and multimode fiber.
9. Give the conditions for total internal reflection to take place.
10. What is meant by critical angle?
11. Define acceptance angle.
12. Define numerical aperture.
13. Give a short note on numerical aperture of graded index fiber.
14. List out the different types of absorption losses.
15. What is meant by dispersion in fibers?
16. Define group velocity.
17. Write the difference between dispersive and non-dispersive medium.

UNIT V:

1. List the types of external modulators.
2. Give the advantages and disadvantages of acoustic modulator.
3. Define Amplitude Shift Keying.
4. Define Frequency shift Keying.
5. Give the differences between modulation and demodulation process.
6. Give the schematic representation of the three types of modulation methods.
7. Define electrooptic modulators.
8. Define Pockels effect.
9. Define homodyne detection scheme.
10. Define heterodyne detection scheme.

11. Mention any two advantages of optical fiber communication.
12. Give the schematic representation of analog and digital fiber communication.

SECTION C

UNIT I:

1. Explain direct band gap and indirect band gap semiconductors with energy band diagrams and with examples.
2. Define density of states. Derive an expression for density of states in conduction and valence bands of semiconductors.
3. Show that at zero Kelvin temperature, the Fermi level lies at the middle of the band gap in intrinsic semiconductor.
4. Explain the effect (role) of doping on carrier concentration. Where is the Fermi level located after doping?
5. Define and describe mobility, current density, and electrical conductivity in semiconducting crystals.

UNIT II:

1. What is LASER? Explain population inversion, spontaneous emission, stimulated emission and coherence of radiation.
2. What are opto-electronic couplers? Describe, giving lay-out diagram, the different types of optoelectronic couplers.
3. Define and explain the different parameters of an opto-electronic coupler.
4. Distinguish between spontaneous emission and stimulated emission.
5. Give the advantages and uses of LED.

UNIT III:

1. Describe the structure and functioning of a photodiode giving its V- I characteristics.
2. Derive an expression for the sensitivity of a photodiode.
3. Discuss about the speed of response of a photodiode.
4. Derive an expression for its optical gain and give its uses.
5. Give the advantages and disadvantages of photomultipliers.
6. Why is SLD called so? Describe the structure and action of superluminescent diode (semiconductor laser diode).
7. What is a photo thermistor? Explain the working principle of photo thermistor. Where is it used?

UNIT IV:

1. Classify the types of fibers based on their use in communication.

2. Write about absorption losses in fibres.
3. Write about scattering losses in fibres.
4. Discuss about dispersion in fibers.
5. Discuss about the numerical aperture for graded index fibers.
6. Write about the theory of material dispersion.

UNIT V:

1. Write about analog and digital optical fiber communication systems.
2. Classify the different generations in optical fiber communication systems.
3. Write about the types of modulation formats to transfer information.
4. Classify the modulation formats used for the amplitude modulation of an optical signal.
5. Write about demodulation schemes.
6. What is an acoustoptic modulator? Give its advantages and disadvantages.

SECTION D

UNIT I:

1. Describe the formation of energy bands in semiconductors and explain the energy band diagram for electrons and holes in it.
2. Derive an expression for electron concentration in intrinsic semiconductors.
3. Deduce the hole concentration in intrinsic semiconductors.
4. What is meant by optical absorption? Explain the condition for optical absorption to take place. What is the influence and significance of optical absorption in semiconductors? Describe experimental demonstration of optical absorption.
5. Define optical absorption coefficient. Show that the intensity of light passing through an absorbing medium decrease exponentially.

UNIT II:

1. What are the different types of laser sources? Describe, in detail, the working of any one laser source.
2. Describe the construction and action of Ruby Laser.
3. Describe the construction and action of Helium-Neon Laser.
4. Describe the construction and action of Semiconductor Laser.
5. Describe the construction and action of Carbon-di-oxide Laser.
6. Give the principle, construction and working of LED.

UNIT III:

1. Describe, giving neat sketch, the construction and action of silicon p-i-n photodiode
2. Explain 'sensitivity' and 'speed of response' of a photodiode. Obtain expressions for them.

3. Describe the structure and functioning avalanche photodiode.
4. Explain the principle, construction, working of phototransistor.
5. Describe the principle, construction and working of photomultipliers.

UNIT IV:

1. Tabulate the types of fiber based on the refractive index profile.
2. Tabulate the types of fiber based on the refractive mode.
3. Discuss the light propagation through step index fiber. (or) Obtain an expression for numerical aperture in terms difference of refractive indices of core and cladding.
4. Discuss the types of losses in fibers.

UNIT V:

1. Give the advantages of fiber optic communication systems.
2. Discuss in detail about electro optic modulators using Pockel's effect.
3. Discuss in detail about acousto optic modulators.

SECTION A

Unit I: Applications of Laser

- For a material processing job with laser in order to obtain small size focused spot, the laser chosen should have.
(a) **Small wave length** (b) large wave length
(c) High intensity (d) large beam width
- Drilling with laser is accomplished by the evaporation of material heated. This is carried out by
(a) Laser with constant intensity (b) **Laser with powerful pulse in series**
(c) Continuous wave laser (d) all the above
- For drilling narrow deep holes through brittle materials like ceramics or Silicon, the type of laser used is
(a) CO₂ (b) N₂ (c) He-Ne (d) **Ruby**
- The jet of oxygen gas used in laser cutting set-up does the following job:
(a) **Expels the molten material** (b) Reduces the material
(c) Decreases melting point (d) increase thermal conductivity of the material
- Laser cutting has been used in textile industry for cutting cloth because
(a) It is attractive (b) It gives edge finish
(c) folding become easier (d) **it is most economical**
- The most commonly used laser for welding purpose is
(a) **Nd-YAG** (b) N₂ (c) Ruby (d) He-Ne
- For laser welding, the following laser is unsuitable
(a) Continuous wave lasers (b) **Q-switched pulse lasers**
(c) dye lasers (d) any kind of laser
- An example of low-pressure laser used for laser welding is
(a) He-Ne (b) Ruby (c) Dye (d) **HF**
- Turbid media are those in the atmosphere that contain
(a) No aerosols (b) **many aerosols** (c) Oxygen (d) Nitrogen
- Turbulent medium is one in which the refractive index
(a) **Changes smoothly as a continuous function of space**

- (b) Changes abruptly with space
 - (c) Remains constant for considerable time
 - (d) Vanishes when the medium is heated
11. When a laser beam propagates through atmosphere, the phenomenon of thermal blooming results on account of
- (a) The presence of turbid media
 - (b) The presence of turbulent media
 - (c) Non uniform intensity across the beam**
 - (d) Non uniform beam width
12. In remote sensing, apart from Rayleigh scattering and Raman scattering, intensity variations of scattered light are attributed to
- (a) Doppler effect
 - (b) induced fluorescence**
 - (c) stimulated emission
 - (d) Sunset
13. LIDAR senses changes in altitude of parcels of aerosols by the corresponding
- (a) Phase changes of corresponding light signal
 - (b) Time variation of arriving light signal**
 - (c) Intensity variation in the scattered light
 - (d) All quantities mentioned above.
14. The demerit of using LIDAR for remote sensing is that
- (a) It does not give how long the aerosols will live
 - (b) It does not give information on the nature of the scattering particle**
 - (c) It cannot be transported to various heights in the atmosphere
 - (d) It does not give accurate result
15. Raman LIDAR exhibits Stokes lines as shift in wavelength of back scattered light in the
- (a) Longer wave length side of the original laser wavelength**
 - (b) Short wave length side of the original laser wave length
 - (c) Same position as the original wave length
 - (d) C.R.O
16. Wind velocity is estimated using laser by application of the principle of
- (a) Rayleigh scattering
 - (b) Raman Scattering
 - (c) Doppler effect**
 - (d) all the above

Unit II: Thin Films

- The process does not involve any chemical reaction between the bombarding gas ions and the cathode is known as
 - Physical sputtering**
 - reactive sputtering
 - high pressure sputtering
 - low pressure sputtering
- The limited range of thickness of thin films are
 - few Å to 5000 Å**
 - few Å to 1000 Å
 - few Å to 500 Å
 - few Å to 100 Å
- The example of refractory metal is
 - silicon
 - germanium
 - tungsten**
 - oxygen
- The glow discharge sputtering is used to study the
 - behaviour of gases at reduced pressures under a high dc voltage**
 - behaviour of gases at high pressures under a high dc voltage
 - behaviour of gases at reduced pressures under a low dc voltage
 - behaviour of gases at high pressures under a low dc voltage
- The fuel element is enclosed in a cladding to
 - keep it cool
 - absorb the excess neutrons
 - prevent it from being corroded by the coolant**
 - slow down the neutrons
- Which factor determines the physical, electrical, optical properties of a film?
 - rate of deposition
 - substrate temperature
 - environmental conditions
 - all the above**
- Induction heating technique is possible to avoid contamination of the
 - film
 - charge**
 - substrate
 - metal
- Electron beam method is one of the best methods for the deposition of
 - metals
 - alloys
 - refractory metals
 - all the above**
- The example of solid substrate is
 - glass
 - quartz
 - mica
 - all the above**
- Oil, grease, dirt are generally removed by degreasing the substrates in ----- solution.
 - alkaline
 - soap
 - other detergent
 - all the above**

Unit III: Polymer Materials

- Polymer is made up of
(a) Atoms (b) Molecules (c) **Macromolecules** (d) elements
- Starch is a ----- polymer.
(a) Synthetic (b) Man-made (c) **Bio** (d) None of the above
- initiators are used in free radical polymerisation process.
(a) Thermally stable (b) Kinetically stable (c) **Thermally unstable** (d) Kinetically unstable
- The chain polymerisation process consists of ----- major steps.
(a) 5 (b) 6 (c) **3** (d) 8
- The conversion of propylene to polypropylene is -----
(a) Chain polymerization (b) Free radical polymerisation
(c) **Addition polymerization** (d) Ionic polymerisation
- is an example for co-polymer.
(a) PVC (b) Polyethylene (c) **Nylon 6/6** (d) Polystyrene
- The condensation polymerisation of phenol and formaldehyde leads to -----
(a) **Bakelite** (b) Polybakelite (c) Polyaniline (d) Polyformaldehyde
- The conductive polymers are mainly synthesised by
(a) Free radical polymerization (b) Condensation polymerisation
(c) Ionic polymerisation (d) **Electrochemical polymerization**
- Polyvinylchloride (PVC) is -----
(a) **Thermoplastics** (b) Elastomers (c) Thermosetting (d) None of the above
- The complex shape polymers are formed by
(a) Blow moulding (b) Thermoforming (c) Powder casting (d) **Transfer moulding**
- PVC is processed by ----- method.
(a) Calendering (c) Thermoforming (b) Rotational casting (d) **Blow moulding**
- The specific gravity of the polymers lies between -----
(a) 0.3-12.00 (b) **0.6-2.27** (c) 0.8-1 (d) 12.00-18.50
- are responsible for the electrical conduction in the unsaturated polymers.
(a) σ -electrons (b) **π -electrons** (c) σ -bonds (d) π -bonds
- The synthetic bakelite is ----- polymer.

(a) Conducting (b) Semi-conducting (c) **Insulating** (d) Super conducting

15. Iso-prene is a monomer of -----

(a) Polyethylene (c) Nylon 6/6 (b) Bakelite (d) **Rubber**

Unit IV: Superconductors

1. Below transition temperature, a superconducting material exhibits

- (a) Only zero resistance (b) only diamagnetic property
(c) **zero resistance and diamagnetic** (d) zero resistance and ferromagnetic

2. The magnetization of a superconductor is

- (a) 0 (b) H (c) 1 (d) **-H**

3. Examples of type I superconductor is

- (a) Al ,Nb and Ta (b) **Al , Zn and Hg** (c) Ta ,V and Nb (d) none of these

4. In a superconducting state

- (a) entropy alone changes (b) electronic specific heat alone changes
(c) **both entropy and electronic specific heat changes** (d) none of these

5. In type I superconductors the coherence length is of the order of

- (a) 10^6 m (b) 10^{-3} m (c) 10^3 m (d) **10^{-6} m**

6. When a material becomes superconductor

- (a) **The properties of lattice structure do not change**
(b) the properties of lattice structure do change
(c) it becomes ferromagnetic in nature
(d) magnetic property does not change

7. In superconducting state the energy gap

- (a) is large compared to semiconductors and insulators (b) is zero
(c) **is very small as compared to semiconductors and insulators** (d) does not change

8. In type II superconductors

- (a) the magnetic flux pass through the entire material
(b) the magnetic flux does not pass through the material
(c) **the magnetic flux does not suddenly drop to zero but decreases exponentially**
(d) none of these

9. In superconducting materials average isotropic mass M is related to the transition temperature by (where α is called the isotope effect coefficient)

- (a) $MT_c^a = \text{constant}$ (b) $MT_c = \text{constant}$ (c) $\alpha M = T_c$ **(d) $M^a T_c = \text{constant}$**

10. In flux quantization sum of the flux due to the external source and the flux due to the super current flowing through the ring (ie) $\phi = \phi_{\text{ext}} + \phi_{\text{sc}}$

- (a) ϕ , ϕ_{ext} and ϕ_{sc} are all individually quantized
 (b) ϕ , ϕ_{ext} and ϕ_{sc} are not quantized
(c) ϕ alone is quantized while ϕ_{sc} adjusts according to ϕ_{ext}
 (d) ϕ_{ext} and ϕ_{sc} are quantized while ϕ is not quantized

11. Switching times with a Josephson junction are in order of magnitude

- (a) 10^{-2} ns** (b) 1 ms (c) 10^{-15} ns (d) $1\mu\text{s}$

Unit V: Materials for Nuclear and Space Applications

1. The percentage of U^{235} in natural Uranium is

- a) 0.7%** b) 0.5% c) 10% d) 0.3%

2. The fuel element is enclosed in a cladding to

- a) keep it cool b) absorb the excess neutrons
c) prevent it from being corroded by the coolant d) slow down the neutrons

3. For maximum energy transfer in a single collision between two particles, the mass of one particle must be

- a) equal to the other** b) less than the other
 c) Twice the other d) Thrice the other

4. The neutron flux in reactors is controlled by materials which have

- a) very low thermal conductivity **b) high neutron absorption cross-section**
 c) low neutron absorption cross-section d) high density

5. Which among the following is not a coolant for solid fuel reactors?

- a) Water b) heavy water **c) Silicon** d) liquid sodium

6. Materials with operating temperature exceeding ----- are normally classified as Extreme high temperature materials.

- a) 1000^0 **b) 2000^0F** c) 3000^0F d) 5000^0F

7. An example of extreme high temperature composite is

- a) graphite-tungsten-molybdenum** b) gold-tungsten-molybdenum
 c) graphite-tellurium-molybdenum d) graphite-tungsten-aluminium

8. Which of the following is not an ultra-high strength material for airborne pressure vessels

- a) Titanium alloy 120 VCA
- b) Aluminium alloy 2219
- c) High alloy steel AM 355
- d) Silicone alloy 300 M**

9. Amongst the laminar solids ----- is found to possess good qualities for use in space.

- a) Molybdenum Sulphide**
- b) Graphite
- c) Silica
- d) Diamond

SECTION B

Unit I: Applications of Laser

1. Define LASER.
2. What is laser drilling?
3. What is laser welding?
4. Define key-hole.
5. What are the three methods in laser welding?
6. What is laser cutting?
7. Define LIDAR.
8. What are applications of LIDAR?
9. What is Raman LIDAR?
10. Define RADAR.

Unit II: Thin Films

1. Write a short note on induction heating method.
2. Discuss about the sputtering phenomenon.
3. Restate the Philips process.
4. Compare physical and reactive sputtering.
5. Define high pressure sputtering.
6. What is meant by chemical vapour deposition process?
7. What is meant by vapour transportation method?
8. What is the cause of poor adhesion of a deposit on a substrate?

Unit III: Polymer Material

1. What is meant by polymers?

2. What is meant by monomer?
3. Explain the addition polymerisation process in polymers.
4. Define homo-polymerisation?
5. What is meant by co-polymerisation?
6. Explain electrochemical polymerisation.
7. What is the classification of polymers?
8. What is meant by natural polymers? Give an example.
9. Explain thermoplastic polymers?
10. Mention the important properties of thermoplastic polymers.
11. What is meant by thermosetting polymers? Give an example.
12. Define elastomers? Give suitable examples.
13. What is meant by linear homochain polymers?
14. Differentiate homo-polymer and co-polymer.
15. What is meant by two-dimensional polymers? Give an example.
16. Explain three-dimensional polymers with suitable example.
17. What is bio-polymer?
18. What is the structure of polymers?
19. Why polymers are used as an insulator?

Unit IV: Superconductivity

1. What is meant by superconductivity?
2. What is critical or transition temperature in superconductivity?
3. What is Josephson Effect?
4. What are Cooper pairs?
5. What are High T_c superconductors?
6. Discuss the effect of current on superconductivity.

Unit V: Materials for Nuclear and Space Applications

1. Name a few fissionable materials used as fuels in nuclear reactors.
2. What are the requirements that a cladding material should satisfy?
3. What are the three conditions in which a nuclear reactor can operate?

4. How does the operating condition of the reactor depend on the effective multiplication factor K_{eff} ?
5. What are the properties necessary for a good coolant?
6. What is thermal ablation?
7. Name the soft metals used as lubricants in space applications.

SECTION C

Unit I: Applications of Laser

1. Explain the fundamental properties of laser light that make it useful in material processing and environmental analysis
2. Describe, giving the underlying principle, the applications of laser in material processing
3. Describe, giving relevant theory, the applications of laser in environmental analysis
4. What material processing? Obtain an expression for the power to be spent for local heating in a material processing a job.
5. Explain what “key-hole” in welding is. Describe hoe key-hole is done.
6. Explain the methods of laser welding giving the advantages
7. Explain the methods of laser drilling giving the advantages
8. Describe how welding is done with multi kilowatt laser. Also explain how spot welding is done. Where are spot welding used?

Unit II: Thin Films

1. Apply the glow discharge sputtering method to analyse the behavior of gases at reduced pressure.
2. Develop the theory of substrate cleaning to produce thin films.
3. Discuss about the nature of thin film.
4. Apply the flash evaporation method to produce a constant composition film.
5. Explain the electron beam method.
6. Explain cathodic sputtering phenomena in detail.

Unit III: Polymer Materials

1. Explain the polymerisation mechanism.
2. Explain the process of making the polymers.
3. State and explain the degree of polymerisation?
4. What are the different types of polymers processing methods?
5. Explain the properties of polymers.
6. Explain why the mechanical properties depend on crystallinity of the polymers.
7. Explain the role of structure of the polymers in mechanical properties.
8. Explain the application of polymers in industries.
9. How polymers are used as good conductors?

Unit IV: Superconductivity

1. Write any six general properties of superconductors?
2. Explain the Meissner effect.
3. Explain isotope effect in superconductivity
4. Explain Type I and II superconductors.
5. Derive the London equation.
6. Give some important applications of superconductors.
7. Explain the energy gap of superconductors.
8. Explain the flux quantization of superconductors.

Unit V: Materials for Nuclear and Space Applications

1. Write a short note on Uranium enrichment.
2. Discuss the properties of some commonly used metallic and ceramic nuclear fuel elements.
3. Give the importance of moderators in nuclear reactors.
4. Discuss the role of control materials in nuclear reactors.
5. Why are shielding materials important for nuclear reactors?
6. Write a short note on materials used for the construction of airborne pressure vessels.
7. Write a short note on materials used for lubrication in space applications.
8. Write a short note on materials used for thermal protection.

SECTION D

Unit I: Applications of Laser

1. Explain the methods of laser welding and laser drilling giving the advantages of each case.
2. Describe the method of laser cutting of metals and nonmetals.
3. What are the types of pollution occurring to environment? What are the aspects of environmental analysis and how are they studied experimentally?
4. Describe the principle and method of air pollution and water pollution studies with laser. Also explain how scanning confocal laser microscopy is used to examine micro-organisms at their natural habitat.
5. Point out the differences between laser propagation and microwave propagation through atmosphere.
6. How would you categorize different behaviours of the atmosphere with regard to propagation of laser light through it? Examine the effect of each such category on the propagation characteristic of laser.
7. Explain what is remote-sensing. What are the application of remote-sensing?
8. Describe the construction, working and use of LIDAR and Raman LIDAR.
9. Explain the method of sensing wind velocity with laser.

Unit II: Thin Films

1. Analyse the resistance heating methods to produce thin films in detail.
2. Conclude briefly how the chemical vapour deposition methods are used to produce thin films.

Unit III: Polymer Materials

1. Describe in detail the various types of polymerisation mechanism with suitable examples.
2. How polymers are classified? Describe in detail the classification of the polymers with suitable example.
3. Explain the relation between the structure, properties and applications of the polymers.
Explain with example, the different structure of polymers.
4. Write an essay about the processing of polymers different process methods.
5. Describe the role of structure, properties and applications of the polymers in industries.

6. Explain how the crystalline of a polymer varies with temperature. What is the role of crystal in the mechanical properties of polymers?
7. Describe the various properties of polymers along with their applications in industries.
8. Write an essay on the properties and applications of polymers.
9. Give note on the following:
 - (a) Polymerisation mechanism
 - (b) Structure and properties of polymers
 - (c) Applications of polymers

Unit IV: Superconductivity

1. Describe the occurrence of superconductors and explain Meissner effect?
2. What are the general properties of superconductors?
3. What is Josephson effect? Explain both D.C and A.C Josephson effects
4. Write a note on BCS theory of superconductivity
5. Write an essay on High T_c superconductors.
6. Write an essay on application of superconductors.
7. Generate the London equations. Give the theory of penetration depth in superconductivity.
8. Explain the thermal properties of superconductors.

Unit V: Materials for Nuclear and Space Applications

1. Describe in detail about nuclear fuels, uranium enrichment and fuel elements.
2. Explain the various materials used as moderators and control materials in nuclear reactors.
3. Describe in detail the various extreme high temperature materials used in space applications.

PSYCHOLOGY UG 2021-2024 QUESTION BANK

SEMESTER I

GENERAL PSYCHOLOGY – 21UPSC11

SECTION –A

Unit - I

1. William James in his book _____ defined Psychology as the description and explanation of state of consciousness
 - a. Principles of sociology
 - b. **Principles of Psychology**
 - c. study of mind
 - d. What is soul ?
2. _____ established the first Psychology laboratory at the University of Leipzig.
 - a. **William Wundt**
 - b. Titchener
 - c. Woodworth
 - d. J.B. Watson
3. Psychology unquestionably falls in the category of _____
 - a. Extra science
 - b. **Positive science**
 - c. Philosophy
 - d. Natural sense
4. _____ is a branch of Psychology deals with the group behavior
 - a. **Social Psychology**
 - b. Abnormal Psychology
 - c. General Psychology
 - d. Treatment Psychology
5. Para- Psychology deals with _____
 - a. Counselling
 - b. **Re-birth**
 - c. inter-relationship
 - d. Healing
6. William Wundt focused his experiments on _____
 - a. **Sensation**
 - b. anatomy
 - c. revising
 - d. Nervous system
7. _____ is regarded as one of the first member of the functional school.
 - a. James
 - b. **William James**
 - c. William Wundt
 - d. John
8. Behaviourism as a method of studying the behavior focused on _____
 - a. human science
 - b. Mind behavior
 - c. **Observable behavior**
 - d. Physiology
9. Gestalt is _____
 - a. **Configuration**
 - b. innate
 - c. criticism
 - d. Psychoanalysis
10. Sigmund Freud gave importance to the repressed _____ - experience
 - a. **Childhood**
 - b. adult
 - c. oldage
 - d. conscious
11. _____ develops out of the id and acts as an intermediary between three sets of forces.
 - a. super ego
 - b. **ego**
 - c. moral
 - d. superiority
12. Abraham Maslow and Rogers contributed towards the growth of _____
 - a. personal Psychology
 - b. Latency
 - c. **Humanist Psychology**
 - d. existence

13. _____ method means looking inward
a. observation b. **introspection** c. individual d. sensation
14. _____ is the most scientific method of studying behavior
a. **experimental method** b. observation method c. Case study d. survey
15. _____ is a school of Psychology
a. History b. **Psychoanalysis** c. individual d. reaction

Unit – II

16. The _____ factors including intelligence have been supposed to be potent factors in behavior
a. interest b. **cognitive** c. nervous d. biological
17. The human body is composed of different types of cells like bone cells, _____ and body cells.
a. lungs cells b. nerve cells c. **muscle cells** d. message cells
18. A nerve cell with all its branches is called a _____
a. **Neuron** b. sense c. receiver d. fibre
19. The number of neurons in a human nervous system has been estimated at _____ million
a. **100 to 200** b. 300 to 400 c. 50 to 100 d. 10 to 20
20. The tiny fibres extending out from the cell body are called _____
a. fibres b. **dendrites** c. sheath d. Axon
21. The message from the cell body travel to the length of a nerve fibre known as the _____
a. **Axon** b. muscle c. RNA d. DNA
22. The _____ neurons collect messages from inside and outside of the body and carry them to the spinal cord and brain
a. **sensory** b. reflex c. impulse d. neural.
23. The motor neurons carry messages from the brain and spinal cord to the _____ and glands.
a. bones b. **muscles** c. memories d. organs
24. The human nervous system is divided in to _____ parts.
a. three b. **two** c. five d. eight
25. The _____ is situated behind and beneath of fore brain
a. **Hind brain** b. pons c. Medulla d. Mid brain
26. The _____ is a sort of bridge connecting the fore brain and hind brain

- a. **Mid brain** b. spinal cord c. cerebrum d. cerebellum
27. The cerebellum is composed of _____ - circular hemispheres.
a. four b. **two** c. three d. one
28. The sympathetic system causes _____ to start producing hormones
a. **adrenal gland** b. digestive gland c. respiration d. heart glands
29. The somatic system consists of sensory and _____ nerves
a. cognitive b. **motor** c. muscles d. pupil
30. The gland is situated within the brain
a. **Pineal** b. pituitary c. thyroid d. thymus

Unit – III

31. Light travels through space in the form of light waves at approximately _____
a) **1,86,000 miles or 3,00,000 kilometers per second** b) 4,00,000 kilometers per second
c) 10 miles or 40 miles per second d) 2-3 miles per second
32. Human beings are able to utilize a small portion of the light waves available in space, known as _____
a) waves b) **visible spectrum** c) radar d) rays
33. The common complaints of eye are caused by an error in communication between the lens and the _____
a) pupil b) **retina** c) cone d) rods
34. The light enters the lens through the _____ a) fovea b) **pupil** c) cells d) nerve
35. The rectina contains the receptor cells that respond to _____
a) **light** b) cones c) rods d) axons
36. The _____ has no receptors
a) Iris b) nerve c) **blind spot** d) cones
37. The cones enable us to see _____
a) **colour** b) night vision c) sensation d) vision
38. The axons of ganglion cells make up the _____ nerve
a) visual b) **optic** c) electro d) message
39. The sound waves from the air are first collected by the _____
a) **pinna** b) hammer c) anvil d) cochlea
40. The round window tries to equalize the _____ in the inner ear.
a) sound b) **pressure** c) air d) channels
41. The oval window is a membrane of the _____

- a)auditory canal b) eardrum c) **cochlea** d) anvil
42. The cochlea is a _____ sized coiled tube.
a)**pea** b) round c) ball d) coin
43. The spiral _____ send neural impulses through the auditory nerve to the brain.
a)bipolar cells b)**ganglion cells** c) vestibular cells d)utricle
44. Free nerve endings receptors are found just below the surface of the _____
a)nerve b) skin c) nose d) organs
45. When we are touching something warm and something cool at the same time two types of _____ sensations may be felt.
a)pain b)damage c)distress d)**paradoxical**
46. _____theory was propagated by the psychologists Ronald Melzack and Patrick Wall.
a) **gate control** b)brain stem c)signals d) Patrick
47. The kinesthetic and the vestibular sense help us to maintain the _____ of our body.
a)**balances** b)pressure c)pain d) stamina

Unit – IV

48. Perception was first studied properly by a group of German psychologists known as the _____
a)configurations b) expectations c) **Gestaltists** d) perceivers
49. The word “gestalt” coming from the German means _____
a) **whole** b) part c) quite d) proper
50. Sensory experiences other than _____ experiences may also be perceived as figure and ground .
a) **visual** b) cognitive c) reversible d)exist
51. Rubins vase an ambiguous figure that can be perceived either as a base or faces
a) **two** b) three c) four d) one
52. Principle of closure is helpful in making valuable interpretation of various _____ objects, patterns or stimuli present in our environment
a)complete b)**incomplete** c) separate d)similar
53. On the basis of similarity, objects or stimuli that look alike are usually perceived as _____
a)cubes b) **unit** c) molecule d) compound

54. On _____ basis objects or stimuli that appear close to one another are likely to be perceived as belonging to the same group.
a) closure b) continuity c) **proximity** d) contrast
55. A contour is said to be a _____ between a figure and its ground
a) friendly b) interpretation c) enemy d) boundary
56. A change in the _____ is likely to bring a great change in its perception
a) context b) group c) figure d) ground
57. _____ and distance perception is a visual monocular cues.
58. Perceptual illusions represent gross misjudgement of _____ perception
a) **false** b) true c) correct d) large
59. Two important binocular cues naming retinal disparity and _____
a) convergence b) space c) **variation** d) direction
60. Shadowing may also help in the perception of a three dimensional figure out of _____ dimensional drawing
a) four b) **two** c) six d) three
61. The disparity in images is known as _____ disparity
a) **retinal** b) mono c) visual d) muscle
62. If an object is brought nearer, both our eyes _____ upon the object in order to focus it
a) refuse b) **converge** c) judging d) sense
63. The phenomenon of convergence is controlled by the _____ - muscles
a) **eye** b) brain c) ear d) distance
64. In horizontal - vertical illusions _____ line is most often perceived longer
a) **vertical** b) horizontal c) acute d) lengthier
65. In Ponzo illusion the _____ rectangular pieces kept between the rail road tracks is larger in size
a) bottom b) **top** c) down d) under
66. Illusions of _____ are supposed to be the result of eye – movements and tendency to over estimate acute angles.
a) **curvature** b) bowed c) parallel d) identical
67. Muller – Lyer illusion is an example of _____ - illusion
a) depth b) rectangle c) length d) horizontal

Unit – V

68. _____ refers to your individual awareness of your unique thoughts, memories, feelings and sensations.
a)unconsciousness b) **consciousness** c) planning d) experiences
69. _____ is a state of human consciousness involving focused attention and reduced peripheral awareness and an enhanced capacity to respond to suggestion
a)**hypnosis** b)distraction c) concentration d) meditation
70. _____ can involve focusing on the breathe, on bodily sensations or on a word or phrase known as a mantra
a)hypnosis b) consciousness c) **meditation** d) frightening
71. _____ developed a psychological technique to interpret dreams
a)**Sigmund Freud** b)Michel c)Jouvet d) Willium James
72. In modern times, dreams have been seen as a connection to the _____ mind
a)clear b)conscious c) **unconscious** d)awareness
73. REM sleep is revealed by continuous movements of the _____ during sleep.
a)**eyes** b) hands c) legs d)fingers
74. People are more likely to remember the dream if they are awakened during the _____ phase
a)MER b)**REM** c) ERM d) RME
75. The scientific study of dreams is called _____
a)**Oneirology** b)Rapid-eye movement c) stages of sleep d) prophecy
76. REM sleep is also known as _____ sleep
a)doxical b)**paradoxical** c) metadoxical d)paradox
77. Stage 2 sleep usually lasts about _____ minutes. a)20 b) 30 c) 40 d) 60
78. People with _____ sleeping habits tend to have hypnic jerks more often.
a)regular b) **irregular** c) more d) minimum
79. Sleep cycles consists of _____ different stages of sleep
a) five b) three c)**four** d) one
80. _____ includes all disorders of initiating and maintaining sleep
a)hypersonic b)**Insomnia** c) excessive sleep d) REM
81. _____ includes disorders of excessive sleep or sleepiness
a)**hypersonic** b)sleep apnea c) Insomia d)somia
82. In sleep _____, the patient stops breathing many times each night.
a)pills b) **apnea** c) narcolepsy d) REM

83. _____ fall a sleep in the middle of a conversation
a)patients b)**Narcoleptics** c) hallucinators d) orexin
84. _____ is characterized by recurring losses of muscle tone during wakefulness
a)**Cataplexy** b) oneiology c)Atonia d) sleepiness
85. _____ is synthesized by neurons in the regions of the hypothalamus that has been linked to the promotion of wakefulness
a)Thalamus b)**Orexin** c) muscles d) hormones

SECTION –B

UNIT I

1. What is Psychology?
2. What kind of science is Psychology ?
3. Scope of Psychology
4. Branches and fields of Psychology
5. Write a note on structuralism
6. Write a short note on functionalism
7. Write about Behaviourism
8. What is Gestalt Psychology?
9. Write about Psychoanalysis
10. What is humanist Psychology?
11. Write about introspection method
12. Write about observation method
13. What is experimental method?
14. Write about case study
15. Write a short not on survey method

UNIT II

16. What is neuron ?
17. What is dendrites?
18. What is the role of sensory neuron ?
19. Write about the Mid brain
20. What are pons?
21. Where is the kind brain situated ?

22. Write about the Medulla
23. Write a note on the cerebellum
24. What is spinal cord?
25. Write about the peripheral nervous system.
26. Write about the autonomic nervous system
27. What is the role of para-sympathetic nervous system?
28. Write about the endocrine system
29. Write about the thyroid gland
30. Write about the thymus gland
31. What is the role of Adrenal gland ?
32. Write a note on the pancreas
33. What is heredity ?
34. Write a note on the role of genes
35. Write a note on chromosomes

Unit -III

36. Write the senses and their role
37. Write about sensitivity
38. Write about vision
39. What is cornea ?
40. Write about Adaptation,
41. What is cochlea?
42. Write a note on sense of smell
43. Write a note on sense of taste
44. Write about the sense of touch or pressure
45. Write about the sense of temperature
46. Write about the sense of pain
47. Write about the kinesthetic sense
48. Write about the vestibular sense

Unit -IV

49. Write about perception
50. Define Gestalt psychology
51. What is attention ?

- 52. What is motivation ?
- 53. Explain learning
- 54. Explain the illusions of length
- 55. Explain the illusions of perspective
- 56. Proximity
- 57. Similarity
- 58. Continuity
- 59. What is ESP
- 60. Define Phi-phenomenon
- 61. What is volitional attention?
- 62. Explain Implicit volitional attention
- 63. Explain Explicit volitional attention

Unit – V

- 64. What is consciousness?
- 65. Write about hypnosis
- 66. Explain meditation
- 67. Write a note on sleep
- 68. What is REM ?
- 69. Explain Oneirology
- 70. Write about paradoxical
- 71. Explain sleep cycle
- 72. What is Insomnia ?
- 73. Explain Hypersomnia
- 74. Write a notes on sleep apnea
- 75. Describe Narcolepsy
- 76. What is cataplexy?
- 77. What is Orexin ?
- 78. Explain dream

SECTION –C

Unit-I

1. Write a short note on the topic meaning of the term behavior
2. Scope of Psychology
3. What are the branches and fields of Psychology?
4. Write about the various schools of Psychology shortly (any 3)
5. Write about the utility of Psychology
6. Write a short note on Psychoanalysis
7. Write about the modern age of Scientific Psychology
8. Recent trends in contemporary Psychology
9. Write about methods of Psychology shortly (any 3)
10. Write about observation method

Unit-II

11. Write about neuron the basic unit of the nervous system.
12. Write about the central nervous system
13. Write about the peripheral nervous system
14. The influence of the nervous system on human behavior
15. Write about the Endocrine system
16. Write a note on heredity
17. Write a note on the role of genes
18. Write a short note on determination of sex
19. The role of heredity or environment in the development of personality and behavior
20. What is environment ?
21. Write about the twins mechanism
22. Write about the spinal cord

Unit-III

23. Explain about the sense of vision
24. Explain about the structure and functioning of the ear
25. Explain about the chemical senses

26. Write about the skin senses
27. Explain about the body senses
28. Write a note on the vestibular sense
29. Describe about the sense of smell
30. Describe about the sense of taste

UNIT IV

31. Explain the principle of closure and the principle of figure and group'
32. Explain the principles of grouping
33. Describe the monocular perception
34. Explain the binocular perception
35. Write in detail about the perceptual illusions (any 3)
36. Explain the types of attention
37. Explain depth perception

UNIT V

38. Write in detail about the sleep disorders
39. Explain the sleep cycle
40. Explain hypnosis and consciousness
41. Write in detail about dreams
42. Explain the REM and dreams

SECTION –D

Answer in about 500 words each :

12 Marks

UNIT I

1. Write about the branches and fields of Psychology
2. Write about the various schools of Psychology
3. Write the various methods of Psychology

UNIT II

4. Explain the structure of neuron
5. Write about the division of the human nervous system

6. Explain about the Endocrine system and its functions
7. Explain about heredity and environment in the development of personality and behavior.

UNIT III

8. Write the structure and function of eye
9. Write in detail about the ear and its function
10. Explain the chemical senses
11. Explain about the skin sense
12. Describe the body senses

UNIT IV

13. Write in detail about the types of attention
14. Describe any four principles of perception
15. Explain in detail about the monocular perception
16. Write in detail about the binocular perception
17. Explain the various perceptual illusions.

UNIT V

18. Explain the four stages of sleep
19. Explain the sleep cycle
20. Write in detail about the sleep related disorders
21. Explain about Hypnosis, consciousness, dreams and meditation

ELEMENTS OF SOCIOLOGY - 21UPSA11

SECTION A

UNIT 1

T/F:

1. Sociology is a physical science. F
2. Community sentiment is a feeling of oneness. T
3. Institutions are concrete. F
4. Ascribed statuses cannot be changed. T
5. Culture is not continuous F
6. Culture is cumulative. T
7. Father of sociology is Auguste Comte. T
8. Study of animals is called sociology. F
9. Sociology is an abstract science. T
10. Acquired statuses give a sense of wellbeing. T

UNIT 2

FILL UPS:

1. In the view of functionalists, society is like a **living organism**.
2. The functionalist and conflict perspective analyse society at **macro level**.
3. The conflict perspective was developed by **Karl Marx**.
4. Anthropology is the study of **man**.
5. Social psychology studies **behaviour** in group environment.

MATCH:

- | | |
|-----------------------|-----------------|
| 6. Functionalist | Herbert Spencer |
| 7. Conflict | Karl Marx |
| 8. Interactionalist | Macro level |
| 9. Anthropology | study of man |
| 10. Social psychology | human behaviour |

UNIT 3

FILL UPS:

1. Internalisation of terms refers to **process**.
2. **Sigmund Freud** was the founder of psycho analysis.
3. Freud centered around the **human mind** rather than the process of socialization.
4. The animal impulse in man is called **id**.
5. Collective representation throws light on **socialization**.
6. Socialization is a gradual process of **learning**.
7. **Culture** defines the social situations for us.
8. Cultural alternatives provides **choice** for the individuals.
9. **Personality** is a product of the society.
10. A group is a system of **interaction**.

UNIT 4

MATCH:

- | | |
|-----------------------|------------------------|
| 1. Family | agent of socialisation |
| 2. Essential | provision of a home |
| 3. Non essential | education |
| 4. Status | ascribed and achieved |
| 5. Consanguine family | blood relationship |
| 6. Conjugal | married |
| 7. Joint family | undivided family |
| 8. Nair | sex relationship |
| 9. Nambudari | illom |
| 10. Litigation | law problem |
| 11. Western values | individualism |

UNIT 5

FILL UPS:

1. Social control is control of a society over a group. F
2. Through social control law and order are maintained. T
3. According to Ross, conformity is a purpose of social control. F

4. The influence of the society has been there since time memorial. F
5. Formal control is more effective in primary groups. F
6. Societies struggle not only for solidarity, but also for continuity. T
7. Social control is as old as human society. T
8. Nature of social control is universal. T
9. Effective informal control is gossip. T
10. Formal control maintains rules and regulations to be followed. T

SECTION B

UNIT 1

1. Define sociology.
2. Define society.
3. Define community.
4. Define association.
5. Define institution.
6. What is social status?
7. What is role?
8. What are the types of roles?
9. What are ascribed and achieved statuses?
10. What is a social structure?
11. Define culture.
12. What are the types of culture contents?
13. What are the elements of culture?

UNIT 2

1. Define anthropology.
2. Define social research.
3. Define observation.
4. Define questionnaire.
5. Define interview.
6. What are the types of interviews?

UNIT 3

1. Define socialization.
2. Write any 4 types of socialization.
3. What are the theories of socialization?
4. Write the four stages of socialization.
5. What are the 3 analysis of human mind?

UNIT 4

1. Define family.
2. What are essential and non essential functions?
3. What are the four main functions of a family?
4. List any four characteristics of family.
5. Define matriarchal family.
6. Define patriarchal family.
7. Define nuclear family. What are its 2 structures?
8. Write about the joint family system in India.

UNIT 5

1. Define social control.
2. What is social control?
3. Describe the nature of social control.
4. What are the 3 purposes of social control?
5. What are the types of social control?
6. Social control brings about social conformity. Explain.

SECTION C

UNIT 1

1. Describe the scope of sociology.
2. Describe the schools of sociology.
3. What are the various perspectives of sociology?
4. Distinguish between society and community.
5. What are the characteristics of institutions?
6. Differentiate between association and institutions.
7. What are the natures of status?

8. What are the types of functions?
9. What are the functions of culture?
10. Explain the growth of culture.

UNIT 2

1. Types of major perspectives in sociology.
2. Describe the limitations of scientific methods in sociology.
3. List the advantages and disadvantages of questionnaires.
4. Explain the process of interview.
5. What are the advantages and disadvantages of interview?
6. Differentiate sociology and anthropology.
7. Differentiate social psychology and sociology.
8. Differentiate sociology and economics.

UNIT 3

1. What are the types of socialization.
2. Describe the stages of socialization.
3. What are the process of socialization.

UNIT 4

1. Describe the types of families.
2. Differentiate between matriarchal and patriarchal family.
3. Write any 6 distinctive features of family.
4. Write the merits and demerits of joint family.

UNIT 5

1. Describe social control. Write about the nature of social control.
2. What are the purposes of social control?
3. What are the types of social control?

SECTION D

UNIT 1

1. Explain the nature of sociology in detail.
2. Define sociology and the other social sciences.
3. Explain the characteristics of sociology.
4. Explain the characteristics of culture.
5. What are the causes of cultural changes? Explain in detail.

UNIT 2

1. Describe in detail the methods of sociology.
2. Define interview. Describe its types and process in detail.
3. Write in detail about the perspectives of sociology.

UNIT 3

1. Write in detail the nature and characteristics of competition.
2. Write in detail the nature and characteristics of conflicts

UNIT 4

1. Write in detail the characteristics of family.
2. What are the functions of a family?
3. What are the recent trends in the nuclear family?
4. Write about the characteristics of joint family.
5. What are the causes for the changes in the joint family system? Discuss in detail.

UNIT 5

1. Define social control. What are the types and nature of social control?
2. Define social change. What are the types of social change.

PROFESSIONAL ENGLISH FOR PSYCHOLOGY - 21UPSPE1

SECTION A

UNIT 1

Choose the correct form of tense :

1. The book Emotional Intelligence ----- by Daniel Goleman.

- a) Wrote b) write c) written d) was written

2. Erik Erikson ----- a German American Psychoanalyst.

- a) is b) was c) has been d) had been

3. Evolutionary Psychology ----- on the study of how the theory of evolution can explain physiological process.

- a) focus b) focuses c) will focus d) focusing

4. Denial is a defence mechanism ----- by Anna Freud.

- a) proposed b) will be proposed c) have been proposed d) would propose

5. Positive reinforcement ----- the likelihood that behaviour will be repeated.

- a) increased b) increases c) should increase d) shall increase

Convert the following sentences into passive voice

UNIT-2

VOCABULARY

Match the following words with its meaning

- | | |
|------------------|--|
| 1. Bias | - person's inability to take responsibility for their actions |
| 2. Construct | - one's awareness of the world around them. |
| 3. Insanity | - ability to use all five senses to focus on the present moment. |
| 4. Consciousness | - method of thinking or theory |
| 5. Mindfulness | - feeling prejudice for or against something. |
| 6. Influence | - Feeling that make one self-conscious and unable to act in a relaxed or natural way |
| 7. Vulnerable | - Restriction or disadvantages |
| 8. Limitation | - Exposed to possibility of being attacked or harmed |

9.Competitive - Capacity to have an influence or effect on behaviour of someone.

10.Inhibition - Relating to or characterized by competition

UNIT 3

Find the part of speech for underlined words.

(Noun,Pronoun, Adjective,Verb, Conjunction,Preposition, Adverb)

11.Tulving proposed the model of memory.

12.The field of artificial intelligence was founded in 1956 by Chomsky.

13.Psychophysics, structuralism, functionalism andbehaviourism all contributed to the development of cognition.

14.Angular size-contrast theory focuses on the relative figure ground relationship.

15.American psychologist, Edward Lee Thorndike had a keen interested in studying animal learning.

Fill in the interrogative sentences

16. ----- types of questions do psychologists ask?

17.----- is your college psychological counsellor?

18.----- does an individual seek counselling?

19.----- can we come to a conclusion?

20.----- theory emphasize on Human values?

UNIT 4

Word Association

Write any 2 words that comes to your mind on reading the following words.

a.Happiness b.Luck c.Media

a.Exam b.Rain c.Life

Essay questions

24.Write an essay on a well renowned psychologist.

25.Give suggestions on how to manage stress.

26.What is the role of a counselling psychologist? Write your views .

27.What do you think as a major achievement in your life?

28.Why did you choose psychology as your major subject?

UNIT 4

1. Perception of an individual is ----- by learning and experience.

a)influenced b)changed c)moulded d)created

2. Old age people are more ----- to mental illness.

a)liable b)prone c)resistant d)immune

3. Psychoanalytical theory was ----- by Freud.

a)found b)proposed c)invented d)marked

4. IQ test was ----- by Alfred Binet

a)found b)invented c)developed d)proposed

5. Choose the synonym of the word “consistency”

a)persistent b)compatible c)contrary d)incongruous

6. Choose the antonym of the word “reared”

a)nurtured b)fostered c)abandoned d)raised

7. Fill in with the correct verb.

My perspective on transgender ----- when I conversed with one among them.

a)will change b)changed c)would change d)will not change

8. Everyone of us ----- age, colour and caste, have the need for love and affection.

a)based on b)depending on c)irrespective of d)with respect to

9. Ego works ----- reality principle.

a)above b)on c)beside d)with

10. Same emotions can be ----- by a number of different stimuli, objects and situations.

a)aroused b)given c)expressed d)taken

UNIT 5

1. Frame sentences using the following words

a.behaviour b.thinking

c.Perspective d.influence

e.emotion

2. Frame sentences using the following idioms and phrases

a. blessing in disguise b. Apple of my eye.

c. cup of tea d. on cloud nine.

e. play a major role f. will influence

3. PICTURE DESCRIPTION

Explain the 6 basic emotions by seeing the given picture.

The universal emotional expressions

4. Develop a story based on the given picture

5. Explain the psychological concept from the given picture

SEMESTER II

DEVELOPMENTAL PSYCHOLOGY – 21UPSC21

SECTION - A

UNIT I

1. Which is not an antagonistic process in development
 - a. Evolution
 - b. Atrophy
 - c. Inevolution
 - d. **Life**
2. Psychological growth is _____ and additive processes
 - a. **Continuous**
 - b. Limited
 - c. Attractive
 - d. Strict
3. Self-realization plays an important role in _____
 - a. Physical health
 - b. **Mental Health**
 - c. Well-being
 - d. Happiness
4. Development follows a predictive and definite pattern _____
 - a. **True**
 - b. False
 - c. Sometimes
 - d. Unknown
5. Which factor does not help in predicting how long one can live?
 - a. Luck
 - b. Inherent weakness
 - c. Environment
 - d. **Diabetes**
6. Prenatal period is for a duration of _____
 - a. **10 months**
 - b. 12 months
 - c. 7 months
 - d. 8 months.
7. What is the 2nd shortest period of life span
 - a. Infancy
 - b. Puberty
 - c. **Prenatal**
 - d. Old age
8. Which of the following is a psychological hazard during the stage of prenatal?
 - a. Developmental irregularities
 - b. **Traditional beliefs**
 - c. Environmental condition
 - d. Ordinal position

9. The physical hazard during prenatal period does not occur during _____
 - a. Period of zygote
 - b. Period of embryo
 - c. Period of fetus
 - d. Period of infancy**
10. Which of the following is one of the unfavorable attitudes towards an unborn child?
 - a. Scorn for the child**
 - b. Wanting the child at this time
 - c. No preference in gender of the child
 - d. Wanting twins.

UNIT II

1. Any agent that causes a birth defect
 - a. Disorder
 - b. Drugs
 - c. Teratogen**
 - d. Maternal disease
2. Which is the shortest period in life span
 - a. Prenatal
 - b. Infancy**
 - c. Adolescent
 - d. Old age
3. Traditional belief is a _____ kind of hazard
 - a. Physical
 - b. Psychological**
 - c. Environmental
 - d. Heredity
4. According to Piaget's theory, the second stage of cognitive development is _____
 - a. Sensorimotor
 - b. Formal operational.
 - c. Pre-operational**
 - d. Concrete operational
5. What is the average weight of an infant?
 - a. 3.5 pounds
 - b. 2.5 Pounds
 - c. 7.5 Pounds**
 - d. 8.5 Pounds
6. The most sensitive and active sense organ during infancy is _____
 - a. Taste**
 - b. Awareness
 - c. Sound
 - d. Vision
7. Infancy is from a duration of _____
 - a. 2 weeks to 2 months
 - b. Birth to 2 weeks**
 - c. 6 months
 - d. 12 months
8. In this kind of birth, the child's buttocks appear first followed by the legs and finally the head.
 - a. Transverse
 - c. Instrument

- b. **Breech** d. Natural
9. Neonatal heartbeat is _____ compared to adult heartbeat.
- a. Slow c. **rapid**
- b. Same d. indifferent
10. During infancy the state consciousness is _____
- a. Fully developed c. Indifferent
- b. **Undeveloped** d. yet to be studied
11. Common play pattern in babyhood does not include _____
- a. Sensorimotor play c. Games
- b. **Peripheral play** d. Amusements.
12. Which is not one among the important concepts that develop in babyhood
- a. Concept of space c. concept of beauty
- b. Concept of weight d. **concept of love**
13. First two weeks after conception is known as.....period.
- a. Postpartum period c. Embryonic period
- b. Fetal period d. **Germinal period**
- 14.
1. Early childhood is for a period of _____
- a. **3 to 6 years** c. 7 to 10 years
- b. 4 to 10 years d. 6 to puberty
2. Late childhood is for a period of
- a. 7 to 15 years c. 15 to 18 years
- b. **6 to puberty** d. 5 to 14 years
3. Which of the following is the name used by psychologist to refer early childhood?
- a. **Imitative age** c. preschool age
- b. Troublesome age d. gang age
4. Which of the following is the name used by educators to refer late childhood?
- a. Imitative age c. preschool age
- b. **Elementary school age** d. gang age

5. Learning to speak is considered as a tool in achieving _____.
 - a. Dependence
 - b. Independence**
 - c. Pathogen
 - d. Interdependence
6. Which of the following is not an influencing factor on how much young children talk?
 - a. Type of discipline
 - b. Ordinal position
 - c. Bilingualism
 - d. Personality**
7. Which of the following is one of the physical development in late childhood?
 - a. **Homeliness**
 - b. Handedness
 - c. color vocabulary
 - d. Self esteem
8. Many left handed children become _____ during late childhood.
 - a. Right handed
 - b. **Ambidextrous**
 - c. Left handed
 - d. Double handed
9. Play interests and activities in late childhood does not include _____.
 - a. Constructive play
 - b. Collecting
 - c. Creative play**
 - d. Games
10. Which of the following is a common misdemeanor in school?
 - a. Being sneaky
 - b. **Being truant**
 - c. fighting with siblings
 - d. being rude to adult family members

UNIT IV

1. Puberty is divided into.....stages.
 - a. 1
 - b. 3**
 - c. 2
 - d. 4
2. First menstrual cycle in girls is called
 - a. periods
 - b. menarche**
 - c. menses
 - d. chums
3. is the gland responsible for hormonal changes in puberty.
 - a. **pituitary**
 - b. thyroid
 - c. endocrine
 - d. digestive
4.maturers among boys are fortunate.
 - a. late
 - b. rapid
 - c. slow
 - d. early**

5. Among girls, those who mature are lucky.
a. **late** c. slow
b. rapid d. early
6. Pubic hair is an example of sex characteristics.
a. primary c. tertiary
b. **secondary** d. important
7. Underachievement is the major problem of
a. boys c. **girls**
b. kids d. adults
8. The first essential of happiness is
a. achievement c. affiliation
b. **acceptance** d. attachment
9. Puberty is also called.....age.
a. joyful c. **problem**
b. learning d. growing
10. Locker room syndrome is found in
a. **boys** c. girls
b. men d. women
11. The second essential of happiness is
a. Affiliation c. **affection**
b. Acceptance d. attachment
12. The third essential of happiness is
a. **achievement** c. affection
b. acceptance d. attachment
13. Puberty of boys is marked by
a. menarche c. mustache
b. **Nocturnal emission** d. beard
14. People of.....size and body, tend to live longer.
a. **Average** c. huge
b. Tiny d. tall

15.years are needed for the sexual maturity of girls.
- a. 2
 - b. **3**
 - c. 1
 - d. 4
16. The latin word adolescere means to
- a. learn
 - b. mature
 - c. **grow**
 - d. live
17. The female sex organ is called
- a. Gonad
 - b. **ovum**
 - c. spermatozoa
 - d. neuron
18. Adolescence is the threshold of
- a. **adulthood**
 - b. career
 - c. maturity
 - d. oldage
19. accepting their is the primary developmental task of adolescence.
- a. attitude
 - b. psyche
 - c. **physique**
 - d. personality
20. Menstruation is commonly called Of adolescent girls.
- a. blessing
 - b. punishment
 - c. **curse**
 - d. gift
21. In a mature ovum, there are.....Pairs of chromosomes.
- a. 21
 - b. 22
 - c. **23**
 - d. 24
22. Of the significant people, the Attitude affects the child the most.
- a. **Mother**
 - b. Father
 - c. brother
 - d. sister
23. Groups of close friends are called
- a. Crowds
 - b. Groups
 - c. **cliques**
 - d. gangs
24. Children belonging to no groups and are socially dissatisfied join to form the
- a. Groups
 - b. **Gangs**
 - c. cliques
 - d. crowds

25. Is a recreation found in adolescents.

- a. sleeping
- b. eating
- c. **daydreaming**
- d. chatting

UNIT V

1. Middle adulthood lasts from

- a. **40-60**
- b. 40-50
- c. 30-50
- d. 30-60

2. Isolation crisis is a characteristic feature of

- a. childhood
- b. oldage
- c. adolescence
- d. **adulthood**

3. Is the important status symbol of adulthood.

- a. career
- b. car
- c. **home**
- d. phone

4. moving from one social group to another is called social

- a. Movement
- b. **Mobility**
- c. transfer
- d. adjustment

5. Longest period in total life span is

- a. Infancy
- b. **adulthood**
- c. childhood
- d. oldage

6. The least religious stage of life is

- a. **early twenties**
- b. early adolescence
- c. early childhood
- d. early forties

7. moving from one social group to another on the same level is

- a. diagonal
- b. reverse
- c. vertical
- d. **horizontal**

8. moving from one social group to another that is lower or higher is called

- a. horizontal
- b. **vertical**
- c. diagonal
- d. reverse

9. The most important quality of an adult leader is

- a. personality
 - b. **Social status**
 - c. career
 - d. beauty
10. Early adulthood is also called age.
- a. **Settling down**
 - b. Gang
 - c. solitary
 - d. isolated
11. Old Age is the period of
- a. growth
 - b. **decline**
 - c. maturity
 - d. productivity
12. The elderly have a group status.
- a. **Minority**
 - b. Seniority
 - c. majority
 - d. juniority
13. is the sense that is most affected in old age.
- a. Audition
 - b. **vision**
 - c. touch
 - d. kinesthetic
14. self interest among the old age people is
- a. decreasing
 - b. stable
 - c. **increasing**
 - d. neutral
15. The most common reason for change in recreation is
- a. **Health**
 - b. Socio economic status
 - c. financial status
 - d. educational status
16. In old age, religious tolerance
- a. Loses hope
 - b. Develops hatred
 - c. decreases
 - d. **increases**
17. The most common physical hazard of old age is
- a. Carelessness
 - b. **Disease**
 - c. ignorance
 - d. accident
18. is the most important psychological hazard for the elderly.
- a. **Accepting stereotype**
 - b. Getting along
 - c. adjusting
 - d. learning
19. Early retirement is opted mainly for Reasons.

- a. financial
- b. **health**
- c. behaviour
- d. character

20. The only factor that will make adjustment to old age easier is..... for old age.

- a. **preparing**
- b. avoiding
- c. coping
- d. managing

SECTION –B

UNIT I

1. State the “Cephalocaudal law and Proximodistal law”?
2. List any three significant facts about develop[ment
3. What is a life span?
4. Why is life span difficult to study?
5. What are the views of Dynamic Systems?
6. List any three developmental tasks of any two stages of lifespan.
7. What are the three stages of the prenatal period?
8. State three characteristics of prenatal period
9. What is the exact duration of prenatal period?
10. Name two physical hazards during prenatal.
11. List the kinds of birth complications.

UNIT II

1. Why is infancy a plateau in development?
2. Define Sensation and Perception.
3. Define Teratogen and Teratology with examples.
4. Name any two characteristics of infancy
5. Name any two characteristics of babyhood.
6. What are Piaget's stages of cognitive development?
7. List the activities of the infant

8. What is the sleep pattern of the babyhood stage?
9. What are the common hand skills and leg skills of babyhood?
10. Write about the task of pronunciation in babyhood.
11. Write about “Joy” in babyhood
12. What are the elements in physical development during babyhood?

UNIT III

1. List any three developmental task of early childhood
2. Write about peer relations in early childhood.
3. What are the tasks involved in learning to speak in early childhood?
4. What are the common emotional patterns in early childhood?
5. List any three developmental tasks of late childhood.
6. Write down the categories of late childhood skills.
7. List out the types of play.
8. List the play interest in late childhood.

UNIT IV

1. Define puberty.
2. What is the general age of attaining puberty in boys and girls?
3. Define growth spurt.
4. Define deviant maturing.
5. What are the types of deviant maturing?
6. List 4 characteristics of adolescence.
7. List out the developmental tasks of adolescents.
8. Name few physical changes caused during adolescence.
9. List a few adolescent interests.
10. What is sex role?
11. List 4 social changes caused due to adolescence.
12. Name the types of social groupings.
13. List 4 common social interests of adolescents.
14. Name a few factors affecting the adolescent attitude towards education.

UNIT V

1. Define adulthood. What are its stages?
2. List a few characteristics of early adulthood.
3. What are the developmental tasks of early adults?
4. List few changes in interests found during early adulthood.
5. Define social mobility.
6. List a few vocational adjustments to be made during early adulthood.
7. List a few marital adjustments to be made during early adulthood.
8. Define singlehood.
9. Define middle age.
10. What are the developmental tasks of middle age?
11. What are the physical changes the middle age have to adjust to?
12. List some of the mental changes occurring during middle age.
13. Define the term empty nest.
14. How can a middle aged person get ready for retirement?
15. What are the developmental tasks of old age?
16. List a few mental changes occurring during old age.
17. What are the changes occurring in interests as a result of old age?
18. List a few vocational adjustments in old age.
19. List some of the changes in family life due to old age.
20. How do the old adjust to the loss of a spouse in old age?

SECTION – C

UNIT I

1. Describe the importance of studying life span development
2. Write a note on life span.
3. Elucidate the characteristics of life span perspective
4. Explain Psychoanalytic theories of development
5. Write about the significance of age in the nature of development

UNIT II

1. Describe the characteristics of Infancy.
2. Explain Piaget's theory of cognitive development.
3. Write a note on prenatal development.
4. Explain the socio - emotional development in infancy.
5. Elucidate the developmental tasks of infancy.
6. Explain the cognitive development in infancy.

UNIT III

1. Write a note on characteristics of early childhood
2. Write a note on characteristics of late childhood
3. Write a note on developmental tasks of early childhood.
4. Write a note on developmental tasks of late childhood.
5. Elaborate play in early childhood.
6. Elaborate on the emotional and personality development in early childhood
7. Elucidate Personality development in late childhood.

UNIT IV

1. Explain the body changes at puberty.
2. Explain the term deviant maturing.
3. Describe the characteristics of adolescence.
4. What are the body changes occurring during adolescence?
5. Describe the socio-emotional development in adolescence.
6. Explain adolescent grouping.
7. Explain some of the common social interests during adolescence.
8. What are the psychological hazards of adolescence?
9. How does the transition from adolescence to adulthood take place?
10. Write about adult lifestyles.

UNIT V

1. What are the characteristics of middle age?
2. What are the popular recreational activities of middle age?
3. What are the factors influencing vocational adjustment in middle age?
4. What are the changed working environments that affect middle -aged people?
5. Discuss stability and change in middle adulthood.
6. Describe the characteristics of old age.
7. Explain the adjustment to physical changes in old age.
8. What are the personal interests of the old?
9. Describe the conditions limiting employment opportunities to the old.
10. Write a note on retirement at old age.
11. Discuss family and social relationships in old age.

SECTION –D

UNIT I

1. Explain the various theories of development.
2. Explain the importance of studying life span.
3. Elaborate the nature of lifespan development.
4. Elaborate on the issues of lifespan development.

UNIT II

1. Elaborate Prenatal development and birth.
2. Illustrate the birth process.
3. Elaborate nature and physical development in infancy.
4. Explain the sensory and perceptual development in infancy.
5. Elaborate on language development in infancy.

UNIT III

1. Explain the physical and cognitive changes in early childhood.
2. Elaborate the socialization in early childhood
3. Elaborate on social grouping and behavior in late childhood.

4. Elaborate emotional and personality development in childhood.

UNIT IV

1. Define adolescence. Explain its characteristic features.
2. Write in detail about the physical changes that accompany adolescence.
3. Write in detail about the social changes during adolescence.
4. Elaborate on the hazards of adolescence.
5. Explain the vocational adjustments needed during early adulthood.
6. Explain the marital adjustments needed during early adulthood.
7. Explain the adjustment to parenthood needed during early adulthood.
8. Write a detailed account on adult lifestyles.

UNIT V

1. Explain the characteristics of middle age.
2. Explain in detail the adjustments to physical changes during middle age.
3. Explain in detail the vocational adjustments during middle age.
4. Explain in detail the adjustment to change family patterns.
5. Elaborate on the vocational hazards of middle age.
6. Elaborate on the marital hazards of middle age.
7. Explain the characteristics of old age.
8. Explain the vocational adjustments during old age.
9. Describe the developmental perspective on death.

BIOLOGICAL BASIS OF BEHAVIOUR 21UPSA21

SECTION A

UNIT 1

1. The theory stating that the mind and the body are the same is
 - a. dualism
 - b. socialism
 - c. **monism**
 - d. humanism
2. carry electrical signals away from the neurons
 - a. **axons**
 - b. dendrites
 - c. mucus
 - d. nucleus
3. is the application of neuro psychological knowledge in the field of medicine
 - a. **clinical neuropsychology**
 - b. experimental psychology
 - c. developmental psychology
 - d. comparative psychology
4. The building block of the nervous system is called
 - a. cell
 - b. **neuron**
 - c. fluid
 - d. axon
5. Psycho biology is also called psychology.
 - a. **Biological**
 - b. Chemical
 - c. physical
 - d. mathematic
6. The theory stating that mind and body are different is
 - a. **dualism**
 - b. socialism
 - c. monism
 - d. humanism
7. Earlier, Chemical was used to study neurons.
 - a. **Silver nitrate**
 - b. Silver chlorate
 - c. silver phosphate
 - d. silver sulphate
8. receive electrical signals from other cells.
 - a. **axons**
 - c. mucus

- b. **dendrites** d. nucleus
9. Clinical psychologists work in
 a. **hospitals** c. offices
 b. schools d. homes
10. Experimental and clinical neuropsychology combined to form
 Neuropsychology.
 a. Behavioural c. humanistic
 b. **cognitive** d. experimental
11. The clear link between cognition and neural activity is found in
 a. Cognitism c. **connectionism**
 b. Behaviourism d. functionalism
12. PET stands for
 a. **Positron emission tomography** c. positron emission topography
 b. Positive emission tomography d. positive emission topography
13. Theory of evolution was proposed by
 a. Freud c. **Darwin**
 b. Adler d. Anna
14. The neurons found only in visual system, brain and spinal cord are neurons.
 a. Motor c. connecting
 b. Sensory d. **interconnecting**
15. The place where neurotic communication takes place is
 a. **Synapse** c. dendrite
 b. Nucleus d. axon

UNIT 2

1. Cognitive psychology views brain as the
 a. White box c. blue box
 b. **Black box** d. red box
2. The science of the structure and functions of the brain is
 a. Clinical science c. **neuroscience**

- b. Biological science d. physical science
3. The releases chemical substances called neurotransmitters.
- a. **Axon** c. nucleus
- b. Dendrite d. synapse
4. The nerve cells that carry information away from the brain are called
- a. **Afferent neurons** c. chemical neurons
- b. Efferent neurons d. sensory neurons
5. The nerve cells that carry information towards the brain are called
- a. Afferent neurons c. chemical neurons
- b. **Efferent neurons** d. sensory neurons
6. Movement of ions like Na and K causes Change in the nerve cells.
- a. Positivity c. **voltage**
- b. Negativity d. energy
7. The electrical impulses transmitted by the nerve cells are called
- a. Activity potential c. negative potential
- b. **Action potential** d. positive potential
8. The charge needed for action potential is
- a. +20mv c. **+40mv**
- b. +30mv d. +50mv
9. The difference between the voltage inside and outside the neuron is called
- a. action potential c. **resting potential**
- b. passing potential d. negative potential
10. The neurotransmitters are also called
- a. **chemical transmitters** c. sensory transmitters
- b. motor transmitters d. cognitive transmitters
11. Natural substances that cause or speed up chemical activity in the body are called
- a. chemicals c. **enzymes**

- b. hormones
d. neurons
12. The deficiency of Hormone in early childhood may produce cretinism.
- a. **Thyroid**
c. pituitary
- b. Hypothalamus
d. pineal gland
13. Carbon, hydrogen and oxygen are components of
- a. Enzymes
c. proteins
- b. **Carbohydrates**
d. fats
14. Amino acids are components of
- a. Enzymes
c. **proteins**
- b. Carbohydrates
d. fats
15. Are present in the cytoplasm of all cells.
- a. **Enzymes**
c. proteins
- b. Carbohydrates
d. fats

UNIT 3

1. Farsightedness is also called
 - a. **hyperopia**
 - b. myopia
 - c. astigmatism
 - d. colour blindness
2. IID stands for
 - a. inter initiative decibel
 - b. **interaural intensity difference**
 - c. interaural intensity dimension
 - d. internal intensity difference
3. Emotional center of the brain is
 - a. **amygdala**
 - b. brainstem
 - c. hypothalamus
 - d. temporal lobe
4. Taste buds mediate sense.
 - a. **gustatory**
 - b. smell
 - c. auditory
 - d. pain
5. Myopia refers to
 - a. **Nearsightedness**
 - b. Farsightedness
 - c. blurred vision
 - d. colour blindness

6. Astigmatism refers to
- a. Nearsightedness
 - b. Farsightedness
 - c. **blurred vision**
 - d. colour blindness
7. is the primary auditory cortex found in brain.
- a. Frontal lobe
 - b. **Temporal lobe**
 - c. occipital lobe
 - d. parietal lobe
8. The spatial hearing system is facilitated by the System of hearing.
- a. Aural
 - b. **Binaural**
 - c. tetraural
 - d. uniaural
9. tones are uncommon in nature.
- a. **Pure**
 - b. Polluted
 - c. mixed
 - d. mass
10. Law of first wave front is also called
- a. **Precedence effect**
 - b. Succession effect
 - c. alternation effect
 - d. substitution effect
11. Touch, hearing and balance are examples of senses.
- a. Chemical
 - b. **Mechanical**
 - c. sensory
 - d. physical
12. Smell and taste are examples of senses.
- a. **Chemical**
 - b. Mechanical
 - c. sensory
 - d. physical
13. association cortex carries out complex mental processes not associated with any particular sense.
- a. Primary
 - b. Secondary
 - c. lower order
 - d. **higher order**
14. The lasting change to the brain throughout the individual's life course is called
- a. **Neuro plasticity**
 - b. Neuro integrity
 - c. neural transformation.
 - d. neural evolution
15. The ability to touch any object with eyes closed is called
- a. Perception
 - b. Apperception
 - c. **proprioception**
 - d. prioception

UNIT 4

1. The internal clock is called
 - a. Circadian cycle
 - b. **Circadian cycle**
 - c. internal cycle
 - d. anatomic cycle
2. The hormone that facilitates sleeping is
 - a. **Melatonin**
 - b. Dopamine
 - c. estrogen
 - d. androgen
3. REM sleep is also called Sleep period.
 - a. Deep
 - b. Shallow
 - c. **dream**
 - d. disturbed
4. EEG pattern called K Complex is found in stage of sleep.
 - a. N1
 - b. **N2**
 - c. N3
 - d. REM
5. In stage N3, Waves form the major part.
 - a. Alpha
 - b. Beta
 - c. theta
 - d. **delta**
6. Active brain in a paralyzed body is found in Sleep stage.
 - a. N1
 - b. N2
 - c. N3
 - d. **REM**
7. Frequent urge to urinate is medically called
 - a. **Nocturia**
 - b. Meduria
 - c. hypernatation
 - d. hydration
8. Inability to fall or remain asleep is called
 - a. Nocuria
 - b. Parasomnia
 - c. **insomnia**
 - d. RLS
9. Narcolepsy is characterized by sudden Attacks.
 - a. Fatigue
 - b. **Sleep**
 - c. pain
 - d. hunger
10. The study of oxygen levels movements and brain waves on sleep is
 - a. Monosomnography
 - b. **Polysomnography**
 - c. somnography
 - d. ectomorphology

11. is used to assess the electric activity of the brain.
- a. **EEG**
 - b. ECG
 - c. fMRI
 - d. MRI
12. The scientific study of dreams is called
- a. Oncology
 - b. **Oneirology**
 - c. biology
 - d. dreamology
13. Psycho analysis was developed by
- a. **Freud**
 - b. Skinner
 - c. Adler
 - d. William James
14. According to Mark Solms, dreams are generated in the
- a. Hindbrain
 - b. **Forebrain**
 - c. brainstem
 - d. cerebrum
15. The most common emotion experienced in dreams is
- a. Anger
 - b. Joy
 - c. **anxiety**
 - d. fear

UNIT 5

1. is the most prominent male sex hormone.
- a. **Testosterone**
 - b. Vasopressin
 - c. estrogen
 - d. melatonin
2. Is associated with both male and female sexual motivation.
- a. **Testosterone**
 - b. **Vasopressin**
 - c. estrogen
 - d. melatonin
3. Most common of the sexual variation is
- a. Paedophilia
 - b. Transvestism
 - c. **exhibitionism**
 - d. hypooxyphilia
4. Urge to involve in sex with young children is called
- a. **Paedophilia**
 - b. Transvestism
 - c. **exhibitionism**
 - d. hypooxyphilia
5. Sexual urge concerning the use of inanimate objects is called
- a. Transvestism
 - b. **transsexualism**
 - c. **transsexualism**
 - d. transsexualism

- b. **Fetishism** d. hypoxophilia
6. Is how you feel inside and how you express your gender outside.
- a. **Gender identity** c. self identity
- b. Self concept d. self esteem
7. Possessing both male and female characteristics is called
- a. Polygamy c. **androgynous**
- b. Monogamy d. polygynous
8. Holding more than one gender schema for responding to the world is
- a. Monoschematic c. aschematic
- b. **Multischematic** d. acroschematic
9. There are Main types of sexual orientation.
- a. 1 c. **3**
- b. 2 d. 4
10. There are types of stress.
1. 2 c. 6
2. **4** d. 8
11. Stress due to joy is called
- a. Acute stress c. episodic acute stress
- b. **Eustress** d. chronic stress
12. During flight or fight response, is released.
- a. **Adrenalin** c. testosterone
- b. Estrogen d. vasopressin
13. James Lange Theory is a theory on
- a. Stress c. feelings
- b. **Emotions** d. ideas
14. Canon Bard Theory was formulated in the year
- a. 1885 c. 1945
- b. **1927** d. 1947
15. Stanley and Jerome formulated the theory of emotions.
- a. **Cognitive** c. humanistic
- b. Psychodynamic d. evolutionary

SECTION B

UNIT 1

1. Differentiate monism and dualism.
2. Draw a neuron and label its parts.
3. Define chemical neuropsychology.
4. Describe Fmri.
5. What are the types of neurons?
6. List 4 assumptions of BLOA.
7. Describe frontal lobe.
8. Describe parietal lobe.
9. Describe occipital lobe.
10. Describe temporal lobe.

UNIT 2

1. Define electric signaling.
2. Define neuro transmission.
3. What are the types of neurons?
4. Define action potential.
5. What are enzymes?
6. Write the components of carbohydrates and proteins.
7. Abbreviate: CAT, PET, fMRI, EEG
8. Define the master gland.
9. Name the enzymes created in human body.
10. Describe proteins.

UNIT 3

1. Differentiate hyperopia and myopia.
2. Define auditory cortex.
3. What is IID?
4. What are the mechanical senses found in man?

5. What are the chemical senses found in man?
6. Define associative cortex.
7. What are higher order association areas?
8. Name the components of motor cortex.
9. List 4 symptoms of movement disorders.
10. Name 4 treatments suggested for movement disorders.
11. Abbreviate: IID, ITD.

UNIT 4

1. Define circadian cycle.
2. What are the types of sleep?
3. List 4 symptoms of sleep disorders.
4. What is insomnia?
5. Define sleep apnea.
6. What is restless leg syndrome?
7. Define narcolepsy.
8. Define dreams.
9. Define homeostasis.
10. How does body regulate temperature?

UNIT 5

1. Define sexual variation.
2. Describe exhibitionism.
3. What is pedophilia.
4. Differentiate gender and gender identity.
5. Define androgyny.
6. What is sexual orientation?
7. Can a person's sexual orientation be changed? Explain.
8. What are the types of stress?
9. Describe flight or fight response.
10. Name any 4 characteristics of emotions.

SECTION C

UNIT 1

1. Write a note on approaches relating brain and behaviour.
2. Write a note on BLOA.
3. Describe the types of neurons with the transmission process.
4. Write a note on localization of cortical functions.

UNIT 2

1. Write a note on electric circuit of the brain.
2. Write a note on the hormones secreted in the body.
3. Write a note on the chemical basis of behaviour.
4. Describe the neuron structure and signal transfer with a diagram.
5. Explain action potential.

UNIT 3

1. Write a note on sound localization.
2. Write a note on the mechanical senses of man.
3. Write a note on the chemical senses of man.
4. Write a note on the components of motor cortex.
5. Describe the types of movement disorders.
6. Write a note on the causes of movement disorders.

UNIT 4

1. Write a note on the stages of sleep.
2. Write a note on the types of sleep disorders.
3. Write a note on the psychological theories of dreaming.
4. How does body regulate thirst and hunger?
5. Define homeostasis and write a note on how body regulates temperature.

UNIT 5

1. Write a note on estrogen and progesterone.
2. Write a note on the influence of family on gender typing.
3. Write a note on the physiology of emotions.
4. Describe James Lange theory and Canon Bard theory of emotions.
5. Explain stress with its types.

SECTION D

UNIT 1

1. Define biopsychology. Name its aspects and explain the approaches relating brain and behaviour.
2. Define neuron. Describe its structure and function with a diagram. Explain the localization of cortical functions with a diagram.

UNIT 2

1. Describe neuron with a diagram and explain the electric circuit and signal transfer from neurons.
2. Write in detail the hormones and enzymes secreted in human body and their functions with a diagram.

UNIT 3

1. Write in detail about movement disorders.
2. Write in detail about association cortex.
3. Write in detail about mechanical and chemical senses.
4. Write in detail about auditory development and sound localization.

UNIT 4

1. Define homeostasis and explain in detail how body regulates temperature, thirst and hunger.
2. Write in detail about sleep disorders.

3. Write in detail about circadian cycle and stages of sleep.
4. Write in detail about dreaming and its theories.

UNIT 5

1. Write in detail about sexual variation.
2. Write in detail about the characteristics and theories of emotion.
3. Write in detail about stress and its impact.
4. Write in detail about the sexual hormones found in man.

SEMESTER III

ABNORMAL PSYCHOLOGY-I

21UPSC31

SECTION –A

UNIT- I

1. People insocieties believed that all events that all even around and within them resulted from the actions of magical, sometimes sinister .
a.**prehistoric** b. history c. normal d. midfield
2. Skulls from Europe and South America show evidence of an operation called____
a. Extra science b. **Trephination** c. Philosophy d. Natural sense
3. _____ is a disorder in which groups of people would suddenly start to jump and dance.
a. **Tarantism** b. Abnormal c. General d . Therapy
4. During renaissance hospitals and monasteries were converted into _____
a . Counselling b. **Asylum's** c . hell d. Ashram
5. _____ perspective view that abnormal psychological functioning has physical causes and the psychogenic perspective
a. **somatogenic** b. anatomy c. century d. neuron
6. Every culture has certain standards for behaviour.
a. understandable b. **acceptable** c.valuable d. markable
7. _____ behaviour refers to the type of behaviour that inhibits a person's ability to adjust to the certain situations.
a. nervosa b. Mind c. **maladaptive** d. Physical.
8. The chief distinguishing feature of psychotic disorders is
a.**confusion of fantasy and reality** .
b. antisocial

- c. anxiety.
 - d. obsessive behavior
9. A common form of mental disorder afflicting 10-20% of the population is
- a. schizophrenia
 - .b. senile dementia
 - .c. depression.**
 - d. delusional disorder.
10. Multiple personality or dissociative identity disorder often begins.....
- a. as a result of combat exhaustion.
 - b. in adulthood as a response to unremitting phobias.
 - c. as a consequence of post-traumatic stress disorders.
 - d. in childhood as a result of unbearable experiences.**

UNIT - II

1. _____ says that there is more to mental life than consciousness.
- a. John Watson b. **Sigmund Freud** c. Kurt k d. William James
2. _____ is the deepest and most primitive part of human personality according to Freud.
- a. lungs cells b. ego. c. **id** d. cells
3. The _____ of abnormality assumes that all maladaptive behaviour is essentially occurred through once environment.
- a. **behavioural model** b. abnormal model c. cognitive model d. stimulus model
4. Change the----- of you can change the behaviours that is abnormal.
- a. **thinking** b. response c. react d. behaviours
5. _____ causes organism to think.
- a. fibres b. **stimulus** c. sheath d. response

6.The organism makes a _____

- a. values b.behaviour c. knowledge **d.response1.**

7.The chief distinguishing feature of psychotic disorders is

a. Confusion of fantasy and reality

- b. antisocial conduct.
c. overwhelming anxiety.
d. obsessive behavior.

8. A common form of mental disorder afflicting 10-20% of the population is

- a. schizophrenia b. senile dementia **.c. depression.** d. delusional disorder.

9. Retreat from reality by hallucinations and delusions and by social withdrawal typically characterizes

- a. somatoform disorders.
b. anxiety disorders.
c. psychotic disorders.
d. personality disorders.

10. Persons who suffer from paraphilias are categorized as having

- a. somatoform disorders.
b. generalized anxiety.
c. sexual disorder
d. personality disorders.

UNIT- III

1. Stress is a -----
experience

- a.Negative** b .positive c. aggressive d .situation

2. Fight refers to -----responses to stress

- a. Cooperative b. stressful **c. aggressive** d. stimulus

3. Managing the internal and external demands of a situation is called as-----

- a. Mediators b. disorder c. amounting **d. coping**

4. ----- is the chronic stress.
- a. Anorexia nervosa b. obsessive c. starvation **d. PTSD**
5. Feeling of hopelessness is a symptoms of
- a. adjustment disorder** b. stress c. deficiency d. hyperactive.
6. Short term may be used to control anxiety symptoms of sleeping problems.
- a. **Medication** b. substance c. skills d. stresses
7. Which of the following is related to recent attempts to find biochemical explanations for schizophrenia?
- a. schizotaxin b. psychotropic c. **dopamine** d. diazepam
8. Which of the following is one reason given that more women than men are treated for psychological problems?
- a. Women are subject to greater stress than men.
- b. As a result of cultural norms, women may be more willing to admit distress.**
- c. Some forms of mental disorders are sex-linked recessive.
- d. Developmental tasks required of women are far more difficult than those required of men.
9. The Freudian explanation of anxiety disorders emphasizes
- a. the avoidance paradox.
- b. learned habits of self-defeating behavior.
- c. forbidden impulses that threaten a loss of control.**
- d. the development of a faulty or inaccurate self-image and distorted self-perceptions.
10. Statistical approaches to abnormality define as "abnormal" those who
- a. show evidence of loss of contact with reality.
- b. are unhappy, withdrawn, and depressed.
- c. deviate from typical or average patterns of behavior.**
- d. are disabled by anxiety.

UNIT-IV

1. The ----- is the extensive network of nerve fibers .
- a. **ANS** b. CNS c. DHPA d. ACDH
2. The hypothalamus first excites sympathetic nervous system to work quicken our -----

- a. pulse b. sweat **c. heart beat** d. situation
3. The key feature of ----- is excessive worry occurring more days than not long lasting at least six months
- a.BDA b. PDA c. GABA d. **GAD**
- 4.-----are repetitive and rigid behaviors or mental acts .
- a. obsessive b. anxiety c. starvation d. **compulsions**
5. disorder is commonly linked with stress.
- a. somatoform** b. nervosa c. dyslexia d. hyperactive.
6. A rare condition in which separate personalities exist in the same person is called
- a. dissociative identity disorder b. split personality c. schizophrenia d. amnesia.
7. A PET scan involves the injection of
- a. **radioactive sugar** .b. iodine. c. metal particles .d. xenon gas.
8. If a person suffering from schizophrenia has an identical twin, that twin
- a. **will have a 46 percent chance of becoming schizophrenic**
- b. will be no more likely than anyone else to become schizophrenic.
- c. is almost sure to become schizophrenic
- d. is also likely to have more than one personality.
9. The most severe psychological disorder is a(n)
- a. personality disorder .b. psychosomatic illness. c. anxiety disorder **.d. psychosis.**
10. Persons who are excessively narcissistic, dependent, or antisocial are characterized as having
- a. somatoform disorder
- b. generalized anxiety
- c. conversion reactions
- d. **personality disorders.**
11. Mood disorders are those in which the person may
- a. experience severe depression and threaten suicide.**
- b. exhibit symptoms suggesting physical disease or injury but for which there is no identifiable cause.

- c. exhibit behavior that is the result of an organic brain pathology.
- d. experience delusions and hallucinations.

UNIT-V

1. Intellectual functioning is also known as -----
a.IQ b. endorphins c. begin d. acute pai
2. The person is considered intellectually disabled if he or she has an IQ of less than
a. 70 to 75 b. 72 to 74 c. 80 to 85 d. 90 to 95
3. The average IQ is -----
a.100 b.45 c. 70 d.85
4. A learning disability is a disability to process -----
a. information b. emotion c. thinking d. stress
- 5..... is a language based disorder
a. dyslexia b. dysmesxia c. dysphaxia d. dyspraxia
6. Dyspraxia is a disorder that affects the development of ----- skills
a. language b .communication c. **motor** d .learning
7. In some countries, it is normal to defecate or urinate in public. This makes it clear that judgments of the normality of behavior are.....
a. culturally relative. b. statistical. c. a matter of subjective discomfort.
d. related to conformity.
8. False beliefs that are held even when the facts contradict them are called.....
a. fantasies. b. hallucinations. c. illusions. **d. delusions.**
9. True paranoids are rarely treated or admitted to hospitals because.....
a. they are potentially harmful and dangerous to others.
b. they resist the attempts of others to offer help.
c. their severe hallucinations make reasoning with them impossible.
d. psychiatric hospitals are primarily for psychotics.
10. The most widely used system of psychological classification today is.....
a. the Freudian Psychoanalytic System (FPS).
b. found in the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV).
c. the system designed by Emil Kraepelin and Eugen Bleuler.

d. to be found in the Federal Uniform Code of Psychopathology (UCP).

SECTION –B

UNIT I

1. What is Abnormal behaviour?
2. Define panic attack.
3. What is phobia?
4. Define mood disorder.
5. Define cyclothymia.
6. Define DSM
7. What is maladaptive behaviour?
8. What is ICD?
9. What is APA?
10. Define bipolar disorder.

UNIT II

1. What is behaviorism?
2. Describe psychodynamic model.
3. Describe humanistic psychology.
4. Explain interpersonal model.
5. Define id.
6. Define ego.
7. DSM IV

UNIT-III

1. Define stress.
2. Define stressors.
3. What is fight or flight?
4. Write about Post traumatic stress disorder (PTSD).
5. What is acute pain ?
6. Write about Chronic pain.
7. Explain Pain.
8. Write a note on disaster.

9. What is called as catastrophe?

UNIT -IV

1. Define Anxiety .
2. What is agoraphobia?
3. Explain OCD.
4. Write a note on GAD.
5. What is GABA?
6. Write about amnesia.

UNIT – V

1. Define the term Mental retardation.
2. Define learning disorder .
3. Define autism.
4. Define dyspraxia .
5. Explain dyslexia
6. Describe about brain defects.

SECTION –C

Answer in about 200 words each :

6 Marks

UNIT- I

1. Explain the criteria of abnormality.
2. Write a detailed note on maladaptive behaviour.
3. Write a note on DSM IV classifications

UNIT-II

1. Write a note on the models of abnormality.
2. Write an overview about psychodynamic model .
3. Write about behavioural model.
4. Write a note on cognitive behavioral model.
5. Explain humanistic model.
6. Describe interpersonal model .

UNIT-III

1. Explain about stress.
2. Write about adjustment disorder.

3. Write about stress and stressors.
4. Write a note on general principles of coping with stress.
5. Write a note on the reactions to common life stressors.
6. Write a note on unemployment .
7. Write the stress disorders.
8. Write a note on divorce.
9. Write a note on the post traumatic stress disorder.

UNIT IV

1. Write about the anxiety based disorder .
2. Explain obsessive compulsive disorder.
3. Explain about the panic disorder.

UNIT V

1. Write about mental retardation.
2. Write a note on learning disorders.
3. Write a note on coordination disorder.

SECTION –D

UNIT- I

1. Explain in detail about popular views of abnormal behaviour.
2. Explain DSM IV classification and its limitations.
3. Explain in detail about the various maladaptive behaviors.

UNIT- II

1. Give an introduction to the models of abnormality.
2. Explain psychodynamic model.
3. Explain humanistic model .

UNIT -III

1. Explain about diathesis stress model.
2. Explain about the principles of coping with stress.

UNIT -IV

1. Explain the anxiety based disorders.
2. Explain the dissociate disorders.

3. Explain about amnesia.

UNIT -V

1. Explain the mental retardation in detail.
2. Explain the brain defects in mental retardation.
3. Explain the various learning disorders and its treatment.

APPLICATION OF POSITIVE PSYCHOLOGY 21UPSS31

SECTION A

UNIT 1

1. Individualism is propagated by culture.
 - a. **Western**
 - b. Buddhism
 - c. Eastern
 - d. Hinduism
2. Yin Yang symbol was proposed by the
 - a. buddhists
 - b. **taoists**
 - c. hindus
 - d. chinese
3. The Search Institute has proposed developmental assets.
 - a. 10
 - b. 20
 - c. **40**
 - d. 30
4. VIA Classification of strengths was proposed by Peterson and
 - a. **Seligman**
 - b. Clifton
 - c. Anderson
 - d. Nelson
5. Nirvana is the concept of
 - a. **buddhists**
 - b. taoists
 - c. hindus
 - d. Chinese
6. ICD stands for
 - a. **international classification of diseases**
 - b. indian classification of diseases
 - c. international classification of disorders
 - d. indian classification of disorders
7. There are Types of well beings.
 - a. 1
 - b. 2
 - c. **3**
 - d. 4
8. The seven holy virtues were proposed by
 - a. Euben
 - b. Wallah

c. Solomon

d. **Thomas Aquinas**

9. According to Confucius, leadership and education are centre to

a. **morality**

b. equality

c. intelligence

d. spirituality

10. Tao means the

a. destiny

b. **way**

c. cause

d. resolution

11. Bharmā viharas was proposed by

a. **buddhists**

b. taoists

c. hindus

d. Chinese

12. Interconnectedness of all things is stressed by

a. buddhists

b. taoists

c. **hindus**

d. Chinese

13. The process of karma was proposed by

a. buddhists

b. taoists

c. **hindus**

d. Chinese

14. The most powerful underlying force in western culture is

a. **hope**

b. love

c. compassion

d. trust

15. The virtue that has its origin both in eastern and western culture is

a. hope

b. love

c. **compassion**

d. trust

UNIT 2

1. The measure of human strengths that has no online version is

a. Gallop Clifton Strength finder

b. Clifton Youth Strength finder

c. VIA-IS

d. **Search institute profiles of student life.**

2. The ability to bounce back after facing a problem is called

- a. resistance
- b. repression
- c. **resilience**
- d. regression

3. The concept of successful aging was proposed by

- a. **Robert Havighurst**
- b. Robert Rowne
- c. Robert Kahn
- d. Robert Christie

4. There are risk focused, asset focused and focused strategies to develop resilience.

- a. progress
- b. power
- c. **process**
- d. potential

5. Strategy for promoting resilience among children is of types.

- a. 1
- b. 2
- c. **3**
- d. 4

6. There are tasks of development identified in adults.

- a. 2
- b. 4
- c. **6**
- d. 8

7. There are Components of successful aging.

- a. 1
- b. 2
- c. **3**
- d. 4

8. The immediate response to a stimulus is

- a. **affect**
- b. effect
- c. emotion
- d. mood

9. PANAS was developed by

- a. **Watson**
- b. Anna
- c. James
- d. Williams

10. PANAS is a Schedule.

- a. stress
- b. **affect**

- c. effect
d. behaviour
11. Broadening theory was proposed by
- a. **Fredrickson**
b. James
c. Watson
d. Anna
12. Eudaimonia refers to human
- a. **flourishing**
b. accomplishments
c. love
d. care
13. There are Thoeries of happiness.
- a. 1
b. 2
c. **3**
d. 4
14. Emotional intelligence was proposed by
- a. **Doleman**
b. James
c. Watson
d. Anna
15. The four branch model of emotions was proposed by
- a. **Salovey & Meyer**
b. James
c. Watson
d. Anna

UNIT 3

1. Theories of happiness have been divided into need, process and theories.
 - a. genetic
 - b. behavioural
 - c. **environmental**
 - d. cognitive
2. Big 5 factors of personality include, conscientiousness, extroversion, agreeableness and neuroticism.
 - a. closeness
 - b. acceptance
 - c. **openness**
 - d. rejection
3. is the awakening from ego to true self.
 - a. **self-realization**
 - b. altruism
 - c. resilience
 - d. self awareness

4. PANAS – X is a way to measure one's
- a. resilience
 - b. cognition
 - c. **emotion**
 - d. personality
5. Mixed emotions related to the ending of something meaningful is called
- a. **poignancy**
 - b. ambivalence
 - c. resilience
 - d. turmoil
6. The belief in one's own ability is called
- a. efficiency
 - b. **efficacy**
 - c. confidence
 - d. skill
7. Previous success is an antecedent of
- a. efficiency
 - b. **efficacy**
 - c. confidence
 - d. skill
8. Neuroendocrines are secreted due to the presence of Feeling.
- a. efficiency
 - b. **efficacy**
 - c. confidence
 - d. skill
9. Learned optimism was proposed by
- a. **Seligman**
 - b. James
 - c. Watson
 - d. Anna
10. TV watching is a source of
- a. **pessimism**
 - b. optimism
 - c. knowledge
 - d. motivation

UNIT 4

1. Pandora's box is a mythical explanation of
- a. love
 - b. **hope**
 - c. care
 - d. efficacy
2. Broaden and build model was developed by

- a. Smith
- b. Cohn
- c. **Fredrikson**
- d. Palmer

3. Major future oriented temporal perspectives in positive psychology include self efficacy, optimism and

- a. **hope**
- b. altruism
- c. love
- d. care

4. parts of the brain facilitate the development of self efficacy.

- a. **pre frontal**
- b. frontal
- c. occipital
- d. temporal

5. CAVE stands for

- a. **cognitive analysis of verbal explanation**
- b. content analysis of verbal explanation
- c. cognitive analysis of verbal expression
- d. content analysis of verbal expression

6. There are cardinal virtues.

- a. 1
- b. 2
- c. 3
- d. **4**

7. Berlin wisdom paradigm was proposed by

- a. **Baltes**
- b. Smith
- c. Colon
- d. Palmer

8. Seligman defines As the ability to rise to the situation.

- a. fear
- b. **courage**
- c. confidence
- d. efficacy

9. Valor is the synonym of

- a. fear
- b. **courage**
- c. confidence
- d. efficacy

10. There are Types of courage.

- a. 1
- b. 2
- c. **3**
- d. 4

11. Doing something again and again expecting different results is called

- a. **insanity**
- b. intelligence
- c. smartness
- d. madness

12. Mindfulness is similar to old practice of creating

- a. **awareness**
- b. intelligence
- c. smartness
- d. madness

13. Non judging is a characteristic feature of

- a. **mindfulness**
- b. intelligence
- c. smartness
- d. madness

14. A person who does things for his own satisfaction is called personality.

- a. borderline
- b. narcissistic
- c. **autotelic**
- d. antisocial

15. The search for the sacred is called

- a. mindfulness
- b. intelligence
- c. smartness
- d. **spirituality**

UNIT 5

1. 1. The 4 cardinal virtues include prudence,, fortitude and temperance.

- a. **justice**
- b. altruism
- c. love
- d. hope

2. Balance theory was proposed by

- a. Watson
- b. **Sternberg**
- c. Baltes
- d. Erickson

3. The preservation of justice and service for common good is called courage.

- a. physical
- b. vital
- c. **moral**
- d. psychological

4. Cultivating awareness is the age old process comparable to today's

- a. consciousness
- b. enlightenment

c. intelligence

d. **mindfulness**

5. Mirror neurons explain the concept of

a. hope

b. love

c. forgiveness

d. **altruism**

6. The freeing from negative attachment is called

a. love

b. altruism

c. **forgiveness**

d. anger

7. The capacity for Is a central component of all human societies.

a. empathy

b. **love**

c. altruism

d. care

8. The first floor of strength school house is divided into plans and

a. **motivation**

b. encouragement

c. hardwork

d. effort

9. Behaviour aimed at helping others is called

a. **altruism**

b. encouragement

c. hardwork

d. effort

10. Putting yourself in the other person's shoes is called

a. altruism

b. **empathy**

c. helping

d. sharing

11. Damage to the cortex affects the perception of other's emotions.

a. **pre frontal**

b. frontal

c. occipital

d. parietal

12. Jigsaw classroom was designed by

a. **Elliot**

b. Emma

c. Watson

d. Anderson

13. Gifted children refer to the children with IQ.

a. low

b. medium

c. high

d. **very high**

14. The strong desire in a teacher to teach is called.....

a. **calling**

b. telling

c. sending

d. mending

15. There are stages in strength based approach to gainful employment.

a. 1

b. 2

c. **3**

d. 4

SECTION B

UNIT 1

1. Describe the Taoist figure of Yin and Yang.
2. Define Positive Psychology.
3. Abbreviate and describe WOO.
4. Write a note on the Athenian view of positive psychology.
5. List the 7 heavenly virtues according to Thomas Aquinas.
6. Describe Tao.
7. Explain the words Nirvana and Brahma vihara.
8. Illustrate Yin Yang.
9. List 3 classification systems of strengths.

UNIT 2

1. What are the primary tasks of adulthood?
2. What is successful aging?
3. What are the dimensions of well being?
4. What are the positive outcomes associated with love?

5. Define multi cultural mindset.
6. Define resilience.
7. List the sources of resilience.
8. List the primary tasks of adulthood.
9. What is successful aging?
10. List the components of successful aging.

UNIT 3

1. Differentiate affect and emotion.
2. Define self realization.
3. Describe the components of EI according to Salovey and Mayer.
4. Define affect.
5. Define emotion.
6. Define happiness.
7. What is subjective well being?
8. Explain the upward spiral of positive emotions.
9. List the 4 branches of emotions included in Salovey and Mayre's theory.
10. Define self efficacy.

UNIT 4

1. Cite 4 characteristics of an emotionally intelligent person.
2. Describe the neurobiology of self efficacy.
3. Define optimism.
4. Define self efficacy.
5. Define hope.
6. List few scales to measure self efficacy.
7. What is learned optimism?
8. List few childhood antecedents of learned optimism.

9. What does learned optimism predict?
10. Describe the neurobiology of hope.

UNIT 5

1. Name the types of courage.
2. Define autotelic personality.
3. Describe the flow state.
4. Explain the triangular theory of love.
5. Describe the ABC of negative events in life.
6. Describe the calling of a teacher.
7. List few varieties in job duties.
8. What is traditional economical capital?
9. Define the term human capital.
10. List the demographics related to collectivism.

SECTION C

UNIT 1

1. Describe any 2 eastern influences on Positive Psychology?
2. Explain Search Institute's 40 developmental assets.
3. Describe the Athenian view of positive psychology.
4. Describe the Gallop's Clifton strength finder.
5. Write a note on the VIA Classification of strengths.
6. Describe the dimensions of well being.
7. Evaluate if positive psychology is culture free or culturally embedded.

UNIT 2

1. Explain the strategies for promoting resilience among youth and children.
2. Write a note on the positive youth development programs at work.
3. Write a note on the primary tasks of adulthood.

4. Write a note on the positive youth development programs at work.
5. Describe the concept of successful aging.
6. Write a note on resilience and its sources.
7. Write the strategies to develop resilience in childhood.

UNIT 3

1. Write a note on views of happiness.
2. Explain positive emotions and health resources.
3. Define the emotional term of emotion, affect and happiness.
4. Describe the positive emotions as health resources.
5. Write a note on the theories of happiness.
6. What are the determinants of subjective well being.
7. Describe the term emotional intelligence.

UNIT 4

1. List the developmental antecedents of self efficacy according to Bandura.
2. Write a note on learned optimism.
3. Describe the four branch theory.
4. Write a note on broaden and build theory.
5. Describe subjective well being with its categories.
6. Discuss: Subjective well being as a synonym for happiness.
7. List Myer's suggestions for a happier life.

UNIT 5

1. Write a note on mindfulness qualities.
2. Explain the term spirituality.
3. Give the 3 prominent classification systems of adult attachment styles.
4. Write a note on teaching as a calling.
5. Describe the components of positive schooling.
6. Explain the components of the second floor of the strengths school house.
7. Write a note on the capitals at work.

SECTION D

UNIT 1

1. Elucidate Gallup Themes of Talent.
2. Write in detail the western influences on positive psychology.
3. Elucidate on the eastern influences on positive psychology.
4. Explain in detail the classifications and measures of strengths.
5. List the 40 developmental assets of search institute.

UNIT 2

1. Elaborate on the dimensions of well-being.
2. Explain in detail Resilience.
3. Elucidate on self realization.
4. Give a detailed account of subjective well being.
5. Elucidate on emotional intelligence.

UNIT 3

1. Elucidate in detail the Salovey & Myer's Four branch ability model of EI.
2. Elucidate on self efficacy and hope.
3. Give a detailed account of positive emotions.
4. Describe in detail optimism and learned optimism.
5. Explain in detail courage.

UNIT 4

1. Explain in detail the development of empathy.
2. Explain in detail gratitude and forgiveness.
3. Write in detail the basics of attachment theory.
4. Give a detailed account of flourishing relationships.

UNIT 5

1. Elucidate in detail the theories of wisdom.
2. Elaborate on the methods of cultivating altruism
3. Explain in detail the societal implications of gratitude and forgiveness.
4. Give a detailed account of positive schooling.
5. Explain in detail life above zero.

Section A

Choose the correct answer:

Unit – I:

1. Who is considered as the father of psychology?

- a) Sigmund Freud **b) Wilhelm Wundt** c) Ivan Pavlov d) Carl Jung

2. Psychology as a scientific discipline began in:

- a) 18th century **b) 19th century** c) 20th century d) 17th century

3. Which area of psychology focuses on diagnosing and treating mental disorders?

- a) Social psychology **b) Clinical psychology**
c) Educational psychology d) Experimental psychology

4. What does the term "psychology" mean?

- a) Study of society **b) Study of behavior and mental processes**
c) Study of health d) Study of consciousness

5. Which of the following is a key element of psychology?

- a) Behavior b) Emotions c) Cognitive processes **d) All of the above**

6. Which of the following is not a subfield of psychology?

- a) Cognitive psychology b) Social psychology
c) Physics d) Developmental psychology

7. Which field of psychology studies the impact of others on individual behavior?

- a) Social psychology** b) Cognitive psychology
c) Clinical psychology d) Educational psychology

8. Which of the following best defines "cognition"?

- a) Physical actions
- b) Emotional responses
- c) Mental processes like thinking, learning, and memory**
- d) Reflexes

9. Who was the founder of psychoanalysis?

- a) B.F. Skinner
- b) Sigmund Freud**
- c) Abraham Maslow
- d) Carl Rogers

10. Find the odd one out.

- a) Biopsychology
- b) Clinical psychology
- c) Microbiology**
- d) Neuropsychology

Unit – II:

1. Who gave incentive theory?

- a) Sigmund Freud**
- b) Maslow
- c) Alder
- d) Wundt

2. Which one does not come under Maslow's theory?

- a) belonging needs
- b) self – esteem needs
- c) self – actualization
- d) cognitive needs**

3. Which motive is primarily concerned with the body's need for water?

- a) Hunger
- b) Thirst**
- c) Sex
- d) Sleep

4. Maslow's theory is also known as the _____ theory of motivation.

- a) Hierarchical**
- b) Biological
- c) Incentive
- d) Social

5. The need to satisfy hunger is categorized under which type of motive?

- a) Social
- b) Biological**
- c) Cognitive
- d) Emotional

6. Freud's theory of motivation is primarily based on the concept of:

- a) Drives**
- b) Social urges
- c) Needs
- d) Goals

7. The sex motive is a type of _____ motive.

- a) Social
- b) Biological**
- c) Cognitive
- d) Psychological

8. According to Adler, which is the primary motivator in human behavior?

a) Biological drives **b) Social urges** c) Incentives d) Achievement

9. Which of the following is a physiological need according to Maslow?

a) Self-esteem **b) Hunger** c) Love d) Safety

10. Drive comes under which category?

a) Motivation b) behaviour c) mind d) thinking

Unit – III:

1. What is the basic meaning of "attention"?

a) Ignoring **b) Focusing** c) Sleeping d) Playing

2. What is the primary effect of attention on perception?

a) Clarity b) Blurriness c) Fatigue d) Distraction

3. Which of the following is a type of attention?

a) Selective b) Long-term c) Procedural d) Impulsive

4. Which factor significantly influences attention?

a) Distance **b) Intensity** c) Duration d) Emotion

5. What is the term for the ability to attend to multiple tasks simultaneously?

a) Divided b) Focused c) Voluntary d) Discrete

6. What is the span of attention?

a) Strength **b) Duration** c) Clarity d) Speed

7. Which term refers to focusing on one stimulus while ignoring others?

a) Involuntary b) Diffused **c) Selective** d) Divided

8. Which of the following is a sign of attention?

a) Alertness b) Sleepiness c) Distraction d) Fatigue

9. What type of attention is typically more susceptible to distraction?

- a) Selective b) Voluntary c) Sustained **d) Divided**

10. The ability to focus attention on a task over a long period is called:

- a) Selective b) Divided **c) Sustained** d) Involuntary

Unit – IV:

1. Which type of memory holds information for a very brief period?

- a) Sensory** b) Long-term c) Short-term d) Procedural

2. Which method focuses on repeating material to improve learning?

- a) Chunking b) Priming c) Scanning **d) Rehearsal**

3. Ebbinghaus's curve of forgetting demonstrates that forgetting is most rapid:

- a) Immediately** b) After a week c) After a month d) After one year

4. Which method measures memory by the time saved in relearning material?

- a) Recall b) Recognition **c) Savings** d) Reconstruction

5. Which of the following is not a memory strategy?

- a) Chunking **b) Forgetting** c) Scanning d) Repetition

6. Ebbinghaus is best known for his work on the:

- a) Curve of forgetting** b) Curve of learning c) Learning strategy d) Memory span

7. Which method involves recalling previously learned information?

- a) Recognition b) Savings c) Relearning **d) Recall**

8. What is a common reason for forgetting over time?

- a) Decay** b) Retention c) Priming d) Consolidation

9. Which memory strategy involves organizing information into meaningful units?

- a) Chunking** b) Rehearsal c) Scanning d) Recall

10. According to Ebbinghaus, forgetting is a process that occurs:

a) **Rapidly at first, then slows down**

b) Slowly at first, then speeds up

c) At a constant rate

d) Only after sleep

Unit – V:

1. What is the meaning of personality?

a) Character

b) Behavior

c) **Traits**

d) Identity

2. Which psychologist developed the psychoanalytic theory of personality?

a) **Freud**

b) Eysenck

c) Maslow

d) Skinner

3. What is the key factor in Eysenck's theory of personality?

a) **Extraversion**

b) Consciousness

c) Emotion

d) Motivation

4. Which factor is most likely to influence personality development?

a) Color

b) Time

c) **Environment**

d) Wealth

5. Freud's theory primarily focuses on the influence of the:

a) **Unconscious**

b) Behavior

c) Conscious

d) Environment

6. In Freud's theory, which component of personality seeks immediate gratification?

a) Self

b) **Id**

c) Ego

d) Superego

7. According to color psychology, which color is often associated with calmness?

a) **Blue**

b) Red

c) Yellow

d) Black

8. Which personality trait is associated with being sociable and outgoing in Eysenck's theory?

a) Introversion

b) **Extraversion**

c) Openness

d) Neuroticism

9. What is a personality profile used for?

a) Motivation

b) Learning

c) Memory

d) **Assessment**

10. Which color is typically associated with passion and energy?

a) **Red**

b) Green

c) Purple

d) White

Section B

Answer the questions in about 50 words each:

Unit – I:

1. Describe the meaning of behavior in psychology.
2. Distinguish between overt and covert behavior.
3. Describe the nature of psychology.
4. Explain general psychology.
5. Classify the branches of psychology.
6. Describe developmental psychology.
7. Explain political psychology.
8. List the branches of pure psychology.
9. List the branches of applied psychology.
10. Define psychology.

Unit – II:

1. Describe motivation.
2. Explain the biological basis of thirst motivation.
3. Define drives.
4. Explain sex motive.
5. Describe hunger motive.
6. Discuss self-actualization of Maslow's theory
7. Explain the concept of social urges in Adler's theory.
8. Explain the concept of unconscious motivation according to Freud.
9. List the various theories of motivation.
10. Classify the various types of motives.

Unit -III:

1. Define attention with an example.
2. Classify the types of attention.
3. Describe selective attention.
4. Explain the signs of attention.
5. Explain the internal determinants of attention.
6. Describe divided attention.
7. Describe executive attention.
8. Explain distraction with an example.
9. List the various activities that requires sustained attention.
10. Describe span of attention.

Unit – IV:

1. Define memory.
2. Classify the various types of memory.
3. Explain immediate memory.
4. Describe short-term and long-term memory.
5. Explain chunking.
6. Describe mind mapping.
7. List the various memory strategies.
8. Define forgetting.
9. Classify the types of forgetting.
10. Explain morbid forgetting.

Unit – V:

1. Describe personality.

2. What are the major characteristics of personality?
3. Explain the role of environment in shaping personality.
4. Classify Eysenck's personality traits theory.
5. Describe id, ego and superego.
6. Explain the influence of heredity in personality development.
7. Discuss the effect of color on personality traits.
8. Explain personality profile.
9. List the various theories of personality.
10. Describe extraversion and introversion.

Section C

Answer the questions in about 200 words each:

Unit – I:

1. Demonstrate nature of psychology.
2. Sketch the scope of psychology.
3. Illustrate the fields of pure psychology.
4. Illustrate the fields of applied psychology.
5. Demonstrate the evolution of psychology.
6. Differentiate between clinical and counselling psychology.
7. Illustrate social psychology and its applications.
8. Sketch the concept of behavior with examples.
9. Apply industrial psychology in workplaces.
10. Show the focus of clinical psychology in treating mental disorders.

Unit – II:

1. Illustrate the concept of hunger motive and its biological nature.

2. Illustrate the concept of thirst motive and its biological nature.
3. Sketch sex motive in animals.
4. Demonstrate Freud's incentive theory of motivation.
5. Illustrate the main ideas of Adler's social urges theory.
6. Demonstrate Maslow's goal-oriented theory.
7. Illustrate various psychosocial needs.
8. Apply Maslow's hierarchy of needs using real-life examples.
9. Demonstrate the role of unconscious motivation in Freud's theory.
10. Sketch the nature of motives.

Unit – III:

1. Illustrate the types of attention.
2. Demonstrate the internal factors of attention.
3. Demonstrate the external factors of attention.
4. Differentiate between selective and sustained attention.
5. Illustrate span of attention in different tasks.
6. Sketch the influence of interest and mental set on attention.
7. Demonstrate various signs and effects of attention.
8. Apply divided attention using real life examples.
9. Illustrate effect of distractions in workplace settings.
10. Demonstrate the meaning and nature of attention.

Unit – IV:

1. Apply memory strategies.
2. Demonstrate the external and internal factors of morbid forgetting.
3. Illustrate Ebbinghaus's curve of forgetting.
4. Illustrate the types of memory.

5. Demonstrate the saving method to measure memory.
6. Demonstrate how learning method can improve memory retention.
7. Illustrate types of forgetting briefly.
8. Explain memory and its significance in learning.
9. Differentiate between memory and forgetting.
10. Differentiate between short – term memory and long – term memory.

Unit – V:

1. Illustrate the meaning and nature of personality.
2. Demonstrate the characteristics of personality.
3. Illustrate the structure of personality by Freud.
4. Demonstrate the Eysenck's personality theory.
5. Differentiate between extraversion and introversion.
6. Sketch the influence of heredity, culture and environment on personality development.
7. Illustrate the relationship between colour and personality.
8. Sketch the influence of personality traits on social behavior?
9. Illustrate the major components of Freud's psychoanalytic theory of personality.
10. Demonstrate the assessment of personality.

Section D

Answer the questions in about 300 words each:

Unit – I:

1. Analyze the nature of psychology
2. Examine the pure and applied fields of psychology.
3. Distinguish between pure psychology and applied psychology.

4. Analyze the scope of psychology as a scientific discipline and explain how it applies to field of education and mental health.
5. Outline the branches of psychology.

Unit – II:

1. Examine the theories of motivation in detail.
2. Analyse the various biological motives.
3. Compare Freud's incentive theory and Adler's social urges theory.
4. Analyze the Maslow's hierarchical theory of motivation.
5. Outline the biological, psychological and social needs.

Unit – III:

1. Outline the determinants of attentions.
2. Examine attention and its signs and effects.
3. Analyze the various types of attention.
4. Critically analyze the effect of distraction on attention in different environments.
5. Analyze the impact of modern technology in both positive and negative ways. Discuss how devices like smartphones affect our ability to focus and multitask.

Unit – IV:

1. Outline the various memory strategies with examples.
2. Diagram and infer the Ebbinghaus's curve of forgetting.
3. Examine the types of memory with real life situations.
4. Analyze forgetting and its types.
5. Compare learning and saving method.

Unit – V:

1. Outline the theories of personality.
2. Critically analyze the Freud's psychoanalytic theory of personality.
3. Examine the various factors influencing personality development.

4. Analyze the nature of personality.
5. Compare the use of personality profiles in clinical settings and the workplace.

SEMESTER IV

Abnormal Psychology-II

21UPSC41

Choose the correct Answer

(1 Mark)

SECTION –A

UNIT- I

8. People insocieties believed that all events that all even around and within them resulted from the actions of magical, sometimes sinister .
a. **prehistoric** b. history c. normal d. midfield
9. Skulls from Europe and South America show evidence of an operation called____
a. Extra science b. **Trephination** c. Philosophy d. Natural sense
10. ____ is a disorder in which groups of people would suddenly start to jump and dance.
a. **Tarantism** b. Abnormal c. General d . Therapy
11. During renaissance hospitals and monasteries were converted into _____
a . Counselling b. **Asylum's** c . hell d. Ashram
12. _____ perspective view that abnormal psychological functioning has physical causes and the psychogenic perspective
a. **somatogenic** b. anatomy c. century d. neuron
13. Every culture has certain standards for behaviour.
a. understandable b. **acceptable** c. valuable d. markable
14. _____ behaviour refers to the type of behaviour that inhibits a person's ability to adjust to the certain situations.
a. nervosa b. Mind c. **maladaptive** d. Physical.

8. The chief distinguishing feature of psychotic disorders is
a.confusion of fantasy and reality .
 b. antisocial
 c. anxiety.
 d. obsessive behavior
9. A common form of mental disorder afflicting 10-20% of the population is
 a. schizophrenia
 .b. senile dementia
.c. depression.
 d. delusional disorder.
10. Multiple personality or dissociative identity disorder often begins.....
 a. as a result of combat exhaustion.
 b. in adulthood as a response to unremitting phobias.
 c. as a consequence of post-traumatic stress disorders.
d. in childhood as a result of unbearable experiences.

UNIT - II

1. _____ says that there is more to mental life than consciousness.
 a. John Watson b. **Sigmund Freud** c. Kurt k d. William James
2. _____ is the deepest and most primitive part of human personality according to Freud.
 a. lungs cells b. ego. c. **id** d. cells
3. The _____ of abnormality assumes that all maladaptive behaviour is essentially occurred through once environment.
 a. **behavioural model** b. abnormal model c. cognitive model d. stimulus model
4. Change the----- of you can change the behaviours that is abnormal.

- a. **thinking** b. response c. react d. behaviours
5. _____ causes organism to think.
- a. fibres b. **stimulus** c. sheath d. response
6. The organism makes a _____
- a. values b. behaviour c. knowledge **d. response1.**
7. The chief distinguishing feature of psychotic disorders is
- a. Confusion of fantasy and reality**
- b. antisocial conduct.
- c. overwhelming anxiety.
- d. obsessive behavior.
8. A common form of mental disorder afflicting 10-20% of the population is
- a. schizophrenia b. senile dementia **.c. depression.** d. delusional disorder.
9. Retreat from reality by hallucinations and delusions and by social withdrawal typically characterizes
- a. somatoform disorders.
- b. anxiety disorders.
- c. psychotic disorders.**
- d. personality disorders.
10. Persons who suffer from paraphilias are categorized as having
- a. somatoform disorders.
- b. generalized anxiety.
- c. sexual disorder**
- d. personality disorders.

UNIT- III

1. Stress is a -----
experience
- a. Negative** b. positive c. aggressive d. situation
2. Fight refers to -----responses to stress

- a. Cooperative b. stressful **c. aggressive** d. stimulus
3. Managing the internal and external demands of a situation is called as-----
- a. Mediators b. disorder c. amounting **d. coping**
4. ----- is the chronic stress.
- a. Anorexia nervosa b. obsessive c. starvation **d. PTSD**
5. Feeling of hopelessness is a symptoms of
- a. adjustment disorder** b. stress c. deficiency d. hyperactive.
6. Short termmay be used to control anxiety symptoms of sleeping problems.
- a. **Medication** b. substance c. skills d. stresses
7. Which of the following is related to recent attempts to find biochemical explanations for schizophrenia?
- a. schizotaxin b. psychotropic **c. dopamine** d. diazepam
8. Which of the following is one reason given that more women than men are treated for psychological problems?
- a. Women are subject to greater stress than men.
- b. As a result of cultural norms, women may be more willing to admit distress.**
- c. Some forms of mental disorders are sex-linked recessive.
- d. Developmental tasks required of women are far more difficult than those required of men.
9. The Freudian explanation of anxiety disorders emphasizes
- a. the avoidance paradox.
- b. learned habits of self-defeating behavior.
- c. forbidden impulses that threaten a loss of control.**
- d. the development of a faulty or inaccurate self-image and distorted self-perceptions.
10. Statistical approaches to abnormality define as "abnormal" those who
- a. show evidence of loss of contact with reality.
- b. are unhappy, withdrawn, and depressed.
- c. deviate from typical or average patterns of behavior.**
- d. are disabled by anxiety.

UNIT-IV

1. The ----- is the extensive network of nerve fibers .
a. **ANS** b. CNS c. DHPA d. ACDH
2. The hypothalamus first excites sympathetic nervous system to work quicken our -----
a. pulse b. sweat **c. heart beat** d. situation
3. The key feature of ----- is excessive worry occurring more days than not long lasting at least six months
a. BDA b. PDA c. GABA d. **GAD**
4. ----- are repetitive and rigid behaviors or mental acts .
a. obsessive b. anxiety c. starvation d. **compulsions**
5. ----- disorder is commonly linked with stress.
a. somatoform b. nervosa c. dyslexia d. hyperactive.
6. A rare condition in which separate personalities exist in the same person is called
a. dissociative identity disorder b. split personality c. schizophrenia d. amnesia.
7. A PET scan involves the injection of
a. **radioactive sugar** .b. iodine. c. metal particles .d. xenon gas.
8. If a person suffering from schizophrenia has an identical twin, that twin
a. **will have a 46 percent chance of becoming schizophrenic**
b. will be no more likely than anyone else to become schizophrenic.
c. is almost sure to become schizophrenic
d. is also likely to have more than one personality.
9. The most severe psychological disorder is a(n)
a. personality disorder .b. psychosomatic illness. c. anxiety disorder **.d. psychosis.**
10. Persons who are excessively narcissistic, dependent, or antisocial are characterized as having
a. somatoform disorder
b. generalized anxiety
c. conversion reactions
d. **personality disorders.**

11. Mood disorders are those in which the person may

- a. experience severe depression and threaten suicide.**
- b. exhibit symptoms suggesting physical disease or injury but for which there is no identifiable cause.
- c. exhibit behavior that is the result of an organic brain pathology.
- d. experience delusions and hallucinations.

UNIT-V

1. Intellectual functioning is also known as -----

- a.IQ**
- b. endorphins
- c. begin
- d. acute pain

2. The person is considered intellectually disabled if he or she has an IQ of less than

- a. 70 to 75**
- b. 72 to 74
- c. 80 to 85
- d. 90 to 95

3. The average IQ is -----

- a.100**
- b.45
- c. 70
- d.85

4. A learning disability is a disability to process -----

- a. information**
- b. emotion
- c. thinking
- d. stress

5. is a language based disorder

- a. dyslexia**
- b. dysmesxia
- c. dysphaxia
- d. dyspraxia

6. Dyspraxia is a disorder that affects the development of ----- skills

- a. language
- b. communication
- c. motor**
- d. learning

7. In some countries, it is normal to defecate or urinate in public. This makes it clear that judgments of the normality of behavior are.....

- a. culturally relative.**
- b. statistical.
- c. a matter of subjective discomfort.
- d. related to conformity.

8. False beliefs that are held even when the facts contradict them are called.....

- a. fantasies.
- b. hallucinations.
- c. illusions.
- d. delusions.**

9. True paranoids are rarely treated or admitted to hospitals because.....

- a. they are potentially harmful and dangerous to others.
- b. they resist the attempts of others to offer help.**
- c. their severe hallucinations make reasoning with them impossible.
- d. psychiatric hospitals are primarily for psychotics.

10. The most widely used system of psychological classification today is.....
- a. the Freudian Psychoanalytic System (FPS).
 - b. found in the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV).**
 - c. the system designed by Emil Kraepelin and Eugen Bleuler.
 - d. to be found in the Federal Uniform Code of Psychopathology (UCP).

SECTION –B

Answer in about 50 words each:

2 Marks

UNIT I

- 11. What is Abnormal behaviour?
- 12. Define panic attack.
- 13. What is phobia?
- 14. Define mood disorder.
- 15. Define cyclothymia.
- 16. Define DSM
- 17. What is maladaptive behaviour?
- 18. What is ICD?
- 19. What is APA?
- 20. Define bipolar disorder.

UNIT II

- 8. What is behaviorism?
- 9. Describe psychodynamic model.
- 10. Describe humanistic psychology.
- 11. Explain interpersonal model.
- 12. Define id.
- 13. Define ego.
- 14. DSM IV

UNIT-III

- 1. Define stress.
- 2. Define stressors.
- 3. What is fight or flight?

4. Write about Post traumatic stress disorder (PTSD).
5. What is acute pain ?
6. Write about Chronic pain.
7. Explain Pain.
8. Write a note on disaster.
9. What is called as catastrophe?

UNIT -IV

6. Define Anxiety .
7. What is agoraphobia?
8. Explain OCD.
9. Write a note on GAD.
10. What is GABA?
6. Write about amnesia.

UNIT – V

7. Define the term Mental retardation.
8. Define learning disorder .
9. Define autism.
10. Define dyspraxia .
11. Explain dyslexia
12. Describe about brain defects.

SECTION –C

Answer in about 200 words each :

6 Marks

UNIT- I

4. Explain the criteria of abnormality.
5. Write a detailed note on maladaptive behaviour.
6. Write a note on DSM IV classifications

UNIT-II

7. Write a note on the models of abnormality.
8. Write an overview about psychodynamic model .
9. Write about behavioural model.
10. Write a note on cognitive behavioral model.

11. Explain humanistic model.
12. Describe interpersonal model .

UNIT-III

10. Explain about stress.
11. Write about adjustment disorder.
12. Write about stress and stressors.
13. Write a note on general principles of coping with stress.
14. Write a note on the reactions to common life stressors.
15. Write a note on unemployment .
16. Write the stress disorders.
17. Write a note on divorce.
18. Write a note on the post traumatic stress disorder.

UNIT IV

1. Write about the anxiety based disorder .
2. Explain obsessive compulsive disorder.
3. Explain about the panic disorder.

UNIT V

4. Write about mental retardation.
5. Write a note on learning disorders.
6. Write a note on coordination disorder.

SECTION –D

UNIT- I

4. Explain in detail about popular views of abnormal behaviour.
5. Explain DSM IV classification and its limitations.
6. Explain in detail about the various maladaptive behaviors.

UNIT- II

4. Give an introduction to the models of abnormality.
5. Explain psychodynamic model.
6. Explain humanistic model .

UNIT -III

3. Explain about diathesis stress model.
4. Explain about the principles of coping with stress.

UNIT -IV

4. Explain the anxiety based disorders.
5. Explain the dissociate disorders.
6. Explain about amnesia.

UNIT -V

4. Explain the mental retardation in detail.
5. Explain the brain defects in mental retardation.
6. Explain the various learning disorders and its treatment.

PSYCHOLOGICAL STATISTICS II - 21UPSA41

SECTION A

UNIT 1

1. If the data is in interval scale, test is used.

- a. **parametric**
- b. non parametric
- c. statistical
- d. non statistical

2. Non parametric tests are also called

- a. distributioned
- b. **distribution free**
- c. distribution stated
- d. distribution classified

3. ANOVA is done by computingstatistics.

- a. B
- b. D
- c. **F**
- d. H

4. The formula for degree of freedom is

- a. **r-1**
- b. r-2
- c. r-3
- d. r-4

5. If the data is in interval scale, test is used.

- a. **parametric**
- b. non parametric
- c. statistical
- d. non statistical

6. Non parametric tests are also called

- a. distributioned
- b. **distribution free**

c. distribution stated d. distribution classified

7. ANOVA is done by computingstatistics.

a. B b. D

c. **F** d. H

8. The formula for degree of freedom is

a. **r-1** b. r-2

c. r-3 d. r-4

9. Square root of $\sum x^2/N + \sum x^2$ is the formula for

a. correlation coefficient b. **contingency coefficient**

c. regression d. chi square

10. Coefficient correlation between the ----- must be in the same limits as the original data.

a. **Variables** b. constant

c. limits d. standards

11. The regression lines cut each other at the point of -----

a. **Average of X and Y** b. average of X only

c. average of Y only d. the median of X and Y

12. The regression line of Y on X

a. **Minimises total of the squares of the horizontal deviations**

b. total of the squares of the vertical deviations c. both vertical and horizontal

d. except horizontal deviations

13. There will be only one regression line in case of two variables

- a. $r = 0$
- b. $r = +1$
- c. $r = -1$
- d. **r is either +1 or -1**

14. when one regression coefficient is negative, the other would be -----

- a. negative
- b. positive
- c. **zero**
- d. infinity

15. The greater the value of r -----

- a. the better are estimates obtained through regression analysis
- b. **the lesser will be the degree of correlation**
- c. the greater will be the degree of correlation
- d. does not really matter

16. In regression analysis b_{xy} stands for

- a. Regression equation of X on Y
- b. Regression equation of Y on X
- c. **Regression coefficient of X on Y**
- d. Regression equation of Y on X

UNIT 2

1. Square root of $\frac{x^2}{N} + \frac{y^2}{N}$ is the formula for

- a. correlation coefficient
- b. **contingency coefficient**
- c. regression
- d. chi square

2. The variation among the group of data may be due to reasons.

- a. 0
- b. 1
- c. **2**
- d. 3

3. ANOVA is a test.

- a. **parametric**
- b. non parametric
- c. statistical
- d. non satatistical

4. For 2 way ANOVA, the sizes of each cell must be

- a. increasing
- b. different
- c. **same**
- d. decreasing

5. The variation among the group of data may be due to reasons.

- a. 0
- b. 1
- c. **2**
- d. 3

6. ANOVA is a test.

- a. **parametric**
- b. non parametric
- c. statistical
- d. non satatistical

7. For 2 way ANOVA, the sizes of each cell must be

- a. increasing
- b. different
- c. **same**
- d. decreasing

8. Error is least at level of significance

- a. .00
- b. .01
- c. .03
- d. **.05**

9. One way ANOVA is used for comparing of more than 2 groups.

- a. **mean**
- b. median
- c. mode
- d. SD

10. Which is always the best measure of central tendency?

- a. **Mean**
- b. Median
- c. Mode
- d. G.M

UNIT 3

1. Error is least at level of significance

a. 1.00

b. 01

c. .03

d. **05**

2. One way ANOVA is used for comparing of more than 2 groups.

a. **mean**

b. median

c. mode

d. SD

3. Hypothesis that cannot be tested on the basis of sample data is called hypothesis.

a. **scientific**

b. statistical

c. null

d. alternative

4. Rejecting H_0 when it is true leads to error.

a. **type 1**

b. type 2

c. correlation

d. significant

5. Hypothesis that cannot be tested on the basis of sample data is called hypothesis.

a. **scientific**

b. statistical

c. null

d. alternative

6. Rejecting H_0 when it is true leads to error.

a. **type 1**

b. type 2

c. correlation

d. significant

7. For right tailed test, the critical region lies to the

a. acceptance

b. rejection

c. **right**

d. south

8. Critical value is also called region.

- a. acceptance
- b. **rejection**
- c. statistical
- d. reserach

9. If calculated test statistic value is than the tabulated value, the H_0 is rejected.

- a. equal to
- b. less than
- c. **greater than**
- d. zero

10. Positive correlation implies that on an average as one variable is increasing the other is -----
----- and as one variable is decreasing the other is also -----.

- a. **Increasing, decreasing**
- b. decreasing, increasing
- c. constant, decreasing
- d. constant, increasing

11. The relationship between three or more variables is studied with the help of -----
correlation

- a. Single
- b. double
- c. **Multiple**
- d. equal

12. If r is more than six times ----- it is called significant.

- a. **Probable error**
- b. Perfect error
- c. Standard error
- d. Preferable error

13. The probable error of correlation coefficient is 0.6745 of -----

- a. Probable error
- b. Perfect error
- c. **Standard error**
- d. Preferable error

UNIT 4

1. . For right tailed test, the critical region lies to the

- a. sufficient b. efficient
c. consistent d. unbiased

8. factors affect the confidence interval.

- a. 1
- b. 2
- c. **3**
- d. 4

9. As the confidence coefficient increases, the width of the confidence interval

- a. **increases**
- b. decreases
- c. changes
- d. remains same

10. What provides estimate of unknown parameters in the form of a single value on the basis of the sample information

- a. **Point Estimation**
- b. Correlation
- c. Regression
- d. Hypothesis

11. An estimator is said to be unbiased if its average value is equal to the

- a. Unknown parameter
- b. Known parameter
- c. **Population parameter**
- d. Variable

12. A statistic is said to be consistent estimator of the population parameter if it approaches to the parameter as the sample size approaches

- a. Zero
- b. Negative
- c. **infinity**
- d. None of these

13. What deals with estimating the value of the population parameter on the basis of the sample observations

- a. **Theory of estimation**
- b. Hypothesis testing
- c. Null hypothesis
- d. Cyclical variations

14. Which statistical procedure meant to test whether the null hypothesis can be rejected against the alternative hypothesis

- a. Test Statistics
- b. Testing of hypothesis
- c. The point estimation
- d. **Statistical hypothesis**

15. The act of ----- is a purchasing of information

- a. **Estimating**
- b. approximate
- c. evaluate
- d. determine

UNIT 5

1. The value of $Z_{0.01/2}$ is

- a. 1.96
- b. **2.33**
- c. 1.97
- d. 2.34

2. Independent group design is also called group design.

- a. **between**
- b. beyond
- c. before
- d. after

3. Replication is done to increase

- a. validity
- b. **reliability**
- c. productivity
- d. researchability

4. Laboratory experiments are conducted in conditions.

- a. controlled
- b. uncontrolled
- c. s.natural
- d. artificial

a. Z b. t

$\mathbb{C}.Z$

d. T @b

12. An estimator is said to be if it uses all information about the population parameter.

a. **sufficient**

b. efficient

c. consistent

d. unbiased

13. factors affect the confidence interval.

a. 1

b. 2

c. 3

d. 4

14. As the confidence coefficient increases, the width of the confidence interval

a. **increases**

b. decreases

c. changes

d. remains samea

SECTION B

UNIT 1

1. Define parametric tests.
2. Define non parametric tests.
3. List 4 differences between parametric and non parametric tests.
4. Describe Chi square.
5. List few rules for using Chi Square.
6. What is contingency co efficient?
7. List the assumptions of using contingency co efficient.
8. Define correlation coefficient.

9. What is regression?
10. Differentiate correlation coefficient and regression coefficient.
11. List 4 advantages of parametric tests.
12. List 4 disadvantages of parametric tests.
13. List 4 advantages of non parametric tests.
14. List 4 disadvantages of non parametric tests.

UNIT 2

1. Define ANOVA
2. What is analysis of variance?
3. What is one way ANOVA?
4. What is two way ANOVA?
5. List the important terminologies in one way ANOVA.
6. List the important terminologies in two way ANOVA.
7. List the procedures involved in implementing one way ANOVA.
8. What are the assumptions of one way ANOVA?
9. What are the advantages of two way ANOVA?
10. What are the important terminologies in two way ANOVA?
11. List the procedure involved implementing two way ANOVA.
12. What are the assumptions in two way ANOVA?

UNIT 3

1. Define hypothesis.

2. What is testing of hypothesis?
3. What is type 1 error?
4. What is type 2 error?
5. Differentiate between type 1 and type 2 error.
6. What is level of significance?
7. What is one tailed test?
8. What is two tailed test?
9. Differentiate between one tailed and two tailed test.
10. What is t test?
11. What is z test?
12. What is the difference between t test and z test?
13. What is test of significance?

UNIT 4

1. What is estimation?
2. What is point estimation?
3. What is interval estimation?
4. Define Theory of estimation.
5. Differentiate between point and interval estimation.
6. What is interval estimation?
7. How is confidence interval for mean calculated?
8. How is the confidence interval for population mean calculated?

9. How is the confidence interval for proportion calculated?
10. List the factors to be remembered while calculating the confidence interval.

UNIT 5

1. Define research design.
2. List the types of research design.
3. What are the principles of design?
4. Define research.
5. What are the methods of research?
6. Define experimental design.
7. Define non experimental design.
8. Give the advantages of experimental design.
9. Give the disadvantages of experimental design.
10. Give the advantages of non experimental design.
11. Give the disadvantages of non experimental design.

SECTION C

UNIT 1

1. Give the advantages and disadvantages of parametric tests.
2. Give the advantages and disadvantages of non parametric tests.
3. Explain the differences between parametric and non parametric tests.
4. Describe Chi square and state the rules for using it.

5. What is contingency co efficient? State its assumptions.
6. Define correlation coefficient. Explain its uses.
7. What is regression? State its advantages and disadvantages.
8. Differentiate correlation coefficient and regression co efficient.

UNIT 2

1. Describe the procedures involved in implementing one way ANOVA.
2. Explain the assumptions of one way ANOVA?
3. Write a note on the advantages of two way ANOVA?
4. Explain the important terminologies in two way ANOVA?
5. Explain the procedure involved implementing two way ANOVA.
6. Describe the assumptions in two way ANOVA
7. Explain the term analysis of variance.

UNIT 3

1. Explain type 1 and type 2 errors?
2. Differentiate between type 1 and type 2 error.
3. Explain level of significance?
4. Explain one tailed and two tailed tests?
5. Differentiate between one tailed and two tailed test.
6. Write a note on t test?
7. Write a note on z test?
8. What is the difference between t test and z test?

9. Explain the term test of significance?

UNIT 4

1. Describe the term estimation? What are its types?
2. Write a note on point estimation and interval estimation.
3. Explain the Theory of estimation.
4. Differentiate between point and interval estimation.
5. Explain how the confidence interval for mean is calculated?
6. How is the confidence interval for population mean calculated?
7. How is the confidence interval for proportion calculated?
8. Explain the factors to be remembered while calculating the confidence interval.

UNIT 5

1. Define research design and state its types.
2. What are the principles of design? State its types.
3. Define research and explain the methods of research.
4. Explain experimental design.
5. Explain non experimental design.
6. Give the advantages and disadvantages of experimental design.
7. Give the advantages and disadvantages of non experimental design.

SECTION D

UNIT 1

1. Explain in detail parametric tests.

2. Explain in detail non parametric tests.
3. Elaborate on correlation.
4. Elaborate on regression.

UNIT 2

1. Explain in detail one way ANOVA.
2. Explain in detail two way ANOVA.
3. Elaborate on analysis of variance.

UNIT 3

1. Explain in detail testing of hypothesis.
2. Elaborate on statistical errors.
3. Elaborate on types of tailed tests.
4. Elaborate on test of significance.

UNIT 4

1. Explain in detail the theories of estimation.
2. Explain in detail confidence interval.

UNIT 5

1. Explain in detail the types of research design.
2. Explain in detail the principles of design.
3. Elaborate on the methods of research.
4. Explain in detail experimental design.

SPORTS PSYCHOLOGY - 21UPSS41

UNIT-1

SECTION A

1. Who investigated on the topic “social facilitation”?
a) **Norman** b) Bandura c) Jung d) Freud
2. Who is known as the father of sports psychology?
a) Norman b) Bandura c) Jung d) **Coleman**
3. Norman Triplett:
a) **1898** b) 1925 c) 1926 d) 1930
4. In which year was the sports psychology was officially made as a branch of psychology?
a) **1986** b) 1898 c) 1925 d) 1930
5. Eysenck:
a) **1952** b) 1950 c) 1960 d) 1962
6. How many temperaments are there?
a) 1 **b) 2** c) 3 d) 4
7. Which is related with black bile?
a) Sanguine b) Choleric **c) Melancholic** d) Phlegmatic
8. Who gave the five-factor model?
a) Costa b) Eysenck c) Freud d) Jung
9. Pick the right one: Reserved
a) Shy b) **Outgoing** c) Trusting d) none
10. Pick the right one: Forthright
a) Shrewd b) Shy c) Trusting d) none

SECTION B

1. Define sports psychology
2. Define social facilitation
3. List the four factors that influence our response to a given situation.
4. Define trait and give examples.
5. List out the temperaments given by Eysenck.

6. Define sensation seeking.
7. Explain Paratelic state.
8. Define Hardiness.
9. Who are effective attenders?
10. List any four high risk sport?

SECTION C

1. Produce a brief history of sports psychology.
2. Explain Eysenck's Trait theory in detail.
3. Explain Cattell's Trait theory in detail.
4. Provide a note on Mental toughness.
5. Provide a note on Attentional styles.
6. Analyse the application of interactional model to sport.

SECTION D

1. Summarize sport psychology.
2. Critically analyse the Trait theories.
3. Critically analyse the Narrow-band theories.
4. Summarise situational and interactional approaches.

UNIT-2

SECTION A

1. The social learning theory was given by....
a) **Bandura** b) Freud c) Jung d) none
2. Who gave the concept of modeling?
a) Bandura b) Freud c) Jung d) none
3. "we watch others behave in a certain way" is known as...
a) **Attention** b) Retention c) reproduction d) none
4. The set of beliefs, practices, values and customs is known as...
a) **Culture** b) family c) both a&b d) none

5. Similarities among cultural groups are known as...
a) Culture b) family **c) emic** d) none
6. How many approaches are there for attitudes?
a) 1 **b) 2** c) 3 d) 4
7. Likert scale was developed by...
a) **Likert** b) Thurstone c) Freud d) Jung
8. Semantic differential scale was developed by..
a) **Osgood** b) Likert c) Freud d) none
9. Theory of reasoned action was given by..
a) Ajzen b) Fishbein **c) both a& b** d) none
10. Theory of planned behavior was given by..
a) Ajzen b) Fishbein c) both a& b d) none

SECTION B

1. Define Personality.
2. List the four stages proposed by Bandura.
3. Explain vicarious learning.
4. Explain Primary socialisation.
5. Explain secondary socialisation.
6. Define culture.
7. Define sublimation.
8. Explain primary narcissism.
9. Define attitude.
10. Define self-efficacy.

SECTION C

1. Analyse the application of social learning theory to sport.
2. Provide a note on sources of influence on social development and sport.
3. Discuss the nature of attitudes.

4. Explain and illustrate TRA.
5. Provide a note on changing people's attitude to sport.
6. Analyse "Character building"

SECTION D

1. Summarize social learning theory.
2. Critically analyse the psychodynamic approach to sport.
3. Elucidate on the measures of attitude.
4. Illustrate the Transtheoretical Model.

UNIT-3

SECTION A

1. Which is known as the unpleasant sensation?
a) Stress **b) anxiety** c) arousal d) none
2. What is a long-term stress called?
a) Acute b) small **c) chronic** d) big
3. Soma means...
a) Hand b) mind **c) body** d) soul
4. Anxiety in aspect of personality is known as?
a) Somatic anxiety **b) trait anxiety** c) cognitive anxiety d) anxiety
5. Who made the distinction between trait and somatic anxiety?
a) **Spielberg** b) Hendry c) Lillian d) Jung
6. When the primary intention is to harm others is known as....
a) **Hostile aggression** b) instrumental aggression c) both a&b d) none.
7. The social learning theory was given by...
a) **Bandura** b) Freud c) Jung d) Eysenck
8. Who gave the frustration- aggression hypothesis?
a) Jung b) Bandura c) Freud **d) Dollard**
9. Which method implies "getting it out of the system"?

- a) Punishment b) catharsis c) contracting d) modelling
10. Who gave instinct theories?
- a) **Freud** b) Bandura c) Dollard d) Jung

SECTION B

1. Define aggression.
2. Define hostile aggression.
3. Define frustration.
4. Define stress.
5. Differentiate somatic and trait anxiety.
6. Explain locus of control.
7. Define mental rehearsal.
8. Define cognitive anxiety.
9. Explain contracting.
10. Explain punishment.

SECTION C

1. Analyse the link between aggression and performance.
2. Discuss situational factors affecting aggression.
3. Elucidate on reduction of aggression.
4. Elucidate on factors inducing anxiety and stress.
5. Explain the inverted-U hypothesis.
6. Explain zone of optimal functioning.

SECTION D

1. Analyse the theories of aggression.
2. Summarise on the relationship between arousal and performance.
3. Summarise on the relationship between anxiety and performance.
4. Discuss the stress management.

UNIT-4

SECTION A

1. Who define group cohesion?
a) **Festinger** b) Jung c) freud d) Rogers
2. Which is the third stage in group formation?
a) **Norming** b) storming c) forming d) none
3. In which stage is the task is accomplished?
a) Adjourning b) norming c) storming d) forming
4. The drive theory was proposed by....
a) Murphy **b) Zajonc** c) Jung d) none
5. Who proposed evaluation- apprehension theory?
a) Murphy **b) Cottrell** c) Jung d) none
6. Which Leader makes the decisions alone/
a) **Authoritarian** b) laissez-fair c) democratic d) pessimistic
7. The motivation that comes from within is known as...
a) **Intrinsic motivation** b) extrinsic motivation c) both a&b d) none
8. The motivation that comes from outside is known as....
a) Intrinsic motivation **b) extrinsic motivation** c) both a&b d) none
9. Who introduced self-efficacy?
a) **Bandura** b) Freud c) Jung d) Anna freud
10. Freudenberger: ? choose the correct option.
a) CFT **b) burn-out** c) self-efficacy d) PMI

SECTION B

1. Explain norming stage.
2. List the stages of group formation.
3. Explain audience effects.
4. Define social loafing.
5. Define closeness.
6. Define intrinsic motivation.

7. Define motivation.
8. Define self-efficacy.
9. Define burn-out.
10. Define extrinsic motivation.

SECTION C

1. Discuss social loafing with an example.
2. Analyse group think.
3. Analyse leadership style.
4. Explain the two types of motivation.
5. Explain counterfactual thinking.
6. Explain self-efficacy.

SECTION D

1. Summarize social facilitation.
2. Summarize leadership theories.
3. Analyse pathological motivation and sport.
4. Summarize motivation.

UNIT-5

SECTION A

1. Pick the odd one out.
a) Power-lift b) full-body tackle c) bear-hug **d) bowling**
2. Pick the odd one out.
a) Karate block b) sprint start c) tennis return **d) bowling**
3. Which one of the following does not come under manual dexterity.
a) Bowling b) basketball manipulation **c) power lift** d) both a&b
4. Movements which are under the athlete's control is known as...
a) **Internally paced** b) externally paced c) both a&b d) none.
5. Which is the third stage of skill acquisition.

- a) Cognitive b) associative **c) autonomous** d) distinctive
6. At which stage individuals will have mastered the skills?
a) Cognitive b) associative **c) autonomous** d) distinctive
7. In which year was the computer developed?
a) 1960s b) 1980s **c) 1950s** d) 1940s
8. How many levels of processing are there?
a) 1 b) 2 **c) 3** d) 4
9. Who gave closed loop theory?
a) **Adams** b) Schmidt c) Hendry d) olive
10. Which processing is concerned with sound?
a) Structural **b) phonetic** c) semantic d) none

SECTION B

1. Explain psychomotor.
2. Define kata.
3. Explain discrete skills.
4. Define proprioception.
5. Explain automatic processing.
6. Explain memory trace.
7. Explain cognitive economy.
8. Define metacognition.
9. Differentiate massed and distributed practice.
10. Define feedback.

SECTION C

1. Explain gross and fine skills.
2. Analyse the existence of super-ability and the nature-nurture debate in sport.
3. Elucidate on the information-processing approach to skills.
4. Explain the levels of processing.
5. Explain closed loop theory.

SECTION D

1. Elucidate on the stages of skill acquisition.
2. Summarize the information processing approach.
3. Summarize the theories of motor learning.
4. Summarize expert performance.

SELF-DEVELOPMENT SKILLS – 21UPSN41

SECTION –A

Unit - I

1. Self-awareness is the most important one in the process of_____
a. Principles of sociology b. **Self-improvement** c. study of mind d. soul
2. is the foundation for self-improvement.
a . **Self-image** b. Self-growing c. Woolworth d. reason
3. Learn to speak with your.....mind.
a. Conscious b. **Subconscious** c. General d. Healthy
4. Motivation is purely a ----- process.
a. **Thought** b. Abnormal c. Psychology d. Treatment
5. SWOT is an _____
a. Counselling b. **Acronym** c. Relation d. meaning
6. In SWOT analysis, S stands for _____
a. Self b. **Strength** c. Sacrifice d. Skills
7. Johari window analysis comes under _____
a. Self motivation b. Self confidence c. **Self awareness** d. Goal setting
8. Inthe information about the person like his attitudes, behaviour, emotions, feelings, skills and views known by the person as well as by others.

a) Blind spot b) Unknown area c) **Open area** d) Hidden area
9.is defined as a belief that one is capable of successfully meeting the demands of a task.

a) **Self-Confidence** b) Self-awareness c) Self-determination d) Self-esteem
10. M in SMART goals stands for.....

a) Magnitude b) Moveable c) Motivation d) **Measurable**

Unit II

1. _____ refers to those qualities characterizing a person's way of behavior which serves to indicate how well he/she can learn to meet and solve specified kinds of problems.
a) Talent b) Achievement **c) Aptitudes** d) Intelligence
2. _____ is an example of aptitude test.
a) Emotional intelligence test b) Intelligence test **c) art judgement test** d) drawing
3. Aptitude of an individual depend upon _____
a) Environment b) heredity c) gene **d) both heredity and environment**
4. _____ tests the general mental ability of an individual.
a) intelligence b) aptitude c) Achievement d) all of the above
5. In _____ motivation, an individual performs an action or task in order to attain some sort of external reward, including money, power and good marks or grades.
a) Intrinsic b) **Extrinsic.** c) Both intrinsic and extrinsic d) Internal
6. _____ concerns only with the present condition, the potentiality or capability which one possesses at the present moment.
a) Aptitude b) Achievement c) **Ability** d) Attitude
7. Emotions like amusement, love, curiosity, joy and happiness which are helpful and essential for the development of an individual areemotions.
8. a) negative b) **positive** c) unpleasant d) distress
9. In _____ assumptions, where we deliberately discover what assumptions we hold.
a) checking b) **hunting** c) taking others perspective d) informed action
10. _____ thinking is expansive, innovative, inventive.
a) **Creative** b) Critical c) Both a & b d) Logical

Unit III

1. _____ is having usual idea and innovative thoughts.
a) configurations b) expectations c) **creative thinking** d) perceivers
2. The second definition of the word invention is.....
a) **Creative** b) Partin c) Think d) Solving

- 3.....thinking is a valuable tool.
a) **critical** b) heavy c) create d) mindful
- 4.Thinking skills can help us in our..... and other aspects of life.
a) mechanical b) **education** c) playing d) crying
- 5._____ explain the elements of critical and creative thinking .
a) unconsciousness b. **cognition** c) planning d) experiences
6. _____ is a step by step problem solving formula.
a) **Algorithm** b) heuristics c) trial and error d) deduction
7. _____ can be the second definition of the word invention .
a) awareness b) Conscious c) **Creative** d) Awareness
8. _____is exercising or involving Careful judgement or evaluation .
a) Usual thinking b) **creative thinking** c) legent d)fingers
- 9._____ is a valuable tool to professional growth
a) **Critical thinking** b) serial thinking c) ERM d) RME
10. Thinking skills can help us in our.....
a) Wills b) **education** c) pain d) kindness

Unit IV

- 1.The leading cause of anger is a person's.....
a) **environment** b) mind c) moral d) angriness
2. There are _____ forms of anger.
a) five b. Six c) **three** d) one
3. Long-term _____ can pose dangerous risks.
a) hypersomnia b) **Anxiety** c) excessive sleep d) RERE
- 4._____ anger can affect your job.
a) non-Controller b) **uncontrollable** c) Hallucinators d) oriented
5. Same _____ can be aroused by a number of different stimuli- objects and situations.
a) Instinct b) **Emotion** c) mindset d) Attitude
6. _____ is the period of “Aha” moments where individuals suddenly receive ideas.
a) Incubation b) Problem Finding c) **Illumination** d) Verification

7. _____ cues include how our body responds - with an increased heart rate, tightness in the chest, feeling hot or flushed.

- a) **Physical** b) Cognitive c) Behavioural d) Emotional

8. An aggression cycle consists ofphases.

- a) One b) Two c) **Three** d) Four

9. The goal ofis to stop your current pattern of angry thoughts before they lead to an escalation of anger and a loss of control.

- a) Cognitive restructuring b) Relaxation Exercise c) **Thought stopping** d) All of the above

10. In anger person tries to repress their anger to avoid dealing with it but typically ends up expressing it in unhealthy and undermining ways.

- a) **Passive-aggressive** b) Aggressive c) Assertive-aggressive d) Openly aggressive

Unit V

1..... is the process of planning and exercising conscious control of time.

- a. **Time management** b. Skill management c. Frustration management d. Google

2. Time management include carrying out..... around prioritization.

- a. **activity** b. Re-add c. listen d. making

3. There are _____ time management styles.

- a) four b) three c) two c) **none of the above**

4. The _____ style maintains their energy by staying busy and switching tasks.

- a) **hopper** b) cliff hanger c) perfectionist d) impulsive

5. The urgent versus important is a _____ dilemma

- a) Stress b) rush c) fight or flight d) **priority**

6. In ABCD model of cognitive restructuring, A stands for _____

- a) **Activating** b) Autonomic c) Automatic d) Approaching

7. In ABCD model of cognitive restructuring, B stands for _____

- a) Building b) Believe c) **Beliefs** d) Beneficence

8. In ABCD model of cognitive restructuring, C stands for emotional_____
- a) **Consequences** b) Cognition c) Compliances d) Complaints
9. In ABCD model of cognitive restructuring, D stands for _____
- a) Dissonance b) **Disputes** c) Defense d) Damage
10. ABCD model comes under _____intervention.
- a) Thought stopping b) **Cognitive restructuring** c) Behavioural d) Relaxation

SECTION B

Unit I

1. What is self-awareness?
2. Draw and label Johari window.
3. Expand SMART goals.
4. Define motivation.
5. What are goals?
6. Define self confidence.
7. Expand SWOT.
8. List out the components of Johari Window Analysis.
9. List out the types of motivation.
10. List out the types of goals.

Unit II

1. State the meaning of aptitude.
2. Name three aptitude measuring tools.
3. Write any two utilities of aptitude.
4. Differentiate between aptitude and achievement.
5. Write about any two nature of aptitude.
6. Differentiate between aptitude and ability.
7. Can we measure aptitude? How?
8. List out any 2 measurements of aptitude.
9. Distinguish between ability and achievement.

Unit III

1. Give any two strategies of problem solving.
2. Define critical thinking.
3. What are the steps in creative thinking?
4. Define stressors?
5. Write any two characteristics of emotions.
6. Define stress.
7. Define creative thinking.
8. Distinguish between creative and critical thinking.
9. List out the myths of creativity.
10. List out the kinds of emotions.

Unit IV

1. Define anger.
2. Define aggression.
3. List out the forms of anger?
4. Describe thought stopping.
5. List out some of the causes of anger.
6. Expand ABCD model.
7. Define Cognitive restructuring.
8. List out any 2 characteristics of anger.
9. List out the techniques used in managing anger.
10. How positive self talk helps in managing anger?

Unit V

1. Define time management.
2. State the importance of time management.
3. What are the 4-time management styles?
4. Name any three time wasters.
5. List out the techniques for time management.

6. List out the advantages of time management.
7. Name some of the time management styles.
8. Distinguish between anger and time management.
9. Who are called early birds?
10. Who are called improvisers?

SECTION –C

Unit I

1. Explain immediate, intermediate and long-term goals.
2. Explain in detail about self-confidence building.
3. Write a short note on SMART goals.
4. Explain Johari Window Analysis.
5. Explain SWOT analysis in detail.

Unit II

1. Explain briefly about aptitude.
2. Describe the utilities of aptitude.
3. Provide a note on the nature of aptitude.
4. Distinguish between aptitude, achievement and ability.
5. Describe the measurement of aptitudes.

Unit –III

1. Produce a note on problem solving.
2. Describe the characteristics of critical thinking.
3. Sketch the steps involved in creative thinking.
4. Elucidate a note on stress and stressors.
5. Briefly explain about emotion and its kinds.

Unit -IV

1. What do you know about the characteristics of anger?
2. Explain the three forms of anger.

3. Describe anger and related diseases.
4. Explain simple relaxation techniques.
5. Write about the problem solving techniques.

Unit – V

1. What is urgent versus important dilemma?
2. Explain about time management.
3. What are time management styles?
4. Describe the importance of time.
5. Explain about the time wasters.

SECTION D

Unit-I

1. Mention characteristics of SWOT analysis.
2. Explain the Johari window analysis.
3. Illustrate the ways to motivate oneself and others.

Unit-II

1. Analyze the difference between aptitude, ability and achievement.

Unit-III

1. Bring out the characteristics of emotions.
2. Analyze the different ways to measure emotions.

Unit IV

1. Write about thought stopping and positive self-talk.
2. Explain about cognitive restructuring.

Unit V

1. Explain some of the techniques to identify time wasters.
2. Summarize the types of time styles.

SEMESTER - V

PSYCHOLOGY AND MICROBIOLOGY FOR HEALTH CARE

21UBCS51

Section A

(1 Mark)

Choose the correct answer:

Unit I

1. Psychology falls under the category of _____

- | | |
|----------------------------|----------------------|
| a) Positive science | b) Normative science |
| c) Physical science | c) Life science |

2. The branch of Psychology that provides the framework and theories for the subject is _____

- | | |
|---------------------------|------------------------|
| a) Pure Psychology | b) Applied Psychology |
| c) Para Psychology | d) Abnormal Psychology |

3. The psycho dynamic theory was proposed by _____

- | | |
|-----------------|-----------|
| a) Freud | b) Adler |
| c) Jung | d) Watson |

4. Behaviourism was initiated by _____

- | | |
|----------|------------------|
| a) Freud | b) Adler |
| c) Jung | d) Watson |

5. Psychology that deals with children is _____ psychology.

- | | |
|-----------------|---------------|
| a) Child | b) Industrial |
| b) Educational | d) Sports |

6. Psychology that deals with workers and the management is _____ psychology.

- | | |
|----------------|----------------------|
| a) Child | b) Industrial |
| b) Educational | d) Sports |

7. Psychology that deals with the various stages of human development is _____ psychology.

- | | |
|----------------|-------------------------|
| a) Child | b) Developmental |
| b) Educational | d) Sports |

a) **observable** b) covert
c) emotional d) mental

10. _____ is regarded as a father of microbiology

a) **Leeuwenhoek** b) Robert Hook c) Louis Pasteur d) Robert Koch

11. _____ is regarded as a father of bacteriology

a) Leeuwenhoek b) Robert Hook c) **Louis Pasteur** d) Robert Koch

12. _____ is regarded as a father of medical microbiology

a) Leeuwenhoek b) Robert Hook c) Louis Pasteur **d) Robert Koch**

13. The term viruses was coined by _____

a) Twort **b) Iwanowsky** c) Roux d) Meyer

14. The term bacteriophage was coined by _____

a) Twort b) Iwanowsky c) Roux **d) Meyer**

15. Germ theory of disease was postulated by _____

a) Edward Jenner b) Robert Hook c) Louis Pasteur **d) Robert Koch**

16. Virus was coined by _____

a) Twort **b) Iwanowsky** c) Roux d) Herelle

17. Bacteriophage were studied in detailed by _____

a) Twort b) Iwanowsky c) Roux **d) Herelle**

18. Bacteria were first discovered by _____

a) Edward Jenner b) Robert Hook c) Louis Pasteur d) Robert Koch

19. Cyanophages were discovered by _____

a) Twort and Herelle b) Bold and Tippo c) **Safferman and Morris** d) Hershey and chase

20. Viruses were first crystallized by _____

a) Twort b) Iwanowsky c) Roux **d) Stanley**

21. Gram staining was developed by _____

- a) Louis pasteur b) Robert Koch **c) Christian Gram** d) Gerald gram
22. Viruses were cultured by _____
- a) Twort b) Iwanowsky **c) Enders** d) Stanley
23. Cancer causing viruses were discovered by _____
- a) Twort **b) Rous** c) Enders d) Stanley
24. _____ is regarded as the father of virology
- a) Twort b) Iwanowsky c) Roux **d) Stanley**
25. The exploitation of microbes for use in industrial processes is called _____
- a) Biotechnology **b) Industrial Microbiology**
c) Dairy Microbiology d) Food Microbiology
26. Antony Van Leewenhoek discovered small creatures and named it as _____
- a) Animalcules** b) Microbes c) Micrographia d) Microorganisms
27. _____ invented Petri dish
- a) Louis Pasteur **b) Richard Petri** c) Paul Ehrlich d) Waldemar

Unit II

28. _____ convey the longest lasting immunity to an infectious agent
- a) Naturally acquired passive immunity b) artificially acquired passive immunity
c) naturally acquired active immunity d) All of these
29. Metchnikoff discovered _____ cells
- a) Louis Pasteur **b) Metchnikoff** c) Von Behring d) Lansteiner
30. B and T cells are produced by stem cells that are formed in _____
- a) Bone marrow** b) The liver c) The circulatory system d) The spleen
31. _____ is referred to the resistance exhibited by the host towards injury
- a) Infection **b) Immunity** c) Health d) Disease
32. Innate immunity also called as _____ immunity
- a) non-specific** b) specific c) Adaptive d) humoral
33. Acquired immunity also called as _____ immunity
- a) non-specific **b) specific** c) Adaptive d) humoral

34. The resistance that an individual acquires during life is known as _____
a) Innate immunity **b) Acquired immunity** c) Passive immunity d) Local immunity
35. Neurohormones are also called as _____
a) neuropeptides b) neurochemicals c) neurons d) neurosignals
36. _____ are compounds produced by immune cells to mediate immunity
a) Immunomediators b) Stressors c) Antibodies d) Haptens
37. _____ is an emotional stressor
a) Friends b) accidents **c) anger** d) peers

Unit III

38. Coronary artery disease (CAD) can be determined by _____
a) Cardiac catheterization b) Electrocardiogram c) Treadmill stress test **d) all of these**
39. The modifiable risk factor associated with coronary artery disease is _____
a) Age **b) Obesity** c) Heredity d) Gender
40. _____ is one of the symptoms of Coronary artery disease
a) Sleep problems b) Headache
c) Diarrhoea **d) Pain or discomfort in the chest, lower jaw or arms**
41. In what age group is the asthma incidence rate the highest
a) Elderly b) Children **c) Adult** d) Toddlers
42. Environmental risk factors for the development of asthma include _____
a) Socioeconomic status b) stress
c) Exposure to second hand tobacco smoke d) exercise
43. _____ is a common symptom of asthma?
a) Wheezing b) Whistling c) Full breaths d) Snoring
44. _____ is the value that is measured by spirometry
a) Residual volume **b) Total lung capacity**

8. Successive cycles of dieting and eating is called Dieting.
- bo-bo
 - yo-yo**
 - zo-zo
 - do-do
9. is a eating disorder that results in starvation.
- anorexia nervosa**
 - bulimia
 - stress eating
 - yo-yo dieting
10. Successive eating and vomiting is a characteristic feature of
- anorexia nervosa
 - bulimia**
 - stress eating
 - yo-yo dieting
11. Sleep disorders characterized by pauses in breathing during sleep is called-----
- Sleep apnea**
 - Insomnia
 - Parasomnia
 - RLS
12. Dreams occur in -----
- Rem sleep**
 - Non Rem sleep
 - Stage 1 Sleep
 - Stage 4 Sleep
13. At home,..... Are more prone to accidents.
- old people**
 - youngsters
 - adolescents
 - mothers
14. Sleep disorder where the patient suffers from sudden sleep attacks is called
- narcolepsy**
 - sleep apnea
 - insomnia
 - para somnia
15. Sleep disorder characterized by insufficient sleep is called
- narcolepsy
 - sleep apnea
 - insomnia**
 - para somnia

Unit V

1. In India, when did the second phase of COVID-19 vaccination start?
- March 2021**
 - December 2020
 - January 2021
 - February 2021
2. How many countries, areas, or territories are suffering from novel coronavirus outbreaks in the World?
- More than 50
 - More than 150

c) More than 100

d) **More than 200**

3. **Thailand announced that it has proceeded to test its novel coronavirus vaccine on which animal/bird?**

a) Monkeys

b) Hens

c) Lizards

d) Nurses

4. Health care providers include

a) Doctors

b) Nurses

c) Physicians assistants

d) **All the above**

5. The misinterpretation of mild symptoms as serious illnesses is called

a. **hypochondriasis**

b. neurosis

c. stigmatosis

d. syndromes

6. Medical students disease is an example of factor that helps in recognizing symptoms.

a. **situational**

b. attentional

c. cultural

d. mood

7. Illness representations are also called

a. thoughts

b. symptoms

c. **schemas**

d. signs

8. Abbreviation of CAM is

a. **complementary alternative medicine** b. Comprehensive alternative medicine

c. compulsory alternative medicine d. consecutive alternative medicine

9. Women use medical service men.

a. less than

b. **more than**

c. equal to

d. not known

10. To be cared for by others is a gain of illness.

a. primary

b. **secondary**

c. tertiary

d. only

11. Is a cause of miscommunication on the part of the health care provider.

a. jargon

b. baby talk

c. non person treatment

d. **all the above.**

12. Attitudes is a reason for miscommunication from the part of

a) Health care provider

b) **patient**

- c) Family d) friends
13. Is a cause of miscommunication on the part of the patient.
- a. characteristics b. attitudes
- c. ignorance/knowledge d. **all the above.**
14. is the result of poor interaction between health care provider and patient.
- a. **poor adherence** b. relapse
- c. worsening of symptoms d. all the above.
15. is the first step to improve adherence.
- a. **listening** b. treating
- c. caring d. curing

Section B

(2 Marks)

Answer in about 50 words:

Unit I

1. Define Psychology.
2. Describe psychology as a science.
3. List few schools of psychology.
4. What are the 2 branches of psychology?
5. Describe pure psychology.
6. Describe applied psychology.
6. List few branches of pure psychology.
7. List few branches of applied psychology.
8. Describe structuralism.
9. Describe functionalism.
10. Describe behaviourism.
11. Describe psycho analysis.
12. Explain the nature of psychology.
13. List the scopes of psychology.

14. Explain Germ theory of diseases
15. Illustrate Koch's Postulates
16. Relate why Antony Von Leeuwenhoek called as 'Father of Microbiology'
17. Indicate some applied fields of microbiology
18. Summarize the classification of microorganisms

Unit II

19. Indicate Immunity
20. Explain Antigen
21. Explain Antibody
22. Interpret the types of immunity
23. Explain Cytokines
24. Explain innate immunity
25. Indicate Acquired Immunity
26. Summarize Neuroimmunology
27. Discuss cytokines
28. Discuss stressor

Unit III

29. Discuss CHD
30. Interpret the causes of Asthma
31. Explain Allergy
32. Illustrate the treatment of Eczema
33. Illustrate the causes of Hiding
34. Interpret the symptoms of Rheumatoid arthrititis
35. Illustrate the types of diabetes mellitus
36. Explain insulin

37. Express the complications in menstrual disorder
38. Discuss PCOD
39. Interpret the treatment for peptic ulcer

Unit IV

1. Define exercise,
2. What are the benefits of exercising?
3. List the psychological effects of doing exercise.
4. Define nutrition.
5. Define obesity.
6. Mention the ideal amount of fat that can be present in men and women.
7. List few healthy foods that can be taken.
8. Define public health.
8. List the public health contributing factors.
9. List the stages of sleep.
10. What is REM sleep?
11. When do dreams occur?
12. Name 4 sleep disorders.
13. Why do accidents occur at home?

Unit V

1. What are illness symptoms of COVID?
2. List the factors contributing to recognizing illness symptoms of COVID?
3. Define COVID
4. Describe the vaccine in India
5. What is Covaxin ?

6. List few symptoms of COVID.
7. List few factors contributed by physical issues due to COVID
8. What is mental Health?
9. What needs to be done for COVID?
10. List the factors of warning signs of COVID

Section C

(5 Marks)

Unit I

1. Give a note on the scope and nature of psychology.
2. Explain structuralism
3. Describe psycho analysis.
4. What is behaviorism?
5. Describe functionalism.
6. Describe the branches of psychology.
7. Describe a few branches of pure psychology
8. Describe a few branches of applied psychology.
9. Outline the contribution of Antony van Leeuwenhoek
10. Outline the contribution of Louis Pasteur
11. Analyze the contribution of Robert Koch
12. Analyze the contribution of Koch's postulates
13. Examine the contribution of Edward Jenner
14. Classify microorganisms
15. Examine the applied fields of Microbiology

Unit II

16. Classify immunity
17. Compile the historical overview of immune system

18. Differentiate between the active immunity and innate immunity
19. Analyze about natural passive immunity
20. Analyze about artificial passive immunity
21. Examine immunomediators
22. Outline on Lymphocyte neurohormonal receptor
23. Compile an account on human stressor
24. Analyze about cytokines
25. Examine specific immune mechanisms and functions

Unit III

26. Compile about CHD
27. Examine Type D personality
28. Organize about the symptoms of peptic ulcer
29. Analyze the complications of diabetes
30. Examine types and causes of asthma
31. Outline an account on treatment for peptic ulcer
32. Compile an account on eczema
33. Analyze about allergy
34. Examine about hirsutism
35. Compile the causes, symptoms and treatment of menstrual disorder

Unit IV

1. Describe the neurobiology of exercise.
2. List the psychological effects of exercise.
3. Write a note on obesity.
4. Write a note on public health.
5. Describe the stages of sleep.

6. Write a note on few sleep disorders.
7. Effects of accidents at home.
8. Causes of accidents in work place.

Unit V

1. Explain the recognizing symptoms of COVID
2. Write a note on health risks of COVID
3. Describe the treatment of COVID
4. Describe the testing of COVID
5. List the factors that promote the mental health due to COVID
6. Describe the prevention due to COVID

Section D

(10 Marks)

Unit I

1. Explain the main schools of psychology.
2. Describe in detail the various fields of psychology.
3. Define Psychology. Describe the scope and nature of the field of psychology.
4. Describe in detail about the contribution of Paul Ehrlich
5. Name four Nobel laureates in microbiology
6. Examine the history of Microbiology
7. Outline on the contributions of Leeuwenhoek, Joseph Lister, Pasteur and Robert Koch
8. Evaluate an account on applied fields of Microbiology
9. Analyze about Classification of microorganisms
10. Give a time line on the history of Microbiology

Unit II

11. Analyze immunity and its types

12. Examine the innate immunity
13. Analyze active immunity
14. Analyze about natural passive immunity
15. Analyze about artificial passive immunity
16. Examine immunomediators
17. Outline on Lymphocyte neurohormonal receptor
18. Analyze an account on human stressor
19. Analyze about cytokines
20. Examine specific immune mechanisms and functions

Unit III

26. Evaluate about CHD
27. Examine the relation between CHD with Type D personality
28. Organize about peptic ulcer
29. Analyze diabetes
30. Examine asthma
31. Outline an account on peptic ulcer
32. Analyze an account on eczema
33. Analyze about allergy
34. Examine about hiding
35. Evaluate about menstrual disorder

Unit IV

1. Illustrate and explain the neurobiology of exercise.
2. Elaborate on the eating related processes.
3. Explain in detail sleep and sleep disorders.
4. Write a note on accidents at home.

5. Give a detailed account of accidents at work place.

Unit V

1. Give a detailed account of recognizing illness symptoms of COVID
2. Give detailed account of treatment of COVID
3. Give a detailed account of health risk factors of COVID
4. Explain the vaccines in India
5. Explain the physical and mental health issues due to COVID

SOCIAL PSYCHOLOGY – 21UPSC51

SECTION A

UNIT – 1

Choose the correct answer:

1. Social psychology adopts a _____ perspective
a) **Multiculture** b) Social c) Personal d) Neuroscience
2. Two sides of coin in social psychology are _____
a) Social thought and relationship c) Social behaviour and relationship
b) **Social thought and behaviour** d) Social relationship and culture
3. In order to attain the goal of explanation social psychology employ a method of research as _____
a) Survey b) **Experimental** c) Analysis d) Correlation
4. A variable that is not under systematic investigation in the study is _____
a) **Confounded** b) Founded c) Independent d) Dependent
5. Which method is used by involving a large number of persons who are asked to respond to questions about their attitudes _____
a) Correlation b) Meta analysis c) **Survey** d) Experimental
6. Providing the participants with full description of the purpose of study of study is _____
a) **Debriefing** b) Informed consent c) Guiding d) Deception
7. Social neuroscience research is providing _____ answers
a. Nonreligious b) religious c) encounter d) **intriguing**
8. we are inaccurate about ourselves because of our _____
a) dreams b) thoughts c) **intentions** d) self
9. Useful ways to know about our self _____
a. **introspection** b) inward c) observation d) understanding
10. Which is not the historical roots in social psychology _____
a) psychoanalysis b) behaviourism c) gestalt d) **cognitive theory**

UNIT 2

1. A _____ is a mental shortcut commonly used to simplify problems and avoid cognitive overload
a) Uncertainty b) **Heuristic** c) Certainty d) Social cognition
2. Harsh anchor provided by _____ source produces harsher sentences
a) **Relevant** b) Irrelevant c) Recommended d) Unrecompensed
3. Portion size effect comes under
a) **Heuristic** b) Anchoring c) Inadequate d) Adjustment
4. Mental frameworks of an individual is _____
a) Planning b) Processing c) Encoding d) **Schemas**
5. Schemas can be _____
a) **Self-fulfilling** b) Unpriming c) Priming d) Influenced
6. _____ is linguistic devices that relate an abstract concept to another dissimilar concept
a) Primed b) **Metaphors** c) Perseverance d) Attention
7. _____ occurs in a systematic, logical and highly effortful manner.
a) Uncontrolled processing c) Automatic processing
b) Classical processing d) **Controlled processing**
8. _____ occurs in a fast, intuitive and relatively effortless manner
a) Controlled processing c) Uncontrolled processing
b) **Automatic processing** d) Classical processing
9. Information conveyed by cues
a) **Nonverbal** b) Verbal c) Irrepressible d) Expression
10. _____ is the window of soul
a) Facial expression b) Posture c) **Eye contact** d) Gesture

UNIT III

1. Social psychologist use the term _____ to refer people evaluation
a) **Attitude** b) Behaviour c) Character d) Empathy
2. Under conditions of uncertainty where the _____ answer is difficult to know
a) Incorrect b) **Correct** c) Ordinary d) Complex
3. The word _____ is not used lightly when the relationship between affect and cognition is important
a) **Interplay** b) Good mood c) Perception d) Thoughts

4. _____ refers to the negative attitude towards one individual in a group
 a) Prejudice b) Hatred c) **Discrimination** d) Racism
5. _____ restores positive self evaluation that are threatened by the dissonance
 a) Cognitive dissonance c) Attitude discrepant
 b) Insufficient justification d) **Self affirmation**
6. Classical conditioning can affect attitudes in 2 pathways
 a) **direct and indirect** c) conditioned and direct
 b) conditioned and indirect d) conditioned and unconditioned
7. Reference groups mostly comes under _____
 a) Classical conditioning c) Instrumental conditioning
 b) Modelling d) **Observational learning**
8. Resistance and persuasion are often increased by
 a) Ego depletion b) **Forewarning** c) Dissonance d) Attitude change
9. Strong reasons for engaging in attitude makes dissonance _____
 a) Strong b) Effective c) Ineffective d) **Weak**
10. _____ has been traditionally considered the feeling component of attitudes towards social groups
 a) **Prejudice** b) Discrimination c) Conformity d) Compliance

UNIT IV

1. The initial contact of 2 people is based on
 a) **Proximity** b) Social network c) Familiarity d) Physical beauty
2. _____ offers an explanation for why we like others who are similar to ourselves and dislike those who are different
 a) Social comparison c) Matching hypothesis
 b) **Balance theory** d) Attitude similarity
3. Frequency of exposure to another person increases the _____ of that person
 a) Disliking b) Familiarity c) Unfamiliarity d) **Liking**
4. Attraction towards others is often strongly influenced by their observable characteristic specially their _____
 a) **Physical attractiveness** b) Proximity c) Familiarity d) Similarity

5. Attraction is determined by the proportion of

- a) Dissimilarity b) Proximity c) **Similarity** d) Familiarity

6. Social astuteness is also known as _____

- a) **Social perception** b) Social cognition c) Social behaviour d) Social influence

7. _____ is the tendency to have inflated views of oneself and no interest in the feelings of others

- a) Physical attraction c) Matching hypothesis

- b) Proportion of similarity d) **Narcissism**

8. Groups which are coherently whole and form a coherent entity is known as _____

- a) Common bond group c) common identity group

- b) **Entitativity** d) whole group

- a) **Competitive altruism theory** c) Kin selection theory

- b) Defensive helping d) Empathy altruism hypothesis

5. Helping others in need because we experience empathic concern for them _____

- a) Negative state relief model c) Empathy joy hypothesis
b) Empathy altruism hypothesis d) Kin selection theory
6. Reducing the threat posed by out groups to one's own in-group is _____
a) Empathy c) **Defensive helping**
b) Negative state relief d) Empathic joy hypothesis
7. _____ can prevent any one person in group strangers from acting as each of them.
a) Pluralistic ignorance c) Bystanders
b) Diffusion of responsibility d) Knowledge
8. Aggression stems mainly from a powerful _____ in all humans
a) Attachment styles b) Parents c) Self-esteem d) **Death wish**
9. _____ can be effective in reducing aggression but only when it is delivered under certain conditions
a) Motivation b) **Punishment** c) Fear d) Positive rewards
10. Beliefs about what members of a group are like is _____
a) Prejudice b) Discrimination c) Negative emotions d) **Stereotype**

SECTION B

UNIT I

1. Write 2 historical roots of applied social psychology?
2. Write a short note on applied social psychology.
3. Define social psychology
4. What is the role of applied social psychologist?
5. Distinguish between social psychology and applied social psychology
6. How social psychology focuses on individual's behaviour?
7. What is called as ethnography?
8. Define case study
9. Distinguish between field study and field experiment.
10. What is correlational research?

UNIT II

1. What is social cognition?
2. Write 2 basic channels of communication?
3. Describe non-verbal communication.
4. Describe deception.
5. What is attribution?
6. What is impression formation?

- 7.Distinguish between Anchoring and Adjustment heuristic.
- 8.Define schema
9. What is impression management?
10. Describe planning fallacy.

UNIT III

1. What is attitude?
- 2.Describe attitude extremity?
- 3.What is persuasion?
- 4.Define social learning
- 5.How social influence reduce prejudice?
- 6.Define prejudice
- 7.Define discrimination
8. Define Thurstone scale.
9. Describe the components of attitude.
- 10.Define planned theory

UNIT IV

- 1.Write about leadership
- 2.Describe the functions of group
- 3.Define group.
- 4.What is social loafing?
- 5.What is group formation?
- 6.Distinguish between transformational and transactional leadership
7. Define social facilitation
8. List any 3 nature of group.
9. Define social facilitation.
10. What is group think?

UNIT V

- 1.What is applying social psychology in legal system?
- 2.What is applying social psychology in media?
3. What is applying social psychology in politics?
4. What is applying social psychology in work setting?
- 5.What is applying social psychology in community?
- 6.What is applying social psychology in culture?
- 7.What is applying social psychology in health?
8. What is applying social psychology in environmental psychology?
- 9.What is applying social psychology in social neuroscience?
- 10.What is applying social psychology to personal relationship?

SECTION C

UNIT I

1. Detail notes on introduction to applied social psychology.
2. Explain the difference between social psychology and applied social psychology.
3. Name the historical context of applied social psychology.
4. Describe the research methods in applied social psychology.
5. Write short note on role of applied social psychologists.
6. Explain the field study research methods.
7. Explain the survey research.
8. Write a short on archival research.
9. Explain the correlational research.
10. Explain the data collection methods in research.

UNIT II

- 1.Explain non-verbal communication.
- 2.Explain the schema types.
- 3.Explain recognizing deception.
- 4.Describe attribution.
- 5.Write a brief on impression management.
- 6.Write a short note on impression formation.
- 7.Describe on social cognition.
8. Explain in detail about Asch research.
- 9.Explain about the sources of error in social cognition
- 10.Describe about heuristics.

UNIT III

- 1.Explain the science of persuasion, how attitude is changed?
- 2.Detail notes on attitude.
- 3.Detail notes on attitude formation.
- 4.Wite a short note on attitude function.
- 5.Explain attitude behaviour link.
- 6.Explain in about components of attitude
7. Describe about persuasion.
8. Explain in detail about cognitive dissonance.
- 9.Provide a summary on attitude scales
10. Outline about prejudice.

UNIT IV

- 1.Explain group in detail.
- 2.Explain the theories of group formation.
- 3.Explain the types of groups.
- 4.Write short note on leadership.
- 5.Distinguish between social facilitation and social loafing.
- 6.Describe about group think.
7. Explain in detail about functions of leadership.
8. Provide a summary on leader effectiveness.
- 9.Outline about theories of leadership.
- 10.Explain in detail about nature and impact in groups.

UNIT V

- 1.What is applying social psychology in media.
- 2.What is applying social psychology in legal system.
- 3.What is applying social psychology in politics.
- 4.Explain in applying social psychology in work settings.
- 5.Explain in applying social psychology in community.
- 6.Explain in applying social psychology in culture.
- 7.Explain in applying social psychology in health.
- 8.Explain in applying social psychology in environmental psychology.
- 9.What is applying social psychology in social neuroscience.
10. Explain in detail about applying social psychology to personal relationships.

SECTION D

UNIT I

1. Explain social psychology.
2. Distinguish between social psychology and applied social psychology.
3. Elaborate about the historical context of applied social psychology.
4. Explain on research methods in applied social psychology.
5. Explain detail note on role of applied social psychologists.

UNIT II

- 1.Explain non-verbal communication.
- 2.Elaborate on basic channels of communication.
- 3.What is recognizing deception?

- 4.Explain in detail about attribution.
- 5.Provide a summary on basic source of errors in attribution.

UNIT III

- 1.Decribe about attitude.
- 2.Explain attitude formation.
- 3.Explain social learning.
- 4.When and why do attitudes influence behaviour?
- 5.Outline on persuasion.

UNIT IV

- 1.Explain about group.
- 2.Explain in detail about types of groups.
- 3.Elaborate on theories of group formation.
- 4.Explain in detail note on social facilitation.
- 5.Explain social loafing.

UNIT V

- 1.Describe about applying social psychology in media.
- 2.Explain applying social psychology in legal system.
- 3.Explain applying social psychology in politics.
- 4.Explain in detail about applying social psychology in work settings.
- 5.Summarize on applying social psychology in community.

COUNSELLING PSYCHOLOGY – 21UPSC52

SECTION A

Unit I

1. _____ started the first psychological clinic.
a. Wilhelm Wundt b. J. B. Miner **c. Lightner winner** d. Adolf Myers
2. First journal of counselling was released in the year _____.
a. 1965 **b. 1954** c. 1950 d. 1945

9. _____ are the three aspects of diagnosis.
a) problem, appraisal, prognosis
b) Prognosis, personal diagnosis, emotional appraisal
c) problem, appraisal, emotional appraisal
d) problem appraisal, personal diagnosis, prognosis
10. The method of submitted ratings was developed by -----
a. Williamson b. Likert c. Thurstone d. Weschler

SECTION B

Unit I

1. What is guidance?
2. Define counselling?
3. Mention any 3 events took place during the period of guidance moment from 1900-1930.
4. List down the factors that contributed to the emergence of counselling.
5. Differentiate guidance from counselling.
6. Give example for immediate and long-term goals.
7. How and when did counselling obtained recognition from APA?

-

Unit II

1. What are directive and non-directive approaches?
2. How is psychodynamic approach differ from psychoanalytic approach?

3. Give any two assumptions or views of humanistic approach.
4. What is Eclectic approach to counselling? Give ex ample.
5. What are behaviouristic approaches?
6. What is the relevance between directive approach and psychoanalysis.?
7. What is reciprocal inhibition?
8. What is eclectic approach? Give example.
9. What are the assumptions of behavioral modification technique?
10. What is conditional and unconditional positive regard?

Unit III

1. Define counselling processes?
2. What is psychoanalysis?
3. What is group Counselling?
4. What is empathy?
5. What is eclectic approach
6. What is emergence of group Counselling
7. Write about existential approach
8. What is ambiguity in counselling?
9. What is self-disclosure in counselling?
10. What is the similarities group Counselling
11. List down the defence mechanisms
12. What is resistance in counselling?

Unit IV

1. What is counsellor education?
2. Bring down the major areas to be focused on ethical and legal issues in counselling.
3. List two essential assumptions for counsellor to follow during the counselling process?
4. What are some of the basic skills needed for the budding counsellor?
5. List down the common ethical violations by mental health professionals.
6. List down three code of professional ethics proposed by APA.
7. Why is ethical code important for mental health professionals?

Unit V

1. What are boundaries of counselling
2. What is ethical issues in counselling
3. List out the types of counselling
4. What is face to face counselling
5. What is computerized therapy programme
6. What are the advantages of online counselling
7. What are setting of counselling
8. Write down the technology involved in counselling
9. Mention the ethical boundaries in counselling

SECTION C

Unit I

1. Write a short note on guidance and counselling.
2. Briefly explain about the goals of counselling.
3. Bring down the similarities and differences between guidance and counselling.
4. Discuss about the guidance movement and psychometric movement.
5. Explain about the status of guidance movement after independence.

Unit II

1. Discuss about the relevance of psychoanalytic approach to directive approach in detail.
2. Explain about behavioral modification technique.
3. Write about behaviouristic approach in detail.
4. Briefly explain about eclectic approach with example.
5. Write a short note on humanistic approach.

Unit III

1. Describe about the Counselling stages.
2. Explain the aspects in involved in preparation for counselling.

3. Explain about counselling relationship and aspects of healthy relationship in counselling.
4. Briefly elaborate the counselling process
5. Explain about the characteristics of counsellor

Unit IV

1. Write about common ethical violation by mental health professionals
2. Write a note about preparation of counsellors for the profession.
3. Explain about the practical skills and selection and training of counsellors.
4. Describe about counsellor preparation and professional issues in it.
5. Describe the group Counselling
6. Explain about educational Counselling

Unit V

1. Explain about the counselling in a face to face process
2. Brief about online counselling
3. Write a detailed note on telephone counselling
4. Write about computerized therapy programme
5. Illustrate the types of counselling

SECTION D

Unit 1

1. Explain in detail about emergence of guidance and counselling.
2. Elaborate the goals and need for guidance and counselling
3. Enumerate the history of counselling and psychotherapy
4. Elaborate the counselling and psychotherapy
5. Explain the ethical codes in counselling

Unit II

1. Analyse the humanistic approach to counselling and Rogers's self-theory in detail.
2. Explain in detail about the role of reciprocal inhibition and behavior modification.
3. Enumerate the steps involved in counselling process.

- a. **entropy** b. equivalence
- c. opposites d. atrophy
13. Jung proposed Psychological types.
- a. 2 b. 4
- c. 6 d. **8**
14. The concept of early recollection was proposed by
- a. Freud b. **Adler**
- c. Horney d. Zultzer
15. The concepts of neurotic needs and trends were proposed by
- a. Freud b. Adler
- c. **Horney** d. Zultzer

UNIT III

1. The book Gandhi's truth was written by
- a. Freud b. Adler
- c. **Erikson** d. Zultzer
2. Competence is the basic strength of stage.
- a. infancy b. anal
- c. genital d. **latency**
3. Ego Integrity-Despair are the conflicts of the stage.
- a. adolescence b. adulthood
- c. middle age d. **old age**
4. Autonomy is a characteristic feature of

- traits are specific to individuals.
 - unique**
 - common
 - surface
 - source
- traits are common to individuals.
 - unique
 - common**
 - surface
 - source

3. Proprium is the other name for as stated by Allport.
- a. id
 - b. **ego**
 - c. super ego
 - d. psyche
4. Allport proposed number of values.
- a. 2
 - b. 4
 - c. **6**
 - d. 8
5. traits determine how efficiently we are able to work towards a goal.
- a. **ability**
 - b. temperament
 - c. dynamic
 - d. common
6. Traits are the driving forces of behaviour.
- a. ability
 - b. temperament
 - c. **dynamic**
 - d. common
7. Traits possessed by everyone to some degree is traits.
- a. ability
 - b. temperament
 - c. dynamic
 - d. **common**
8. 16 PF was developed by
- a. Freud
 - b. Adler
 - c. **Cattell**
 - d. Zultzer
9. Q data of Cattell relies upon
- a. **questionnaires**
 - b. objective tests
 - c. observer's ratings
 - d. researcher's ratings
10. According to Eysenck, personality has dimensions.
- a. 1
 - b. 2
 - c. **3**
 - d. 4
11. According to McCrae and Costa there are personality factors.
- a. 1
 - b. 3
 - c. **5**
 - d. 7

12. In US, women high in, were found to blog more.

- a. **neuroticism**
- b. psychoticism
- c. agreeableness
- c. emotional stability.

13. Lower needs are also called

- a. **deficit needs**
- b. growth needs
- c. safety needs
- d. being needs

UNIT V

1. Skinner identified respondent behaviour and behaviour.

- a. **operant**
- b. modelled
- c. overt
- d. covert

2. Schedule in which the reinforcements are given at specific time intervals is

- a. **fixed interval schedule**
- b. fixed ratio schedule
- c. variable interval schedule
- d. variable ratio schedule

3. Schedule in which the reinforcements are given at variable time intervals is

- a. fixed interval schedule
- b. fixed ratio schedule
- c. **variable interval schedule**
- d. variable ratio schedule

4. Punishment and negative reinforcement are

- a. the same
- b. **not the same**
- c. unique
- d. specific

5. Observing the behaviour of a person and repeating it is called

- a. **modelling**
- b. shaping
- c. conditioning
- d. reinforcing

6. Observational learning is governed by related mechanisms.

- a. 1
- b. 2
- c. 3
- d. **4**

7. According to Bandura, feelings of self sufficiency and adequacy is called

- a. self efficiency
- b. **self efficacy**

- c. self confidence
d. all the above
8. Locus of control was proposed by
- a. **Rotter**
b. Zuckerman
c. Seligman
d. None of the above.
9. Sensation seeking was proposed by
- a. Rotter
b. **Zuckerman**
c. Seligman
d. None of the above.
10. Learned helplessness was proposed by
- a. Rotter
b. Zuckerman
c. **Seligman**
d. None of the above.
11. Positive Psychology was proposed by
- a. Rotter
b. Zuckerman
c. **Seligman**
d. None of the above.

SECTION B

Answer in about 50 words:

(2 Marks)

UNIT I

1. Define personality.
2. Differentiate between conscious and unconscious.
3. Who proposed the concept of behaviourism.
4. Define reliability.
5. What is validity?
6. Describe projective tests.
7. Describe Buss and Plomin's three temperaments.
8. Write a note on Eysenck's dimensions of personality.
9. State the 5-factor model of personality.
10. Describe Cattell's trait theory.

UNIT II

1. Describe id, ego and superego.
2. Illustrate the structure of the psyche according to Freud.
3. Describe projection.
4. What are defense mechanisms?
5. Explain reaction formation.
6. Differentiate between regression and repression.
7. What is Oedipus complex?
8. List Jung's psychological types.
9. What is the collective unconscious?
10. Explain MMPI.
11. Describe the characteristics of the second born child.

UNIT III

1. List Horney's neurotic needs.
2. Describe a compliant personality.
3. Describe aggressive personality.
4. Describe detached personality.
5. What is womb envy?
6. List the psychosocial stages of development.
7. List the basic strengths developed in the various psychosocial stages of development.
8. Describe industriousness versus inferiority.
9. Describe Erikson's Play therapy.
10. Abbreviate: PEM & NEM.
11. Explain identity crisis.
12. What are the stages of development of gender preference.

UNIT IV

1. Describe traits according to Allport.
2. What is functional autonomy of motives?
3. State the types of functional autonomies.
4. Differentiate common and unique traits.
5. State the importance of dynamic traits.
6. What are ergs and sentiments?
7. State Eysenck's dimensions of personality.
8. Describe psychoticism.
9. What are the 5 factors of personality according to McCrae and Costa?
10. Illustrate Maslow's hierarchy of needs.
11. State 4 characteristics of needs.
12. Describe meta motivation.
13. State 4 characteristics of self-actualizers.
14. State 4 characteristics of a fully functional person.
15. Describe client centered therapy.

UNIT V

1. Define operant behaviour.
2. Define respondent behaviour.
3. State the schedules of reinforcement.
4. Describe superstitious behaviour.
5. Differentiate punishment and negative reinforcement.
6. Describe modelling.
7. What is disinhibition?
8. State the mechanisms that govern observational learning.
9. Define self efficacy.
10. What is reciprocal determinism?
11. Describe locus of control.

12. What is sensation seeking?
13. Differentiate optimism and pessimism.
14. What is learned helplessness?
15. Define positive psychology?

SECTION C

Answer in about 200 words each:

(5 Marks)

UNIT I

1. Describe the role of the unconscious.
2. Explain the evolution of personality.
3. Write a note on personality and the internet.
4. Describe the projective tests used to assess personality.
5. Explain clinical methods.
6. Explain personality in the perspective of genetic factors.
7. Explain personality in the perspective of developmental factors.
8. Explain personality in the Perspective of unconscious factors.
9. Describe a virtual research method.
10. List the limitations of experimental methods.

UNIT II

1. Explain Freud's structure of the psyche
2. Describe the psychosexual stages of development.
3. Explain any 5 defense mechanisms of Freud.
4. State Anna Freud's extensions of Freud's theory.
5. Describe dream analysis.
6. Explain opposites, equivalence and entropy.
7. Write a note on extraversion and introversion.
8. Write a note on archetypes.
9. Describe the importance of ordinal position according to Adler.

10. Explain superiority and inferiority feelings.

UNIT III

1. Describe basic anxiety as the foundation of neurosis according to Horney.

2. Describe the neurotic needs and trends according to Horney.

3. Explain complaint and aggressive personality types.

4. State the characteristics of detached personality.

5. Describe the conflicts found in various psychosocial stages of development according to Erikson.

6. How is assessment done in Erikson's theory?

7. Write a note on gender preference identity.

8. Write a note on virtual identity.

UNIT IV

1. Explain functional autonomy.

2. Explain the types of traits according to Cattell.

3. Describe dynamic traits.

4. Differentiate extraversion and introversion.

5. Describe the five-factor model of personality.

6. Write a note on Maslow's meta needs and meta pathologies.

7. Explain self-actualization according to Maslow.

8. Write a note on the conditions of worth according to Rogers.

9. Describe the personal construct theory.

10. Describe fixed role therapy.

UNIT V

1. Describe the schedules of reinforcement.

2. Differentiate operant and respondent behaviour.

3. Explain operant conditioning.

4. Explain the applications of operant conditioning.

5. Describe the assessment methods in operant conditioning.

6. What are the characteristics of modelling situations?
7. Differentiate self-reinforcement and self-efficacy.
8. Explain Julian Rotter's theory of personality.
9. Explain Zuckerman's sensation seeking.
10. Explain Seligman's positive psychology.

SECTION D

Answer in about 400 words:

(10 Marks)

UNIT I

1. Elaborate on the place of personality in the history of psychology.
2. Explain the research methods used in psychology.
3. Elaborate the perspectives of psychology in genetic and environmental factors.
4. Explain in detail the personality perspectives in conscious and unconscious factors.
5. Explain in detail the personality perspectives in developmental and parental factors.

UNIT II

1. Give a detailed account of Freud's psycho sexual stages of development.
2. Elaborate on defense mechanisms.
3. Explain Jung's concepts of psychic energy.
4. Critically analyze inferiority and superiority feelings.
5. Explain the importance of ordinal positions according to Adler.

UNIT III

1. Discuss on Horney's Feminine Psychology.
2. Elaborate on neurotic needs and trends.
3. Explain in detail Erikson's stages of psychosocial development.
4. How is assessment done in Erikson's theory and what are its reflections?
5. Explain how basic anxiety forms the basis of all neurosis according to Horney.

UNIT IV

1. Give a detailed account of Allport's trait theory.

2. Explain in detail traits as proposed by Cattell.
3. Elaborate on Eysenck's theory of personality.
4. Analyze the five-factor theory of personality critically.

UNIT V

1. Explain operant conditioning in detail.
2. Elaborate on Maslow's hierarchy of needs.
3. Give a detailed account of personal construct theory.
4. Explain how modelling forms the basis of observational learning.
5. Elaborate on the contemporary theories of personality.

FORENSIC PSYCHOLOGY - 21UPSE51

SECTION A

UNIT 1

1. refers to anything pertaining to law, both civil and criminal.
 - a. Psychology
 - b. Forensic science
 - c. **Forensic**
 - d. Investigation
2.is concerned with in-depth evaluation of language related characteristics of text.
 - a. **Forensic linguistics**
 - b. Forensic entomology
 - c. Forensic anthropology
 - d. Forensic archaeology
3. refers to the identification of skeletal, badly decomposed and unidentified human remains.
 - a. Forensic linguistics
 - b. Forensic entomology
 - c. **Forensic anthropology**
 - d. Forensic archaeology
4. is concerned with diseases and disorders of the body.
 - a. **Forensic pathology**
 - b. Forensic entomology
 - c. Forensic anthropology
 - d. Forensic archaeology
5. is the study of insects as it relates to legal issues.
 - a. Forensic linguistics
 - b. **Forensic entomology**
 - c. Forensic anthropology
 - d. Forensic archaeology
6.also called forensic data recovery, involves e-mail and internet analysis, along with hard drive, memory stick recovery etc.
 - a. Recovery
 - b. Data retriever
 - c. **Computer evidence recovery**
 - d. Data analysis
7.is the research and application if psychological principles and clinical skills to law enforcement and public safety.
 - a. Legal Psychology
 - b. Investigative Psychology
 - c. Correctional Psychology
 - d. **Police Psychology**
8. ia an umbrella term for the scientific study of a wide assortment of topics reflecting the close relationship between Psychology and the courts.
 - a. **Legal Psychology**
 - b. Forensic Psychology
 - c. Correctional Psychology
 - d. Police Psychology

- b. Investigative Psychology
 - d. Police Psychology
- 9. Incourts, two or more parties approach the legal system, often seeking resolution of a dispute.
 - a. Criminal
 - c. **Civil**
 - b. Mental health
 - d. Probate
- 10. is done to uncover bias and to attempt to produce an objective jury.
 - a. Amicus curiae
 - c. Depositions
 - b. **Voir dire**
 - d. Nolo contendere

UNIT 2

- 1. PTSD is usually characterized by which of the following symptoms?
 - a. recurrent occurrence of memories
 - b. intrusive memories of the event
 - c. horror
 - d. **All of the above**
- 2. Munchausen Syndrome was also called
 - a. Child Neglect
 - c. Shaken baby syndrome
 - b. **Medical Child Abuse**
 - d. All of the above
- 3. The primary standard of child custody was, in which the children particularly girls were best left in the care of the mother.
 - a. Best Interest of the child
 - c. **Tender years doctrine**
 - b. Alternative standard
 - d. All of the above
- 4. is the equivalent of sentencing in the adult context.
 - a. Evaluation
 - c. Assessment
 - b. **Disposition**
 - d. Rehabilitation
- 5. means to reduce the sentence by avoiding the death penalty.
 - a. Sentencing
 - c. **Mitigation**
 - b. Competency to be executed
 - d. Insanity
- 6.refers to mental state at the time of the crime.
 - a. Sanity
 - c. Criminal responsibility
 - b. **Both a & b**
 - d. Competency

7.refers to one's mental state at the time of the criminal justice proceedings
 - a. Sanity
 - b. Insanity
 - c. Criminal responsibility
 - d. **Competency**
8. When it is mental disorder that robs the individual of a guilty mind, the law refers to this as
 - a. Sanity
 - b. **Insanity**
 - c. Criminal responsibility
 - d. Competency
9. refers to the degree to which all items on a particular test measure the same thing.
 - a. **Internal consistency**
 - b. Reliability
 - c. Interrater reliability
 - d. Validity
10. is broad enough to subsume a wide range of abilities defendants are expected to possess.
 - a. Competency
 - b. Dusky Competence
 - c. **Adjudicative competence**
 - d. All of the above

UNIT 3

1. The right to speak out during the proceedings is.....
 - a. Notification
 - b. Compensation
 - c. **Allocution**
 - d. Restorative justice
2.is a remedy for the recovery of some measure of economic and psychological wholeness.
 - a. Notification
 - b. Compensation
 - c. **Restitution**
 - d. Restorative justice
3. involves sexual arousal from observing an unsuspecting person who is undressing, naked.
 - a. **Voyeurism**
 - b. Fetishism
 - c. Frotteurism
 - d. Partialism
4. involves sexual arousal from inflicting real or stimulated physical pain.
 - a. **Sexual sadism**
 - b. Fetishism
 - c. Frotteurism
 - d. Partialism

5. involves achieving sexual arousal by touching body parts not normally associated with sexual activity such as feet or ears.
 - a. Sexual masochism
 - b. Fetishism
 - c. Frotteurism
 - d. **Partialism**
6. involves achieving sexual arousal from touching against a nonconsenting person, usually in a crowded public place.
 - a. Sexual sadism
 - b. Fetishism
 - c. **Frotteurism**
 - d. Partialism
7. stalking is considered highly delusional.
 - a. Vengeance
 - b. **Erotomania**
 - c. Love obsession
 - d. Simple obsession
8. normally refers to the killing of three or more individuals without a cooling off period.
 - a. Mass murder
 - b. **Spree murder**
 - c. Serial murder
 - d. Murder
9. refers to an unintended killing that results from unjustifiable conduct.
 - a. **Manslaughter**
 - b. Murder
 - c. Criminal homicide
 - d. Multiple murder
10. violence is also expressive violence.
 - a. Instrumental
 - b. Domestic
 - c. **Reactive**
 - d. IPV

UNIT 4

1. Shaken baby syndrome is a form of.....
 - a. Elder abuse
 - b. **Child abuse**
 - c. Elder neglect
 - d. Stalking
2. means killing of a child older than one year.
 - a. **Filicide**
 - b. Neonaticide
 - c. Infanticide
 - d. All of the above
3. means killing of the newborn within the first 24 hours after birth.
 - a. Filicide
 - b. **Neonaticide**
 - c. Infanticide
 - d. All of the above

4. Which of the following comes under maltreatment?
 - a. Neglect
 - b. Emotional abuse
 - c. Physical abuse
 - d. **All of the above**
5. Battered women syndrome was given by
 - a. Seligman
 - b. Levesque
 - c. **Lenore Walker**
 - d. Meire Walker
6. BWS follows a stage cycle of violence.
 - a. 2
 - b. 4
 - c. **3**
 - d. 5
7. The Developmental stages of an Intimate Partner Violence relationship was proposed by
 - a. Walker
 - b. **Meier et.al**
 - c. Leoner
 - d. Goddard
8. The family members, friends of the victims are termed as
 - a. By-victims
 - b. Bystanders
 - c. **Co-victims**
 - d. Passers
9. Fear of being victimized is especially powerful as a victim's
 - a. Pre - victimization characteristics
 - b. **Post - victimization abilities to cope**
 - c. Response to the criminal event
 - d. All of the above
10. The condition iswhen atleast 6 months have passed between the traumatic event and the onset of symptoms.
 - a. Acute
 - b. **Delayed onset**
 - c. Chronic
 - d. Severe

UNIT 5

1. are mistaken assumptions regarding the crime.
 - a. **Thinking errors**
 - b. Mistakes
 - c. Cognitive miss
 - d. Errors

2. FFT stands for.....
 - a. **Functional Family Therapy**
 - b. Functional Family Training
 - c. Family Fixedness Therapy
 - d. Family Fixedness Training
3. ART stands for.....
 - a. **Aggression Replacement Training**
 - b. Aggression Risk Taking
 - c. Aggression Risk Training
 - d. Aggressive Risk Taking
4. offenders are juveniles whose offenses might include running away from home.
 - a. Juvenile
 - b. Sex
 - c. **Status**
 - d. Minority
5. Which of the following are the obstacles to treatment of inmates?
 - a. Confidentially
 - b. Environment
 - c. Coercion
 - d. **All of the above**
6. Substance abuse often co-occurs with.....
 - a. Violence
 - b. Behavioural problems
 - c. Mental disorders
 - d. **All of the above**
7. needs are dynamic factors & subject to change.
 - a. **Criminogenic**
 - b. Dynamic
 - c. Non-criminogenic
 - d. Static
8. needs are those that may be subject to change but have been found to have little influence on an offender's criminal behaviour.
 - a. Criminogenic
 - b. Dynamic
 - c. **Non-criminogenic**
 - d. Static
9. psychologists work in correctional facilities.
 - a. Legal
 - b. Criminal
 - c. Police
 - d. **Correctional**
10. In, the inmates are isolated from the general jail for a variety of reasons.
 1. Pretrial
 2. **Solitary confinement**
 - c. Transfers
 - d. Supervision

SECTION B

UNIT 1

1. Differentiate forensic psychology and forensic science.
2. Define forensic psychiatry.
3. Define forensic social work.
4. Describe forensic psychology.
5. List out the careers in forensic psychology.
6. Define forensic linguistics.
7. Explain forensic anthropology.
8. Define forensic entomology.
9. Describe the status of forensic psychology at present.
10. List out some of the ethical issues in forensic psychology.
11. List out the sub specialities of forensic psychology.
12. Distinguish between Psychology and Psychiatry.

UNIT 2

1. Define police psychology.
2. Define legal psychology.
3. Define investigative psychology.
4. Expand: (i) SWAT (ii) NGRI
5. What do you mean by false confessions?
6. Define profiling.
7. Distinguish between dynamic and static risk factors.
8. Mention some of the causes of police suicide.
9. Define dusky standard.
10. List out the types of profiling.
11. Define polygraph.
12. Distinguish between hypnotic hypermnesia and nonhypnotic hypermnesia.
13. List out the types of courts.
14. Define the purpose of family courts.
15. Who are called juries?
16. Define amicus curiae briefs.

17. Define disposition.
18. What do you mean by 'voir dire'?
19. What do you mean by 'competency to stand trial'?
20. Define criminal responsibility.
21. Distinguish between screening out and screening in procedures.
22. What are called testamentary capacity?

UNIT 3

1. Define Juvenile fire setting.
2. Define hate crime.
3. List out the causes of violence.
4. What are the signs of criminal psychopath?
5. Define criminal homicide.
6. Define sexual homicide.
7. List out the demographics of rapists.
8. List out the typologies of rapists.
9. Define stalking.
10. Define mass murder.
11. Define spree murder.
12. When does stalking usually stop?
13. List out the types of MTC:R3

UNIT 4

1. Define multiculturalism.
2. What are called victimless crimes?
3. Define child abduction.
4. List out the legal rights of inmates.
5. List out the legal rights of victims.
6. Expand: IPV
7. Define child sexual abuse.
8. Define PTSD

9. List out the assessment involved in IPV.
10. Explain Battered Woman Syndrome.
11. Define Munchausen Syndrome.
12. Define Shaken Baby Syndrome.
13. What are the roles of forensic psychologist in victimology?

UNIT 5

1. Define correctional psychology.
2. List out the role of correctional psychologists.
3. What is called solitary confinement?
4. Differentiate correctional and legal psychology.
5. List out the assessment involved in correctional psychology.
6. List out some of the substance abuse models.
7. List out some of the family preservation models.
8. How did Juvenile courts function?
9. List out the obstacles to treatment of inmates.
10. Are treatment programs offered for juvenile sex offenders effective?
11. Distinguish between criminogenic and noncriminogenic needs.

SECTION C

UNIT 1

1. Explain the role of forensic psychologists.
2. Elucidate a note on the history of forensic psychology.
3. Distinguish between forensic psychology and forensic psychiatry.
4. Provide a detailed account the careers in forensic psychology.
5. Describe the ethical issues concerned with forensic psychology.

UNIT 2

1. Explain some of the inventories used in police psychology.
2. Explain the problems associated with profiling.

3. Describe the methods used to detect deception.
4. Explain forensic hypnosis.
5. Explain about risk assessment.
6. Provide a note on Post-shooting traumatic reactions.
7. Explain some of the competency assessment instruments.
8. Explain Tarasoff requirement.
9. Explain some of the child custody standards.

UNIT 3

1. Explain the causes of violence.
2. Describe the general behavioural characteristics of Psychopaths.
3. Explain coercion developmental model of juvenile offending.
4. Write a note on the typologies of rapists.
5. Produce a note on female sex offender typologies.

UNIT 4

1. Write a note on multiculturalism and victimization.
2. Describe the legal rights of victims.
3. Examine the forensic assessment involved in IPV.
4. Analyse the role of forensic psychologists in victimology and victim services.
5. Provide a short note on elder abuse and neglect.
6. Analyze the causes of child abduction.

UNIT 5

1. Explain the legal rights of inmates.
2. Write a note on the role of correctional psychologists.
3. Explain some of the psychological assessment in correction.
4. Describe the obstacles to treatment of inmates.
5. Analyze the psychological treatment in Juvenile facilities.

SECTION D

UNIT 1

1. Define forensic psychology. Explain the sub-specialities involved in forensic psychology.
2. Elucidate a note on various fields of forensic science.
3. Compile your views on various careers in forensic psychology.
4. Provide a detailed account on the history of forensic psychology.

UNIT 2

1. Elaborate on the various forensic assessment involved in police psychology.
2. Provide a detailed account on the types of profiling.
3. Provide an account on the stages involved in judicial process.
4. Provide a detailed account on investigate psychology.
5. Provide a detailed account on legal psychology
6. Provide a detailed account on police psychology.

UNIT 3

1. Elucidate a note on Moffitt Theory of juvenile offending.
2. Elucidate a note on the developmental factors in the formation of persistent criminal behaviour.
3. Provide a detailed account on MTC:R3
4. Analyze the role of forensic psychologists in criminal psychology.

UNIT 4

1. Elaborate the psychological effects of criminal victimization.
2. Describe some of the forms of child abuse.
3. Analyze the developmental theory of IPV.
4. Summarize the types of victimization with its effects.

UNIT 5

1. Illustrate your views on the treatment of special populations.
2. Provide a detailed account on family preservation model of rehabilitation.
3. Provide a detailed account on substance abuse model.
4. Compile your views on violence prevention programs.
5. Summarize Juvenile sex offender treatment programs.

SEMESTER VI

EDUCATIONAL PSYCHOLOGY – 21UPSC61

Section – A

(1 Mark)

Unit I

1. What does the term "nature" refer to in educational psychology?
 - a) **The innate characteristics and abilities of an individual**
 - b) The environmental factors influencing learning
 - c) The educational practices implemented in natural settings
 - d) The cultural background of learners
2. What is the primary focus of the history of educational psychology?
 - a) Tracing the development of educational institutions
 - b) Studying the evolution of teaching methods
 - c) **Understanding the origins and growth of psychological theories relevant to education**
 - d) Analyzing the impact of technology on learning environments
3. Which of the following best describes the scope of educational psychology?
 - a) **The study of human behavior in educational settings**
 - b) The examination of historical educational practices
 - c) The analysis of societal influences on education
 - d) The exploration of philosophical principles in education
4. Which method is commonly used in educational psychology to study individual differences in learning?

- a) **Case studies**
- b) Surveys
- c) Experiments
- d) Observational research

5. The role of educational psychology includes:

- a) Developing curriculum materials
- b) **Evaluating teaching effectiveness**
- c) Managing school finances
- d) Enforcing disciplinary policies

6. What aspect of educational psychology focuses on understanding how students acquire knowledge and skills?

- a) Developmental psychology
- b) **Cognitive psychology**
- c) Social psychology
- d) Personality psychology

7. Which method of educational psychology involves systematically observing and recording behavior in naturalistic settings?

- a) Experimental method
- b) Correlational method
- c) **Descriptive method**
- d) Survey method

8. What is the primary goal of educational psychology?

- a) To improve teaching techniques
- b) To understand the behavior of students
- c) **To enhance learning outcomes**
- d) To design standardized tests

9. How does educational psychology contribute to teaching practices?

- a) By developing standardized curricula
- b) **By providing insights into individual differences in learning**
- c) By enforcing strict discipline in classrooms
- d) By promoting memorization-based learning approaches

10. In educational psychology, the term "motivation" refers to:

- a) **The desire to achieve success in academic tasks**
- b) The influence of genetics on learning outcomes
- c) The impact of socioeconomic status on educational attainment
- d) The effectiveness of instructional materials in promoting learning

Unit II

1. According to Piaget's theory of cognitive development, which stage is characterized by the ability to think logically about abstract concepts?

- a) Sensorimotor
- b) Preoperational
- c) Concrete operational
- d) **Formal operational**

2. Vygotsky's sociocultural perspective emphasizes the importance of:

- a) Genetics in cognitive development
 - b) Social interactions in cognitive development**
 - c) Individual exploration in cognitive development
 - d) Biological factors in cognitive development
3. The zone of proximal development (ZPD) refers to:
- a) The stage when children develop basic motor skills
 - b) The difference between what a learner can do without help and what they can do with help**
 - c) The stage when children begin to understand abstract concepts
 - d) The period of adolescence marked by rapid physical changes
4. Dual language development refers to:
- a) The ability to speak two languages fluently from birth
 - b) Learning two languages simultaneously during early childhood**
 - c) Learning a second language later in life
 - d) The process of code-switching between two languages
5. Which of the following is NOT a key component of language development in the school years?
- a) Vocabulary expansion
 - b) Grammar acquisition
 - c) Phonological development
 - d) Attachment formation**
6. Piaget's theory suggests that children construct their understanding of the world through:
- a) Social interactions
 - b) Genetic predispositions
 - c) Sensorimotor experience**
 - d) Formal instruction
7. Vygotsky believed that cognitive development is heavily influenced by:
- a) Biological maturation
 - b) Social and cultural factors**
 - c) Individual differences
 - d) Internal mental processes

8. The critical period hypothesis suggests that:
- a) Cognitive development occurs in discrete stages
 - b) Language acquisition is easiest during early childhood**
 - c) Intelligence is primarily determined by genetics
 - d) Social interactions play a minor role in development
9. According to Vygotsky, which of the following is an example of scaffolding?
- a) Providing a child with a finished model of a project
 - b) Allowing a child to work independently without guidance
 - c) Breaking a task into smaller steps and offering assistance as needed**
 - d) Encouraging a child to explore their environment freely
10. Language development in the school years often involves:
- a) Decreased vocabulary size
 - b) Increased reliance on nonverbal communication
 - c) Improved comprehension and production of complex sentences**
 - d) Regression in language skills due to peer influence

Unit III

1. What is motivation primarily concerned with?
- a) Setting goals
 - b) Achieving goals**
 - c) Understanding emotions
 - d) Acquiring knowledge
2. Which approach to motivation focuses on the pursuit of mastery and improvement?
- a) Performance orientation
 - b) Mastery orientation**
 - c) Outcome orientation
 - d) Task orientation
3. Interests are closely related to:
- a) Emotions**
 - b) Self-esteem
 - c) Intelligence

d) Personality traits

4. Self-schemas refer to:

a) **A person's self-concept**

b) Genetic predispositions

c) Unconscious desires

d) Inherited behaviors

5. What drives motivation to learn according to social cognitive theory?

a) External rewards

b) **Intrinsic motivation**

c) Fear of failure

d) Cognitive dissonance

6. Setting a specific, measurable, achievable, relevant, and time-bound (SMART) goal is an example of:

a) **Target for learning**

b) Mastery orientation

c) Self-schema

d) Goal orientation

7. Which strategy is effective for encouraging motivation and thoughtful learning?

a) Providing extrinsic rewards only

b) Focusing solely on competition

c) **Offering autonomy and choice**

d) Relying on punishment for non-compliance

8. What is a key aspect of the target for learning?

a) Being vague and general

b) Being unrelated to personal goals

c) Providing immediate rewards

d) **Being challenging yet achievable**

9. Which theory emphasizes the importance of intrinsic motivation and the innate tendency to seek out novelty and challenges?

a) **Self-determination theory**

b) Behaviorism

- c) Psychoanalytic theory
 - d) Humanistic psychology
10. Which of the following is NOT a strategy to encourage motivation and thoughtful learning?
- a) Providing constructive feedback
 - b) Encouraging collaboration and peer learning
 - c) **Creating a rigid, one-size-fits-all curriculum**
 - d) Cultivating a growth mindset environment,

Unit IV

1. What is a key aspect of effective problem-solving skills?
- a) Memorization
 - b) **Creativity**
 - c) Repetition
 - d) Conformity
2. Which learning strategy involves breaking down complex information into smaller, more manageable parts?
- a) Mnemonics
 - b) **Chunking**
 - c) Rote learning
 - d) Hypothesis testing
3. Teaching for transfer focuses on:
- a) Teaching students how to memorize information quickly
 - b) **Encouraging students to apply knowledge and skills to new situations**
 - c) Using standardized tests as the primary assessment tool
 - d) Avoiding challenging tasks to prevent confusion
4. What is a characteristic of inclusive teaching practices?
- a) Providing the same instructions to all students
 - b) Ignoring individual student needs
 - c) **Creating a supportive learning environment for diverse learners**
 - d) Focusing only on high-achieving students

5. Which learning strategy involves associating new information with previously learned material?
- a) Elaborative interrogation
 - b) Interleaved practice
 - c) Distributed practice
 - d) **Associative learning**
6. What is the primary goal of teaching concepts?
- a) Encouraging rote memorization
 - b) **Facilitating deep understanding**
 - c) Emphasizing surface-level learning
 - d) Avoiding critical thinking
7. Which teaching approach focuses on students actively constructing their understanding of concepts?
- a) Direct instruction
 - b) **Discovery learning**
 - c) Drill and practice
 - d) Lecture-based instruction
8. What is a characteristic of effective study skills?
- a) Cramming all information the night before an exam
 - b) Procrastinating on assignments
 - c) **Using active learning techniques**
 - d) Avoiding practice tests
9. Reaching every student in the classroom involves:
- a) Teaching at a fast pace to keep advanced students engaged
 - b) Ignoring struggling students to maintain classroom order
 - c) **Differentiating instruction to meet diverse learning needs**
 - d) Assigning the same tasks to all students regardless of ability
10. What does metacognition refer to?
- a) Memorizing facts and figures
 - b) **Understanding one's own thought processes**
 - c) Group problem-solving techniques

- d) Following step-by-step instructions without deviation

Unit V

1. Which of the following is NOT a characteristic of a positive learning environment?
 - a) Supportive relationships
 - b) Clear expectations
 - c) **Chaotic atmosphere**
 - d) Respect for diversity
2. Classroom management involves:
 - a) Strict discipline only
 - b) Ignoring disruptive behavior
 - c) **Establishing routines and procedures**
 - d) Allowing students to do as they please
3. According to Bloom's taxonomy, which level focuses on remembering previously learned material?
 - a) Analyzing
 - b) Evaluating
 - c) **Remembering**
 - d) Creating
4. Which of the following is an example of maintaining a good learning environment?
 - a) Allowing bullying behaviour
 - b) **Encouraging collaboration and teamwork**
 - c) Punishing mistakes harshly
 - d) Ignoring student needs
5. The need for organization in the classroom helps in:
 - a) Creating chaos
 - b) **Enhancing learning experiences**
 - c) Increasing distractions
 - d) Limiting student participation
6. Bloom's taxonomy includes levels such as:
 - a) **Remembering, Understanding, Evaluating**

- b) Reading, Writing, Arithmetic
 - c) Recalling, Memorizing, Regurgitating
 - d) None of the above
7. A teacher can promote a positive learning environment by:
- a) **Fostering a growth mindset**
 - b) Discouraging questions
 - c) Favoring certain students
 - d) Avoiding differentiation
8. Which of the following is NOT a component of creating a positive learning environment?
- a) Flexibility
 - b) **Authoritarianism**
 - c) Encouragement
 - d) Respect
9. Classroom management techniques aim to:
- a) Suppress student creativity
 - b) Minimize student engagement
 - c) **Enhance teaching effectiveness**
 - d) Increase disruptive behavior
10. Bloom's taxonomy is a framework used to:
- a) Organize classroom furniture
 - b) **Assess student learning at various cognitive levels**
 - c) Select textbooks for the curriculum
 - d) Punish students for misbehavior

SECTION B

Answer in about 50 words each :

(2 Marks)

Unit I

1. Define educational psychology.
2. Discuss the significance of educational psychology.
3. Define the scope of educational psychology.
4. Compare and contrast the experimental and correlational methods.
5. Mention three roles of educational psychologists.
6. List out the nature of educational psychology.

7. Define introspection.
8. List out the types of observation method.
9. Mention some of the demerits of experimental method.
10. Write about clinical method.

Unit II

1. List out the stages of Piaget's theory of cognitive development.
2. Explain Vygotsky's sociocultural perspective on development.
3. What is the zone of proximal development (ZPD)?
4. List out the components of language development.
5. How does Piaget characterize the preoperational stage of development?
6. What is scaffolding?
7. List out the general principles of development.
8. How do social interactions influence language acquisition?
9. Compare Piaget's and Vygotsky's perspectives on language development.
10. What are the key milestones in language development during the school years?

Unit III

1. Define intrinsic motivation and provide an example.
2. Distinguish between mastery orientation and performance orientation.
3. How do interests influence learning?
4. Describe self-schemas.
5. Define motivation.
6. What is meant by the term "target for learning"?
7. Define emotional motive.
8. Define goal orientation.
9. Discuss the role of emotions in motivating learning behaviour.
10. Describe two strategies that educators can use to encourage thoughtful learning and motivation in their students.
11. List out the needs of Maslow hierarchy theory.
12. Define attribution.
13. Distinguish between internal and external locus of control.

Unit IV

1. List out the types of transfer in learning?
2. Define learning.
3. Distinguish between positive and negative transfer of learning.
4. Define zero transfer of learning with examples.
5. Define chunking.
6. What are called mnemonics?
7. List out some of the reading strategies.
8. List out some of the learning strategies.
9. Define method of loci.
10. Define problem solving.

Unit V

1. Describe three key elements of a positive learning environment.
2. List out the importance of classroom management.
3. Define Bloom's taxonomy.
4. How can a teacher accommodate diverse learning needs and styles in the classroom.
5. List out the roles of educational psychologists.
6. Discuss the significance of maintaining a positive relationship between teachers and students in the classroom.
7. Define differentiated instruction.
8. Mention some of the learning outcomes.
9. Define growth mindset.
10. How can teachers ensure clear and effective communication with students.

SECTION C

Answer in about 200 words:

(5 Marks)

Unit I

1. Explain the nature of educational psychology.
2. Produce a note on the scope of educational psychology.
3. Explain the role of educational psychologists.

4. Analyze experimental method with its merits and demerits.
5. Produce a detailed account on observation method with its types.

Unit II

1. Discuss the applications of Piaget's theory of cognitive development in Educational Psychology.
2. Compare and contrast Vygotsky's sociocultural perspective with Piaget's theory of cognitive development.
3. Explain the concept of the zone of proximal development (ZPD) proposed by Vygotsky.
4. Analyze the concept of language development.
5. Evaluate the impact of socio-cultural factors on children's language development.
6. Examine the general principles of development.

Unit III

1. Discuss the various types of goals.
2. Analyze the relationship between interests and motivation in the context of education.
3. Evaluate the effectiveness of different strategies for promoting motivation and thoughtful learning in educational settings.
4. Explain arousal theory with its implications.
5. Explain Kelly's Attribution theory.
6. Explain Maslow's hierarchy of needs.
7. Discuss some of the strategies to encourage motivation and thoughtful learning.

Unit IV

1. Explain the concept of transfer of learning in education.
2. Analyze the effectiveness of different learning strategies in promoting deep understanding and long-term retention of knowledge.
3. Explain the stages involved in problem solving.
4. Describe some of the ways to reach every student.
5. Explain about teaching and learning concepts.

Unit V

1. Explain the different levels of Bloom's taxonomy.
2. Discuss the role of the physical classroom environment in facilitating learning.

3. Discuss the importance of inclusive practices in creating a supportive learning environment for all learners.
4. Explore the significance of positive teacher-student relationships.
5. Analyze the importance of clear and effective communication in the classroom.

SECTION D

Answer in about 400 words:

(10 Marks)

Unit I

1. Trace the history of educational psychology.
2. Discuss the nature and scope of educational psychology.
3. Critically analyze the methods used in educational psychology.

Unit II

1. Discuss the theories of Piaget and Vygotsky in relation to language development, highlighting their key concepts, stages, and implications for education.
2. Examine the influence of socio-cultural factors on language development, drawing from Vygotsky's sociocultural theory.
3. Summarize the language development in school years.

Unit III

1. Explore the concept of goal orientation and its impact on students' motivation and learning outcomes.
2. Critically analyze the various approaches of motivation.
3. Investigate the relationships of one's emotion, interest and arousal with motivation in educational settings.

Unit IV

1. Discuss the significance of problem-solving skills in education and the strategies teachers can employ to develop these skills in students.
2. Critically analyse some of the learning strategies and study skills.
3. Summarize the types of transfer in learning with examples.

Unit V

1. Explain the principles of effective classroom management and discipline.
2. Outline the steps involved in integrating Bloom's taxonomy into lesson planning.
3. Explore the key elements of a positive classroom culture, including trust, respect, collaboration, and a growth mindset.
4. Summarize on classroom management.

HEALTH PSYCHOLOGY – 21UPSC62

Section – A

(1 Mark)

Unit I

1. Health is a complete state of physical, mental, and social well-being and not merely the _____ of disease or infirmity.
a. Presence **b Absence** c. Endurance d. Persistence
2. _____ model assumes that psychological and social processes are largely irrelevant to the disease process.
a. Biochemical model **b. Biomedical model** c. Cultural model d. Biopsychic model
3. Pneumonia is a/an _____.
a. Degenerative disease b. Neurological illness c. Chronic illness **d. Acute illness**
4. Health psychologists' study about the _____ aspects of prevention and treatment of illness.
a. Physiological b. biological **c. psychological** d. Sociocultural
5. The temperament that is associated with yellow bile is _____.
a. Sadness b. Passionate **c. Angry** d. Lai back
6. Humoral theory of illness was developed by _____.
a. Germans b. Chinese **c. Greeks** d. Japanese
7. _____ refers to the origin or cause of illness.
a. Signs b. Symptoms **c. Etiology** d. Trauma
8. Short term medical illness which are often the result of a viral or bacterial infection and usually amenable to cure is called _____.
a. Chronic illness b. Disorders **c. Acute illness** d. Mental illness
9. _____ model emphasizes illness over health rather than focusing on behaviors that promote health.
a. Biomedical b. Psychosomatic c. Biopsychosocial d. Psychosocial
10. _____ are slowly developing diseases with which people live for many years and typically cannot be cured.
a. Acute illness **b. Chronic illness** c. Lifestyle diseases d. Degenerative disease

Unit II

1. _____ is not the example of a teachable moment.
a. Reading books with children b. Punishing for wrong behavior
c. Taking for learning vacation **d. Discussing about social issues**
2. _____ is the removing negative internal monologues
a. Self-monitoring behavior **b. Self-control behavior**
c. Contingency contracting d. Self-reinforcement
3. _____ involves removing a discriminative stimulus
a. Self-monitoring behavior b. Self-control behavior
c. Stimulus control d. Self-discrimination
4. Removing a pleasant stimulus for behavior modification is _____
a. Cognitive restructuring b. Positive punishment
c. Negative punishment d. Negative reinforcement
5. Negative reinforcement is _____ for behavioral change.
a. Removing a pleasant stimulus b. Giving a favourable reinforcement
c. Removing an aversive stimuli d. Giving an unfavourable stimulus
6. _____ are the firmly established health behaviours which are often performed automatically and without awareness.
a. Health promotion b. Health beliefs c. Health behavior **d. Health habits**
7. For _____, health promotion involves emphasizing good health and providing information and resources to help people change poor health habits.
a. Health Psychologists b. Medical practitioners
c. Individuals **d. community and national policy makers**
8. In _____ stage of transtheoretical model people intend to change their behavior but have not yet done so successfully.
a. Pre contemplation b. Contemplation **c. Preparation** d. Maintenance
9. _____ is any behavior that is related to the health status of an individual.
a. Health habits b. Health promotion c. Health beliefs **d. Health behaviour**

10. _____ states that people are autonomously motivated when they experience free will and choice when making decisions.
- a. Cognitive-behavior approach b. Health belief model
c. Self-determinist theory d. Trans theoretical model

Unit III

1. _____ proposed that when an organism perceives a threat, the body is rapidly aroused and motivated by the sympathetic nervous system and the endocrine system.
- a. Richard Lazarus **b. Walter Cannon** c. S. E. Taylor d. Selye
2. _____ and colleagues developed a theory of responses to stress termed tend and befriend.
- a. Richard Lazarus b. Walter Cannon **c. S. E. Taylor** d. Selye
3. _____ is a stress hormone.
- a. Oxytocin b. Serotonin **c. Cortisol** d. Dopamine
4. _____ is the advanced anticipation of stressful event and getting ready to cope with it.
- a. Problem focused coping **b. Proactive coping**
c. Reactive coping d. emotion focused coping
5. Which one among this is the direct physiological effect of stress?
- a. Decreased sleep **b. Decreased immunity**
c. Reduced optimism d. Decreased adherence to treatment
6. _____ developed the General Adaptation Syndrome theory of Stress.
- a. Richard Lazarus b. Walter Cannon c. S. E. Taylor **d. Hans Selye**
7. _____ type of pain persists longer than 6 months and increases in severity.
- a. Chronic benign pain **b. Chronic progressive pain**
c. Acute pain c. Recurrent acute pain
8. _____ type of pain is short in duration.
- a. Chronic benign pain b. Chronic progressive pain
c. Acute pain c. Recurrent acute pain
9. _____ is a method of achieving control over a bodily process.
- a. Biofeedback** b. Relaxation c. Cognitive behavior therapy d. Sensory control
10. _____ help instill a sense of Self-Efficacy have been used successfully in the treatment of pain.

- a. Biofeedback b. Relaxation **c. Cognitive behavior therapy** d. Relapse prevention

Unit IV

1. Alzheimer's is a _____ disease
a. Degenerative b. Autoimmune c. Lifestyle d. Respiratory
2. _____ diabetes is the most common type of diabetes.
a. Type I **b. Type II** c. Diabetes mellitus d. Prediabetes
3. _____ is a group of diseases characterized by the presence of neoplastic cells that grow and spread without control.
a. Asthma b. HIV/AIDS **c. Cancer** d. Alzheimer's
4. Islet cells produce glucagon and insulin in _____.
a. Lungs b. Kidney **c. Pancreas** d. Thyroid
5. Asthma is caused by constriction/inflammation of _____ tubes, preventing air from passing freely.
a. Bronchial b. Vascular c. Uterine d. Fallopian tubes
6. HIV/AIDS originated in _____.
a. North America **b. Africa** c. South America d. Canada
7. The HIV infects the _____ system.
a. Respiratory b. Limbic **c. Immune** d. Muscular
8. _____ approaches include sensory stimulation and reality orientation to help Alzheimer's patients retain their cognitive abilities.
a. Gestalt **b. Behavioral** c. Psychoanalytic d. Psychodynamic
9. Low cognitive activity _____ the risk of developing Alzheimer's.
a. Decreases **b. Increases** c. least influences d. Does not contribute to
10. _____ is the rare type of malignant tumor.
a. Sarcoma b. Carcinoma **c. Lymphoma** d. Leukemia

Unit V

1. _____ increased the risk of chronic bronchitis.
a. Smoking b. Alcohol c. Drugs d. Tobacco
2. _____ is the process by which the toxic substances in the body are removed.

- a. Antibiotic b. Liposuction **c. Detoxification** d. Cleaning
3. _____ is the major psychological technique used in intervention of Alcoholism and smoking.
- a. REBT** b. Gestalt c. CBT d. Systematic desensitization
4. _____ is the strong desire to engage in a behavior.
- a. Tolerance b. Addiction c. Withdrawal **d. Craving**
5. _____ is referred to as being physically and psychologically dependent on a substance.
- a. Craving **b. Addiction** c. Withdrawal d. Tolerance
6. _____ exercise improves memory and attention span.
- a. Cardiovascular b. Weight training **c. Brain** d. Stretching
7. _____ is not the origin of Alcoholism and Problem drinking.
- a. Genetic b. Media c. Stress **d. Education**
8. Consumption of _____ turns a man's teeth and finger yellowish in color.
- a. Alcohol b. Cocaine **c. Tobacco** d. Smoking
9. _____ exercise improves the body's ability to take in and use oxygen to produce energy.
- a. Cardiovascular** b. Weight training c. Brain d. Stretching
10. _____ and smoking can interact to increase mortality.
- a. Weight** b. Height c. Complexion d. Structure

SECTION B

Answer in about 50 words each :

(2 Marks)

Unit I

1. Define health Psychology
2. What does health psychology focus on?
3. What are the four body humors?
4. Write any two needs of health psychology.
5. WHO's definition of Health.
6. What is the basic assumption of a biopsychosocial model?
7. What is psychosomatic medicine?
8. Give any two limitations of the biomedical model.

9. What is acute illness? Give an example.
10. What is chronic illness? Give an example.

Unit II

1. State fear appeals.
2. Write a short note on Self-monitoring technique
3. What is motivational interviewing?
4. What is health promoting behaviors?
5. What are health habits and health beliefs?
6. What is the use of mammography?
7. Write about any two benefits of exercise.
8. What are health compromising behaviors? Give an example.
9. What is a transtheoretical model of behavioral modification?
10. How is sleep related to health?

Unit III

1. What is stress? What are stressors?
2. Explain Selye's General adaptation syndrome
3. What makes an event stressful?
4. What are pain behaviors?
5. Mention the pain control techniques.
6. What is meant by coping? How to cope with stress?

Unit IV

1. What are the major chronic illnesses and the major factors causing it?
2. What is cancer?
3. List the types of cancer with its explanation.
4. What are the interventions a health psychologist can give to a diabetic patient?
5. What are the symptoms of Asthma?
6. How are health psychologists involved in treating patients with chronic illness?
7. What is asthma? Mention its treatment method.

8. What are type I and Type II diabetics?

Unit V

1. What are the Origins of alcoholism and problem drinking?
2. What are the factors associated with adolescence in smoking?
3. What are the benefits of physical exercise?
4. What is meant by substance dependence?
5. What is meant by detoxification?
6. What is cardiovascular exercise? give example.

SECTION C

Unit I

1. Discuss about the biomedical model and biopsychosocial model.
2. Write a note on health psychology and explain what it focuses on.
3. Why is the field of health psychology needed?
4. Explain about the perspective of mind and body before the emergence of biomedical models.

Unit II

1. Sketch the health belief model and explain.
2. Describe the transtheoretical model.
3. Write about health enhancing behaviors.
4. Explain about health compromising behaviors.
5. Write a note on changing health habits.

Unit III

1. Explain Walter Cannon theory of stress
2. Explain the coping styles in detail
3. What are the sources of chronic stress?
4. What are the effects of stress on the daily life of an individual?
5. Explain the types of pain in detail.

Unit IV

1. Explain about cancer and its treatment.

2. Brief about Alzheimer's and the issues faced by the patient and their caregivers.
3. Describe the issues faced by diabetic patients and the interventions planned by health psychologists.
4. Discuss asthma and the intervention given by health care professionals.
5. Discuss about the difficulties of the patients living with chronic illness

Unit V

1. What are the Synergic effects of Stress?
2. What are the Treatment programs for alcoholism? Explain in detail
3. What is Substance dependence? Explain the factors involved in physical dependence.
4. Why should an individual do physical exercise?

SECTION D

Unit I

1. Trace the history of mind-body relationship.
2. Discuss the focus, need and characteristics of health psychology.
3. Explain fields of health psychology
4. Discuss on focus of health psychology
5. Explain health psychology

Unit II

1. Analyze the various cognitive behavioral approaches to health behavioral change.
2. Discuss health enhancing behaviors in detail.
3. Explain health beliefs
4. Discuss health promotion
5. Explain health compromising behavior

Unit III

1. Explain the Theories of stress in detail.
2. Explain the Pain Control techniques in detail.
3. What are the Pain management programs? Explain each program in detail.
4. Discuss sources of chronic stress
5. Explain stress management

Unit IV

1. Explain in detail about the factors that contribute to the development of cancer.
2. How does chronic illness affect a person's life? Elaborate.
3. Sketch upon the role of psychological illness in dealing with chronic illness.
4. Discuss on Alzheimer and its treatment
5. Explain HIV

Unit V

1. Give a detailed explanation on the interventions to reduce smoking.
2. Explain in detail the types of physical exercise and its benefits
3. Explain eating disorder and its types
4. Discuss alcohol and its effects
5. Explain tobacco and its causes

ORGANIZATIONAL BEHAVIOUR – 21UPSC63

SECTION -A

UNIT I

1. What is the best definition of career success?
a) money
c) work life balance
b) recognition
d) autonomy
2. What is the best predictor of employee productivity?
a) ability
b) tenure
c) religion
d) job satisfaction
3. Managers who are weak at managing conflicts have low _____ skills?
a) Technical
c) human
b) conceptual
d) decision making
4. which management function moves a manager from lower level to mid- level management?
a) planning
b) organizing
c) leading
d) controlling
5. _____ is an unpleasant psychological process that occurs in response to environmental pressure.
a) stress
b) distress
c) Eustress
d) depression
6. An mental ability to analyze and diagnose complex situation are called _____ skill
a) technical
b) conceptual
c) human
d) communication
7. The manager performs a _____ role when they represent the organization to outsiders.
a) Leader
b) disseminator
c) Spokesperson
d) figurehead

6. The ability to move the trunk and back muscle is called _____
- a) **extent flexibility** b) dynamic flexibility
c) dynamic strength d) trunk strength
7. _____ refers to the biological heritage people use to identify themselves.
- a) Family b) **race**
c) culture d) religion
8. _____ is the additional set of cultural characteristics that often overlaps with race
- a) religion b) **ethnicity**
c) culture d) region
9. The ability to exert muscular strength using the trunk muscles is called _____
- a) static b) **trunk**
c) dynamic d) explosive
10. _____ is the ability to use logic and assess the implications of an argument?
- a) Inductive reasoning b) **deductive reasoning**
c) spatial visualization d) memory

UNIT III

1. The most common means of measuring personality is _____
- a) Experimental method b) survey method
c) **self report surveys** d) interview method
2. Who rely on unconscious processes and look at the “big Picture”?
- a) Extraverted b) introverted
c) sensing d) **intuitive**
3. Which personality identifies opportunities to show initiative until meaningful changes occurs?
- a) Depended personality b) pro social personality
c) **Pro- active personality** d) neurotic personality

4. which set of values refers to prepared modes of behaviour?
- a) **instrumental values** b) terminal values
c) generational values d) value system
5. The _____ dimension captures our comfort level with relationship
- a) agreeableness b) conscientiousness
c) **Extraversion** d) openness to experience
6. _____ types of personality prefer order and structure
- a) **Judging** b) thinking
c) sensing d) extraverted
7. _____ is an enduring characteristics that describes an individual's behaviour
- a) MBTI b) Big Five Model
c) **personality traits** d) personality determinants
8. People who are sociable, gregarious and assertive are _____
- a) **Extraversion** b) agreeableness
c) Conscientiousness d) emotional stability
9. People who lack in concern for others and lack of guilt when causing harm to others are _____
- a) Narcissism b) Machiavellianism
c) **Psychopathy** d) histrionic
10. Which personality trait is associated with better leaders?
- a) Machiavellianism b) **narcissism**
c) psychopathy d) agreeableness

UNIT IV

1. Increasing the group status and perceived difficulty of attaining membership is the property of _____
- a) diversity b) **cohesiveness**

- c) norms
 - d) roles
2. The joy of experienced when other teams lose is called _____
 - a) in group favouritism
 - b) status
 - c) **schadenfreude**
 - d) Social identity
3. In which stage intra group conflict occurs?
 - a) forming
 - b) **storming**
 - c) norming
 - d) performing
4. Zimbardo's prison experiment is an example for _____
 - a) **role**
 - b) norms
 - c) status
 - d) size
5. Our view of how we are supposed to act in a given situation is called _____
 - a) role expectation
 - b) role
 - c) **role perception**
 - d) norms
6. In group others are not carrying their fare share is the cause of _____
 - a) faultline
 - b) diversity
 - c) **social loafing**
 - d) polarisation
7. Punctuated equilibrium model is for _____ group formation
 - a) Formal
 - b) informal
 - c) temporary
 - d) **temporary group with deadlines**
8. The Hawthorne study examines the relationship between _____ and productivity.
 - a) job satisfaction
 - b) family roles
 - c) tenure
 - d) **physical environment**
9. Conformity experiment was done by _____
 - a) Philip Zimbardo
 - b) Tuckman
 - c) James Stoner
 - d) **Solomon Asch**

10. Conformity to social norms is higher in _____

- a) **Collectivistic culture**
- b) individualistic culture
- c) formal group
- d) informal group

UNIT V

1. Influence based on special skill or knowledge is called _____ power.

- a) **Expert**
- b) legitimate
- c) referent
- d) reward

2. Among the following powers which one is most effective?

- a) Coercive
- b) reward
- c) legitimate
- d) **referent**

3. B's relationship to A when A possesses something that B requires is an example of _____

- a) personal Power
- b) formal power
- c) **dependence**
- d) Politics

4. Leaders use power as a mean of attaining _____

- a) group cohesiveness
- b) group performance
- c) **group goal**
- d) group norms

5. In which power tactics employee use friendly behavior prior to making request?

- a) **Ingratiation**
- b) Personal appeals
- c) Exchange
- d) Coalitions

6. The ability to influence others to enhance one's objective is called _____

- a) Power
- b) **Political skill**
- c) power tactics
- d) political behaviour

7. Presenting a logical arguments to demonstrate a request is reasonable is called _____

- a) Legitimacy
- b) **Rational Persuasion**

- c) Inspirational appeals d) Consultation

8. In which year government of India passed The Sexual Harassment of women at work place act?

- a) 2011 b) 2012
c) **2013** d) 2014

9. When employees see politics as a threat, they often respond with _____

- a) Power tactics b) decreased turnover
c) **Defensive behaviour** d) Increased job satisfaction

10. Which is NOT a determinant of sexual harassment?

- a) Showing pornography b) **Welcomed verbal communication**
c) request for sexual favor d) unwelcomed non-verbal conduct

SECTION B

Answer in about 50 words each:

(2 Marks)

UNIT I

1. List out the skills of manager to achieve organizational goals.
2. Explain micro level concepts in organizational behavior.
3. Mention the management functions.
4. Explain the decisional role of management.
5. Explain the term manager and organization.
6. Explain the human skill of management.
7. List out the disciplines that contribute to organizational behavior.
8. How organization respond to globalization
9. Explain employee well-being at work.
10. Describe positive organizational scholarship.

UNIT II

1. Differentiate between surface and deep level diversity.

2. Write the components of attitude.
3. Define job satisfaction.
4. Mention the cause of job satisfaction.
5. List the dimensions of intellectual abilities.
6. Describe the role of disabilities.
7. Define attitude.
8. Describe Surface level diversity.
9. Describe deep level diversity.
10. Describe age related diversity.

UNIT III

1. Define Personality
2. Explain the determinants of personality
3. Write a note on approach- avoidance framework.
4. Define Values.
5. Differentiate between terminal and instrumental values.
6. Mention the measures of personality.
7. Describe MBTI personality framework.
8. How conscientiousness personality trait influences Organizational behavior?
9. Describe Machiavellianism.
10. Describe Narcissism.

UNIT IV

1. Define groups
2. Distinguish between different types of groups.
3. Describe social identity theory.
4. Describe ingroup favoritism

5. Explain punctuated- equilibrium model.
6. Differentiate role perception and role expectation
7. Define conformity
8. Describe deviant workplace behavior.
9. Describe cohesiveness.
10. What are the by- products of group decision making?

UNIT V

1. Define power.
2. Describe the term dependence related to OB.
3. Describe coercive power.
4. Describe reward power.
5. Describe legitimate power.
6. Describe referent power.
7. Explain sexual harassment.
8. Define Political behavior.
9. Describe defensive behaviours.
10. Describe expert power.

SECTION C

Answer in about 200 words:

(5 Marks)

UNIT I

1. Examine the functions of management with example.
2. Discuss the management roles.
3. Discuss the management skills.
4. Demonstrate Fred Luthans study on managerial activities.
5. Discuss the disciplines that contribute to organizational behavior.

UNIT II

1. Discuss the other biological characteristics of diversity.
2. Discuss Intellectual ability in organizational behavior.
3. Discuss sex related diversity in organization.
4. Discuss employee engagement in job satisfaction.
5. Discuss the levels of diversity with example.

UNIT III

1. Compare generational differences in values.
2. Discuss Dark Triad with example.
3. Discuss MBTI strength and weaknesses.
4. Identify the key traits in the Big Five Personality model.
5. Discuss approach- avoidance framework of personality.

UNIT IV

1. Demonstrate social identity theory with their characteristics.
2. Identify stages of group development.
3. Discuss group decision making techniques.
4. Show how group size affects group performance.
5. Discuss the pros and cons of cohesive group

UNIT V

1. Discuss about leadership and power.
2. Discuss sexual harassment in organization.
3. Discuss the reality of politics.
4. Identify the factors that contribute to political behavior.
5. Discuss the ethics of behaving politically

SECTION D

UNIT I

1. Evaluate the view of challenges in organizational behavior with example.
2. Elaborate Mintzberg's managerial roles with example.
3. "Globalization is a challenge to an organization"- justify.
4. Analyse the enhancement of employee well-being at work place.

UNIT II

1. Prove that biographical characteristics make diversity in work place.
2. Interpret the major job attitudes.
3. Outline the abilities in organizational behavior.
4. Show the practical implementation of diversity management strategies.

UNIT III

1. Show that Myers- Briggs and Big Five Personality model predict behaviour at work
2. Examine the undesirable traits in organizational behavior.
3. Analyse the importance of value in organization.
4. Elaborate some of the specific personality attributes relevant to OB.

UNIT IV

1. Contrast the strengths and weakness of group decision making.
2. Evaluate the implications of diversity for group effectiveness.
3. Analyse the role change in different situation with example.
4. Outline the norms of the group effect on individuals.
5. Elaborate the alternative model for temporary group with deadlines.

UNIT V

1. Examine the bases of power.
2. "Dependence is a key to power" – Justify.
3. Outline power tactics.

4. Analyse the cause and consequences of political behavior.
5. Show the connection between sexual harassment and the abuse of power.

CONSUMER PSYCHOLOGY –21UPSC64

SECTION –A

UNIT I

1. The sending of promotional alerts to the customer smart phones are called _____
 - a) Show rooming
 - b) Mobile tracking
 - c) **Geofencing**
 - d) Online tracking
2. To be an effective target, a market segment must be _____
 - a) Stable and loyal
 - b) Trustworthy and adaptable
 - c) Reachable and interactive
 - d) **Identifiable and Sizable**
3. Marketing and consumer behavior stem from _____
 - a) Production concept
 - b) Product concept
 - c) **Marketing concept**
 - d) Selling concept
4. Which need is an individual's desire to control his or her environment?
 - a) **Power**
 - b) Affiliation
 - c) Achievement
 - d) all the above
5. Positioning is a process by which a company creates a _____
 - a) **Distinct image**
 - b) discrete image
 - c) mirror image
 - d) consumer image
6. Which is not a media vehicle?
 - a) Facebook
 - b) **Yahoo**
 - c) Google
 - d) Twitter
7. Which data is evidence based?
 - a) Demographic data
 - b) **Behavioural data**
 - c) Brand data
 - d) Product data

8. Premier positioning focuses on brand's _____
- a) descriptivity
 - b) exclusivity**
 - c) inclusivity
 - d) association
9. The statement that describes the universal benefits of the company's offering is called _____
- a) key attribute
 - b) umbrella positioning**
 - c) premier position
 - d) un-owned positioning
10. The _____ position must be in the consumers mind not the marketer's.
- a) Un-owned**
 - b) key attribute
 - c) premier
 - d) umbrella

UNIT II

1. The blood sugar level triggers the need for hunger, is an example of _____
- a) physiological need
 - b) need arousal**
 - c) cognitive arousal
 - d) psychogenic need
2. Individual who move towards others are called _____
- a) compliant
 - b) aggressive
 - c) detached
 - d) democratic**
3. Individuals with personality traits such as openness to experience and extraversion are _____
- a) dogmatic
 - b) highly dogmatic
 - c) moderately dogmatic
 - d) low dogmatic**
4. "Aggressively competing in auction" is the characteristics of _____
- a) fixated consumption**
 - b) compulsive consumption
 - c) ethnocentrism
 - d) materialism
5. Which color is associated with powerful personality trait?
- a) blue
 - b) yellow
 - c) red
 - d) orange**

6. Which is NOT the psychogenic need by Murray?
- a) informational need b) power
c) **achievement** d) materialistic
7. Which of the following is not a physiological need?
- a) food b) air
c) sex d) **affection**
8. Negative outcome that one wants to prevent is called _____
- a) approach object b) **avoidance object**
c) generic object d) specific object
9. _____ reflects interest in the performance of an innovation
- a) **functional factor** b) Hedonic factor
c) social factor d) cognitive factor
10. _____ is the degree to which people like novel and complex experience.
- a) Sensation seeking b) novelty seeking
c) **Optimum stimulation** d) variety seeking

UNIT III

1. Placing ads in place where consumers do not expect to see is called _____
- a) **ambush marketing** b) experiential marketing
c) sensory adaptation d) Weber's law
2. Suresh is a trustworthy and noble person because he looks into the eyes when he speaks is an example of _____
- a) first impression b) **halo effect**
c) stereotypes d) Just noticeable difference
3. New products fail in market because of _____
- a) package b) service

- c) **brand image** d) price
4. Hindustan Unilever produce PEARS shower gel is an example of _____
- a) Product line extension **b) product form extension**
- c) family branding d) licensing
5. Consumer purchase brand because of habit and convenience is called _____
- a) covetous brand loyalty **b) Inertia brand loyalty**
- c) premium brand loyalty d) behavioural measures
6. Consumer purchase the product for an extensive problem solving is _____
- a) associative learning b) trial and error
- c) observational learning **d) cognitive learning**
7. The lowest level at which an individual can experience a sensation is called _____
- a) Absolute threshold** b) Differential threshold
- c) subliminal perception d) sensory input
8. Consumer high attachment to the brand and repeated purchase is called _____
- a) brand equity b) Inertia brand loyalty
- c) covetous brand loyalty **d) premium brand loyalty**
9. _____ is the key to forming association between brands and fulfillment of needs.
- a) Associative learning **b) repetition**
- c) reward d) response
10. _____ is a measure of how often consumers buy a given product.
- a) brand loyalty** b) inertia
- c) premium d) covetous

UNIT IV

1. _____ is a primary source of attitude towards product
- a) online ads **b) direct experience**

- c) Consumer perception **d) cognitive dissonance**

10. _____ persuade consumers to buy advertised products

- a) **Internal attribution** b) external attribution
c) Both A & B d) defensive attribution

UNIT V

1. _____ is the channels for transmitting communication

- a) word- of mouth b) new media
c) traditional media **d) media**

2. _____ psychological constructs that have an impact on consumer's responses to ads that depict nudity

- a) **Sexual self- schema** b) need for cognition
c) recency effect d) addressable

3. _____ is an essential component of both interpersonal and impersonal communications

- a) Belongingness b) Humor
c) Communication feedback d) Happiness

4. Advertisement for a specific person or small audiences rather than group of consumer's is called _____

- a) **Addressable** b) customized
c) interactive d) traditional media

5. Online channels, social networks and mobile electronics devices are _____

- a) traditional media **b) new media**
c) selective exposure d) formal sources

6. _____ refers to consumer's selectivity in paying attention to advertising message.

- a) time shift **b) selective exposure**
c) formal source d) informal source

7. _____ is the pursuit of novel and exciting sensations and experiences.

- a) Openness to change b) communication
- c) Persuasion effect **d) sensation seeking**

8. Which test is used to measure the cognitive response to message?

- a) attitudinal measure** b) psychological measure
- c) physiological measure d) recognition test

9. The material presented first produces a greater effect is called _____ effect

- a) **order** b) recency
- c) primacy d) image

10. A distracting thoughts can affect the reception of a promotional message are called _____

- a) Communication effect b) media exposure effect
- c) Psychological noise d) persuasion effect

SECTION B

UNIT I

2. Define consumer behaviour
2. Describe marketing myopia
3. “Consumer behavior involves interaction” - explain
4. Explain about marketing mix
5. Describe societal marketing concept
6. List out marketing concept
7. Describe segmentation
8. Describe behavioural targeting
9. Describe positioning
10. Describe repositioning

UNIT II

1. Interpret that needs affect consumer behavior.

2. Describe the term dogmatism
3. Explain about consumer materialism
4. Define optimum stimulation level
5. Describe sensation seeking
6. Explain about need for cognition
7. Describe fixated consumption
8. Describe compulsive consumption
9. Define consumer ethnocentrism
10. Describe brand personification

UNIT III

1. Define consumer perception
2. Define ambush marketing
3. Why brand repositioning needed?
4. State Weber's law
5. How observation affects consumer learning?
6. Describe experiential marketing
7. Write a note on absolute threshold
8. Describe sensory input.
9. Differentiate between extinction and forgetting
10. List out the measures of consumer learning

UNIT IV

1. List the source of attitude formation.
2. Explain post- purchase dissonance.
3. Define attitude in consumer view point.
4. How attitude formed towards product or brand?

5. Describe attitude towards behavior model.
6. Describe attitude towards ad model.
7. Describe utilitarian function.
8. Describe ego defensive function.
9. Describe value- expressive function.
10. Describe cognitive dissonance in consumer.

UNIT V

1. Define communication in consumer behaviour
2. List out the key factors involved in communication model.
3. Describe psychological noise.
4. Describe the term selective exposure.
5. Describe new media.
6. Define narrowcasting.
7. Differentiate positive and negative message framing.
8. Mention the types of order effect.
9. Describe communication feedback
10. What are all the psychological measures of message effectiveness?

SECTION C

UNIT I

1. Classify the factors influencing consumer behavior.
2. Compile the concept of marketing
3. Provide a note on segmentation
4. Provide a note on targeting

UNIT II

1. Relate product personality to gender and geography.

2. Apply color psychology to consumer behavior.
3. Discuss Maslow hierarchy of needs in related to consumer behavior.
4. Discuss the Trio of need.
5. Discuss Neo- Freudian personality theory related to consumer behaviour

UNIT III

1. Discuss the aspects of consumer imagery.
2. Discuss about outcomes and measures of consumer learning.
3. Identify the traditional and emerging stereotypes in Indian ads.
4. Demonstrate operant conditioning related to consumer psychology
5. Discuss the effectiveness of brand repositioning.

UNIT IV

1. Examine the Tri- component attitude model.
2. Identify the concepts in altering consumer attitude.
3. Discuss Foot- in- the- door technique.
4. Discuss attitudes and their formation.

UNIT V

1. Discuss on addressable advertising.
2. Examine the designing of persuasive messages.
3. Discuss on fear appeals.
4. Identify the Indian way of humor in ads.
5. Discuss on sexual appeals.

SECTION D

UNIT I

1. Evaluate marketing segmentation, targeting and positioning
2. Outline the nature of consumer behavior.

3. Justify that marketing and consumer behavior stem from marketing concept.

UNIT II

1. Evaluate the dynamics of motivation.
2. Analyse the systems of needs.
3. Express the relationship between theories of personality and consumer behavior.
4. Justify that self- image has greater impact on consumer behavior.

UNIT III

1. Evaluate classical conditioning in consumer behaviour
2. Analyse perceptual interpretation in consumer behaviour
3. Outline associative learning in consumer behavior.
4. Outline the elements of perception.

UNIT IV

1. Assess the change in motivational functions of attitude
2. Illustrate the multi- attribute attitude model in consumer behavior.
3. Outline the attribution theory in consumer behavior.
4. Evaluate cognitive dissonance and resolving conflicting attitudes in consumer.

UNIT V

1. Evaluate persuasive advertising appeals.
2. Analyse the measures of message effectiveness.
3. Outline the communication process.
4. Evaluate broadcasting versus narrowcasting.

EDUCATIONAL PSYCHOLOGY – 21UPSC61

Section – A

(1 Mark)

Unit I

1. What does the term "nature" refer to in educational psychology?
 - a) **The innate characteristics and abilities of an individual**
 - b) The environmental factors influencing learning
 - c) The educational practices implemented in natural settings
 - d) The cultural background of learners
2. What is the primary focus of the history of educational psychology?
 - a) Tracing the development of educational institutions
 - b) Studying the evolution of teaching methods
 - c) **Understanding the origins and growth of psychological theories relevant to education**
 - d) Analyzing the impact of technology on learning environments
3. Which of the following best describes the scope of educational psychology?
 - a) **The study of human behavior in educational settings**
 - b) The examination of historical educational practices
 - c) The analysis of societal influences on education
 - d) The exploration of philosophical principles in education
4. Which method is commonly used in educational psychology to study individual differences in learning?
 - a) **Case studies**

- b) Surveys
- c) Experiments
- d) Observational research

5. The role of educational psychology includes:

- a) Developing curriculum materials
- b) **Evaluating teaching effectiveness**
- c) Managing school finances
- d) Enforcing disciplinary policies

6. What aspect of educational psychology focuses on understanding how students acquire knowledge and skills?

- a) Developmental psychology
- b) **Cognitive psychology**
- c) Social psychology
- d) Personality psychology

7. Which method of educational psychology involves systematically observing and recording behavior in naturalistic settings?

- a) Experimental method
- b) Correlational method
- c) **Descriptive method**
- d) Survey method

8. What is the primary goal of educational psychology?

- a) To improve teaching techniques

b) To understand the behavior of students

c) **To enhance learning outcomes**

d) To design standardized tests

9. How does educational psychology contribute to teaching practices?

a) By developing standardized curricula

b) **By providing insights into individual differences in learning**

c) By enforcing strict discipline in classrooms

d) By promoting memorization-based learning approaches

10. In educational psychology, the term "motivation" refers to:

a) **The desire to achieve success in academic tasks**

b) The influence of genetics on learning outcomes

c) The impact of socioeconomic status on educational attainment

d) The effectiveness of instructional materials in promoting learning

Unit II

1. According to Piaget's theory of cognitive development, which stage is characterized by the ability to think logically about abstract concepts?

a) Sensorimotor

b) Preoperational

c) Concrete operational

d) **Formal operational**

2. Vygotsky's sociocultural perspective emphasizes the importance of:

a) Genetics in cognitive development

b) **Social interactions in cognitive development**

- c) Individual exploration in cognitive development
 - d) Biological factors in cognitive development
3. The zone of proximal development (ZPD) refers to:
- a) The stage when children develop basic motor skills
 - b) The difference between what a learner can do without help and what they can do with help**
 - c) The stage when children begin to understand abstract concepts
 - d) The period of adolescence marked by rapid physical changes
4. Dual language development refers to:
- a) The ability to speak two languages fluently from birth
 - b) Learning two languages simultaneously during early childhood**
 - c) Learning a second language later in life
 - d) The process of code-switching between two languages
5. Which of the following is NOT a key component of language development in the school years?
- a) Vocabulary expansion
 - b) Grammar acquisition
 - c) Phonological development
 - d) Attachment formation**
6. Piaget's theory suggests that children construct their understanding of the world through:
- a) Social interactions
 - b) Genetic predispositions
 - c) Sensorimotor experience**
 - d) Formal instruction
7. Vygotsky believed that cognitive development is heavily influenced by:
- a) Biological maturation
 - b) Social and cultural factors**
 - c) Individual differences
 - d) Internal mental processes
8. The critical period hypothesis suggests that:
- a) Cognitive development occurs in discrete stages

- b) **Language acquisition is easiest during early childhood**
 - c) Intelligence is primarily determined by genetics
 - d) Social interactions play a minor role in development
9. According to Vygotsky, which of the following is an example of scaffolding?
- a) Providing a child with a finished model of a project
 - b) Allowing a child to work independently without guidance
 - c) **Breaking a task into smaller steps and offering assistance as needed**
 - d) Encouraging a child to explore their environment freely
10. Language development in the school years often involves:
- a) Decreased vocabulary size
 - b) Increased reliance on nonverbal communication
 - c) **Improved comprehension and production of complex sentences**
 - d) Regression in language skills due to peer influence

Unit III

1. What is motivation primarily concerned with?
- a) Setting goals
 - b) **Achieving goals**
 - c) Understanding emotions
 - d) Acquiring knowledge
2. Which approach to motivation focuses on the pursuit of mastery and improvement?
- a) Performance orientation
 - b) **Mastery orientation**
 - c) Outcome orientation
 - d) Task orientation
3. Interests are closely related to:
- a) **Emotions**
 - b) Self-esteem
 - c) Intelligence
 - d) Personality traits
4. Self-schemas refer to:

- a) **A person's self-concept**
 - b) Genetic predispositions
 - c) Unconscious desires
 - d) Inherited behaviors
5. What drives motivation to learn according to social cognitive theory?
- a) External rewards
 - b) **Intrinsic motivation**
 - c) Fear of failure
 - d) Cognitive dissonance
6. Setting a specific, measurable, achievable, relevant, and time-bound (SMART) goal is an example of:
- a) **Target for learning**
 - b) Mastery orientation
 - c) Self-schema
 - d) Goal orientation
7. Which strategy is effective for encouraging motivation and thoughtful learning?
- a) Providing extrinsic rewards only
 - b) Focusing solely on competition
 - c) **Offering autonomy and choice**
 - d) Relying on punishment for non-compliance
8. What is a key aspect of the target for learning?
- a) Being vague and general
 - b) Being unrelated to personal goals
 - c) Providing immediate rewards
 - d) **Being challenging yet achievable**
9. Which theory emphasizes the importance of intrinsic motivation and the innate tendency to seek out novelty and challenges?
- a) **Self-determination theory**
 - b) Behaviorism
 - c) Psychoanalytic theory
 - d) Humanistic psychology

10. Which of the following is NOT a strategy to encourage motivation and thoughtful learning?

- a) Providing constructive feedback
- b) Encouraging collaboration and peer learning
- c) **Creating a rigid, one-size-fits-all curriculum**
- d) Cultivating a growth mindset environment,

Unit IV

1. What is a key aspect of effective problem-solving skills?

- a) Memorization
- b) **Creativity**
- c) Repetition
- d) Conformity

2. Which learning strategy involves breaking down complex information into smaller, more manageable parts?

- a) Mnemonics
- b) **Chunking**
- c) Rote learning
- d) Hypothesis testing

3. Teaching for transfer focuses on:

- a) Teaching students how to memorize information quickly
- b) **Encouraging students to apply knowledge and skills to new situations**
- c) Using standardized tests as the primary assessment tool
- d) Avoiding challenging tasks to prevent confusion

4. What is a characteristic of inclusive teaching practices?

- a) Providing the same instructions to all students
- b) Ignoring individual student needs
- c) **Creating a supportive learning environment for diverse learners**
- d) Focusing only on high-achieving students

5. Which learning strategy involves associating new information with previously learned material?

- a) Elaborative interrogation

- b) Interleaved practice
- c) Distributed practice
- d) **Associative learning**

6. What is the primary goal of teaching concepts?

- a) Encouraging rote memorization
- b) **Facilitating deep understanding**
- c) Emphasizing surface-level learning
- d) Avoiding critical thinking

7. Which teaching approach focuses on students actively constructing their understanding of concepts?

- a) Direct instruction
- b) **Discovery learning**
- c) Drill and practice
- d) Lecture-based instruction

8. What is a characteristic of effective study skills?

- a) Cramming all information the night before an exam
- b) Procrastinating on assignments
- c) **Using active learning techniques**
- d) Avoiding practice tests

9. Reaching every student in the classroom involves:

- a) Teaching at a fast pace to keep advanced students engaged
- b) Ignoring struggling students to maintain classroom order
- c) **Differentiating instruction to meet diverse learning needs**
- d) Assigning the same tasks to all students regardless of ability

10. What does metacognition refer to?

- a) Memorizing facts and figures
- b) **Understanding one's own thought processes**
- c) Group problem-solving techniques
- d) Following step-by-step instructions without deviation

Unit V

1. Which of the following is NOT a characteristic of a positive learning environment?
 - a) Supportive relationships
 - b) Clear expectations
 - c) **Chaotic atmosphere**
 - d) Respect for diversity
2. Classroom management involves:
 - a) Strict discipline only
 - b) Ignoring disruptive behavior
 - c) **Establishing routines and procedures**
 - d) Allowing students to do as they please
3. According to Bloom's taxonomy, which level focuses on remembering previously learned material?
 - a) Analyzing
 - b) Evaluating
 - c) **Remembering**
 - d) Creating
4. Which of the following is an example of maintaining a good learning environment?
 - a) Allowing bullying behaviour
 - b) **Encouraging collaboration and teamwork**
 - c) Punishing mistakes harshly
 - d) Ignoring student needs
5. The need for organization in the classroom helps in:
 - a) Creating chaos
 - b) **Enhancing learning experiences**
 - c) Increasing distractions
 - d) Limiting student participation
6. Bloom's taxonomy includes levels such as:
 - a) **Remembering, Understanding, Evaluating**
 - b) Reading, Writing, Arithmetic
 - c) Recalling, Memorizing, Regurgitating

- d) None of the above
7. A teacher can promote a positive learning environment by:
- a) **Fostering a growth mindset**
 - b) Discouraging questions
 - c) Favoring certain students
 - d) Avoiding differentiation
8. Which of the following is NOT a component of creating a positive learning environment?
- a) Flexibility
 - b) **Authoritarianism**
 - c) Encouragement
 - d) Respect
9. Classroom management techniques aim to:
- a) Suppress student creativity
 - b) Minimize student engagement
 - c) **Enhance teaching effectiveness**
 - d) Increase disruptive behavior
10. Bloom's taxonomy is a framework used to:
- a) Organize classroom furniture
 - b) **Assess student learning at various cognitive levels**
 - c) Select textbooks for the curriculum
 - d) Punish students for misbehavior

SECTION B

Answer in about 50 words each :

(2 Marks)

Unit I

1. Define educational psychology.
2. Discuss the significance of educational psychology.
3. Define the scope of educational psychology.
4. Compare and contrast the experimental and correlational methods.
5. Mention three roles of educational psychologists.
6. List out the nature of educational psychology.
7. Define introspection.
8. List out the types of observation method.

9. Mention some of the demerits of experimental method.
10. Write about clinical method.

Unit II

1. List out the stages of Piaget's theory of cognitive development.
2. Explain Vygotsky's sociocultural perspective on development.
3. What is the zone of proximal development (ZPD)?
4. List out the components of language development.
5. How does Piaget characterize the preoperational stage of development?
6. What is scaffolding?
7. List out the general principles of development.
8. How do social interactions influence language acquisition?
9. Compare Piaget's and Vygotsky's perspectives on language development.
10. What are the key milestones in language development during the school years?

Unit III

1. Define intrinsic motivation and provide an example.
2. Distinguish between mastery orientation and performance orientation.
3. How do interests influence learning?
4. Describe self-schemas.
5. Define motivation.
6. What is meant by the term "target for learning"?
7. Define emotional motive.
8. Define goal orientation.
9. Discuss the role of emotions in motivating learning behaviour.
10. Describe two strategies that educators can use to encourage thoughtful learning and motivation in their students.
11. List out the needs of Maslow hierarchy theory.
12. Define attribution.
13. Distinguish between internal and external locus of control.

Unit IV

1. List out the types of transfer in learning?
2. Define learning.
3. Distinguish between positive and negative transfer of learning.
4. Define zero transfer of learning with examples.
5. Define chunking.
6. What are called mnemonics?
7. List out some of the reading strategies.
8. List out some of the learning strategies.
9. Define method of loci.
10. Define problem solving.

Unit V

1. Describe three key elements of a positive learning environment.
2. List out the importance of classroom management.
3. Define Bloom's taxonomy.
4. How can a teacher accommodate diverse learning needs and styles in the classroom.
5. List out the roles of educational psychologists.
6. Discuss the significance of maintaining a positive relationship between teachers and students in the classroom.
7. Define differentiated instruction.
8. Mention some of the learning outcomes.
9. Define growth mindset.
10. How can teachers ensure clear and effective communication with students.

SECTION C

Answer in about 200 words:

(5 Marks)

Unit I

1. Explain the nature of educational psychology.
2. Produce a note on the scope of educational psychology.
3. Explain the role of educational psychologists.
4. Analyze experimental method with its merits and demerits.
5. Produce a detailed account on observation method with its types.

Unit II

1. Discuss the applications of Piaget's theory of cognitive development in Educational Psychology.
2. Compare and contrast Vygotsky's sociocultural perspective with Piaget's theory of cognitive development.
3. Explain the concept of the zone of proximal development (ZPD) proposed by Vygotsky.
4. Analyze the concept of language development.
5. Evaluate the impact of socio-cultural factors on children's language development.
6. Examine the general principles of development.

Unit III

1. Discuss the various types of goals.
2. Analyze the relationship between interests and motivation in the context of education.
3. Evaluate the effectiveness of different strategies for promoting motivation and thoughtful learning in educational settings.
4. Explain arousal theory with its implications.
5. Explain Kelly's Attribution theory.
6. Explain Maslow's hierarchy of needs.
7. Discuss some of the strategies to encourage motivation and thoughtful learning.

Unit IV

1. Explain the concept of transfer of learning in education.
2. Analyze the effectiveness of different learning strategies in promoting deep understanding and long-term retention of knowledge.
3. Explain the stages involved in problem solving.
4. Describe some of the ways to reach every student.
5. Explain about teaching and learning concepts.

Unit V

1. Explain the different levels of Bloom's taxonomy.
2. Discuss the role of the physical classroom environment in facilitating learning.
3. Discuss the importance of inclusive practices in creating a supportive learning environment for all learners.
4. Explore the significance of positive teacher-student relationships.

5. Analyze the importance of clear and effective communication in the classroom.

SECTION D

Unit I

1. Trace the history of educational psychology.
2. Discuss the nature and scope of educational psychology.
3. Critically analyze the methods used in educational psychology.

Unit II

1. Discuss the theories of Piaget and Vygotsky in relation to language development, highlighting their key concepts, stages, and implications for education.
2. Examine the influence of socio-cultural factors on language development, drawing from Vygotsky's sociocultural theory.
3. Summarize the language development in school years.

Unit III

1. Explore the concept of goal orientation and its impact on students' motivation and learning outcomes.
2. Critically analyze the various approaches of motivation.
3. Investigate the relationships of one's emotion, interest and arousal with motivation in educational settings.

Unit IV

1. Discuss the significance of problem-solving skills in education and the strategies teachers can employ to develop these skills in students.
2. Critically analyse some of the learning strategies and study skills.
3. Summarize the types of transfer in learning with examples.

Unit V

1. Explain the principles of effective classroom management and discipline.
2. Outline the steps involved in integrating Bloom's taxonomy into lesson planning.

3. Explore the key elements of a positive classroom culture, including trust, respect, collaboration, and a growth mindset.

4. Summarize on classroom management.

ST. MARY'S COLLEGE (Autonomous) - THOOTHUKUDI

Core I - Invertebrata Course Code: 21UZOC11

(for those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

- Which is not the locomotory organ of protozoa ?
 - Cilia
 - Flagella
 - Pseudopodia
 - Parapodia**
- Conjugation in protozoa is found in _____
 - Sarcodina
 - Flagellata
 - Sporozoa
 - Ciliata**
- Slipper animalcule is _____
 - Paramecium***
 - Euglena*
 - Plasmodium*
 - Vorticella*
- Asexual reproduction in *Paramecium* occurs by _____
 - binary fission**
 - cytogamy
 - conjugation
 - fragmentation
- Trichocysts in *Paramecium* represents _____
 - special type of cysts
 - plasma membrane
 - motile flagellum
 - a weapon of defence**
- Entamoeba histolytica* infection occurs through _____
 - contaminated water and food**
 - sweat
 - bird droppings
 - mosquito bites
- Amoebic dysentery is caused by _____
 - Entamoeba histolytica***
 - Entamoeba gingivalis*
 - Entamoeba coli*
 - Amoeba proteus*

- 8 A sponge can be distinguished from other animals by the presence of _____
- hollow body
 - coelenteron
 - choanocytes**
 - dermal papilla
9. Which structure in sponge corresponds to the mouth of other animals ?
- Ostia
 - Osculum**
 - In current canal
 - Ex -current canal
10. Ascon type of canal system is found in _____
- Euspongia*
 - Leucosolenia***
 - Hyalonema*
 - Geodia*

Unit II

1. In a polymorphic colony of coelenterates , gastrozooid are meant for _____
- feeding**
 - locomotion
 - defence
 - reproduction
2. Larva of *Obelia* is _____
- amphiblastula
 - planula**
 - scyphistoma
 - parenchymula
3. Number of tentacles in *Obelia* polyp is _____
- 30**
 - 8
 - 20
 - 12
4. The reproductive zooid of *Obelia* is _____
- polyp
 - pneumatophore
 - blastostyle**
 - nectocalyces
5. How many types of zooids are found in cormidium ?
- 5
 - 4**
 - 3
 - 1
6. Platyhelminthes are called as _____
- acoelomate**
 - haemocoelomate
 - coelomate
 - pseudocoelomate
7. Flame cells are the excretory organs of animals belonging the phylum _____
- Protozoa
 - Porifera
 - Coelenterate
 - Platyhelminthes**

8. Suckers are the structures of _____
a. strobilla b. proglottids c. **scolex** d. gravid proglottids
9. Scolex is a characteristic of _____
a. flatworms b. **tapeworms** c. roundworms d. earthworms
10. For attachment, *Taenia solium* has _____
a. **four suckers and hooks** b. two suckers
c. two suckers and hooks d. hooks only
11. *Taenia solium* lives as a parasite in _____
a. pig b. **intestine of man** c. liver of man d. abdomen of man
12. The intermediate host of Tape worm is _____
a. snail b. dog c. man d. **pig**
13. *Taenia solium* lacks alimentary canal because _____
a. it does not require any food b. it lives in the intestine
c. **it has saprozoic mode of feeding** d. it has holozoic mode of feeding
14. The common name of *Taenia solium* is _____
a. round worm b. **tape worm** c. liver fluke d. lung fluke
15. In Tape worm ootype is surrounded by _____
a. **Mehlis's gland** b. master gland c. pituitary gland d. Mars gland

Unit III

1. Which of the following belongs to the class Nematoda?
a. *Ascaris* b. Nematomorpha c. *Amoeba* d. *Fasciola hepatica*
2. *Ascaris lumbricoides* inhabits _____ of man.
a. **small intestine** b. large intestine c. rectum d. blood
3. The phenomenon by which male and female sexes could be differentiated morphologically is called _____.
a. variation b. polymorphism c. **sexual dimorphism** d. hermaphrodite
4. Cuticle in *Ascaris* is an adaptation for _____.
a. **parasitism** b. growth c. reproduction d. locomotion
5. What is the larva of *Ascaris* ?
a. nauplius b. mysis c. **rhabditiform** d. microfilaria

6. Identify the disease caused by *Ascaris lumbricoides*
a. ascariasis b. elephantiasis c. amoebiasis d. yellow fever
7. Which among the following is the lymphatic parasite?
a. Ascaris b. **Wuchereria** c. Pig d. Anopheles mosquito
8. The secondary host of filarial worm is _____.
a. man b. **Culex mosquito** c. pig d. *Anopheles* mosquito
9. Name the causative organism of elephantiasis
a. **Wuchereria** b. *Culex* c. *Trichinella* d. *Schistosoma*
10. What is the common name of *Ancylostoma duodenal*?
a. Pin worm b. Whip worm c. **Hook worm** d. Filaria worm
11. In whom intestinal hook worm disease is more common ?
a. **children** b. adult c. teen-age d. pregnant ladies
12. The first true coelomate animals are _____.
a. **Annelids** b. Aschelminthes c. Porifera d. Arthropoda
13. Metamerism is one of the unique features of _____.
a. Nematodes b. **Annelids** c. flatworm d. Molluscs
14. If the body arrangement of an organism is segmental, the process is known to be _____.
a. segmentation b. segmental body c. **metamerism** d. integument
15. The animals bearing numerous setae belong to the class _____.
a. Hirudinea b. Oligochaeta c. **Polychaeta** d. Onychopora
16. What is the function of clitellum?
a. copulation b. **cocoon formation** c. digestion d. locomotion
17. Which one is known as nature's plough man?
a. Nereis b. Leech c. **Earthworm** d. *Polygordius*
18. The mode of respiration in earthworm is called _____.
a. **cutaneous** b. gills c. pulmonary d. sub cutaneous
19. The first body segment of earthworm is _____.
a. peristome b. **peristomium** c. prostomium d. protostome
20. The excretory units of annelids are called _____.
a. urniferous tubules b. flame cells c. nephrostome d. **nephridia**

21. How many pairs of spermatheca in earthworm body?
a. 4 pairs b. 8 pairs c. 12 pairs d. 3 pairs
22. The excretory product of earthworm is called _____
a) Vermicast b) pellet c) faeces d) droppings

Unit IV

1. The Zoological name of marine prawn is _____
 a. ***Penaeus monodon*** b. *Ascaris lumbricoides*
 b. *Macrobrachium rosenberg* d. *Periplanata americana*
2. The meaning of the word arthropod is _____
 a. jointed body **b. jointed leg**
 c. jointed mouth d. compound eyes
3. *Penaeus* belongs to the class _____
 a. Insecta b. Oligochaeta **c. Crustacea** d. Trematoda
4. Most primitive Arthropods belong to the class _____
 a. Archnida b. Insecta **c. Onychophora** d. Myriapoda
5. Cephalic appendages of prawn are _____
 a. 8 pairs **b. 5 pairs** c. 15 pairs d. 6 pairs
6. How many abdominal appendages are there in prawn ?
 a. 8 pairs **b. 6 pairs** c. 12 pairs d. 5 pairs
7. The female prawn has _____ in their abdominal appendages
 a. **thelycum** b. petasma c. copulatrix d. glands
8. The last pair of abdominal appendages of prawn are called _____
 a. uropod b. pleopod c. coxa d. protopodite
9. Which species of honey bee is commonly domesticated?
 a. ***Apis dorsata*** b. *Apis florae* c. *Apis indica* d. *Apis mellifera*
10. Rearing of honey bee is called _____
 a. **Apiculture** b. Sericulture c. Aquaculture d. Moriculture

Unit V

1. _____ animals are included in Mollusca
 a. Segmented **b. Soft bodied**
 c. Coiled d. Coelomate

- 2.Scaphopoda is a taxonomic class under the phylum _____
 - a.Arthropoda
 - b.**Mollusca**
 - c.Annelida
 - d.Echinodermata
3. Which one of the following animal is called as apple snail?
 - a. Sepia
 - b. **Pila**
 - c. *Loligo*
 - d.Octopus
4. The mouth of the snail is closed by a lid called _____.
 - a. **operculum**
 - b. mantle
 - c. groove
 - d. umbilicus
5. Pila is a _____ animal
 - a. **herbivore**
 - b. carnivore
 - c. omnivore
 - d. parasitic
6. In pila the stalk of the eye is called as _____.
 - a. operculum
 - b.**ommatophore**
 - c. groove
 - d. umbilicus
7. In pila osphradium is otherwise called as _____.
 - a. **chemoreceptor**
 - b.lamella
 - c. statocysts
 - d. optic vesicle
8. Which one of the following is called as best quality pearl?
 - a. **Lingha pearl**
 - b. Seed pearl
 - c. Blister pearl
 - d. natural pearl
9. The pearl is formed of _____.
 - a. **nacre**
 - b. sulphur
 - c. spat
 - d. seed
- 10.Which of the following is the larval form of star fish?
 - a.Trochophore
 - b.**Bipinnaria**
 - c.Pluteus
 - d.Veliger
- 11.Bipinnaria is the larval form of _____.
 - a.pila
 - b.**star fish**
 - c. sea cucumber
 - d.prochordate
- 12.Water vascular system is identification of _____.
 - a.Porifera
 - b.Coelenterata
 - c.Arthropoda
 - d.**Echinodermata**
- 13.Water vascular system is otherwise called _____.
 - a. **ambulacral system**
 - b. vascular system
 - c. venous system
 - d.arterial system
14. How many Tiedemann's bodies are present in star fish ?
 - a.Six
 - b.Seven
 - c.Eight
 - d.**Nine**

15. Select the phylum which includes marine animals
- | | |
|-------------------------|----------------|
| a.Mollusca | b.Coelenterata |
| c. Echinodermata | d.Porifera |
16. Echinus belongs to the class _____
- | | |
|--------------|----------------------|
| a.Asteroidea | b.Ophiuroidea |
| c.Crinoidea | d. Echinoidea |
17. Starfish belongs to the class _____
- | | |
|----------------------|----------------|
| a. Asteroidea | b. Forcipulata |
| c. Gastropoda | d.Hirudinea |

Section – B (10x2=20)

Answer in about 50 words

Unit I

1. Define Protozoa
2. What is nuclear dimorphism ? Give example
3. Write short notes on oral groove of *Paramecium*.
4. Comment on cyclosis
5. On basis of which characters the classification of Porifera based ?
6. Write the outline classification of phylum Porifera
7. Where are the spicules found ?
8. Explain the process of encystment
9. Write down the symptoms of amoebiasis
10. Give any four control measures for amoebiasis

Unit II

1. What is hydrotheca ? Mention its function
2. Comment on statocyst
3. What is mesogloea?
4. Define polymorphism?
5. What is meant by zooids? Write about different kinds of zooids found in Obelia.
6. How will you describe Platyhelminthes?
7. Define scolex
8. What are proglottids?

9. What is strobilization?
10. What is pseudometamerism?
11. Comment on capsule.
12. What is digenic life cycle?
13. Give a note on Mehlis's gland.

Unit III

1. Write any two key characters of phylum Aschelminthes
2. What is sexual dimorphism? With the help of labelled diagrams differentiate a male *Ascaris* from a female?
3. Define endoparasite
4. Write short notes on rhabditiform larva
5. Give a note on ascariasis
6. Comment on elephantiasis
7. Write notes on microfilarial larva.
8. Define hermaphrodite animal
9. Write a note on metamerisms in Annelida.
10. Define clitellum.
11. What is cutaneous respiration?

Unit IV

1. What is biramous appendage?
2. Write short notes on chelate legs.
3. Write a note on green glands.
4. What are walking legs?
5. Write notes on Epipodites.
6. What is petasma?
7. Define the functions of uropod
8. List down the larval stages of prawn
9. What is apiculture?
10. What are the uses of honey?

Unit V

1. Give any five distinguished features of the phylum Mollusca

2. Enlist the classes of the phylum Mollusca
3. What is radula?
4. What is amphibious animal? Give example.
5. Comment on operculum
6. What is creeping sole?
7. Mention ctenidium
8. Comment on cerebral ganglia
9. Give a note on pleural ganglia
10. Comment on pedal ganglia
11. Write a note on visceral ganglia
12. What is statocysts
13. Define pedicellaria
14. Enlist the larval stages of *Asterias*
15. Mention the function of tube feet
16. Depict diagrammatically the water vascular system of *Asterias*

Section – C (5x6=30)

Answer in about 200 words

Unit I

1. Bring out the salient features of invertebrates
2. Describe the structure of *Paramecium*
3. Describe the contractile vacuole of *Paramecium* and mention the role of contractile vacuoles in its life.
4. Explain the structure and function of trichocyst.
5. Write down binary fission in *Paramecium*
6. Describe the feeding mechanism in *Paramecium*.
7. Describe the structure of *Entamoeba histolytica*
8. What are the characteristic features of phylum Porifera ?
9. Describe the structure of choanocyte with neat diagram
10. Differentiate between asconoid and syconoid types of canal system

Unit II

1. Describe the structure of *Obelia* medusa.

2. Comment on blastostyles.
3. Differentiate between polyp and medusa.
4. Draw a labeled diagram of *Obelia* colony.
5. Differentiate between gastrozooids and dactylozooids
6. Enlist the general characters of the phylum Platyhelminthes.
7. Illustrate the structure of *Taenia solium*
8. Describe the male reproductive system of tapeworm
9. Describe the female reproductive system of tapeworm
10. Enlist the general characters of the class Turbellaria.

Unit III

1. Mention the general characters of phylum Aschelminthes.
2. Give an account of the habit, habitat and external features of *Ascaris*.
3. Describe the salient features of the class Nematoda
4. Explain the reproductive system of *Ascaris*
5. Analyze the pathogenic effect of *Ascaris* and its preventive measures.
6. Classify the phylum Annelida.
7. Mention the salient features of the class Hirudinea
8. With the labeled sketch explain the morphology of earthworm.
9. Write in detail the mode of locomotion in earthworm.
10. Describe the reproductive system of earthworm.

Unit IV

1. Enumerate the characters of the class Crustacea
2. Give an account of the character of class Insecta.
3. Give an account of the habits, habitat and external features of *Penaeus*.
4. Analyze the abdominal appendages of *Penaeus* with neat sketch.
5. Discuss on the cephalic appendages of prawn with diagrams.
6. Describe the thoracic appendages of prawn with diagrams.
7. Explain the reproductive system of prawn
8. Describe the female reproductive system of prawn
9. Enumerate the members of a bee colony and their functions
10. Explain the economic importance of honey bee

Unit V

1. List out the salient features of the phylum Mollusca
2. Mention the salient features of the class Pelecypoda
3. Bring out the general characters of the class Cephalopoda
4. Explain the external morphology of Pila
5. Illustrate the nervous system of Pila
6. Explain the male and female reproductive system of pila
7. List out the general characters of the phylum Echinodermata
8. Explain the external morphology of star fish
9. Describe the different types of pedicellaria in star fish
10. Draw and explain the bipinnaria larva of echinoderm
11. Mention the salient features of the classes Asteroidea and Ophiuroidea

Section – D (3x12=36)

Answer in about 400 words

Unit I

1. Classify phylum Protozoa upto classes with examples
2. Describe the feeding apparatus, mechanism of feeding and process of digestion in *Paramecium*.
3. Give an account of mode of excretion and osmoregulation in *Paramecium*.
4. Explain the methods of reproduction in *Paramecium*.
5. What is conjugation ? Describe the process of conjugation in *Paramecium* and its importance.
6. Describe the structure and life history of *Entamoeba histolytica*
7. Classify phylum Porifera upto classes with examples
8. Describe the life history of *Entamoeba histolytica*. Add a note on symptoms of amoebiasis and control measures as well.
9. Describe the structure and development of *Leucosolenia*
10. What is canal system ? Describe different types of canal system in sponges.

Unit II

1. Give in detail the characters of phylum Coelenterata. Classify it up to classes with examples
2. Describe in detail the structure of an *Obelia* colony and give an account of its life history.
3. What is polymorphism? Explain it with example of *Obelia* colony.
4. Elaborate polymorphism in Coelenterates
5. What is alternation of generations? Explain by taking the example of *Obelia*.
6. Explain in detail the characters of the phylum Platyhelminthes. Classify it up to classes and its examples.
7. Explain the male and female reproductive system of Tape worm
8. What is digenic life cycle? Explain it with reference to life history of *Taenia solium*.
9. Enumerate the parasitic adaptations of Platyhelminthes.

Unit III

1. Bring out the general characters of the phylum Aschelminthes and classify it up to classes by giving examples.
2. Explain the life cycle, pathology and control measures of *Ascaris*.
3. Give an account of the life history of a filarial worm and discuss its pathogenic effect.
4. Describe the pathogenic effect of *Ancylostoma duodenale*
5. Give an account of the characters of phylum Annelida classify it up to classes giving characters and examples.
6. Explain the external morphology of Earth worm
7. "Earthworms are hermaphrodites" Explain. Add notes on their reproductive system.
8. Explain in detail the biological significance of earthworm

Unit IV

1. Give an account of the characters of the phylum Arthropoda. Classify it up to classes, mentioning their characteristic features and examples.
2. Bring out the salient features of the sub phylum Mandipulata
3. Enumerate the appendages of prawn with the labeled sketch.
4. Explain the reproductive system of prawn.
5. Trace the various stages in the life history of prawn.

6. Describe the social life in honey bees.

Unit V

1. Outline the classification of the phylum Mollusca with examples
2. Enumerate the sense organs of Pila
3. Explain pearl formation in bivalves
4. Outline the classification of the phylum Echinodermata
5. Bring out the salient features of the sub phylum Eleutherozoa
6. Bring out the salient features of the sub phylum Platyhelminthes
7. Describe the water vascular system in star fish
8. Evaluate the larval forms of echinoderms and their phylogenetic significance

ST. Mary's COLLEGE (Autonomous) THOOTHUKUDI

B.Sc Botany Semester I

Allied - Invertebrate and Chordate Zoology Course Code :21UZO A11

(For those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Asexual reproduction in *Paramecium* occurs by _____
a. **binary fission** b. cytogamy c. conjugation d. fragmentation
2. Osmoregulation in *Paramecium* is done by _____
a. nucleus b. **contractile vacuoles** c. lobopodia d. general body surface
3. _____ is the covering of *Paramecium*
a. **Pellicle** b. Cuticle c. Epidermis d. Tunic
4. _____ is called as slipper animalcule
a. *Paramecium* b. Euglena c. Amoeba d. Entamoeba
5. _____ is absent in invertebrates.
a. **Vertebral column** b. Muscles c. Eyes d. Locomotion
6. *Paramecium* moves with the help of _____
a. flagella b. **cilia** c. pseudopodia d. skin
7. The mode of nutrition observed in *Paramecium* is _____
a. holophytic b. **holozoic** c. parasitic d. saprozoic
8. How many Paramecia are produced after the conjugation?
a. Two b. **Eight** c. Four d. Six
9. Sponges exchange gases through _____
a. **Diffusion** b. contractile vacuole c. trachea d. nucleus
10. The spongocoel opens to the outside by an _____
a. **osculum** b. ostia c. chamber d. dermal ostia

11. The spongocoel in *Leucosolenia* is lined by _____
 a. amoebocytes b. **choanocytes** c. scleroblasts d. pinacocytes
12. Mention the primitive group of animals which are multicellular
 a. **Sponges** b. Colonial protozoans c. Arthropoda d. Coelenterata
13. A sponge can be distinguished from other animals by the presence of _____
 a. hollow body b. coelenterons c. **choanocytes** d. dermal papilla
14. Which structure in sponge corresponds to the mouth of other animals?
 a. ostia b. **osculum** c. in-current canal d. ex-current canal
15. Amoebic dysentery is caused by _____
 a. ***Entamoeba histolytica*** b. *Paramecium caudatum* c. *Ascaris* d. *Leucosolenia*
16. *Obelia* belongs to the class _____
 a. Anthozoa b. **Hydrozoa** c. Metazoa d. Scyphozoa
17. Blastozooid is a _____
 a. **gonozooid** b. trophozooid c. gastrozooid d. polyp
18. The reproductive zooid of *Obelia* is _____
 a. polyp b. **medusa** c. both a and b d. planula

Unit II

1. Platyhelminthes are _____ animals
 a. **flatworms, triploblastic, acoelomate**
 b. flatworms, diploblastic, acoelomate
 c. flatworms, triploblastic, coelomate
 d. flatworms, triploblastic, pseudocoelomate
2. The excretory system of Platyhelminthes animals are formed of _____
 a. gonopore b. suckers c. **protonephridia** d. parenchyma
3. *Fasciola hepatica* is an endoparasite that lives in the _____
 a. **liver of sheep** b. blood of sheep c. spleen of sheep d. intestine of sheep
4. Miracidium is a larval stage in the development of _____
 a. *Taenia solium* b. ***Fasciola hepatica*** c. *Ascaris* d. *Echinococcus*

5. The intermediate host of *Fasciola hepatica* is _____
a. ***Limnaea truncatula*** b. *Pila globosa* c. *Lamellidens marginalis* d. *Helix pomatia*
6. Which of the following stage in the life cycle of *Fasciola* is infective for sheep?
a. Cercaria b. Miracidium c. Redia d. **Metacercaria**
7. Metamerism is one of the unique features of _____
a. Nematodes b. **Annelids** c. Flatworm d. Molluscs
8. Leech belongs to the class _____
a. Oligochaeta b. **Hirudinea** c. Polychaeta d. Gastropoda
9. Hirudinaria is commonly called as _____
a. paddle worm b. **cattle leech** c. sand worm d. liver fluke
10. Which one of the following belongs to the class Nematoda?
a. ***Ascaris*** b. *Nematomorpha* c. *Amoeba* d. *Fasciola*
11. *Ascaris lumbricoides* inhabits in the _____ of man
a. **intestine** b. uterus c. spleen d. urinary bladder
12. The larva of *Ascaris* is _____
a. zoea b. **rhabditiform** c. microfilaria d. nauplius
13. The exterior of *Ascaris* is covered by _____
a. pellicle b. epidermis c. sclerites d. **cuticle**
14. The cuticle of *Ascaris* protects it from _____ of the host
a. mechanical injury b. stress c. **digestive enzymes** d. dessication
15. The process of morphological differentiation of male and female sexes is known as _____
a. variation b. polymorphism c. **sexual dimorphism** d. dimorphism
16. Which one of the following disease is caused by *Ascaris*?
a. **Ascariasis** b. Elephantiasis c. Filariasis d. Malaria

UNIT III

1. In arthropods the function of green gland is _____
a. **excretion** b. respiration c. circulation d. digestion
2. In Arthropods the exoskeleton is made up of _____
a. lipids b. carbohydrates c. **chitin** d. minerals
3. The meaning of the word arthropod is _____
a. jointed body b. **jointed leg** c. jointed mouth d. compound eyes
4. _____ has six teeth in cockroach
a. Mouth b. **Gizzard** c. Buccal cavity d. Stomach
5. _____ helps in grinding food particles
a. **Gizzard** b. Tongue c. Saliva d. Gut
6. _____ help in removal of excretory products
a. **Malpighian tubules** b. Stomach c. Rectum d. Intestine
7. _____ present at the junction of midgut and hindgut
a. Stomach b. **Malpighian tubules** c. Liver d. Intestine
8. The mouth parts of honey bee are _____ type
a. **chewing and lapping** b. sucking c. cutting d. biting
9. _____ are smooth and situated on either side of the labrum
a. Legs b. Wings c. **Mandibles** d. Sting
10. Which group of invertebrates is called 'soft bodied animals'?
a. Protozoa b. Porifera c. **Mollusca** d. Annelida
11. Lamellidens belongs to the class _____
a. **Pelecypoda** b. Gastropoda c. Scaphopoda d. Cephalopoda
12. The shell of mollusc is made of _____
a. **conchiolin** b. chitin c. cellulose d. starch
13. _____ layer is smooth and lustrous
a. **Nacreous** b. Middle c. Outer d. Inner
14. The _____ is the locomotors organ in mollusc
a. cilia b. flagellum c. **foot** d. tube feet

15. Which of the following is an organ of taste?
 a. **Epipharynx** b. Mandible c. Labrum d. Galea
16. Phylum Echinodermata are exclusively _____ animals
 a. **marine** b. freshwater c. terrestrial d. brackish
17. Water vascular system is the special feature of _____
 a. poriferans b. coelenterates c. arthropods **d. echinoderms**
18. The locomotory organs of Echinoderms are called _____
 a. parapodia b. pseudopodia c. **tube feet** d. setae
19. The two arms between which the madreporite lies are called as _____
 a. **bivium** b. trivium c. peristome d. tube feet
20. Star fishes are _____
 a. herbivorous b. **carnivorous** c. filter feeders d. omnivorous
21. Pedicellaria are modified _____
 a. tube feet b. integumentary structures c. **spines** d. peristome

Unit IV

1. Which of the following is the distinctive chordate character?
 a. presence of heart b. presence of true coelom
 c. **presence of notochord** d. presence of RBC
2. The chordate which lacks cranium belongs to _____
 a. Cyclostomata b. **Acraniata** c. Placoderm d. Ostracoderm
3. Which of the following is the example of hemichordate?
 a. *Tunicate* b. *Amphioxus* c. ***Balanoglossus*** d. *Lamprey*
4. Prochordates with notochord in the anterior half of the body are called _____
 a. **hemichordates** b. urochordates c. protochordates d. cephalochordates
5. The superclass Agnatha includes _____
 a. limbless vertebrates b. boneless vertebrates
 c. **jawless vertebrates** d. flightless birds

6. Prochordates with notochord extending up to the tip of the head are _____
a. protochordates b. urochordates c. hemichordates d. **cephalochordates**
7. Concentration of nervous tissue and sense organs towards the head is known as _____
a. **cephalization** b. metamerism c. symmetry d. gastrulation
8. The study of fishes is called _____
a. Physiology b. **Ichthyology** c. Ornithology d. Anthropology
9. Bony fishes belong to the class _____
a. **Osteichthyes** b. Chondrichthyes c. Placodermi d. Elasmobranchii
10. *Scoliodon* is commonly called as _____
a. **shark** b. narcine c. trigon d. eel
11. The skin of *scoliodon* is covered with _____ scales
a. dermal b. cycloid c. ctenoid d. **placoid**
12. Tail of *Scoliodon* is _____
a. homocercal b. **heterocercal** c. hypocercal d. hypercercal
13. Frog is an _____ animal
a. herbivorous b. omnivorous c. **carnivorous** d. viviparous
14. The conversion of tadpole larva into adult frog is called _____
a. microphorphosis b. megamorphosis c. **metamorphosis** d. promorphosis
15. How will you identify a male frog from a female?
a. Anal styles b. **Vocal sacs** c. Forelimbs and hind limbs d. Nictitating membrane
16. _____ are the first land vertebrates
a. **Reptiles** b. Mammals c. Birds d. Amphibians
17. The example for the poisonous snake is _____
a. Rat snake b. Python c. Typhlops d. **Krait**

18. Which among the following has a characteristic spectacle mark on the dorsal side of the hood?

- a. **Cobra** b. Krait c. Viper d. Enhydrina

19. Poison glands of snake are the modified _____

- a. pituitary gland b. scales c. fins d. **salivary glands**

Unit V

1. _____ are described as the masters of air

- a. Reptiles b. **Birds** c. Dinosaurs d. Snakes

2. In birds, wings are the modified _____

- a. **forelimbs** b. hindlimbs c. ribs d. jaws

3. The single bone in the ear of pigeon is _____

- a. **columella auris** b. syrinx c. synsacrum d. occipital condyle

4. Birds are _____

- a. **uricotelic** b. ammonotelic c. ureotelic d. hydrophilic

5. Which among the following is a monogamous animal?

- a. Rabbit b. **Pigeon** c. Crow d. Squirrel

6. Name the oil gland present in the uropygium of pigeon

- a. Green gland b. Salivary gland c. Thyroid gland d. **Preen gland**

7. The quill feathers found in the tail are called _____

- a. **rectrices** b. remiges c. barbs d. coverts

8. What are the feathers present in the nestlings of pigeon called?

- a. Filoplumes b. Quillfeathers c. **Down feathers** d. Bristles

9. Existence of two sets of teeth in the life of an animal is called as _____ dentition

- a. **diphyodont** b. heterodont c. homodont d. deciduous

10. The characteristic odour of the rabbit is due to the presence of _____ gland

- a. mammary b. **perineal** c. meibomian d. sweat gland

11. In aquatic mammal the forelimbs are modified into _____

- a. **paddles** b. fins c. hands d. phalanges

12. Name the oxygen saving mechanism in aquatic mammals

- a. **Bradycardia** b. Retia mirabilia c. Filter feeding d. Precociousness

13. Baleen plate are present in _____

- a. dolphins b. **whales** c. shark d. frog

Section B (2marks)

Answer in about 50 words

Unit I

1. Write any two characteristic features of Protozoa
2. What is binary fission?
3. Note down the significance of binary fission
4. Mention the significance of conjugation
5. List out the symptoms of amoebiasis
6. How will you control amoebiasis?
7. Write any two characteristic features of phylum Porifera
8. Comment on the characteristic features of phylum Coelenterata
9. Name the zooids found in *Obelia* colony
10. Enlist the functions of polyps

Unit II

1. Write any two key characters of Phylum Platyhelminthes
2. What is hermaphrodite?
3. List out the types of larva in the life cycle of *Fasciola hepatica*
4. Why liver fluke is called as digenic parasite?

5. How will you prevent liver fluke infection?
6. What is sexual dimorphism? With the help of labelled diagrams differentiate a male *Ascaris* from a female
8. Define endoparasite. Give examples
9. Write the features of rhabditiform larva?
10. What are cystogenous glands?

Unit III

1. Write the functions of mandibles
2. Name the parts of labium
3. Mention the functions of antenna in cockroach
4. Differentiate male and female cockroach
5. Write the functions of maxillae and labial palp
6. What is crop?
7. Write the role of gizzard in cockroach?
8. Mention the functions of Malpighian tubules
9. What are tube feet?
10. Explain pedicellaria
11. Differentiate pedunculate pedicellaria from straight pedicellaria
12. List out functions of pedicellaria

Unit IV

1. Distinguish between chordates and non chordates
2. What are the three structures shared by every chordate that characterize the group?
3. What is cephalization?
4. Differentiate Craniata from Acraniata
5. Compare the classes Chondrichthyes and Osteichthyes
6. Distinguish between Agnatha and Gnathostomata
7. Define metamerism
8. Name the different type of scales in fishes

9. What is meant by counter shading mechanism?
10. Define metamorphosis
11. Write a short note on amphibious life
12. List out the types of respiration in frog
13. State the distinctive characters of the class Reptilia
14. How will you identify cobra?
15. Why will there be continuous bleeding from the wound if a poisonous snake bites?
16. What is a fang?

Unit V

1. What is pecten?
2. Define synsacrum
3. Write a short note on preen gland
4. Enlist the types of feather in pigeon
5. Explain down feathers
6. Mention the functions of feathers in pigeon
7. Why is pigeon called as a monogamous animal?
8. Enlist the different types of teeth in mammals
9. What is called hare lip?
10. Name the different types of glands present in rabbit
11. Discuss the use of blubber
12. What is meant by bradycardia?

Section C (5 marks)

Answer in about 200 words

Unit I

1. List out the salient features of invertebrates

2. Bring out the general characters of the phylum Protozoa
3. Write the general characters of the phylum Porifera
4. Narrate the external structure of *Paramecium*
5. Describe the external structure of *Leucosolenia*
6. List down the general characteristics of the phylum Coelenterata
7. Explain the external structure of *Obelia* colony
8. Describe the external structure of *Entamoeba histolytica*
9. Differentiate polyp and medusa
10. Comment on blastostyle
11. Write the symptoms of amoebiasis

Unit II

1. Mention the general characters of phylum Platyhelminthes
2. Characterize the external morphology of *Fasciola hepatica*
3. Narrate the life cycle of *Fasciola hepatica*
4. Specify the general characters of phylum Annelida
5. Explain the external morphology of *Hirudinaria*
6. Illustrate the external morphology of *Ascaris*
7. Describe the extra-intestinal migration in *Ascaris*
8. Express the pathogenic nature of *Ascaris*
9. How do you prevent the infection of *Ascaris*? List out the drugs used for the treatment of ascariasis
10. Write about the life cycle, pathogenicity and control measure of *Ascaris lumbricoides*

Unit III

1. List down the general characters of the phylum Arthropoda
2. Describe the external structure of *Periplaneta americana*
3. Sketch and comment on the mouth parts of honeybee
4. Describe the digestive system of cockroach
5. Draw the digestive system of cockroach
6. List down the general characters of the phylum Mollusca
7. Describe the external structure of *Lamellidens marginalis*

8. Enlist the salient features of phylum Echinodermata
9. Explain the structure of *Asterias rubens*
10. Comment on pedicellaria

Unit IV

1. What are the general characters of the phylum Chordata
2. Bring out the general characters of the class Pisces
3. Enumerate the different types of fins in *Scoliodon*
4. Describe the external characters of *Scoliodon*
5. Enlist the salient features of class Amphibia
6. Describe the external features of *Rana hexadactyla*
7. Describe the structure of skin of frog
8. Discuss the pulmonary respiration of amphibians
9. List out general characters of the class reptilia
10. Describe the external characters of *Calotes versicolor*

Unit V

1. List down the general characters of birds
2. Describe the external morphology of pigeon
3. Comment on the exoskeletal structures of pigeon
4. Bring out the structure and functions of quill feathers
5. List out any ten characters of mammals
6. Describe the external morphology of rabbit
7. Discuss the different types of glands present in rabbit
8. Explain the excretory system of rabbit with a neat labeled diagram
9. Illustrate male reproductive system of rabbit.
10. Describe the female reproductive system of rabbit

Section D (10marks)

Answer in about 400 words

Unit I

1. Specify the general characters of invertebrates
2. List out the general characters of protozoa
3. Outline the general characters of porifera
4. Sketch and comment on the external structure of *Paramecium*
5. Explain the binary fission in *Paramecium* with a neat labelled diagram
6. Draw and explain the process of conjugation in *Paramecium*
7. Comment on the external structure of *Leucosolenia* with the help of diagram
8. Describe the structure of *Obelia* with neat labelled diagram
9. Illustrate external structure of *Entamoeba histolytica* with diagram
10. Write the mode of infections, symptoms and preventive measures caused by *Entamoeba histolytica*

Unit II

1. Narrate the life cycle of *Fasciola hepatica*
2. Describe the external morphology of *Fasciola hepatica* with diagram
3. Explain the external morphology of *Hirudinaria* with diagram
4. Illustrate the life cycle and pathogenicity of *Ascaris lumbricoides*
5. Sketch and comment on *Ascaris lumbricoides*. Mention the control measures

Unit III

1. With the help of a diagram, describe the digestive system of the cockroach
2. Draw and explain the external structure of *Periplaneta americana*
3. Explain the mouth parts of honeybee with a neat labelled diagram
4. Draw and explain the external structure of *Lamellidens marginalis*
5. Describe the external features of *Asterias rubens*

Unit IV

1. Classify the phylum Chordata upto classes with example
2. Describe the external features of *Scoliodon*

3. Describe the respiratory system of frog
4. Enumerate the general characters of the class Reptilia
5. Differentiate poisonous snakes from the non poisonous snakes

Unit V

1. Describe the external morphology of pigeon
2. Describe the integument of rabbit
3. Explain the excretory system of rabbit with a neat labeled diagram
4. Illustrate the reproductive system of rabbit
5. List down the various adaptations of aquatic mammals

ST.MARY'S COLLEGE (Autonomous) THOOTHUKUDI

QUESTION BANK

PROFESSIONAL ENGLISH FOR ZOOLOGYI

Sub. Code: 21UZOPE1

Section A(1 Mark)

UNIT I

1. _____lab coat before entering the lab.
a. Rinse b. **Wear** c. Dispose d. Handle
2. _____ eat in the lab.
a. Rinse b. Wear c. Dispose d. **Do not**
3. _____the concentrated acids in the presence of your professor.
a. Rinse b. Wear c. **Dilute** d. Handle
4. _____glassware with care.
a. **Handle** b. Wear c. Dilute d. Handle
5. _____the apparatus before and after the experiment.
a. **Rinse** b. Wear c. Dilute d. Handle
6. _____the spills immediately.
a. Rinse b. **Clean** c. Dilute d. Handle
7. _____waste in the dustbin.
a. Clean b. Wear c. **Dispose** d. Handle
8. _____the apparatus in order after the experiment is over.
a. **Arrange** b. Do not c. Dilute d. Handle
9. _____ the gloves while handling poisonous chemicals.
a. **Wear** b. Ware c. Where d. Were
10. _____ the waste in the dust bin.
a. Disperse b. **Dispose** c. Disberse d. Disappear
11. _____ I go for a break?
a. Could b. **May** c. Would d. Will

12. _____ I get in the car?

- a. Might b. Must c. Will d. **Can**

13. It _____ rain tonight.

- a. Must b. **Might** c. Will d. Can

14. _____ I be allowed to join the company?

- a. Dare b. Might c. **Will** d. Can

15. You _____ study for the exam.

- a. **must** b. might c. will d. can

16. I _____ not speak another word.

- a. must b. might c. **dare** d. can

Unit II

a) Cells are gently smeared onto a _____.

- a. test tube b. **slide** c. forceps d indicator

b) _____ needs to be centrifuged.

- a. **Test tube** b. Double distilled water c. Distilled water
d Indicator

c) Litmus paper is used as an _____.

- a. test tube b. slide c. forceps d **indicator**

d) _____ are used to hold tissue out of the way or to pick up a structure.

- a. Test tube b. Slide c. **Forceps** d Indicator

e) _____ are attached to a gas line.

- a. **Bunsen burners** b. Slide c. Forceps d Indicator

f) The plant cell has a cell wall _____ the animal cell.

- a. similar to b. same as c. **unlike** d. like

g) The plant cell is rectangular in shape _____ the animal cell is irregularly shaped.

- a. same as b. like c. in the same way d. **whereas**

h) Centrioles are present in all animal cells _____ it is only present in lower plant forms.

- a. **but** b. like c. in the same way d. likewise

- i) Animal cells do not have chloroplast _____ the plant cells have chloroplasts.
 a. **on the contrary** b. like c. also d. too
- j) The plant cells have a nucleus _____ the animal cells.
 a. on the contrary b. **like** c. also d. too

UNIT III

1. _____ is a Nobel laurette who studied the effect of CFCs on ozone layer.
 a. Dr. J.C. Bose b. **Dr. Mario.J. Molinac**.Michael Faraday d. Newton
2. Dr. J.C. Bose invented the _____.
 a. anemometer b. **crescograph** c. thermocycler d. electricity
3. Crescograph is a machine that measures the _____.
 a. plant height b. photosynthesis c. **plant heart beat** d. respiration
4. Where is the Bose institute located?
 a. Delhi b. Bangalore c. Chennai d. **Calcutta**
5. In a group discussion '**I don't agree** that the plant has a heart beat' has to be said as
 a. I don't like your point b. You are wrong
 b. It doesn't make sense c. **I disagree because** _____
6. _____ should not be used in a group discussion.
 a. I disagree because b. I see it differently because
 c. Can you explain please c. **That is crap**
7. _____ can be used instead of 'You are dead wrong' in a discussion.
 a. **It might be better to** b. I don't agree
 c. It is crap d. It doesn't make sense
8. Find one word for the following sentence.
 "Essential elements required by plants in relatively low concentrations."
 a. Macronutrients b. **Micronutrients** c. Sunlight d. Water
9. A substance that provides nourishment essential for the maintenance of life and for growth.
 a. **Nutrient** b. Oxygen c. Carbon dioxide d. Sunlight
10. _____ are resources such as air, water, and sunlight that refill naturally.
 a. Renewable resources b. Non-renewable resources c. Biotic d. Abiotic

UNIT IV

1. _____ is a decreased amount of red blood cells or hemoglobin in the body.
a. Anemia **b. Anaemia** c. Animia d. Aneemia
2. _____ carries the oxygen in the blood.
a. Hemoglobin b. Himoglobin c. **Haemoglobin** d. Hamoglobin
3. 'Iron' is a _____ word.
a. bisyllabic b. trisyllabic c. pentasyllabic d. **monosyllabic**
4. 'Deficiency' is a _____ word.
a. bisyllabic b. trisyllabic c. **pentasyllabic** d. monosyllabic
5. 'Clinical' is a _____ word.
a. bisyllabic b. **trisyllabic** c. pentasyllabic d. monosyllabic
6. 'Treatment' is a _____ word
a. **bisyllabic** b. trisyllabic c. pentasyllabic d. monosyllabic
7. 'Phagocytose' is a _____ word.
a. bisyllabic b. trisyllabic c. pentasyllabic d. **tetrasyllabic**
8. _____ is the act of identifying a disease from its signs and symptoms
a. **Diagnosis** b. Vaccination c. Antibody d. Lethal
9. _____ is a poisonous substance that is a specific product of the metabolism.
a. Toxoid b. Toxic c. **Toxin** d. Taxa
10. _____ a blood protein produced in response to and counteracting a specific antigen.
a. Antiblood b. **Antibody** c. Antiseptic d. Antimater
11. Fruits are _____ by the bats.
a. eat b. ate c. **eaten** d. eats

UNIT V

1. _____ are biological catalysts that catalyse the biological reactions.
a. Catalyst b. Metals c. **Enzymes** d. Blood
2. _____ is the salivary enzyme.
a. Amylase b. Amylose c. Maltose d. Maltase
3. A substance that increases the rate of a chemical reaction without itself undergoing any permanent chemical change is called as a _____.
a. reactant b. substrate c. **catalyst** d. product

4. The chemical breakdown of a compound due to reaction with water is called as _____
 a. oxidation b. hydration c. reduction **d. hydrolysis**
5. _____ is the substance on which an enzyme acts.
 a. Reactant b. **Substrate** c. Catalyst d. Product
6. The process of water movement through a plant and its evaporation from aerial parts, such as leaves, stems and flowers is _____.
 a. transportation b. sublimation c. condensation **d. transpiration**
7. _____ happens when water vapour becomes water droplets via cloud formation
 a. Transportation b. Sublimation c. **Condensation** d. Transpiration
8. _____ is any form of liquid or solid water particles that fall from the atmosphere and reach the surface of the Earth in the form of drizzle, rain, hail etc.
 a. **Precipitation** b. Sublimation c. Condensation d. Transpiration
9. Plastic is a _____ waste.
 a. biodegradable **b. non-biodegradable** c. compost d. organic
10. Water seeps into the ground and then percolates into the water table by _____.
 a. **Infiltration** b. Sublimation c. Condensation d. Transpiration

Section B (2 Marks)

1. Write any two imperative sentences.
2. Identify the verb and object of the following sentence.
'Check the answers.'
3. Identify the form of imperative sentence.
 - a. Use only blue pens.
 - b. Please join Microsoft Team.
4. Write one word for the following.
 - a. Journey to a holy place for religious reasons. (gpigerimal)
 - b. Proof of something (tstatmene)
5. Identify and correct the mistake in the following sentence
 - a. You adjust the knob.
 - b. Must I bring the note book tomorrow.
6. Frame sentence using the following words
 - a. Bring
 - b. give
7. Give instructions for setting up a fish tank in 4 sentence.
8. Identify the modal words in the following sentence.
 - a. You dare not touch the electric wire.
 - b. It will rain tomorrow.
9. Write any two imperative sentences that is used for giving instructions.
10. Write any two imperative sentences that can be used as requests.
11. Identify the type of imperative sentence
 - a. Plant trees
 - b. Please join the class.
12. Frame any two sentences using the modal words.
 - a. will
 - b. might

UNIT II

1. Write two exchanges of conversation between a doctor and a patient.
2. Represent the operation of a microscope with a simple flow chart
3. Make sentences using
 - a. forceps
 - b. Petri dish

4. Write one word for the following.
 - a. Pre-made solutions or papers that are used to determine chemical characteristics, such as acidity and composition (indicator).
 - b. An extremely sharp bladed instrument that can neatly split open skin and cut through muscle and organs (scalpel)
5. Fill in the blanks with appropriate comparison/contrast words
 - a. The plant cells have chloroplast _____ animal cells.
 - b. Amphibians live in water _____ reptiles live on land.
6. Join the two sentences using appropriate comparison/contrast words
 - a. Protozoa are unicellular animals. Porifera are multicellular animals
 - b. Plant cells have cell membrane. Animal cells have cell membrane
7. Write one or two sentences on any two instruments used in the lab.
8. Write the correct contrast/comparison word
 - a. Plant cell has a cell wall _____ an animal cell does not.
 - b. The animal cell has a nucleus and the plant cell _____ a nucleus.
9. Write the uses of the following
 - a. Slides
 - b. Centrifuge
10. Using comparison and contrast words differentiate an amphibian and a reptile.

UNIT III

1. Write any two disagreement statements that has to be used in a group discussion.
2. Change the disagreement statements appropriately
 - a. I don't agree
 - b. That does not make sense at all.
3. What are micronutrients? Give examples.
4. Draw a tree diagram on animal nutrition.
5. Write any two importance of nature conservation.
6. Frame any four questions to be asked to a scientist during an interview.
7. Draw a mind map with one set of subtopic on 'Nutrition'.
8. Write any two disagreement statements that should not be used in a group discussion
9. Write one word for the following statements.
 - a. The essential elements required by plants in relatively low concentrations.
 - b. The nutrients that are required in relatively large amounts.

10. Make sentences with the following words
 - a. microorganism
 - b. nutrition.
11. 'Effect of firework on the environment'-Discuss by writing 4 sentences.
12. Discuss any four points on 'Water pollution'
13. Write down the points to be addressed in a brain storming session on 'conservation of nature'

UNIT IV

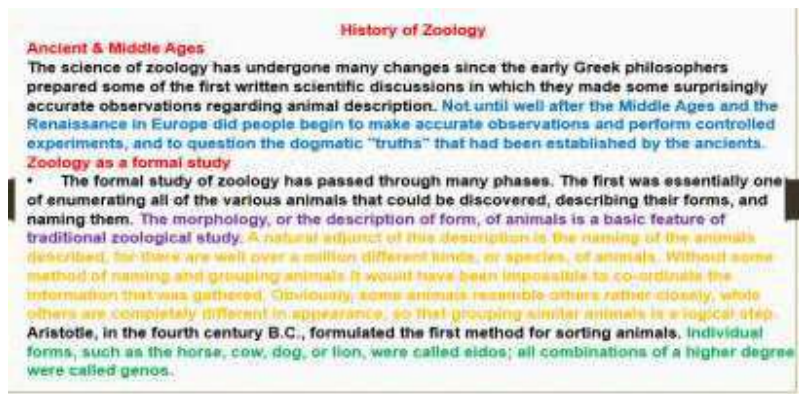

1. Syllabify the following words
 - a. Associated
 - b. Hypochromic
2. Classify the words as monosyllabic, bisyllabic, trisyllabic etc.
 - a. Iron
 - b. Deficiency
 - c. Clinical
 - d. Treatment
3. From the following sentence find one word for 'to isolate'

In addition, a cereal-based diet decreases iron availability because phytates in grains sequester iron in a poorly absorbable complex.
4. Write the synonym for
 - a. novel
 - b. myth
5. Frame sentences using the following words
 - a. vaccine
 - b. eradicate
6. Write one word for the following sentences.
 - a. the death of large numbers (as of people or animals)
 - b. a poisonous substance that is a specific product of the metabolism
7. Write one word for the following sentences
 - a. very potent or effective
 - b. the act of identifying a disease from its signs and symptoms
8. Write any four recommendations for using the dissection box.
9. Write any four recommendations for reducing mosquitoes in your locality.
10. Write any four recommendations for strengthening your immune system.
11. Change the sentences into passive voice.
 - a. Adlin cleans the board
 - b. The fish ate the worms
12. Change the sentences into active voice.
 - a. Invertebrata is taught by Mary mam.
 - b. The test is written by the students.
13. Identify whether the sentences are active/passive
 - a. Ram is studying

- b. The monkey ate the fruits
- c. Insects are eaten by frogs
- d. The entire field was grazed by the cattle.

UNIT V

1. Give one word for the following
 - a. Catalysts in biological reaction
 - b A chemical reaction in which a molecule of water breaks one or more chemical bonds.
2. Give one word for the following
 - a. The substance on which an enzyme acts
 - b. To absorb water
3. Name the enzymes that acts upon.
 - a. Lipids
 - b. Amylose
4. Name the enzymes that acts upon
 - a. maltose
 - b. proteins
5. Illustrate a power point slide on external morphology of hydra.
6. Identify the mistakes in the power point slide

7. Give the synonyms of the following words
 - a. survive
 - b. essential
8. Make sentences with the following words
 - a. Digestion
 - b. Biodegradable

8. Write one word for the following

a. The process of water movement through a plant and its evaporation from aerial parts, such as leaves, stems and flowers.

b. the process of conversion of ice into water vapour

9. State the problem of non-biodegradable waste and suggest a solution.

10. Make a linear note of the following passage (at least 5 lines)

The foods we eat contain many complex molecules. These complex molecules should be broken down to simple molecules, for absorption in the body. Breaking down of large food molecules into small molecules is called chemical digestion. Chemical digestion could not take place without the help of digestive enzymes. Digestive enzymes speed up chemical reactions that break down large food molecules into small molecules. They turn the food we eat into energy. Digestive enzymes are released or secreted, by the organs of the digestive system. These enzymes include proteases which digest proteins, and nucleases that digest nucleic acids.

Important digestive enzymes include: (1) Amylase, produced in the mouth, which helps to break large starch molecules into smaller sugar molecules; (2) Pepsin, produced in the stomach, helps to break proteins into amino acids; (3) Trypsin formed in the pancreas also breaks down proteins; and (4) Pancreatic Lipase, produced in the pancreas, is used to break apart fats.

SECTION C (5 marks)

UNIT I

1. Write the instructions for using a microscope.

2. Write down the five instructions to be followed in the laboratory.

3. Write five instructions to conserve wildlife.

4. Write a dialogue between a patient and a nutritionist about diet schedule for a diabetic patient
(At least 3 exchanges).

3. Write a dialogue between a professor and a student regarding making a ecofriendly campus
(At least 3 exchanges)

4. Correct the following sentences by changing the modals.

a. I think it should rain tomorrow morning

b. Will I borrow a compass from you?

c. Shall you be able to visit me tomorrow?

d. You will go now.

e. I could finish it by evening.

5. Write one imperative sentence for the following

a. instruction

b. request

c. command

d. advice

e. invitation

6. Read the paragraph and write down any five scientific contributions of Sir HarGovind Khorana

In 1968 Khorana was awarded the Nobel Prize for Physiology or Medicine with Marshall W. Nirenberg of Cornell University and Robert W Holley of the National Institutes of Health. This they were awarded for their elucidation of the genetic code and its function in protein synthesis. Khorana's work confirmed Nirenberg's finding that the chemical composition and function of a new cell is determined by how the four nucleotides are arranged on the spiral 'staircase' of a DNA molecule. He also demonstrated that the nucleotide code is always transmitted in groups of three, called codons, and that these codons instruct the cell to start and stop the production of proteins. Khorana was also one of the first to outline the possibility of gene manipulation. This he did before any individual genes had been characterised from any organism. Khorana is also credited with having devised techniques for the creation of synthetic DNA oligonucleotides, which provided a building block for the creation of artificial genes and primers and templates for DNA polymerase. This work laid the foundation for the development of the polymerase chain reaction (PCR), a technique that enables the amplification of small fragments of DNA to billions of copies within a matter of hours.

7. Frame sentences with the given words.

a. Pioneer b. Visionary c. Icon d. Mentor e. Stipend

8. Write a paragraph on your favourite scientist.

9. Compile any five instructions to set up a fish tank. K3

10. Indicate the meanings of the given words from the following paragraph. K2

Scientists who study the animal kingdom classify animals into different groups, based on different characteristics. Some characteristics scientists study are: what makes up the animal's skin, such as hair or scales whether animals give birth to live babies or lay eggs whether mothers feed their babies milk from their own bodies whether animals are warm-blooded or cold blooded. Another key characteristic that scientists study is whether animals have a backbone. Animals that have a backbone are called vertebrates. Humans are vertebrates. Place your hand on the back of your neck until you feel a bump. Now, rub your hand up and down the middle of your back. Do you feel bumpy bones that run in a row down your back, from your neck down to your waist? That's your backbone. Another name for a backbone is a spine. The backbone or spine wraps around and protects an important part of your body called the spinal cord. The spinal cord is a bundle of nerves. Messages travel up and down your spinal cord from your brain to other parts of your body. This is the way that your brain sends signals telling the other parts of your body what to do.

Many other animals also are vertebrates. All mammals, reptiles, fish, and birds have a backbone, so they are all vertebrates. They have some type of spinal cord, too. Animals with a backbone come in all different shapes and sizes. Apes, rhinos, horses, rabbits, bats and yes, rats and humans, too are all mammals and vertebrates. Lizards, turtles, snakes, and crocodiles are reptiles and vertebrates. Huge sharks and tiny goldfish are also vertebrates. Small hummingbirds and large eagles are vertebrates, too. But there are many more animals that do not have a backbone. Animals without a backbone are called invertebrates. Insects are the largest group in the animal kingdom. Insects are also the largest group of invertebrates. Insects include flies, wasps, beetles, cockroaches, ladybugs, and butterflies. Other kinds of invertebrates include earthworms and spiders.

i. Vertebrates ii. Spine iii. Spinal cord iv. Invertebrates

11. Fill in the blanks using the words given. K2

(Rinse, Wear, Arrange, Dispose, Handle, Do not, Clean, Dilute)

- i. lab coat before entering the lab.
- ii. eat in the lab.
- iii. the concentrated acids in the presence of your professor.
- iv. glassware with care.
- v. the apparatus before and after the experiment.
- vi. the spills immediately.
- vii. waste in the dustbin.

UNIT II

1. Draw a flow chart for earthworm dissection using the information in the paragraph

Wash the live specimens with water to get rid of mucus. Drop them in a petri dish containing 30% alcohol. Take out the specimens immediately after cessation of movements and put in tap water in a large beaker. Place the specimen on the fingers of your left hand. Insert the tip of one of the blades of a pair of fine scissors through the skin above the dorsal blood vessel at about 30th segment of the body. Hold the scissors almost in a horizontal position keeping the lower arm just below the body wall and cut the skin anteriorly for about 2 cm. Put the worm on the dissecting tray, keeping the dorsal surface upwards and fix it in a straight line on the wax with a few pins passing through the skin of the lateral sides and one at each of the anterior and the posterior end. Care should be taken not to damage the nerve ring at the anterior end and the anal region at the posterior end.

Starting from the initial incision cut the skin along the mid-dorsal line, proceeding anteriorly or posteriorly or both as required for dissection. Hold the skin with a pair of fine forceps and free it from septa with a fine needle. Care must be taken not to damage the gut or other organs. Pin down the loose flaps of the skin and proceed for dissection of organ systems.

Dialogue writing

2. Interview with a scientist

3. Class monitor and classmates regarding a study tour

4. Shop keeper and a customer

5. Describe the uses of the following instruments in the lab.

a. Forceps b. Scalpel c. Probe d. Beaker

6. Draw a flow chart for the following procedure for operation of ultra sound scanning machine

The technologist applies a small amount of gel to the area under examination and places the transducer there. The gel allows sound waves to travel back and forth between the transducer and the area under examination. The ultrasound image is immediately visible on a video display screen that looks like a computer monitor. The computer creates the image based on the loudness (amplitude), pitch (frequency) and time it takes for the ultrasound signal to return to the transducer.

7. Differentiate between animal and plant cells using compare/contrast words.

8. Examine the following paragraph and answer the given questions. K4

Professor Har Gobind Khorana was born on 9th January, 1922(Raipur, Punjab, British India) Died on 9th December, 2011(Concord, Massachusetts, United States) Khorana was one of the first scientists to demonstrate the role of nucleotides in protein synthesis and helped crack the genetic code. He also helped develop custom-designed pieces of artificial genes and methods that anticipated the invention of the polymerase chain reaction (PCR) process, a biochemical technology used to amplify a single or a few copies of a piece of DNA.

Education

Khorana received his first four years of education from a village teacher while sitting under a tree. After this Khorana attended D.A.V. High School in the near-by city of Multan (now West Punjab) and then applied to study English literature and chemistry at the Government College in Lahore which was affiliated to Punjab University. In the end he decided to study chemistry and received his bachelor's degree in 1943. Two years later he had completed a master's degree at the same institution. In 1945 Khorana gained a Government of India fellowship to undertake a doctorate in England which he intended to use to study insecticides and fungicides. He landed up, however, studying the chemistry of melanins under the supervision of Roger J.S. Beer at Liverpool University.

In 1968 Khorana was awarded the Nobel Prize for Physiology or Medicine with Marshall W. Nirenberg of Cornell University and Robert W Holley of the National Institutes of Health. This they were awarded for their elucidation of the genetic code and its function in protein synthesis. Khorana's work confirmed Nirenberg's finding that the chemical composition and function of a new cell is determined by how the four nucleotides are arranged on the spiral 'staircase' of a DNA molecule. He also demonstrated that the nucleotide code is always transmitted in groups of three, called codons, and that these codons instruct the cell to start and stop the production of proteins. Khorana was also one of the first to outline the possibility of gene manipulation. This he did before any individual genes had been characterised from any organism. Khorana is also credited with having devised techniques for the creation of synthetic DNA oligonucleotides, which provided a building block for the creation of artificial genes and primers and templates for DNA polymerase. This work laid the foundation for the development of the polymerase chain reaction (PCR), a technique that enables the amplification of small fragments of DNA to billions of copies within a matter of hours

i. When was Dr. Khorana born?

ii. Which school did Khorana attend during his childhood?

iii. How are the four nucleotides arranged?

iv. When did Dr. Khorana receive a Nobel prize?

v. What is PCR?

9. Fill in the blanks with appropriate words.

(Bunsen burners, Test tube with samples, slide, Forceps, indicator)

a) Cells are gently smeared onto a _____

b) _____ needs to be centrifuged.

c) Litmus paper is used as an _____.

d) _____ are used to hold tissue out of the way or to pick up a structure.

e) _____ are attached to a gas line.

10. Read the following passage carefully and answer the questions.

You might have heard about the different classes of animals in your daily life such as birds, reptiles, mammals, amphibians, fish, etc. Out of all these classes, reptiles and amphibians have more similarities. Often, people find it hard to differentiate between them both. However, amphibians and reptiles are very different from each other. You can easily spot an amphibian or a reptile if you know the basics. Here are some differences between an amphibian and a reptile.

Definitions

An amphibian is an ectothermic animal which means that it is cold-blooded. It matures in the water but can live on land and water both. It has gills to breathe in the water. However, it uses lungs to breathe on land. Reptile is also an ectothermic animal. A reptile only lives on land. It has four legs. Only some reptiles such as alligators, crocodiles, etc can live in water.

Reproduction

An amphibian is oviparous in nature. This means that the embryo develops inside the mother in the egg before it is hatched outside. On the other hand, a reptile can be oviparous or viviparous.

Visualization

Amphibians have a very narrowed down spectrum that they can view. Reptiles have the ability to visualize and distinguish a wide spectrum of colors.

Protection

Amphibians have toxins on their skin that protects them from dangerous animals. Reptiles have scaled skin. They also have toxins in their teeth and nail.

- i. What are ectothermic animals?
- ii. How do amphibians breathe?
- iii. Describe a reptile?
- iv. What is meant by oviparous?
- v. How do amphibians protect themselves from dangerous animals?

11. Examine the paragraph and write the procedure for operating a ultrasound scanning machine using a flow chart.

The technologist applies a small amount of gel to the area under examination and places the transducer there. The gel allows sound waves to travel back and forth between the transducer and the area under examination. The ultrasound image is immediately visible on a video display screen that looks like a computer monitor. The computer creates the image based on the loudness (amplitude), pitch (frequency) and time it takes for the ultrasound signal to return to the transducer.

Ultrasound imaging is based on the same principles involved in the sonar used by bats, ships and fishermen. When a sound wave strikes an object, it bounces back, or echoes. By measuring these echo waves, it is possible to determine how far away the object is as well as the object's size, shape and consistency. This includes whether the object is solid or filled with fluid.

12. Compare and contrast a plant cell and animal cell.

UNIT III

1. Write an action plan for “wild life conservation”.
2. Discuss on the advantages and disadvantages of mobile phones in not more than 10 points.
3. Write down the statements that can be used during a group discussion.

4. Write the dialogue between 5 people in a group discussion on the 'conservation of nature'

5. Read the passage and answer the questions.

An amoeba, sometimes written as "ameba", is a term generally used to describe a single celled eukaryotic organism that has no definite shape and that moves by means of pseudopodia. Pseudopodia or pseudopods are temporary projections of the cell and the word literally means "false feet". The cell uses the pseudopodia as a means of locomotion. The plural of amoeba is "amoebae", not "amoebas". Although the word "amoeba" or "amoeboid" is often used to refer to all protozoa that move using pseudopodia, the word *Amoeba* (written in italics and with a capital letter) refers to a specific genus of protozoa of which *Amoeba proteus* is the best-known species. The cytoplasm of an amoeba contains the organelles and is enclosed by a cell membrane. An amoeba uses a process called phagocytosis to obtain food. This is a process in which projections of the cell membrane of the amoeba extend and surround the food particle, totally enclosing it. The food particle is thus internalized in a sort of "bubble" called a vacuole. The food particle can then be digested in the vacuole. The amoeba reproduces via mitosis.

- a. What is the shape of amoeba?
- b. How does amoeba move?
- c. How does amoeba obtain food?
- d. Write the process of reproduction in amoeba.
- e. What does pseudopodia mean?

6. Sketch a mind map on Food Adulteration

7. Sketch a mind map on plant nutrients

8. Role of Microbes in human welfare

9. Read the paragraph and answer the questions.

Micronutrients are the essential elements required by plants in relatively low concentrations. Micronutrients form a coherent group, including eight core elements: iron (Fe), sodium (Na), chlorine (Cl), boron (B), manganese (Mn), zinc (Zn), copper (Cu), and molybdenum (Mo). Some scientists consider silicon (Si) a micronutrient. Though, not known to be essential, it is accumulated by plants and used in the plant body at a fairly high concentration. Cobalt (Co) is an essential micronutrient for plant species that form root nodules. Additionally, nickel (Ni) is a micronutrient that, while essential, is virtually never limiting or deficient in the natural world. In the rare cases when it is limiting, symptoms include reduction in leaf size, cupping of the leaf, and reduced vegetative growth. It is also a component of a single enzyme, urease. When grown without nickel, plants fail to produce urease in sufficient quantity and can suffer effects of accumulating toxic quantities of urea in the cells. Plants need micronutrients in low enough concentrations that the relative likelihood of deficiency is far less than for the macronutrients.

- a. Name a few micronutrients
- b. Say true or false 'Silica is a micronutrient'
- c. What happens to plant that are grown without nickel.
- d. Depict the role of cobalt.
- e. The effect of micronutrient deficiency _____ (more/less) compared to macronutrient deficiency

UNIT IV

1. Syllabify the following words.

- a. Crucial b. Absence c. Reduction d. Associated e. Hypochromic

2. Read the passage and find one word for the sentences given

Iron deficiency anaemia is a type of anaemia caused by low iron levels in the body. Anaemia is a condition where there is a low amount of red blood cells or haemoglobin in the body. Red blood cells and haemoglobin are responsible for the transport of oxygen throughout the body to the tissues and organs. Iron is responsible for making haemoglobin. When iron levels are low in the body red blood cells and hemoglobin do not work properly which leads the patient to feel symptoms of lethargy, pallor, tachycardia, weird food cravings (ice, clay, dirt), inflammation of the tongue (glottis), nail changes such as koilonychia (spoon shape of the nails) etc. Treatment for iron-deficiency anaemia includes iron supplementation, increasing iron in the diet with foods rich in iron (such as egg yolks, red meats, poultry, shellfish, fish, legumes, seeds etc), and prevention. The causes of iron-deficiency anaemia include poor intake of iron (as with pregnancy, vegetarian diet, or malnourishment), blood loss (GI bleed, menstruation), or absorption issues (as with Celiac disease, GI surgery etc). It is diagnosed with complete blood count (CBC), iron level, or blood smear to assess the RBC which may appear hypochromic (pale) and microcytic (small). What is Anaemia? Anemia is a decreased amount of red blood cells or hemoglobin in the body. These components play a huge role in carrying oxygen throughout the body. If you are low in RBCs or hemoglobin, your body won't receive enough oxygen to function properly.

- a. The pigment that carries oxygen in the blood
- b. A condition in which there is a deficiency of red cells or of haemoglobin in the blood
- c. Lack of proper nutrition, caused by not having enough to eat
- d. Addition of something
- e. The identification of the nature of an illness or other problem by examination of the symptoms.

3. Read the following passage and answer the questions.

Poverty, malnutrition and famine are self-explanatory causes of anaemia in the multitude of people living with iron deficiency in developing countries, especially children and pregnant women. In addition, a cereal-based diet decreases iron availability because phytates in grains sequester iron in a poorly absorbable complex. Other common causes in developing countries include hookworm infections and schistosomiasis, which cause chronic blood loss. Strict vegan and vegetarian diets, malabsorption, and chronic blood loss resulting from heavy menstrual losses are well-known causes of iron-deficiency anemia in developed countries. Chronic blood loss from the gastrointestinal tract, including occult blood, especially in male patients and elderly patients, may reveal the presence of benign lesions, angiodysplasia, or cancer.

- a. What are the causes of anaemia in developing countries?
- b. What is the meaning of the term 'sequester'?
- c. Which are the causes of blood loss?
- d. List out the causes of iron-deficiency anaemia in developed countries.

- e. What condition may reveal the presence of benign lesions, angio dysplasia, or cancer?

4. Write the synonyms for the following.

- a. novel b. myth c. huge d. survivor e. determined

5. Write sentences using the following words

- a. hazards b. technique c. procedure d. phenomenon e. enteric

6. Frame sentences using the following words

- a. adapt b. eradicate c. essential d. remarkable e. resistant

7. Match the words in Column A with their meaning in the Column B

Column A	Column B
Vaccination	very potent or effective
Antibody	the deliberate inoculation of an uninfected person with the smallpox virus
Toxin	the death of large numbers (as of people or animals)
Lethal	a blood protein produced in response to and counteracting a specific antigen.
Mortality	a poisonous substance that is a specific product of the metabolic

8. Convert the sentences into passive voice.

- a. The microbes help in digestion.
b. Plants need micronutrients in trace amounts.
c. Caterpillars eat mulberry leaves.

UNIT V

1. Read the following passage and answer the questions.

Chemical reactions in biological systems hardly occur in the absence of a catalyst. The biological catalysts that catalyse the biological reactions are enzymes. Almost all biochemical reactions in living things need enzymes. Even a reaction as simple as the hydration of carbon dioxide is catalysed by an enzyme.

In the absence of enzyme, the transfer of CO_2 from the tissues into the blood and then to the alveolar air would be incomplete. Carbonic Anhydrase is the enzyme that catalyses this reaction. This is one of the fastest known catalysts for catalysing this reaction. Each enzyme molecule can hydrate 10⁵ molecules of CO_2 in one second. This catalysed reaction is 10⁷ times faster than the uncatalysed reaction. There are approximately 1300 different enzymes found in the human cell. They are vital for life and serve a wide range of important functions in the body, such as aiding in digestion and metabolism. Metabolic enzymes are an essential component for optimal cellular function and health. Enzymes are biologically active proteins found in all living cells. All enzymes are proteins, but all proteins are not enzymes. They significantly increase the rate of almost all the chemical reactions taking place within cells. The striking characteristics of all enzymes are their catalytic power and specificity. Some enzymes help break large molecules into smaller pieces that are more easily absorbed by the body. Other enzymes help bind two molecules together to produce a new molecule. Furthermore, the activity of many enzymes is regulated. In addition, some enzymes are intimately involved in the transformation of different forms of energy.

- a. What are enzymes?
- b. Name the enzyme involved in hydration of carbon dioxide in the tissues
- c. State true or false
 - i) The enzyme increases the rate of reaction
 - ii) Enzymes are non-specific.
- d. Write any two functions of enzymes.

2. Read the passage and fill up the blanks.

The foods we eat contain many complex molecules. These complex molecules should be broken down to simple molecules, for absorption in the body. Breaking down of large food molecules into small molecules is called chemical digestion. Chemical digestion could not take place without the help of digestive enzymes. Digestive enzymes speed up chemical reactions that break down large food molecules into small molecules. They turn the food we eat into energy. Digestive enzymes are released or secreted, by the organs of the digestive system. These enzymes include proteases which digest proteins, and nucleases that digest nucleic acids.

Important digestive enzymes include: (1) Amylase, produced in the mouth, which helps to break large starch molecules into smaller sugar molecules; (2) Pepsin, produced in the stomach, helps to break proteins into amino acids; (3) Trypsin formed in the pancreas also breaks down proteins; and (4) Pancreatic Lipase, produced in the pancreas, is used to break apart fats.

- a. Breaking down of large food molecules into small molecules is called _____.
- b. The enzymes turn the food into _____.

- c. _____ enzymes digest nucleic acids
 - d. The enzyme that digest starch molecule is _____
 - e. _____ enzymes break down proteins.
3. Write the meaning of the following words
- a. Catalyst b. Enzyme c. Hydrolysis d. Substrate
4. Illustrate the lifecycle of *Entamoebahistolytica* using two power point slides.
5. Make a note of the following passage using annotation method

In many biochemical reactions, the energy of the reactants is converted into a different form with high efficiency. For example, in photosynthesis, light energy is converted into chemical bond energy. In Mitochondria, the free energy contained in small molecules derived from foods is converted into free energy of adenosine triphosphate (ATP). The chemical-bond energy of ATP is then utilized in many different ways. These transformations of energy are carried out by enzyme molecules that are integral parts of highly organized assemblies. The making and breaking of chemical bonds by an enzyme are preceded by the formation of an enzyme-substrate (ES) complex. The substrates bind to a specific region on the enzyme called the active site. As already mentioned, most enzymes are highly selective in their binding of substrates. Certainly, the catalytic specificity of enzymes depends largely on the specificity of the binding process. Furthermore, the control of enzymatic activity may also take place at this stage. The widely accepted theory for explaining the enzyme-substrate interaction is the lock-and-key model. In the lock-and-key model, the active site of an enzyme is exactly shaped to hold specific substrates. In the other model called induced-fit model, the active site and substrate do not fit perfectly together. But, both of them alter their shape to connect. In any case, the reactions that occur get accelerated by a million fold. Once the chemical reactions result in a new product, it separates from the enzyme. The freed enzyme goes on to catalyse other reactions. For example, when the salivary enzyme amylase binds to a starch, it catalyses hydrolysis. The hydrolysis results in maltose or malt sugar. The maltose departs from the enzyme.

6. Write the Do's and Don't of Powerpoint slide making.
7. Comment on the five Rs of notes making.
8. Write the general principles of note making.
9. Differentiate sketch note and mind map method of notes making depicting an example.
10. State any five solutions for disposal of non-biodegradable wastes.

SECTION D (10 Marks)

UNIT I

1. Write the instructions to operate a compound microscope (at least 10).
2. Read the passage and comment on the career of Professor Khorana in 10 sentences.

From early on Khorana did not stick to the rigid boundaries of disciplines and his work was to take him across the fields of chemistry, biology and physics. This was unusual for scientists of his generation. Whenever he undertook a new project Khorana secured time in other laboratories so that he could master the techniques he needed to carry an idea forward. As soon as he finished his doctorate, based on the importance of German scientific literature, Khorana decided he would benefit from pursuing his postdoctoral research in a German-speaking country. To this end he

spent months in Zurich between 1948 and 1949 at the Organic Chemistry Laboratory at the Swiss Federal Institute of Technology (ETH) where he researched alkaloid chemistry with Vladimir Prelog. Khorana greatly valued the philosophy and work ethics Prelog passed on to him during this time. Khorana unfortunately had to cut short his visit to Switzerland because he had no stipend and his savings were running out. Thereafter, Khorana returned to the Punjab in order to fulfil the requirements of his Indian government scholarship. He found it difficult, however, to find a job because of the upheaval caused by the recent partition of British India. What came to his rescue was the offer of a fellowship at Cambridge University. This he secured through the help of the Cambridge based scientist G.W. Kenner whom he had met in Zurich. In 1950 Khorana returned to England with money scraped together by his extended family to pay for his ship's passage. Over the next two years Khorana worked alongside Alexander Todd trying to define the chemical structures of nucleic acids. This was an exciting time to be in Cambridge because Fred Sanger was then in the process of sequencing insulin, the first protein to be sequenced, and Max Perutz and John Kendrew were performing the first x-rays of myoglobin and haemoglobin. Such work inspired Khorana to start looking at proteins and nuclear acids.

In 1952 Khorana was offered a position in Vancouver to start a new nonacademic research laboratory based on a recommendation by Todd to Gordon M. Shrum, head of the British Columbia Research Council. While the laboratory in Vancouver had very little in the way of facilities, Khorana treasured the freedom the job gave him to pursue his own research. He soon launched a number of projects researching phosphage esters and nucleic acids. Such work necessitated him developing methods to synthesise short oligonucleotides. His publication of these techniques soon attracted the attention of notable biochemists, such as Arthur Kornberg and Paul Berg, who were eager to visit him to learn from him and gain his reagents. In 1960 Khorana moved to the Enzyme Institute at the University of Wisconsin-Madison where he began working on the genetic code and chemical synthesis of a transfer RNA gene. During this time he and his colleagues determined how the synthesis of proteins is controlled by nucleotides in nucleic acids. In 1970 Khorana transferred to the Massachusetts Institute of Technology where he began investigating the molecular mechanism that governs the cell signalling pathways of vision. This was a topic he pursued until his retirement in 2007.

3. Explain the achievements of Professor of Khorana.

In 1968 Khorana was awarded the Nobel Prize for Physiology or Medicine with Marshall W. Nirenberg of Cornell University and Robert W. Holley of the National Institutes of Health. This they were awarded for their elucidation of the genetic code and its function in protein synthesis. Khorana's work confirmed Nirenberg's finding that the chemical composition and function of a new cell is determined by how the four nucleotides are arranged on the spiral 'staircase' of a DNA molecule. He also demonstrated that the nucleotide code is always transmitted in groups of three, called codons, and that these codons instruct the cell to start and stop the production of proteins. Khorana was also one of the first to outline the possibility of gene manipulation. This he did before any individual genes had been characterised from any organism. Khorana is also credited with having devised techniques for the creation of synthetic DNA oligonucleotides, which provided a building block for the creation of artificial genes and primers and templates for DNA polymerase. This work laid the foundation for the development of the polymerase chain reaction (PCR), a technique that enables the amplification of small fragments of DNA to billions of copies within a matter of hours. In 1976 Khorana and his colleagues at MIT achieved the first synthesis of an artificial gene in a living cell. Their method of chemically synthesising genes helped facilitate controlled, systematic studies of how genetic structure influences function.

Alongside his Nobel prize, Khorana was awarded the Louisa Gross Horwitz Prize from Columbia University and the Lasker Foundation Award for Basic Medical Research in 1968; the Willard Gibbs Medal of the Chicago section of the American Chemical Society, in 1974; the Gairdner Foundation Annual Award, in 1980; and the Paul Kayser International Award of Merit in Retina Research, in 1987. In 2007 the University of Wisconsin-Madison, the Government of India and the Indo-US Science and Technology Forum founded the Khorana Program in Khorana's honour to facilitate the exchange of students between the university and Indian research institutions.

4. Give one word for the following sentences from the paragraph.

- a. A famous person viewed as a symbol of some idea
- b. Chemicals used to destroy fungus
- c. Chemicals used for killing insects
- d. Scientist who studies the chemistry of living things
- e. Long walk in the country
- f. Exceptionally talented
- g. Brothers and sisters born to the same parents
- h. A person who plans for the future with great imagination
- i. journey to a holy place for religious reasons

5. Write an essay on your 'favourite scientist'

6. Write a story using the pictures given.

UNIT II

1. Describe using a flow chart the setting up of an aquarium
2. Write a dialogue between you and your Zoology teacher regarding wild life conservation.
3. Read the passage and answer the questions

Ultrasound imaging uses sound waves to produce pictures of the inside of the body. It is used to help diagnose the causes of pain, swelling and infection in the body's internal organs and to examine a baby in pregnant women and the brain and hips in infants. It's also used to help guide biopsies, diagnose heart conditions, and assess damage after a heart attack. Ultrasound is used to help physicians evaluate symptoms such as pain, swelling, infection. Ultrasound is also used to blockages to blood flow (such as clots), narrowing of vessels, tumors and congenital vascular malformations, reduced or absent blood flow to various organs, such as the testes or ovary, increased blood flow, which may be a sign of infection. Ultrasound is safe, non invasive, and does not use ionizing radiation. It is safe and painless. Ultrasound imaging is also called ultrasound scanning or sonography.

The Equipment:

Ultrasound scanners consist of a computer console, video display screen and an attached transducer. The transducer is a small hand-held device that resembles a microphone.

Procedure:

The technologist applies a small amount of gel to the area under examination and places the transducer there. The gel allows sound waves to travel back and forth between the transducer and the area under examination. The ultrasound image is immediately visible on a video display screen that looks like a computer monitor. The computer creates the image based on the loudness (amplitude), pitch (frequency) and time it takes for the ultrasound signal to return to the transducer. Ultrasound imaging is based on the same principles involved in the sonar used by bats, ships and fishermen. When a sound wave strikes an object, it bounces back, or echoes. By measuring these echo waves, it is possible to determine how far away the object is as well as the object's size, shape and consistency. This includes whether the object is solid or filled with fluid.

Limitations:

Ultrasound waves are disrupted by air or gas. Therefore, ultrasound is not an ideal imaging technique for the air-filled bowel or organs obscured by the bowel. Ultrasound is not as useful for imaging air-filled lungs, but it may be used to detect fluid around or within the lungs. Similarly, ultrasound cannot penetrate bone, but may be used for imaging bone fractures or for infections surrounding a bone.

- a. Write any two applications of ultrasound scanning machine.
- b. Write the advantages of the ultrasound scanning machine.
- c. Draw a flow chart for the operational procedure of the machine.

- d. Write any two limitations of the ultra sound scanning machine.
4. Write the similarities and dissimilarities between animal cells and plant cells using comparison/contrast words

UNIT III

1. Sketch a mind map for 'coronavirus'
2. Sketch a mind map for 'Conservation of nature'
3. Sketch a mind map for 'Diet'
4. Write an essay on 'Conservation of nature'
5. Read the paragraph on animal nutrition and answer the questions

Nutrition is the process of taking food and using it for obtaining energy, growth and repair of the body. Animals depend on other organisms for getting their food. They cannot make their own food, so they are heterotrophs. Animals Obtain their Food from Plants and other Animals. Animals need readymade food and therefore they depend on either plants or other animals which they eat. For example, snake eats frogs, insects eat dead bodies of animals, birds eat worms and insects etc.

Modes of Nutrition

The method of obtaining food by an organism is called modes of nutrition. There are two modes of nutrition. They are:

- 1) Autotrophic
- 2) Heterotrophic

Heterotrophic Mode of Nutrition

All the animals cannot make their own food from simple inorganic material like carbon dioxide and water. They depend on other organisms for food. This is called heterotrophic mode of nutrition. The organisms which depend on other organisms for food are called heterotrophs. For example, man, dog, cat, deer, tiger, cow, non-green plants like yeast are all heterotrophs. They depend on plants or other organisms for their food.

Types of Heterotrophic Nutrition

There are three types of heterotrophic mode of nutrition. They are:

- i) Saprotrophic nutrition
- ii) Parasitic nutrition
- iii) Holozoic nutrition

Saprotrophic nutrition

Sapro means rotten. There are organisms which feed on dead and decaying organic matter for obtaining their food. These organisms feed on rotting wood of dead and decaying trees, rotten leaves, dead animals, rotten bread etc. Such organisms are called saprophytes. Fungi and many bacteria are saprophytes. These saprophytes break down the complex organic matter from the dead and decaying organic matter into simpler substances outside their body. These simpler substances are then absorbed by saprophytes.

Parasitic Nutrition

It is that mode of nutrition in which organisms feed on other living organisms, called their host, without killing them. The organisms which obtain food in a manner are called parasites.

Parasites harm the host, which may be a plant or an animal. Parasites cause diseases to mankind, domestic animals, and crops. Fungi, bacteria, a few plants like cuscuta and some animals like plasmodium and roundworms undergo parasitic mode of nutrition.

Holozoic Nutrition

Holozoic is a mode of nutrition in which organisms eat solid food. The food may be a plant product or animal product. In this process, an organism ingests the complex organic food material into its body and then digests the food which is then absorbed into the body cells. The unabsorbed food is thrown out of the body of the organisms by the process of egestion. Man, cat, dog, bear, giraffe, frog, fish, etc., have holozoic mode of nutrition.

- a. Why is nutrition in man is called heterotrophic?
- b. How do Saprotrophs obtain their nutrition?
- c. What are parasites?
- d. What is called as holozoic nutrition?
- e. Differentiate saprotrophic and parasitic nutrition.

UNIT IV

1. Read the passage and answer the questions

Iron deficiency anaemia is a type of anaemia caused by low iron levels in the body. Anaemia is a condition where there is a low amount of red blood cells or haemoglobin in the body. Red blood cells and haemoglobin are responsible for the transport of oxygen throughout the body to the tissues and organs. Iron is responsible for making haemoglobin. When iron levels are low in the body red blood cells and hemoglobin do not work properly which leads the patient to feel symptoms of lethargy, pallor, tachycardia, weird food cravings (ice, clay, dirt), inflammation of the tongue (glossitis), nail changes such as koilonychia (spoon shape of the nails) etc. Treatment for iron-deficiency anaemia includes iron supplementation, increasing iron in the diet with foods rich in iron (such as egg yolks, red meats, poultry, shellfish, fish, legumes, seeds etc), and prevention. The causes of iron-deficiency anaemia include poor intake of iron (as with pregnancy, vegetarian diet, or malnourishment), blood loss (GI bleed, menstruation), or absorption issues (as with Celiac disease, GI surgery etc). It is diagnosed with complete blood count (CBC), iron level, or blood smear to assess the RBC which may appear hypochromic (pale) and microcytic (small). Anemia is a decreased amount of red blood cells or hemoglobin in the body. These components play a huge role in carrying oxygen throughout the body. If you are low in RBCs or hemoglobin, your body won't receive enough oxygen to function properly.

- a. What are the symptoms of iron deficiency anaemia?
- b. What is the cause of iron deficiency anaemia?
- c. List down the treatment of iron deficiency anaemia.
- d. How is oxygen carried in the blood?
- e. How is iron deficiency anaemia diagnosed?

2. Write the synonym and frame sentences for the following words

- a. Resistant b. portrait c. phenomenon
d. insight e. enteric f. principle g. infect

2. Write a set of instructions to be followed in the zoology museum.

3. Write the recommendations for proper use of a lap top.

4. Convert the sentences into active/passive voice

- a. The butterflies feed on nectar
b. Amoeba uses pseudopodia for locomotion
c. Biological reactions are catalyzed by enzymes.
d. The entire field is grazed by the cattle.

5. PARAGRAPH

In 1879 in France, Louis Pasteur was studying the bacterium that causes a disease of chickens called fowl cholera. Pasteur possessed a culture of this bacterium that, when injected into chickens, consistently caused an infection that killed them. One afternoon he told his assistant, Charles Chamberland, to infect some birds with the culture. Since it was late in the day and he was about to go to vacation, Chamberland decided to postpone the experiment until he returned. As a result, the chickens eventually received an injection of the bacterial culture that had remained in the bench for several weeks. The inoculated chickens remained healthy. Pasteur then decided to inject these chickens with a second dose of bacteria from the fresh bacterial culture. To Pasteur's surprise, the birds survived this second dose without becoming ill. Pasteur, with remarkable insight, recognized that this phenomenon was identical in principle to vaccination. By injecting his chickens with the aged culture of bacteria (a vaccine), he had protected them against disease caused by a fresh culture of the same organism. Once he had established the general principle of vaccination, Pasteur tried to apply it to other infectious diseases. He first produced a vaccine against anthrax, a disease caused by a bacterium called *Bacillus anthracis*. Pasteur found that he could not make this organism safe by aging it on the laboratory bench, but he could do so by growing it at an unusually high temperature. Pasteur then conducted a public experiment that convincingly showed that administration of his heated anthrax culture would protect sheep, cattle and goats against a subsequent lethal dose of anthrax bacteria. A few years later he developed an effective vaccine against rabies. He thus showed that the general principles of vaccination applied to diseases other than smallpox, and this approach could be used to protect animals and humans against other infections. Louis Pasteur can therefore be considered the founder of the science of Immunology.

Era of First Nobel Prize in medicine for production of antibodies

Pasteur, although remarkably successful in developing effective vaccines, had little concept of the mechanisms involved. He suggested that the organisms in the vaccines removed essential nutrients from the body and thus prevented the subsequent growth of the disease-causing agent. It was in Berlin about ten years later, in 1890, that Emil von Behring and Shibasaburo Kitasato demonstrated that the protection induced by vaccination was not due to removal of nutrients but was associated with the appearance of protective factors in the blood. They called these factors antibodies.

The first Nobel Prize in medicine was awarded to Emil von Behring in 1901 for his work on the production of antibodies against toxins (antitoxins). Within a few years Paul Ehrlich had proved that antibodies could protect animals against foreign toxins other than those found in bacteria (in 1908 Paul Ehrlich was awarded Nobel Prize) and other German, Richard Pfeiffer, had shown that antibodies could clump and then destroy *Vibrio cholera* bacteria, the cause of cholera in humans. The demonstration that antibodies could make a suspension of bacteria clump was soon applied by Isidore Widal to the diagnosis of enteric disease such as typhoid fever. Thus serum from an infected.

Find one word for the following sentences from the paragraph

- a. The deliberate inoculation of an uninfected person with the smallpox virus
- b. not susceptible or responsive; having a high degree of resistance to a disease
- c. the death of large numbers (as of people or animals)
- d. a poisonous substance that is a specific product of the metabolic reactions.
- e. a blood protein produced in response to and counteracting a specific antigen

UNIT V

1. Read the passage and answer the questions.

Chemical reactions in biological systems hardly occur in the absence of a catalyst. The biological catalysts that catalyse the biological reactions are enzymes. Almost all biochemical reactions in living things need enzymes. Even a reaction as simple as the hydration of carbon dioxide is catalysed by an enzyme.

In the absence of enzyme, the transfer of CO_2 from the tissues into the blood and then to the alveolar air would be incomplete. Carbonic Anhydrase is the enzyme that catalyses this reaction. This is one of the fastest known catalysts for catalysing this reaction. Each enzyme molecule can hydrate 10⁵ molecules of CO_2 in one second. This catalysed reaction is 10⁷ times faster than the uncatalysed reaction. There are approximately 1300 different enzymes found in the human cell. They are vital for life and serve a wide range of important functions in the body, such as aiding in digestion and metabolism. Metabolic enzymes are an essential component for optimal cellular function and health. Enzymes are biologically active proteins found in all living cells. All enzymes are proteins, but all proteins are not enzymes. They significantly increase the rate of almost all the chemical reactions taking place within cells. The striking characteristics of all enzymes are their catalytic power and specificity. Some enzymes help break large molecules into smaller pieces that are more easily absorbed by the body. Other enzymes help bind two molecules together to produce a new molecule. Furthermore, the activity of many enzymes is regulated. In addition, some enzymes are intimately involved in the transformation of different forms of energy.

Enzymes are highly selective catalysts, meaning that each enzyme only speeds up a specific reaction. They are highly specific both in the reaction catalysed and in their choice of reactants. The molecules that an enzyme works (reacts) with are called substrates. For example, Trypsin

is quite specific in that it splits peptide bonds on the carboxyl side of lysine and arginine residues only. Many enzymes have been named by adding the suffix “-ase” to the name of their substrate or to a word/phrase describing their activity. Thus, the enzyme that catalyzes the hydrolysis of urea is urease, and DNA polymerase is the enzyme that catalyzes the polymerization of nucleotides to form DNA. Before the specific reaction catalyzed by an enzyme was known, enzymes were named by their discoverers for a broad function. For example, an enzyme known to act in the digestion of foods was named pepsin, from the Greek word *Pepsis*, meaning, “digestion”. **The Role of Enzymes in the Digestive System** The foods we eat contain many complex molecules. These complex molecules should be broken down to simple molecules, for absorption in the body. Breaking down of large food molecules into small molecules is called chemical digestion. Chemical digestion could not take place without the help of digestive enzymes. Digestive enzymes speed up chemical reactions that break down large food molecules into small molecules. They turn the food we eat into energy. Digestive enzymes are released or secreted, by the organs of the digestive system. These enzymes include proteases which digest proteins, and nucleases that digest nucleic acids.

Important digestive enzymes include: (1) Amylase, produced in the mouth, which helps to break large starch molecules into smaller sugar molecules; (2) Pepsin, produced in the stomach, helps to break proteins into amino acids; (3) Trypsin formed in the pancreas also breaks down proteins; and (4) Pancreatic Lipase, produced in the pancreas, is used to break apart fats.

Enzymes Transform Different Kinds of Energy

In many biochemical reactions, the energy of the reactants is converted into a different form with high efficiency. For example, in photosynthesis, light energy is converted into chemical bond energy. In Mitochondria, the free energy contained in small molecules derived from foods is converted into free energy of adenosine triphosphate (ATP). The chemical-bond energy of ATP is then utilized in many different ways. These transformations of energy are carried out by enzyme molecules that are integral parts of highly organized assemblies.

- a. Write the mechanism of action of enzymes
 - b. State true or false
 - i. All enzymes are proteins
 - ii. All proteins are enzymes
 - c. Write a note on important digestive enzymes.
 - d. Comment on energy transformation by enzymes
2. Illustrate using five power point slides the ‘salient features of invertebrates’
 3. Make a note of the following paragraph using ‘sketch note method’ and ‘Cornell method’.

Water is one of the most essential sources of life. Plants and animals must have water to survive. If there was no water there would be no life on earth. A hydrosphere is the total amount of water on a planet. The hydrosphere includes water that is on the surface of the planet, underground and in the air. A planet's hydrosphere can be liquid, vapour, or ice. Hydrosphere covers 70% of earth's surface. 97.6% of water found on Earth is in the oceans in the form of salt water. Only 2.4 % of water on Earth is fresh water. Out of this, 87% is in frozen form as glaciers and 13% is available as liquid water which is easily accessible to human. Of this 13 % liquid water 95 % remain as ground water, 3 % distributed as lakes, rivers and streams and the remaining 2 % as soil moisture. It is important to know the cycle of processes by which water circulates between the earth's oceans, atmosphere and land which in other words can be called as Water Cycle. Water continually cycles around the planet in 10 distinctive steps:

Evaporation is the primary pathway that water moves from the liquid state back into the water cycle as atmospheric water vapour.

Transpiration is the process of water movement through a plant and its evaporation from aerial parts, such as leaves, stems and flowers.

Sublimation describes how snow and ice change to water vapour without becoming liquid.

Condensation happens when water vapour becomes water droplets via cloud formation.

Transportation defines how water moves through the atmosphere in its solid, liquid or gaseous form.

Precipitation is any form of liquid or solid water particles that fall from the atmosphere and reach the surface of the Earth in the form of drizzle, rain, hail etc.

4. Write a problem solution essay on 'non-biodegradable waste'.

5. Write a problem solution essay on 'water pollution'.

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI

I B.Sc Zoology

Semester II

Core Chordata Sub. Code. 21UZOC21

Question Bank

Section A (1 mark)

Unit I

1. Chordates are distinguished from non chordates by the presence of
a. ventral nerve cord b. dorsal nerve cord c. brain d. **dorsal tubular nerve cord**
2. Which one of the following features is found in chordates and not in non chordates?
a. Gills b. spiracles c. **post anal tail** d. chitinous exoskeleton
3. Wheel organ is found in
a. Ascidian b. **Amphioxus** c. Star fish d. Acorn worm
4. Which among the following is the first primitive chordates?
a. **Prochordata** b. Prototheria c. Chordata d. Vertebrata
5. The pharynx of Amphioxus is called
a. branchial aperture b. **branchial basket** c. synapticulum d. endostyle
6. Ascidian belongs to the sub phylum
a. Cephalochordata b. Hemichordata c. **Urochordata** d. Prochordata
7. Atrial and branchial apertures of *Herdmania* are surrounded by
a. two lips b. three lips c. **four lips** d. five lips
8. Retrogressive metamorphosis is found in
a. Balanoglossus b. Branchiostoma c. **Herdmania** d. Amphioxus

9. *Herdmania* is commonly known as
- a. **sea squirt** b. lancet c. sea lamprey d. hag fish
10. Agnatha includes
- a. **hag fishes** b. cat fishes c. jelly fishes d. flying fishes
11. Ammocoetes larva occurs in the life history of
- a. sea urchin b. **Petromyzon** c. Balanoglossus d. Ascidian
12. Petromyzon belongs to
- a. Chondrichthyes b. **Osteichthyes** c. Cyclostomata d. Amphibia
13. Which of the following is a Parasitic chordate?
- a. Exocetus b. Amphioxus c. **Petromyzon** d. Jamoytius
14. How many gill slits are found in Petromyzon?
- a. Two pairs b. Four pairs c. Six pairs d. **Seven pairs**
15. Which among the following is the fossil Agnathan?
- a. **Hemicyclopsis** b. Petromyzon c. Bdellostoma d. Myxine

Unit II

1. In which of the following jaws are found?
- a. *Herdmania* b. **Fish** c. Petromyzon d. Amphioxus
2. Which of the following has a cartilaginous endoskeleton?
- a. **Elasmobranch** b. Dipnoi c. Mollusca d. Bony fish
3. What would you call the study of fishes?
- a. Herpetology b. **Ichthyology** c. Saurology d. Ornithology
4. In fishes, the kidney is
- a. **Mesonephros** b. Pronephros c. Metanephros d. Holonephros

5. Venous heart is present in

- a. **Fish** b. Ascidian c. Amphioxus d. Man

6. Scoliodon is commonly called as

- a. **shark** b. live fish c. ribbon fish d. eel

7. _____ is the receiving chamber of the heart

- a. **Sinus venosus** b. Superior vena cava c. Inferior vena cava d. Pulmonary vein

8. Migration from fresh water to sea for breeding is called as

- a. anadromous b. **catadromous** c. potomodromous d. oceanodromous

9. In shark which one is used to store spermatozoa?

- a. Sweat gland b. **Shell gland** c. Pituitary gland d. Spermatheca

10. Optic lobes control _____

- a. hearing b. **vision** c. taste d. smell

11. Frog is a _____ animal

- a. herbivorous b. omnivorous c. **carnivorous** d. viviparous

12. *Rana cyanophlyctis* is commonly called as _____

- a. jumping frog b. fast swimmer c. **skipper frog** d. fast runner

13. In frog skin, the respiration is called

- a. **cutaneous respiration** b. pulmonary respiration
b. pulmocutaneous respiration d. buccopharyngeal respiration

14 _____ is the receiving chamber of the heart

- a. **Sinus venosus** b. Superior vena cava
c. Inferior vena cava d. Pulmonary vein

15. In frog the cavity enclosed by the brain is called as _____
a. sinus venosus b. auricle c. diencephalon d. **ventricle**
16. How many pairs of cranial nerves are present in an adult frog?
a. **10** b. 12 c. 11 d. 14
17. _____ is supplying the blood to liver and stomach
a. Renal artery b. Iliac artery c. **Coeliac artery** d. Laryngeal artery
18. Mesonephric duct is otherwise called as _____
a. renal duct b. cloaca duct c. bile duct d. **Wolffian duct**
19. The adult frog has _____ kidney
a. pronephric b. metanephric c. **mesonephric** d. uronephric
20. How many pairs of renal veins are present in a adult frog?
a. **4-5** b. 8-9 c. 1-2 d. 6-7
21. Nuptial pads in male frog is developed during _____ season
a. before breeding b. **during breeding** c. after breeding d. summer
22. The conversion of tadpole larva into adult frog is called
a. microphorphosis b. megamorphosis
c. **metamorphosis** d. prometamorphosis

Unit III

1. The common name of *Calotes versicolor* is _____
a. tree lizard b. **garden lizard** c. wall lizard d. monitor lizard
2. The skin of calotes is made up of _____
a. pepsin b. renin c. **keratin** d. cellulose

3. Calotes versicolor belongs to the class

- a. Osteichthyes b. Amphibia c. **Reptilia** d. Aves

4. Which one of the following is not a poisonous snake?

- a. Cobra b. Viper c. **Python** d. Krait

5. The venom which affects the nervous system is called _____

- a. haemotoxin b. **neurotoxin** c. aflatoxin d. toxin

6. The subclass Archaeornithes includes _____

- a. **ancient birds** b. modern birds c. flying birds d. flightless birds

7. _____ are described as the masters of air

- a. Snakes b. Reptiles c. Dinosaurs d. **Birds**

8. Which among the following is a monogamous animal?

- a. Crow b. Rabbit c. **Pigeon** d. Squirrel

9. Name the oil gland present in the uropygium of pigeon?

- a. **Preen gland** b. Green gland c. Salivary gland d. Thyroid Gland

10. The quill feathers found in the tail are called _____

- a. barbs b. remiges c. **rectrices** d. coverts

11. What are the feathers present in the nestlings of pigeon called?

- a. filoplumes b. **down feathers** c. quillfeathers d. bristles

12. Identify the gland which secretes milk in pigeons.

- a. Pancreas b. Gastric gland c. Mucous gland d. **Crop gland**

13. In birds the excretory product is _____

- a. **uric acid** b. urea c. ammonia d. sulphate

14. Which is the muscle that brings about a downstroke of the wings in pigeon?

- a. Bicep b. Lessor longus c. **Depressor muscle** d. Tricep

15. The movement of birds from mountain tops to valley is called ____ migration

- a. longitudinal b. latitudinal c. **altitudinal** d. diurnal

Unit IV

1. The diagnostic features of mammals are the presence of _____

- a. pinna & diaphragm b. **hair & mammary gland**
c. sweat & sebaceous glands d. viviparity & placenta

2. Which of the following groups contain mammals that lay eggs?

- a. **Prototherians** b. Metatherians c. Eutherians d. Mesotherians

3. _____ are pouched mammals

- a. Prototherians b. **Metatherians** c. Eutherians d. Mesotherians

4. The third eye lid of rabbit is _____

- a. **nictitating membrane** b. pinnae c. diaphragm d. lower eye lid

5. The salivary gland present below the tongue of rabbit is _____

- a. **sublingual gland** b. parotid gland c. infra orbital gland d. submandibular gland

6. Existence of two sets of teeth in the life of an animal is called as _____

- a. homodont dentition b. heterodont dentition
c. **diphyodont dentition** d. deciduous dentition

7. Diastema is present in _____ animal

- a. **herbivorous** b. carnivorous c. omnivorous d. aquatic

8. Olfactory chambers are separated from the buccal cavity by _____

- a. **palate** b. glottis c. nasal septum d. trachea

9. Which is the largest digestive gland in rabbit?

- a. **liver** b. pancreas c. gastric gland d. intestinal gland

10. The membranous covering of the mammalian heart is _____

- a. **pericardium** b. pleura c. capsule d. Meninges

11. Name the blood vessels which carry pure blood from the lungs to the heart

- a. Pulmonary artery b. **Pulmonary vein**
c. Systemic artery d. Post caval vein

12. Structural and functional unit of kidney is _____.

- a. neuron b. capillaries c. **nephron** d. alveoli

13. The Bowman's capsule and the glomerulus are together called

- a. **Malphigian corpuscle** b. Henles loop
c. collecting duct d. urinary bladder

16. In aquatic mammal the forelimbs are modified into

- a. hands b. fins c. **paddles** d. phalanges

17. What is the layer of fat deposit below the skin of aquatic mammals called?

- a. flake b. **blubber** c. baleen plate d. blow hole

18. Name the oxygen saving mechanism in aquatic mammals

- a. precociousness b. Ritiamirabilia c. Filter feeding d. **Bradycardia**

19. The comb like structure that filters food from water in whales is called _____

- a. **baleen** b. pharynx c. nasal septum d. trachea

Unit - V

1. Respiration in fish is done by the help of paired _____
a. fins b. **gills** c. operculum d. bladder
2. Respiration through the skin is called _____ respiration
a. aerial b. **cutaneous** c. pulmonary d. internal
3. Adult amphibian uses _____ for respiration.
a. **lungs & skin** b. lungs & gills c. gills & skin d. lungs & operculum
4. Reptiles breathe air through the _____
a. skin b. gills c. **lungs** d. pharynx
5. In birds respiratory organs consists of lungs and _____
a. air bladder b. **air sacs** c. gills d. swim bladder
6. In the Eel _____ is highly vascularized and serves as accessory respiratory organ.
a. pharynx b. gills c. **skin** d. lungs
7. In lepidosiran, _____ of male become enlarged and acts as accessory respiratory organ.
a. **pelvic fin** b. pectoral fin c. caudal fin d. gills
8. A specialized type of respiratory structure encountered in Clarias is _____
a. supra branchial chamber b. swim bladder
c. **branchial outgrowth** d. pneumatic sacs
9. Right aortic arch is present in _____
a. Mammals only b. **birds only** c. both reptiles and birds d. both birds and mammals

Section B (2 marks)

Unit I

1. Mention any two structures present among all chordates
2. State the location of the following
 - a. Hatschek's groove
 - b. Endostyle
3. Sketch and label Amphioxus
4. Give the popular names of Ascidain and Amphioxus
5. What is wheel organ? Where is it located?
6. What is Hatschek's pit?
7. Name the enzymes secreted by hepatic diverticulum
8. Mention the excretory organs found in Amphioxus
9. What are solenocytes? State their location
10. Give the scientific name of Sea Lamprey and classify up to order
11. Sketch and label buccal funnel of Petromyzon
12. Mention the functions of pineal eye
13. Name the parts of the brain of Petromyzon
14. What are the sensory organs of Petromyzon ?
15. Give any two examples of hag fish
16. What are anapsid scales?

Unit II

1. Mention the scales found in fishes
2. What is venous heart?
3. What are called first fishes?
4. Give any two examples of Elasmobranchii

5. What are lung fishes? Give example
6. What are cartilaginous fishes? Give example
7. Comment on placoid scales
8. Comment on blind sac
9. What is maxillary nerve?
10. What is meant by bursa entiana?
11. What is counter shading?
12. Comment on cardiac sphincter
13. Comment on pyloric sphincter
14. Mention polyphyodont
15. What is meant by cutaneous respiration?
16. What is inspiration?
17. What is expiration?
18. What is foramen of Monro
19. Write the significance of portal system
20. Define metamorphosis

Unit III

1. Define moulting?
2. Comment on chromatophores
3. What is homodont?
4. Comment on pulmonary aorta.
5. Comment on fangs
6. What is preen gland?
7. What are down feathers?

8. Why is the respiration in birds called as double respiration?
9. What is meant by gliding in birds?
10. Which is the largest flight muscle in pigeon? Mention its use
11. How is weight reduction achieved in birds?
12. What is synsacrum?
13. Mention the functions of feathers in pigeon
14. What sort of birds are included in the subclass Archaeornithes
15. Why is pigeon called as a monogamous animal?

Unit - IV

1. What are pouched mammals? Why are they called so?
2. What is called hare lip?
3. What is coprophagy?
4. How is cellulose digested in rabbit?
5. Give reasons for the presence of diestema only in herbivores
6. What is dental formula? Give the dental formula of rabbit
7. What is meant by a heart beat?
8. State why the type of circulation in mammal is called double circulation
9. What are aquatic mammals? Give two examples
10. List out any three aquatic adaptation in mammals

Unit - V

1. Define respiration.
2. What is external respiration?
3. What is internal respiration?
4. Write the respiratory mechanism in fishes.

5. What is cutaneous respiration?
6. What are the three organs involved in respiration of amphibians?
7. What is accessory respiratory organ?
8. List the accessory respiratory organs in fishes
9. What circulatory system do chordates have
10. What is the lymphatic vessel?

Section – C (5 marks)

Unit I

1. List out the general characters of Prochordata
2. What are spicules? Explain the types of spicules found in Ascidian with labeled sketch
3. Describe the structure of branchial apparatus in Amphioxus
4. What is endostyle? Explain its functions
5. Explain the excretory system of Amphioxus
6. Describe the structure of alimentary canal in Amphioxus
7. Distinguish between urochordate and cephalochordate
8. Describe the structure of Ascidian with neat labeled sketch
9. Bring out the general characters of Agnatha
10. Describe the external morphology of Petromyzon

Unit II

1. Distinguish between Elasmobranchii and Holocephali
2. Bring out the characteristic features of Placoderms
3. Enumerate the external features of shark
4. Illustrate shark digestive system
5. Illustrate the structure of shark heart

6. Explain shark respiratory system
7. Describe male and female reproductive system of shark
8. List down the general characters of the class Amphibia
9. Illustrate the structure and function of teeth in frog
10. Explain the digestive system of shark
11. Draw the structure of heart of frog and explain it
12. Illustrate the structure of male reproductive system of frog
13. Illustrate the structure of female reproductive system of frog
14. Explain the male urinogenital system of frog

Unit – III

1. List down the general character of the class Reptilia
2. Explain the digestive system of calotes
3. Draw the structure of heart of frog and explain it
4. Explain the digestive system of calotes
5. Explain the identification of poisonous snakes and nonpoisonous snakes
6. List down the general characters of Aves
7. Bring out the structure and functions of quill feathers.
8. Give details on the air sacs of pigeon
9. What is synsacrum? Explain
10. Comment on Archaeornithes
11. What is double respiration?
12. Draw a labeled sketch of respiratory system of pigeon
13. Compare the pectoralis major and pectoralis minor muscles of pigeon
14. Explain the mechanism of flight in birds.
15. Enumerate the means by which weight reduction is achieved in birds.

Unit IV

1. List out any ten characters of mammals
2. “Prototheria are unfinished mammals”. Discuss
3. With suitable diagram explain the structure of tongue of rabbit
4. What are the different types of salivary glands in rabbit?
5. Draw and explain the structure of a typical tooth of rabbit
6. Explain the structure of kidney in rabbit
7. Draw the structure of lung in rabbit and mark the parts
8. Draw and describe the structure of rabbit heart
9. What is double circulation? Explain.

Unit - V

1. Give a comparative account of respiratory organs in vertebrates
2. Explain the accessory respiratory organs in fishes.
3. Illustrate the evolution of heart in vertebrates

Section D (10 marks)

Unit I

1. Explain the general characters of Phylum Chordata
2. Describe the structure of Amphioxus with neat labeled sketch
3. Explain the external features of Ascidian with neat labeled sketches
4. Explain the general characters of super class Agnatha
5. Explain the structure of Petromyzon with neat labeled sketch
6. What is migration? Describe the migration of Petromyzon
7. Describe the general characters of Balanoglossus

Unit II

1. Describe the general characters of the class Pisces
2. Describe the characteristic features of class Chondrichthyes including its subclasses
3. Explain the arterial system of shark
4. Explain the venous system of shark
5. Enumerate the nervous system of shark
6. Elaborate the migration of fishes
7. Describe the digestive system of frog
8. Explain the respiratory system of frog
9. Explain the central nervous system of frog
10. Enumerate male and female reproductive system of frog
11. What is metamorphosis? Explain the life cycle of frog

Unit III

1. Explain the general characters of class Reptilia up to order
2. Explain the digestive system of calotes
3. Enumerate the identification of poisonos snake and nonpoisonous snakes
4. Give the classification of Aves with suitable examples.
5. Present the external morphology of pigeon.
6. Enumerate the different type and functions of feathers found in pigeon.
7. Describe the respiratory system of pigeon.
8. Give an account on the flight muscles and the mechanism of flight in pigeon.
9. Write an essay on the flight adaptation in birds.
10. Give details on the mechanism of weight reduction in birds.
11. Explain the exoskeleton of birds.
12. What is pulmonary respiration? Describe the various organs involved in it.
13. What are the air sacs associated with the lungs of pigeon. Add a note on their role in respiration.

Unit - IV

1. Bring out the different parts of the alimentary canal of rabbit.
2. What are digestive glands? Illustrate and explain the different types of digestive glands in rabbit.
3. What do you know about the dentition in rabbit?
4. Explain the structure of lungs of rabbit with a special note on the mechanism of respiration.
5. Give an account on the circulatory system of rabbit.
6. Present the structure and function of excretory system of rabbit.
7. Write about the salient features of egg laying mammals with example
8. List down the various adaptations of aquatic mammals.
9. Give the classification of phylum Mammalia.

Unit - V

1. Give a comparative account of respiratory organs in vertebrates
2. Explain the accessory respiratory organs in fishes.
3. Critically analyze the evolution of heart, aortic arches, venous system and lymphatic system in vertebrates

ST. Mary's COLLEGE (Autonomous) THOOTHUKUDI
QUESTION BANK

B.Sc Botany - Semester II

Allied - Genetics, Physiology and Developmental Zoology Sub. Code :21UZOA21
(For those who joined in July 2021 and after)

Section A (10 x1 =10)

Choose the correct answer

Unit I

1. If the genotype consists of only one type of allele. It is called as
a. **homozygous** b. heterozygous c. momoallelic d. polyallelic
2. Which part of the blood is affected in sickle cell disease?
A, Haemoglobin b. White blood cell c. Plasma membrane d. Platelets
3. The haemoglobin in patients with sickle cell disease is of -----type
a. **Hb^s Hb^s** b. Hb^A Hb^s c. Hb^A Hb^A d. Hb^s Hb^A
4. Phenylketonuria is caused by a deficiency of ----- enzyme
a. amylase b. Phenylalanine galactase c. alanine lipase d. **phenylalanine hydroxylase**
5. Blood group is inherited by
a. multiple genes b. **multiple alleles** c. sex-linked genes d. a pair of alleles
6. Type of genotype individual having blood group A will be
a. **L^A L^O** b. L^B L^O c. L^O L^O d. L^A L^B
7. Erythroblastosis foetalis occurs in child born to
a. Rh- husband and Rh- wife b. **Rh+ husband and Rh- wife**
c. Rh- husband and Rh+ wife d. Rh+ husband and Rh+ wife
8. The gender of the foetus is determined by -----
a. mothers age b. egg c. **sperm** d. fathers health
9. The number of barr bodies found in a female with xxxx chromosomes
a. one b. two c. **three** d. four
10. Inheritance of skin colour in humans is an example of -----
a. epistasis b. gene linkage c. **polygenic inheritance** d. co-dominance
11. Which of the following is an example of sex linked disease?
a. anaemia b. albinism c. jaundice d. **colour blindness**
12. Bleeder's disease is called as
a. colour blindness b. **haemophilia** c. typhoid d. Malaria
13. Identify the karyotype of an individual with Klinefelter's syndrome
a. 45, XO b. **47, XXY** c. 48, XXXY d. 46, XX

14. Criss-cross inheritance transmitted from -----

- a. **Father to grandson through the daughter**
- b. Mother to grandson through the daughter
- c. Father to the grandson through the son
- d. Mother to grand daughter through the daughter

Unit II

1. The enzymatic breakdown of any type of food molecules is called

- a. **digestion**
- b. absorption
- c. respiration
- d. metabolism

2. Starch is digested by -----enzyme

- a. lactase
- b. sucrase
- c. maltase
- d. **amylase**

3. Saliva contains

- a. pepsin
- b. trypsin
- c. **amylase**
- d. lipase

4. Gastric enzymes are secreted by

- a. **chief cells**
- b. goblet cells
- c. parietal cells
- d. oxyntic cells.

5. Which of the following does not produce digestive enzyme?

- a. pancreas
- b. small intestine
- c. salivary glands
- d. **liver**

6. The shortest section of intestine is

- a. colon
- b. **Duodenum**
- c. ileum
- d. jejunum

7. The finger like projections inside the small intestine is

- a. colon
- b. micro villi
- c. **villi**
- d. pepsin

8. Carbohydrates are acted on by

- a. trypsin
- b. **amylase**
- c. lipase
- d. pepsin

9. The conversion of complex insoluble food materials into simple and soluble food materials is known as

- a. excretion
- b. **digestion**
- c. respiration
- d. egestion

10. Proteins are absorbed in the form of

- a. peptides
- b. **amino acids**
- c. fatty acids
- d. glucose

11. Rennin of the gastric juice act on milk protein and converts it in to

- a. **caseinogens**
- b. fructose
- c. fat materials
- d. mineral salts

12. Villi are found in

- a. **intestine** b. large intestine c. Stomach d. duodenum

Unit III

1. When there is low tension of oxygen, oxyhaemoglobin rapidly

- a. fade b. **dissociate** c. multiply d. balance

2. Movement of CO₂ and O₂ across the alveoli and capillaries takes place by

- a. active transport b. **diffusion** c. carrier transport d. imbibitions

3. Amount of oxygen normally carried out by 100ml of pure blood is

- a. 10ml b. **20ml** c. 30ml d. 40ml

4. Volume of air inspired and expired in each breath is

- a. **tidal volume** b. total lung capacity c. inspiratory capacity d. residual volume

5. Dissociation curve is connected with

- a. oxygen b. **oxyhaemoglobin** c. carbon-di-oxide d. carbonic anhydrase

6. What is the shape of the haemoglobin –oxygen dissociation curve?

- a. Straight b. Constant c. Hyperbolic d. **Sigmoid**

7. How much percentage of air is expired during expiration?

- a. 7% b. **32%** c. 25% d. 20%

8. 70% of carbon dioxide is transported as bicarbonate by the enzyme

- a. **carbonic anhydrase** b. carbonic hydrase c. carbaminase d. carbonates

9. Bulk of carbon dioxide is transported by -----

- a. dissolved state b. plasma as bicarbonate c. carbamino haemoglobin d. methamoglobin

10. Haemoglobin is _____ coloured pigment.

- a. **red** b. violet c. blue d. green.

11. One haemoglobin carries ----- molecules of oxygen

- a. 6 b. 3 c. **4** d. 2

12. ----- is the largest cell in the body

- a. **Neuron** b. Nephron c. Nerve cell d. Dendron

13. The sheath covering the axon of the nerve is

- a. sarcolemma b. **neurilemma** c. epineurium d. trigoid granules

14. The junction between a neuron and a muscle is called
- a. **neuromuscular junction** b. synapse c. synaptic cleft d. synoptic knob
15. Which is a neuro transmitter?
- a. acetic acid b. **acetyl choline** c. sulphuric acid d. pepsin.
16. The presynaptic fibre ends in an expanded terminal called
- a. synaptic cleft b. **synaptic knob** c. synaptic vesicle d. soma
17. Polarisation of nerve cell is caused by the movement of
- a. calcium ions b. **sodium ions** c. chloride ions d. sulphate ions
18. Conduction of nerve impulse through myelinated sheath is called as-----
- a. polarization wave b. action potential c. **saltatory propagation** d. depolarization wave
19. The nerves arising from the brain are called _____
- a. **cranial nerves** b. spinal nerves c. oral nerves d. renal nerves
20. The myelinated neurons are otherwise called as _____
- a. grey neuron s b. **white neurons** c. sensory neurons d. internuncial neuron

Unit IV

1. Animals excreting _____ are called ureotelic animals
- a. **urea** b. uric acid c. purines d. guanine
2. What is the functional unit of Kidney?
- a. **nephron** b. neuron c. cortex d. medulla
3. Where does ultrafiltration take place in the nephron?
- a. **Malpighian corpuscle** b. Henle's loop c. Convolute tubul d. Collecting duct
4. What is the inflammation of the kidney called as?
- a. **Nephritis** b. Ulcer c. Neuritis d. Edema
5. The glomerulus and Bowman's capsule are together called
- a. **Malpighian corpuscle** b. afferent vessels c. efferent vessels d. collecting tube
6. The testis remains inside a sac called
- a. **scrotum** b. epididymis c. sac d. ureter
7. The inner most layer of uterus is called
- a. myometrium b. **endometrium** c. ectometrium d. epithelium
8. Testis is covered by a fibrous capsule called -----
- a. interstitial cells b. **tunica albuginea** c. seminiferous tubules d. epididymis

9. The day in which ovulation occurs

- a. **14th day** b. 15th day c. 13th day d. 17th day

10. Androgen hormone secreted by

- a. pyramidal cells b. **interstitial cells** c. seminiferous tubules d. sertoli cells

11. The ovary is covered by a single layer of epithelial cells called

- a. mesovarium b. germinal endothelium c. **germinal epithelium** d. endocardium

12. Testis is covered by a fibrous capsule called -----

- a. interstitial cells b. **tunica albuginea** c. seminiferous tubules d. epididymis

13. Progesterone is secreted by _____.

- a. **Corpus luteum** b. Corpus albicans c. Graffian follicle d. Corpus tubegebenium

Unit V

1. The egg of human is _____.

- a. megalecithal b. mesolecithal c. microlecithal d. **alecithal**

2. The sperm of man is about ----- mm in length.

- a. 0.03 b. 0.03 c. 0.13 d. **0.055**

3. As the yolk egg is present on one side, it is called

- a. isolecithal b. centrolecithal c. **telolecithal** d. megalecithal

4. When only one sperm fuses with the egg is called

- a. **monospermy** b. polyspermy c. microspermy d. macrospermy

5. The movement of cells on the surface of the embryo is called

- a. **epiboly** b. emboly c. yolkplug d. involution

6. The tissue connecting the mother and the foetus is called as

- a. blastocyst b. **placenta** c. cotyledon d. villi

7. Mono discoidal placenta is found in _____

- a. monkey b. **man** c. pig d. dog

8. Portion of the placenta contributed by the embryo is the

- a. **chorion** b. yolk sac c. amnion d. allantois

9. Which one of the following is a first test tube baby?

- a. Robert Edwards b. **Louise Brown** c. Patrick d. Jack

10. The preservation of biological materials in the frozen state is called
 a. laparoscopy b. **cryopreservation** c. cloning d. embryo transfer
11. ----- is a female contraceptive device.
 a. condoms c. **IUD** b. IVF d. ART
12. The process by which the foetus is attached to the uterine wall is called
 a. **implantation** b. ovulation c. gastrulation d. fertilization
13. The production of test tube baby involves
 a. IVF b. **embryo transfer** c. IVF &ET d. IUI

Section – B (7 x 2 = 14)

Answer any seven of the following

Unit I

1. What are Mendelian traits? Give two examples
2. Define phenylketonuria
3. Write the genotypes of ABO blood groups
4. Why is blood type important in blood transfusion?
5. Give the genetic reason for the occurrence of erythroblastosis foetalis
6. What are sex determinative factors in man?
7. What is Barr body?
8. What is sex linked inheritance?
9. Why haemophilia is called as royal disease?
10. What is meant by criss-cross inheritance?
11. Distinguish between Klinefelter's syndrome and Down's syndrome

Unit II

1. What is digestion?
2. What are the enzymes involved in carbohydrate digestion?
3. List any three glands involved in protein digestion
4. What is the function of villi?
5. How does the intestinal juice contribute to digestion of proteins ?
6. What are the enzymes involved in lipid digestion?
7. What is absorption?
8. List any two physiological role of carbohydrates
9. Mention any three physiological role of proteins
10. What are the enzymes involved in the digestion of milk?

11. What is the role of carboxypeptidase in protein digestion?

Unit III

1. What is meant by transport of gases?
2. Define oxygen transport
3. List out the factors responsible for the formation of oxyhaemoglobin
4. Enlist the causative factors for the dissociation of oxyhaemoglobin
5. What is Bohr effect?
6. How is CO₂ taken up from the tissues and transported to the lungs?
7. Distinguish between Hb and HbO₂
8. Define neuron
9. Comment on node of Ranvier
10. List the different types of neurons based on the number of processes
11. Classify the neurons based on the chemical substances they release
12. What is a synapse?
13. What is orthodromic conduction?
14. Define neurotransmitter. Give two examples
15. Why does nerve impulse travel faster in myelinated nerve fibre?

Unit IV

1. Comment on Graafian follicle
2. What are the cells present in seminiferous tubule
3. What is nephron?
4. Define dialysis
5. Mention the steps involved in urine formation
6. What are the phases of menstrual cycle?
7. What is the function of Sertoli cells?
8. List out the important layers of germinal cells
9. What do you mean by proliferative phase?
10. List out the endocrine glands involved in the control of sexual cycles.

Unit V

1. Define fate map
2. Define epiboly
3. What is emboly?
4. What is meroblastic cleavage?

5. What does gastrulation refer to?
6. Define fertilization
7. What is cleavage?
8. What are the three layers present in the mature gastrula?
9. What do you mean by invagination?
10. What is infertility? Mention its types.
11. What is meant by artificial insemination?
12. What do you mean by in-vitro fertilization?
13. List down the uses of test tube baby technique.
14. Comment on Diffuse placenta
15. List down the contraceptive devices for men.
16. List down the contraceptive devices for women.
17. Differentiate identical twins from Siamese twins
18. What are fraternal twins?
19. Mention the importance of twin study

Section C (5X6=30)

Answer the following choosing either (a) or (b)

Unit I

1. Discuss Simple Mendelian Traits with an example
3. Describe the antigen –antibody reactions which form the basis for ABO blood grouping
4. What is Rh incompatibility? How is it treated?
5. Describe common Mendelian traits in man and add a note on their mode of inheritance
6. Explain the mechanism of sex determination in man
7. Which type of inheritance is colour blindness? What is the genetic cause for colour blindness?
8. Comment on Down's syndrome

Unit II

1. Describe the physiological role of carbohydrates.
2. What are the importance of protein digestion?
3. Analyse the role of villi in the process of absorption of digested food
4. Give an account of digestion and absorption of fats

5. Analyze the composition and functions of gastric and intestinal juices.
6. Elucidate the role of enzymes involved in the process of milk digestion.

Unit III

1. Describe how oxygen is transported by the blood?
2. Define oxygen dissociation curve. Add a note on association and dissociation of haemoglobin
3. Explain the transport of carbon-di-oxide by the blood.
4. How is haemoglobin associated with respiration?
5. Explain Bohr effect and its physiological significance
6. Describe the structure of neuron with a neat labeled diagram
7. List out the different types of neurons
8. What is synapse? How does the nerve impulse cross the synapse?
9. What is nerve impulse? How is it set up and transmitted through a non-myelinated neuron?
10. What are neurotransmitters? Elaborate the various neurotransmitters you have studied.
11. Describe the mechanism of saltatory conduction.

Unit IV

1. Describe the structure and functions of human kidney
2. Write an essay on hormonal control of reproductive cycle in human
3. Explain the structure of ovary with a neat and labeled diagram.
4. Explicate the structure of Malpighian corpuscle.
5. Give an account on composition of human urine.
6. Describe the process of ultrafiltration.
7. With a neat illustration describe the structure of human testis.

Unit V

1. Explain the structure of human ovum.
2. Explain the structure of human sperm.
3. Write an essay on the process of gastrulation.
4. Enumerate the structure and functions of sperm of man.
5. Briefly explain about fatemap.
6. Explain the process of fertilization in man.

7. Describe the different types of placenta based on the distribution of villi.
8. List out the functions of placenta
9. What are the steps involved in in-vitro fertilization in human beings?
10. Describe artificial insemination
11. Comment on the importance of birth control measures.
12. How are Siamese twins formed?

Section D (3X12=36)

Answer any three of the following

Unit I

1. “Simple Mendelian Traits follows laws of Segregation” – Justify
2. Explain the inheritance of blood groups
3. Explain sex linked inheritance in man with suitable examples
4. Discuss the factors which determined the sex in human beings for the sex determination
5. What are the syndromes caused by errors in the number of sex chromosomes in human?

Unit II

1. Explain the process of absorption of food in human being
2. Explain the physiological role of carbohydrates, proteins and lipids
3. Enumerate the enzymes involved in digestion of carbohydrates in man
4. Enumerate the functions of gastro intestinal enzymes involved in protein digestion.
5. How are small and large intestines related to the function of absorption?
6. Give an account of digestion of fat and its absorption.

Unit III

1. Explain the transport of oxygen and carbon-di-oxide between alveoli and tissue with diagram.
2. How does the exchange of gases take place in respiration?
3. Describe the mode of carbon -dioxide transport in man.
4. Bring out the different types of neuron based on their structures and functions.
5. Describe the conduction of nerve impulse through myelinated neuron and nonmyelinated neuron
6. What are the different types of synapse? Explain the process of synaptic transmission
- 7 With a neat diagram explain the structure of a typical neuron.

Unit IV

1. Explain the structure and functions of Graffian follicle
2. Describe the structure and functions of nephron.
3. Explain in detail the structure of ovary of human
4. Describe the structure of testis
5. Write an essay on formation of urine
6. Describe the structure of human testis.
7. Describe the structure of nephron with suitable diagram
8. Explain the different steps involved in urine formation
9. Describe the cyclic events in different phases of menstrual cycle.
10. Explicate the hormonal control of female reproductive cycle.

Unit V

1. What is fertilization? Write a detailed account on the process of fertilization in humans?
2. Explain the process of gastrulation in human embryo.
3. Explain the structure of human ovum with a neat and labelled diagram
4. Illustrate the process of fertilization of man.
5. Explain the types of twins and highlight the importance of twin study
6. What are the techniques involved in the production of test tube baby?
7. Comment on the types of placenta and their importance.
8. Write a detailed account on different birth control measures.
9. Give an elaborate account on the IVF.
10. Comment on the treatment modalities for infertility.

ST.MARY'S COLLEGE (Autonomous) THOOTHUKUDI

QUESTION BANK

PROFESSIONAL ENGLISH FOR ZOOLOGYII

Sub. Code: 21UZOPE2

Section A (1 Mark)

Choose the correct answer

Unit I

1. Choose the synonym for 'renovate'
a. detonate b. ameliorate c. **renew** d. remove
2. Choose one word for the following sentence 'Able to maintain at a certain level'.
a. **Sustainable** b. Demand c. Extract d. Tap
3. Write one word for the following sentence 'A unit of liquid'
a. hydrosphere b. **gallon** c. sanitation d. aquifers
4. _____ are invertebrates with spine on their skin.
a. Porcupine b. Ant eater c. **Echinoderm** d. Mollusc
5. _____ is type of salamander
a. *Obelia* b. *Pila* c. **Newt** d. Scoliodon
6. I live inside the soil, I do not have eyes, arms or legs .
a. Salamander b. Mole c. Badger d. **Earthworm**
7. _____ is a pigment that protect skin from sun damage.
a. Barrier b. **Melanin** c. Chemical substance d. Nutrient
8. Dam is a _____ to restrict the flow of water.
a. **barrier** b. instrument c. well d. channel
9. _____ is a chemical substance that regulate cellular activities.
a. Melanin b. **Hormone** c. Nutrient d. Pigment
10. _____ are the largest group of invertebrates
a. Molluscs b. Poriferans c. Echninoderms d. **Arthropods**
11. All the water on the earth's surface .
a. Aquifers b. **Hydrosphere** c. Resource d. Gallon
12. _____ is the process of keeping places clean and healthy.
a. Saponification b. Sanctuary c. **Sanitation** d. Stratification
13. Identify the invertebrate.
a. **Star fish** b. Clown fish c. Ray fish d. Eel

Unit II

1. A substance that helps to protect against certain disease
a. **Vaccine** b. melanin c. antibiotic d. vacation
2. _____ is a place to conduct experiments.
a. Sanctuary **b. Laboratory** c. Warehouse d. Theatre
3. The instrument that doctors use to look inside the body _____.
a. Endoscope b. Stethoscope c. Sphygmomanometer d. Echocardiogram
4. _____ is a branch of natural science which deals with the study of structural organization of living things.
a. Physiology **b. Anatomy** c. Molecular biology d. Genetics
5. Pollination is a _____ of transfer of pollen grains to create offspring.
a. place b. study **c. process** d. instrument
6. Endoscope is a(n) _____ that is used to look inside the body by doctors.
a. place **b. instrument** c. nutrient d. pigment
7. Agronomist is a(n) _____ who is involved in soil management and crop production.
a. doctor **b. scientist** c. expert d. farmer
8. Write one word for 'something that is very unpleasant'.
a. awful b. awesome c. fantastic d. wonderful
9. Write one word for 'a chemical substance that regulates cellular activities'
a. melanin **b. hormone** c. protein d. hormone
10. The _____ connects the baby with the placenta.
a. fallopian tube **b. umbilical cord** c. esophagus d. nasal tube

Unit III

1. Crops that has a origin in a local area.
a. Indigenous crops b. Seasonal crops
c. Genetically modified crops d. Conventional crops
2. Crossing of species of the same genus to provide the offspring with the desired traits of both parents is called _____.
a. genetic engineering **b. breeding** c. gene transfer d. sowing
3. Bt. stands for _____.
a. BioTech b. Breeding technology c. **Bacillus thuringiensis** d. Bacillus tolerant
4. It is raining _____.
a. **cats and dogs** b. pillar to post c. farm to fork d. cat out of the bag.
5. A person with an interest or concern in a particular business.
a. Partner b. venture capitalist c. CEO **d. Stakeholder**
6. Fruits are _____.
a. high calorie diet **b. fibre rich diet** c. junk food d. low calorie diet
7. _____ is the apex body that allows for commercial release of GM crops.
a. RGCM **b. GEAC** c. RDAC d. GAEC
8. The students _____ against the new exam pattern.

- a. **agitated** b. condemned c. rooted d. produced

9. The process that describes how food from a farm ends up on our tables is _____.
a. farm to fork b. **food market chain** c. fibre rich diet d. high calorie diet
10. FAO stands for _____.
a. Food Association Organization b. Farm Association Organization
c. **Food and Agriculture Association** d. Farm Application Organization

Unit IV

1. A speech on 'Eating healthy in a busy lifestyle' is an _____ speech.
a. **informative** b. persuasive c. cause and effect d. problem and solution
2. A speech on 'Say no to GM crops' is a _____ speech.
a. informative b. **persuasive** c. cause and effect d. problem and solution
3. A speech on 'air pollution and its management' is a _____ speech.
a. informative b. persuasive
c. cause and effect d. **problem and solution**
4. A speech on 'Marine pollution and its effect on the coral reefs' is a _____.
a. informative b. persuasive c. **cause and effect** d. problem and solution
5. The process of taking food, drink or other substance into the body by swallowing or absorbing
a. **Ingestion** b. Digestion c. Absorption d. Egestion
6. The process by which complex food substances are broken down into simpler molecules.
a. Ingestion b. **Digestion** c. Absorption d. Egestion
7. _____ is the process by which the products of digestion are absorbed by the blood to be supplied to the rest of the body.
a. Ingestion b. Digestion c. **Absorption** d. Egestion
8. The removal of undigested food from the body is called _____.
a. ingestion b. digestion c. absorption d. **egestion**
9. The data 30% hares, 20% hedge-hogs, 15% rats, 25% birds and 10% birds can be represented using a _____.
a. bar diagram b. histogram c. flow chart d. **pie diagram**
10. I was sick during the study holidays. _____ I failed in my exams.
a. Conversely b. **Consequently** c. Generally d. Accordingly

Unit V

1. _____ are biological catalysts.
a. Proteins b. **Enzymes** c. Carbohydrates d. Fatty acid
2. _____ is not an enzyme.
a. Anhydrase b. **Progesterone** c. Lipase d. Protease
3. _____ is an enzyme produced in the stomach and helps to break proteins into amino acids.
a. **Pepsin** b. Insulin c. Protein d. Humulin

4. _____ is an enzyme produced in the mouth and helps to break starch molecules into simple sugars.
 a. Lipase b. Protease c. Anhydrase **d. Amylase**
5. The chemical breakdown of a compound due to reaction with water is _____.
 a. proteolysis b. phosphorylation c. oxidation **d. hydrolysis**
6. The substance on which an enzyme acts is called _____.
 a. melanin b. enzyme **c. substrate** d. catalyst
7. You should acquire _____ in all the subjects to succeed in life.
a. competence b. compliment c. commitment d. communicate
8. You should have basic _____ in the working place.
 a. knowledge b. ethnicity **c. ethics** d. ethology
9. A bacterium, virus or a microorganism that can cause disease is called as _____.
a. pathogen b. antigen c. antibody d. parasite
10. Unborn offspring of a mammal is called as _____.
 a. placenta b. larva **c. foetus** d. embryo

Section B (2 Marks)

UNIT I

1. Write one word for the following
 - a. The process of keeping places clean and healthy
 - b. A body of permeable rock which can contain and transmit ground water
2. Write the synonyms of the following words
 - a. Overcome b. Demand
3. Make sentence using the following words
 - a. renew b. extract
4. Join the sentences using appropriate words.
 - a. Vertebrates have backbone. Invertebrates do not have back bone.
 - b. Reptiles live on land. Mammals live on land.
5. Identify the animals.
 - a. I am a single celled animal. I move using pseudopodia.
 - b. I am a mammal. But I can fly.
6. Make sentences with the following words.
 - a. Irrigate b. Demand
7. Classify the following animals as vertebrate or invertebrate.
 - a. Newt b. Frog c. Shark d. Octopus e. Snail f. Echinoderm g. Mollusc h. Pigeon
8. Write two instructions to conserve water.
9. Write the meaning of the following words.
 - a. warm blooded animals b. cold blooded animals.
10. Write one word for the following sentences.
 - a. A body of permeable rock which can contain and transmit groundwater
 - b. A source of supply, support or aid.

Unit II

1. Give extended definition for the word 'Anatomy'.
2. Identify the words
 - a. A common vision condition in which you can see objects near to you clearly, but objects farther away are blurry. (Myopia, Hypermetropia)
 - b. The substance that helps to protect against certain diseases. (Vaccination, Vaccine)
3. Make sentences using the following words
 - a. Anatomy
 - b. Umbilical cord
4. Write meaning for the following words
 - a. Awful
 - b. Biodiversity
5. Write extended definition for 'Carbohydrate'
6. Form correct grammatical sentences
 - a. Endoscope-instrument-look inside the body by the doctors
 - b. Dam-barrier-restrict flow of water
7. Write the extended definitions for the terms in **bold** case
 - a. Sudha is **myopic**.
 - b. She was born with **umbilical cord** wrapped around her neck

Unit III

1. Fill in the blanks using the correct idiomatic phrases
 - a. Fruits are _____ diet
 - b. Mango is a _____ crop
2. Write the synonyms of the following words.
 - a. Agitation
 - b. Conventional
3. Make sentence using the following words
 - a. Fashion
 - b. Invention
4. Elaborate the following abbreviations.
 - a. Bt. cotton
 - b. UN
5. Describe the following words.
 - a. Genetically modified crops
 - b. Breeding
6. Infer what is fashion.
7. Elaborate the following abbreviations
 - a. FAO
 - b. UN
8. Write two advantages of Genetically modified crops.
9. Make sentences using the following idiomatic phrases
 - a. Seasonal crop
 - b. Healthy diet
10. Infer style.

Unit IV

1. Write a topic for persuasive speech.
2. Write a topic for informative speech
3. Write the meaning for the following words
 - a. Digestion
 - b. Egestion
4. Make sentences using the following words.

- a. Nutrition
 - b. Calorie
5. Draw a pie chart using the following data.
Zoology-50%, Botany-50%
6. Write the passive voice of the following sentence
Turtle lays the eggs on the shore.
7. Write the active voice of the following sentence.
The seeds are eaten by the birds.
8. Draw a bar diagram using the following data
Carbohydrate - 25 gm, Fat -10 gm, Protein-30 gm
9. Join the sentences using the appropriate connective.
a. Fishes live in water. Crocodiles live in water (and)
10. Use the linker appropriately.
a. I was sick during the exam. I failed. (Consequently)

UNIT V

1. Identify the enzymes from the following
a. lipase b. insulin c. anhydrase c. penicillin
2. Elaborate the following
a. ATP b. ES
3. Fill in the blanks
(substrate, enzyme)
a. The catalysts in the biological reactions are called _____.
b. The enzymes bind to the active sites on the _____.
4. Write the meaning of the following words
a. Enzyme b. Catalyst
5. Make sentences using the following words
a. Enzymes b. Digestion
6. Write the meaning for the following words
a. Competence b. Professional Ethics
7. Join the two sentences
Transfer of active immunity in the form of readymade antibodies from one individual to another. Immunity that occurs when a person is exposed to a live pathogen. (whereas)
8. Write the definition for the following
a. Pathogen b. Placenta
9. Write one word for the following sentences.
a. A bacterium, virus, or other microorganism that can cause disease.
b. A microorganism, especially a bacterium causing disease or fermentation.

SECTION C (5 MARKS)

Unit I

1. Write any five instructions to conserve water
2. Write 5 dialogues shared between friends while arranging a birthday party.
3. Read the following paragraph and answer the given questions.

Amphibians form a class of vertebrates. Vertebrates are animals that have backbones that

surround their nerve cords. The nerve cord is found along the back of the animal. Amphibians go through a two-stage life cycle. Eggs are laid in water or a damp environment to keep from drying out. They experience a metamorphosis or change in appearance from the baby to adult. When an amphibian hatches, it is in a gilled larva form. In frogs and toads this larva is called a tadpole.

There are three basic groups of amphibians. The first group is frogs and toads, the second are newts and salamanders, and the third one is worm-like animals called caecilians that are found only in the tropics. Amphibians are cold blooded, which means the body temperature is the same as the surrounding air, water, or soil. Some frogs can survive in freezing temperatures. The frog's body produces a chemical that acts like the antifreeze we use in cars. This chemical keeps the cells alive during the freezing temperatures. Amphibians have soft, generally moist skin without scales. Most amphibians have lungs like other vertebrates.

All amphibians use their skin to take oxygen. Many breathe through gills. There are more than 4,000 species of amphibians. Frogs and toads are the most with 3,438 species frogs have smooth skin and long limbs. Toads have warty skin and short limbs.

Salamanders and newt have long bodies, long tails, and two pairs of legs. There are 320 species of salamanders. The life span of a salamander, depending on its species, it may live up to 1 to 60 years. Salamanders can be short, but some can grow up to be very long, such as the giant salamander of Japan. They are brightly colored, often brown, black, yellow, or red. The skin contains many glands, some secreting mucus to help maintain moisture and other secreting a toxic irritating liquid when the animal is frightened.

- i. How are amphibians classified?
 - ii. What are cold blooded animals?
 - iii. How do amphibians breathe?
 - iv. What does a salamander do when it is frightened?
 - v. Describe the skin of amphibians.
4. Identify 5 vertebrates and 5 invertebrates from the puzzle.

E	C	H	I	N	O	D	E	R	M

5. Who am I?

- a. I have five arms, but neither have blood nor brain. I live in sea.
- b. I have eight legs but don't have antennae
- c. I am a domestic animal. A friend of police and enemy for thief/
- d. I am an invertebrate. I have spines on my skin.
- e. I am a vertebrate. I live both on land and in water.

Unit II

1. Illustrate the process of induced fertilization in fish using a flow chart.
2. Write 5 conversations between a scientist and an interviewer
3. Read the following passage and answer the questions.

It happened a long, long time ago, he began. So long ago that there were no schools and no teachers. Children lived in caves with their parents and helped them to collect fruit and berries from the forest. At that time, there were no tigers or panthers or elephants in Pambupatti forest. There were only reptiles, many kinds of reptiles. Now you know what reptiles are. Snakes, crocodiles, turtles, lizards.

Every month, the reptiles of Pambupatti had a big meeting. The president of these meetings was Makara, the biggest crocodile of the forest. All the animals thought he was very important. When someone is strong and powerful, you know, it is difficult not to go along with what he says or does. "Brothers and sisters," he began. All the reptiles, even the beautiful king cobras, stopped talking. Makara continued his speech. "I have decided that we don't need the tortoises! I have told them not to come today. And by the following Tuesday, they were all gone. At first the animals were sad, but then they realised that what Makara had said was true. There was more food, more water and more space for them! But soon, a strange smell began to fill the forest. It was the smell of rot — rotting fruit on the ground, rotting animals in the river. This was what the tortoises used to eat. And even Makara had to go about holding his nose with his big claws. In the following months Makara sent the snakes and the lizards.

But now, when life should have been wonderful for the crocodiles of Pambupatti, all kinds of awful things began to happen. To begin with, the rats grew bolder by the day. They became so fearless that they jumped and turned somersaults on the crocodiles' backs! And there were too many frogs. They seemed to be growing larger and there was no one to eat them but the crocodiles. These huge frogs began to eat the baby crocodiles. And the insects! Now that the lizards were gone, there were millions of them, growing bigger and nastier by the day. Makara sent urgent messages all over the place for the tortoises, snakes and lizards to come back to Pambupatti. In two months, the forest was back to normal. The rats disappeared and the insects and the smell and the world finally went back to its familiar old self.

Nature plays an important role in helping mankind. Bio-diversity is an essential factor for all living things to enjoy life on Earth. One creature depends on another. Man should not mar nature.

Answer the following questions

- i. Where did the story take place?
- ii. List the reptiles mentioned in the story.
- iii. Who is the leader of the reptiles?
- iv. What happened to the forest after chasing all the reptiles of the forest?
- v. Who pointed out the reason for the disaster that happened in the forest?

vi. How did the normalcy return to the forest?

4. Read the following paragraph and answer the given questions.

Flight adaptations in birds

Bird flight is the primary mode of locomotion used by most bird species in which birds take off and fly. Flight helps birds in feeding, breeding, avoiding predators, and in migration. Flight adaptations in birds are divided into two categories:

A. Morphological Adaptations B. Anatomical Adaptations

Morphological Adaptations

1. **Body shape:** The birds have a spindle-shaped body to offer less air resistance during flight. This helps the birds to conserve energy and become more efficient at flying.
2. **Compact body:** The body of a bird is compact, dorsally strong and ventrally heavy to maintain equilibrium in the air. Their wings are attached on the thorax, the light organs like lungs and sacs are positioned high, the heavy muscles placed centrally are other features that help in flight.
3. **Body covered with feathers:** The feathers are smooth, directed backwards, and closely fitting which make the body streamlined and reduce friction during flight. It lightens the body weight and protects it from the effect of environmental temperature. They also have a wide surface area for striking the air. Feathers add to the body buoyancy. It insulates the body and prevents any loss of heat from the body. This helps the birds to bear low temperatures at higher altitudes.
4. **Forelimbs modified into wings:** The forelimbs are modified into wings which is the only organ of flight. The wings have a large surface area. They also support the bird in the air.
5. **Mobile neck and head:** The birds have a long and flexible neck which helps in the movement of head important for various functions. They possess a horny beak which helps them to pick the grains and insects while feeding.
6. **Bipedal locomotion:** The anterior part of the body of a bird helps in taking off during flight. The anterior part of the body also helps birds to land. The hindlimbs help in the locomotion on land. They can support the entire body weight of a bird.

Anatomical Adaptations

1. **Flight muscles** The well-developed muscles control the action of the flight muscles. It weighs about 1/6th of the entire bird. The flight muscles are striated. The muscles on the wings are large.
2. **Light and rigid endoskeleton** The birds have a very stout and light skeleton. The bones are hollow, filled with air sacs. They are provided with a secondary plastering to increase their rigidity. The bones are fused and lack bone marrow. The birds lack teeth. The thoracic vertebrae are fused except for the last one. This plays an essential role in the action of wings striking the air.
3. **Digestive system** The birds have a very high rate of metabolism. Therefore, food digests rapidly. The length of the rectum is reduced because of the minimum undigested waste.

They have no gall bladder which reduces the weight of the bird.

4. Respiratory system: The respiratory system of birds is designed in such a manner that the food is oxidised rapidly and a large amount of energy is liberated. Since the metabolism rate is higher, a large number of oxygen molecules are required by the body. For this, the lungs are provided which occupy the entire space between the internal organs.
5. Circulatory system: Rapid supply of oxygen is required by the blood due to rapid metabolism rate in birds. Therefore, birds require an efficient circulatory system. Birds have a fourchambered heart that performs double circulation. This prevents the mixing of oxygenated and deoxygenated blood. Also, the birds contain a large amount of haemoglobin in their red blood cells which helps in the quick aeration of body tissues.

Answer the following questions

- a. What are two types of flight adaptations in birds?
- b. How does the body shape of birds help in its flight?
- c. List the uses of feathers.
- d. How are the forelimbs in birds modified?
- e. Why do birds have high rate of metabolism?

5. Describe the given words in column **A** by matching Column **B** and **C**

A	B	C
Offspring	Crops grown	crop with herbicide tolerance and <i>Bacillus thuringiensis</i> gene
HtBt	An individual	that allows for commercial release of GM crops.
GEAC	Genetically modified	in a particular season
Seasonal crops	A diet	born of a parent
High calorie diet	The apex body	containing more than 4,000 calories per day.

6. Write extended definitions for the following words.

Unit III

- Write any 3 advantages and disadvantages of genetically modified crops
- Explain the following Idioms
 - Zero Hunger day
 - Fibre rich diet
 - farm to fork
 - Indigenous groups
- Read the following passage and answer the question.

The experimenter is curious and has special talent. Armed with a tea canister and some wire, with silk, a little sealing wax and two or three jam – pots, Faraday marched forth against the mysterious powers of electricity. He returned in triumph with their captured secrets. It was just a question of suitably juxtaposing the wax, the glass jars, and the wires. The mysterious powers couldn't help surrendering. So simple – if you happened to be Faraday. And if you happened to be Sir J. C. Bose it would be so simple, with a little clockwork, some needles and filaments, to devise machines that would make visible the growth of plants, the pulse of their vegetable 'hearts', the twitching of their nerves, the processes of their digestion. It would be so simple – though it cost even Bose long years of labour to perfect his instruments.

At the Bose Institute in Calcutta, the great experimenter himself was our guide. Through all afternoon we followed him from marvel to marvel. We watched the growth of a plant being traced out automatically by a needle on a sheet of smoked glass; we saw its sudden, shuddering reaction to an electric shock. We watched a plant feeding; in the process it was exhaling minute quantities of oxygen. Each time the accumulation of exhaled oxygen reached a certain amount, a little bell, like the bell that warns you when you are nearly at the end of your line of typewriting, automatically rang. When the sun shone on the plant, the bell rang often and regularly. Shaded, the plant stopped feeding; the bell rang only at long intervals or not at all. A drop of stimulant added to the water in which the plant was standing set the bell wildly tinkling, as though some record breaking typist were at the machine.

In one of the laboratories we were shown the instrument which records the beating of a plant's 'heart'. By a system of levers, similar in principle to that with which the self – recoding barometer has made us familiar, but enormously more delicate and sensitive, the minute pulsations, which occur in the layer of tissue immediately beneath the outer rind of the stem, are magnified – literally millions of times – and recorded automatically in a dotted graph on a

moving sheet of smoked glass. Bose's instruments have made visible things that have been hitherto impossible to see, even with the aid of the most powerful microscope.

Answer the following questions

1. Whose experiment is talked about in the beginning of the passage?
 2. Where is Bose Institute located?
 3. What did they encounter in Bose's lab?
 4. How did the instrument record the beating of plant's heart?
 5. How did the plant feed itself?
 6. How is the growth of the plant recorded?
4. Elaborate the following abbreviations.
- a. Bt. b. Ht c. GEAC d. GM e. WHO

5. Read the passage and answer the questions

Clothing in India varies depending on the different ethnicity, geography, climate and cultural traditions of the people of each region of India. In a country like India, variety of attire can be spotted. In current days, colours for each occasion are also brought into practice due to the mass availability of materials and swift labouring of designing the clothes. It has a diversity in terms of weaves, fibres, colours and material of clothing. India's recorded history of clothing goes back to the 5th millennium BC in the Indus valley civilization where cotton was spun woven and dyed. Dhoti wrap is a predecessor to the modern sari. Likewise, trends in clothing have been changing from time to time.

Initially Romans and Egyptians showed great interest in fashion and spent a lot of effort and currency on it. The court decided the fashion. During 17th century the working class people started imitating the aristocrats at an affordable price. Gradually, the clothing during this period reflected the social standing of the wearer. The traders and merchants and the aristocrats differed by the choice of their clothing. The Industrial Revolution in Britain that took place from 1760 to 1840 greatly helped the textile manufacturing to flourish by bringing machines for production and tailoring. Until then weaving, embroidery, cutting, stitching were only hand-crafted by skilled craftsmen and seamstress. Knitted and woven fabric of fine gauge were started to be produced by these machines. Thus the invention of sewing machine in the year 1790 enabled speedy manufacturing of garments with less labour. The mechanised mass production of textiles meant clothing became more widely available and cheaper. Yet, at the same time it was made easy to meet the designers' need. Only after this, fashion became a stigma to showcase a personal style. Around 20th century, even the common mass adopted fashion in a larger scale. This changed a great deal in fashion history. The introduction of synthetic fibre, the availability of cheaper and much practical clothes are the main reasons for this change. This denotes that following fashion trends was really expensive during past-time. During the La Belle Epoque period dresses were extravagantly decorated and no woman was able to dress on her own because of many layers and petticoats under the gown. Fashion magazines and Cinema industry are the greatest impacts for the spread of new trends in fashion. Designers and boutique brands are all over the world now. In many Asian countries, local designers can charge a small fortune for exclusive

bridal wear, wedding attire and other formal wear apart from regular wear. Thus, history shows us that changes in costume often took place at times of social and economic change.

Answer the following questions

- 1) Is fashion closely interlinked with the history of the world?
- 2) What is embroidery?
- 3) Infer what is fashion.
- 4) Infer what is style.
- 5) Why were fashion dresses most welcomed by the masses?

Unit IV

1. Write a passage for a informative speech on colour blindness.
2. Write the synonyms of the following words and make sentences using the words.
a. Nutrition b. Digestion c. Calorie d. Esophagus
3. Interpret the following table and write about it in paragraph (100 words)

Municipal solid waste collection and segregation at Source (Source: Solid Waste Management in India: ICRIER Report Jan 2019)

S.No	City	State	Population (in million)	Door to door collection from households(%)	Segregation at source (%)
1	Mumbai	Maharashtra	20.1	80	Nil
2	Delhi		19.1	39	2
3	Bengaluru	Karnataka	10.4	71	50
4	Chennai	Tamil nadu	10.0	80	Nil
5	Hyderabad	Telangana	9.1	73	Nil

4. Connect the following sentences with appropriate connectives and linkers.
 - i. Dogs are vertebrates. Pigeons are vertebrates. (and)
 - ii. The frogs breath through their gills. The frogs are in the water. (when)
 - iii. The tortoise lives in land. It lives in water. (as well as)
 - iv. The elephants can withstand heat. The elephants have a thick skin. (because)

Unit V

1. Read the following passage on ENZYMES

Chemical reactions in biological systems hardly occur in the absence of a catalyst. The biological catalysts that catalyse the biological reactions are enzymes. Carbonic anhydride is the enzyme that catalyses this reaction. This is one of the fastest known catalysts for catalysing this reaction. Each enzyme molecule can hydrate 105 molecules of CO₂ in one second. This catalysed reaction is 10⁷ times faster than the uncatalysed reaction. There are approximately 1300 different enzymes found in the human cell. They are vital for life and serve a wide range of important functions in the body, such as aiding in digestion and metabolism. Enzymes are biologically active proteins found in all living cells. All enzymes are proteins, but all proteins are not enzymes. The striking characteristics of all enzymes are their catalytic power and specificity. The molecules that an enzyme works (reacts) with are called substrates. For example, Trypsin is quite specific in that it splits peptide bonds on the carboxyl side of lysine and arginine residues only. Many enzymes have been named

by adding the suffix “-ase” to the name of their substrate or to a word/phrase describing their activity. Thus, the enzyme catalyzes the hydrolysis of urea is urease, and DNA polymerase is the enzyme that catalyzes the polymerization of nucleotide to form DNA. Before the specific reaction catalyzed by an enzyme was known, enzymes were named by their discoverers for a broad function. For example, an enzyme known to act in the digestion of foods was named pepsin, from the Greek word Pepsis, meaning, “digestion”.

Fill in the blanks using the appropriate words from the passage

- i) The catalysts in the biological reactions are called _____.
- ii) There are approximately _____ different enzymes found in the human cell.
- iii) The enzyme that catalyses the hydrolysis of urea are called as _____.
- iv) _____ enzymes speed up chemical reactions that break down large food molecules into small molecules.
- v) ‘All proteins are enzymes’. The sentence is _____ (True or False).

2. Read the following passage on ENZYMES

Chemical reactions in biological systems hardly occur in the absence of a catalyst. The biological catalysts that catalyse the biological reactions are enzymes. Carbonic anhydrase is the enzyme that catalyses this reaction. This is one of the fastest known catalysts for catalysing this reaction. Each enzyme molecule can hydrate 10⁵ molecules of CO₂ in one second. This catalysed reaction is 10⁷ times faster than the uncatalysed reaction. There are approximately 1300 different enzymes found in the human cell. They are vital for life and serve a wide range of important functions in the body, such as aiding in digestion and metabolism. Enzymes are biologically active proteins found in all living cells. All enzymes are proteins, but all proteins are not enzymes. The striking characteristics of all enzymes are their catalytic power and specificity. The molecules that an enzyme works (reacts) with are called substrates. For example, Trypsin is quite specific in that it splits peptide bonds on the carboxyl side of lysine and arginine residues only. Many enzymes have been named by adding the suffix “-ase” to the name of their substrate or to a word/phrase describing their activity. Thus, the enzyme catalyzes the hydrolysis of urea is urease, and DNA polymerase is the enzyme that catalyzes the polymerization of nucleotide to form DNA. Before the specific reaction catalyzed by an enzyme was known, enzymes were named by their discoverers for a broad function. For example, an enzyme known to act in the digestion of foods was named pepsin, from the Greek word Pepsis, meaning, “digestion”.

Answer the following questions

- a. What is called chemical digestion?
- b. Can chemical digestion take place without the help of digestive enzymes?
- c. What is the role of amylase?
- d. Name any two digestive enzymes.

e. Where is pepsin produced?

3. Write the meaning of the following words and frame sentences using them

a. Catalyst b. Enzyme c. Hydrolysis d. Substrate

4. Explain the technical terms

a. Pathogen b. Microbe c. Foetus d. Placenta

Section D (10 marks)

Unit I

1. Develop a story from the given picture

2. Develop a story from the picture and write the moral of the story.

3. Write down atleast 10 dialogue exchanges in a group discussion about arranging a study tour.

4. Write an essay on the importance of water conservation.

Unit II

1. Sketch the process of induced fertilization in fish and represent it in a flow chart.

2. Write dialogues (10) for a role play as an interviewer taking interview of a famous scientist.
3. Describe the external structure of rabbit.

Unit III

1. Develop an essay on Phylum Chordata from points given below.
 - Introduction to chordate
 - Chordate animals
 - Diversity of chordata
 - Ecology
 - Classification.
2. Draw a flow chart for dissection of the digestive system and circulatory system of frog.
3. Write an essay on the main ideas explained in the given passage.

World Food Day 2019: FAO calls for healthy diet to build zero hunger world

The United Nations body noted that people around the world were either suffering from obesity or food insecurity. People globally should eat healthy diet for a zero hunger world, the United Nations (UN) Food and Agriculture Organization (FAO) has said in a booklet that it released ahead of World Food Day on October 16. Shifting to a healthier diet by eating more seasonal fruits and vegetables and reducing the consumption of junk food could help in meeting the ‘zero hunger’ goal of the UN-mandated Sustainable Development Goals, the document said. Over 820 million people — approximately one in nine people around the world — were hungry and malnutrition affected one in every three people, the FAO noted. The world was facing a crisis of extremes, the UN body said, with many affected by obesity and others by food insecurity.

Humans have become more obese with their diets shifting from seasonal, mainly plant-based and fibre-rich dishes, to high-calorie diet, rich in refined starches, sugar, fats, salt, processed food and often marked by excessive consumption of meat, according to FAO. This was due to globalisation, urbanisation and income growth, it added. People spent less time preparing meals at home and cooked food and packed food were available at just a mouse click.

On the other hand, many people globally were suffering from food insecurity, a situation in which people lack secure access to sufficient amounts of safe and nutritious food for normal growth and development and an active and healthy life. “But food security in our times isn’t only a matter of quantity. It’s also a question of quality. Unhealthy diets have now become a leading risk factor for disease and death worldwide. There is an urgent need to make healthy and sustainable diets affordable and accessible to everyone,” the FAO document stated.

4. Explain the following idioms and make sentences using them
 - a. Healthy diet
 - b. Zero Hunger World
 - c. Fibre-rich dishes,

- d. High-calorie diet
- e. Farm to fork
- f. Stakeholders
- g. Seasonal crops
- h. Indigenous crops
- i. Food waste entering landfills
- j. Food market chain

Unit IV

1. Work out a speech on the following topic
 - a. Colour blindness (informative talk)
 - b. Go for GM crops (persuasive talk)
2. Read the passage and tabulate the data in a tabular column.

“People get worked up when a couple of thousand human beings per annum are killed on the roads of Great Britain. That is a tragedy of course - but few people know that two million wild birds are killed per annum on the roads, or that in a small area studied by a Danish scientist the number of road deaths were: hares 3,014; hedge-hogs 5,377; rats 11,557; various small mammals 27,834; birds 111,728; amphibians 32,820. These, of course, are only figures for the main oads; if you included the figures for the side roads they would probably be trebled. Now, if human beings were knocked down to that extent in any country in the world there would be such a shriek of protest, such an outcry, such a lamentation, that any government in power would be forced to make us give up the motor car as a means of locomotion and go back to the horse and cart. Not that I’m against the motor car per se, but you do see my point ?”
3. Interpret the following table and write about it in a paragraph (200 words) and draw a bar chart.

Municipal solid waste collection and segregation at Source (Source: Solid Waste Management in India: ICRIER Report Jan 2019)

City	State	Population (in million)	Door to door collection from households(%)	Segregation at source (%)
Mumbai	Maharashtra	20.0	80	Nil
Delhi	-	19.1	39	2
Bengaluru	Karnataka	10.4	71	50
Chennai	Tamil	10.0	80	Nil
Hyderabad	Nadu	9.1	73	Nil
	Telungana			

4. Draw a bar chart using the data in the paragraph.

“People get worked up when a couple of thousand human beings per annum are killed on the roads of Great Britain. That is a tragedy of course - but few people know that two million wild birds are killed per annum on the roads, or that in a small area studied by a

Danish scientist the number of road deaths were: hares 3,014; hedge-hogs 5,377; rats 11,557; various small mammals 27,834; birds 111,728; amphibians 32,820. These, of course, are only figures for the main oads; if you included the figures for the side roads they would probably be trebled. Now, if human beings were knocked down to that extent in any country in the world there would be such a shriek of protest, such an outcry, such a lamentation, that any government in power would be forced to make us give up the motor car as a means of locomotion and go back to the horse and cart. Not that I'm against the motor car per se, but you do see my point ?”

5. Describe the dissection of fish digestive system using a flow chart.

UNIT V

1. Write the instructions for preparation of power point slides.
2. Make notes of the following paragraph.

Professional Competence and Professional Ethics

Two important ingredients in our recipe for success in our career life, are nothing but Professional Competence and Professional Ethics. They are not to be confused as they mean two different concepts. Competence in any area of work is a combination of knowledge and skill and application of the same. Competence is much more than a skill. For instance, a driver may have the necessary skill to drive. But when something goes wrong with the vehicle the driver must be able to identify the problem and fix it himself if possible. Similarly, a person may be good at all the four skills of language, namely, Listening, Speaking, Reading, and Writing. But linguistic competence refers to one's ability to use language effectively in any situation. It should help person transfer knowledge, ideas and information while at the same time using it for interpersonal relationship, by understanding the feelings of others, influencing and motivating others. Obviously different kinds of professions and even jobs call for the respective skills and competence. Right from the lab assistant to a cobbler, there is a certain amount of skill and competence required to set a microscope or to mend the shoes respectively. In the corporate world, the in-roads to success must be known to the person doing the business. In the field of computers, there is a clear distinction between software professionals and hardware, because both demand a different set of skills and expertise. Skills can be acquired with training whereas competence comes with experience. As Noam Chomsky says, with regard to language intuition plays a very important role in developing competence. It may be true with other fields of work as well.

Professionalism, which is a combination of knowledge, skill, expertise and competence, is essential to increase efficiency and productivity, ultimately leading to success. Professionalism also refers to the attention to every detail and the care with which every minute work or even great challenging work has to be done. It also calls for preparedness. A simple tip to the students who are going to attend an interview: Your professionalism is visible when you report in time at the venue, neatly dressed for the occasion and taking all the necessary certificates and documents, properly arranged. A candidate will be judged by his or her professionalism even before joining the profession. Hence it is necessary we learn to take particular care in everything that we do. It is not enough if we develop professional competence alone to become successful. Our dealings should be driven by a set of rules or a code of behaviour, called 'ethics'. Professional Ethics refers to the values or principles that govern any profession. Even though the idea was associated with religion basically, it found its application in Divinity, Law and Medicine and later

to the Military Services. It took a secular dimension further when it was applied to every field of activity. A fine example of Professional Ethics can be taken from the Hippocratic Oath, taken by medical professionals. By this, every medical practitioner or physician swears to uphold the specific ethical standards of the medical profession. It is attributed to Hippocrates, the ancient Greek doctor and his book Hippocratic Corpus. Similarly lawyers swear that what they speak is nothing but the truth. Professional Ethics also means one's ability to make judgements or evaluations while taking important decisions. While giving service to the public the professional must disseminate knowledge that should be governed by values.

The means adopted should justify the end. If a person's personal values and belief systems are strong and authentic, then his or her professional ethics also will have a strong foundation. If an individual has very strong principles of hard work and honesty, with values of punctuality and integrity, then this will enable the person to adhere strictly to the ethics of the profession. goals. It is equally important to have a win-win approach, to help ourselves and others grow. Meaning to say, anything that we do should lead to development, both as individuals and those surrounding us and the society at large.

3. Summarize the following paragraph

What is immunity?

The ability of an organism to resist a particular infection or toxin by the action of specific **antibodies** or sensitized white blood cells in the host is referred as immunity.

Types

Passive immunity: It is a transfer of active immunity in the form of readymade antibodies from one individual to another. It also can occur naturally when maternal antibodies are transferred to the foetus through the placenta. Passive immunization is used when there is a high risk of infection and insufficient time for the body to develop immune response. It provides immediate protection but at risk of being infected by the same pathogen later.

Active immunity: Naturally acquired active immunity occurs when a person is exposed to a live pathogen and develops a primary immune response. This type of immunity is "natural".

Immune systems

The **immune system** is a complex network of cells and proteins that defends the body against infection. The immune system keeps a record of every germ (microbe) it has ever defeated so it can recognise and destroy the microbe quickly if it enters the body again. There are two major immune systems: the innate immune system and the adaptive immune system. Both subsystems use humoral immunity (antibodies mediated) and cell-mediated immunity to perform their functions. The immune system produces an immune response to the **pathogen** by generating antibodies, killer cells, or both.

- In the first type of immune response (humoral response), the body's B-cells produce antibodies to neutralize antigens and eliminates,
- In the second type of immune response (termed the cell-mediated response), specific killer cells called cytotoxic T-cells attack the pathogen in the infected cells.

How to enhance immunity?

Inadequate or poor quality sleep is linked to susceptibility to sickness, Whole plant foods like fruits, vegetables, nuts, seeds and legumes are rich in nutrients and antioxidants that may give you an upper hand against harmful pathogens. Healthy fats, like those found in olive oil and salmon, may boost your body's immune response to pathogens.

ST.MARY'S COLLEGE(Autonomous THOOTHUKUDI)

II B.Sc Zoology Semester III

Core I - Developmental Zoology Course code: 21UZOC31

(for those who joined in July 2021 and after)

Question Bank

Section A (1mark)

Choose the correct answer

Unit I

1. The transformation of spermatids into spermatozoan is called _____.
a. **spermiogenesis** b. spermatogenesis c. cytolysis d. spermatogone
2. The process by which the sperm attains the ability to fertilize the egg is known as _____.
a. **physiological ripening** b. fertilization c. spermatogenesis d. maturation
3. The fusion of egg with the polar body is called _____.
a. duplication b. autolysis c. parthenogenesis d. **autofertilization**
4. What is the process of increase in number of genes during previtellogenesis called ?
a. magnification b. **amplification** c. capacitation d. polarization
5. Name the cavity present in the Graafian follicle
a. coelom b. **antrum** c. air space d. neck
6. In mammals follicle cells and the developing ovum together constitute a _____.
a. zona pellucida b. cumulus oophorus c. **Graafian follicle** d. nurse cell
7. _____ is the mitochondrial enzyme that crystalizes the soluble yolk
a. **protein kinase** b. amylase c. lipase d. lactase
8. The cytoplasm of the egg is called _____.
a. **ooplasm** b. protoplasm c. axoplasm d. neuroplasm
9. Human egg is called alecithal because of the absence of _____.
a. tail b. **yolk** c. mitochondria d. centriole

10. Identify the type of hen's egg from the following

- a. **megalecithal** b. microlecithal c. homolecithal d. isolecithal

Unit II

1. Fertilizin is produced by _____

- a. **egg** b. sperm c. nucleus d. granules

2. The lytic enzyme secreted by mammalian sperm is _____

- a. protease b. **hyaluronidase** c. protease d. lipase

3. Name the polyspermy that occurs during abnormal conditions

- a. Teratogeny b. Physiological polyspermy
c. Monospermy d. **Pathological polyspermy**

4. The attraction of sperms towards the egg by the chemicals is called _____ .

- a. phototaxis b. **chemotaxis** c. thermotaxis d. chromotaxis

5. The process of introduction of sperm into the cloaca of female bird is called _____ .

- a. **cloacal kiss** b. copulation c. capacitation d. conception

6. _____ refers to the fusion of male and female pronuclei

- a. Copulation b. Meiosis c. **Amphimixis** d. Cleavage

7. What is the type of cleavage in chick ?

- a. **meroblastic** b. holoblastic c. spiral d. rotational

8. The blastula of chick is called _____ .

- a. **discoblastula** b. coeloblastula c. blastophore d. blastocyst

9. What is the movement of cells into the embryo called as?

- a. Epiboly b. **Emboly** c. Delamination d. Infiltration

10. Name the furrow that runs along the middle of the primitive streak of chick

- a. Primitive plate b. Primitive pit c. **Primitive groove** d. Primitive fold

Unit III

1. The process by which fertilized egg divides is known as _____ .

- a. **cleavage** b. oogenesis c. regeneration d. invagination

2. What is the type of cleavage in mammal?
- a. meroblastic **b. holoblastic** c. spiral d. rotational
3. Identify the pattern of cleavage in mammal
- a. biradial b. radial c. meroblastic **d. rotational**
4. The movement of cells on the surface of the embryo is _____ .
- a. **epiboly** b. emboly c. delamination d. infiltraion
5. The movement of cells during gastrulation is called _____ .
- a. **morphogetic movement** b. cellular movement c. migration d. blastulation
6. The outer envelope of cells in the blastocyst is called _____ .
- a. **trophoblast** b. embryoblast c. animal pole d. vegetal pole
7. Formation of primitive streak occurs during _____ stage
- a. **blastula** b. neurula c. gastrula d. morula
8. In development of brain myelencephalon develops into _____ .
- a. **medulla oblongata** b. pituitary gland c. cerebrum d. cerebellum
9. The bendings of the brain are called _____
- a. **flexures** b. neuromeres c. ventricles d. pituitary
10. Which one of the following is the centre for coordination of muscular movements?
- a. cerebrum b. infundibulum **c. cerebellum** d. olfactory lobe
11. In development of heart the place of flexure will form _____ .
- a. auricle b. myocardium c. ventral aorta **d. ventricle**
12. The cells that give rise to the inner layer of heart are called _____
- a. **endocardial cells** b. epicardial cells c. mesocardial cells d. foramen ovale
13. Name the membraneous covering of the heart
- a. meninges **b. pericardium** c. pleura d. peritoneum

Unit IV

1. Which one of the following is the primary organizer?
a. **chordomesoderm** b. optic vesicle c. lens d. ear vesicles
2. _____ is the secondary organizer
a. **optic vesicle** b. dorsal lip c. grey crescent d. neural tube
3. The chemical substance emitted by an inductor is called _____.
a. chemogen b. **evocator** c. enzyme d. hormone
4. Head inductor which induces the forebrain, eyes and nose rudiments are called _____ inductor
a. duterencephalic b. spinocaudal c. **archencephalic** d. neuro
5. The ability of the cell to respond to a specific induction signal is known as _____.
a. **competence** b. equivalence group c. receptor d. potency
6. Identify the area in the morphogenetic fields
a. **presumptive** b. predetermined c. unregulative d. differentiative
7. A cell is said to be _____ when its fate is fixed
a. differentiated b. demonstrated c. **determined** d. predetermined
8. Embryonic stem cells are derived from _____.
a. **undifferentiated inner cell mass of embryo** b. differentiated trophoblast cells
c. differentiated inner cell mass of embryo d. undifferentiated trophoblast cells
9. Which one of the following is the neuro-degenerative disorder?
a. Osteoarthritis b. Diabetes c. **Parkinson's disease** d. Cancer
10. Name the layer of culture disc coated with UV irradiated mouse embryonic skin cells
a. Non feeder layer b. Inactive layer c. **Feeder layer** d. Active layer

11. Yolk sac placenta is otherwise called as _____ placenta
a. **choriovitelline** b. chorio allantoic c. diffuse d. zonary
12. Villi in discoidal placenta are in the form of _____.
a. patches b. **circular discs** c. scattered form d. group
13. Which of the following animal has monodiscoidal placenta?
a. monkey b. **man** c. pig d. dog

Unit V

1. What does amniocentesis refer to?
a. **amnion puncture** c. abnormality b. freezing d. artificial insemination.
2. How are controlled breeding experiments carried out?
a. Inbreeding b. Interspecific hybridization
c. **Artificial insemination** d. Out-crossing
3. The transfer of fertilized and developing egg into the uterus of a mother is called _____.
a. implantation b. **embryo transfer** c. gastrulation d. fertilization
4. The production of test tube baby involves
a. IVF b. **artificial insemination** c. IVF and ET d. IUI
5. Find out the first test tube baby from the following
a. Robert Edwards b. **Louise Brown** c. Patrick d. Jack
6. What is the prevention of pregnancy called as?
a. conception b. **contraception** c. fertilization d. insertion
7. Surgical method of birth control employed in man is _____.
a. amputation b. D and C c. **vasectomy** d. tubectomy
8. In normal women ovulation occurs on _____ day of the menstrual cycle
a. **14th** b. 18th c. 15th d. 19th

10. Which among the following is an intrauterine device?
a. diaphragm b. **copper T** c. condom d. mala D
11. The inability to conceive is called _____.
a. adultery b. **infertility** c. fertility d. surrogacy
12. Tumour of the uterus is called _____.
a. **myoma** b. dyspareunia c. leucorrhoea d. glaucoma
13. Find out the female gamete specific antifertility vaccine
a. **BhCG** b. oFSH c. rCP d. vCP

Section B (2 marks)

Answer in about 50 words

Unit I

1. Define gametogenesis
2. List out the phases of spermatid formation
3. Define spermiogenesis
4. What is meant by acroblast ?
5. What is called mitochondrial cloud ?
6. Recall what is physiological ripening
7. Indicate the importance of primordial germ cells
8. What are lamp-brush chromosomes?
9. Define amplification
10. What is called Graafian follicle ?
11. Define vitellogenesis
12. What is vitellogenin ?
13. Define autofertilization
14. Mention the significance of polar bodies in oogenesis
15. Indicate why hen's egg is called as telolecithal egg
16. What are called chalazae ?

Unit II

1. What is external fertilization ?
2. What refers to cloacal kiss?
3. Mention the significance of micropyle
4. What does chemo-taxis refer to?
5. What is meant by cytofertilizin?
6. Define polyspermy
7. What refers to acrosomal reaction?
8. Describe fertilization cone.
9. What constitute cortical reaction?
10. Define penetration path
11. State the meaning of amphimixis
12. Recall why cleavage in chick is called discoidal
13. What refers to margin of overgrowth?
14. Define zone of junction
15. Enumerate the embolic movements in chick gastrulation
16. State the theory of involution
17. What is meroblastic cleavage?
18. What refers to discoblastula?

Unit III

1. Explain holoblastic cleavage
2. What is meant by implantation?
3. Write short note on gastrulation
4. Discuss fate map
5. Define epiboly
6. What is emboly ?
7. List out the types of valves in the heart of mammal
8. Define flexures

9. Enlist the ventricles in the development of brain
10. What is foramen of Monro?

Unit IV

1. Define organizer
2. Distinguish between primary and secondary organizer
3. What is morphogenetic field?
4. Describe the characteristics of morphogenetic field
5. Explain gradient theory
6. Differentiate single gradient from double gradient theory
7. Write short notes on embryonic stem cells
8. List out the applications of human embryonic stem cells
9. What is placenta ?
10. Describe the characteristics of placenta
11. Write short notes on yolk sac placenta

Unit V

1. What is meant by artificial insemination?
2. Define in-vitro fertilization
3. List out the advantages of embryo transfer
4. Define amniocentesis
5. Distinguish between gift and fruit method in the artificial insemination
6. What is infertility ? Mention its types.
7. Describe antifertility vaccine with an example
8. What are contraceptive devices? Give examples
9. What is called as danger period?
10. What refers to douching?
11. Write short note on tubectomy
12. What is meant by vasectomy?
13. Describe MTP
14. Mention the use of Mala-D

Section C (5 marks)

Answer in about 200 words

Unit I

1. Describe the phases of spermatid formation
2. Illustrate the structure of mature Graafian follicle
3. What happens during previtellogenesis?
4. What is vitellogenesis ? Explain
5. Explain the transport and processing of yolk by the oocyte
6. Write short notes on polar body
7. What happens during the maturation phase of oogenesis?
8. Describe the structure of human egg with a neat labeled sketch
9. Explain the different parts of chick's egg with a neat labeled sketch
10. Illustrate the structure of human sperm

Unit II

1. Explain the chemical factors involved in fertilization
2. Present the different steps of acrosomal reaction with suitable diagram
3. Illustrate the cortical reaction
4. Describe the structure of blastula of chick
5. Explain the regular cleavage patterns in chick
6. Bring out the different theories regarding the formation of endoderm
7. Draw and explain the fate map of chick
8. Bring out the different parts of the primitive streak of chick
9. Explain the formation of mesoderm in chick
10. Mention any five physical factors involved in fertilization

Unit III

1. Outline the process of cleavage in the development of human
2. Illustrate human fate map

3. Discuss the formation of blastocyst in mammals
4. Explain implantation of morula in the uterus
5. Describe the process of gastrulation in mammals
6. Discuss the development of endoderm during gastrulation
7. Explain the development of primitive streak and mesoderm in mammal
8. Enumerate the steps in the development and differentiation of endocardial tube in mammals
9. Analyze the differentiation of prosencephalon in the development of mammalian brain
10. Outline the differentiation of rhombencephalon in the development of mammalian brain

Unit IV

1. Discuss the properties and structure of organizer
2. Explain the primary organizer with examples
3. Describe the secondary organizer
4. Analyze the two different factors affecting gradients
5. Explain the culture of embryonic stem cell in vitro
6. Discuss the process of maintenance of stem cells
7. Explain the application of embryonic stem cell therapy in curing diabetes
8. Classify the placenta based on the distribution of villi
9. Differentiate epitheliochorial placenta from endotheliochorial placenta
10. List out the functions of placenta

Unit V

1. Describe artificial insemination
2. Explain the process of in vitro fertilization in human beings
3. Discuss the techniques involved in the production of test tube baby
4. Analyze the advantages and disadvantages of test tube baby
5. Comment on amniocentesis
6. What are the causes of impotency and sterility in male and female?

7. Bring out the necessity for birth control
8. How are intra-uterine devices and spermicidal substances used in birth control ?
9. Explain the surgical methods of birth control
10. Discuss the antigen antibody mediated termination of pregnancy

Section D (10 marks)

Answer in about 400 words

Unit I

1. Describe the process of spermatogenesis
2. Highlight the importance of growth phase in oogenesis
3. Compare spermatogenesis with oogenesis
4. Bring out the hormonal control of oogenesis
5. With the neat labeled sketch explain the structure of the sperm and egg of chick.

Add a note on the functions of different parts of the egg

Unit II

1. Narrate the cytological events of fertilization
2. Bring out the physiological events involved in fertilization
3. Enumerate the physical events involved in fertilization
4. Explain the cleavage process in chick
5. Discuss the events in gastrulation of chick
6. Describe the formation structure of primitive streak of chick

Unit III

1. Categorize the events in gastrulation
2. Describe the process of implantation in the development of mammals
3. Outline the process of formation of blastomere and blastocyst
4. Analyze the development of heart in mammal
5. Explain the development of brain in mammal

Unit IV

1. Support the existence of double gradient hypothesis in the embryonic development with examples
2. Enlist the characteristics of morphogenetic field
3. Explain the culture and maintenance of stem cell
4. Explain the applications of embryonic stem cells in the field of medicine
5. Classify placenta based on the type of tissues involved

Unit V

1. Explain the process of in vitro fertilization in human beings and its advantages
2. What is infertility ? Evaluate the causes of sterility in male, female and both the partners
3. Bring out the various contraceptive devices used for birth control in man
4. What is PCOD? Explain it's causes and impact on women health.

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI

II B. Sc. Zoology

Semester III

Skill Based Elective: Fishery Products Course Code: 21UZOS31

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Minced fish, salt, starch and spices are mixed and made into round white value-added product is called _____
a. **Fish ball** b. Fish noodles c. Fish wafer d. Fish cutlet
2. For fish fingers, the cut fish should be _____
a. moist b. **dry** c. watery d. soggy
3. What are the materials used for the outer covering of the fish cutlet?
a. Egg & Corn flour b. Corn flour & Bread crumbs
c. Rice flour and Bread crumbs d. **Egg & Bread crumbs**
4. Which of these is not an important ingredient in fish pickle?
a. Vinegar b. **Soy sauce** c. Ginger-garlic paste d. Vegetable oil
5. Identify the fermented fish product which gives a fishy and salty taste.
a. Fish Pickle b. Fish Soup Powder c. **Fish Sauce** d. Fish Curry
6. The sauce from which fish is very preferable is _____
a. Carp b. Catfish c. **Anchovy** d. Shark
7. _____ is an excellent binder added in minced products
a. **Egg white** b. Bread crumbs c. Cooked rice d. Vegetable oil
8. Fish pressed into a flat piece covered with bread crumbs and fried in oil is called _____
a. Fish ball b. **Fish cutlet** c. Fish cake d. Fish finger
9. Find out the preservative added in fish pickle
a. kanamycin b. fumaric acid c. **vinegar** d. ascorbic acid
10. Storage life of the packed soup powder is _____ years
a. 1 b. **2** c. 3 d. 4

11. Which of the following is called fish finger?
- a. Fish vathal ` b. **Fish stick** fish noodles d. Fish wafer
12. Dried, ready- to-fry-and-serve fish product is _____
- a. **fish wafer** b. fish finger c. fish ball d. fish sausage
13. _____ adds salty umami savory flavor that makes the food more tasty
- a. **Fish sauce** b. Fish sausage c. Fish meal d. Fish soup powder
14. Cylindrical fish product encased in a skin is called _____
- a. fish soup powder b. **fish sausage** c. fish finger d. fish sauce

Unit II

1. Isinglass is prepared from _____ of fish
- a. **air bladder** b. liver c. stomach d. skin
2. Isinglass is employed in _____
- a. preparation of wines b. **clearing of wines**
c. distillation of wines d. preservation of wines
3. Isinglass is prepared from _____
- a. musk deer b. lizards c. **fishes** d. snakes
4. Name the biopolymer produced from shrimp shell
- a. Isinglass b. Fish leather c. **Chitosan** d. Fish glue
5. In India _____ fish is used for the production of pearl essence
- a. tuna b. **ribbon** c. shark d. ray
6. Identify the process where chitosan is produced from chitin
- a. Deproteinization b. Demineralization c. **Deacetylation** d. Demethylation
7. Name the shining material found in the epidermal layer of sardine fishes.
- a. **Guanine** `b. Lysine c. Histidine d. Arginine
8. _____ is the suspension of crystalline guanine in water or organic solvent
- a. Fish soup b. Fish sauce c. **pearl essence** d. fish maws
9. Ribbon fish is used for the production of _____
- a. **pearl essence** b. chitosan c. isinglass d. fish maws
10. Shark fins are used to prepare _____
- a. **soups** b. isinglass c. glue d. leather

Unit III

1. Identify the red algae which is used to make the famous Japanese dish nori.
a. *Nemalion* b. ***Porphyra*** c. *Chondrus* d. *Eucheruma*
2. Agar is obtained from the algal species of _____
a. *Chondrus* b. *Gigartina* c. ***Gelidium*** d. *Laminaria*.
3. Algin and alginic acid are obtained from _____
a. **brown algae** b. red algae c. yellow algae d. green algae
4. Carrageenan is used as an _____
a. emulsifier b. binder c. solidifying agent d. **emulsifier and binder**
5. Seaweeds contain high level of _____
a. **iodine** b. calcium c. iron d. phosphorus
6. What is used for artificial culture media for algae, fungi, bacteria and plant tissues in biological laboratories?
a. **Agar-agar** b. Carrageenin c. Algin d. Alginates
7. Identify the largest edible seaweed popular in China to prepare salads
a. Nori b. **Kelp** c. Sea grapes d. Fucus
8. Algae and carrageenin are polymers of _____
a. glucose b. phosphoric acid c. starch d. **galactose**
9. _____ present in seaweeds have potential health benefits.
a. chemicals b. **bioactive compounds** c. proteins d. enzymes
10. Seaweed belongs to a group of plants known as _____
a. fungi b. lichens c. **algae** d. bryophytes

Unit - IV

1. What is the name of the preservation of fish in salt and tamarind?
a. Icing b. Freezing c. **Pickling** d. Salting
2. In which preservation process, heat treatment is the principal factor?
a. **Canning** b. Salting c. Freezing d. Fermentation
3. Identify the phenolic compound of smoke.
a. **Catechol** b. Carbon monoxide c. Carbon dioxide d. Glycerol
4. Which is the simple and natural method of preservation?
a. Cooling b. **Sun drying** c. Freezing d. Canning

5. Fishes are rich in _____.
a. leucine b. **lysine** c. tryptophan d. acetic acid
6. In _____ salting, fish is salted simultaneously with salt and with brine
a. dry b. **mixed** c. wet d. salt
7. Drying prevents bacterial actions and _____.
a. dehydration b. **putrefaction** c. smoking d. canning
8. Salt absorbs water from fish due to its _____.
a. **hygroscopic ability and osmosis** b. permeability c. penetration d. exudation
9. A large amount of _____ adversely affects the appearance of the product and causes shrinkage.
a. **drip** b. ice c. smoke d. scum
10. Carcinogenic compound present in smoke is _____.
a. carbon monoxide b. **3-4 benzopyrene** c. dust d. carbon
11. Removal of air and gas from can is _____.
a. **exhausting** b. drying c. canning d. fermentation

Unit - V

1. _____ is a part of quality control
a. **Inspection** b. Operation c. Production d. Oxidation
2. Preservation of fish in salt in the wet condition is called
a. **Wet curing** b. Dry curing c. Monocuring d. Drying
3. Preservation of fish in salt and tamarind is called
a. **Wet curing** b. Pickling c. Salting d. Smoking
4. Keeping the captured fish among ice blocks is called
a. **Icing** b. refrigeration c. freezing d. drying
4. Low incidence of microorganisms is one indicator of -----
a. pathogen b. **good quality** c. salt content d. sanitation
5. High amount of _____ and _____ cause blackening of canned prawns.
a. sodium and chlorine b. **copper and iron**
c. potassium and sodium d. chlorine and iodine.
7. Glass packed foods should be protected from _____.
a. air b. dust c. **light** d. micro-organisms

8. Highly unsaturated oil of seafood has beneficial effects on _____.
a. digestive system b. **cardiovascular system** c. excretory system d. nervous system
9. Which one is associated with the quality assurance of seafood product
a.MPEDA b.IFS c.**HACCP** d.SART
10. Perishable foods should not be allowed to stand at room temperature for more than:
a.1 hour b. 2 hours c. 4 hours d. **8 hours**

Section-B (2 marks)

Answer in about 50 words

Unit I

1. What is value added fishery product?
2. Comment on the significance of value addition in the sea food industry.
3. How do you prepare fish mince?
4. How do you cook frozen fish ball?
5. Define surimi.
6. Name some surimi products.
7. Is fish wafer a value-added fish product?
8. Write any three breaded products of fishes.
9. Name some minced fishery products.
10. How will you prepare fish soup powder?

Unit –II

1. Enlist the uses of shark fin rays.
2. What are the essential fatty acids present in fish oil?
3. Write notes on shark fin rays.
4. Mention the importance of fish oil.
5. What are the application of chitin and chitosan?
6. Write the uses of chitosan.
7. What method is used to prepare isinglass?
8. Which part of the fish is used for preparing isinglass?
9. What is pearl essence?
10. Compare pearl essence with natural pearl.

Unit – III

1. Classify the seaweeds based on their pigments.
2. Why Sea weeds are considered as a valuable source of bioactive compounds.
3. What are bioactive compounds?
4. Name the bioactive compounds of algal origin?
5. Mention the sea weed used for obtaining alginates.
6. What are algin and carrageen used for?
7. Mention the sea weeds used for obtaining agar.
8. Write a short note on carrageenin.
9. Define edible sea weeds.
10. List out some edible sea weeds in India.

Unit – IV

1. Comment on fish spoilage.
2. What are the various methods of preserving fish and fish products?
3. List out the principles of fish preservation.
4. Define curing of fishes.
5. Discuss the different factors involved in drying of fishes.
6. Distinguish between wet curing and dry curing.
7. Write short notes on smoking.
8. Define Pickling.
9. Differentiate deep freezing from freeze drying.
10. Define canning.
11. Enlist the advantages of canning.

Unit – V

1. What is quality with respect to seafood?
2. Name any two prime factors responsible for significant quality changes.
3. In what way, fish forms an excellent supplementary protein food to the cereal rich diet?
4. What is quality control?
5. Mention the objectives of quality control.
6. How will you prevent environmental contamination on fish and fishery products.

7. What are the processing factors which affect the quality in the fish industry?
8. Comment on FSSAI.
9. Mention the HACCP implementation in fish processing.
10. Name the factors that are responsible for the quality of fish food.

Section – C (5 marks)

Answer in about 200 words

Unit – I

1. Discuss the preparation of fish sausage.
2. Describe the process of preparation of fish sauce.
3. Write down the recipe for fish pickle.
4. Give a detailed account on the preparation of fish fingers.
5. How will you prepare fish wafers?
6. Discuss the methods of preparation of fish soup powder.
7. Draw chart for preparation of fish ball.
8. Demonstrate the steps for the preparation of fish cutlet.
9. Present the method of preparation of battered product.
10. Discuss the importance of fish soup powder.

Unit- II

1. Explain the production and uses of fish oil.
2. Enumerate the qualities of fish oil,
3. Demonstrate the preparation of isinglass.
4. Present the qualities and importance of fish isinglass.
5. Discuss about shark fin rays.
6. Evaluate the various application and food values of shark fin rays.
7. Comment elaborately on chitosan.
8. Provide chart for the preparation of chitosan.
9. Describe the qualities of pearl essence.
10. Explain the nature and preparation pearl essence.

Unit- III

1. Discuss about the economically important agar.
2. Assess the properties and economic value of algin.

3. Enumerate the characteristics of carrageenin and its applications.
4. Explain any two economically important sea weed product.
5. Explain the role of seaweed as food for human consumption
6. Demonstrate the different types of edible seaweeds used for human consumption
7. Categorize the different types of edible sea weeds
8. Illustrate the economic importance of agar & algin
9. Analyze the nutritional significance of kelp
10. Describe the qualities of sea weed Irish mosh

Unit – IV

1. Describe various methods of fish preservation.
2. Explain the three ways of drying of fishes.
3. How drying is done? Write the factors affecting it.
4. Demonstrate the preservation of fish products using salt.
5. Discuss about smoking
6. Enlist the disadvantages of drying and smoking.
7. Present the advantages of freezing of fishes for preservation.
8. Categorize different types of freezing of fishes.
9. Enumerate the advantages of canning of fish preservation
10. Demonstrate the different steps followed during canning

Unit – V

1. What are the prime factors responsible for significant quality changes?
2. Describe the factors that affect processing and the quality in fish industry.
3. Write about the chemical quality of water used in fish processing industry.
4. Evaluate the good manufacturing practices in fish sanitation
5. Analyze the four stages of quality control.
6. Explain how good personal hygiene reduces contamination of fish
7. Analyze the causes of environmental contamination of fish
8. Demonstrate the five preliminary steps of HACCP on fishery products.
9. Discuss the role of FSSAI on fishery products.
10. Present the FSSAI Regulations for fish and fishery products.

Section D (10 marks)

Answer in about 400 words

Unit – I

1. Explain the recipe for the preparation of fish pickle.
2. Demonstrate the ingredients and preparation fish cutlet.
3. Outline the preparation of coated fishery products.
4. Provide the recipe for making fish soup powder and fish sauce.
5. Bring out the types of batter and breading and their applications.

Unit – II

1. “Shark fins are used in the preparation of delicacy fin soup” Explain.
2. “Fish isinglass is the important value-added fishery product”-Justify.
3. Outline the economically important fishery product “Pearl essence”.
4. Present the uses, benefits and side effects of chitosan.

Unit – III

1. Discuss about the economically important seaweeds and their products.
2. Analyze the uses of seaweeds as food for human consumption.
3. “Seaweeds are a valuable source of bioactive compounds” – Justify.
4. Discuss the biological activities of seaweed.

Unit – IV

1. Describe the process involved in different types of curing.
2. Explain the advantages of freezing in fish preservation
3. Outline the different steps followed in canning.
4. Explain the process of drying.
5. Write an essay on smoking and freezing.

Unit – V

1. Describe the hygiene and sanitation in fish processing plants.
2. Explain the eight key sanitation conditions
3. Outline the guidelines of HACCP process of fish flow chart and the manufacturing process.

ST.MARY'S COLLEGE (Autonomous), THOOTHUKUDI
II B.Sc. Semester III
NME - Basic Biotechnology Course Code : 21UZON31
(for those who joined in July 2021 and after)

QUESTION BANK

Section A (1 mark)

Choose the correct answer

Unit I

1. _____ is the structural and functional unit of an organism.
a. Nucleus b. Mitochondria c. Cytoplasm d. **Cell**
2. Who first observed nucleus?
a. Robert Hooke b. **Robert Brown** c. Schwann d. Schleiden
3. _____ acts as power house of the cell.
a. Endoplasmic reticulum b. Golgi c. **Mitochondria** d. Centriole
4. DNA does not have _____
a. Adenine b. Guanine c. Cytosine d. **Uracil**
5. The prokaryotes have _____ ribosomes.
a. 60S b. **70S** c. 80S d. 100S
6. _____ forms the circulatory system of the cell.
a. **Endoplasmic reticulum** b. Golgi c. Mitochondria d. Centriole
7. _____ forms the cytoskeleton of the cell.
a. **Endoplasmic reticulum** b. Golgi c. Mitochondria d. Centriole
8. _____ are called as suicidal bags of the cell.
a. **Lysosomes** b. Golgi c. Mitochondria d. Centriole
9. _____ are the sites of protein synthesis.
a. Lysosomes b. vacuoles c. Mitochondria d. **Ribosomes**
10. Who proposed the cell theory?
a. Robert Hooke b. Robert Brown c. **Schwann and Schleiden** d. Golgi
11. Photosynthesis is the main function of _____
a. chromoplast b. **chloroplast** c. phaeoplast d. rhodoplast
12. _____ is a prokaryotic cell.
a. Plant cell b. Animal cell c. **Bacteria** d. Yeast

13. Name the bond present in the sugar phosphate backbone of DNA.
- Hydrogen bond
 - Phosphodiester bond**
 - Covalent bond
 - Ionic bond
14. Which of the base is not a pyrimidine?
- Thymine
 - Cytosine
 - Uracil
 - Adenine**

Unit II

- _____ are extrachromosomal, self replicating DNA molecules found in bacteria.
 - Nucleoid
 - Plasmid**
 - mtDNA
 - Phage
- EcoRI* is a restriction enzyme isolated from _____.
 - E. coli***
 - H. influenza*
 - S. marcescens*
 - B. liquifaciens*
- Which among the following is called as molecular scissors?
 - Ligases
 - Restriction endonucleases**
 - Gyrases
 - Exonucleases
- The _____ restriction enzymes are used in genetic engineering.
 - type I
 - type II**
 - type III
 - type IV
- Name the enzyme is used for joining two DNA molecules.
 - Gyrase
 - Ligase**
 - Alkaline phosphatase
 - Restriction endonuclease
- pBR322 is an example of _____.
 - plasmid**
 - phagemid
 - cosmid
 - restriction endonuclease
- The restriction endonucleases break the _____ of DNA.
 - hydrogen bond
 - phosphodiester bond**
 - hydroxyl bond
 - carbon bond
- A good plasmid vector will possess _____.
 - origin of replicaion
 - cos site
 - multiple cloning site
 - both a and c**
- The restriction enzymes can cut a _____ DNA.
 - Double stranded DNA**
 - Single stranded DNA
 - Single Stranded RNA
 - Double stranded RNA
- _____ is not a restriction endonuclease.

- a. HindIII b. **Ecoli** c. EcoRI d. BamHI
11. Name the plasmid cloning vector
a. SV40 b. P1 Phage c. **pBR322** d. λPhage
12. The restriction enzymes which have the same recognition site and cutting site.
a. Type I b. **Type II** c. Type III d. Type IV
13. Identify the natural plasmid vector.
a. **ColEI** b. pBR322 c. pUC18 d. pOK12
14. The genetic marker/s of pBR322 is/are _____.
a. Ampicillin b. Tetracyclin
c. Ampicillin and Tetracyclin d. Ampicillin or Tetracyclin

Unit III

1. _____ is used in Polymerase chain reaction.
a. Taq DNA polymerase b. *HindIII* c. *BamHI* d. *SmaI*
2. _____ is a method to separate DNA fragments
a. PCR b. **Agarose gel electrophoresis** c. SDS-PAGE d. both a & b
3. In agarose gel electrophoresis _____ is used to stain the DNA.
a. crystal violet b. safranin c. **Ethidium bromide** d. Coomassie Brilliant blue
4. During electrophoresis the DNA migrates towards _____.
a. **Anode** b. Cathode c. Diode d. triode
5. _____ is an electrophoresis technique.
a. **SDS-PAGE** b. PCR c. Sequencing d. Cloning
6. _____ is a method of gene transfer to bacteria
a. Transfection b. Biolistic c. Microinjection d. **Transformation**
7. Transfection is a method of gene delivery to _____.
a. bacteria b. **animal cell** c. plant cell d. both a and b
8. Gene gun method is also called as _____.
a. Transfection b. **Biolistic** c. Microinjection d. Transformation
9. _____ gas is used in gene gun.
a. H b. **He** c. O d. N
10. The temperature for heat shock treatment is _____ °C.

- a. 50 b. 40 c. 42 d. 45

11. Ethidium bromide is used in _____

- a. **Agarose gel electrophoresis** b. PCR
c. Transformation d. Gene cloning

12. _____ is a DNA binding dye.

- a. EDTA b. **Ethidium bromide** c. SDS d. EtOH

Unit IV

1. _____ is a method of gene transfer to generate transgenic animals.

- a. Transfection b. Biolistic **c. Microinjection** d. Transformation

2. _____ is method of gene transfer to animal cells.

- a. Transfection **b. Agrobacterium-mediated gene transfer** c.
Microinjection d. Transformation

3. _____ is a plasmid of *Agrobacterium tumefaciens*.

- a. Ti** b. pBR322 c. SV40 M13

4. _____ is a part of T-DNA

- a. Border sequence b. Opine synthesis c. Origin of replication **d. both a&b**

5. _____ is involved in formation of T-Pilus

- a. VirA **b. VirB** c. VirC d. VirD

6. _____ is the pilot protein

- a. a. VirA b. VirB c. VirC **d. VirD**

7. A super mouse is a _____

- a. mouse with high IQ b. mouse that can fly
c.transgenic mouse d. obedient mouse

8. Golden rice is a rice _____

- a. **That produces vitamin A** b. Costly rice
c. Golden colour rice d. Rare rice

9. Bt. Cotton is resistant to _____

- a. drought b. rain **c. insect attack** d. cold

10. The golden rice contains the _____ gene

- a. Phytoene synthase b. Phytoene desaturase
c. Enolase **d. a&b**

11. A gold fish is a transgenic fish that expresses the _____
- a. Phytoene synthase
 - b. Phytoene desaturase
 - c. Enolase
 - d. Human growth hormone**

Unit V

1. In SDS-PAGE, protein sample is first treated with detergent sodium dodecyl sulfate (SDS), in order to _____.
 - a. Make the protein become negatively charged.**
 - b. Make the protein become positively charged.
 - c. Renature the protein.
 - d. Adjust the pH of protein.
2. What is the purpose of using bromophenol blue in the sample buffer?
 - a. To ionize the sample.
 - b. To monitor the electrophoretic run.**
 - c. To act as standard control
 - d. To adjust the pH of sample.
3. The restriction digestion reaction is usually set at _____ temperature
 - a. 37°C**
 - b. 40°C
 - c. 45°C
 - d. 50°C
4. The restriction enzymes require _____ ions as cofactors.
 - a. Mg**
 - b. Ca
 - c. Ni
 - d. Cd
5. In PCR the temperature for extension of DNA strands is _____.
 - a. 37°C
 - b. 40°C
 - b. 72°C**
 - b. 50°C
6. DNA is precipitated by _____.
 - a. Ethanol**
 - b. Methanol
 - c. Acetic acid
 - d. Acetone
7. The structure of DNA was elucidated by _____.
 - a. Robert Brown
 - b. Schleiden and Schwann
 - c. Watson and Crick**
 - d. Louis Pasteur
8. The tRNA is _____ shaped.
 - a. Oval
 - b. Linear
 - c. Cuboid
 - d. Clover**
9. The DNA is a _____ structure.
 - a. linear
 - b. helically coiled**
 - c. circular
 - d. triangular

10. _____ carries the amino acids during translation.

a. mRNA

b. rRNA

c. tRNA

d. siRNA

Section B (2 marks)

Answer in about 50 words

Unit I

1. State the cell theory.
2. Write any two differences between prokaryotic and eukaryotic cells.
3. Why are bacterial cells prokaryotic?
4. Comment on the composition of animal cell wall.
5. 'Mitochondria is called as the power house of the cell' – Justify the statement.
6. List the functions of lysosomes.
7. Draw the structure of DNA.
8. Sketch a typical prokaryotic cell and mark the parts.
9. Comment on DNA base pairing.
10. Write the nitrogenous bases present in DNA.
11. Comment on nucleosome.

Unit II

1. Comment on restriction enzymes.
2. Name any two restriction enzymes and write their source.
3. Write a note on plasmids?
4. What are palindromic sequences? Write an example.
5. Differentiate cohesive ends from blunt ends.
6. Why are type I endonucleases not useful for recombinant DNA technology?
7. List any two natural and artificial plasmids.
8. State the advantages of cosmid vector.
9. Comment on DNA ligase.
10. Define artificial gene cloning vector.
11. List the different types of gene cloning vectors.
12. Depict the central dogma of life.

Unit III

1. Define transformation
2. Write the three basic steps in a PCR cycle.
3. Comment on gene gun method.
4. List the methods to introduce rDNA into cells.
5. What is transformation?
6. Comment on transfection.
7. List down the various electrophoresis techniques.
8. Name the electrophoresis techniques used to resolve DNA and Proteins respectively.
9. Calculate the number of copies of a DNA fragment during the 4th cycle in a PCR reaction.
10. List down the components of PCR.
11. Appraise the application of agarose gel electrophoresis for DNA analysis.
12. Summarize the steps in polymerase chain reaction.
13. Comment on the role of calcium chloride in transformation.
14. Write the principle of SDS-PAGE.

Unit IV

1. Define GMO.
2. Give few examples of genetically modified organisms.
3. Comment on microinjection.
4. What is a supermouse?
5. Draw the structure of a T_i plasmid.
6. Illustrate a T-DNA
7. Comment on the role of VirD protein of *Agrobacterium*.
8. What is Bt cotton?
9. What is 'golden rice'?
10. Name the genes and their sources that are used to generate golden rice.

Unit V

1. Write the principle of DNA isolation?
2. Write the reaction set up of restriction digestion.
3. Draw the structure of DNA
4. Sketch the structure of t-RNA
5. Elaborate SDS-PAGE.

6. What is electrophoresis?
7. Name any four restriction enzymes.
8. Comment on the role of ethidium bromide in agarose gel electrophoresis.
9. Give an example of horizontal gel electrophoresis and vertical gel electrophoresis each.
10. Comment on Taq DNA polymerase.

Section C (4 marks)

Answer in about 100 words

Unit I

1. Describe prokaryotic cell with a neat diagram.
2. Write the differences between a prokaryotic cell and a eukaryotic cell.
3. List the functions of a cell.
4. Comment on the structure of an animal cell with a neat sketch.
5. Enumerate the functions of DNA.
6. Draw and label the structure of typical plant cell.
7. Comment on the structure and function of a cell nucleus.
8. List down the different fields of biotechnology.
9. Write on the basic structure of an eukaryotic cell.
10. Comment on the scope of biotechnology in the field of medicine.

Unit II

1. Differentiate type I from type II restriction endonucleases.
2. Give an account on the nomenclature of restriction enzymes citing specific examples.
3. Summarise the salient features of genetic code.
4. What are plasmids? Write on the characteristic features of plasmids.
5. Enlist the types of plasmid with a description of each type.
6. Comment on recognition sequences of type II restriction endonucleases.
7. Add a note on cohesive and blunt ends.
8. List the basic steps of cloning.
9. Enlist the features of an ideal plasmid vector.
10. Write the chemical composition of DNA.
11. Enumerate the salient features of pBR322 vectors.
12. What are plasmids vectors? Give their general characters.

13. Sketch the steps involved in gene cloning.

Unit III

1. Write down the steps of bacterial transformation.
2. Comment on gel electrophoresis.
3. Explicate the steps of PCR.
4. Differentiate transfection and transformation.
5. Describe any one method of gene delivery to bacterial cells.
6. Discuss a method of gene delivery to eukaryotic cell.
7. Write the schematic representation of agarose gel electrophoresis.
8. Give a brief account on the method of protein separation.
9. Comment on the roles of various PCR components
10. Enlist the gene delivery methods to cells and explain one method elaborately.

Unit IV

1. Describe microinjection method of gene delivery.
2. List down the various vir genes and their functions.
3. Comment on the various genes present on the T_i plasmid.
4. Describe the structure of a T-DNA.
5. Give an account on the applications of transgenic animals.
6. Write a brief account on super mouse.
7. Outline the protocol for generating transgenic fish.
8. List a few transgenic plants and their applications.
9. How are insect resistant plants generated by genetic engineering?
10. List down the steps involved in T-DNA transfer into plant cells.
11. Comment on golden rice.

Unit V

1. Draw and comment on the double helical model of DNA.
2. Illustrate the structure of tRNA .
3. Comment on the role of the components of PCR reaction
4. Write the basic steps of DNA isolation from bacterial cell.
5. Discuss the principle of a transilluminator.
6. Describe a transilluminator.

7. Write the principle of SDS-PAGE
8. Write the principle of agarose gel electrophoresis.
9. Comment on restriction digestion.
10. Describe a thermocycler.

Section D (10 marks)

Answer in about 400 words

Unit I

1. Differentiate a eukaryotic cell from a prokaryotic cell.
2. With a neat sketch explain the structure of an animal cell.
3. Explain the structure and functions of various cellular organelles.
4. Give a detailed account on the scope of biotechnology.
5. Appraise the scope of biotechnology in improving the livelihood of man.

Unit II

1. Enlist the salient features of pBR322.
2. Explicate the structure of DNA with a neat diagram.
3. Explain the features of an ideal plasmid vector and list the steps involved in gene cloning.
4. Give a detailed account on restriction enzymes.
5. 'Plasmids are ideal vectors'- Justify the statement with a suitable example.

Unit III

1. Give an account on any two gene delivery methods.
2. Explain the principle and protocol of agarose gel electrophoresis.
3. Elaborately discuss the biolistic methodology for gene delivery to cells.
4. Differentiate the agarose gel electrophoresis and SDS-PAGE.
5. Illustrate polymerase chain reaction explaining the steps involved.

Unit IV

1. Explain the microinjection methodology to generate a super mouse.
2. Outline the various steps involved in T-DNA transfer with a neat diagram.
3. Enumerate the applications of transgenic animals and plants.
4. Write a detailed account on Golden rice.
5. Discuss about any two genetically modified plants.

6. Give an account on any two genetically modified animals.

Unit V

1. Write down the protocol of Agarose gel electrophoresis.
2. Sketch the procedure for SDS-PAGE.
3. Draw and comment on DNA and t-RNA
4. Illustrate the steps of PCR.
5. Outline the steps to set a restriction digestion reaction.

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI

II B.Sc Zoology

Semester IV

Core I – Biochemistry and Bioinstrumentation Course Code: 21UZOC41

(for those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Find the ratio between hydrogen and oxygen in a carbohydrate

- a. 5:1 b. 4:3 c. 3:1 d. **2:1**

2. Name the number of carbons in monosaccharides

- a. 20 b. 10-15 c. **3-10** d. 3-7

3. Identify the reducing sugar

- a. **glucose** b. sucrose c. chitin d. starch

4. Fructose is a

- a. **levo sugar** b. dextro sugar c. invert sugar d. neutral sugar

5. Name the molecular formula of glucose

- a. **C₆H₁₂O₆** b. C₆H₁₃O₆ c. C₇H₁₄O₇ d. C₈H₁₆O₈

6. Find the disaccharide

- a. **lactose** b. starch c. glucose d. glycogen

7. The change in specific rotation of an optically active compound is called _____

- a. Epimers b. Isomers c. Anomers d. **Mutarotation**

8. Name the storage polysaccharide of animal

- a. starch b. inulin c. **glycogen** d. cellulose

9. Indicate the cell wall component of plant

- a. **cellulose** b. fructose c. galactose d. sucrose

10. Carbohydrates found in DNA is _____

- a. ribose b. **deoxyribose** c. ribulose d. pentulose

Unit II

1. The functional groups present in all amino acids are_____ and _____

- a. hydroxyl; amide b. **carboxyl; amine** c. acetal; amine d. carbonyl; amide

2. The amino acids which are not synthesized in our body are _____ amino acids

- a. non-essential b. deaminated c. proteinaceous d. **essential**

3. A tripeptide has _____

- a. 3 amino acids and 1 peptide bond b. **3 amino acids and 2 peptide bond**
c. 3 amino acids and 3 peptide bond d. 3 amino acids and 3 peptide bond

4. The smallest structural units of proteins are _____

- a. peptides b. proteoses c. **amino acids** d. peptone

5. Which of the following is not the classified form of conjugated protein?

- a. Lipoprotein b. Glycoproteins c. Metalloproteins d. **Complete protein**

6. Amino acids that behave both as weak acid and base are _____

- a. D - amino acids b. L - amino acids c. α -amino acids d. **ampholytes**

7. In the protein classification the globular proteins are_____ in water

- a. soluble b. unsaturated c. saturated d. **insoluble**

8. In the pleated sheet of secondary structure, polypeptide chain proceed in same direction amino to carboxyl is _____

- a. antiparallel b. horizontal c. **parallel** d. antihorizontal

9. Identify the fibrous protein

- a. **collagen** b. haemoglobin c. globulin d. albumin

10. Name the protein present in hair

- a. **Keratin** b. Elastin c. Myosin d. Globulin

11. The non-protein substance linked to protein is called _____

- a. **prosthetic group** b. non-prosthetic group c. haem group d. aminoacid

12. The linear sequence of polypeptide makes _____structure of protein

- a. **primary** b. secondary c. tertiary d. quaternary

13. The polypeptide chains are _____ in homogenous quaternary structure of protein

- a. **identical** b. equal c. non identical d. parallel

Unit III

1. Find the alcohol present in lipids

- a. ethanol b. methanol c. **glycerol** d. steroids

2. Identify the fatty acids with double bonds

- a. saturated fatty acids b. **unsaturated fatty acids**
c. essential fatty acids d. non-essential fatty acids

3. Indicate the process of manufacturing soap

- a. rancidification b. **saponification** c. emulsification d. esterification

4. Fats are _____ conductors of heat

- a. **bad** b. good c. very good d. fair

5. Name the simple lipid

- a. **Wax** b. Lecithin c. Cephalin d. Phosphoinositides

6. Auto oxidation of oil is _____

- a. **rancidification** b. saponification c. emulsification d. esterification

7. Which one of the following is the essential fatty acid?

- a. **Arachidonic acid** b. Lanoline c. Lecithin d. Cephalin

8. Breaking down of fats into minute droplets in water is called _____

- a. rancidification b. saponification c. **emulsification** d. esterification

9. Which of the following is a phospholipid?

- a. **Lecithin** b. Cholesterol c. Ergosterol d. Coprostanol

10. Liquid form of triglycerides at ordinary room temperature are called

- a. **oils** b. solid c. fat d. vapour

Unit IV

1. Enzymes are polymers of _____

- a. fatty acids b. **amino acids** c. inorganic phosphate d. hexose sugar

2. Enzymes are essential because they _____

- a. supply energy b. **catalyse biochemical reactions**
c. form structural components of the body d. are lipids

3. Combination of apoenzyme and co-enzyme produces _____

- a. prosthetic group b. **holoenzyme**
c. enzyme product complex d. enzyme-substrate complex.

4. Pick up the enzyme which hydrolyses starch to maltose

- a. protease b. isomerase c. amylase d. **maltase**

5. The number of substrate molecules catalyzed by an enzyme per minute is _____

- a. E.C number b. **turnover number** c. optimum number d. enzyme number

2. Rotor and motor are the components of _____
- a. pH meter b. colorimeter c. **centrifuge** d. chromatography
3. Which electrode is sensitive to hydrogen ions?
- a. **glass electrode** b. calomel electrode c. anode d. cathode
4. Optical density of a solution can be measured by _____
- a. pH meter b. **colorimeter** c. centrifuge d. chromatography
5. Amino acids are detected by using _____
- a. pH meter b. colorimeter c. centrifuge d. **chromatography**
6. _____ is used to separate the molecules based upon the molecular charge
- a. chromatography b. pH meter c. centrifuge d. **electrophoresis**
7. Dissociation constant of a weak acid is _____
- a. pH b. **pKa** c. Rf d. RCF
8. Rf value is related to _____
- a. pH meter b. colorimeter c. centrifuge d. **chromatography**
9. A solution of pH 7 is _____
- a. acidic b. basic c. **neutral** d. alkaline
10. _____ is used for the verification of Beer Lambert law
- a. pH meter b. centrifuge c. **colorimeter** d. chromatography

Section B (2 marks)

Answer in about 50 words

Unit I

1. What are carbohydrates?
2. Classify monosaccharide based on number of carbon atoms.

3. What is epimer?
4. Differentiate α glucose from β glucose
5. Comment on glycogen
6. Mention any two biological significances of carbohydrates
7. What are oligosaccharides?
8. Define glycosidic linkage
9. What are polysaccharides?
10. Write a note on mutarotation

Unit II

1. What are essential amino acids?
2. Define isoelectric pH
3. What is the special group present in tryptophan?
4. How are proteins made up of?
5. Define peptide bonds.
6. Name the isomeric forms of aminoacids.
7. Distinguish between globular and fibrous proteins.
8. What are ampholytes?
9. Define Zwitterion.
10. Mention the differences between first class and second class proteins.

Unit III

1. Define simple lipid.
2. Distinguish between oils and fats.
3. What are compound lipids?

4. What is conjugated unsaturated fatty acid?
5. Define saponification.
6. Write a note on emulsification.
7. What are derived lipids?
8. List down the functions of glycolipids.
9. Write notes on hydrolysis of fat.
10. Differentiate hydrolytic rancidity from oxidative rancidity.

Unit IV

1. Define the role of active site of an enzyme.
2. Mention any two functions of enzymes.
3. Write a short note on the effect of pH on enzyme activity.
4. What is Koshland's Induced Fit hypothesis?
5. Define turn-over number.
6. What are vitamins?
7. Write a note on vitamin K.
8. List out the names of B vitamins.
9. What are the functions of vitamin D?
10. Write short notes on vitamin B12.

Unit V

1. What is meant by Resolution Front value?
2. Write down the components of spectrophotometer
3. Mention Beer's law.
4. Define Lambert law.

5. What is centrifugation?
6. List out the uses of centrifuge.
7. Mention the uses of pH meter
8. Define agarose gel electrophoresis.
9. What is thin layer chromatography?
10. Mention the significance of agarose gel electrophoresis

Section C (5 marks)

Answer in about 200 words

Unit I

1. Discuss the properties of monosaccharides
2. Present any five properties of carbohydrates
3. Outline the classification of carbohydrates
4. Explain the straight chain and ring structure of glucose
5. Illustrate the structure of sucrose
6. Summarize the functions of fructose
7. Present an account on glycosidic linkage
8. Explain the furanose ring
9. Discuss Mutarotation
10. Illustrate the structure and functions of glycogen

Unit II

1. Comment on essential and non- essential amino acids.
2. Mention various types of neural amino acids with an example.
3. Distinguish between acidic and basic amino acids.

4. With suitable example explain aliphatic amino acids.
5. Write a brief note on any four chemical properties of amino acids.
6. “Proteins have been called biological polymers.” - Explain.
7. Distinguish between primary, secondary and tertiary structure of protein.
8. What are the main characteristics of globular and fibrous proteins?
9. List any five functions of proteins.
10. What is protein denaturation? Explain its significance.

Unit III

1. Discuss the structure of triglycerides
2. Differentiate monoglycerides from diglycerides.
3. Classify the fatty acids based on the presence or absence of double bonds.
4. Explain the salient features of essential fatty acids
5. Illustrate the structure and functions of glycolipids.
6. Summarize the structure and functions of cephalin.
7. ‘Cholesterol is a steroid’ - Investigate

Unit IV

1. List any three properties of enzymes.
2. Illustrate the lock and key theory of enzyme action.
3. Tabulate the characteristics of catalyst.
4. How are prosthetic groups different from cofactors?
5. How are enzymes named and how have they been classified recently?
6. Explain the sources and deficiency symptoms of vitamin A.
7. Analyze the deficiency symptoms of vitamin C.

Unit V

1. Describe the glass electrode and calomel electrode of pH meter.
2. How would you measure the pH of a solution?
3. Comment on mobile phase and stationary phase of chromatography.
4. Outline the steps involved in paper chromatography.
5. Comment on electrophoresis media.
6. Analyze the steps involved in differential centrifugation.

Section D (10 marks)

Answer in about 400 words

Unit I

1. Evaluate the structure of monosaccharide.
2. Analyze the biological significance of carbohydrates.
3. Examine the chemical structure of glucose and fructose.
4. Outline the classification of monosaccharides and add a note on functions of monosaccharides.
5. Investigate the properties of monosaccharides.
6. Analyze the structure and properties of sucrose and lactose.
7. Examine the structure of cellulose and glycogen.
8. Analyze the properties and functions of polysaccharides.

Unit II

1. Describe the classification of amino acids with structure.
2. How is a peptide bond formed between the two amino acids and discuss the character of it.
3. Give an account of properties of amino acids.
4. "Primary structure of protein guides the formation of secondary and tertiary structures" -

Justify.

5. “Haemoglobin and collagen are proteins with diverse functions”- Explain.
6. Compare and contrast the structural features of α -helix and β -pleated sheet structure with example.
7. Analyze the chemical properties of proteins.
8. Enlist the important functions of proteins.
9. Describe the classification of proteins with examples.
10. What are the molecular shapes and kinds of chemical bonds that characterize the structure of proteins?

Unit III

1. Evaluate the types of fatty acids with suitable examples.
2. Outline the classification of lipids with examples.
3. Evaluate the structure, properties and functions of simple lipids.
4. Analyze the different types of phospholipids.
5. Investigate structure and functions of derived lipid.
6. Examine the properties of lipids.
7. Analyze the biological significance of lipids.

Unit IV

1. Describe the important properties of enzymes.
2. Investigate the different classes of enzymes with suitable examples.
3. Present the IUB nomenclature of enzymes in detail with examples.
4. “Activity of enzymes is markedly affected by several factors” - Substantiate
5. Write an account on various factors affecting enzyme activity.

6. Investigate the sources and deficiency symptoms of fat soluble vitamins.
7. Analyze the properties, source, requirement and deficiency symptoms of any five water soluble vitamins.

Unit V

1. Discuss the principle and uses of pH meter.
2. Describe the principle, structure and applications of centrifuge.
3. Explain the principle, operation and uses of colorimeter.
4. Discuss the principle, procedure and applications of gel electrophoresis.
5. Explain the principle, procedure and applications of paper chromatography.
6. What is Thin Layer Chromatography? Highlight the steps involved in TLC.

ST. MARY'S COLLEGE (Autonomous) – THOOTHUKUDI

II B.Sc. Zoology Semester IV

Skill Based Elective: Clinical Laboratory Technology Course Code : 21UZOS41

(for those who joined in July 2021 after)

QUESTION BANK

Section A (1 mark)

Choose the correct answer

Unit – I

1. Three dimensional information of the internal body parts is provided by _____.
a. ECG b. **CT scan** c. sphygmomanometer d. autoanalyser
2. Autoclaving is a method of sterilizing materials using _____.
a. low temperature steam b. intermittent heat
c. dry heat d. **steam at temperature above 100°C**
3. Image acquisition is much faster in _____.
a. 3D- CT scanner b. Helical CT scanner
c. **Electron Beam CT scanner** d. Conventional CT scanner
4. In laminar flow cabinets, sterilization of materials is performed using _____.
a. X-rays b. γ - rays c. UV-A light d. **UV-C light**
5. CT imaging involves _____.
a. UV- rays b. infra red ray c. **X- rays** d. ultrasound waves
6. Dry heat sterilization is _____.
a. tyndallisation b. autoclaving c. **flaming** d. inspisation
7. In hot air oven the suitable sterilizing time is _____.
a. 3 hrs at 160°C b. **1 hr at 160°C**
c. 30 minutes at 160°C d. 15 minutes at 160°C
8. _____ is a non-invasive imaging technology that produces three-dimensional detailed anatomical images.
a. MRI b. **CT** c. X Ray d. Stethoscope
9. A hot air oven is a laboratory equipment that uses _____ to sterilize laboratory objects.
a. **dry heat** b. moist heat c. UV d. X ray
10. _____ is the most effective method of sterilizing the lab equipment.
a. Boiling b. Drying c. **Autoclaving** d. Heating

Unit - II

- _____ group person is universal recipient
a. A b. B c. **AB** d. O
- _____ group person is universal donar.
a. A b. B c. AB d. **O**
- Erythroblastosis foetalis is caused by the reaction of anti- D antibody and
a. **Rh antigen** b. A antigen c. B antigen d. O antigen
- The largest leukocyte is _____.
a. lymphocyte b. **monocyte** c. basophil d. neutrophil
- When there is no agglutination with antiserum A and antiserum B the blood group is _____.
a. A b. B c. AB d. **O**
- Normal haemoglobin value in women is _____.
a. 11.0- 13.0 gm% b. **11.5- 16.5 gm%** c. 13.5- 19.5 gm% d. 14.0- 18.0 gm%
- Eosinophils are involved in _____.
a. phagocytosis b. anticoagulation
b. coagulation d. **detoxification**
- In infants the blood sample is taken by pricking _____.
a. ear lobe b. tip of the finger
c. knee d. **plantar surface of the heel**
- When haemoglobin is treated with glacial acetic acid it forms _____ crystals.
a. **Haemin** b. Bilirubin c. Globin d. Porphyrin
- Venipuncture can be done by _____ method.
a. vacuum tube b. **syringe** c. capillary tube d. pressure
- In Sahli's method, haemoglobin is converted into _____.
a. Protein b. globin c. iron d. **acid haematin**

Unit - III

- Which one of the following is an anticoagulant?
a. pepsin b. collagen c. **heparin** d. albumin
- Uremia refers to the accumulation of urea in _____.
a. **blood** b. urine c. liver d. brain
- Laboratory diagnosis of HIV infection employs _____.
a. PCR b. **ELISA** c. WIDAL d. RIA
- Excess of unconjugated bilirubin is seen in _____.
a. **haemolytic jaundice** b. anaemia c. gall stone d. pyrexia

5. Sputum stained by Ziehl – Neelsen method reveals _____.
a. *Vibrio cholerae*
b. *Mycobacterium tuberculosis*
c. *Staphylococcus aureus*
d. *Mycobacterium leprae*
6. Curschman's spirals are seen in the sputum of patients suffering from _____.
a. **bronchial asthma**
b. pneumonia
c. lung abscess
d. lung carcinoma
7. Hepatitis _____ virus causes the dangerous disease hepatitis in man
a. A
b. **B**
c. C
d. D
8. Radioimmuno assay is used to screen _____.
a. encephalitis
b. **hepatitis**
c. poliomyelitis
d. myositis
9. Dialyser is also called as _____.
a. urine analyzer
b. **artificial kidney**
c. kidney transplant
d. artificial lungs
10. _____ is caused by excess production of bilirubin due to excess breakdown of haemoglobin.
a. Parasitic infection
b. **Haemolytic jaundice**
c. Polio
d. AIDS

Unit IV

1. Alkaline picrate method is used to estimate serum _____.
a. urea b. uric acid c. **creatinine** d. xanthine
2. Clinically interpret the serum creatinine level 0.6 - 1.4 mg/dl.
a. **normal** b. decreased c. increased d. abnormally increased
3. Estimation of serum urea requires the _____ reagent
a. **diacetylmonoxime** b. anthrone c. biuret d. ferric chloride-acetic acid
4. Estimation of serum urea is clinically significant because it gives insights about the diseases of _____.
a. liver b. bone c. blood d. **kidney**
5. Estimation of serum uric acid is done by _____ method.
a. Folin-Wu b. Hopkins-Cole c. Jaffe d. **Caraway**
6. In the uric acid estimation blue colour develops and is measured at _____ nm.
a. 530 b. 560 c. 620 d. **700**
7. Normal range of serum cholesterol in young adults is _____ mg/dl
a. **150 -240** b. 100 -150 c. 250-300 d. 140 -200
8. Heart friendly good cholesterol is _____.
a. LDL b. **HDL** c. VLDL d. IDL

9. _____ is one of the most common analyte used as the indicator of glomerular filtration rate and kidney function.

- a. **Creatinine** b. Uric acid c. Glucose d. Cholesterol

10. The normal range of blood urea is _____ mg/dl

- a. 20-25 b. **15–40** c. 5-10 d. 1-5

Unit – V

1. The electrical activities of the heart are recorded using the instrument called _____ .

- a. Electrocardiogram b. Echocardiogram
c. **Electrocardiograph** d. Electrocardiographic grid.

2. Ultrasound is used to examine the heart in _____ .

- a. **Echocardiogram** b. Electrocardiogram c. CAT scan d. MRI scan

3. In ECG, 'T' wave is caused by _____ .

- a. atrial depolarization b. atrial repolarization
c. ventricular depolarization d. **ventricular repolarization.**

4. In a normal healthy individual pulse pressure is _____ mmHg.

- a. 80 b. 93 c. **40** d. 120

5. Blood pressure can be accurately measured by _____ method

- a. palpatory b. **auscultatory** c. oscillatory d. ultrasound

6. Urine samples are preserved in _____ .

- a. **thymol** b. glycerol c. alcohol d. polyethyleneglycol

7. Heat and acetic acid test is used to detect _____ in urine.

- a. **albumin** b. bilirubin c. acetone d. phenol

8. _____ is one of the symbols of the medical profession.

- a. Sphygmomanometer b. **Stethoscope** c. ECG d. MRI

9. A sphygmomanometer is a device that measures _____.

- a. muscle contraction b. heart beat c. **blood pressure** d. polarization

10. A normal ECG is composed of _____ waves.

- a. three b. **five** c. eight d. six

11. Normal blood pressure value is _____.

- a. **120/80 mmHg** b. 140/90 mmHg c. 135/90 mmHg d. 110/80 mmHg

Section B (2 marks)

Answer in about 50 words

Unit I

1. Define sterilization.
2. Differentiate between sterilization and disinfection.
3. List out the materials which should not be sterilized in a hot air oven.
4. What is moist heat sterilization?
5. Write down the principle of laminar flow hood.
6. Enlist the uses of a CT- scan.
7. Write the advantages of MRI scan.
8. Differentiate between CT and MRI.
9. Write the principles of the autoclave.
10. What is the need for sterilization in clinical laboratories?

Unit II

1. Distinguish granulocytes from agranulocytes.
2. Write short notes on blood platelets.
3. Enlist the functions of blood.
4. What is meant by erythroblastosis foetalis?
5. How would you obtain peripheral blood?
6. What is venipuncture?
7. Write down the complications expected during venipuncture.
8. Enlist the anticoagulants used for blood.
9. Mention the significance of compatibility testing.
10. Identify the distribution of antigens and antibodies in the ABO blood group.
11. What precautions should be observed while collecting blood for component preparation?

Unit III

1. What is the basic principle of dialysis?
2. Enlist the causes of hepatitis
3. Mention the bile pigments
4. What is sputum? Comment on its physical examination.
5. Write down the modes of transmission of HIV
6. What is ELISA? What are its types?

7. What modern molecular tools are available for diagnosing parasites?
8. What is dialysate?
9. Write the principle used in artificial kidney.
10. What is haemolytic jaundice?

Unit IV

1. Bring out the clinical significance of the estimation of blood uric acid.
2. Write down the formula to calculate the amount of urea in 100 ml of serum.
3. What is the normal range of urea and uric acid in the blood?
4. Distinguish between good and bad cholesterol.
5. Mention any two renal disorders associated with elevated levels of urea.
6. Write the clinical significance of serum cholesterol
7. List the clinical significance of serum uric acid
8. Write down the formula to estimate the amount of uric acid?
9. How will you calculate serum cholesterol?
10. List the clinical significance of the estimation of blood creatinine.

Unit V

1. List out the applications of Cardiac Echo
2. Define electrocardiogram.
3. Write down the clinical importance of ECG.
4. What is stethoscope?
5. What are the types of sphygmomanometer?
6. Differentiate between hypertension and hypotension
7. Enlist the chemical constituents of urine
8. Bring out the clinical significance of urine analysis
9. Differentiate between echocardiogram and electroencephalogram
10. Write notes on the total volume of urine
11. List the chemicals used for urine preservation
12. Write characteristics to be considered in the routine physical examination of urine?
13. Define Polyuria
14. List the importance of the stethoscope.

Section-C (5 marks)

Answer in about 200 words

Unit - I

1. Explain how a hot air oven can be used for the sterilization process.
2. How can be a pressure cooker used for moist heat sterilization?
3. 'Autoclaving is the most effective method of sterilization' – Justify.
4. Discuss the method of sterilization by ultraviolet radiation.
5. Enlist the norms to be followed in clinical laboratories.
6. Differentiate between dry heat and moist heat methods of sterilization.
7. List the applications of CT and MRI in the medical field.
8. How does a CT- scan work?
9. Explain the working mechanism of MRI.
10. How X-ray is useful in the medical field?

Unit II

1. Discuss the ways of obtaining venous blood.
2. Explain the method of collecting capillary blood.
3. How will you determine the blood group of the ABO blood group system?
4. How will you determine the Rh blood group?
5. Comment on erythroblastosis foetalis.
6. Enumerate the functions of blood.
7. Discuss the use of blood components.
8. Explain the storage of blood in a blood bank.
9. Present the advantages and disadvantages of estimation of haemoglobin in Sahli's method.
10. How blood is collected for clinical diagnosis?

Unit -III

1. What is jaundice? Explain its types, causes and clinical manifestations,
2. Describe the methods of collection and disposal of sputum.
3. Enumerate the laboratory diagnostic procedures employed for the screening of AIDS.
4. Explain hemolytic jaundice.
5. Explain the mechanism of function of an artificial kidney.
6. Discuss the physical examination of sputum.

7. Explain the method of diagnosis of Dengue.
8. Write down the procedure for the diagnosis of COVID-19.
9. Analyze the confirmatory test for AIDS.
10. Give an account on hepatitis test.

Unit –IV

1. Present the protocol for the assay of serum creatinine
2. How do you estimate serum uric acid?
3. Highlight the clinical significance of estimating serum creatinine
4. Enlist the clinical significance of estimating serum uric acid.
5. List the clinical significance of urea of blood.
6. Write down the steps involved in the analysis of blood urea.
7. Present the procedure for estimating serum cholesterol.
8. What is the clinical significance of estimating serum cholesterol?
9. List the chemicals required for the assay of the enzyme alkaline phosphatase.
10. Outline steps involved in the assay of enzyme alkaline phosphatase

Unit –V

1. Explain the working mechanism and uses of Echocardiogram.
2. Discuss the usage of Echocardiogram in diagnosing heart problems.
3. Elucidate the structure, types and uses of stethoscopes.
4. Write down the definition, normal values and variations of blood pressure.
5. Discuss the methods of collection and preservation of urine samples.
6. Comment on the routine physical examination of urine samples.
7. How urine sample is preserved?
8. Analyze the clinical significance of 'PQRST' waves.
9. Mention the clinical significance of EEG.
10. Express the usage of a sphygmomanometer in blood pressure. Write its significance

Section D (10 marks)

Answer in about 400 words

Unit I

1. Explain the sterilization procedures using dry heat.
2. How does a CT- scan work? What are its applications in the medical field?
3. Discuss the method of sterilization by ultraviolet radiation.

4. Analyze the different methods of sterilization.
5. Analyze the code of conduct for medical laboratory personnel.
6. Explain the principle and applications of MRI scan.
7. Defend the microbial culture transfer using a Laminar air flow chamber

Unit II

1. Describe the composition of blood of man.
2. Outline the procedure for the estimation of haemoglobin in Sahli's method.
3. Analyze the ABO blood groups of man.
4. Discuss the preparation and use of blood components.
5. Examine the collection and storage of blood.

Unit - III

1. "Severe dysfunction of the kidney is treated by dialysis" - Justify.
2. Enumerate the methods of detection of hepatitis.
3. Evaluate the basic principle and methods of clinical diagnosis of haemolytic jaundice
4. "Analysis of sputum is a valuable means of investigating respiratory tract diseases"- Justify.
5. Explain the mechanism of function of an artificial kidney.
6. Outline the laboratory diagnostic procedures employed for the screening of AIDS

Unit –IV

1. Discuss the methodology and clinical significance of blood cholesterol estimation in man.
2. Write down the steps involved in the analysis of blood urea. Add a note on its clinical interpretation.
3. Present the procedure for estimating serum cholesterol. What is its clinical significance?
4. Explain the procedure for estimating serum uric acid. List its clinical significance.
5. Outline steps involved in the assay of enzyme alkaline phosphatase

Unit –V

1. 'ECG is the graphical registration of electrical activities of the heart'- Substantiate.
2. How do you measure blood pressure by sphygmomanometer? Add a note on its clinical uses.
3. Discuss the usage of Echocardiogram in diagnosing heart problems.
4. Explain the structure, types and uses of stethoscopes.
5. Discuss the methods of collection and preservation of urine samples.

ST.MARY'S COLLEGE (Autonomous), THOOTHUKUDI

II B.A./ B. Sc./ B.Com./ BBA

Semester IV

NME - Applied Biotechnology

Course Code : 21UZON41

(for those who joined in July 2021 and after)

QUESTION BANK

Section – A (1 mark)

UNIT I

Choose the correct answer

1. Name the microorganism used for bread preparation.
a. *Lactobacillus* b. ***Saccharomyces cerevisiae***
c. *E. coli* d. *Methanococcus*
2. Bread is a fermented product of _____.
a. Grapes b. **Cereal flour** c. Milk d. Barley
3. _____ is a single cell protein
a. Cellulose b. Cellulase c. **Spirulina** d. Mushroom
4. _____ is not a substrate for beer preparation.
a. wheat b. barley c. cereals d. **Grapes**
5. Wine is prepared from _____
a. wheat b. barley c. malt d. **Grapes**
6. _____ is a substrate for yoghurt preparation.
a. Wheat b. Barley c. Cereals d. **Milk**
7. The microorganism used in fermentation of wine is _____
a. *Lactobacillus* b. ***Saccharomyces cerevisiae***
c. *E. coli* d. *Methanococcus*
8. Crushing of sprouted barley for beer brewing is called as
a. mashing b. **malting** c. fermentation d. coagulation
9. The crushed grapes used in wine preparation is called as _____
a. **Must** b. Hops c. Malt d. Vinegar

10. Which of the following genus is called “white button mushroom”?
- a. *Volvariella* sps b. *Pleurotus* sps c. *Morchella* sps d. ***Agaricus* sps**
11. Spirulina is a _____
- a. edible fungus b. biofertilizer c. biopesticide d. **single cell protein**
12. _____ microorganism is used for yoghurt production .
- a. ***Lactobacillus*** b. *Saccharomyces cerevisiae*
 c. *Penicillium* d. *Methanococcus*
- 13 . The enzyme lactase is used in _____ industry
- a. brewing b. **dairy** c. wine d. detergent
- 14 . Spawn is _____
- a. a type of mushroom b. a type of SCP
 c. a type of yeast powder d. **inoculum in mushroom cultivation**
15. Identify the poisonous mushroom
- a. *Agaricus bisporus* b. *Lentinus edodes*
 c. ***Amanita phalloides*** d. *Volvariella volvacea*

UNIT II

1. Biogas is produced from _____
- a. chemical wastes b. **biological waste** c. charcoal d. wood
2. The major constituent of biogas is _____.
- a. ethane b. **methane** c. propane d. butane
3. In India Biogas is otherwise called as _____.
- a. hydrogen peroxide b. LPG c. **gobar gas** d. Helium gas
4. Biogas is produced by microbial _____ of biological waste
- a. aerobic digestion b. **anerobic digestion**
 c. chemical reaction d. ruminant digestion
5. The advantage of biogas is _____
- a. Environment friendly b. less cost
 c. production of biomanure d. **all of the above**
6. Microorganism involved in biogas production is _____
- a. *Saccharomyces cerevisiae* b. *Lactobacillus*
 c. *E. coli* d. ***Methanobacter***

7. Biodiesel is _____.
 a. LPG b. fossil fuel c. **alternative fuel** d. gobar gas
8. Biodiesel production is the process of producing the biofuel, biodiesel, through the chemical reactions of _____ of vegetable and animal oils.
 a. hydrolysis b. oxidation
 c. acidification d. **transesterification and esterification.**
9. _____ is a source of biodiesel.
 a. LPG b. Animal waste c. **Vegetable oil** d. Vegetable waste
10. Biodiesel is produced by esterification and transesterification of vegetable oil and _____.
 a. propanol b. acetic acid c. propionic acid d. **ethanol**
11. Biogas is produced from _____.
 a. chemical wastes b. **biological waste** c. charcoal d. wood

UNIT III

1. _____ is the first step of the sewage treatment
 a. **Screening** b. Sedimentation c. Solubilization d. Sterilization
2. Sedimentation process is otherwise called _____.
 a. chemical coagulation b. **chemical precipitation** c. purification d. screening
3. During the secondary treatment _____ waste are removed from the sewage
 a. sedimentable b. **non sedimentable** c. degradable d. non degradable
4. _____ produced from microbial conversion is collected to use it as biogas
 a. alum chloride b. ferrous cyanide c. **methane** d. ethane
5. Identify the disinfectant used in tertiary treatment of sewage.
 a. Bromine b. **Chlorine** c. Iodine d. Sodium
6. Tertiary treatment involves removal of
 a. Calcium b. Organic matters c. Coarse materials d. **Phosphate**
7. _____ is suitable for treating large areas containing low level of oil contamination
 a. **in- situ bioremediation** b. ex situ bioremediation
 c. land forming d. composting
8. _____ are man made compounds.
 a. biodegrading agents b. **xenobiotics** c. DNA probes d. biosensors
9. Name the first step of the sewage treatment.

- a. Screening b. **Sedimentation** c. Solubilization d. Sterilization
10. Disinfection is carried out in _____ .
- a. primary treatment b. sedimentation
- c. secondary treatment d. **tertiary treatment**
11. Sedimentation is a _____.
- a. **primary treatment** b. sedimentation
- c. secondary treatment d. tertiary treatment
12. _____ is biological treatment .
- a. primary treatment b. sedimentation
- c. **secondary treatment** d. tertiary treatment

UNIT IV

1. The gene used to treat genetic disease is called _____
- a. **remedial gene** b. gene probe c. gene chip d. genome
2. The direct delivery of a remedial gene into proper organ of a patient to correct the genetic defect is called as _____
- a. embryo therapy b. **in-vivo therapy**
- c. patient therapy c. ex-vivo therapy
3. Treatment of genetic disease by introducing a remedial gene into sperm, egg or zygote is known as _____ gene therapy
- a. **germ line** b. somatic cell c. tissue grafting d. foetal
4. Identify the disease that can be cured by gene therapy
- a. Corona virus infection b. Diabetes c. Malaria d. **Cancer**
5. SCID is a genetic disorder that can be cured by _____.
- a. homeopathy b. allopathy c. **gene therapy** d. siddha medicine
6. Introducing a correct copy of the gene into somatic cells is called _____.
- a. germline gene therapy b. **somatic cell gene therapy**
- c. stem cell gene therapy d. radiation therapy
7. The introduction of a remedial gene directly into the body of the diseased individual is called as _____ gene therapy
- a. **in-vivo** b. ex- vivo c. somatic d. germ line

8. Introduction of a remedial gene into individual cells grown outside the body is called as _____.
- a. in-vivo b. **ex- vivo** c. somatic d. germ line
9. The most commonly used gene therapy method is _____.
- a. in-vivo b. **ex- vivo** c. somatic d. germ line
10. SCID is caused by the mutation in the gene encoding _____.
- a. melanin b. keratin c. **cytosine deaminase** d. cytosine esterase
11. The introduction of corrected copy of the defective gene is called _____.
- a. suicidal therapy b. antisense therapy
c. antisense therapy c. **replacement therapy**
12. The introduction of remedial gene to kill the cells is called _____.
- a. **suicidal therapy** b. antisense therapy
c. augmentation therapy c. replacement therapy
13. The introduction of the antisense mRNA to stop production of a defective protein is called _____.
- a. suicidal therapy b. antisense therapy
c. **antisense therapy** c. replacement therapy

UNIT V

1. Intellectual property is a category of property that includes _____.
- a. copyrights b. patents c. trademarks d. **all of the above**
2. The copyright does not give the rights over _____.
- a. poems b. ideas c. paintings d. **books**
3. HIV is considered under _____.
- a. Risk Group I b. Risk Group II c. **Risk Group III** d. Risk Group IV
4. Copyright gives rights over _____.
- a. ideas b. Expression of ideas c. Inventions d. **All of the above**
5. Class III Biosafety cabinet is used for _____.
- a. HIV b. *Mycobacterium tuberculosis* c. HBV d. **COVID 19**
6. A pathogen that usually causes serious human or animal disease but does not ordinarily spread from one infected individual to another is classified under _____.
- a. Risk Group 1 b. Risk Group II c. **Risk Group III** d. Risk Group IV

7. rDNA work in Colleges have to get prior approval from _____
 a. GEAC b. RCGM c. **IBSC** d. RDAC
8. A _____ is a recognizable sign, design or expression which distinguishes products or services of a particular trader from the similar products or services of other traders.
 a. **Trade mark** b. Trade dress c. Copy right d. Trade design
9. The review of developments in Biotechnology at national and international levels is done by _____.
 a. **RDAC** b. RCGM c. IBSC d. DLC
10. The approval of activities involving large scale use of hazardous microorganisms and recombinants in research and industrial production from the environmental angle is sanctioned by _____.
 a. RDAC b. RGCM c. **GEAC** d. DLC
11. A microorganism that does not cause any serious human disease is classified under _____.
 a. **Risk group 1** b. Risk group 2 c. Risk group 3. Risk group 4
12. A pathogen that can cause human or animal disease but is unlikely to be a serious hazard to laboratory workers, the community, livestock or the environment is classified under _____.
 a. Risk group 1 b. **Risk group 2** c. Risk group 3 d. Risk group 4
13. A pathogen that usually causes serious human or animal disease and that can be readily transmitted from one person to another directly or indirectly and for which no treatment or preventive measures are not usually available is classified under _____.
 a. Risk group 1 b. Risk group 2 c. Risk group 3 d. **Risk group 4**
14. The corona virus COVID 19 is classified as _____ microorganism.
 a. Risk group 1 b. Risk group 2 c. Risk group 3 d. **Risk group 4**
15. IBSC means _____.
 a. **Institutional Biosafety Committee** b. International Biosafety Committee
 c. Integral Biosafety Committee d. Industrial Biosafety Committee
16. _____ is considered as a biological containment.
 a. Air filters b. Sterilization light
 c. Proper waste disposal d. **Temperature sensitive mutants**

Section B (2 marks)

Answer in about 50 words

UNIT I

1. What is SCP?
2. List the advantages of SCP.
3. Write a note on must.
4. Give an account on hops.
5. Comment on malting.
6. Give four examples of SCP.
7. Add a note on spawn.
8. Enlist the varieties of mushrooms cultivated in India.
9. Name any four SCP.
10. List any four fermented foods.
11. Name two edible mushrooms and two poisonous mushrooms.
12. List the stages of beer preparation.
13. List out a few poisonous mushrooms.
14. What is composting?
15. Enlist any two medicinal uses of mushrooms.
16. Comment on the uses of Spirulina.

UNIT II

1. Mention the uses of biogas.
2. Explain the characteristics features of biogas.
3. What are the disadvantages of biodiesel.
4. Comment on gobar gas.
5. What is biodiesel?
6. Write the composition of biogas.
7. How is biogas produced?
8. Enlist the raw materials for biogas production.
9. Define B20.
10. Write the raw materials for biodiesel production.
11. Write any two properties of biodiesel.

12. Write the significance of sedimentation.

13. Write on the benefits of biodiesel.

UNIT III

1. Differentiate coarse screens and medium screens.

2. What are screens?

3. Write a note on activated sludge process.

4. Write an account on anaerobic digestion.

5. Define Flocc.

6. Write the difference between the primary and secondary treatment.

7. Give a brief account on Ion exchange method.

8. What is bioremediation?

9. Briefly explain the method of ex-situ bioremediation.

10. Comment on oxidation ponds.

11. Define xenobiotics.

12. Differentiate coarse screens and fine screens.

13. List out the methods involved in the secondary treatment.

14. Define bioremediation.

15. Comment on in situ bioremediation.

16. Write the advantages of in situ bioremediation.

17. What are CFC?

18. List of few microbes involved in bioremediation.

19. Differentiate in situ and ex situ bioremediation.

Unit IV

1. What is gene therapy?

2. Comment on germline gene therapy.

3. Differentiate germline gene therapy and somatic gene therapy.

4. Define a remedial gene.

5. Write a few oncogenes.

6. Write a few genetic disorders.

7. What is gene augmentation therapy?

8. Comment on replacement therapy.

9. What is the role of TNF α in cancer?
10. Define a suicidal gene. Give an example.
11. Add a note on SCID.
12. Add a note on antisense gene therapy.
13. List a few diseases that can be cured by gene therapy.
14. List out the types of gene therapies

UNIT V

1. Comment on IPR.
2. Elaborate IBSC, RCGM.
3. Name the various biosafety committees in India.
4. What is biosafety?
5. Write on biosecurity.
6. Enlist the duties of Recombinant DNA Advisory Committee (RDAC).
7. What are Risk group I microorganisms?
8. How are microorganisms classified?
9. Add a note on copy right.
10. What is trade mark?
11. List the categories protected under Intellectual Property Rights.
12. List the aim of the biosafety guidelines.
13. Define patent.

Section C (4 marks)

Answer in about 100 words

Unit I

1. What is spawn? How is it prepared?
2. Write down the advantages of SCP.
3. Comment on the nutritional value of mushroom.
4. List the medicinal values of mushroom.
5. Illustrate the biotechnological process of bread making.
6. Appraise the uses of Spirulina.
7. Write on the open circulating system of Spirulina cultivation.

8. What are SCP? Comment on its significance.
9. Review the advantages of Single Cell Protein.
10. Comment on the method of yoghurt making.

UNIT II

1. List out the common properties of biodiesel.
2. What are the advantages of biodiesel?
3. Comment on stages of methanogenesis.
4. Outline the manufacturing process of biodiesel.
5. Illustrate a fixed dome type biogas plant.
6. Examine the structure and function of typical Indian biogas plant.
7. Appraise the importance of oxidation ponds.
8. Enlist the characteristics of biogas.
9. Comment on methane fermentation.
10. Illustrate a floating gas holder type biogas plant.

UNIT III

1. Give an account on sedimentation methods.
2. Comment on the different types of screens.
3. Give an account on tertiary treatment
4. Write the advantage of immobilized microbes.
5. Differentiate in situ and ex situ bioremediation.
6. Write an account of anaerobic digestion
7. Illustrate an oxidation pond.
8. Write a brief note on ex situ bioremediation.
9. Give an account on in situ bioremediation.
10. Write on disinfection in waste water treatment.
11. Illustrate trickling filters.

UNIT IV

1. How is cancer treated using gene therapy ?
2. With a neat diagram explain embryo therapy.
3. Differentiate somatic and germline gene therapy with suitable examples
4. What are oncogenes? How are they inhibited by gene therapy?

5. Illustrate antisense gene therapy.
6. Write a note on different types of gene therapy.
7. List the steps in ex-vivo gene therapy.
8. How are cancer cells killed by gene therapy.
9. Interpret the method of treatment of cancer caused by mutations in tumor suppressor genes.
10. Outline the method of gene drug delivery by adenoviral method.
11. Write on any one physical method for gene drug delivery to cells.

UNIT V

1. What is IPR? Enlist the properties protected under IPR.
2. Enlist the importance of biosafety and biosecurity.
3. Write any five roles of biosafety committees.
4. Sketch the role of RCGM.
5. Explain the role of IBSC.
6. Comment on physical containment.
7. Write on biological containment.
8. Differentiate traditional and intellectual properties .
9. List down legislatures covering IPRs in India.
10. Comment on patenting of biological products.
11. Outline the various risk groups by which the microbes are classified.

Section D (10 Marks)

Answer in about 400 words

UNIT I

1. Explain the process of production of bread.
2. What are single cell proteins? Give an account on mass cultivation of Spirulina
3. Enlist the advantages and disadvantages of Single Cell Proteins.
4. Sketch the schematic process involved in preparation of wine.
5. Explicate the method of cultivation of white button mushroom. Comment on its nutritive value.
6. Elaborately discuss the applications of biotechnology in food industry.
7. Explain the application of biotechnology in production of alcoholic beverages.

UNIT II

1. Explain the process of production of biodiesel. Comment on its advantages

2. Give a detailed account on biogas production. Add a note on its advantages.
3. Outline the important steps involved in biogas production and give a detailed account on the stages of methanogenesis
4. With a neat diagram explain the different types of biogas plants.
5. Appraise the properties and uses of biodiesel

UNIT III

1. Describe the process of primary treatment of removal of solid waste from sewage
2. With a neat diagram explain trickling filters and rotating biological contractors.
3. Explain the various steps involved in waste water treatments.
4. Explain the steps involved in tertiary treatment.
5. With suitable examples explain in situ and ex situ bioremediation.
6. Outline the various aerobic treatment methods of waste water treatment.
7. Explicate the anaerobic treatment methods of waste water treatment.

UNIT IV

1. Give a detailed account on application of gene therapy for cancer treatment .
2. Outline the different methods of gene therapy.
3. With a neat diagram explain the gene therapy methodology for SCID treatment.
4. Explain the various gene drug delivery methods.
5. Outline how gene therapy can be used for treatment of a genetic disorder.
6. With examples describe the different types of somatic cell gene therapy

UNIT V

1. Classify the microorganism on the basis of the risk they pose to humans.
2. What is biosafety? Give an account on the importance of biosafety guidelines.
3. Comment on the various regulatory Committees that monitor biosafety in India.
4. What is intellectual property right? Comment on the various intellectual properties.
5. Enlist the possible dangers of genetically engineered organisms.
6. Explicate the various containment methods.

ST. MARY'S COLLEGE (Autonomous) - THOOTHUKUDI

QUESTION BANK

III B. Sc Zoology

Common Core – Biotechnology

Semester – November 2023

Course Code: 21UBCC51

Time: 3 hours

Max. Marks: 75

Section A

Unit I

1. Identify the plant virus. K1
a. **Gemini virus** b. M13 c. HIV d. RP4
2. Find the genome size of CaMv. K1
a. **8024bp** b. 6024 bp c. 5024 bp d. 7024 bp
3. Name the cell organelle that helps with the spreading of CaMV from cell to cell. K1
a. Coat protein b. Plasma membrane
c. **Plasmodesmata** d. Endoplasmic reticulum
4. How many base pairs does pBR322 have? K1
a. 4052 b. **4363** c. 4039 d. 4000
5. Name the plasmid carrying the cos site of a λ phage DNA. K1
a. pBR322 b. **Cosmid** c. M13 bacteriophage d. Ti plasmid
6. Identify the hybrid DNA formed by the joining of a plasmid and a λ phage DNA carrying a cos site. K1
a. Phasmid b. Plasmid c. **Cosmid** d. Cos cell
7. How many nucleotides does the single stranded extensions of λ DNA cos site have? K1
a. **12** b. 11 c. 13 d. 14
8. What is the size of SV40 vector? K1
a. **5.2 Kbp** b. 8.5 kbp c. 6.4 kbp d. 9.3 kbp
9. What type of virus is Lambda phage ? K1
a. Animal virus b. **Bacterial virus** c. Foreign gene d. Retro virus
10. Which of the following is termed as “chemical weapon” in recombinant DNA technology? K1
a. Ligase b. **Restriction endonuclease**
c. S1 nuclease d. Isoschizomer

11. Which category of vector is Charon phage? K1
 - a. Replacement b. **Insertion** c. Substitution d. Non-replacement
12. Identify the shape of M13 bacteriophage. K1
 - a. Coiled b. **Filamentous** c. Monolayered d. Non-filamentous

Unit II

1. Label the separating product of the Southern blotting technique . K1
 - a. Protein b. **Desired DNA** c. RNA d. Antibody
2. Find the paper type which is used for the Southern blotting technique. K1
 - a. Whatman filter paper b. Aminobenzylmethoxy filter
 - c. Tissue paper d. **Nitrocellulose filter paper**
3. Identify the source of Taq polymerase. K1
 - a. ***Thermus aquaticus*** b. *Thermus caldilimi*
 - c. *Thermus caldophilus* d. *Thermus brockianus*
4. Name the method of introduction of rDNA into cells by electricity. K1
 - a. Transfection b. **Electroporation** c. Microinjection d. cDNA
5. Name the DNA that carries the desired gene to the host. K1
 - a. **Cloning vector** b. Insertional inactivation c. cDNA d. Marker
6. Identify the process of intake of DNA fragments added to the media by the bacteria. K1
 - a. **Transformation** b. Transduction c. Transfection d. Microinjection
7. What is the temperature for heat shock during transformation? K1
 - a. 40°C b. **42°C** c. 50°C d. 100°C
8. Name the virus mediated gene transfer method. K1
 - a. Transformation b. **Transduction** c. Transfection d. Microinjection
9. Find the Chemical used for gene transfer by transformation. K1
 - a. **Calcium chloride** b. Sodium Chloride
 - c. Calcium acetate d. Sodium acetate
10. Name the method of introduction of DNA by exposure to high voltage electric pulse. K1
 - a. Transformation b. Transduction c. Transfection d. **Electroporation**

11. Identify the method widely used to transform *in vitro* animal cell culture that uses lipid vesicles. K1
- a. **Liposome mediated transformation** b. Microinjection
c. Transfection d. Transduction
12. Name the method of direct delivery of genes into the nucleus of the cells using micro needles . K1
- a. Liposome mediated transformation b. **Microinjection**
c. Transfection d. Transduction
13. Find the virus used for retroviral method of transgenesis. K1
- a. **MuLV** b TMV c.CAMV d. ALV

Unit -III

- Identify the main constituents of culture media for animal cell growth. K1
 - Cytokines
 - Interferons
 - Glucose and glutamine**
 - Glucagon
- Find the small part isolated from an animal for *in vitro* culturing in the specific medium. K1
 - Embryoid
 - Synthetic clone
 - Callus
 - Explant**
- Which of the following methods is used to culture anchorage dependent cells?K1
 - Monolayer culture**
 - Perfusion culture
 - Suspension culture
 - Hybridoma technology
- Which one of the following is the primary source of human embryonic stem cells? K1
 - An unfertilized egg
 - The trophoblast
 - The inner cell mass of a blastocyst**
 - The foetal tissue obtained from a post-implantation embryo
- Which among the following is referred to as 'pluripotent'? K1
 - Ability of a single embryonic stem cell to develop into an adult stem cell
 - Ability of a single embryonic stem cell to develop into many different cell types of a body**
 - Ability to induce cancer
 - Ability to heal different types of diseases
- Identify the cell involved in the artificial synthesis of skin, the proliferation and differentiation of keratinocytes. K1

- a. He La cell b. **3T3 fibroblast** c. CHC d. pepsin
7. Which one of the following is involved in the recreation of artificial cartilage as the ground matrix in its architecture? K1
- a. **Collagen** b. Mysoin c. Tubulin d. Nestin
8. Identify the year of completion of Human Genome Project. K1
- a. **2003** b. 2007 c. 2006 d. 2009
9. Which among the following is called as Sanger sequencing method? K1
- a. Chemical degradation b. **Chain termination**
- c. Polymerase chain reaction d. Capillary electrophoresis
10. Name the process involved in second generation technologies. K1
- a. **Ultra thin electrophoresis** b. Flow cytometry
- c. Scanning tunneling microscope d. Mass spectrometric analysis

Unit IV

1. Find the free-floating fern. K1
- a. *Selaginella* b. *Sargassum* c. *Lycopodium* d. *Azolla*
2. Name the strain of fungi used for large-scale production of penicillin. K1
- a. *Aspergillus niger* b. *Candida albicans*
- c. *Saccharomyces cerevisiae* d. ***Penicillium chrysogenum***
3. Name the microorganism that penicillin was used to destroy. K1
- a. Virus b. Fungi c. **Bacteria** d. Algae
4. Name the process by which ethanol is recovered after fermentation. K1 a.
- a. Centrifugation b. **Distillation** c. Filtration d. Cell disintegration
5. Identify the oil that was used in the production of biodiesel in early 1977 . K1
- a. Coconut oil b. Olive oil c. Castor oil d. **Sunflower oil**
6. Find out the natural method of wastewater treatment. K1
- a. Chemical method b. Physical method
- c. **Water hyacinth pond** d. Rotating biological contractors
7. Identify the following nitrogen fixers found in rice fields associated with *Azolla*. K1
- a. *Tolypothrix* b. *Frankia* c. ***Anabaena*** d. *Spirulina*
8. Find out the correct statement about bioremediation. K1
- a. Usage of microbes to create new organisms
- b. Usage of anaerobic bacteria to create new antibiotics

- c. **Usage of microbes to destroy environmental pollutants**
 - d. Usage of aerobic bacteria to create new vaccines
9. Name the fermentation processes is used in the production of penicillin? K1
- a. Aerobic fermentation followed by anaerobic fermentation
 - b. Anaerobic fermentation
 - c. **Aerobic fermentation**
 - d. Anaerobic fermentation followed by aerobic fermentation
10. Name the most common bacteria used for bioleaching. K1
- a. *Spirillum* b. *Coccus* c. ***Bacillus*** d. *Streptococcus*

Unit V

1. Name the chemical which is applied to the haploid embryoids for two days and grown into plants *in vitro* as a result the plants are diploid and fertile. K1
- a. **Colchicine** b. Cytokinin c. Sucrose d. Auxin
2. Identify the transgenic plant, which is supplemented with vitamin A in order to improve its nutritional quality. K1
- a. Cotton b. Potato c. Tomato d. **Rice**
3. Name the disease caused by *Agrobacterium tumefaciens* . K1
- a. Root rot b. **Crown gall** c. Stem rot d. Leaf blight
4. Name the plant which was used first for the successful anther culture. K1
- a. ***Ginkgo biloba*** b. *Oryza sativa* c. *Auracaria* d. *Tobacco*
5. Find the result of High Auxin: Cytokinin ratio. K1
- a. Callus development b. Root growth c. **Shoot growth** d. Flower development
6. Identify the test that is used to identify the first mitotic completed anther for anther culture. K1
- a. Colchicine treatment b. **Acetocarmine squash test**
 - c. Carcinogenic test d. Pathogenic test
7. Find the gene used to treat genetic disease. K1
- a. **Remedial gene** b. Gene probe c. Gene chip d. Genome

8. Which among the following therapy is involved in the direct delivery of a remedial gene into proper organ of a patient to correct the genetic defect? K1
 a. Embryo therapy b. ***In-vivo* therapy** c. Patient therapy c. *Ex-vivo* therapy
9. Name the gene therapy which introduces a remedial gene into sperm, egg or zygote . K1
 a. **Germ line** b. Somatic cell c. Tissue grafting d. Foetal therapy
10. Find the DNA which is unique to an individual. K1
 a. **Satellite DNA** b. Single stranded DNA c. r DNA d. Duplex DNA
11. Identify the process used to distinguish the individuals according to the DNA print pattern. K1
 a. Southern blotting b. Northern blotting c. **DNA profiling** d. hybridization

Section B

Unit I

1. Explain cloning vector. K2
2. Explain plant viral vectors. K2
3. Explain the uses of restriction endonuclease. K2
4. Interpret plasmids. K2
5. Differentiate between the lytic and lysogenic life cycle of lambda phage. K2
6. Interpret the advantages of lambda phage. K2
7. Explain the branches of biotechnology. K2
8. Discuss λ -phage replacement vectors? K2
9. Explain the characteristics of natural plasmid. K2
10. Explain the features of M13 phage. K2
11. Interpret on pBR322. K2
12. Outline the desirable characteristics of a good vector. K2
13. Interpret any two restriction enzymes and their recognition sites. K2
14. Explain the features of Gemini virus. K2
15. Explain the genomic organization of tobamo virus. K2
16. Draw the structural components of Ti plasmid. K2
17. Draw and label the structure of a T-DNA. K2
18. Interpret the importance of RB sequence and LB sequence of T-DNA. K2

Unit II

1. Explain DNA library. K2
2. Explain PCR. K2
3. Interpret hybridization techniques. K2
4. Explain transformation. K2
5. Interpret on electroporation. K2
6. Explain the gene gun method. K2
7. Summarize the methods to introduce rDNA into cells. K2
8. Summarize the applications of southern blotting. K2
9. Distinguish between Southern and Northern techniques. K2
10. Indicate the stages of PCR cycle. K2

Unit III

1. Differentiate natural media from chemically defined media. K2
2. Summarize different types of complex natural media. K2
3. Explain monolayer culture. K2
4. Discuss hollow fibre bioreactor immobilized cell culture. K2
5. Explain embryonic stem cell culture. K2
6. Infer the steps involved in the production of artificial skin. K2
7. Discuss the synthesis of artificial cartilage. K2
8. Explain HUGO. K2
9. Infer the goals of Human Genome Project. K2
10. Discuss Sanger sequencing technique. K2

Unit IV

1. Explain Xenobiotics. K2
2. Discuss about Bioleaching. K2
3. Write about different types of bioleaching. K2
4. Infer Bioremediation. K2
5. Summarize the uses of ethanol. K2
6. Draw and label the parts of *Azolla*. K2
7. Interpret on *Azolla*. K2
8. Explain which crop of *Azolla* is being used as a biofertilizer. K2

9. Draw and label the parts of coffee still. K2
10. Summarize the uses of *Azolla*. K2

Unit V

1. Summarize the advantages of DNA probes. K2
2. Explain satellite DNA. K2
3. Discuss germline gene therapy. K2
4. Infer the different types of somatic cell gene therapy. K2
11. Explain antisense gene therapy. K2
12. Interpret callus. K2
13. Discuss embryo culture. K2
14. Explain anther culture. K2
15. Interpret edible vaccine. K2
16. Summarize the significance of embryo culture. K2
17. Discuss about Bt cotton. K2

Section C

Unit I

1. Compile the drawbacks of using CaMv as a vector. K3
2. Present the structure and function of the Tobamovirus. K3
3. Show the structure of geminivirus and add a note on its significance. K2
4. Interpret scope of animal biotechnology in various fields of life science. K3
5. Analyse the role of restriction enzymes in genetic engineering. K4
6. Interpret the role of vir proteins in *Agrobacterium* T-DNA transfer. K3
7. Illustrate insertion vectors of lambda phage. K3
8. Analyze M13 based vectors. K4
9. Interpret the salient features of SV40. K5
10. Explain the structure of pBR322 vector. K5
11. Examine the applications of Gemini virus. K4
12. Evaluate the features of a Ti plasmid vector. K5

Unit II

1. Organize the method of southern blotting techniques. K4
2. Compile the notes on western blotting techniques. K3
3. Organize the northern blotting techniques and write their uses. K4
4. Distinguish between transformation and electroporation. K4
5. Illustrate the steps involved in gene gun method of gene transfer. K3
6. Examine the liposome mediated gene transfer to animal cells. K4
7. Illustrate the viral vector method of gene transfer. K3
8. Analyze the applications of PCR. K4
9. Interpret the procedure for transformation of bacterial cell. K3
10. Interpret the procedure for electroporation of bacterial cell. K3

Unit III

1. Present the various types of natural animal ingredients used as media. K3
2. Show the different types of chemically defined media. K3
3. Compile the various approaches for the immobilized culture of cell lines. K3
4. Investigate the steps involved in the culture of embryonic stem cells. K4
5. Examine the applications of human embryonic stem cell culture. K4
6. Present the tissue engineering of artificial skin. K4
7. Analyze the production of artificial cartilage. K4
8. Examine Celera genomics HGP. K4
9. Appraise the different methods of DNA sequencing. K4
10. Present the potential benefits of HGP. K3

Unit IV

1. Compile the notes on bioremediation of hydrocarbons. K3
2. Present the types of bioleaching. K3
3. Compile the steps involved in the production of penicillin. K3
4. Show the steps involved in the production of ethanol. K3
5. Diagrammatically explain *Azolla*. K4

Unit V

1. Compile the notes on golden rice. K3
2. Present the method for the anther culture. K3
3. Compile the steps involved in embryo culture. K3
4. Show the method of suspension culture and write its significance. K3

5. Analyze DNA probes and their applications. K4
 6. Outline the methodology of DNA fingerprinting. K4
 7. Categorize the applications of DNA Fingerprinting. K4
 8. Analyze the different types of somatic cell gene therapy with suitable examples. K4
- Present ex-vivo gene therapy with an example. K3

Section D

Unit I

1. Simplify the characteristic features of any two plant viral vectors. K4
2. Distinguish between Geminivirus and tobamovirus. K4
3. Analyze the restriction enzymes and their types. K4
4. Appraise the role of SV40 virus as a gene cloning vector. K5
5. Explain the structure and advantages of pBR322. K5
6. Examine the importance of biotechnology. K5
7. Appraise the features of restriction enzymes and add a note on their uses. K5
8. Explain the T_i plasmid vectors. K5
9. Assess the characteristic features of lambda phage vectors. K5
10. Explain the detailed mechanism of Agrobacterium T-DNA transfer. K5.

Unit II

1. Outline the method of PCR techniques and write its application. K4
2. Distinguish between Northern and western blotting and write their applications. K4
3. Appraise the various methods of gene transfer to host cells. K5
4. Evaluate the various non-viral methods of gene delivery to host cells. K5
5. Explain the viral and non-viral method of gene transfer to animal cells. K5
6. Analyze the methods of gene transfer to animal cells. K4
7. Examine the methods of gene transfer to bacterial cell. K4

Unit III

1. Analyze the types and applications of culture media in animal cell and tissue culture. K4
2. Investigate the strategies of monolayer and immobilized culture of cell lines. K4
3. Examine the techniques and applications of human embryonic stem cell culture. K4
4. "Tissue engineering provides suitable tissues for implantation in patients" – Prove K5
5. Evaluate Human Genome Project goals, techniques and potential benefits. K5

Unit IV

1. Outline the industrial production of penicillin and its uses. K4
2. Simplify the steps involved in the production of ethanol. K4
3. Diagrammatically explain the morphology of *Azolla* and add its uses. K4
4. Organize the different types of bioleaching and briefly explain it. K4
5. Analyze the bioremediation of hydrocarbons and Xenobiotics. K4
6. Evaluate the biological methods of waste water treatment. K4

Unit V

1. Outline the steps involved in embryo culture and write their significance. K4
2. Diagrammatically explain the steps followed in organ culture development. K4
3. Simplify the steps followed in *in vitro* pollination. K4
4. Analyze the methods and mechanisms of DNA probes diagnosis of genetic disorders. K4
5. Investigate the methodology of DNA fingerprinting and its applications. K4
6. Evaluate somatic cell gene therapy and treatment of genetic diseases with example. K5

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI.

III B. Sc. Zoology Semester V

Core 1 - Animal Physiology Course Code: 21UZOC51

(for those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. What type of reaction is represented by the enzymatic digestion of food in our body? (K1)
a. **Hydrolysis** b. Oxidation c. Reduction d. Diffusion
2. Identify the following one is secreted by the parietal cells of the stomach (K1)
a. Pepsin b. Gastrin c. **Hydrochloric acid** d. Mucin
3. Name the largest part of the alimentary canal (K1)
a. Stomach b. Oesophagus c. **Small intestine** d. Large intestine
4. Name the first part of the small intestine (K1)
a. Ileum b. Caecum c. Jejunum d. **Duodenum**
5. Choose the enzyme that acts on carbohydrates (K1)
a. Trypsin b. **Amylase** c. Lipase d. Pepsin
6. Name the readily available source of energy in the body (K1)
a. Proteins b. **Carbohydrates** c. Lipids d. Vitamins
7. What is the main function of microvilli in the intestine of man?
a. To digest fat c. **Increase surface area for the absorption of food**
b. Secrete gastric juice d. Secrete digestive enzymes
8. Which among the following is a protein deficiency disorder?
a. Scurvy b. Tetanus c. Anaemia d. **Kwashiorkor**
9. Name the form in which carbohydrates are absorbed in the body
a. **Glucose** b. Amino acids c. Fatty acids d. Disaccharides
10. Which deficiency causes marasmus disease?
a. Carbohydrate b. **Protein** c. Vitamin A d. Iron
11. Choose the main place of absorption in our body
a. **Intestine** b. Stomach c. Liver d. Pancreas

Unit II

1. Select oxygen carrying blood pigment in annelids (K1)
a. Haemoglobin b. Haemocyanin c. Haemerythrin d. **Chlorocruorin**
2. Where does exchange of respiratory gases take place in the lung? (K1)
a. **Alveoli** b. Trachea c. Bronchi d. Bronchiole
3. Which one of the following is explained by Hamburger's phenomenon? (K1)
a. Breathing mechanism b. **Chloride shift**
c. Oxygen saturation of haemoglobin d. Formation of bicarbonate
4. State RQ (K1)
a. **Ratio between CO₂ liberated and O₂ taken**
b. Ratio between O₂ liberated and fat utilized
c. Volume of O₂ taken
d. Volume of CO₂ liberated
5. Select respiratory quotient of glucose (K1)
a. 0.5 b. 2 c. **1** d. 1.5
6. Name the end product of anaerobic respiration (K1)
a. Glucose b. CO₂ c. **Lactic acid** d. NAD
7. Find the percentage of water in blood plasma (K1)
a. 80 b. **90** c. 98 d. 60
8. What is the life span of red blood cells? (K1)
a. 30 days b. 50 days c. 80 days d. **120 days**
9. Choose the graveyard of RBC (K1)
a. Liver b. Kidney c. **Spleen** d. Thymus
10. Which of the following white blood cells is capable of phagocytosis? (K1)
a. Basophil b. Eosinophil c. Lymphocyte d. **Neutrophil**
11. Which one of the following guards the opening of right auricle into right ventricle? (K1)
a. Mitral valve b. **Tricuspid valve**
c. Bicuspid valve d. Semilunar valve
12. Which one of the following is called as Heart of heart? (K1)
a. **SA node** b. AV node
c. Bundle of His d. Purkinji fibers

13. Which of the following plasma proteins are involved in coagulation of blood? (K1)

- a. Albumin b. Globulin c. **Fibrin** d. Collagen

14. Choose the contraction phase of cardiac cycle (K1)

- a. Diastole b. **Systole** c. Diastasis d. Isometric

15. Select the normal blood pressure of a healthy person (K1)

- a. 110/90 b. 120/100 c. 120/90 d. **120/80**

Unit III

1. Find out the excretory product of ureotelic animals (K1)

- a. **Urea** b. Uric acid c. Purines d. Guanine

2. What is the functional unit of Kidney? (K1)

- a. **Nephron** b. Neuron c. Cortex d. Medulla

3. Where does ultrafiltration take place in the nephron? (K1)

- a. **Malpighian corpuscle** b. Henle's loop
c. Convoluted tubule d. Collecting duct

4. What is the inflammation of the kidney called as? (K1)

- a. **Nephritis** b. Ulcer c. Neuritis d. Edema

5. Name the organisms which can tolerate changes in salinity (K1)

- a. **Euryhaline** b. Stenohaline c. Eurythermal d. Stenothermal

6. Name the organ by which excess of water is removed in Astacus (K1)

- a. Chloride cell b. Kidney c. **Green glands** d. Rectal glands

7. Which organ is used to secrete the excess of salt in anadromous fishes? (K1)

- a. **Chloride secretory cells** b. Glomerular kidney
c. Rectal glands d. Kidney

8. Which among the following is an antifreeze substance present in the Antarctic ice fish? (K1)

- a. **Glycoprotein** b. Glycerol c. Urea d. Magnesium

9. Which animal uses panting to reduce the body temperature? (K1)

- a. **Dogs** b. Man c. Snails d. Horse

10. What acts like an automatic furnace in bat during cold stress? (K1)

- a. **Brown fat** b. Epinephrine c. Thyroxine d. Glycogen

Unit - IV

1. What is the plasma membrane of muscle fiber called as? (K1)

- a. **Sarcolemma** b. Endomysium c. Epimysium d. Sarcoplasm

2. Name the protein filament present in the sarcoplasm of muscle (K1)
 - a. **Myofibril** b. Sacromere c. Tendons d. Myomysin
3. What is the interval between the application of stimulus and the beginning of contraction in muscle called as? (K1)
 - a. **Latent period** b. Period of relaxation
 - c. Fatigue d. Period of contraction
4. What is the study of action potential in human skeleton muscle called as? (K1)
 - a. **Electromyography** b. Electrocardiography
 - c. Ocenography d. Thermography
5. Which of the following is called as sarcomere? (K1)
 - a. Distance between Z line and A band b. **Distance between two Z lines**
 - c. Distance between I band and H zone d. Distance between A and I band
6. Name the nerves arising from the brain (K1)
 - a. **Cranial nerves** b. Spinal nerves c. Oral nerves d. Renal nerves
7. How are myelinated neurons otherwise called as? (K1)
 - a. Grey neurons b. **White neurons**
 - c. Sensory neurons d. Internuntial neuron
8. Find out the function of Acetylcholine from the following(K1)
 - a. **Synaptic transmission** b. Synaptic delay
 - c. Membrane permeability d. Permeability
9. Where does saltatory conduction of nerve impulse take place? (K1)
 - a. **Myelinated nerve fibres** b. Non- myelinated nerve fibres
 - c. Grey fibres d. Abducens
10. Name the region of the eye where optic nerve passes out of the retina (K1)
 - a. Fovea b. Iris c. **Blind spot** d. Optic chiasma

Unit V

1. Which one of the following is the onset of reproductive cycle in man? (K1)
 - a. **Puberty** b. Spermiation c. Ovulation d. Menopause
2. Name the sac the testis is remains inside (K1)
 - a. **Scrotum** b Seminal vesicle c. Oviduct d. Uterus
3. Identify the innermost layer of uterus (K1)
 - a. **Endometrium** b. Cervix c. Urethra d. Fimbria

4. Which one of the following secretes progesteron? (K1)
a. Ovary b. Oviduct c. Testes d. **Corpus luteum**
5. Find the hormone which influences the mammary glands to secrete milk (K1)
a. **Prolactin** b. Relaxin c. Oxytocin d. Oestrogen
6. Identify the hormone which is involved in the secondary sexual characters in man (K1)
a. Oestrogen b. **Androgen** c. Relaxin c. Oxytocin
7. Select the hormone which influences the mammary glands to secrete milk (K1)
a. Relaxin b. Oxytocin c. **Prolactin** d. Oestrogen
8. Name the master gland of the endocrine system (K1)
a. **Pituitary** b. Parathyroid c. Adrenal d. Thyroid
9. Select the disease which is caused by the overactivity of pituitary gland in the child (K1)
a. Marasmus b. Dwarfism c. **Gigantism** d. Goitre
10. Identify high blood sugar level is referred as (K1)
a. Ketoneuria b. **Glycosuria** c. Polyuria d. Polyphagia
11. Identify the disease caused by the deficiency of insulin (K1)
a. Heart attack b. **Diabetes mellites** c. Coronary heart disease d. Fever

Section B (2 marks)

Answer in about 50 words

Unit I

1. Explain digestion (K2)
2. Differentiate between intracellular and extracellular digestion (K2)
3. Explain the parts of the stomach (K2)
4. Summarize the enzymes present in the intestinal juice (K2)
5. Discuss about proteases (K2)
6. Explain digestion of cellulose (K2)
7. Explain how the proteins are absorbed in the body (K2)
8. Express the meaning of malnutrition (K2)
9. Present the clinical manifestations of Kwashiorkor disease (K2)
10. Indicate the symptoms of Marasmus (K2)

Unit II

1. Explain the important respiratory pigments (K2)
2. Discuss the functions of respiratory pigments (K2)
3. Summarize the factors that favour dissociation of oxyhaemoglobin (K2)
4. Indicate the formula of respiratory quotient (K2)
5. Explain the major functions of blood (K2)
6. Summarize the various components of blood (K2)
7. Explain blood coagulation (K2)
8. Discuss about the pacemaker of heart (K2)
9. Explain cardiac cycle and its phases (K2)
10. Distinguish between hypertension and hypotension (K2)

Unit - III

1. Explain uricotelism with example (K2)
2. Indicate why terrestrial animals are not ammonotelic (K2)
3. Illustrate the components of Malpighian corpuscle. (K2)
4. Explain ultra filtration (K2)
5. Infer why marine animals face the problem of physiological dehydration (K2)
6. Indicate the special feature of euryhaline animals (K2)
7. Outline the special features of regional heterotherms. (K2)
8. Explain the meaning of basking (K2)
9. Rephrase the meaning of aestivation (K2)
10. Relate thermoregulation and panting in dogs (K2)
11. Indicate what is referred as automatic furnace (K2)

Unit – IV

1. Indicate what is meant by sarcomere (K2)
2. Express the location of sarcoplasm in a muscle fiber (K2)
3. Indicate the use of tendons (K2)
4. Explain the structure of myosin. (K2)
5. Differentiate isometric contraction from isotonic contraction (K2)
6. Explain myelinated neurons (K2)
7. Summarize the function of motor neuron (K2)

8. Distinguish axon from axoplasm (K2)
9. Illustrate the multi polar neuron (K2)
10. Restate the meaning of orthodromic conduction (K2)
11. Explain the meaning of saltatory propagation. (K2)
12. Outline the events of sodium-potassium pump (K2)
13. Rephrase the meaning of synapse (K2)
14. Explain synaptic cleft (K2)
15. Illustrate neuromuscular junction (K2)
16. Explain blind-spot present in the eye (K2)
17. Explain the accommodation of eye (K2)
18. Differentiate between rods and cones (K2)
19. Explain myopia (K2)

Unit V

1. Indicate the functions of semen (K2)
2. Discuss about puberty (K2)
3. Distinguish between spermatogenesis and spermiogenesis (K2)
4. Explain ovulation (K2)
5. Discuss about endocrine glands (K2)
6. Differentiate between adenohypophysis and neurohypophysis (K2)
7. Explain the groups of corticosteroids (K2)
8. Illustrate adrenal gland (K2)
9. Differentiate between glycosuria and polyuria (K2)
10. Explain diabetes mellitus (K2)
11. Discuss about endocrine glands (K2)

Section C (5 marks)

Answer in about 200 words

Unit I

1. Classify intracellular and extracellular digestion with examples (K3)
2. Analyse the structure of human alimentary canal (K4)
3. Compile the digestion of polysaccharides and disaccharides (K3)
4. Present the role of pancreatic juice in digestion (K3)

5. Compile the functions performed by liver in the process of digestion (K3)
6. Relate small and large intestine to the function of absorption (K3)
7. Compile the process of absorption of carbohydrates in the body (K3)
8. Present any two disorders caused by protein energy malnutrition (K3)

Unit II

1. Classify the types of respiratory pigments (K3)
2. Analyze the structure of haemoglobin (K4)
3. Examine how haemoglobin is associated with respiration (K4)
4. Analyze Bohr's effect and its physiological significance (K4)
5. Present an account on chloride shift (K3)
6. Classify the components of blood (K3)
7. Appraise the mechanism of coagulation of blood (K4)
8. Analyse the origin and conduction of heart beat (K4)
9. Outline the sequence of events in cardiac cycle (K4)
10. Appraise the mechanisms of regulation of blood pressure in man (K4)

Unit III

1. Appraise uricotelism (K4)
2. Analyse the phenomenon of hibernation (K4)
3. Examine how migratory fishes face the problem of osmoregulation (K4)
4. Demonstrate the process of ultra filtration in urine formation (K3)
5. Examine the structure of nephron with a neat and labeled sketch (K4)
6. Compare shivering and non-shivering thermogenesis (K4)
7. Analyse the mechanism of osmoregulation in crustaceans (K4)
8. Compare the osmoregulation in marine teleost fishes with that of freshwater teleost fishes (K4)
9. Classify animals based on thermoregulation. (K3)

Unit IV

1. Differentiate isometric and isotonic muscle contractions (K4)
2. Present the physical changes that take place during muscle contraction (K3)
3. Demonstrate the sliding filament theory (K3)
4. Compile the chemical changes that take place during muscle contraction (K3)
5. Present a brief note on synapse (K3)

6. Classify the neuron (K3)
7. Analyse the myoneural junction (K4)

Unit V

1. Present a brief note on male reproductive system of man (K3)
2. Present a brief note on female reproductive system of human (K3)
3. Examine the structure of human ovary with a neat and labeled sketch (K4)
4. Classify the maternal body changes during pregnancy (K3)
5. Demonstrate the process of parturition (K3)
6. Analyze the hormonal control of menstrual cycle (K4)
7. Examine the structure of thyroid gland (K4)
8. Compare gigantism and acromegaly (K4)
9. Classify the diseases caused by the deficiency of insulin (K3)
10. Examine the structure of adrenal gland with a neat and labeled sketch (K4)

Section D (10 marks)

Answer in about 400 words

Unit I

1. Analyze the digestion of carbohydrates in various parts of alimentary canal (K4)
2. Evaluate the mode of action of proteolytic enzymes of man (K5)
3. Examine the role of liver and pancreas in the physiology of digestion (K4)
4. Outline the absorption of carbohydrate (K4)
5. Assess the causes, clinical implications and remedy for malnutrition (K5)
6. Analyse the process of absorption of different types of food in our body (K4)

Unit II

1. Appraise the transport of respiratory gases (K4)
2. Examine the process of carbon dioxide transportation in man (K4)
3. Appraise the types and functions of blood cells (K4)
4. Outline the theories of coagulation of blood with schematic representation (K4)
5. Assess the structure and functioning of human heart with a sketch (K5)
6. Outline the phases of cardiac cycle (K4)

Unit – III

1. Examine the structure and functions of human kidney (K4)
2. Outline the different steps involved in urine formation (K4)
3. Classify animals based on the type of their excretory products (K4)
4. Analyze the physiology of excretion (K4)
5. Classify animals based on thermoregulation (K4).
6. Determine the effects of lethal temperature and explain how acclimatization take place in animals (K5)
7. Assess the different types of thermoregulatory mechanisms in animals (K5)
8. Evaluate the osmoregulatory mechanism in fishes(K5)

Unit – IV

1. Categorize the different types of changes taking place during muscle contraction (K4)
2. Analyze the ultra structure of skeletal muscle (K4)
3. Outline the process of nerve impulse conduction through non-myelinated neuron (K4)
4. Examine the types of synapse and explain the process of synaptic transmission (K4)
5. Evaluate the steps involved in neuromuscular transmission of impulse and the role of neurotransmitters in it (K5)

Unit V

1. Analyze the steps involved in oogenesis (K4)
2. Analyze the steps involved in spermatogenesis (K4)
3. Evaluate the cyclic events in different phases of menstrual cycle (K5)
4. Outline the facts about pregnancy and parturition. Add a note on menopause (K4)
5. Analyze the ultra structure of Pituitary gland (K4)
6. Categorize the hormones and its functions of thyroid gland (K4)

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI
III B.Sc. Zoology Semester V
Core III - Cell Biology and Genetics Course Code : 21UZOC52
(for those who joined in July 2021 and after)
Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Who is called the father of Cell Biology? (K1)
a. Hertwig b. **Schwann** c. Robert Hooke d. Leeuwenhoek
2. What does the Cell Theory state? (K1)
a. All cells have nuclei b. All cells are living c. Cells reproduce by mitosis
d. **Cells are fundamental structural units of plants and animals**
3. Who introduced the term protoplasm? (K1)
a. Flemming b. **Purkinje** c. Robert Brown d. Weismann
4. Which one of the following will be absent in prokaryotic cell? (K1)
a. Cell wall b. **Nuclear membrane** c. Cytoplasm d. Ribosomes
5. Name the nucleus without a nuclear membrane. (K1)
a. **Nucleoid** b. Nucleolus c. Mitochondria d. Nucleoplasm
6. Which separates the contents of the cell from the surrounding environment? (K1)
a. Nuclear membrane b. **Plasma membrane**
c. Mitochondrial membrane d. Lysosomal membrane
7. Select the composition of plasma membrane. (K1)
a. Proteins b. Lipids c. Cellulose d. **Proteins and lipids**
8. What is the boundary of the cell?
a. **Plasma membrane** b. Nuclear membrane c. Cytoskeleton d. Nucleolus
9. Name the thickened area of plasma membrane of two adjacent cells. (K1)
a. Tight junction b. Gap junction c. **Desmosome** d. Basal infolding
10. Find the other name for the gap junction. (K1)
a. Desmosomes b. Zona occludes c. Interdigitations d. **Nexus**
11. Name the process of engulfing of fluid particles through plasma membrane. (K1)
a. Phagocytosis b. **Pinocytosis** c. Cytopenphsis d. Osmosis

12. Who proposed the Fluid mosaic model of cell membrane? (K1)

- a. Danielli and Davson b. Singer and Nicholson
- c. Schleidan and Schwann d. Messelson and Stahl

13. Name the disc shaped thick areas of plasma membrane of two adjacent cells. (K1)

- a. Microvilli b. Desmosomes c. Nexus d. Plasmadesmata

Unit II

1. Who observed mitochondria first ? (K1)

- a. Robert Hooke b. Robert Brown c. Lipmann d. **Altman**

2. Where are Cristae found ? (K1)

- a. Golgi complex b. **Mitochondria** c. Lysosome d. Ribosomes

3. Name the cell organelle found numerously in brown fat tissues of bats. (K1)

- a. Ribosomes b. Lysosomes c. **Mitochondria** d. Nucleus

4. Which is called as the power house of the cell ? (K1)

- a. Chromosomes b. Centrioles c. Ribosomes d. **Mitochondria**

5. Which of the following is associated with the structure of Golgi complex? (K1)

- a. Cristae b. **Cisternae** c. Annuli d. Desmosomes

6. Which of the following organelle contains enzymes that modify proteins and lipids? (K1)

- a. Lysosomes b. Peroxisomes c. **Golgi complex** d. Ribosomes

7. What is the role of smooth endoplasmic reticulum ? (K1)

- a. Protein synthesis b. Synthesis of carbohydrate
- c. Synthesis of amino acid d. **Synthesis of lipids**

8. Which cell organelle digests the useless old organelles? (K1)

- a. Ribosome b. Microsome c. **Lysosome** d. Peroxisome

9. Select the cell organelle containing hydrolytic enzymes. (K1)

- a. Mesosomes b. **Lysosomes** c. Ribosomes d. Mitochondria

10. Name the secondary lysosomes with undigested wastes. (K1)

- a. **Residual bodies** b. Phagosomes c. Primary lysosomes d. Autophagic vacuoles

11. Which is the site of protein synthesis in cytoplasm? (K1)

- a. Mitochondria b. **Ribosome** c. Lysosome d. Golgicomplex

12. Name the condition where five or more ribosomes join through mRNA chain. (K1)

- a. Centrosomes b. Glyoxisomes c. **Polysomes** d. Microsomes

13. Select the cell in which the smooth endoplasmic reticulum exists as myeloid bodies. (K1)

- a. Goblet cells b. Plasma cells c. **Retinal cells** d. Notochordal cells

14. Which of the following cell organelles is called a suicidal bag? (K1)

- a. Lysosomes b. Golgi bodies c. Cell membrane d. Mitochondria

Unit III

1. Identify the information centre of the cell (K1)

- a. Mitochondria b. Chloroplasts c. Lysosomes d. **Nucleus**

2. Find the site of Ribosomal RNA synthesis (K1)

- a. Mitochondria b. **Nucleoli** c. Endoplasmic reticulum d. Golgi complex

3. What is the alternative name for the nuclear envelope? (K1)

- a. **Karyotheca** b. Karyolymph c. Karyoplasm d. Plasma membrane

4. Who discovered the nucleus? (K1)

- a. Altman b. **Robert Brown** c. Robert d. Benda

5. Identify the location of nucleolus (K1)

- a. Nuclear membrane b. Chromatin c. **Nucleolar organizer** d. Mitochondria

6. Which of the following has V- shaped chromosome? (K1)

- a. Telocentric b. Acrocentric c. Sub-metacentric d. **Metacentric**

7. Show the structures that cap the ends of eukaryotic chromosomes (K1)

- a. Centromeres b. **Telomeres** c. Histones d. Kinosomes

8. Name the nucleolar organizer region on the chromosome(K1)

- a. Primary constriction b. **Secondary constriction**
c. Satellite d. Telomere

9. Histone proteins pack DNA into a repeating array of DNA-protein particles. Label it (K1)

- a. **Nucleosomes** b. Heterochromatin c. Euchromatin d. Centrosomes

10. What statement about nucleosomes is false? (K1)

- a. It is a “bead” on a string of unfolded chromatin
b. It produces a 3-fold packing ratio of DNA
c. **They are found only in mitotic chromosomes**
d. It consists of DNA wrapped around histone proteins, plus a segment of linker DNA

11. Which of the following is the picture of a person’s chromosomes? (K1)

- a. **Karyotype** b. Syndrome c. DNA fingerprint d. Kinosome

12. Find out the scientist who discovered chromosome. (K1)

- a. Waldeyer b. Strausberger c. Strausberger d. Porter

13. Which of the following has V- shaped chromosome? (K1)

- a. Telocentric b. Acrocentric c. Sub-metacentric d. **Metacentric**

14. Name the structures that cap the ends of eukaryotic chromosomes? (K1)
 a. Centromeres b. **Telomeres** c. Histones d. Kinosomes
15. Which is the nucleolar organizer region on the chromosome? (K1)
 a. Primary constriction b. **Secondary constriction**
 c. Satellite d. Telomere
16. Which base pairs are found in DNA?
 a. A- C and T- G b. **A- T and C- G** c. A- G and C- T d. A- U and C- G

Unit IV

1. Who is regarded as the “Father and founder of Genetics”? (K1)
 a. Morgan b. Hugo de Vries c. **Gregor Mendel** d. Lamarck
2. Choose the plant selected by Mendel to conduct the hybridization experiments (K1)
 a. ***Pisum sativum*** b. *Mirabilis jalapa* c. *Lathyrus odoratus* d. *Brassica campestris*
3. Spell the reason for the selection of pea plant by Mendel (K1)
 a. They were cheap b. They were available easily
 c. They were pest resistant d. **They had contrasting characters**
4. According to Mendelism which character shows dominance? (K1)
 a. Wrinkled seed b. **Green pod colour**
 c. Green colour in seed coat d. Terminal position of flower
5. Relate the individual which has two different alleles of a gene with the genetic status (K1)
 a. Homozygous b. Allelopathic c. **Heterozygous** d. Polyallelic
6. A monohybrid cross tests which of the following rules? (K1)
 a. **Rule of segregation** b. Rule of independent assortment
 c. Chromosome theory of inheritance d. Cell theory
7. What is the expected genotypic ratio of the F₂ generation of monohybrid cross? (K1)
 a. 3:1 b. 3:1:6 c. **1:2:1** d. 1:1
8. What is the genotypic ratio of Mendel’s dihybrid cross in F₂? (K1)
 a. 1:2:1 b. 3:1 c. **9:3:3:1** d. 7:2:3:4
9. The best method to determine the genotype of dominant parent is by crossing it with the hybrid. Name this cross. (K1)
 a. Test cross b. Selfing c. Cross fertilization d. **Back cross**
10. Identify the cross involving F₁ hybrid plant and recessive parent (K1)
 a. Monohybrid Cross b. Dihybrid cross c. Back cross d. **Test cross**
11. Show the classical dihybrid test cross ratio (K1)
 a. 7:1:1:7 b. 1:7:7:1 c. 15:1 d. **1:1:1:1**

12. In Snapdragon a red flower (RR) is crossed with white flower (rr). What colour are flowers that are Rr? (K1)
- a. Red b. Red and White c. **Pink** d. White
13. Identify the reason for the appearance of pink coloured flowers in 4 O' clock plant, *Mirabilis* in F₁ generation (K1)
- a. **Incomplete dominance** b. Complete dominance
c. Codominance d. Polygenic inheritance
14. In poultry, tell the new comb shape that appears by collaboration of two dominant genes
- a. Single b. Rose c. Pea d. **Walnut**
15. Which of the following is the result of a cross between fowls with rose comb (RRpp) and pea comb (rrPP)? (K1)
- a. Rose b. Pea c. **Walnut** d. Single
16. Who was awarded with Nobel Prize in Physiology and Medicine for the discovery of ABO blood group system (K1).
- a. Lederberg b. **Karl Landsteiner** c. Jacob and Monad d. Alexander Weiner
17. A mother of blood group O has a group O child. Select the possible blood type of father (K1)
- a. A or B b. AB only c. O only d. **A or B or O**
18. What will be the phenotype of the offspring of the marriage between AB and A group persons ($I^A I^B \times I^A I^O$) ? (K1)
- a. **A, AB and B** b. AB and O c. A, O d. A, B and O
19. Erythroblastosis foetalis occurs in child due to Rh blood group incompatibility during pregnancy. Choose the correct option (K1)
- a. Rh⁻ husband and Rh⁻ wife b. **Rh⁺ husband and Rh⁻ wife**
c. Rh⁻ husband and Rh⁺ wife d. Rh⁺ husband and Rh⁺ wife
20. Which of the following is an example of polygenic inheritance? (K1)
- a. **Skin colour in human** b. Flower colour in *Mirabilis jalapa*
c. Production of male honeybee d. Pod shape in garden pea.
21. Name the individual resulting from marriage between Negro (AABB) and White (aabb) (K1)
- a. Negro b. **Mulatto** c. Light d. White

Unit V

1. What is the reason for the determination of sex of child? (K1)
- a. Nature of egg b. **Nature of sperm** c. Health of father d. Age of mother
2. Label the inactivated X chromosome (K1)
- a. **Barr body** b. Polar body c. Nucleosome d. Transposon

3. How many Barr bodies are present in an individual with 4X chromosomes? (K1)
 - a. 1 b. 2 **c. 3** d. 4
4. Select the condition in which green colour cannot be distinguished (K1)
 - a. Protonopia b. Myopia c. Metanopia **d. Deuteronopia**
5. Which of the following is known as Royal disease? (K1)
 - a. **Haemophilia** b. Colour blindness c. Alzheimer's disease d. Thalassemia
6. Show the major clinical manifestation of phenylketoneuria (K1)
 - a. Urine turning black on exposure to air b. Lack of melanin pigment
 - c. Ear stained black in colour **d. Mental defect and feeble mindedness**
7. Identify the enzyme missing in individuals with albinism (K1)
 - a. **Tyrosinase** b. Amylase c. Acetylcholinesterase d. Carbonic anhydrase
8. Who first presented a detailed description of sickle cell anaemia? (K1)
 - a. Linus Pauling b. Roland Scott **c. James Herrick** d. Wilson
9. Which type of haemoglobin is present in a patient who has sickle cell anaemia? (K1)
 - a. Haemoglobin AA b. Haemoglobin AS
 - c. Haemoglobin SS** d. Haemoglobin AC
10. What is the cause of Down's syndrome? (K1)
 - a. Only one X chromosome **b. Trisomy 21** c. Trisomy 18 d. 13q deletion
11. Identify the karyotype of individual with Turner syndrome (K1)
 - a. 46, XY **b. 45, XO** c. 47, XYY d. 47, XXY
12. A man has enlarged breasts, sparse hair on body and sex complement as XXY. Name the syndrome (K1)
 - a. Down syndrome b. Turner syndrome
 - c. Klinefelter syndrome** d. Edward syndrome

Section B (2marks)

Answer in about 50 words

Unit I

1. Express cell theory. (K2)
2. Illustrate unit membrane. (K2)
3. Discuss microvilli. (K2)
4. Express pinocytosis. (K2)
5. Explain eukaryotic cells. (K2)

6. Illustrate active transport. (K2)
7. Differentiate phagocytosis and pinocytosis. (K2)
8. Indicate any two functions of plasma membrane. (K2)
9. Express brush border. (K2)
10. Explain cytopemphis. (K2)
11. Discuss plasmodesmata (K2)
12. Illustrate nexus. (K2)

Unit II

1. Discuss rough endoplasmic reticulum. (K2)
2. Indicate the three components of endoplasmic reticulum. (K2)
3. Express cisternae. (K2)
4. Illustrate any two functions of mitochondria. (K2)
5. Explain Golgi complex. (K2)
6. Summarize any two functions of Golgi complex. (K2)
7. Explain lysosomes. (K2)
8. Infer the slots present in ribosomes. (K2)
9. Relate 70S and 80S ribosomes. (K2)
10. Illustrate polyribosomes. (K2)

Unit III

1. Indicate the components of nucleus. (K2)
2. Summarize the functions of nucleus.(K2)
3. Differentiate between binucleate and multinucleate cells (K2)
4. Interpret nucleocytoplasmic index. (K2)
5. Infer the parts of nucleolus. (K2)
6. Express any two functions of nucleus. (K2)

7. Explain karyotype. (K2)
8. Interpret the role of histones in chromosomes (K2)
9. Summarize the components of DNA. (K2)
10. Explain nucleosides (K2)
11. Express base pairs. (K2)
12. Classify the chromosomes based on the position of centromere (K2)

Unit IV

1. Summarize the laws formulated by Mendel. (K2)
2. Interpret the F₁ and F₂ results of Mendel's experiment on crossing a pure tall plant with a pure short pea plant. (K2)
3. Infer the principle of independent assortment (K2)
4. Illustrate the test cross with an example (K2)
5. Explain the incomplete dominance (K2)
6. Discuss the multiple alleles. (K2)
7. Indicate the phenotypes and genotypes of ABO blood groups in man (K2)
8. The parents belong to O and AB blood group. Infer the blood groups of the children (K2)
9. Differentiate between universal donor and universal recipient in blood transfusion. (K2)
10. Rh⁻ mothers have pregnancy risks. Discuss genetic reasons. (K2)
11. Illustrate mulattoes skin colour in the African American community (K2)
12. Explain polygenes (K2)

Unit V

1. Differentiate between autosomes and allosomes. (K2)
2. Illustrate heterogametic sex citing an example (K2)
3. Explain Barr bodies (K2)
4. Interpret criss cross pattern of inheritance (K2)
5. Haemophilic women are rare. Discuss genetic reasons (K2)

6. More men are defective in red green colour vision than women. Infer reasons (K2)
7. Relate the contribution of Garrod to biochemical genetics. (K2)
8. Summarize the symptoms of phenylketoneuria (K2)
9. Discuss albinism (K2)
10. Indicate the cause for sickle cell anaemia (K2)
11. Express the health complications associated with sickle cell anaemia (K2)
12. Summarise the facial features of Down syndrome. (K2)

Section C (5 marks)

Answer in about 200 words

Unit I

1. Analyse the structure of prokaryotic and eukaryotic cells (K4)
2. Relate the postulates of cell theory and protoplasmic theory. (K3)
3. Analyze the fluid mosaic model of plasma membrane. (K4)
4. Appraise the bimolecular leaflet model of plasma membrane. (K4)
5. Present the chemical composition of plasma membrane. (K3)
6. Produce the types of desmosomes. (K3)
7. Analyze the tight junction interdigitations (K4)
8. Distinguish tight junction and gap junction of plasma membrane. (K4)
9. Present a note on anchoring junctions. (K3)

Unit II

1. Examine the functions of Golgi apparatus. (K4)
2. Analyze the structure of Golgi complex with suitable diagram. (K4)
3. Present the role of endoplasmic reticulum in cell function. (K3)
4. Appraise the structure of ribosomes. (K4)
5. Outline the functions of ribosomes. (K4)

6. Examine the polymorphism in lysosomes. (K4)
7. Analyze the ultra-structure of mitochondria. (K4)

Unit III

1. Present the structure of interphase nucleus. (K3)
2. Examine the cytochemistry of nucleus. (K4)
3. Compile the functions of nucleus. (K3)
4. Investigate the ultrastructure of nucleolus. (K4)
5. Categorize the cells based on the number of nucleus with suitable diagram. (K4)
6. Construct the number and shape of chromosomes. (K3)
7. Analyze nucleosome and its functions. (K4)
8. Analyze the structure of chromosomes. (K4)
9. Examine the structure of polytene chromosomes. (K4)

Unit IV

1. Outline the seven pairs of contrasting characters Mendel chose for his experiments (K4)
2. Apply and prove the law of segregation. (K3)
3. Diagram the dihybrid cross and identify the phenotypes and genotypes of F₁ and F₂ generation. (K4)
4. Distinguish between back cross and test cross. (K4)
5. Demonstrate the incomplete dominance with an example. (K3)
6. Solve the comb shapes in chicken. Present the phenotypes and genotypes. (K3)
7. Investigate the immunogenetics of ABO blood groups. (K4)
8. Analyze the antigen-antibody reactions which form the basis of ABO bloodgroup system. (K4)
9. Compile the cause, symptoms and prevention of Erythroblastosis foetalis. (K3)
10. Solve the genetic variations in the skin colour of man. (K4)

Unit V

1. Examine the chromosomal theory of sex determination in man (K4)
2. Classify the types of sex linked inheritance in man (K3)

3. Investigate the mode of inheritance of colour blindness in man (K4)
4. Present the inheritance of haemophilia with a suitable cross (K3)
5. Demonstrate the inborn error in metabolism and biochemical block using an example. (K3)
6. Analyse the clinical manifestation and treatment of phenylketonuria. (K4)
7. Show the genetic cause and symptoms of alkaptonuria and albinism in man (K3)
8. Demonstrate the relation between the mutant haemoglobin and red blood cells in sickle cell anaemia (K3)
9. Appraise the genetic cause and clinical features of Down syndrome (K4)
10. Distinguish between Turner syndrome and Klinefelter syndrome (K4)

Section D (10 marks)

Answer in about 400 words

Unit I

1. Analyse the structure of prokaryotic and eukaryotic cells (K4)
2. Evaluate the models of plasma membrane with suitable diagrams. (K5)
3. Examine the various functions of plasma membrane (K4)
4. Outline the specialized structures of plasma membrane with neat and labelled sketches. (K4)

Unit II

1. Analyze the types, structure and function of endoplasmic reticulum. (K4)
2. Outline the structure and functions of Golgi apparatus. (K4)
3. Examine the origin, structure and functions of lysosome. (K4)
4. Evaluate the polymorphism of lysosome with suitable diagrams. (K5)
5. Analyze the functions of mitochondria. (K4)
6. Distinguish the 70S and 80S ribosomes. (K4)
7. Examine the functions of Golgi apparatus. (K4)
8. Defend the functions of mitochondria. (K5)

Unit III

1. Examine the ultrastructure of nucleus. (K4)

2. Investigate the ultrastructure of nuclear membrane and nuclear pore complex. (K4)
3. Compile the structure and functions of nucleolus. (K3)
4. Outline the structure of chromosome with a labeled diagram. (K4)
6. Appraise the structure of polytene chromosome. (K4)
7. Analyze the chemical composition of DNA. (K4)
8. Examine the features of Watson - Crick model of DNA. (K4)

Unit IV

1. “The gene pairs segregate independently during gamete formation” – Prove this statement with an example. (K5)
2. Evaluate the supplementary gene interaction in the inheritance of comb pattern in fowls. (K5)
3. Examine the inheritance and medicolegal applications of ABO blood groups. (K4)
4. Investigate the inheritance of skin colour in interracial marriage between negro and white (K4)

Unit V

1. Evaluate the mechanisms sex determination in man (K5)
2. Analyze the phenomenon of sex linked inheritance with a suitable example. (K4)
3. Organize the biochemical blocks observed in the metabolism of phenylalanine. (K4)
4. “Sickle cell anemia is an inherited genetic disorder involving haemoglobin”- Prove (K5)
5. Appraise the syndromes caused by aberrations in the number of sex chromosomes in human. (K4)

ST. MARY'S COLLEGE (Autonomous) - THOOTHUKUDI

III B. Sc. Zoology

Semester V

Core III - ECOLOGY

Course. Code: 21UZOC53

(for those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Ecology is the study of the interaction of living organism
 - a. with each other and their habitat
 - b. and their communities
 - c. **with each other and their physical environment**
 - d. and the food they eat
2. Name the nonliving parts of an ecosystem (K1)
 - a. The community
 - b. Biotic factors
 - c. **Abiotic factors**
 - d. Biomes
3. Which of the following would be a biotic factor in an ecosystem? (K1)
 - a. **Bacteria**
 - b. Soil
 - c. Temperature
 - d. Rainfall
4. Identify the animals which can tolerate wide range of temperature fluctuations (K1)
 - a. **Eurythermal**
 - b. Stenothermal
 - c. Hypothermal
 - d. Lipothermal
5. Select the rule where organisms living in colder climates have shorter extremities. (K1)
 - a. Bergmann's rule
 - b. **Allen's rule**
 - c. Liebig's rule
 - d. Jordan's rule
6. Identify the reason for lost of eye sight in cave dwelling animals (K1)
 - a. Loss of pigmentation
 - b. Well developed tactile organs
 - c. Weak exoskeleton
 - d. **Absence of light**
7. How will you called the response of animals to light (K1)
 - a. Chemotaxis
 - b. Rhetoaxis
 - c. **Phototaxis**
 - d. Thigmotaxis
8. Name the term the" sequence of eaters being eaten" (K1)
 - a. Food Web
 - b. Ecology
 - c. **Food Chain**
 - d. Energy flow
9. Identify the animal relationship between hermit crab and sea-anemone (K1)
 - a. Commensalism
 - b. **Mutualism**
 - c. Parasitism
 - d. Neutralism

10. Which is true for commensalism? (K1)

- a. **One species is benefited while other remains unaffected**
- b. Both species are benefited
- c. One species is benefited and other is harmed
- d. Both are harmed

Unit- II

Write an individuals in a species is called (K1)

- a. **group**
- b. species in a community
- c. communities in an ecosystem
- d. individuals in a family

2. Which one of the following is refers to natality? (K1)

- a. **Birth rate**
- b. Death rate
- c. Emigration
- d. Immigration

3. Name the maximum possible rate of reproduction for a population under optimal condition (K1)

- a. Ecological natality
- b. **Potential natality**
- c. Realized mortality
- d. Potential mortality

4. Tell the total number of individuals per unit area or per unit volume is called(K1)

- a. **population density**
- b. population equilibrium
- c. population dispersal
- d. population fluctuations

5. Find out which one of the following is the ratio between birth and death rate (K1)

- a. Mortality
- b. Natality
- c. **Vital index**
- d. Carrying capacity

6. Which one of the following factor is involved in the prevention of population

Increase? (K1)

- a. **Environmental resistance**
- b. Maximum natality
- c. Ecological natality
- d. Realized mortality

7. Select which one is refers to the different age groups of population can be represented in the form of a graph (K1)

- a. **Age pyramids**
- b. Age rate
- c. S- shaped curve
- d. J- shaped growth curve

8. When the pyramid is triangular the population is (K1)

- a. **growing**
- b. stable
- c. declining
- d. unstable

9. Select the functional status of an organism in its community (K1)
- a. Address b. **Niche** c. Succession d. Climax
10. Tell vertical stratification is well established in (K1)
- a. **forest community** b. desert community c. rocks d. estuary
11. Find out the intermediate zone lying between two adjacent communities(K1)
- a. Pioneer community b. **Ecotone** c. Niche d. Neretic zone
12. Write the pioneer species in succession on a rock are (K1)
- a. **lichens** b. xerophytic ferns c. shrubs d. trees
13. Select the final stable community is (K1)
- a. Seral community b. Edge species c. **Climax community** d. Pioneer community
14. Write the various stages of a community (K1)
- a. Biomass b. **Sere** c. Succession d. Epilimnion

Unit – III

1. Name the gaseous cycle (K1)
- a. **Oxygen cycle** b. Phosphorous cycle
c. Sulphur cycle d. Sedimentary cycle
2. Select the sedimentary cycle (K1)
- a. Oxygen cycle b. **Phosphorous cycle**
c. Carbon cycle d. Nitrogen cycle
3. Identify the main nitrogen reservoir in the biosphere (K1)
- a. Ocean b. Rocks c. **Atmosphere** d. Organism
4. Identify the process which converts most carbon from one form to the another (K1)
- a. Animal respiration b. Decay c. Feeding d. **Photosynthesis**
5. Write denitrification is a part of which of the following cycle (K1)
- a. Oxygen cycle b. **Nitrogen cycle** c. Phosphorus cycle d. Carbon cycle
6. Which of the following organisms can fix nitrogen? (K1)
- a. Plants b. Fish c. Fungi d. **Bacteria**
7. Which one of the following is the sedimentary cycle? (K1)
- a. Carbon b. Hydrogen c. Nitrogen d. **Phosphorous**

8. Select the largest reservoir of phosphorous in the biosphere (K1)
- a. Atmosphere b. **Rock** c. Organism d. Ocean
9. Which of the following activities releases sulphur in to the atmosphere (K1)
- a. **By burning of fossil fuels** b. By the CFC emission
- c. By burning wood d. By manufacturing steel
10. How do the plants absorb sulphur from the atmosphere (K1)
- a. **Sulphates** b. sulfuric acid c. Sulphur di oxide d. CFC

Unit IV

1. Identify the following is an example of lotic biome (K1)
- a. **Rivers** b. lakes c. Oceans d. Springs
2. Name the Organisms which are living on the bottom of the pond (K1)
- a. Nekton b. **Benthos** c. Plankton d. Periphyton
3. Identify the excretory product of fresh water animals (K1)
- a. **Ammonia** b. Urea c. Uric acid d. Guanine
5. Which of the following refers to the floor of the sea beyond littoral zone? (K1)
- a. **deep sea** b. muddy shore c. Sandy shore d. rocky shore
6. Which zone comprises the continental slope and it extends to a depth from 200 m to 4000m. (K1)
- a. Abyssal zone b. **Bathyal zone** c. Hadal zone d. Muddy shore
7. Which among the following zone forms the ocean floor between 4000 to 6000m? (K1)
- a. **Abyssal zone** b. Bathyal zone c. Hadal zone d. Eulittoral zone
8. Select the zone which forms the deep trenches below 6000 metres. (K1)
- a. Abyssal zone b. Bathyal zone c. **Hadal zone** d. Eulittoral zone
9. What are completely absent from the deep seas. (K1)
- a. Pressure, Temperature b. Viscosity Pressure
- c. **Tides, Waves** d. Density, Surface tension.
10. Which among the following system have the ability to secrete large amount of mucous ? (K1)
- a. Lateral-line system b. Sense organs
- c. Lymphatic system d. **Muciferous system**

11. Name the land which is a waterless, treeless, large waste-land often covered with sand.(K1)

- a. **Desert** b. Cave c. Grassland d. Forest

12. Give an example for hot desert (K1)

- a. **Sahara** b. Alps c. Tibet d. Ladakh

15. Identify the excretory product of desert animals (K1)

- a. Urea b. Creatinine c. Ammonia d. **Uric acid**

16. Find out the adaptation of desert animals that absorbs water from the atmosphere like a blotting pot (K1)

- a. **Hygroscopic skin** b. Impervious skin c. Sweat glands d. Water cells

17. Identify the desert animals which stores water in the intestine.(K2)

- a. Jerboas b. **Uromastix** c. Camel d. Ants

18. Which of the following cells help to store water in the camel? (K2)

- a. **Water cells** b. Epithelial cells c. Capillary cells d. Endothelial cells

Unit V

1. What is deforestation? (K2)

- a. Product of forest b. **Destruction of forest**

- c. Planting of trees d. Cultivation of crops

2. What is the main reason for melting of ice sheets? (K2)

- a. Increase in the oxygen content b. **Global warming**

- b. Decrease in carbon dioxide d. Noise pollution

3. Identify the reason for the corrosion of Taj Mahal (K2)

- a. **Acid rain** b. Oxygen depletion

- b. Deforestation d. Global warming

4. Which of the following agent is responsible for turning the Taj Mahal yellow? (K2)

- a. Sulphur b. Chlorine c. **Sulphur dioxide** d. Nitrogen dioxide

5. Identify the disease caused by the effect of ozone layer depletion (K2)

- a. Heart stroke b. Brain stroke c. **Skin cancer** d. Asthma

6. Which of the following is not a green house gas? (K2)

- a. **Carbon dioxide** b. Nitrogen

- a. Methane d. Sulphur dioxide

7. What is green house effect refers (K2)

- a . Cooling of earth b. **Warming of earth**
- c. Trapping of UV rays d. Production of cereals

Section- B (10x2=20)

Answer in about 50 words

Unit I

1. Define ecology (K2)
2. What is phototaxis?(K2)
3. Differentiate thermo conformers from thermo regulators (K2)
4. Distinguish between heat coma and chill coma (K2)
5. Differentiate hibernation from aestivation (K2)
6. Comment on light penetration in the sea (K2)
7. Describe the biotic components of ecosystem (K2)
6. Explain food chain and draw food chain in grassland ecosystem (K2)
7. Distinguish ectoparasite from endoparasite (K2)
8. Discuss commensalism (K2)
9. Define mutualism (K2)
10. Enlist the different types of parasites (K2)

Unit- II

1. Explain the characteristics of a population? (K2)
2. Discuss how will you measure the population density? (K2)
3. Differentiate between mortality and natality (K2)
4. Distinguish potential natality from realised natality (K2)
5. Summarize the population based on age distribution (K2)
6. Discuss the salient features of age-pyramids (K2)
7. Explain carrying capacity (K2)
8. Explain biotic potential capacity (K2)
9. Differentiate between ecotone and edge effect (K2)

10. Summarize the significances of succession (K2)

11. Express any two concepts of climax (K2)

Unit- III

1. Differentiate between gaseous cycles and sedimentary cycles (K2)
2. Explain photosynthesis (K2)
3. Explain denitrification (K2)
4. Differentiate between electrochemical fixation and biological fixation (K2)
5. Summarize the gaseous cycles (K2)
6. Describe the reservoirs of phosphorous cycle (K2)
7. Describe sulphur cycle (K2)
8. Define biogeochemical cycle (K2)

Unit IV

1. Explain the characteristic features of lentic habitat (K2)
2. Discuss the fauna of lentic habitat (K2)
3. Discuss the lotic adaptation (K2)
4. Describe the biota of lotic habitat (K2)
5. Illustrate the characteristic features of deep sea system (K2)
6. Infer the biota of deep sea system. (K2)
7. Describe the adaptations exhibited by deep sea animals (K2)
8. Discuss the bioluminescence phenomenon of deep sea animals. (K2)
9. Explain the water conservation adaptations of desert animals. (K2)
10. Discuss the fauna and flora of desert habitat (K2)

Unit V

1. Explain ozone layer depletion? (K2)
2. Describe urbanization (K2)
3. Discuss deforestation (K2)
4. Infer the effects of global warming (K2)

5. Discuss the causes of acid rain (K2)
6. Infer global warming gases (K2)
7. Discuss the effect of ozone layer depletion (K2)
8. What are the causes of urbanization (K2)
9. Explain the responsibilities of Swatch Bharat Abhiyan (K2)
10. Describe the future aspects of Swatch Bharat Abhiyan on green economy (K2)

Section- C (5x6 =30)

Answer in about 200 words

Unit - I

1. Demonstrate the components of ecosystem and their specific role (K3)
2. Demonstrate thermal stratification in aquatic water (K3)
3. Compile the biological effect of light (K3)
4. Analyze hibernation, its types with examples (K4)
5. Compile the effect of temperature on cyclomorphosis (K3)
6. Apply the importance of food web in a terrestrial ecosystem with neat sketch (K3)
6. Present the concept of energy flow in an ecosystem (K3)
8. Appraise commensalism with suitable examples (K4)
9. Produce the animal relationship on mutualism with suitable example (K3)
10. Categorize the effect of parasitism (K4)

Unit- II

1. Analyse the different methods to measure the population density (K4)
2. Outline population growth (K4)
3. Classify community stratification with suitable examples (K)
4. Compare the differences between the seral stage and the climax (K4)
5. Analyze the structure of a community with suitable examples (K4)
6. Classify the primary and secondary succession with suitable examples (K3)

Unit III

1. Appraise carbon cycle (K4)
2. Analyze oxygen cycle (K4)

3. Present the phosphorous cycle with a neat diagram (K3)
4. Demonstrate nitrogen cycle with neat sketch (K3)
5. Illustrate sulphur cycle with neat sketch (K3)

Unit IV

1. Compile the adaptations of organisms in lotic habitats (K3)
2. Present the flora and fauna of pond habitat (K3)
3. Compile the characteristic features of deep sea system (K3)
4. Categorize the adaptations exhibited by deep sea animals (K4)
5. Produce the characteristic features of desert habitat (K3)
6. Analyse the adaptations of organisms to desert habitats (K4)

Unit IV

1. Appraise the causes of climate change and global warming (K4)
2. Outline the process of deforestation (K4)
3. Analyse the causes and effects of acid rain in the environment (K4)
4. Apply the causes, effects and prevention of ozone layer depletion (K3)
5. Demonstrate the threatening of urbanization (K3)
6. Present the initiative and responsibilities of Swatch Bharat Abiyan (K3)

Section- D (3x12 =36)

Answer in about 400 words

Unit- I

1. Outline the abiotic and biotic components of the ecosystem and their relationship with each other (K4)
2. Categorize the effect of temperature on Living organisms (K4)
3. Analyse the biological effect of light (K4)
4. Evaluate the importance of food web in a pond ecosystem with neat sketch (K5)
5. Outline the different types of animal relationship with examples (K4)

Unit-II

1. Evaluate important characteristics of a population (K5)
2. Categorize the age pyramid of a population with suitable examples (K4)
3. Rewrite on age distribution (K6)
4. Evaluate the types of succession with suitable examples (K5)
5. Assemble the differences between the seral stage and climax community in succession (K6)
6. Defend the process of succession in ponds (K5)

Unit- III

1. Analyze the steps involved in nitrogen cycle (K4)
2. Assemble the gaseous cycle (K6)
3. Appraise phosphorous cycle with neat sketch (K4)
4. Outline sedimentary cycle with neat sketch (K4)
5. Evaluate biogeochemical cycle with neat sketch (K5)
6. Analyze the steps involved in nitrogen cycle (K4)

Unit IV

1. Analyze the characteristic features of fauna and adaptations of pond habitat (K4)
2. Appraise the characteristic features of fauna and adaptations of lotic habitat (K4)
3. Outline the fauna and adaptations of deep Sea system. (K4)
4. Analyse the fauna and adaptations of desert animals (K4)

Unit V

1. Apply the causes and impact of deforestation in an ecosystem (K4)
2. Analyze the causes, effect and solutions of urbanization (K4)
3. Evaluate the causes of global warming and its role in human health (K5)
4. Outline the causes and effect of acid rain (K4)
5. Categorize the causes of global warming and its role in human health (K3)
6. Criticize initiatives, responsibilities and future aspects Swatch Bharat Abiyan (K5)

ST.MARY'S COLLEGE (Autonomous) THOOTHUKUDI

III B. Sc Zoology Semester -V

Core Elective: Introduction to Research Course Code :21UZOE51

(for those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Find the synonym for basic research (K1)
 - a. Descriptive research
 - b. **Fundamental research**
 - c. Applied research
 - d. Qualitative research
2. Recall the example of quantitative research (K1)
 - a. **Amount of milk yield**
 - b. Flavour of milk
 - c. Colour of milk
 - d. Flavour of ice cream
3. Find the correct statement from the following (K1)
 - a. **For carrying out research work, proper methodology has to be adopted**
 - b. Research work should not be carried out by competent persons.
 - c. Finding out the right time of research is not important
 - d. Gathering knowledge for knowledge's sake is termed as applied research
4. Choose the statement which is not related to research (K1)
 - a. Art of scientific investigation
 - b. **Independence Day celebration**
 - c. Search for knowledge
 - d. Systematic investigation
5. Which among the following statement is incorrect related to the objectives of research ? (K1)
 - a. Why the research work has to be done ?
 - b. Where the research work should be undertaken ?
 - c. By whom the research work should be done ?
 - d. **How to write the introduction ?**
6. . Recall the hallmark of efficiency in research (K1)
 - a. **Accuracy**
 - b. Passion
 - c. Bias
 - d. Budgeting the time
7. Choose the qualification of a researcher from the following (K1)

- a. Qualitative approach b. Quantitative approach
 - c. **Steady and incision observation** d. Testing hypothesis
8. Which of the following is not an example of advancing knowledge in research ? (K1)
- a. Uncover facts b. Develop theories
 - c. Propose new ideas d. **Collection of data**
9. How did the research foster continuous learning and improvement ? (K1)
- a. Development of new technologies b. Development of new products
 - c. Improved quality of life d. **Stay updated with the latest development**
10. Which among the following statement is correct related to the importance of research ? (K1)
- a. **Solving problems and addressing challenges** b. Desire to be respected
 - c. Desire to get a research degree d. Learning about the topic

Unit - II

1. Find out the valuable technique for visually displaying relationship and resources (K1)
- a. Scaling b. **Mapping** c. Blinding d. Observing
2. Which among the following is a data collection tool ? (K1)
- a. Interviewing b. **Checklist** c. Randomization d. Attrition
3. Which among the following is not a data collection technique? (K1)
- a. **Scale** b. Observation c. Interviewing d. Focus group discussion
4. How many persons can participate in the focus group discussion ? (K1)
- a. 6 – 11 b. **6 -12** c. 6 - 10 d. 6 - 13
5. Find the example of projective techniques (K1)
- a. Exploring relevant local concepts b. **Presentation of a hypothetical question**
 - c. Analysis of health information d. Administering written questionnaires
6. Choose the important aspect to be considered when designing an experiment (K1)
- a. Accuracy b. Passion c. Testing hypothesis d. **Bias**
7. Find the category of research design from the following (K1)
- a. Qualitative approach b. **Observational or experimental study**
 - c. Quantitative approach d. Historical research
8. Choose the correct statement for interviewing (K1)
- a. **A data collection technique that involves oral questioning of respondents**
 - b. A valuable technique for visually displaying relationships and resources
 - c. A data collection tool in which written questions are presented
 - d. Systematically selecting watching and characteristics of living beings

9. Which among the following is a less time consuming and less flexible method of interviewing ?(K1)
- Face to face interviews
 - Computer assisted personal interviews
 - Telephone interviews**
 - Personal interviews
10. Select the data collection tool used for observing (K1)
- Checklist
 - Questionnaire
 - Microscope**
 - Data compilation form

Unit- III

1. Name the variable which produces numerical responses from a counting process
- Categorical
 - Continuous
 - Discrete**
 - Numerical
2. Which of the following is not a type of longitudinal survey ? (K1)
- Panel studies
 - Cohort studies
 - Numerical studies**
 - Trend studies
3. Choose the material not necessary for survey method (K1)
- Survey questions
 - Journal**
 - Response forms
 - Access to online resources
4. Find the correct statement for survey method (K1)
- Primary method of collecting data by manual, mechanical, electrical or electronic means
 - Face to face meeting in which a researcher asks an individual a series of questions
 - Going out and asking questions about the phenomenon of interest**
 - A method for visually displaying relationships and resources
5. Choose the correct statement for trend studies (K1)
- Focus on a particular population, sampled and studied more than once
 - Expensive, take a lot of time, and suffer from high attrition rates
 - Focus on a particular population, which is sampled and scrutinized repeatedly**
 - An accurate proportional representation of the population under study
6. Name the person who conducts the enquiry (K1)
- Investigator**
 - Enumerator
 - Respondent
 - Informant
7. Which of the following sampling methods involves dividing the population into subgroups or strata, then randomly selecting individuals from each stratum? (K1)
- Stratified Random Sampling**
 - Snowball Sampling
 - Quota Sampling
 - Convenience Sampling
8. Which of the following sampling methods is most likely to result in a biased sample?(K1)
- Random sampling
 - Stratified random sampling
 - Convenience sampling**
 - Quota sampling

9. Which of the following is NOT probability sampling techniques? (K1)
 - a. Stratified b. Snowball c. Cluster d. **Convenience**
10. Which among the following is the subset of a population ?(K1)
 - a. Survey b. **Sample** c. Element d. Data
11. Name the method suitable to study Cross-cultures (K1)
 - a. **Case study** b. Comparative study c. Experimental study d. Cross-sectional study
12. Choose the correct statement for case-study (K1)
 - a. Studies conducted in areas of genetics and microbiology
 - b. **An in-depth examination of a subject and its related conditions**
 - c. A report on the existing socio-political condition
 - d. Specialised research in the areas of health and sanitation
13. Which is the most appropriate statement for questionnaire ? (K1)
 - a. A survey and a research study using questionnaires is the same thing
 - b. Surveys only use questionnaires to collect data
 - c. **Questionnaires are primarily quantitative in nature**
 - d. You are not permitted to include quantitative questions and qualitative questions in the same questionnaire
14. Which among the following is a structured questionnaire ? (K1)
 - a. **Where only closed questions are used or the respondent has to choose from a limited set of options**
 - b. Where an online survey tool is used to structure the questionnaire
 - c. Which only includes open questions
 - d. Where respondents are encouraged to structure their responses in whichever way they want

Unit IV

1. Which attracts potential readers and facilitates the cataloguing of a research report in an electronic database ? (K1)
 - a. **A well-written title**
 - b. A well-written summary
 - c. A well-written abstract
 - d. A well-written synopsis
2. Find the most reliable source of information for your literature review (K1)
 - a. A TV documentary
 - b. A newspaper article

- c. **A peer reviewed research article**
 - d. A relevant chapter from a textbook
3. What is the term for the process of gathering and compiling data from multiple sources? (K1)
- a. Primary Data
 - b. Quantitative data
 - c. **Secondary data**
 - d. Qualitative data
4. What comes right before the formulation of the hypothesis in the research? (K1)
- a. **Collection of data**
 - b. Analysis of data
 - c. Selection of the tools of research
 - d. Statement of objectives
5. Recall the full form of 'MLA' as a referencing style (K1)
- a. Machine Language Adaptation
 - b. **Modern Language Association**
 - c. Management Language Authority
 - d. Mainstream Language Association
6. Choose the accepted style of referencing in writing an educational research report (K1)
- a. **APA** b.DSM III c. Chicago d. MLA
7. Select the abbreviations cannot be used in a research report (K1)
- a. IQ b. sec. for second c. yr. for year **d. mo. for month**
8. Which among the following should be placed in chronological order(K1)
- a. **Reference** b. Articles c. Journals d. Discussion
9. What kind of source is a conference proceeding ? (K1)
- a. Conventional b. **Primary** c. Secondary d. Tertiary
10. Which among the following is not a search engine.? (K1)
- a. Google b. Yandex c. **Gmail** d. Bing

Unit V

1. What is the purpose of the conclusion in a research report?(K1)
- a. It explains how concepts were operationally defined and measured
 - b. It contains a useful review of the relevant literature
 - c. It outlines the methodological procedures that were employed

- d. **It summarizes the key findings in relation to the research questions**
2. Which among the following is a reference to a source of information that is placed at the bottom of a page? (K1)
- a. Keynote b. **Footnote** c. Keywords d. Abbreviation
3. Choose the core elements of a dissertation (K1)
- a. Introduction; Data Collection; Data Analysis; Conclusions and Recommendations
- b. Executive Summary; Literature Review; Data Gathered; Conclusions; Bibliography
- c. Research Plan; Research Data; Analysis; References
- d. **Introduction; Literature Review; Research Methodology; Results; Discussions and Conclusions**
4. Name the first page of the research report (K1)
- a. Appendix b. Bibliography c. Index d. **Title page**
5. Recall the last page of the report (K1)
- a. **Appendix** b. Bibliography c. Index d. Conclusion
6. Choose the correct option for the term "Bibliography" (K1)
- a. Footnote b. Quotations c. **List of books referred** d. Biography
7. Which among the following is the last stage of research process?(K1)
- a. Review of Literature b. **Report writing** c. Research design d. Analysis of data
8. Find the correct statement for abstract (K1)
- a. A brief summary of research problems
- b. **A brief summary of the findings of the report**
- c. A brief analysis of data
- d. A brief interpretation of data
9. Choose the other name of thesis (K1)
- a. Research report b. Monograph c. **Dissertation** d. Book
10. Select the correct statement for Plagiarism (K1)
- a. Contriving data in survey and research reports.
- b. Making errors in paraphrasing or citations
- c. Illegal duplication of print and electronic work.
- d. **Presenting ideas and expressions of others as your own without proper acknowledgement**

Section B (2 marks)

Answer in about 50 words

Unit I

1. Paraphrase research (K2)
2. Compare basic and applied research (K2)
3. Discuss descriptive research (K2)
4. Differentiate qualitative and quantitative research (K2)
5. Explain where should research work be done (K2)
6. Indicate when research work should be undertaken (K2)
7. Discuss how a research work should be done (K2)
8. Explain analytical research (K2)
9. Indicate how does research contribute to fostering innovation and facilitating development? (K2)
10. Discuss the importance of research in tackling societal challenges (K2)

Unit – II

1. Explain blinding (K2)
2. Compare simple and block randomization (K2)
3. Explain mapping with an example (K2)
4. Discuss scaling (K2)
5. Differentiate between participant and non participant observation (K2)
6. Restate checklist (K2)
7. Explain focus group discussions (K2)
8. Indicate data collection tools (K2)
9. Summarize data collection techniques (K2)
10. Summarize different types of less flexible method of interviewing (K2)

Unit - III

1. Explain the types of data (K2)
2. Discuss the survey method of research (K2)
3. Summarize the materials necessary for survey method of research (K2)
4. Explain the types of longitudinal surveys (K2)
5. Explain cross sectional survey (K2)
6. Explain stratified sampling (K2)
7. Summarize the advantages of sampling (K2)

8. Explain sampling (K2)
9. Summarize the types of random sampling (K2)
10. Explain cluster random sampling (K2)
11. Discuss the types of non-random sampling (K2)
12. Explain case-study (K2)

Unit IV

1. Explain search engine (K2)
2. Explain the different systems of citing references (K2)
3. Compare the various computer aided searches in literature collection (K2)
4. Summarize the different sources of literature (K2)
5. Explain some search engines (K2)
6. Discuss on offline search in literature collection (K2)
7. Explain APA reference style (K2)
8. Discuss on periodicals (K2)
9. Discuss the importance of journals in research (K2)
10. Discuss on google scholar (K2)

Unit V

1. Summarize the components of a report (K2)
2. Explain Plagiarism (K2)
3. Discuss the preparation of abstract (K2)
4. Explain conflict of interest (K2)
5. Discuss the ways of writing a summary in a research paper (K2)
6. Indicate the steps in writing a discussion in a research paper (K2)
7. Explain the ways to write the author's name in an article? (K2)
8. Explain keyword (K2)
9. Explain how to write an effective conclusion (K2)
10. Indicate the purpose of acknowledgment in a research paper (K2)

Section C (5 marks)

Answer in about 200 words

Unit I

1. Outline the importance of research (K4)
2. Identify the qualification of a researcher (K3)

Unit – II

1. Categorize research design(K4)
2. Distinguish the case control study from cohort study (K4)
3. Research on the concept of bias in experimental design. (K4)
4. Analyze the role of replication and sample selection in the design of experiments (K4)
5. Examine the elements of sample size and minimization in the context of experimental design.(K4)
6. Analyze the practice of data collection through the utilization of existing information.(K4)
7. Outline the process of gathering data through written questionnaire (K4)

Unit – III

1. Investigate the considerations need to conduct surveys (K4)
2. Examine the issues in conducting surveys (K4)
3. Analyze the different types of non-random sampling (K4)
4. Examine the different types of random sampling (K4)
5. Analyze the importance of case study as a research method (K4)
6. Appraise the points to be considered when designing a questionnaire (K4)

Unit IV

1. Outline the important steps on choosing a research paper title (K4)
2. Examine the sources of literature in research (K4)
3. Appraise the most commonly used search engines used in research (K4)
4. Outline the different ways to cite literature in a report (K4)
5. Analyze the different systems of citing references (K4)

Unit V

1. Outline the basic steps to follow when writing an abstract (K4)
2. Analyze the importance of Plagiarism in research (K4)
3. Examine the ways to interpret and report the findings in research (K4)

4. Present format for presenting the "Material and Methods" section in scientific writing (K3)
5. Outline the key elements to include in the introduction section of a scientific paper (K4)
6. Analyze the importance of referencing in a research paper (K4)

Section D (10 marks)

Answer in about 400 words

Unit I

1. Select the objectives of research (K5)
2. Compare the different types of research (K4)

Unit II

1. Compare observation and interviewing methods of data collection technique (K4)
2. Examine different types of randomization experimental design (K4)
3. Prove observational studies within the context of experimental design (K5)
4. Examine the data collection method of focus group discussions (K4)
5. Outline the advantages and disadvantages of data collection techniques (K4)

Unit III

1. Outline the different types of surveys (K4)
2. Analyze the factors to consider and potential challenges when conducting surveys (K4)
3. Elaborate the different types of sampling methods (K4)
4. Examine the important aspects of questionnaire design (K4)
5. Outline the different types of case study (K4)

Unit IV

1. Analyze the sources of literature collection in research (K4)
2. Examine the computer – based literature searches (K4)
3. Analyze the role of search engines in research (K4)
4. Examine the various methods for citing sources in a research report (K4)

Unit V

1. Categorize the components of a research report (K4)
2. Examine the significance of plagiarism in academic work (K4)
3. Analyze the importance of having a bibliography in a research paper (K4)

St. Mary's College (Autonomous), Thoonthukudi

III Year Semester V

CSB

Computer for Digital Era and Soft Skills

Sub. Code: 21UCSB51

Question Bank

Unit I - Fundamentals of computer

Section A

1 mark

Choose the correct option

1. _____ is the brain of the computer
a)Monitor b)Hard disk c)Central processing unit d)Keyboard **(Ans c)**
2. _____ is the fundamental building block of CPU used to perform arithmetic and logic operations
a)Arithmetic - logic unit b)Control unit c)Registers d)Drivers **(Ans a)**
3. _____ responsible for controlling, integrating, and managing the individual hardware components of a computer system
a)System software a)Application software c)Operating system d)Antivirus **(Ans a)**
4. _____ is an interface between computer user and computer hardware.
a)Operating system b)Web based apps c)Native apps d)Hybrid apps **(Ans a)**
5. Software that controls particular hardware which is attached to the system is _____
a)Registers b)drivers c)mobile apps d) web based apps **(Ans b)**
6. _____ also known as end-user programs are software that helps the user in completing various tasks.
a)Input devices b)Application software c)Operating system d)Output devices **(Ans b)**
7. Any software that is copyrighted and bears limits against use, distribution and modification that are imposed by its developer is called _____
a)system software b) application software c) proprietary software d)mobile software **(Ans c)**

8. Which of the following is a utility software?
a)WinRAR b)BIOS drive c)Symbian OS d)Ubuntu **(Ans a)**
9. A mobileOS among the following is
a)Google chrome b) Bada c)CC cleaner d)Internet explorer **(Ans b)**
10. _____ is a temporary storage place for instruction or data.
a)CPU b)Monitor c) Hard disk d)Registers **(Ans d)**

Section B

4marks

1. Explain the working principle of computers.
2. Differentiate system and application software.
3. What are the features of application software?
4. Write the functions of utility software.
5. What are the functions of program language translators?
6. Give the difference between free and open-source software.

Section C

10 marks

1. Explain the negative impacts of computers on society
2. Explain some of the popular Mobile Operating Systems.
3. Describe the features of some application software.
4. Explain the various types of computers.
5. Write the importance of an operating system.

Unit II - Recent Trends in Computer Science and E-Commerce

Section A

1 mark

1. Transactions carried out through a banking correspondent based on Aadhaar verification is called _____.
a)USSD b)AEPS c)UPI d)BHIM **(Ans b)**
2. _____ mobile apps are specifically built using different multi-platform web technologies like JavaScript and HTML5.
a) Hybrid b)Native c)MobileOS d)Web-Based Apps **(Ans a)**
3. _____ are developed for a certain mobile device operating system like Windows Phone or Android.
a)Operating system B) Web-based apps c) Native apps d)System softwares **(Ans c)**
4. _____ uses information about the behaviours of electricity suppliers and consumers in an automated fashion.
a)Smart grid b)Smart city c)Smart phone d)Smart home **(Ans a)**
5. _____ refers to the process of carrying out banking transactions online.
a)Internet banking b)E-commerce c)E-learning d)Internet of things **(Ans a)**
6. MOOC stands for
a)Massive open online course
b) Mass open online course
c) Massive online open credit
d) Mass online open credit **(Ans a)**
7. Which of the following is false about e-learning?
a) E-learning means electronic learning
b) Chalk and talk method
c) Multimedia enriched learning
d) Web-based learning **(Ans b)**
8. Hand held device that reads banking cards are called as_____
a)PoS terminals b)credit cards c)debit cards d)mobile wallets **(Ans a)**

9. _____ enables users to transfer money without a bank account or IFSC code.
a)MOOC b)AEPS c)UPI d)USSD (Ans c)
10. _____ type of payments can also be made with no mobile data facility.
a)USSD b)UPI c)AEPS d)BHIM (Ans a)

Section B

4marks

- 1) Explain any two types of digital payments in India.
- 2) Discuss some of the E-learning platforms
- 3) What are the benefits of E-commerce?
- 4) Write the disadvantages of E-Commerce
- 5) What are the benefits of Digital Payments?

Section C

10 marks

- 1) Give an account the various e-learning websites.
- 2) Explain the types of digital payments in India.
- 3) Explain i)smart home ii)smart city iii)smart grid
- 4) Give an account of various E- commerce.
- 5) Explain some of the applications of IoT.

Unit III - Social Media

Section A

1 mark

1. _____ are web-based communication tools that enable people to interact with each other by sharing and consuming information.
a) Email c) Browsers c)Operating system d)Social media **(Ans d)**
2. In Twitter the short messages which the users post are known as
a)SMS b)tweets c)mails d)chats **(Ans b)**
3. _____ are networks from compromised computers that are controlled externally by remote hackers.
a)Media b)Phishing c)Hacking d)Botnets **(Ans d)**
4. _____ are usually in the form of ads or spam emails that include promises of rewards or offers of unrealistic amounts of money.
a) Online scams b)OTP c)Hacking d)Craking **(Ans a)**
5. _____ is the fraudulent use of electronic communications to deceive and take advantage of users.
a)Hacking b)Coding c)Cracking d)Phishing **(Ans d)**
6. A _____ hacker is an individual who attempts to gain unauthorized entry into a system or network to exploit them for malicious reasons.
a)white-hat b)blue-hat c)black-hat d)pink-hat **(Ans c)**
7. One Time Password(OTP) is sent to the user as an SMS or an email at the mobile number/email address is a method of
a)authentication b)encryption c)decryption d)decoding **(Ans a)**
8. _____ is a technique to convert the data in unreadable form before transmitting it over the internet.
a)Authentication b)Encryption c)Decryption d)Decoding **(Ans b)**
9. Which type of crime specifically targets high profile and/or senior executives in an organization?
a) Hacking b) Whaling c)Encryption d)Cracking **(Ans b)**
10. The process of gaining unauthorized access into a computer system, or group of computer systems is called _____
a)coding b)encryption c)hacking d)cracking **(Ans c)**

11. The method by which the password or code is obtained is called _____
a) coding b) decryption c) hacking d) cracking **(Ans d)**
12. _____ acts as a shield between an organization's network and the internet and protects it from threats like virus, malware, hackers, etc.
a) Operating system b) Mobile OS c) Firewall d) Malwares **(Ans c)**
13. The technique of hiding secret messages in a document file, image file or a program is called _____
a) botnets b) encryption c) authentication d) Steganography **(Ans d)**

Section B

4 marks

1. What are the various forms of social media?
2. How Phishing Attacks can be prevented?
3. Explain the types of phishing attacks.
4. Write a brief account on the types of hackers.
5. Give the importance of antivirus.
6. What are the functions of firewall?

Section C

10 marks

1. Explain the features of any two free social media.
2. Write the disadvantages of Social Media.
3. What are the Importance of Social Media in Business Communication?
4. How can we protect ourselves from Social Networking problems?
5. Give an account on the types of cybercrime.
6. Explain the process of encryption.

Unit IV - Introduction to Soft Skills

Section A

1 mark

1. _____ are part of the skill set that is required for a job.
a)Soft skills b)Hard skills c)Learning skills d)Critical thinking **(Ans b)**
2. Skills related to dealing with others called _____
a)thinking skills b)personal skills c)social skills d)affective skills **(Ans c)**
3. Skills needed to maintain more complex social interactions are called _____
a)cognitive skills b)affective skills c) Interaction Skills d)foundation skills
(Ans a)
4. Resolving conflicts is an example for _____ skills
a)cognitive skills b)affective skills c) Interaction skills d)foundation skills
(Ans c)
5. _____ focus more on people than processes.
a)Soft skills b)Hard skills c)Learning skills d)Critical thinking **(Ans a)**
6. _____ is the ability to think clearly and rationally about what to do or what to believe.
a)Critical thinking b)Social skills c)Hard skills d)Affective skills **(Ans a)**
7. Understanding the logical connections between ideas is called _____
a)reflection b)critical thinking c)coding d)stroke **(Ans b)**
8. _____ is triggered with the help of Self assessment questions
a)Understanding b)Social skills c)Group work d)Reflective practice **(Ans d)**
9. _____ is a form of thinking used to fulfill a purpose or to achieve some anticipated outcome
a)Critical thinking b)Stroke c)Reflection d)Affective skills **(Ans c)**
10. Learning how to begin and end conversations is related to _____ skills
a)foundation b)interaction c)affective d)cognitive **(Ans b)**
11. _____ are used by a person to communicate and interact with others.
a)Interpersonal skills b)Intrapersonal skills c)Hard skills d)Listening skills

(Ans a)

Section B

4 marks

1. Why do we need soft skills?
2. Explain the categorization of soft skills.
3. Write the uses of soft skills.
4. Describe effective communication.
5. Write briefly about group work.
6. What are the outcomes of soft skills?

Section C

10 marks

1. Explain hard and soft skills.
2. Explain i)critical thinking ii)reflection
3. Write in detail about the various categories of soft skills.
4. Explain i)communication and interaction ii)skillful writing
5. Describe the peer-to-peer interaction method in detail.

Unit V - Understanding Self and Team Building

Section A

1 mark

1. _____ analysis is a systematic tool for personal growth and personal change.
a)Systematic b) Transactional c)Mechanical d)Exploratory **(Ans b)**
2. _____ state is a consistent pattern of feeling and experience directly related to a corresponding consistent pattern of behaviour.
a)Ego b)Conscious b)Subconscious d)Mind **(Ans a)**
3. _____ is a bar chart representing the person's entire personality.
a)Angiogram b)Cardiogram c)Egogram d) Mammogram **(Ans c)**
4. Unit of recognition is _____
a)stroke b)metre c)egogram d)pascal **(Ans a)**
5. A _____ is a set of interpersonal relationships structured to achieve established goals
a)society b) family c)team d)friends **(Ans c)**
6. _____ is a situation in which the ideology of the team clouds the capacity of team members to think and act rationally about the task.
a)Group work b)Hard word c)Smart think d)Group think **(Ans d)**
7. _____ involves establishing an environment in which all team members feel as responsible as the leader for the performance of the work unit.
a)Shared responsibility b)Aligned on purpose c)High communication
d)Future focused **(Ans a)**
8. _____ to our emotional side, our capacity to feel and express emotions.
a)Cognitive self b)Affective self c) Behavioural self d)Conscious self **(Ans b)**
9. _____ refer to those personal attributes of individual members that help remove barriers to creativity, and enable creative application of individual talents and skills.
a)Critical thinking b)Reflection c)Cognitive skills d)Creative talents **(Ans d)**
10. Successfully meeting the personal needs of members in a team increases _____
a)friendship b)leadership c)cohesion d)dependence **(Ans c)**
11. _____ ego state is those feelings, attitudes, behaviours related to current here and now reality
a)Parent b)Child c)Elder d)Adult **(Ans d)**

12. In _____ child, behaviour of rebellion or compliance is seen

- a) adapted b) natural c) sensitive d) serious **(Ans a)**

13. One of the useful ways of learning about cooperation, shared responsibility, project planning, and time management is _____

- a) hard work b) smart work c) group work d) soft work **(Ans c)**

Section B

4 marks

1. Explain briefly about transactional Analysis.
2. Describe the structural analysis of Ego states.
3. How the egogram represents person's entire personality?
4. What are the features of effective creative teams?
5. Write the rules and roles of a team.

Section C

10 marks

- 1) Explain the three broad aspects of self.
- 2) Explain the different types of strokes.
- 3) Give a detailed account of life Positions.
- 4) Explain team building.
- 5) Explain i) Positive interdependence ii) Group processing

ST. Mary's COLLEGE (Autonomous) THOOTHUKUDI

III B.Sc Zoology Semester VI

Core I - Immunology and Microbiology Course Code :21UZOC61

(For those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Who is called the father of Immunology? (K1)
a. Edward Jenner b. **Louis Pasteur** c. Jules Bordet d. Paul Ehrlich
2. Which disease detected by Anti- streptolysin- O test? (K1)
a. Syphilis b. Tuberculosis c. Typhoid fever d. **Rheumatoid fever**
3. Who discovered mast cells? (K1)
a. **Paul Ehrlich** b. Robert Koch c. Charles Richet d. Jules Bordet
4. Name the type of immunity gained by vaccination (K1)
a. Passive immunity b. Natural immunity
c. **Artificial active immunity** d. Innate immunity
5. What is the alternative name for the process of phagocytosis? (K1)
a. Cell drinking b. Cell digestion c. **Cell eating** d. Cell destruction
6. Which of the following immunities do we have from our birth? (K1)
a. Passive b. **Innate** c. Acquired d. Active
7. Which of the following functions both as a primary and secondary lymphoid organ? (K1)
a. Spleen b. Thymus c. Lymph node d. **Bone marrow**
8. Identify the organ that trapped the foreign particles circulating in the blood (K1)
a. Tonsils b. **Spleen** c. Lymph node d. Peyer's patches
9. Find out the primary lymphoid organ present in birds (K1)
a. **Bursa of Fabricius** b. Thymus c. Spleen d. Malt

10. Name the organ where the lymph node monitor the antigens formed by the microbial flora of gut (K1)
- a. **Mesentry** b. Axilla c. Groin d. Joints
11. Write the type of immunity when preformed antibodies are directly injected into the body (K1)
- a. Natural active b. Artificial active c. Natural passive d. **Artificial passive**

Unit II

1. Which of the following cells develop into blood cells? (K1)
- a. Mast cells b. **Stem cells** c. NK cells d. K cells
2. Identify the cell responsible for humoral immune response (K1)
- a. T cells b. **B cells** c. Stem cells d. Null cells
3. Identify the test for primary complex (K1)
- a. Widal test b. ELIZA test c. Mantoux test d. Agglutination test
4. Find out the origin of B- cells from the following (K1)
- a. Thymus b. Spleen c. Lymphnodes d. **Bone marrow**
5. What produces macrophages? (K1)
- a. T lymphocytes b. B lymphocytes c. **monocytes** d. megakaryocytes
6. Name the macrophages present in liver (K1)
- a. **Kupffer cells** b. Giant cells c. Microglial cells d. Peritoneal macrophages
7. Which of the following immunity is produced by T cells? (K1)
- a. Acquired immunity b. Humoral immunity
- c. Artificial active immunity d. **Cell mediated immunity**
8. Find the 'end product' of cell mediated immune response from the following (K1)
- a. **Lymphokines** b. Antibodies c. Interferons d. Perforin
9. Identify the substance which enhances the immune response of an antigen (K1)
- a. Hapten b. **Adjuvant** c. Lymphokine d. Complement

10. Identify the graft between genetically non identical individuals of the same species (K1)

- a.Xeno-graft b. Auto graft c. **Allograft** d. Isograft

Unit III

1. Which one of the following is an incomplete antigen? (K1)

- a.**Hapten** b. Heterophile antigen c. Cross reactive antigen d. Forssman antigen

2. Name the part of the antibody reacting with the antigen (K1)

- a.Epitope b. **Paratope** c. Hypervariable region d. Hot spot

3. Identify the part of the antigen reacting with the antibody (K1)

- a.Epitope b. **Paratope** c. Hypervariable region d. Hot spot

4. Identify the macroglobulin from the following (K1)

- a. IgA b. **IgM** c. IgE d. IgG

5. Write the scientist who proposed the basic structure of immunoglobulin (K1)

- a. **Rodney Porter** b. Landsteiner c. Paul Ehrlich d. Robert Koch

6. Find the number of polypeptide chains present in immunoglobulin (K1)

- a. 6 b. **4** c. 3 d. 5

7. Identify the immunoglobulin that crosses the human placenta (K1)

- a.**IgG** b. IgM c. IgD d. IgE

8. Write the immunoglobulin found in colostrum is (K1)

- a.**IgA** b. IgM c. IgE d. IgG

9. Which antibody characterizes the allergic reaction? (K1)

- a. IgG b. IgA c. IgM d. **IgE**

10.Which one of the following is termed as antiseptic paint? (K1)

- a. IgG b. IgM c. IgE d. **IgA**

Unit IV

1. Identify father of microbiology (K1)

- a. Edwin John Butler b. Ferdinand Cohn c. Robert Koch d. **Antoni van Leeuwenhoek**

2. Define Microbiology (K1)
 - a. Study of molecules that are visible to human eyes
 - b. Study of animals and their family
 - c. Study of organisms that are not visible to naked eyes**
 - d. Study of microscope
3. Name the bacteria when they possess clusters of flagella at both poles of their cells (K1)
 - a. **Amphitrichous**
 - b. Monotrichous
 - c. Peritrichous
 - d. Lophotrichous
4. Who first proved the existence of virus? (K1)
 - a. Winogradsky
 - b. Ivanowski**
 - c. Ronald Ross
 - d. Beijerinck
5. Identify the phase when the secondary metabolites are produced during growth (K1)
 - a. Lag phase
 - b. Log/Exponential phase
 - c. Stationary phase**
 - d. Death phase
6. Name the lag phase of bacterial growth (K1)
 - a. **Period of initial adjustment**
 - b. Transitional period
 - c. Generation time
 - d. Period of rapid growth
7. Which of the following are living chemicals? (K1)
 - a. Bacteria
 - b. Viruses**
 - c. Algae
 - d. Fungi
8. Which one of the following is not present in bacteria? (K1)
 - a. **Mitochondria**
 - b. Mesosome
 - c. Ribosome
 - d. Cell wall.
9. What is the medium used to analyse the presence of byproducts? (K1)
 - a. **Assay medium**
 - b. Maintenance medium
 - c. Transport medium
 - d. Complex medium.
10. Name the smallest of all living things (K1)
 - a. Virusoids
 - b. Viroids
 - c. Prions**
 - d. Viruses.

Unit V

1. What is the shape of the bacterium *Clostridium botulinum*? (K1)
 - a. Spherical
 - b. Rod**
 - c. Spiral
 - d. Curved
2. Which are the common types of food poisoning bacterium? (K1)
 - a. Streptococcal
 - b. Staphylococcal**
 - c. Diplococcal
 - d. Tetracoccal
3. Name the conversion of nitrogen to ammonia or nitrogenous compounds (K1)
 - a. Nitrogen assimilation
 - b. Nitrogen fixation**
 - c. Denitrification
 - d. Nitrification

4. What is the function of leghaemoglobin present in the root nodules of legumes? (K1)
 - a. **Oxygen removal**
 - b. Inhibition of nitrogenase activity
 - c. Expression of nif gene
 - d. Nodule formation
5. Name the disease which is prevented by BCG vaccine (K1)
 - a. Malaria
 - b. **Tuberculosis**
 - c. Jaundice
 - d. Hepatitis
6. Who discovered tuberculosis? (K1)
 - a. Dixon Postgate
 - b. Karl Landsteiner
 - c. **Dr. Robert Koch**
 - d. Widal Fernando.
7. Identify the technique for food preservation by using radiation (K1)
 - a. Pasteurization
 - b. Sterilization
 - c. **Cold sterilization**
 - d. Lyophilization
8. What process eliminates the neurotoxin botulinum? (K1)
 - a. **Heating**
 - b. Refrigerating
 - c. Bottling
 - d. Canning.
9. Which fungus is responsible for aflaxotin? (K1)
 - a. *Penicillium rubrum*
 - b. *Aspergillus flavus*
 - c. *Amanita phalloides*
 - d. *Rhizopus stolonifera*
10. What does the “19” refer to? (K1)
 - a. There are 19 variants of the coronavirus
 - b. There are 19 symptoms of coronavirus disease
 - c. This is the 19th coronavirus pandemic
 - d. **The coronavirus and the disease it cause were identified in 2019**

Section B (2marks)

Answer in about 50 words

Unit I

1. List the contributions of Landsteiner to the field of immunology (K1)
2. Define attenuation (K1)
3. What is Widal’s test? (K1)
4. Differentiate innate immunity from acquired immunity (K2)
5. Explain the biochemical factors contributing to innate immunity (K2)
6. Write the functions of thymus (K1)
7. List the functions of spleen (K1)
8. Define passive immunity (K1)

9. Distinguish between primary and secondary lymphoid organs (K2)
10. Differentiate natural passive immunity from artificial passive immunity (K2)
11. Explain convalescent serum (K2)
12. Discuss adoptive immunity (K2)

Unit II

1. Define stem cells (K1)
2. List out the types of T lymphocytes (K1)
3. Define lymphokines (K1)
4. Write the types of macrophages (K1)
5. Define primary immune response (K1)
6. Distinguish between T and B lymphocytes (K2)
7. Discuss humoral immunity (K2)
8. Explain cell mediated immune response (K2)
9. Differentiate primary immune response from secondary immune response (K2)
10. Compare humoral immunity with cell mediated immunity (K2)

Unit III

1. Define immunogens (K1)
2. What are heterophile antigens? (K1)
3. Define hapten. (K1)
4. What is hot spot? (K1)
5. List out the biological properties of IgG (K1)
6. Differentiate secretory IgA from serum IgA (K2)
7. Explain why secretory IgA is called as antiseptic paint? (K2)
8. Summarize the classes of immunoglobulins based on the nature of heavy chain (K2)
9. Discuss the functions of IgM (K2)
10. Explain the functions of IgM (K2)
11. Distinguish between epitope and paratope (K2)
12. Discuss the biological properties of IgG (K2)

Unit IV

1. Compare the Structure of fungi and virus (K2)
2. Explain the structure of bacteria (K2)
3. Differentiate continuous and batch culture of bacteria (K2)
4. Summarize bacterial growth curve (K2)
5. List out the types of flagellation in bacteria (K1)
6. How would you prepare a typical culture medium? (K1)
7. Define batch culture (K1)
8. What are the advantages of continuous culture? (K1)
9. How are cultural media differentiated based on their uses? (K1)
10. Differentiate enriched medium from enrichment medium (K1)

Unit V

1. Differentiate food poisoning and food spoilage (K2)
2. Explain rhizosphere (K2)
3. Summarize symptoms of dengue (K2)
4. Illustrate the symptoms of dermatophysis (K2)
5. Define putrefaction (K1)
6. How would you prevent food poisoning? (K1)
7. What do you mean by cold sterilization? (K1)
8. Name the different biological nitrogen fixers in biological nitrogen fixation (K1)
9. What is primary complex? (K1)
10. List out the symptoms of COVID 19 (K1)

Section C (5 marks)

Answer in about 200 words

Unit I

1. Discuss the applications of immunology in the branches of science (K2)
2. Illustrate the contributions of Metchnikoff and Emil Von Behring to the field of Immunology (K2)
3. Explain the role of physical and mechanical barriers to block the entry of microbial pathogens (K2)

4. Discuss the structure of thymus and justify its inclusion under the primary lymphoid organs (K2)
5. “The lymph node architecture is well adapted to its function” – Explain. (K2)
6. Explain how passive immunity is different from active immunity (K2)
7. Demonstrate the production of artificial passive immunity serum (K3)
8. Examine the role of bone marrow as a primary and secondary lymphoid organ (K4)

Unit II

1. Explain the origin of stem cells and their differentiation (K2)
2. Discuss the development and fate of B lymphocytes (K2)
3. Explain the origin and functions of macrophages in immune system (K2)
4. Present the development and cell surface markers of T lymphocytes (K3)
5. Compile the different types of T lymphocytes (K3)
6. Outline the production of primary immune response (K4)

Unit III

1. Explain cross reactive antigen and heterophile antigen (K2)
2. Present the basic structure of immunoglobulins (K3)
3. Compile the structure and functions of IgM (K3)
4. Outline the structure and functions of IgG (K4)
5. Present the structure and functions of IgE (K4)

Unit IV

1. Summarize the major features of virus (K2)
2. Explain the structure of flagellum in a bacterium (K2)
3. Classify the bacteria (K3)
4. Demonstrate culture media for bacterial growth (K3)
5. Simplify the factors affecting bacterial growth (K4)

Unit V

1. Classify the methods of food preservation (K3)
2. Demonstrate botulism (K3)

3. Explain the mechanism of biological N₂ fixation (K2)
4. Summarize salmonellosis (K2)
5. Outline the symptoms, prevention and control of dermatophytosis (K4)

Section D (10marks)

Answer in about 400 words

Unit I

1. Analyze the contributions of Louis Pasteur, Edward Jenner, Paul Ehrlich and Jules Bordet for the advancement of immunology (K4)
2. Outline the factors controlling innate immunity (K4)
3. Simplify acquired immunity (K4)
4. Differentiate artificial passive immunity from natural passive immunity (K4)
5. Analyze the structure and functions of primary lymphoid organs (K4)
6. Evaluate the structure and functions of secondary lymphoid organs (K5)

Unit II

1. Outline the biological functions of cell mediated immunity (K4)
2. Differentiate primary and secondary immune response in humoral immune response (K4)
3. Analyze the mechanism of T cell activation (K4)
4. Evaluate the role of B cell in antibody formation (K5)

Unit III

1. Examine the types and general properties of antigen (K4)
2. Analyze the structure and functions of IgA (K4)
3. Evaluate the structure and functions of IgG and IgM (K5)

Unit IV

1. Outline the detailed account on the scope of Microbiology (K4)
2. Simplify the general structure of virus (K4)
3. Analyze the culture media based on consistency, composition and uses (K4)
4. Conclude the culture techniques of bacteria (K5)
5. Criticize the general structure of fungus (K5)

Unit V

1. Simplify types of food poisoning ((K4)
2. Outline Causative agent, symptoms, prevention and control of candidiasis (K4)
3. Analyze the causative agent, symptoms, preventive measures, and strategies for controlling COVID 19.
4. Discriminate symbiotic nitrogen fixation with asymbiotic fixation (K5)
5. Conclude causative agent, symptoms, prevention and control of tuberculosis (K5)

ST.MARY'S COLLEGE (Autonomous) THOOTHUKUDI

III B.Sc Zoology Semester VI

Core II - Biostatistics and Bioinformatics Course Code: 21UZOC62

(for those who joined in July 2021 and after)

Question Bank

Section - A (1 mark)

Choose the correct answer

Unit I

- 1 . Name the process of getting values and facts from an observation (K1)
a **Sampling** b. Collection of data c. Random sampling d. Cluster sampling
2. Find out the classification based on the time of its occurrence (K1)
a. Geographical b. **Chronological** c. Qualitative d. Quantitative
3. Write the term used to refer freshly collected unprocessed data (K1)
a. Array data b. **Raw data** c. Primary data d. Secondary data
4. Define the term 'variable'(K1)
a. A measure of central tendency
b. **A characteristic or attribute that can take on different values**
c. A constant value that does not change
d. The process of collecting data
5. Interpret the type of variable of number of fruits in a tree (K2)
a. **Discrete variable** b. Continuous variable
c. Quantitative variable d. Confounding variable
6. Express the class midpoint for the class 160-180 (K2)
a. 160 b. 180 c. **170** d. 340
7. Identify the process of systematic representation of statistical data in rows and columns (K1)
a. **Tabulation** b. Classification c. Dispersion d. Regression
8. Show the column headings of a table (K1)
a. Reference notes b. **Captions** c. Stubs d. Title
9. Recall the diagram in which data are depicted using circle with sectors (K1)
a. Bar diagram b. Pictogram c. **Pie diagram** d. Histogram
10. Name the graphical representation of cumulative frequency curves (K1)
a. Histogram b. Frequency Polygon c. Frequency curve d. **Ogives**

Unit II

1. Name the average which is based on all the observations of a data set (K1)
a. **Mean** b. Median c. Mode d. Range
2. Write the central value of the array (K1)
a. Mean b. **Median** c. Mode d. Range
3. Find out the mode for the following data. (K1)
2,3,4,5,6,7,3,6,6
a. **6** b. 5 c. 4 d. 7
4. Retrieve the measure which divides a set of observations into two equal groups (K1)
a. Range b. **Median** c. Mean d. Mode
5. Define mode (K1)
a. Difference between highest and lowest value
b. Value of middle observation
c. Average of value
d. **Most frequent value**
6. Which of the following is not a measure of central tendency? (K1)
a. Mean b. Mode c. **Range** d. Median
7. Indicate the square of the standard deviation (K2)
a. **Variance** b. Mean deviation c. Standard error d. Range
8. Write the best measure of dispersion (K1)
a. **Standard deviation** b. Quartile c. Range d. Variance
9. Infer the formula of the range (K2)
a. $R = S - L$ b. **$R = L - S$** c. $R = \frac{L - S}{2}$ d. $R = \frac{(L - S)^2}{2}$
10. Estimate the algebraic sum of deviations from arithmetic mean (K2)
a. More than 1 b. Less than 1 c. **Equal to 0** d. Equal to 1
11. The mean of the distribution is 14 and the standard deviation is 5. Find the value of coefficient of variation (K1)
a. 60.4% b. 48.3% c. 27.8% d. **35.7%**

Unit III

1. Identify the set of all possible outcomes in any random experiment (K1)
a. **Sample space** b. Sample point c. Empirical space d. Interspace
2. We roll a six faced dice. Find out the probability of getting 6 (K1)
a. 1/4 b. **1/2** c. 1 d. 1/3
3. Express the range of probability scale (K2)
a. **0 to 1** b. +1 to -1 c. 0.5 to 1 d. +0.5 to -0.5
4. Infer the statistical test that is used to compare an observed distribution and expected distribution (K2)
a. **Chi square test** b. F test c. t test d. Z test
5. Name the scientist who devised the mathematical measure for the correlation coefficient (K1)
a. **Karl Pearson** b. Tippet c. Yates d. Haldane
6. Write the graphical method of studying correlation between a dependent and independent variable (K1)
a. Bar graph b. **Scattergram** c. Pictogram d. Histogram
7. Indicate the number of variables involved in the simple correlation (K2)
a. 1 b. **2** c. 3 d. 4
8. Find the possible range of values for the coefficient of correlation (K1)
a. Can take any value b. Always more than 1
c. Always less than 1 d. **Can take any value between +1 and -1**
9. Match the value of $r = +1$ with the correlation (K1)
a. **Perfect positive correlation** b. High degree of positive correlation
c. Low degree of positive correlation d. Not expressible
10. Name the test of significance of correlation coefficient (K1)
a. **t-test** b. ANOVA c. F test d. EDA

Unit IV

1. Identify the term used for the integration of information technology with Molecular Biology
a. Cheminformatics b. Proteomics c. **Bioinformatics** d. Genomics
2. Which among the following is used to access MEDLINE ?
a. FABLE b. SRS c. **PubMed** d. LOCUS LINK
3. Identify the search engine for gene related texts
a. **FABLE** b. SRS c. ENTREZ d. LOCUS LINK
4. Which of the following is not a database retrieval tool?

- a. Medline b. Locus link c. SRS d. **BLAST**
- 5. Show the database retrieval system used to get information about gene loci
 - a. Medline b. **Locus link** c. SRS d. Entrez
- 6. Which among the following explores matters on gene ontology?
 - a. MeshPubmed b. HubMed c. **GoPubMed** d. FABLE
- 7. Find out the type of information stored in a bioinformatics database
 - a. Nucleotide sequences b. protein sequences c. gene expression data d. **all the above**
- 8. Who wrote the first book on biological databases?
 - a. **Margaret Dayhoff** b. Shuang Dei c. Richard Durbin d. Michael Dunn
- 9. Who coined the term Bioinformatics?
 - a. J.D Watson b. **Pauline Hogeweg** c. Margaret Dayhoff d. Frederic Sanger
- 10. Identify the search engine for similarity search in text databases
 - a. **ETBLAST** b. FABLE c. PMID d. BIOWIZARD

Unit V

- 1. Identify the protein sequence database
 - a. EMBL b. **NCBI** c. DDBJ d. SRS
- 2. Which among the following is not guaranteed to detect best alignment between query and database?
 - a. MMTK b. **BLAST** c. PROTPARAM d. PDB
- 3. Find out the database similarity search tool
 - a. MMTK b. **BLAST** c. PROTPARAM d. PDB
- 4. Which one the following tool is provided by “NCBI”?
 - a. **BLAST** b. FASTA c. Chime d. Clustal W
- 5. Identify the BLAST program which compares an amino acid query sequence against protein sequence
 - a. blastn b. **blastp** c. blastx d. thlastn
- 6. Find out the conserved pattern of amino acids found in two or more proteins
 - a. promotor b. **motif** c. Pfam d. domain
- 7. Which among the following is a comprehensive collection of primary nucleotide sequences maintained at the European Bioinformatics Institute?.
 - a. **EMBL** b. NCBI c. DDBJ d. SRS
- 8. Identify a genetic sequence database, an annotated collection of all publicly available DNA sequences

- a. **Genbank** b. NCBI c. DDBJ d. SRS

9. Which tool is used for making submissions to GenBank ?

- a. **Bankit and Sequin** b. Bankit and Bankin c. Sequin and Bankin d. Entrez

10. When was the SWISSPROT protein sequence database initiated?

- a. 1988 b. 1985 c. 1986 d. **1987**

Section B (2 marks)

Answer in about 50 words

Unit I

1. Differentiate between population and sample (K2)
2. Explain the types of variables with suitable examples (K2)
3. List the different types of classification of statistical data (K1)
4. Define class interval and class limits of continuous frequency distribution (K1)
5. Indicate the parts of a table (K2)
6. Distinguish between simple and complex table (K2)
7. Compare the bar diagram and histogram (K2)
8. Summarize the steps involved in drawing a pie diagram (K2)
9. Express the advantages of display of statistical data through diagrams (K2).
10. Discuss the construction of histogram (K2)
11. Illustrate frequency polygon and frequency curve (K2)
12. Interpret the less than and more than ogives (K2)

Unit II

1. Define measures of central tendency (K1)
2. Write down the algebraic expression of mean (K1)
3. Illustrate median with an example (K2)
4. Explain mode (K2)
5. Indicate the empirical relationship between mean, median and mode (K2)
6. Express measures of dispersion (K2)
7. Estimate the range and coefficient of range from the following data set (K2)
14, 11, 20, 28, 24
8. Variance of a distribution is 81. Infer the standard deviation (K2)
9. Standard deviation is the best measure of dispersion. Show two reasons (K1)
10. The haemoglobin level in healthy women has mean 13.5g/l and standard deviation 1.5g/l.
Estimate the value of coefficient of variation (K2)
11. Summarize the uses of coefficient of variation (K2)
12. Discuss the standard error of mean. (K2)
13. Distinguish between standard deviation and standard error of mean (K2)

Unit III

1. Define the term probability (K1)
2. Express the probability scale (K2)
3. Distinguish between mutually exclusive event and independent event with an example (K2)
4. Summarize the addition theorem of probability (K2)
5. One card is drawn from a pack of 52 cards. Find the probability of drawing a queen (K1)
6. Write down the conditions required for applying chi-square test (K1)
7. Discuss the term goodness of fit (K2)
8. Define correlation. Recall two examples (K1)
9. Differentiate between positive and negative correlation (K2)
10. Infer the contribution of Karl Pearson to correlation analysis (K2)
11. Interpret the following correlation coefficients : (i) $r = +1$ (ii) $r = 0$ (K2)
12. Indicate any two applications of correlation analysis in biology (K2)

Unit IV

1. Infer the applications of bioinformatics (K2)
2. Explain bioinformatics (K2)
3. Discuss the scope of bioinformatics (K2)
4. Summarize the properties of biological databases (K2)
5. Indicate some database retrieval tools (K2)
6. Discuss some salient features of PubMed (K2)
7. Explain Medline (K2)
8. Discuss some interfaces which serve as alternatives for PubMed (K2)
9. Summarize the information about the gene query gene provided by locuslink (K2)
10. Discuss the importance of locuslink (K2)

Unit V

1. Infer the applications of bioinformatics tools in research (K2)
2. Explain the salient features of NCBI (K2)
3. Summarize some protein sequence databases used in bioinformatics (K2)
4. Discuss on sequence alignment softwares (K2)
5. Explain BLAST (K2)
6. Explain SWISSPROT (K2)
7. Explain the importance of FASTA (K2)
8. Summarize any two nucleotide sequence databases (K2)
9. Explain EMBL (K2)
10. Discuss on the benefits of GENBANK (K2)

Section C (5marks)

Answer in about 200 words

Unit I

1. What is sampling ? Describe the various sampling techniques employed in biological

investigation

2. Demonstrate the methods of classifying raw data (K3)
3. Present the types of frequency distribution with examples (K3)
4. Compile the parts of a table with a model table (K3)
5. Relate the subdivided bar diagram and percentage bar diagram (K3)
6. Outline the technique of drawing a pie diagram with an illustration (K4)
7. Compare and contrast frequency polygon and frequency curve (K4)

Unit II

1. Compare the characteristics of the mean, median and mode (K4).
2. The following data shows the daily fat intake (grams) of a sample of 10 adults. Compute the mean, median and mode.(K3)

62	56	69	77	89	85	80	77	79	75
----	----	----	----	----	----	----	----	----	----

3. Appraise the calculation and properties of range (K4)
4. Examine the merits and demerits of standard deviation (K4)
5. Compute the variance, standard deviation and standard error of mean from the following data on the height of students in cm (K3)

159	165	169	163	161	171	173	167
-----	-----	-----	-----	-----	-----	-----	-----

6. Illustrate the purpose of coefficient of variation with an example (K2)

Unit III

1. Classify the types of events on the basis of probability (K3)
2. Categorize the types of probability with suitable examples (K4).
3. Organize the basic steps involved in the chi-square test. (K4)
4. Analyze the uses of scatter diagrams in the study of relationship between variables. (K4)

5. Diagram a scatter plot and interpret it (K4)

X	2	4	6	8	12
Y	5	9	15	20	24

6. Compile the steps and formula for calculating Karl Pearson's correlation coefficient (K3)
7. Interpret the Pearson's correlation coefficient (K2)
8. Discuss the step-by-step procedure for testing statistical significance of correlation coefficient using t-test (K2)

Unit IV

1. Compile the properties of biological databases (K3)
2. Present the scope of bioinformatics in different fields (K3)
3. Construct the applications of bioinformatics in various fields (K3)
4. Present any two database retrieval tools (K3)
5. Compile the salient features of the following database retrieval tool (i) PubMed (ii) Locuslink (K3)
6. Present the key components of MEDLINE (K3)
7. Show the applications of PubMed (K3)

Unit V

1. Compile the various sequence alignment softwares (K3)
2. Construct the structure of protein sequence database (K3)
3. Present the role of SWISS PROT protein sequence database (K3)
4. Write an account on nucleotide sequence database (K3)
5. Show the applications of various tools used in bioinformatics (K3)

Section D (10 marks)

Answer in about 400 words

Unit I

1. Examine the various sampling techniques employed in biological investigation (K4)
2. Outline the different types of frequency distribution with examples (K4)
3. Recommend the types of bar diagrams with appropriate visual presentation (K5)

4. Evaluate the different forms of graphical presentation of continuous frequency distribution data (K5)

Unit II

1. The following table shows the age distribution of certain disease reported during the year. Analyze the sample mean, median and mode (K4).

Age	10-19	20-29	30-39	40-49	50-59	60-69
Number of cases	5	10	20	22	13	6

2. Evaluate the mean, standard deviation and coefficient of variation from the following data (K5)

No. of children/ family (X)	1	2	3	4	5
Number of families (f)	4	19	7	2	1

3. The following table shows the grouped data, in classes, for the heights of 50 people. Evaluate the standard deviation and standard error of mean. (K5)

Height in cm	120-130	130-140	140-150	150-160	160-170
Number of People	2	5	25	10	8

4. “Dispersion is the degree of scatter of the variable from a central value” – Criticize (K5)

Unit III

1. Prove the theorems of probability with suitable examples (K5)
2. “Chi square test is a valuable statistical tool to analyze the goodness of fit of data”- Support with an illustration (K5)
3. Categorize the types of correlation with examples (K4)
4. Evaluate the Pearson’s correlation coefficient for the following data on length (x in cm) and weight (y in grams) of gold fish. Test its significance using student’s t- test (K5)

X	7	5	6	3	4	2	4	8	5
Y	26	18	20	9	12	8	13	30	16

5. The following table shows the age (x in years) and systolic blood pressure (y in mmHg).

Investigate Pearson's correlation coefficient and interpret it. (K4)

X	28	41	40	38	35	33	40	32	36
Y	120	128	141	126	134	126	140	144	126

Unit IV

1. Examine the scope and applications of bioinformatics (K4)
2. Outline the properties of biological databases (K4)
3. Recommend the various database retrieval tools used in bioinformatics (K4)
4. "MEDLINE as a Source of Just-in-Time Answers to Clinical Questions" – Criticize (K5)
5. "LocusLink: A Directory of Genes" – Defend (K5)

Unit V

1. Examine the salient features of NCBI and SWISSPROT (K4)
2. Appraise the applications of bioinformatics tools in research (K4)
3. Evaluate the various nucleotide sequence databases (K5)
4. Recommend on FASTA and BLAST alignment softwares (K5)

ST. MARY'S COLLEGE (Autonomous) - THOOTHUKUDI

III B.Sc Zoology Semester VI

Core III – Marine Biology Course Code: 21UZOC63

(for those who joined in July 2021 and after)

Question Bank

Section A (1 mark)

Choose the correct answer

Unit I

1. Which one of the following region is called as open sea? (K1)
a. **Pelagic region** b. Neritic region c. Benthic region d. Euphotic region
2. Name the zone which lies between highest high tide and lowest low tide (K1)
a. Eulittoral zone b. Abyssal zone c. Bathyal zone d. **Intertidal zone**
3. Find the outer limit of the rocky shore (K1)
a. **Spraying zone** b. Balanoid zone c. Oyster zone d. Sub tidal zone
4. Show the distance of disphotic zone (K1)
a. 70-100 m b. 60-90 m c. **80-200m** d. 10- 200m
5. Identify the sandy shore organism (K1)
a. Chiton b. Ascidian c. Sea anemone d. **Balanoglossus**
6. Which among the following is occupied by muddy shore beaches? (K1)
a. Corals b. **Salt marshes** c. Barnacles d. Sea urchins
7. Name the rocks which are permanently immersed in water (K1)
a. Exposed rocks b. **Submerged rocks** c. Loose rocks d. Sand-covered rocks
8. Show the intertidal area abundant in oyster (K1)
a. Balanoid zone b. Supra-tidal zone c. Sub-tidal zone d. **Oyster zone**
9. Write the space lying between the sand grains in sandy shore (K1)
a. Interstitial shore b. Interstitial system c. **Interstitial space** d. Interstitial water
10. Which among the following is the upper region of intertidal sandy shore? (K1)
a. **Supra-littoral fringe** b. Mid-littoral zone
c. Sub-littoral fringe d. Interstitial zone

Unit II

1. Choose the amount oxygen present per liter of seawater (K1)
 - a. **0 to 8 milliliters**
 - b. 10 to 18 milliliters
 - c. 13 to 18 milliliters
 - d. 20 to 30 milliliters
2. Select which one of the following is more soluble than oxygen (K1)
 - a. **Carbon di oxide**
 - b. Nitrogen
 - c. Hydrogen
 - d. Methane
3. Name the most abundant salt dissolved in seawater (K1)
 - a. Calcium carbonate (CaCO_3)
 - b. Iron oxide (Fe_2O_3)
 - b. **Sodium chloride** (NaCl)
 - d. Ammonium nitrate (NH_4NO_3)
4. Find the amount of carbon dioxide dissolved in ocean (K1)
 - a. **80%**
 - b. 70%
 - c. 55%
 - d. 40%
5. Identify the water layer where there is no visible light (K1)
 - a. Profundal zone
 - b. **Aphotic zone**
 - c. Euphotic zone
 - d. Disphotic zone
6. Choose the amount of salinity in mesohaline waters (K1)
 - a. **between 5 and 18 ppt**
 - b. between 30 and 35
 - c. between 0.5 to 5 ppt
 - d. between 18 to 30 ppt
7. Identify the dissociate form of CO_2 which reacts with water to produce carbonic acid (K1)
 - a. **Bicarbonate (HCO_3^-) and Hydrogen ions (H^+)**
 - b. Carbonate (CO_3^{2-}) and Water
 - c. Oxygen (O_2) and Water
 - d. Carbon di oxide (CO_2) and Water
8. Name the most abundant salt dissolved in seawater (K1)
 - a. Calcium carbonate (CaCO_3)
 - b. Iron oxide (Fe_2O_3)
 - b. **Sodium chloride** (NaCl)
 - d. Ammonium nitrate (NH_4NO_3)
9. Find out the components of minute crystals of the prismatic layer (K1)
 - a. Magnesium carbonate
 - b. Sodium carbonate
 - c. **Calcium carbonate**
 - d. Potassium carbonate
10. Choose the amount of density of seawater (K1)
 - a. 1.01 to 1.07
 - b. **1.02 to 1.07**
 - c. 2.01 to 2.09
 - d. 3.09 to 4.08

Unit III

1. Find the organism which move with the direction of water current (K1)
a. Nekton b. Prawn c. **Plankton** d. Fish
2. Identify the organism which spend only a part of their life as plankton (K1)
a. Holoplankton b. **Meroplankton** c. Microplankton d. Macroplankton
3. Name the planktonic organism that can tolerate the salinity change of 0.5 ppt (K1)
a. Oligohaline plankton b. Mesohaline plankton
c. Microplankton d. **Infrahaline plankton**
4. Identify the plankton which has the size range between 0.02 - 0.2 mm (K1)
a. Holoplankton b. **Femtoplankton** c. Microplankton d. Macroplankton
5. Which one of the following is a gas-filled sac, arising as a dorsal outgrowth from the gut in fishes? (K1)
a. **Air bladder** b. Pneumatophore c. Pores d. Thin shells
6. Identify the type of exoskeleton formed by corals (K1)
a. Hydrogen calcite b. **Calcium carbonate**
c. Limestone d. Phosphate
7. Name the confluent zone of sea water and fresh water (K1)
a. **Estuaries** b. Salt marshes c. Oceanic province d. Neritic province
8. Select the mangrove plant (K1)
a. **Avicennia** b. Cactus
c. *Hibiscus* d. Coconut
9. Quote the nature of pneumatophores (K1)
a. Positively geotrophic b. Negatively phototropic
c. **Positively phototropic** d. Chemotrophic
10. Find out the mangrove plant which shows the adaptive feature of vivipary (K1)
a. *Avicennia* b. **Rhizophora** c. *Salicornia* d. *Suaeda*

Unit IV

1. Find out the periodic rise and fall of the oceans (K1)
a. **Tides** b. Currents c. Waves d. Plunging waves
2. Write the duration of one lunar day (K1)
a. **24h 50m** b. 24h 15m c. 24h 12m d. 24h10m

3. Identify the type of tide when the sun, moon and earth are on straight line (K1)
 - a. Neap tides b. **Spring tides** c. Diurnal tides d. Semi diurnal tides
4. Which among the following causes the most ocean waves? (K1)
 - a. Impacts of cosmic bodies b. Earthquakes c. **Wind** d. Land slides
5. Show the horizontal distance between the crest and trough (K1)
 - a. **Wave length** b. Wave height c. Period d. Speed of the wave
6. Identify the lowest part of the wave (K1)
 - a. Crest b. Wave length c. Wave height d. **Trough**
7. Which of the following causes Tsunami? (K1)
 - a. Decrease in salinity of water b. **An earthquake** c. Heavy winds d. Swells
8. Write the other name for Tsunami (K1)
 - a. **Seismic waves** b. Tidal bores c. Wind waves d. Storm surges
9. Identify the striking feature of global surface circulation (K1)
 - a. **Gyres** b. Bores c. Surges d. Fetch
10. Identify the maximum speed of equatorial counter current (K1)
 - a. 25 cm/sec b. 50 cm/sec c. **125 cm/sec** d. 200 cm/sec

Unit V

1. Find out the other name of manganese nodules (K1)
 - a. **Poly-metallic nodules** b. Alluvial placer
 - c. Manganese nodules d. Ferrous nodules
2. Which among the following form concentric layers of manganese nodules? (K1)
 - a. **Iron and Manganese hydroxide** b. Silicate and Hydroxide
 - c. Lead and Zinc d. Copper and Nickel
3. Choose the primary mixtures of Petroleum (K1)
 - a. Manganese b. **Hydrocarbons** c. Iron d. Sulphate
4. Find out the percentage of manganese present in the Peru Basin (K1)
 - a. 60-70 b. **34** c. 75-80 d. 35-40
5. Select the primary mineral in phosphorite (K1)
 - a. Manganese b. Iron c. **Apatite** d. Sulphate
6. Which one of the following is an essential element for plant growth? (K1)
 - a. Manganese b. **Phosphorus** c. Iron d. Sulphate

7. Identify the primary component of fertilizer used in agriculture to enhance crop yields (K1)
 - a. Manganese
 - b. **Phosphorite**
 - c. Iron
 - d. Sulphate
8. Which one of the following is a byproduct of phosphoric acid? (K1)
 - a. **Phosphogypsum**
 - b. Silicate and Hydroxide
 - c. Lead and Zinc
 - d. Copper and Nickel
9. Which one of the following absorbs and stores nutrients from the water? (K1)
 - a. Sea lily
 - b. **Caulerpa**
 - c. Barnacle
 - d. Sea squirt
10. Choose the floating sea weed (K1)
 - a. **Sargassum**
 - b. Crab
 - c. Prawn
 - d. Fish

Section B (2 marks)

Answer in about 50 words

Unit I

1. What is pelagic region? (K1)
2. Define disphotic zone (K1)
3. Distinguish bathypelagic region from abyssopelagic region (K1)
4. Write a short note on the littoral zone (K1)
5. Name the five zones of rocky shore (K1)
6. Discuss any four mechanisms developed by rocky shore organism (K2)
7. Explain the filter feeding mechanism developed by sandy shore animal (K2)
8. Summarize any two problems faced by intertidal sandy shore organisms (K2)
9. Infer the composition of mud (K2)
10. Compare the deposit and detritus feeding in muddy shore animals (K2)

Unit II

1. Explain thermocline (K2)
2. Discuss illumination (K2)
3. Differentiate between pycnocline and thermohaline (K2)
4. Summarize major and minor constituents of seawater (K2)
5. Explain ocean acidification (K2)
6. Discuss the trace elements present in the sea water (K2)
7. Summarize the factors that affect the dissolved gases of the ocean (K2)
8. Discuss salinity (K2)

9. Summarize the factors which affect the salinity of the marine environment (K2)
10. Discuss ocean currents (K2)

Unit III

1. What is meroplankton? (K1)
2. Define nanoplankton (K1)
3. Write notes on jet propulsion (K1)
4. What is air bladder? (K1)
5. Write a short note on primary production (K1)
6. What is salt-wedge estuary? (K1)
7. Write a short note on estuarine animals (K1)
8. Summarize the morphological adaptations of mangroves (K2)
9. Discuss vivipary (K2)
10. Discuss Fjord estuaries (K2)

Unit IV

1. What are tides? (K1)
2. Write a note on the forces causing tides (K1)
3. Define semidiurnal tides (K1)
4. What is wave length? (K1)
5. Define capillary waves (K1)
6. Distinguish between crest and trough (K2)
7. Summarize the ideal properties of waves (K2)
8. Discuss seismic sea wave (K2)
9. Explain equatorial current (K2)
10. Discuss doldrums (K2)

Unit V

1. Write a short note on manganese nodules (K1)
2. List out the macrofauna present in the manganese nodule (K1)
3. What is petroleum? (K1)
4. Explain beach placers (K2)
5. Discuss petroleum deposits (K2)
6. Differentiate between Peru and Penrhyn basin (K2)

7. List out the medical applications of phosphorus (K2)
8. Discuss bioremediation in sponges (K2)
9. What is Marine Natural Products Libraries? (K2)
10. Discuss the environmental cleanup efforts of Caulerpa (K2)

Section C (5 marks)

Answer in about 200 words

Unit I

1. Discuss the vertical zones of pelagic region (K2)
2. Summarize the salient features of rocky shore (K2)
3. Explain the various zones of the intertidal rocky shore (K2)
4. Present the salient features of rocky shore (K3)
5. Show the adaptations of intertidal rocky shore fauna (K3)
6. Classify the zones of intertidal sandy shore (K3)
7. Present the adaptations of intertidal sandy shore organisms (K3)
8. Outline the zonation of muddy shore (K4)
9. Categorize the biota of muddy shore animals (K4)
10. Analyze the adaptations of muddy shore organisms (K4)

Unit II

1. Classify the factors which affect the temperature of the ocean (K3)
2. Show the distribution of temperature (K3)
3. Present the vertical distribution of salinity (K3)
4. Classify role of temperature in the marine environment (K3)
5. Discuss the factors affecting the temperature of the ocean (K2)
6. Present the horizontal distribution of salinity (K3)
7. Classify the factors which affect the salinity of the ocean (K3)
8. Compile major dissolved elements of ocean (K3)
9. Present a short note on illumination (K3)

Unit III

1. Explain the classification of zooplankton based on their size (K2)
2. Summarize the adaptations exhibited by planktonic organisms (K2)
3. Show the methods of plankton collection (K3)

4. Present the primary production in marine environment (K3)
5. Analyze the different trophic levels in the ocean (K4)
6. Classify the types of coral reefs (K3)
7. Present the special adaptations of mangroves (K3)
8. Present the characteristics of mangroves (K3)
9. Classify the types of mangroves (K3)
10. Summarize the characteristics of estuaries (K2)

Unit IV

1. Discuss the forces causing tides (K2)
2. Explain the different types of tides (K2)
3. Infer the effect of tides in coastal areas (K2)
4. Compile the characteristics of waves (K3)
5. Show the properties of ideal waves (K3)
6. Classify the waves based on their properties (K3)
7. Differentiate deep water and shallow water waves (K4)
8. Compare wave height and wave period (K4)
9. Examine Tsunami – the seismic sea wave (K4)
10. Analyze the western boundary currents (K4)

Unit V

1. Show the formation of manganese nodules (K3)
2. Present the occurrence of manganese nodules (K3)
3. Analyze production of phosphorus (K4)
4. Analyze the formation of manganese nodules (K4)
5. Examine the diagnostic features of *Caulerpa* (K4)
6. Examine the diagnostic features of *Sargassum* (K4)

Section D (10 marks)

Answer in about 400 words

Unit I

1. Outline the classification of marine habitat (K4)
2. Examine the features of sandy and rocky shores (K4)
3. Appraise the salient features and adaptations of intertidal rocky shore animals (K4)

4. Analyze the salient features of intertidal sandy sea shore (K4)
5. Evaluate the general adaptations of intertidal sandy shore organisms (K5)
6. Combine the adaptations of intertidal muddy shore animals (K6)

Unit II

1. Analyze the chemical properties of sea water (K4)
2. Categorize the dissolved gases in sea water (K4)
3. Outline the role of temperature in marine environment (K4)
4. Construct illumination and salinity distribution (K6)
5. Evaluate the dissolved gases in sea water (K5)

Unit III

1. Outline the classification of plankton with suitable examples (K4)
2. Examine the adaptations of plankton (K4)
3. Evaluate the primary and secondary production in ocean (K5)
4. Evaluate the characteristic features and types of mangroves (K5)
5. Analyze the role of mangroves in protecting the environment (K4)
6. Evaluate the characteristics features and types of estuaries (K5)
7. Analyze the characteristics features and types of mangroves (K4)

Unit IV

1. Analyze the formation of different types of oceanic tides (K4)
2. Investigate the effects of tides in coastal areas (K4)
3. Evaluate the formation and properties of waves (K5)
4. Discriminate the different types of waves (K5)
5. Combine the types of currents (K6)

Unit V

1. Outline the role of manganese nodules (K4)
2. Evaluate the formation and the life of manganese nodules (K5)
3. Analyze the role of phosphorus in various fields (K4)
4. Examine the diagnostic features of *Caulerpa* and *Sargassum* (K4)
5. Discriminate the different kinds of natural products from sponges and molluscs (K5)

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI

III B.Sc. Zoology

Semester VI

Core IV- Economic Zoology

Course code: 21UZOC64

Question Bank

(for those who joined in July 2021 and after)

Section A (1 mark)

Choose the correct answer:

Unit I

1. Which earthworm species is preferred for the vermicomposting process? (K1)
a. *Eudrilus eugeniae* c. *Perionyx excavatus*
b. *Eisenia fetida* d. *Lampito mauriti*
2. Choose the correct statement regarding vermicompost(K1)
a. **Decomposed remnants of organic material**
b. Decomposed remnants of inorganic material
c. Fresh remnants of organic material
d. Fresh remnants of inorganic material
3. How much time does it typically take for worms to compost organic matter using the pit method? (K1)
a. **45- 60 days** c. 40- 50 days
b. 40- 60 days d. 45- 50 days
4. What is known as black gold in vermicomposting? (K1)
a. Worm oil c. **Vermi casts**
b. Black worms d. Vermi wash
5. Which of the following is an example of a food waste item that should not be added to a vermicomposting bin? (K1)
a. Banana peels c. Eggshells
b. **.Meat scraps** d . Coffee grounds
6. Which of the following earthworm species is not recommended for vermi composting? (K1)
a. *Eudrilus eugeniae* c. *Perionyx excavatus*

b. *Eisenia fetida*

d. *Pheretima posthuma*

7. What is the thickness of the loamy soil of vermibed ? (K1)

a. **15 cm**

c. 17 cm

b. 16 cm

d. 18 cm

8. Which of the following form the basal layer of vermibed ? (K1)

a. **Broken bricks, coarse sand and loamy soil**

c. Grass clipping

b. Leaves

d. Kitchen scraps

9. Select the correct statement for vermiwash ? (K1)

a. **Tea preparation of earthworm**

c. Production of large quantities of desired worm

b. Decomposition of organic wastes

d. Rearing of earthworm

10. Which among the following is not a component of vermiwash ? (K1)

a. Coelomic fluid

c. Enzymes

b. Mucus

d. **Carbon**

Unit II

1. Find the correct term for rearing of young age worms in India (K1)

a. **Chawki rearing**

b. Shoot rearing

c. Shelf rearing

d. Floor rearing

2. Name the instrument used to measure the moisture content in the rearing room (K1)

a. Sphygmomanometer

b. Thermometer

c. **Hygrometer**

d. Calorimeter

3. Name the most common mountage used in South India (K1)

a. **Chandrike**

b. bottle brush mountage

c. Folded straw mountage

d. Centipede rope mountage

4. Recall the most preferred method of propagation of mulberry for commercial plantation (K1)

a. Seedling

b. **Vegetative**

c. **Micropropagation**

d. Macro propagation

5. Find the high yielding variety of Mulberry from the following options (K1)

a. **S 30**

b. Kanva- 2

c. Mysore local

d. Sujanpur – 4

6. What is ant well? (K1)

a. Seat of rearing rack

b. Alluminium bowl

c. Plastic mug

d. **Device to prevent ants from entry into the rearing tray.**

7. Recall the term for cultivation of mulberry plants (K1)

- a. **Moriculture** b. Sericulture c. Apiculture d. Silviculture
8. Recall Kolar system of planting of mulberry plants (K1)
- a. Pit system b. **Row system** c. Strip system d. Trench system
9. What is the popular method of propagation of mulberry for commercial plantation?(K1)
- a. Seedling b. **Vegetative** c. Micropropagation d. Micropropagation
10. Which of the following is a plant based hormone? (K1)
- a. **Sampoorna** b. Ecdysone c. Seriphos d. FYM

Unit III

1. What is the scientific name of European bee ? (K1)
- a. *Apis dorsata* b. *Apis florea* c. *Apis indica* d. ***Apis mellifera***
2. Choose the correct pair (K1)
- a. **Apiculture – Honey bee** b. Sericulture - Fish
- c. Pisciculture – Silkworm d. Aquaculture – Lac insect
3. Which among the following is used for preventing bee stings on face and neck (K1)
- a. **Bee veil** b. Uncapping knife c. Smoker d. Hive tool
4. Select the bee which constructs combs in dark places (K1)
- a. ***Apis indica*** b. *Apis dorsata* c. *Apis florea* d. *Apis mellifera*
5. Find the best choice of honey bee species for bee keeping (K1)
- a. *Apis dorsata* b. *Apis florea* c. ***Apis indica*** d. *Apis mellifera*
6. Find the term which refers to the second swarm in Honey bees (K1)
- a. **Cast** b. Prime swarm c. Virgin Queen d. Supersedure
7. Name the process of swarming when the swarm leaves the hive with the old queen (K1)
- a. Absconding b. **Prime swarm** c. Cast d. Brooding
8. What is the crystallizing tendency of honey called as? (K1)
- a. **Granulation** b. Processing c. Fermentation d. Sterilization
9. Identify the beeswax produced by *Apis dorsata* (K1)
- a. **Ghedda wax** b. Royal jelly c. Propolis d. Solar wax
10. Where is the bee venom stored in the body of Honey bee? (K1)

- a. **Poison sac** b. Mandibles c. Spiracle d. Thorax

Unit IV

1. Which one of the following is live fish? (K1)
a. *Catla* b. *Mrigala* c. ***Clarias*** d. Grass carp
2. Choose the common carp from the following . (K1)
a. *Labeo rohita* b. *Catla catla* c. *Labeo calbasu* d. ***Cyprinus carpio***
3. Select the term which refers to the number of one species released into the pond (K1)
a. Stocking density b. **Stocking rate** c. Ration d. Conversion rate
4. What is defined as the total number of fish released into the aquatic body (K1)
a. **Stocking density** b. Stocking rate c. Stocking ratio d. Pond dykes
5. Show the ideal level of oxygen for the best growth of the fishes (K1)
a. 10 mg/l b. **5 mg/l** c. 15 mg/l d. 2 mg/l
6. Name the instrument used to measure the turbidity of water (K1)
a. **Secchi disc** b. Hygrometer c. Colorimeter d. pH meter
7. Find out the pearl oyster from the following (K1)
a. *Crassostrea madresensis* b. *Perna viridis* c. *Perna indica* d. ***Pinctada fucata***
8. Name the eggs of *Artemia* (K1)
a. **cyst** b. ren c. silver pearl d. spat
9. Which one of the following is commonly called as rotifer? (K1)
a. ***Brachionus*** b. *Daphnia* c. *Chlorella* d. *Spirulina*
10. What deficiency causes soft shell syndrome disease? (K1)
a. **Calcium and Phosphorous** b. Iron c. Nitrogen d. Vitamin

Unit V

1. Find the disease caused by over feeding of the calf (K1)
a. **Calf Scours** b. Mastitis c. Pneumonia d. Brucellosis
2. Choose the ideal time to dehorn the calf after birth from the following (K1)
a. Within 15-20 days b. **Within 7-10 days** c. Within 2-5 days d. Within 5-9 days
3. How many days of dry period is necessary between calving? (K1)

- a. **60 - 90 days** b. 30-50 days c. 10 - 30 days d. 80 - 100 days
4. When will the placenta be expelled after calving? (K1)
- a. 10 - 12 hours b. **2 - 4 hours** c. 4 - 8 hours d. 5 - 10 hours
5. What is the first milk of the cow called as? (K1)
- a. **colostrum** b. skimmed milk c. cream d. cheese
- 6 . Name the main sugar present in milk (K1)
- a. **lactose** b. sucrose c. fructose d. maltose
7. Find out the normal pH of the milk (K1)
- a. **6.5 to 6.7** b. 6 to 7 c. 4.5 to 5.5 d. 8to 9
8. Name the primary protein of milk (K1)
- a. Whey protein b. **Casein** c. Niacin d. Folate
9. What is used to make ricotta cheese ? (K1)
- a. Lactose b. Xanthine c. Carotene d. **Whey protein**
10. What is the boiling point of milk ? (K1)
- a.100⁰ C b.**100.2⁰ C** c. 98⁰ C d. 102⁰ C

Section B (2 marks)

Answer in about 50 words

Unit I

1. Define vermicast (K1)
2. List out the need for vermiculture(K1)
3. Define vermiwash (K1)
4. Enlist the vermibed materials (K1)
5. Mention the suitable species of earthworms used in vermiculture (K1)
6. What is continuous flow system (K1)
7. Define vermibed (K1)
8. Name the containers used in vermiculture (K1)
9. What are the two methods of windrow vermicomposting (K1)
10. List out the steps involved in vermiculture (K1)

Unit II

1. Define Moriculture (K1)
2. Mention the cultivable varieties of mulberry in India (K1)
3. What is shoot grafting ? (K1)
4. Write any two merits of chandrike (K1)
5. What is sampoorna ? (K1)
6. List any two advantages of vegetative propagation (K1)
7. Write down the Kolar system of planting of mulberry (K1)
8. Quote the purpose of keeping paraffin paper in the rearing tray (K1)
9. Mention the uses of ant wells (K1)
10. What are chop sticks ? (K1)

Unit III

1. Write the best qualities of *Apis mellifera* for bee keeping (K1)
2. What is Apiculture ? (K1)
3. Name the parts of a Newton's beehive (K1)
4. How do you drive away the bees using smoker ? (K1)
5. What is queen excluder ? (K1)
6. Define swarming (K1)
7. List down the factors responsible for swarming (K1)
8. What is prime swarm? (K1)
9. Explain poison sac (K2)
10. Indicate the uses of bee venom ?(K2)
11. Distinguish between prime swarm and cast (K2)

Unit IV

1. Why is *Clarias batrachus* called as live fish?(K1)
2. Describe nursery pond (K1)
3. List down the cultivable organisms in culture ponds (K1)
4. Define thermal stratification (K1)
5. What are the live feed organisms used in aquaculture? (K1)
6. Define Feed Conversion Ratio (K1)
7. Illustrate batch culture (K2)

8. Distinguish stocking density from stocking rate (K2)
9. Indicate the advantages of liming in culture pond (K2)
10. Explain formulated feed (K2)

Unit V

1. What do you mean by heifer in dairy? (K1)
2. List out the symptoms of delivery in pregnant cow (K1)
3. Write the composition of milk (K1)
4. Indicate the vitamins present in milk (K2)
5. Distinguish calf from heifer (K2)
6. Summarize the importance of quality food in growth of heifers (K2)
7. Discuss the need for milk replacers (K2)
8. Explain dehorning in calf (K2)
9. Express the correct method of milking (K2)
10. Explain how ghee is obtained from milk (K2)

Section C (5 marks)

Answer in about 200 words

Unit I

1. Illustrate the steps to construct a vermibed for vermicomposting (K2)
2. Explain the preparation of vermiwash (K2)
3. Demonstrate the preparation of vermibed (K3)
4. Differentiate between pit and bin method of vermicomposting (K2)
5. Discuss windrow method of vermicomposting (K2)
6. Differentiate between static pile windrow and top fed windrow (K2)
7. Illustrate the composition and application of vermiwash (K2)
8. Differentiate between trapping and manual methods of harvesting of vermicompost (K2)
9. Present the harvesting of vermicompost using mechanical harvester (K3)

Unit II

1. Compile the methods adopted in chawki rearing (K3)
2. Indicate the methods of harvesting of cocoons (K2)

3. Present a detailed account on sampoorna (K3)
4. Discuss the planting systems in mulberry cultivation (K2)
5. Summarize the factors responsible for the successful rearing of silkworm (K2)
6. Explain silkworm rearing house (K2)
7. Illustrate chandrike and its merits (K2)

Unit III

1. Present the characteristic features of Indian bee (K3)
2. Summarize the characteristic features of European bee (K2)
3. Compare the desirable traits of *Apis indica* and *Apis mellifera*(K2)
4. Differentiate between brood comb frames and super comb frames (K2)
5. Illustrate the structure of honey extractor (K2)
6. Present the methods of extraction and processing of honey(K3)
7. Compile the different strategies to prevent swarming in Bees (K3)
8. Classify the factors promoting swarming in honey bee (K3)
9. Demonstrate the procedure to collect bee venom and its applications (K3)

Unit IV

1. Explain the culture of common carps (K2)
2. Classify the methods of Rotifer culture (K3)
3. Demonstrate the methodology used in *Artemia* culture (K3)
4. Compile the criteria for good quality artificial feed (K3)
5. Categorize the fertilizers used in fish ponds and their importance (K4)
6. Analyse the factors controlling productivity in aquaculture in ponds (K4)
7. Outline the management of culture ponds (K4)
8. Research the culturable organisms other than fin fishes (K4)

Unit V

1. Explain feeding of calves in dairy farming (K2)
2. Present the strategies to be followed in successful management of heifers (K3)
3. Demonstrate the preparation of butter and ghee (K3)
4. Categorize the steps in management of lactating cow (K4)
5. Outline the precautionary measures to be taken before and during parturition (K4)

6. Examine the different types of proteins in milk and their nutritive value (K4)

Section D (10 marks)

Answer in about 400 words

Unit I

1. Select the methods of vermicomposting (K4)
2. Outline the methods of harvesting vermicompost (K4)

Unit II

1. Outline common Indian varieties of mulberry (K4)
2. Examine vegetative propagation in mulberry cultivation (K4)
3. Select the rearing appliances used in silkworm rearing (K4)

Unit III

1. Analyse the characteristic features of Indian bee and European bee (K4)
2. Select the bee keeping equipment (K4)
3. Examine the parts of Langstroth hive (K4)
4. Outline the parts of Newton's hive (K4)
5. Compare Langstroth hive and Newton's hive (K4)
6. Evaluate the production, nature and uses of bee wax (K5)
7. Discriminate the types and causes of swarming and suggest the preventive measures (K5)

Unit IV

1. Analyse the role of live feed organisms in aquaculture (K4)
2. "Water quality parameter in aquaculture system is of pivotal importance" – Prove (K5)
3. Evaluate the basic considerations in selection of culturable organisms and recommend few culturable species (K5)
