UNIT V:

29. Give any two disadvantages of brainstorming.

30. Mention few types of brain storming.

31. Is brain writing will be useful in day to day life?

32. What do you think about brain storming?

33. Write any two advantages of brain storming.

Section-C

Answer the following by choosing either a (or) b:

(5 X 4=20)

UNIT I:

- 1) A) Philosophy of Education is a label applied to the study of the purpose, process, nature and ideals of education. It can be considered a branch of both philosophy and education. Education can be defined as the teaching and learning of specific skills, and the imparting of knowledge, judgment and wisdom, and is something broader than the societal institution of education we often speak of.

Many educationalists consider it a weak and woolly field, too far removed from the practical applications of the real world to be useful. But philosophers dating back to Plato and the Ancient Greeks have given the area much thought and emphasis, and there is little doubt that their work has helped shape the practice of education over the millennia.

Plato is the earliest important educational thinker, and education is an essential element in "The Republic" (his most important work on philosophy and political theory, written around 360 B.C.). In it, he advocates some rather extreme methods: removing children from their mothers' care and raising them as wards of the state, and differentiating children suitable to the various castes, the highest receiving the most education, so that they could act as guardians of the city and care for the less able. He believed that education should be holistic, including facts, skills, physical discipline, music and art. Plato believed that talent and intelligence is not distributed genetically and thus is to be found in children born to all classes, although his proposed system of selective public education for an educated minority of the population does not really follow a democratic model.

Aristotle considered human nature, habit and reason to be equally important forces to be cultivated in education, the ultimate aim of which should be to produce good and virtuous citizens. He proposed that teachers lead their students systematically, and that repetition be used as a key tool to develop good habits, unlike Socrates' emphasis on questioning his listeners to bring out their own ideas. He emphasized the balancing of the theoretical and practical aspects of subjects taught, among which he explicitly mentions reading, writing, mathematics, music, physical education, literature, history, and a wide range of sciences, as well as play, which he also considered important.

During the Medieval period, the idea of Perennialism was first formulated by St. Thomas Aquinas in his work "De magistro Augustine". Perennialism holds that one should teach those things deemed to be of everlasting importance to all people everywhere, namely principles and reasoning, not just facts (which are apt to change over time), and that one should teach first about people, not machines or techniques. It was originally religious in nature, and it was only much later that a theory of secular perennialism developed.

During the Renaissance, the French skeptic Michel de Montaigne (1533 - 1592) was one of the first to critically look at education. Unusually for his time, Montaigne was willing to question the conventional wisdom of the period, calling into question the whole edifice of the educational system, and the implicit assumption that university-educated philosophers were necessarily wiser than uneducated farm workers, for example.

Answer the questions:

Q1.What is the difference between the approaches of Socrates and Aristotle?

- 1) Aristotle felt the need for repetition to develop good habits in students; Socrates felt that students need to be constantly questioned
- 2) Aristotle felt the need for rote-learning; Socrates emphasized on dialogic learning
- 3) Aristotle emphasized on the importance of paying attention to human nature; Socrates emphasized upon science

Q2.Why do educationists consider philosophy a ‘weak and woolly’ field?

- 1) It is not practically applicable
- 2) Its theoretical concepts are easily understood
- 3) It is irrelevant for education

Q3. What do you understand by the term ‘Perennialism’, in the context of the given comprehension passage?

- 1) It refers to something which is of ceaseless importance
- 2) It refers to something which is quite unnecessary
- 3) It refers to something which existed in the past and no longer exists now

Q4. Were Plato’s beliefs about education democratic?

- 1) He believed that only the rich have the right to acquire education
- 2) Yes
- 3) He believed that only a select few are meant to attend schools

Q5.Why did Aquinas propose a model of education which did not lay much emphasis on facts?

- 1) Facts are not important
- 2) Facts do not lead to holistic education
- 3) Facts change with the changing times

Q6.what is the synonym for renaissance?

(OR)

- 1) B) Explain briefly about the process and objectives of communication.

- 2) A) It is rare to find someone with good technical and colleagues if you combine the two early in your career. People will judge, evaluate, promote or block you based on your communication skills. Since habits form by repeating both good and bad forms of communication, learn to observe great communicators and adapt their styles and traits in written and verbal forms. The art of listening and learning from each and every interaction is another secret recipe. Develop the subconscious habit of listening to yourself as you speak and know when to pause.
2. Learning what not to say is probably more important than teaching what to say. As your career develops, you will realize that the wise speak less. Speak when you have value to add, else refrain. Poorly constructed e-mails with grammatical errors are acceptable between friends, but they should be seriously avoided while communicating formally with your seniors. Avoid any communication in an emotional state when you might say things you will regret later. One unnecessary word uttered at the wrong time or place can ruin a relationship, career or even your life. Such is the power of words. Such a thing happens, you should immediately apologize, else it may haunt you for life.
3. Another problem to overcome is speaking too fast since our minds are working faster than our speech, we are inclined to speak fast. This does not necessarily mean that the person hearing it will get it any faster. On the contrary, it is always the reverse. So slow down, think before you speak, "When I get ready to speak to people", Abraham Lincoln said, "I speak two-thirds of the time thinking what they want to hear and one-third thinking what I want to say," Adding humor and it is also essential. But realize that not all jokes are funny and observe certain boundaries. Never say anything that could offend. Remember you are not a comedian who must offend as many people as you can to be witty.

Questions from the above passages:

- a. Why is it necessary to have good communication skills?
 - b. How can communication skills be developed?
 - c. What according to the writer should be avoided while communicating?
- 2) a) Explain about the importance of effective communication in Business.

(OR)

- b) What is your view on Chennai Flood?

UNIT II:

3) A) Read the passage.

Artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals. In computer science AI research is defined as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals. Colloquially, the term "artificial intelligence" is applied when a machine mimics "cognitive" functions that humans associate with other human minds, such as "learning" and "problem solving". The scope of AI is disputed: as machines become increasingly capable, tasks considered as requiring "intelligence" are often removed from the definition, a phenomenon known as the AI effect, leading to the quip, "AI is whatever hasn't been done yet." For instance, optical character recognition is frequently excluded from "artificial intelligence", having become a routine technology. Capabilities generally classified as AI as of 2017 include successfully understanding human speech, competing at the highest level in strategic game systems (such as chess and Go), autonomous cars, intelligent routing in content delivery network and military simulations.

Artificial intelligence was founded as an academic discipline in 1956, and in the years since has experienced several waves of optimism, followed by disappointment and the loss of funding (known as an "AI winter"), followed by new approaches, success and renewed funding. For most of its history, AI research has been divided into subfields that often fail to communicate with each other. These sub-fields are based on technical considerations, such as particular goals (e.g. "robotics" or "machine learning"), the use of particular tools ("logic" or artificial neural networks), or deep philosophical differences. Subfields have also been based on social factors (particular institutions or the work of particular researchers). The traditional problems (or goals) of AI research include reasoning, knowledge representation, planning, learning, natural language processing, perception and the ability to move and manipulate objects. General intelligence is among the field's long-term goals. Approaches include statistical methods, computational intelligence, and traditional symbolic AI. Many tools are used in AI, including versions of search and mathematical optimization, artificial neural networks, and methods based on statistics, probability and economics. The AI field draws upon computer science, mathematics, psychology, linguistics, philosophy and many others.

Answer the following:

Q1.What is the AI winter?

1. Loss of funding for AI projects
2. Non-functioning AI systems
3. Absence of research labs
4. None of the above

Q2.Are sub-fields based only on social factors? State the reasons in your view.

1. No
2. Yes
3. They are based on machine learning
4. None of the above

Q3. Learning and problem solving by machines is a colloquial way of understanding artificial intelligence? State the reasons in your view.

1. Yes
2. No
3. Artificial intelligence means acquiring knowledge through books
4. It cannot be defined colloquially

Q4. Are autonomous cars an example of AI? State the reasons in your view.

1. Yes
2. No
3. As of 2017, they are
4. None of the above

Q5. Does AI only draw on technology and mathematics? State the reasons in your view.

1. Yes
2. No
3. It also draws upon psychology
4. It only draws upon linguistics

Q6. What is the opposite of the word 'confrontation'?

(OR)

3. B) Share the latest business news which you have read recently.
4. A) Explain about your dream company

(OR)

- B) Write a content using the picture as a hint

UNIT III:

5. A) Read the given passage and answer the questions: **THE CRUEL PANDEMIC**
- Corona viruses are a family of viruses that can cause respiratory illness in humans. They are called “corona” because of crown-like spikes on the surface of the virus. Severe acute respiratory syndrome (SARS), Middle East respiratory syndrome (MERS) and the common cold are examples of corona viruses that cause illness in humans. The new strain of corona virus — COVID-19 — was first reported in Wuhan, China in December 2019. The virus has since spread to all continents. The number of people infected changes daily. As of this writing (13/11/2021), more than 196,910,000 people in the world have been infected. Over 4,850,000 people have died. Some 192 countries and territories on all continents have now reported cases of COVID19. The best way to avoid spreading COVID19. Stay 6 feet away from others whenever possible. Wear a cloth mask that covers your mouth and nose when around others. Wash your hands often. If soap is not available, use a hand sanitizer that contains at least 60% alcohol. Avoid crowded indoor spaces. Bring in outdoor air as much as possible.

Questions:

- Q1. Give the abbreviation of COVID19, SARS AND MERS
- Q2. Give the synonym of “pandemic”.
- a) An outbreak of disease spreading all over the world.
- b) Everything around seems to be normal.
- Q3. How many people have been infected and how many people have died?
- Q4. Point out any three ways to avoid spreading COVID19.

(OR)

5. B) Write down Six Spelling Rules.
6. A) Refer the passage and answer the questions given below:
- In the 16th century, an age of great marine and terrestrial exploration, Ferdinand Magellan led the first expedition to sail around the world. As a young Portuguese noble, he served the king of Portugal, but he became involved in the quagmire of political intrigue at

court and lost the king's favor. After he was dismissed from service by the king of Portugal, he offered to serve the future Emperor Charles V of Spain. A papal decree of 1493 had assigned all land in the New World west of 50 degrees W longitude to Spain and all the land east of that line to Portugal. Magellan offered to prove that the East Indies fell under Spanish authority. On September 20, 1519, Magellan set sail from Spain with five ships. More than a year later, one of these ships was exploring the topography of South America in search of a water route across the continent. This ship sank, but the remaining four ships searched along the southern peninsula of South America. Finally they found the passage they sought near 50 degrees S latitude. Magellan named this passage the Strait of All Saints, but today it is known as the Strait of Magellan. One ship deserted while in this passage and returned to Spain, so fewer sailors were privileged to gaze at that first panorama of the Pacific Ocean. Those who remained crossed the meridian now known as the International Date Line in the early spring of 1521 after 98 days on the Pacific Ocean. During those long days at sea, many of Magellan's men died of starvation and disease. Later, Magellan became involved in an insular conflict in the Philippines and was killed in a tribal battle. Only one ship and 17 sailors under the command of the Basque navigator Elcano survived to complete the westward journey to Spain and thus prove once and for all that the world is round, with no precipice at the edge.

1. The 16th century was an age of great _____ exploration.
a) Cosmic b) Land c) Mental d) Common man e) None of the above
2. Magellan lost the favour of the king of Portugal when he became involved in a political _____.
a) Entanglement b) Discussion c) Negotiation d) Problem e) None of the above
3. The Pope divided New World lands between Spain and Portugal according to their location on one side or the other of an imaginary geographical line 50 degrees west of Greenwich that extends in a _____ direction.
a) North and south b) Crosswise c) Easterly d) South east e) North and west
4. One of Magellan's ships explored the _____ of South America for a passage across the continent.
a) Coastline b) Mountain range c) Physical features d) Islands e) None of the above
5. Four of the ships sought a passage along a southern _____.
a) Coast b) Inland c) Body of land with water on three sides d) Border e) Answer not available
6. The passage was found near 50 degrees S of _____.
. a) Greenwich b) The equator c) Spain d) Portugal e) Madrid

(OR)

B) List out any six commonly misspelt words:

7. A) **Read the passage and answer the questions give below:**

The 543 elected MPs will be elected from single-member constituencies using first-past-the post voting. The President of India nominates an additional two members from the Anglo-Indian community if he believes the community is under-represented. Eligible voters must be Indian citizens, 18 or older, an ordinary resident of the polling area of the constituency and possess a valid voter identification card issued by the Election Commission of India. Some people convicted of electoral or other offences are barred from voting. Earlier there were speculations that the Modi Government might advance the 2019 general election to counter the anti-incumbency factor, however learning from its past blunder of preponing election made by the Vajpayee Government it decided to go into election as per the normal schedule which was announced by Election Commission of India (ECI) on 10 March 2019, after which Model Code of Conduct was applied with immediate effect. Read the passage and choose the most appropriate option

Q1. Which word or phrase means “disapproval of current political officeholders” in the passage

a)First-past-the-post b)Blunder c)Anti-incumbency d)Model Code of Conduct

Q2. Since when was the Model Code of Conduct applied with immediate effect?

a) 23rd May 22018 b)10th March 2019 c)10th March 2018
d) 11th March 2019

Q3. When does the President of India nominate an additional two members from the Anglo-Indian community?

a) When there are less than 543 elected MPs
b) When the Anglo-Indian community fails to send a representative
c) When the president believes that the Anglo-Indian community is over-represented
d) When the president believes that the Anglo-Indian community is under-represented

Q4. What are the mandatory requirements to vote in India?

a) Must be an Indian citizen
b) Must be 18 or older
c) Must have a valid criminal record
d) Must be an ordinary resident of the polling area of the constituency
e) Must possess a valid voter identification card issued by the Election Commission of India

Q5. What is the apt meaning of “speculations” as per the passage?

- a) Conjectures b) Assumptions c) Either (a) or (b)
d) Both (a) and (b)

(OR)

B) Compare the two companies, develop the hints and give your own views:

VIVO & OPPO

UNIT IV:

8. A) Describe the below Flow Chart in your own ideas

(OR)

8. B)

what are the 10 most common interview etiquettes to be followed?

9. A)

How would you manage your time if you were

a business person.

(OR)

B) Identify the logo of a company and share some ideas about it.

10. A) what do you mean by skimming and scanning? Leave an example

(OR)

B) Reading comprehension:

The boats are floating along the Lakeshore .it is summer boat parade.
There are motorboat row boats and sailboat .the row boat decorated with flowers is Lisa's favourite .the boat parade is so fun to watch .it is the best part of summer.

A. Where are the boats floating?

- B. What kind of boats are there?
- C. What is Lisa's favourite boat?
- D. What is the best part of summer?

UNIT – V

11. a) Give Definition of Brainstorm & two examples of Brainstorm

(OR)

b) List out the rules of Brainstorm:

12. a) List out & Explain the Benefits of Brainstorm

(OR)

b) What are the importances of Brainstorming?

13) a) Write a short note on disadvantages of Brainstorming & Techniques of Brainstorm

(OR)

b) Write an essay on Brainstorming

14) a) Define the situation which relates brainstorming

(OR)

b) What do you understand by Brainstorming Explain in detail?

SECTION D

Answer any TWO of the following in about 400 words each:

(2 x10 =20)

UNIT I:

1. Write a content using the picture as a hint.
2. Write the Importance of Communication in Our Day to day life?
3. Why Better Business Communication Matters and How to Improve It

UNIT II:

4. What are the steps taken by a manager to improve his business unit?
5. Write an essay about the word "Advertisement"
6. What do you do if there was a disagreement within your team?

UNIT III:

7. How to apply for a job in a company?
8. Write a debate about the social media.

9. Explain your business plan.

UNIT IV:

10. Manufacturing is an integral and huge part of the economy. It involves the processing and refinement of raw materials, such as ore, wood, and foodstuffs, into finished products, such as metal goods, furniture, and processed foods.

Converting these raw materials into something more useful adds value. This added value increases the price of finished products, making manufacturing a very profitable part of the business chain. Some people specialize in the skills required to manufacture goods, while others provide the funds that businesses need to purchase the tools and materials.

As noted above, efficiency in manufacturing can lead to higher productivity and cost savings. Manufacturers are able to accomplish this if they are able to:

- Reduce redundancies
- Improve the quality of work
- Update equipment and procedures
- Set realistic goals
- Streamline intake, supply chain, and distribution channels.

Three common types of manufacturing production processes are: make to stock (MTS), make to order (MTO), and make to assemble (MTA). Such strategies have advantages and disadvantages in labour costs, inventory control, overhead, customization, and the speed of production and filling orders.

What are the key takeaways of the above passage?

11. Write a letter to a HR management for applying job

12. Write a paragraph about the pandemic situation ?

UNIT V:

13. **Read the given passage and attempt the tasks.**

A promise, a belief system, a truth, and a soul. All of these terms have been used to define a brand. I will describe it as a representation of a company's values and goals demonstrated through its mission statement, interaction with consumers, and overall position in the market. Branding is extremely important in the auto industry. Some consumers in this industry are

completely brand loyal to one company. Others will explore a new brand if it has a more competitive product or if it is recommended to them by someone they trust.

WHY IS BRANDING IMPORTANT?

Customers are told what to expect from your company through its brand. Your brand is your company's connection to its consumers and other businesses. That is why what a company claims their brand message must match with how the company actually operates every day. Positive thoughts or experiences with a brand often lead to brand loyalty which frequently results in an increase in sales. In this increasingly competitive auto market, the fight for customers' attention and business is getting more and more competitive. You can stand apart from other companies by maintaining a stellar brand image. Customer service, blogging, a solid mission statement, and consistent messages on social media can all be beneficial for your brand. You should continuously strive to improve your brand's image.

How can you improve your brand?

Consistency

Consistency is achieved when your company's daily actions concur with your brand's image. For automobile franchises, the biggest aspect of consistency involves communicating with their customers at the dealership. When a customer anticipates service similar to what your mission statement and advertisements claim, and they don't receive that level of service, their expectations are not met. Because of this, customer satisfaction goes down, and a word of mouth marketing may not work in your favour. That's why consistency among all workers is important. While a logo, colour scheme, and website layout are not the most vital parts of a brand's image, they must be consistent with your company's message in order for it to be effective. Every time something like an interaction, an ad, or a website layout doesn't coincide with a company's brand, that brand's power and credibility are weakened.

Authenticity

Studies show that being honest about products and services available is even more important than product utility and social significance. People care about how their products are made and whether companies are willing to be transparent about their business practices. It is very difficult to gain customer loyalty and trust without credibility. People are hesitant to trust any company or any person without knowing their story. Authenticity is about knowing your audience and delivering straightforward messages to them. Building credibility is one of the most beneficial things a company can do for its brand in today's market.

Company

Consistency does not mean conformity. Conformity is not needed for a company's brand to be powerful; in fact, today's culture thrives on individuality. Consistency, however, is

needed. Every part of the company should be aware of the brand and how their job fits into it. Each employee impacts the brand in a different way. The key is making sure that, even more than knowing the company's mission statement, workers realize that their actions impact the company's brand and how it is perceived by the public. Every part of the company from finance to management needs to participate in actively representing the brand.

Pull Marketing: Most industries rely on push marketing to sell products. This can be effective with some products, but it's hard to do with vehicles. Pushing someone to buy a car is likely not going to be very effective. I know what you're thinking, then how are we supposed to get new customers? The answer seems simple: build up your brand. Well, I guess it's not that simple. To do that requires time, focus, effort, and therefore, money. The point of pull marketing is to make consumers come to you. For this to happen, you have to focus on building credibility of the company, expertise in the field, and value for the customer. Focusing on strengthening the reputation of your brand should not be seen as insignificant. It may not lead to new clients right away, but pull marketing is more sustainable and less time consuming than push marketing.

WHAT IS THE NEXT STEP?

The auto industry is individualizing vehicles more and more, but you must ensure that your brand and its message remain intact. Customization is important because it lets consumers choose exactly what they want. You should strive to make the overall experience that people get from any interaction with your company align with your brand and its reputation. Consistency and authenticity throughout your entire company are needed in order for you to pull consumers to your brand.

QUESTIONS:

1. What is the impact of positive thoughts or experience with a brand?
2. What do the customers anticipate?
3. What is meant by authenticity?
4. What is important to gain customer loyalty and trust?
5. Name the three things which will bring customers to you.

14. Write about your Favourite book which you have recently read. Mention the key content of that book.
15. **Read the text carefully and answer the questions given below.**

Over the years, advertising has evolved into a major industry that goes beyond informing to persuading and influencing the consumers. They are psychological tools which influence people to buy a product. Undoubtedly, advertisements and consumer culture have become a part of our lives today causing a significant and measurable effect on consumer cognitions, emotions, and behaviors. Needless to say, advertising has given rise to negative attributes like creating class consciousness, materialism, and other value factors that are not market de facto. We have become trapped in the web of advertising where products like brands of beer and cigarette take over our minds, doing away with our core family values. Unethical advertising can occur in subtle ways that are difficult to establish as complete deception. An effective defense against misleading advertisements has to be built. Not only strict supervisions on media are required, but also necessary education should be provided to develop more critical judgment among media consumers.

In general, an advertisement that uses deceiving information in the form of false claims, inaccurate affiliations or company influence to make their consumers buy their product is called misleading advertisement. These misleading ads can lead to customer disappointment, change of purchase trends of the consumer and also create a false hype, which could lead to trust issues on the product. Unethical advertisements have always been a major issue to the society and its people. In the growing business competition worldwide, marketing and advertisements have become a major weapon in boosting sales across companies. Besides, millions of rupees are getting spent by companies across nations and worldwide to attract customers to buy their services and products. The increasing grievances reported every day from misguided customers through these fake promotions have now raised a grave concern and have led towards taking appropriate measures against those advertisers. In such instances, the alertness of the consumer is vital in distinguishing false and misleading information that form the content of advertisements.

Answer the following questions:

A. Give a appropriate title to the above passage.

B. What should be the objective of an advertisement?

- a) To manipulate consumers
- b) To entertain consumers
- c) To inform consumers
- d) None of the above

C. What are the impacts of false advertisement on consumers?

- a) Positive impact

b) Negative impact

c) Physiological impact

d) None of the above

D. In what ways do the advertisers influence our actions?

a) Materialism

b) Commercialism

c) Professionalism

d) None of the above

E. What does the phrase —trapped in the web of advertising mean?

a) Losing the control

b) Caught in the situation

c) Closed in the web

d) None of the above

F. Advertisements play an integral role in

a) Improving sales of the product

b) Increasing the cost of the product

c) Enhancing customer relations

d) None of the above

G. What conclusion can you draw based on the passage?

H. Give a suitable title for the above passage. Justify.

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI-628001

Question Bank

Semester II - April

Allied- Business Environment

Sub.Code:12UBAA21

(for those who joined from 2012 and above)

Section A

Choose the best answer

Unit 1

1. The macro environment is otherwise known as _____ environment.
a) **general** b) internal c) task d) social
2. The micro environment is otherwise known as _____ environment.
a) **task** b) macro c) remote d) external
3. The components like business opportunities and threats will be under _____ environment.
a) **external** b) internal c) micro d) macro
4. _____ environment are controllable on the factors like physical facilities, personnel.
a) External b) **Internal** c) Micro d) Macro
5. _____ environment are uncontrollable on the factors like economic, legal.
a) **External** b) Internal c) Micro d) Macro
6. The components like business strength and weakness will be under _____ environment.
a) external b) **internal** c) micro d) macro
7. _____ environment consists of economic conditions, policies and system.
a) Business b) **Economic** c) Natural d) Global
8. _____ refers to the external forces which have a bearing on the functioning of the business.
a) **Environment** b) Culture c) System d) Business
9. The company's immediate environment that affect the performance of the company _____ environment.
a) **Macro** b) Micro c) Technological d) Natural

10. An analysis of the external environment enables a firm to identify _____

- a) Strengths and opportunities b) Strength and weakness
c) Weakness and threats **d) Opportunities and threats**

Unit 2

11. _____ policy affects the fortunes of the firms.

- a) Trade** b) Industrial c) Fiscal d) Monetary

12. Industrial economies, oil exporters are the two components of _____ income economies.

- a) low b) high c) middle d) average

13. _____ environmental factors are important for the financiers of the company.

- a) Micro b) Macro c) Internal d) External

14. Economic System is considered as “invisible hands” is given by _____

- a) Adam Smith** b) F.W. Taylor c) Strong d) Henry Fayol

15. _____ is concerned with raising revenue through taxation and deciding on the level and pattern of expenditure.

- a) Monetary **b) Fiscal** c) Cash d) Trade

16. The primary sector concentrates _____

- a) Agriculture** b) Industrial c) Infrastructure d) Communication

17. Indian Economy is an example of _____ economy.

- a) Capitalist b) Closed **c) Mixed** d) Socialism

18. ----- economy is not planned, controlled or regulated by the Govt.

- a) Closed b) Mixed **c) Free market** d) Socialism

19. In _____ economy, the Government intervention will be absent.

- a) Free enterprise** b) Socialist d) Mixed d) Capitalism

20. _____ is an economic system where the means of production are owned and managed by the State

- a) Capitalism **b) Socialism** c) Mixed Economy d) Common economy

21. India follows _____ economic system

- a) Social b) Capitalist **c) Mixed** d) Common.

22. In _____ economic system, there exists both private and public sector?

- a) Social b) Capitalist **c) Mixed** d) Common

Unit 3

23. _____ responsibility refers to the voluntary contributions of business to the society.
a) Discretionary b) Ethical c) Legal **d) Economic**
24. _____ refers to the rules or principles that define right and wrong conduct.
a) Business ethics b) CSR c) Business audit d) Social responsibility
25. CSR- Corporate _____ Responsibility
a) Social b) Society c) Services d) Sectors
26. Immoral management is the synonymous _____.
a) unethical b) ethical c) amoral d) ethics
27. _____ concerned with the obligation and duties of business to the society.
a) Social responsibility b) Status c) Authority d) Ethics

Unit 4

28. _____ sector has been viewed as an effective means of achieving a mixed economy.
a) Joint b) Public c) Private d) Co- operative
29. A company which holds 51% or more shares by central / state government is _____ company.
a) public b) private c) political d) holding
30. In _____ company the word 'private limited' must be added at the end company name.
a) public **b) private** c) political d) holding
31. The minimum number of members in public company is _____.
a) 7 b) 6 c) 5 d) 8
32. The public sector works on _____ motive.
a) profit b) primary c) secondary **d) service**
33. In _____ sector the exploitation of natural resources like forest, mines etc.
a) private b) public c) joint d) co-operative
34. The joint sector is the extension of _____ economy.
a) Mixed b) Socialism c) Capitalism d) Government controlled

35. All the forms of business organization are _____ oriented.
- a) **profit** b) new c) loss d) service
36. The Companies Act was passed in the year _____
- a) **1956** b) 1998 c) 1965 d) 1889
37. BSNL is an example for _____ sector.
- a) **public** b) private c) joint d) co-operative
38. The Union budget of the coming financial year presented to the parliament on -----
- a) **Last working day of February** b) First working day of February
- c) March first week d) Last working day of March

Unit 5

39. GATT was established in the year _____
- a) **1948** b) 1957 c) 1989 d) 2009
40. WTO was established in the year _____
- a) **1995** b) 2005 c) 1985 d) 1993

Section B

Answer the following in about 50 words:

Unit 1

1. Define business environment.
2. Explain internal environment.
3. Explain external environment.
4. Explain the term global environment.
5. Write a short note on customers.
6. Explain the nature of business.

Unit 2

7. Explain the term economic systems.
8. Explain low income economy.
9. What is meant by economic environment?
10. Explain industrial policy.
11. Explain fiscal policy.
12. Explain free enterprise economy.

Unit 3

13. Explain the term business ethics.
14. Explain moral management.
15. Explain the term ethics.
16. Explain the term business.
17. What is meant by social responsibility?
18. Explain immoral management.

Unit 4

19. Explain the term public sector.
20. Define private sector.
21. Explain the term joint sector.
22. Explain the term co-operative sector.
23. Explain any two advantage of joint sector.

24. Explain any two disadvantage of public sector.

Unit 5

25. Define WTO.

26. Define GATT.

27. Explain the term political environment.

28. Explain the term tariffs.

Section C

Answer the following in about 200 words:

Unit 1

1. a) Explain the purpose of business.

(or)

b) Explain the business in today's world.

2. a) What are the types of macro environment.

(or)

b) What are the factors affecting business decision?

3. a) Explain the miscellaneous factors in internal environment.

(or)

b) Write a short note on business environment.

4. a) Explain micro environment.

(or)

b) Explain the term company image and brand equity.

Unit 2

5. a) Explain the nature of the economy.

(or)

b) What are the features of socialist economy?

6. a) Explain the structure of the economy.

(or)

b) Write a short note on the term socialism.

- a. Interest b. Committee c. Formal **d. Reference**
8. ----- stage is characterised by conflict, confrontation, concern and criticism.
- a. Norming b. Storming **c. Performing** d. Forming
9. ----- stage is the highest level of group maturity.
- a. Storming b. Norming **c. Performing** d. Forming
- 10.----- Roles are related to task – oriented activities.
- a. Work role** b. Maintenance role c. Blocking role d. Role identity
- 11.----- are the activities that disrupt or destroy the group.
- a. Work role b. Maintenance role **c. Blocking role** d. Role identity
- 12.----- Refer to the discrepancy between the defined role and perceived role.
- a. Role expectation **b. Role ambiguity** c. Role conflict d. Role identity

UNIT-II

13. _____ are empowered to plan control and implement A _____ is a group whose members have complementary skills.
- a) Member b) **Team** c) group d) individual
14. The process of making teams effective is called _____
- a) Teamwork b) team effectiveness c) **team building** d) lead team
15. _____ members of a group are required to be responsive to demands regularly placed management.
- a) First b) second **c) third** d) fourth
16. The members of _____ team consist of managers and direct subordinates.
- a) Lead** b) problem solving c) cross functional d) virtual
17. _____ are empowered to plan control and implement their work process

a) **self-managed team** b) problem solving c) lead d) virtual

18. _____ is the penultimate stage in team building process.

a) problem solving b) feedback c) **developing argumentative** d) follow up action.

19. _____ is the final stage of team building process.

a) **follow up action** b) feedback c) problem solving d) examination of differences

20. _____ members who have primary concern to complete to task.

a) **contributor** b) collaborator c) communicator d) challenger

21. _____ has enlisted the four roles played by team members.

a) Katzenbach b) Smith c) **Parker** d) Lexicon

22. the constructive behaviour does not include_____

a) building b) **attacking** c) bringing d) clarifying

23. The _____ team work across space and time.

a) **virtual** b) self-managed c) lead d) problem solving

24. _____ provides the members may include their feelings approach way.

a) problem solving b) **feedback** c) lead d) self-managed

25. the practice of working in teams is called_____

a) **team work** b) team building c) team effective d) group.

26. _____ members share a common interest goal.

a) first b) second c) third d) **finally**

27. _____team set own goals develop work schedule.

- a) lead b) **self-managed** c) virtual d) problem solving

Unit-III

28. Power is an exchange between an agent and _____.

- a) **Target** b) person c) authority d) agent

29. The _____ is the person who uses the power

- a) target b) **agent** c) power d) authority

30. _____ is one's ability to influence other people.

- a) **power** b) authority c) expert power d) reward power

31. _____ is right to influence another person.

- a) power b) **authority** c) influence d) power and authority

32. _____ is based on proverb "wealth is power".

- a) referent power b) **reward power** c) expert power d) legitimate power

33. Expert power is based on the proverb _____.

- a) **knowledge is power** b) wealth is power
c) union is power d) none of these

34. _____ power is based on position and mutual agreement.

- a) expert power b) **legitimate power** c) referent power d) coercive power

35. Politics relates to the gain and use _____.

- a) authority b) influence c) **power** d) organisation

36. _____ means the use of power and influence organisations.

- a)politics b)power politics c) **Organisational politics** d)autocratic decision

37. _____ is yet another way to earn power.

- a) power b)**coalescing** c)politics d)organisations

UNIT-IV

38.The_____has acquired divergent meanings.

- a)**Conflict** b)Emotion c>Action d)Anger

39. _____refers to the presence of unclear lines of responsibility within an organisation.

- a)Skills and Abilities b)**Jurisdictional Ambiguities**
c)Specialisation d)Interdependence

40 . There are how many sources of conflict?

- a)three b)five c)four d)**two**

41.An _____person is one who ignores the interpersonal aspects of work and feelings of colleagues.

- a)Aggressive b)**Abrasive** c)Conjunctive d) Impressive

42._____situation is opposite to hidden self.

- a)**Blind** b)Open c)Undiscovered d)Hidden

43.The group that improve the performance and support the goals is known as _____ conflicts.

- a)Perceived b)**Functional** c)Manifest d)Latent

44.Which is the first stage in conflict?

- a)Perceived conflict b)Conflict Aftermath
c)**Latent Conflict** d)Manifest Conflict

45.Emotional conflict relates to _____.

- a)Perceived conflict b) Manifest Conflict c)Latent Conflict d)**Felt Conflict**

46.Conflict arises from individual factor is _____

- a) **Personal factor** b) Structural factor
c) Personnel factor d) Formal factor

47. _____ occurs whenever two or more conflicting parties attempt to resolve their divergent goals.

- a) **Negotiations** b) Bargaining c) Accommodating d) Avoiding

47. How many conflict management styles are there?

- a) Ten **b) Five** c) Four d) Six

48. There are how many types of negotiation process?

- a) **Five** b) Two c) Six d) Seven

UNIT-V

49. "The survival of the fittest" is _____ theory.

- a. Winston Churchill b. Koontz **c. darwin** d. Burke

50. The _____ effect means one change triggers off a series of related changes.

- a. **domino** b. change in leadership c. meeting crises d. organizational life cycle

51. _____ change occurs when forces compel organization to implement change without delay.

- a. **reactive** b. proactive c. confirmative d. productive

52. Reactive involves _____ behaviour.

- a. purposive behaviour **b. reflexive** c. immediate d. compulsive

53. purposive behaviour involves _____ change.

- a. **proactive** b. productive c. reactive d. confirmative

54. The emergence of the field of organizational development sciences is traced back during _____.

- a. 1950's and 1960's **b. 1940's and 1950's**
c. 1950's and 1970's d. 1960's and 1970's

55. _____ stage of organizational development is designed to solve problems.

- a. first b. third **c. fifth** d. fourth

56. T-groups are also called as _____.

- a. physical training b. oral training c. vocabulary training d. **laboratory training**

57. Organizational development is a systematic integrated and planned approach, according to _____.

- a. burke b. french and bell c. **koontz** d. darwin

58. _____ recognizes the reciprocal relationship between individuals and organizations .

- a. Organizational changes b. **organizational development**
b. c. organizational behaviour d. group behaviour

UNIT-I

Section – B

Answer any TEN of the following questions in about 50 words:

(10x2=20)

59. Define Group?
60. Write any two Characteristics of group?
61. What is formal group?
62. What is informal group?
63. What is group behaviour?
64. What is Balance theory?
65. Explain command group in brief?
66. Explain a brief note on forming and norming?
67. What is group role?
68. Write any two advantages of group decision making?
69. Write any two disadvantages of group decision making?
70. What is group decision making?
71. What are the stages of group development?

UNIT –II

72. Define team.
73. Who is called as contributor?
74. Name the types of teams?

75. What do you mean by team?
76. Name the four roles played by team members?
77. Write any three features of team members?
78. Write short note on problem solving team?
79. List out the constructive and negative behaviour?
80. Write any two differences between tip and rationale.
81. Explain feedback in team building process.
82. What are the features of self-managed teams.
83. Explain collaborator.
84. What are virtual teams?
85. Explain the purpose and process of team and group.

UNIT-III

86. Define power?
87. What is the meaning of power?
88. Distinction between power and authority?
89. Define influence and authority?
90. Define expert power?
91. What is the autocratic power?
92. Define discretionary authority?
93. Define organisational politics?
94. Define power politics?
95. What is reward power?
96. What is power? How does it differ from authority?
97. Explain acquisition of power?
98. Limiting effect of political behaviour?
99. Explain organisational politics?
100. States the reasons for organisational politics?

UNIT-IV

101. Define Conflict?
102. Name the types of Interdependence?
103. What is Johari Window?
104. Write briefly about negotiations?
105. Difference between distributive bargaining and Integrative bargaining?
106. Write short note on Third party negotiations?
107. What do you mean by Jurisdictional Ambiguities?
108. What is Conflict Aftermath?
109. Draw the model of conflict process?
110. Write briefly on negotiation process?

UNIT-V

111. What are organizational changes?
112. What are the changes which affects organization? (any three)
113. What is organizational life cycle?
114. Difference between reactive and proactive change?
115. Write the meaning of organizational development?
116. What is the definition of organizational development?
117. Write any two characteristic of organizational development?
118. What are the objectives of organizational development? (Any two)
119. Name the types of changes?
120. Domino effect - explain?
121. What is technological advance?

Section – C

Answer in about 200 words each choosing either (a) or (b):

(5x6=30)

UNIT-I

- 122. Define group and characteristics of group?
- 123. Explain the stages of group development?
- 124. Write a brief note on exchange and balance theory?
- 125. What are the kinds of informal group?
- 126. What is group role and explain its types?
- 127. Explain the process of groups decision making?
- 128. What are the advantages of group decision making?
- 129. What are the kinds of formal group?
- 130. What are the advantages of group decisions making?
- 131. Why do people form and join group?

UNIT-II

- 132. Describe the characteristics of team.
- 133. How the teams are different from work group.
- 134. Explain the lead teams and cross functional team.
- 135. How to evaluate team building?
- 136. How to make team successful?
- 137. Explain the penultimate stage and final stage in team building process?

UNIT-III

- 138. What is power? How does it differ from authority?
- 139. Explain acquisition of power?
- 140. What are the Limiting effects of political behaviour?
- 141. Explain organisational politics?
- 142. States the reasons for organisational politics?

UNIT-IV

- 143 .What are the types of conflicts?
- 144. Write down the process of conflicts?
- 145. Write about the negotiation strategies?
- 146. Explain conflict Management in India?
- 147. Meaning and Definition of conflict?
- 148. Explain conflict management styles?

UNIT-V

- 149. What are the changes which affected the organization?
- 150. What are the internal and external changes?
- 151. What are the types of changes?
- 152. What are the characteristics of organizational development?
- 153. What are the objectives of organizational development?
- 154. What are organizational changes, meaning and characteristics of organizational development?
- 155. Characteristics and objectives of organizational development?
- 156. Write down the meaning and types of changes?

Section – D

Answer THREE of the following questions in about 400 words:

(3x10=30)

UNIT-I

- 157. Explain the theories of group formation?
- 158. What is formal and informal and explain its types?
- 159. What are the types of group role and explain it?
- 160. Explain the characteristics of group and the stages for development?
- 161. What is decision making and its process in detail?

UNIT -II

- 162. Define team and explain the types of team?
- 163. Explain the team building process?
- 164. State the differences between team and group.
- 165. What causes team failure and how to make team victorious?

166. Determine the features of team and roles of team?

UNIT-III

167. Define power? What are the sources of power?

168. Explain sources of power and acquisition power?

169. Define organisation politics and its reasons?

170. How do manage Organisational politics?

171. What is the reason for organisational politics?

UNIT -IV

172. Explain the Sources of conflict?

173. Write in detail about conflict?

174. Write detail about conflict management?

175. Explain the situation influence in negotiation?

176. Explain detail about Third Party Negotiation?

177. Write about Types and Sources of conflict?

UNIT-V

178. What are the internal and external changes?

179. What are the types of changes?

180. What are the internal reasons of organizational change with diagram?

181. What is organizational development? What are the characteristics and objectives of organizational development?

182. What are the objectives of organizational development and its effect on it??

183. Explain the External reasons of organizational change?

B.B.A

Semester II

CORE IV-BUSINESS STATISTICS

Sub.Code:21UBAC22

(for those who joined from 2012 and above)

Section A

(10x1=10 marks)

Choose the best answer

Unit 1

1. The word STATISTICS is derived from _____ word.
a) English **b) Latin** c) American d) Greek
2. The word STATISTICS is derived from the Latin word _____.
a) Status b) Statista c) Statistik d) Stat
3. Sources of data may be of _____ types.
a) 2 b) 3 c) 4 d) 5
4. Semi official publication is an example for _____ data.
a) Primary b) Secondary c) Tertiary d) Census
5. Sampling process consists of _____ elements.
a) 2 **b) 3** c) 4 d) 5
6. Classification of data on the basis of State wise or District wise is known as _____ classification.
a) Spatial b) Qualitative c) quantitative d) chronological
7. Example for Qualitative classification.
a) Age b) Height **c) Colour** d) Production
8. The smallest and the largest possible measurements in each class are known as _____.
a) Class intervals **b) class limits** c) class frequency d) Mid point
9. The difference between the upper limit and lower limit of a class limit is known as _____.
a) Class interval b) Class frequency c) Class limits d) Mid point
10. _____ Diagrams are also known as one dimensional diagram.
a) Bar b) Pie c) Pictograms d) Circles
11. A _____ is a description of the contents of the table.
a) Table number b) Caption **c) Title** d) Stub
12. _____ refers to the headings of horizontal rows.

- a) Table number b) Caption c) Title **d) Stub**
13. A _____ table is one in which only one characteristic is shown.
a) Simple b) Complex c) High order d) Manifold
14. A complex table is also known as _____ table.
a) Manifold b) Higher order c) Three way **d) All of these**

Unit 2

- Midpoint of the class limit 10-20 is _____.
a) 30 **b) 15** c) 10 d) 25
- The class interval of the class limit 10-20 is _____.
a) 25 **b) 10** c) 30 d) 20
- The mean of the series 8, 10, 15, 5, 2 is _____.
a) 2 b) 5 c) 10 **d) 8**
- The sum of the deviations of the items from mean is always _____.
a) 0 b) 1 c) 2 d) 3
- _____ is also known as positional average.
a) Mean **b) Median** c) Mode d) Range
- _____ is very useful in the case of open end classes.
a) Mean **b) Media** c) Mode d) Range
- 8, 10, 15, 5, 2 and 20.
The Median of the above series is _____.
a) 2 **b) 9** c) 8 d) 10
- The word 'MODE' is derived from the _____ word.
a) French b) Latin c) American d) Greek
- The word MODE is derived from the French word _____ which means the fashion.
a) Mode **b) Lamode** c) Lemode d) De la mode
- _____ is an actual value which has the highest concentration of items in and around it.
a) Mode b) Median c) Mean d) Range
- Marks obtained by 10 students are given below:
20, 60, 26, 45, 60, 23, 38, 79, 60, 50. Find Mode.
a) 20 b) 50 **c) 60** d) 79

Unit 3

- The difference between the two boundary values of a distribution is known as _____.
a) Range b) Quartile deviation c) Standard deviation d) Lorenz curve
- _____ is suitable for open end classes.
a) Range **b) Quartile deviation** c) Standard deviation d) Mean

3. Semi inter quartile range is also known as _____.
a) Range b) Co-efficient of range **c) Quartile deviation** d) Standard deviation
4. _____ is based on 50% of the observations.
a) Mean **b) Quartile deviation** c) Mode d) Standard deviation
5. Measures of dispersion are also called as “average of the _____ order”.
a) Second b) First c) Third d) Forth
6. The difference between the value of the smallest item and the value of the largest item is known as _____.
a) Range b) Co-efficient of range c) Co-efficient of variation d) Quartiles
7. _____ is a measure of dispersion which is based on the upper quartile and lower quartiles.
a) Median b) Range **c) Quartile deviation** d) Standard deviation
8. _____ is a measure of distribution based on all items in a distribution.
a) Range b) Quartile deviation **c) Mean deviation** d) Median
9. _____ is the square root of the mean of the squared deviations from the arithmetic mean.
a) Range **b) Standard deviation** c) Co-efficient of variation d) Quartiles
10. Mean square deviation is otherwise called as _____.
a) Standard deviation b) Range c) Mean deviation d) Quartile deviation
11. Graphic method of dispersion was devised by _____.
a) Dr. Max.O.Lorenz b) Adam Smith c) Marshall d) Terry

Unit 4

1. The Geometric mean between regression and co-efficient is known as _____.
a) Correlation **b) Skewness** c) Co-efficient of correlation d) Regression
2. _____ Correlation refers to the movement of variables in the same direction.
a) Positive b) Negative c) Simple d) Non Linear
3. Negative correlation is also known as _____ correlation.
a) Direct b) Multiple **c) Inverse** d) Indirect
4. When three or more variables are studied, it is a _____ correlation.
a) Simple **b) Multiple** c) Partial d) Complex
5. When variations in the values of two variables have a constant ratio, then it is a _____ correlation.
a) Linear b) Non Linear c) Curvilinear d) Non curvilinear

6. The word REGRESSION was first introduced by _____ in 1877.
a) Karl Pearson b) Spearman **c) Sir Francis Galton** d) Terry
7. _____ Variable is one whose value is influenced or is to be predicted.
a) Dependent b) Independent c) Predictor d) Regressor
8. Independent variable is also known as _____.
a) Regressor b) Predictor c) Explainator **d) All of these**
9. $x - 2y = 3$; $2x - 2y = 8$. Then the mean value of x is _____.
a) 3 b) 8 **c) 5** d) 1
10. Regression co-efficient of X on Y = -0.6
Regression co-efficient of Y on X = -0.6. Then, the co-efficient of correlation is _____.
a) -0.6 b) +0.6 c) 0 d) +1

Unit 5

1. A _____ is a set of observation taken at specified times.
a) Regression b) Times series c) Correlation d) Probability
2. Components of times series may be classified into _____ groups.
a) 3 **b) 4** c) 2 d) 5
3. The word SECULAR is derived from the _____ word.
a) Greek **b) Latin** c) French d) American
4. The word SECULAR is derived from the Latin word _____ which means generation or age.
a) Seculim b) Seculam **c) Seculum** d) Secularism
5. The term Trend may also be called as _____.
a) Secular trend b) Long term trend **c) Both 'a' and 'b'** d) Short term trend
6. Irregular variations are also known as _____.
a) Cyclical variations **b) Erratic variations** c) Seasonal variations d) Negative variations
7. Prosperity period is also known as _____ period.
a) Boom period b) Recession c) Depression d) Recovery
8. Measurement of seasonal variations is called _____.
a) Seasonal indices b) Index numbers c) Trend values d) Cyclical variations
9. _____ Variations is either short term or long term phenomenon.

- a) Seasonal **b) Cyclical** c) Erratic d) Secular
10. The first index number was constructed in the year _____.
a) 1954 **b) 1764** c) 1674 d) 1950
11. The first index number was constructed by an Italian, _____.
a) Bowley b) Lawrence **c) Carli** d) Terry
12. _____ Index reveals the change in the volume of goods produced or consumed.
a) Price b) Value c) Retail price **d) Quality**
13. Pasche's method was formulated by a German Statistician Paasche in _____.
a) 1874 b) 1784 c) 1974 d) 1975
14. _____ Method is the ideal method of index numbers.
a) Fisher's b) Paasche's c) Kelly's d) Laspeyre's
15. Consumer price index number is also known as _____.
a) Cost of living index number
b) Retail price index number
c) Price of living index number
d) All of these
16. There are _____ methods of construction of consumer price index.
a) 2 b) 3 c) 4 d) 5

Section B

Answer the following in about 100 words:

5*5=25

Unit 1

1. A. Explain the concept of statistics with definition.

(Or)

B. In a survey of 50 families in a village the number of children per family was recorded and the following data is obtained.

1	0	3	8	5	9	0	3	0	3
4	1	2	4	3	2	8	0	0	2
6	3	4	1	0	9	7	2	1	2
1	2	3	4	5	6	5	3	1	1
4	5	4	2	9	7	8	0	4	3

Represent the data in the form of a Discrete Frequency Table.

2. A. Enumerate the functions of statistics with examples.

(Or)

B. Given below are the marks of 30 students in an examination.

48	27	29	03	23	30	40	11	48	01
15	35	40	32	12	29	41	32	13	25
44	07	43	25	22	19	18	30	24	02

Make a Continuous Frequency Table under Inclusive type.

3. A. Point out the drawbacks of statistics.

(Or)

B. From the following observations, prepare a classified Frequency Distribution.

120	148	110	108	126	132	149	136
140	125	119	11	154	147	165	137
125	112	138	155	125	138	136	130
145	132	150	137	142	135	125	126

4. A. Define primary data and secondary data.

(Or)

B. In a certain data, the following four main characteristics with their sub-characteristics are presented.

<u>Main characteristics</u>	<u>Sub characteristics</u>
Locality	Urban , Rural
Religion	Hindus , Non-Hindus

Sex	Male , Female
Age	0-30, 30-6, 60 and above

Prepare a suitable form of Table.

5. A. What are the sources of secondary data?

(Or)

- B. Following table shows the monthly expenditure of a firm:

<u>Item</u>	<u>Expenditure</u>
Rent	Rs. 3,000
Salary to the staff	Rs. 10,000
Electricity & water	RS. 2,000
Miscellaneous	Rs. 5,000

Represent the above data by a Simple Bar Diagram

6. A. What precaution would you take before using secondary data?

(Or)

- B. Draft a form of tabulation to show the following:

Faculty - Arts, Commerce and Science

Class - Under Graduate and Post Graduate

Sex – Male and Female

Age – Below 20 and above 20

7. A. Distinguish between “Primary data” and “Secondary data”.

(Or)

- B. Represent the following data by a suitable diagram showing the difference between proceeds and costs.

<u>Years</u>	<u>Total proceeds</u> (Rs in thousands)	<u>Total cost</u> (Rs in thousands)
1998	22	19
1999	27	21
2000	29	26
2001	31	28
2002	35	37

8. A. What are the characteristics and objectives of classification?

(Or)

- B. Represent the following data by Sub-Divided Bar Diagram.

Distribution of monthly income of 2 families A and B

<u>Income</u>	<u>Family A</u>	<u>Family B</u>
Rent	250	300
Food	400	500
Clothing	200	250
Education	100	250
Saving	150	100
Miscellaneous	300	200

9. Distinguish between “Classification” and “Tabulations” and explain the objectives of tabulations.
10. Write down the components of a good table and draw a structure of it.

UNIT II:

1.a) Explain the functions of an average

(or)

b) Calculate arithmetic mean from the following:

House no.	1	2	3	4	5
Income	10000	500	2000	3500	5000

2a) State the merits of arithmetic mean

(or)

b) Calculate the mean for the following data

Roll no	1	2	3	4	5	6	7	8	9	10
Marks	40	50	55	78	58	60	73	35	43	48

3a) Calculate mean from the following using short cut method

Marks	10	20	30	40	50	60
--------------	----	----	----	----	----	----

No.of students	5	6	10	8	5	6

(or)

b) 50 students took up a test. The result of those who passed the test is given below.

Marks	4	5	6	7	8	9
No.of students	8	10	9	6	4	3

If the average of all the students were 5.16 , find out the average marks of the students who failed.

4 a) Explain the characteristics of median

(or)

b) List out the merits & demerits of median

5 a) The weight of 15 students in a class is stated below

S.no	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Weight	49	52	47	48	42	55	56	54	50	52	51	59	57	41	43

Find out the median weight of the students.

(or)

b) Calculate median marks from the following data;

35,46,29,57,60,73,20,59,50,70

6 a) In the series given below find the first quartile & third quartile (Q1&Q3)

2,4,6,8,10,12,14,16,18,20,22

(or)

b)Find Q1 & Q3 of the following series

Size of shoes	4	4.5	5	5.5	6	6.5	7	7.5	8
Frequency	10	18	22	25	40	15	10	8	7

7a)Calculate median from the following data

Wages (rs)	25	50	35	45	20	55	30	40
No.of workers	7	9	12	15	10	20	12	25

(or)

b)Monthly income of 100 families in a village are stated below

Monthly income	100-200	200-300	300-400	400-500	500-600	600-700	700-800	800-900	900-1000
No.of families	7	5	15	22	14	12	8	9	8

8.a)What are the uses of mode?

(or)

b)Calculate mode

Size	10	11	12	13	14	15	16	17	18
Frequency	10	12	15	19	20	8	4	3	2

9 a)List out the merits & demerits of mode

(or)

b)Find the mode

Size	0-10	10-20	20-30	30-40	40-50	50-60	60-70
Frequency	5	7	12	18	16	10	5

10 a)What are the uses of geometric mean?

(or)

b)Calculate geometric mean for the following

50, 72,54,82,93

UNIT-3

5 marks

1 a)What are the purposes of measuring variation?

(or)

b)Find the range of weight of 7 students from the following;

27,30.35,36,38,40,43

2 a)Explain the merits , demerits & uses of range.

(or)

b)Calculate the semi-inter quartile range & quartile co-efficient from the following

Age	20	30	40	50	60	70	80
no of members	3	61	132	153	140	51	3

3 a)Explain merits & demerits of quartile deviation

(or)

b)What are the differences between mean deviation & standard deviation

4 a) Calculate mean deviation from mean from the following data

100,150,200,250,360,490,500,600,671 also calculate co-efficient of mean deviation.

(or)

b) Calculate mean deviation from median from the following data

X	2	4	6	8	10
F	1	4	6	4	1

5 a) Calculate mean deviation from mean from the following data.

Class interval	2-4	4-6	6-8	8-10
Frequency	3	4	2	1

(or)

b) Calculate mean deviation from median from the following series;

X	10	11	12	13	14
F	3	12	18	12	3

6 a) Calculate the standard deviation from the following data;

14,23,9,15,20,17,12,11

(or)

b) Calculate standard deviation from the following;

Marks	10	20	30	40	50	60
No of students	8	12	20	10	7	3

7 a) Explain skewness & its objectives.

(or)

b) Calculate Karl Pearson's co-efficient of skewness for the following data

25,15,23,40,27,25,23,25,20

8 a) Find the co-efficient of skewness from the data given below;

Size	3	4	5	6	7	8	9	10
Frequency	7	10	14	35	102	136	43	8

(or)

b) From the marks secured by 120 students in section A, 120 in section B of a class if following measures are obtained.

Section A; $\bar{X}=46.83$ $\sigma(\text{S.D})=14.8$ $Z=51.67$

Section B; $\bar{X}=47.83$ $\sigma(\text{S.D})=14.8$ $Z=47.07$

Determine which distribution of mark is more skewed .

9 a) Find bowleys co-efficient of skewness, if difference between two quartiles is =8; sum of two quartiles is=22; median is =10.5

(or)

b) Given $Q_1=18$, $Q_3 = 25$, mode=21, median=18 find bowleys co-efficient of skewness

UNIT-4

5 marks

1a) Calculate co-efficient of correlation from the following data

X	12	9	8	10	11	13	7
Y	14	8	6	9	11	12	3

(Or)

b) Find if there is any significant correlation between height & weight

Height in inches	57	59	62	63	64	65	55	58	57
Weight in lbs	113	117	126	126	130	129	111	116	112

2a) Explain the merits & demerits of rank correlation coefficient

(Or)

b) Define correlation & its significance of the study

3a) Find a suitable coefficient of correlation of the following data

Fertilizer used(tons)	15	18	20	24	30	35	40	50
Productivity (tons)	85	93	95	105	120	130	150	160

(Or)

b) Calculate the coefficient of correlation between age of cars & annual maintenance cost and comment

Age of cars	Annual maintenance cost (rs)
2	1600
4	1500
6	1800
7	1900
8	1700
10	2100
12	2000

4a) Following are the rank obtained by 10 students in two subjects. Statistics & mathematics. To what extent the knowledge of the students in the two subjects is related?

Statistics	1	2	3	4	5	6	7	8	9	10
Mathematics	2	4	1	5	3	9	7	10	6	8

(Or)

b)A random sample of 5 college students is selected & their grades in mathematics & statistics are found to be;

	1	2	3	4	5
Mathematics	85	60	73	40	90
Statistics	93	75	65	50	80

5a)From the following data, examine whether input of oil & output of electricity can be said to be correlated

Input of oil	6.9	8.2	7.8	4.8	9.6	8.0	7.7
Output of electricity	1.9	3.5	6.5	1.3	5.5	3.5	2.2

(Or)

b)Calculate the coefficient of correlation for the ages of husband & wife

Age of husband	23	27	28	29	30	31	33	35	36	39
Age of wife	18	22	23	24	25	26	28	29	30	32

6a)Define regression

(Or)

b)Explain the uses of regression analysis

7a)Calculate the coefficient of concurrent deviation from the data below

Month	Supply	Price
Jan	160	292

Feb	164	280
Mar	172	260
Apr	182	234
May	166	266
June	170	254
July	178	230
Aug	192	190
Sept	186	200

(Or)

b) Calculate the two regression equations X on Y & Y on X from the data given below, taking deviations from actual means of X & Y

Price (rs)	10	12	13	12	16	15
Amount demanded	40	38	43	45	37	43

8a) Estimate the values of X corresponding to Y=200 from the following data

X	200	248	297	338	463	493
Y	137	147	184	196	276	260

(Or)

b) From the following data find the coefficient of correlation & obtain the two regression equations

X	1	2	3	4	5	6	7	8	9	10
Y	9	8	10	12	11	13	14	16	15	

5marks

1. a) Fit a trend line to the following data by the free hand method

Year	2001	2002	2003	2004	2005	2006	2007
Sales (1000units)	65	95	85	115	110	120	130

(Or)

b) Draw a trend line by the method of semi average method

Year	2002	2003	2004	2005	2006	2007
Sales (1000units)	60	75	81	110	106	120

2. a) Draw a line by the method of semi-average

Year	2001	2002	2003	2004	2005	2006	2007
Sales	110	105	115	112	110	106	120

(Or)

b) Calculate 3 yearly moving average of the following data

Year	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007
Sales	15	18	17	20	23	25	29	33	36	40

3.a) The following figures relates to the profit of a commercial concern for 8 years

Year	2000	2001	2002	2003	2004	2005	2006	2007
Profit	15420	14470	15520	21020	26120	31950	35370	34670

Find the trend of profit by the method of moving averages

(Or)

b) Assuming a 4 yearly cycle calculate the trend by the method of moving averages from the following data relating to the tea in India.

Year	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007
Production	464	515	518	467	502	540	557	571	586	612

4.a) Calculate trend by 4 yearly moving average of the following data given below

year	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007
Production	614	615	652	678	681	655	717	719	708	779	757

(Or)

b) Draw a graph to represent the 5 yearly moving averages

Year	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007
No.of students	332	317	357	392	402	405	410	427	405	438

5.a) Calculate trend values by the method of least squares from the data given below & estimate sales 2010

Year	2003	2004	2005	2006	2007
-------------	------	------	------	------	------

Sales(lakhs)	70	74	80	86	90
---------------------	----	----	----	----	----

(Or)

b) Calculate trend from the following data by using least square method.

Year	2002	2003	2004	2005	2006	2007
Production	7	9	12	15	18	22

6.a) Convert the following fixed base index numbers into chain base index numbers

Year	2002	2003	2004	2005	2006	2007
F.B.I	376	392	408	380	392	400

(Or)

b) From the chain index numbers given below prepare fixed index number.

Year	2003	2004	2005	2006	2007
Chain Base	80	110	120	90	140

7.a) Reconstruct the following index number shift base to i) 2005 ii) 2007

Year	2000	2001	2002	2003	2004	2005	2006	2007
Index number	120	150	160	180	200	200	210	240

(Or)

b) Taking 2001 as base index number of wholesale price of the commodity are given below;

Year	2001	2002	2003	2004	2005	2006	2007
Index Number	100	120	190	200	206	230	300

8. a) Construct an index number for 2006 taking 2005 as base

Commodity	Price in 2005	Price in 2006
A	90	95
B	40	60
C	90	110
D	30	35

(Or)

b) Compute price index for the following data by applying weighted average of price relative method using,

- i. Arithmetic mean
- ii. Geometric mean

Item	Price in 2005	Price in 2006	Quantity in 2005
Wheat	2.00	2.50	40 kg
Sugar	3.00	3.25	20 kg
Milk	1.50	1.75	10 ltr

9. a) Explain the components of times series

(Or)

b) What are the uses of trend?

10.a) What are the merits & demerits of graphic method?

(Or)

b) What is secular trend? Explain any one method measuring the trend of time series.

Section C

Answer the following in about 400 words:

(5x8=40marks)

Unit 1

1. A. Explain the followings in detail.

A .Histogram

B. Frequency diagram

(Or)

- B. Draw a Percentage Bar Diagram for the following data:

<u>Expenditure</u>	<u>Company A</u>	<u>Company B</u>
Wages	450	700
Materials	200	500
Power	75	350
Maintenance	80	175
Profit	195	275
Total	1000	2000

2. A. Write a detailed notes on a) Frequency curve

b) Cumulative frequency curve

c) Lorenz Curve

(Or)

- B. Draw a Pie Diagram to represent the following population in a town.

Males	Females	Girls	Boys	Total
2000	1800	4200	2000	10000

3. A. Explain the scope of statistics in detail.

(Or)

- B. Construct a Histogram and Frequency Polygon for the following distribution.

Marks	21-27	28-34	35-41	42-48	48-55	56-62	63-69
No. of Students	2	3	10	18	15	5	6

4. A. What are the methods of collecting primary data?

(Or)

B. For the following table, draw a Histogram and Frequency Curve.

Class interval	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90
Frequency	5	10	15	17	20	24	16	8

5. A. What are the requisites of a good questionnaire?

(Or)

B. Draw a Lorenz Curve from the following data to study the extent of dispersion graphically:

Salary (in Rs)	100	150	200	250	300
No. of workers	20	10	8	10	2

6. What are the methods of classification?

7. Explain the method of forming a frequency distribution from a raw data.

8. What do you mean by tabulation? What are the general rules to be followed in tabulation?

Unit 2

1 a) Calculate mean from the following

Marks	0-10	10-20	20-30	30-40	40-50
Frequency	5	8	10	8	9

(or)

b) Calculate arithmetic mean through short cut method from the following data:

Marks	0-9	10-19	20-29	30-39	40-49	50-59	60-69	70-79	80-89	90-99
No. of students	3	4	7	4	5	7	8	6	4	2

2 a)Following are the data related with monthly income of 100 family in a villiage:

Monthly income	Above 0	Above 100	Above 200	Above 300	Above 400	Above 500	Above 600	Above 700	Above 800	Above 900	Above 1000
No.of families	100	95	80	75	60	55	40	35	25	20	0

(or)

b)Calculate the arithmetic mean from the following data using step deviation method:

Age (years)	18-21	22-25	26-35	36-45	46-55
No.of employees	8	32	54	36	20

3 a)From the following find out the median monthly income of families of a village

Monthly income	500	600	700	800	900	1000	1100	1200	1300
No.of families	4	6	5	7	15	20	9	3	6

(or)

b)Calculate the median from the following data

Marks	0-10	10-40	40-60	60-90	90-100
No.of students	3	9	20	12	3

4 a)Compute the median from the following data

Mid-value	5	15	25	35	45	55	65	75
Frequency	10	12	15	37	52	35	11	4

(or)

b) The marks obtained by 100 students in a class in the subject statistics are given below

Marks	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90
No. of students	3	9	10	20	16	18	9	4	1

Calculate

- Median
- Total no. of students passed & percentage of pass
- Total no. of students failed & percentage of fail

5 a) Calculate the value of median, Q1 & Q3 from the following

Values	4-6	6-8	8-10	10-12	12-14	14-16	16-18	18-20	20-22	22-24	24-26	26-28	28-30
Frequency	2	5	4	11	11	11	13	10	7	6	4	3	1

(or)

b) Find the median & quartiles from the following data

Monthly income	No. of persons
Below 50	35
50-60	24
60-70	21
70-80	18
80-90	6
90 & above	3

6 a) Calculate mode from the following series

Size of item	0-5	5-10	10-15	15-20	20-25	25-30	30-35	35-40	40-45
Frequency	20	24	32	28	20	16	34	10	8

(or)

b) Calculate mean & mode for the following distribution

Size of item(below)	15	20	25	30	35	40	45	50
No. of items	4	12	30	60	80	90	95	97

7 a) Find out geometric mean

Yield of wheat(mounds)	7.5-10.5	10.5-13.5	13.5-16.5	16.5-19.5	19.5-22.5	22.5-25.5	25.5-28.5
No. of farms	5	9	19	23	7	4	1

(or)

b) Compute the geometric mean from the following data

Marks	0-10	10-20	20-30	30-40	40-50
No. of students	5	7	15	25	8

8 a) Find the median through graphical method of marks obtained by 95 students

Marks	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90	90-100
No. of students	5	4	8	12	16	25	10	8	5	2

(or)

b) Find the median through graphical method of marks obtained by 100 students

Marks	0-10	11-20	21-30	31-40	41-50	51-60	61-70	71-80	81-90	91-100
No. of students	2	3	5	15	18	26	20	8	2	1

9 a) Calculate the average mark scored by students in 5 different subjects. The details of marks are given below; English 85, Tamil 70, Maths 90, Science 60, Social 55. The weight given for these subjects are Maths 5, Science 4, Social 3, Tamil 2, English 1.

(or)

b) The mean wages of 150 workers in a factory is rs.85. If the arithmetic mean of 80 workers in one section is rs.92. Calculate arithmetic mean of wages for other section.

10 a) State the relationship between mean, geometric mean & harmonic mean

(or)

b) The following table give the weight of 31 persons in sample survey. Calculate geometric mean

Weight	130	135	140	145	146	148	149	150	157
No.of persons	3	4	6	6	3	5	2	1	1

Unit 3

1 a) Calculate the range of semi-inter quartile range and wage labour

Wage	30-32	32-34	34-36	36-38	38-40	40-42	42-44
Labours	12	18	16	14	12	8	6

(or)

b) Evaluate an appropriate measure of dispersion for the following data

Income	No.of persons
Less than 50	54
50-70	100
70-90	140
90-110	300
110-130	230
130-150	125
Above 150	51

2 a) Find the co-efficient of mean deviation in the following data

Age in years	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80
No. of persons	20	25	32	40	42	35	10	8

(or)

b) With median as the base calculate the mean deviation & compare the variability of the two series ;

Series A	3484	4572	4124	3682	5624	4388	3680	4308
Series B	487	508	620	382	408	266	186	218

3 a) Calculate mean deviation from median from the following data

Class interval	20-25	25-30	30-40	40-45	45-50	50-55	55-60	60-70	70-80
Frequency	6	12	17	30	10	10	8	5	2

(or)

b) Compute standard deviation & mean deviation from the following data.

Class interval	0-10	10-20	20-30	30-40	40-50	50-60	60-70
Frequency	8	12	17	14	9	7	4

4 a) Calculate standard deviation from the following through step deviation method:

Marks	5-10	10-15	15-20	20-25	25-30	30-35	35-40	40-45
No. of students	6	5	15	10	5	4	3	2

(or)

b)The daily temperature recorded in a city Russia in a year is given below.

Temperature^oc	-40to(-30)	-30to(-20)	-20to(-10)	-10to0	0to10	`0to20	20to30
No.of days	10	28	30	42	65	180	10

5 a)Calculate arithmetic mean & standard deviation from the following data

Value	More than 800	More than 700	More than 600	More than 500	More than 400	More than 300	More than 200	More than 100
Frequency	14	44	96	175	385	527	615	660

(or)

b)Calculate any measures of dispersion from the following distribution of the number of practical's emitted by ratio active.

No.of practical's	0-2	3-5	6-8	9-11	12-14
Frequency	643	1465	451	86	2

6 a)Find the standard deviation & co-efficient of students for given distribution:

Variable	0-5	5-10	10-15	15-20	20-25	25-30	30-35	35-40
Frequency	2	5	7	13	21	16	8	3

(or)

b)From a moderately skewed distribution of retail prices for mens shoes it is found that the mean price is 20 & the median price is rs.17.If the co-efficient of variation is 20% find the personal co-efficient of the distribution.

7 a)Calculate SK_P from the following

Size	0-6	6-12	12-18	18-24	24-30	30-36
-------------	-----	------	-------	-------	-------	-------

Frequency	12	24	38	52	34	19
------------------	----	----	----	----	----	----

(or)

b) Calculate standard deviation & co-efficient of SK_P .

Weekly wages	15	20	25	30	35	40	45
No. of earners	3	25	19	16	4	5	6

8 a) From the information given below calculate Karl Pearson's co-efficient SK_P & also quartile co-efficient of SK_B

Measure	Place A	Place B
\bar{X}	256.5	240.8
Median	201.0	201.6
Standard deviation	215.4	181.1
3 rd quartile	260.0	242.0
1 st quartile	157.0	164.2

(or)

b) Calculate SK_B from the following data

Payment of commission	No. of sales man
1000-1200	4
1200-1400	10
1400-1600	16
1600-1800	29
1800-2000	52
2000-2200	80
2200-2400	32
2400-2600	23
2600-2800	17
2800-3000	7

9 a) By using the quartiles find the measures of skewness from the measures of skewness from the following distribution

Sales less than	20	30	40	50	60	70	80	90	100
------------------------	----	----	----	----	----	----	----	----	-----

No.of firms	30	225	465	580	634	644	650	655	680
--------------------	----	-----	-----	-----	-----	-----	-----	-----	-----

(or)

b) Calculate the measures of skewness based on quartiles & median from the following data

Variable	10-20	20-30	30-40	40-50	50-60	60-70	70-80
Frequency	358	2417	976	129	62	18	10

UNIT 4

1a) Find Karl Pearson's co-efficient of correlation from the following data

Wages	100	101	102	102	100	99	97	98	96	95
Cost of living	98	99	99	97	95	92	95	94	90	91

(Or)

b) Find out the co-efficient of correlation of co-efficient in the following case

Height of father (inches)	65	66	67	67	68	69	71	73
Height of son (inches)	67	68	64	68	72	70	69	70

2a) Explain scatter diagram method

(Or)

b) Explain the types of correlation

3a) With the following data in 6 cities, calculate the coefficient of correlation by Pearson's method between the density of population & the death rate

Cities	Area in sq.kilometer	Population in '000	No. of deaths
A	150	30	300
B	180	90	1440

C	100	40	560
D	60	42	840
E	120	72	1224
F	80	24	312

(Or)

b)The following table gives the distribution of the total population & those who are totally & partially blind among them. Find out if there is any relation between age & blindness

Age	No. of persons	Blind
0-10	100	55
10-20	60	40
20-30	40	40
30-40	46	40
40-50	24	36
50-60	11	22
60-70	6	18
70-80	3	15

4a)From the following data calculate the rank correlation coefficient after making adjustment for tied ranks

X	48	33	40	9	16	16	65	24	16	57
Y	13	13	24	6	15	4	20	9	6	19

(Or)

b) Calculate the coefficient of concurrent deviations from the data given below

Months	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept
Supply	160	164	172	182	166	170	178	192	186
Price	292	280	260	234	266	254	230	190	200

5a)Calculate the value of coefficient of correlation between price & supply. What is its probable error? Interpret the value of coefficient of correlation

Price	8	10	15	17	20	22	24	25
Supply	25	30	32	35	37	40	42	45

(Or)

b) Compute the coefficient of correlation of the following score of A & B

A	5	10	5	11	12	4	4	2	7	1
B	1	6	2	8	5	1	4	6	5	2

6a) Differentiate correlation & regression

(Or)

b) What are the methods of studying regression?

7a) Determine the equation of a straight line which best fits the data X & Y

X	10	12	13	16	17	20	25
Y	10	22	24	27	29	33	37

(Or)

b) Determine the equation of a straight line which best fits the data

X	10	12	13	16	17	20	25
Y	10	22	24	27	29	33	37

8a) Find the coefficient of correlation (r) between X & Y from the following data;

X	3	6	5	4	4	6	7	5
Y	3	2	3	5	3	6	6	4

(Or)

b) Given the bivariate data;

X	1	5	3	2	1	1	7	3
Y	6	1	0	0	1	2	1	5

- i) Fit a regression line of Y on X & hence predict X if Y=2.5
- ii) Fit a regression line of Y on X & hence predict Y if X=5

- iii) Calculate Karl Pearson's correlation coefficient

10 marks

1. a) Calculate the seasonal indices by the link relative method by the data given below

Year	I Quarter	II Quarter	III Quarter	IV Quarter
2003	60	65	62	69
2004	52	68	65	68
2005	65	70	64	62
2006	70	75	68	67
2007	72	80	70	78

(Or)

- b) Compute the price index by the following

- Simple aggregate
- Average of price relative method by using both arithmetic mean & geometric mean

Commodity	Price in 2005	Price in 2006
A	20	25
B	30	30
C	10	15
D	25	35
E	40	45
F	50	55

2. a) Calculate index number from the following data

	Base year	Current year
--	-----------	--------------

	Kilo	Rate(rs)	Kilo	Rate(rs)
Bread	10	3	8	3.25
Meat	20	15	15	20
Tea	2	25	3	23

(Or)

b) Calculate quality index numbers by

- i. Laspeyre's method
- ii. Paashe's method
- iii. Fisher's method

Commodity	Price (P0)	Total value	Price (P1)	2006 Total value(p1q1)
A	10	100	12	144
B	12	144	14	196
C	14	196	16	256
D	16	256	18	324
E	18	324	20	400

3. a) From the following data calculate price Index Numbers for 2007 with 2006 as base by

- i. Laspeyre's method
- ii. Marshall edge worth method
- iii. Fisher's ideal method

Commodity	2006		2007	
	Price	Quantity	Price	Quantity
A	20	8	40	6
B	50	10	60	5
C	40	15	50	15
D	20	20	20	25

(Or)

b) Two set of indices one with 1993 as base and the other with 2001 as base are given

a) Year	Index Numbers	b) Year	Index Numbers
1993	100		

1994	110		
1995	120	2001	100
1996	190	2002	105
1997	300	2003	90
1998	330	2004	95
1999	360	2005	102
2000	390	2006	110
2001	400	2007	96

4.a) Compute index numbers using fisher's ideal formula & show that it satisfies time reversal test

Commodity	Quantity	Base price	Quantity	Current price
A	12	10	15	12
B	15	7	20	5
C	24	5	20	9
D	5	16	5	14

(Or)

b) Construct with the help of the table below fisher's ideal index

Commodity	2006		2007	
	Price	Quantity	Price	Quantity
A	6	50	10	56
B	2	100	2	120
C	4	60	6	60
D	10	30	12	24
E	8	40	12	36

5. a) The following table gives the sterling assets RBI in crores of rupees

- Represent the data graphically
- Fit a straight line trend.
- Show the trend on the graph.

Year	2001-2002	2002-2003	2003-2004	2004-2005	2005-2006	2006-2007
Asset	83	92	71	90	169	191

Also estimate the figure for 2011-2012.

(Or)

b) Compute the average seasonal movement for the following series.

Year	Quarterly Production			
	I	II	III	IV
2003	3.5	3.9	3.4	3.6
2004	3.5	4.1	3.7	4.0
2005	3.5	3.9	3.7	4.2
2006	4.0	4.6	3.8	4.5
2007	4.1	4.4	4.2	4.5

6. a) Find the seasonal variation by the ratio to trend method by the data given below;

Year	Quarterly production			
	I	II	III	IV
2005	86	95	96	99
2006	96	102	104	110
2007	103	108	106	107

(Or)

b) Find the seasonal index from the following table by ratio to moving average method

Seasons	2003	2004	2005	2006	2007
I	40	42	41	45	44
II	35	37	35	36	38
III	38	39	38	36	38
IV	40	38	42	41	42

7.a) Calculate index number of prices for 2007 on the base of 2006 from the data given below

Commodity	Weight	Price per unit(2006)	Price per unit(2007)
A	40	16	20
B	25	40	60
C	5	0.50	0.50
D	20	5.12	6.25
E	10	2.00	1.50

(Or)

b) An enquiry into the budgets of middle class family in a certain city gave the following information.

Expenses	Food	Fuel	Clothing	Rent	Miscellaneous
Weight	35%	10%	20%	15%	20%
Prices(2006)	150	25	75	30	40
Prices(2007)	145	23	65	30	45

8.a) Calculate the index number using the aggregate expenditure method for the year 2007 as 2006 as the base year from the following data

Commodity	Quantity in units	Price per unit(2006)	Price per unit(2007)
A	100	8	12
B	25	6	7.50
C	10	5	5.25
D	20	48	52
E	65	15	16.50
F	30	19	27

(Or)

b) The following are the group index numbers & the group weights of an average working class family budget. Construct the cost of living index number.

Group	Index numbers	Weight
Food	330	50
Clothing	208	10
Fuel & light	200	12
House rent	162	12
Miscellaneous	180	16

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI

B.B.A

Core V -Business Economics

Sub.Code: 21UBAC31

Question Bank

Semester III

Time: 3 hours

Max Marks: 75

SECTION A

(10x1=10)

Choose the correct answer:

UNIT I

1. Production possibility curve is also called _____.

a) Transformation curve

b) Demand curve

c) Supply curve

d) None of the these 2.

_____ economy explains the circular flow of national income

a) Micro

b) Macro

c) Both macro and micro

d) None of these 3. _____

economy helps to maximize the resource utilization

a) Micro

b) Macro

c) Both macro and micro

d) None of these 4.

How many stages are there in economic cycle?

a) 4

b) 3

c) 5

d) 2

5. Business economic is an application of economics in _____

a) Business

b) Organization

c) Market

d) None of these

6. Business economic is an _____

a) Art

b) Science

c) Both Art and Science

d) None of these

7. Business economic is _____ in nature

- a) Positive
- b) Normative
- c) Negative
- d) Positive and normative**
8. What are the two method goods and services
- a) Labour Intensive Method
- b) Capital Intensive Method
- c) Both a and b**
- d) None of these
9. Stability is a term used by economists to describe_____
- a) National Income
- b) Real income
- c) Country's Financial system**
- d) None of these
10. Micro Economics helps to understand _____
- a) Market Economy**
- b) sales economy
- c) purchase economy
- d) All of the above

- What is the meaning of ceteris paribus?
 - a) other things remains constant**
 - b) other things not remain constant
 - c) other things remains neutral
 - d) All the above 2.
- Greater change in price leads to small or no change in demand?
 - a) unit elastic
 - b) elastic demand
 - c) inelastic demand**
 - d) All of these
- The value of relatively inelastic
 - a) zero
 - b) one**
 - c) infinity
 - d) infinity
- The effectiveness of price control depends upon?
 - a) elasticity of supply
 - b) elasticity of demand**
 - c) demand curve
 - d) None of the above
- Elasticity of demand is an guiding idea to generate _____.
 - a) income
 - b) tax revenue**

- c) capital d) None of these
6. Products and services whose income elasticity is zero and one.
It is called as _____
- a) Negative income elasticity b) income elastic
- c) **income inelastic** d) Positive income elasticity
7. The price of the product increases, Quantity supply also increases
It is called as _____
- a) **Law of supply** b) Law of demand
- c) Law of proportion d) All the above
8. When demand is equal to supply it is _____
- a) **equilibrium** b) Law of demand
- c) Inelasticity demand d) None of these
9. A small change in price leads to greater change in demand
- a) elasticity of supply b) **elastic demand**
- c) Supply curve d) inelastic demand
10. Determinants of advertising elasticity of demand
- a) income spent on the product b) Price change
- c) **Effects of time** d) All of these

UNIT III

1. _____ is the process of changing inputs into outputs.
- a) total product b) **production**
- c) function d) None of the above
2. The quantity of output produced using a given quantities of input is known as _____.
a) Average product b) marginal product
- c) **total product** d) All of the above
3. According to _____, "An increase in some inputs relative to other fixed inputs will, in a given state of technology, cause output to increase but after a point the extra

output resulting from the same additions of extra inputs will become less and less''. a)
Charles Cobb b) Adam Smith

c) **Prof. Samuelson** d) Paul Douglas

4. Which is the wrong assumption for law of variable proportions

- a) It is possible to vary the proportion in which the various inputs are combined
- b) Only one input is variable while others remain constant
- c) The product can be measured in terms of units like Kg
- d) **Technology will always change**

5. _____ explains the reaction of total product when all the inputs are increased proportionately.

- a) **Law of Returns** b) Law of Constant returns
- c) Law of Increasing returns d) Law of Decreasing Costs

6. Isoquants curves are similar to _____ curves

- a) Demand curve b) Supply curve
- c) Equilibrium d) **Indifference curve**

7. The sum of all costs incurred by a firm in producing a certain level of output is called _____.

- a) Average cost b) marginal cost
- c) **Total cost** d) All of above

8. The relationship between the output and the costs in the short run is determined by the _____ function.

- a) Total cost b) Average cost
- c) **Short run cost** d) Long run cost

9. In the long run a firm has sufficient time to _____ all inputs.

- a) **Change** b) Constant
- c) Increase d) Decrease

10. Law of Increasing returns is also known as _____.

- a) **Law of decreasing cost** b) Law of Increasing Costs
- c) Law of constant cost d) None of the above

UNIT IV

1. _____ is a set of condition under which sellers and buyers sell and buy commodity.

- a) **Market**
- b) Company
- c) Firm
- d) All of the above

2. Market structure is made up in terms of _____.

- a) Profit levels
- b) Impact on efficiency
- c) nature of products produced
- d) **All of the above**

3. If the conditions of perfect competition do not hold, _____ competition will exist.

- a) Perfect
- b) **Imperfect**
- c) Oligopoly
- d) Monopoly

4. What is the origin of monopoly?

- a) **Growth of the firm**
- b) Growth of the company
- c) Through legal means
- d) non acquiring license

5. _____ were only one producer exist in the industry.

- a) Oligopoly
- b) Monopoly
- c) **Pure monopoly**
- d) Duopoly

6. The market structure in which the number of sellers is small and there is in dependence in decision making by the firm is known as _____.

- a) Perfect competition
- b) **Oligopoly**
- c) Monopoly
- d) Monopolistic competition

7. Monopolistic can determine _____.

- a) Price
- b) Output
- c) **either price or output**
- d) None of the above

8. Market which two firms are known as _____.

- a) Oligopoly
- b) Monopoly

5. The purchasing power of money varies _____.

- a) Directly with the volume of employment **b) Inversely with the price level**
- c) Directly with the interest rate d) Directly with the price level
6. Which of the following is not a part of the National Income?
- a) Undistributed profits
b) Income from government expenditure
c) The interest amount on the unproductive national debt
d) The payments made by a household to a firm for purchasing goods and services
7. Inflation is measured by _____.
a) Consumer price index b) Wholesale price index
- c) Marshall's index d) None of the above
8. Which of the following is true for Inflation?
- a) The value of money increases during Inflation
b) The value of money decreases during Inflation
c) The value of money stays the same during Inflation
d) None of the above
9. Which of the following is true for Net National Income?
- a) The Net National Income is the total of Gross National Product and Depreciation
b) The Net National Income is the difference between Gross National Product and Depreciation
c) The Net National Income is the difference between Gross Domestic Product and Depreciation
d) The Net National Income is the difference between Net Domestic Product and Depreciation
10. Which of the following is included in the National Income of a country?
- a) Rent b) Interest
- c) Wages **d) Rent, Interest, Wages, Salary, Profits**

SECTION-B

(5x2=10)

Answer any five of the following in about 50 words each

UNIT I

- 1) Define Business Economics
- 2) What do you mean by Scarcity?
- 3) Explain the term "Efficiency"

- 4) List the role of business economics
- 5) What is central economic problem
- 6) Write about opportunity cost
- 7) Write a short note on macroeconomics
- 8) Write a short note on microeconomics
- 9) What is an economic cycle?
- 10) What do you mean by normative economics
- 11) Write about production possibility frontiers

Unit II

- 1) Write about law of supply.
- 2) List some of the factors affecting elasticity of the demand.
- 3) What is meant by demand forecasting.
- 4) Write about supply curve.
- 5) List some of the determinants of supply.
- 6) Define supply
- 7) Write about elasticity of demand
- 8) Define demand
- 9) What is meant by supply
- 10) Write about demand curve

Unit III

- 1) What is total cost
- 2) Write about marginal cost
- 3) What is meant by semi variable cost
- 4) What is meant by law of production
- 5) Write a short note on law of variable proportion
- 6) What is a cost function
- 7) Write about least cost combination principle
- 8) List any two uses of production function in decision making
- 9) Write about short run total cost curve
- 10) What is meant by production

Unit IV

- 1) Define market
- 2) Write a short note on perfect competition
- 3) What is meant by the term monopoly
- 4) List any two features of monopoly

- 5) Write a short note on oligopoly
- 6) List any two characteristics of oligopoly
- 7) Write about perfect market
- 8) List any two features of perfect competition
- 9) Write a short note on monopolistic competition
- 10) What is meant by discriminating monopoly

Unit V

- 1) Write a short note on money
- 2) What is an inflation
- 3) List any two reasons for inflation
- 4) Define national income
- 5) What is a real income
- 6) Write a short note on money market equilibrium
- 7) What is meant by demand and supply of money
- 8) List any two impact of inflation
- 9) Mention any two difficulties in measurement of National Income
- 10) What is an unemployment trade off

SECTION-C

(5x5=25) Answer all questions choosing either

(a) or (b) in about 200 words each:

Unit I

- 1) a. Explain the nature of Business economics.
(or)
b. List out few points on scope of Business economics.
- 2) a. Explain the terms and scarcity and choice
(or)
b. Explain the role of Business economics
- 3) a. Write the difference between productive efficiency and economic efficiency
(or)
b. Explain the fundamentals of economic problem
- 4) a. Write in brief about micro and macroeconomics
(or)

- b. Enumerate positive and normative economics
- 5) a. State in brief about economic growth and stability

(or)

- b. List the role of business economics

Unit II

- 1) a. Explain the Cross Elasticity of Demand

(or)

- b. List out the factors influencing elasticity of demand.

- 2) a. What is the contraction and expansion of supply?

(or)

- b. Give any two examples to “Exception to the law of Demand.”

- 3) a. Write in brief about advertising and demand

(or)

- b. Explain the significance of demand forecasting

- 4) a. Enumerate the function of supply

(or)

- b. Outline the scope of demand

- 5) a. Write about contraction and expansion of supply

(or)

- b. State the increase and decrease in supply

Unit III

- 1) a. Write a in brief cob Douglas production function

(or)

- b. Explain continuous aggregate production function

- 2) a. Write about average and marginal cost

(or)

b. Write in brief about total cost and short run total cost curve

3) a. Elaborate the use of production function in decision making

(or)

b. Write about law of production in brief.

4) a. Enumerate the law of variable proportion

(or)

b. Explain the limitation of least cost combination principle

5) a. Write in brief about cost function

(or)

b. Write in brief about variable and semi variable cost

Unit IV

1) a. Explain in brief about perfect and imperfect market

(or)

b. What are the features of perfect competition?

2) a. Elaborate monopolistic competition

(or)

b. What is monopoly and write the features of monopoly?

3) a. What is meant by oligopoly and describe the characteristics of oligopoly?

(or)

b. Write in brief about degree of monopoly

4) a. Explain the features of monopolistic competition

(or)

b. Describe social cost of monopoly

5) a. Enumerate the term competition

(or)

b. Write about the term Monopoly and oligopoly

Unit V

1) a. Describe the function of money

(or)

b. Explain the measurement of money supply 2) a.

What are the reasons for inflation?

(or)

b. What are the impacts of inflation?

3) a. Elaborate the concept of national income

(or)

b. Elucidate the computation of national income

4) a. What are the difference between inflation and unemployment trade off?

(or)

b. Explain the difficulties in measurement of National Income

5) a. Write in brief about national income and real income

(or)

b. Describe about money market demand supply

SECTION D

(3x10=30)

Answer any three of the following questions in about 400 words each

Unit I

- 1) “Fundamentals of Economic problems” – Explain
- 2) Describe the terms Positive and normative economics with an example.
- 3) What do you meant by Production possibilities Frontiers with a help of diagram?
- 4) Explain the relationship of Business Economics with other discipline
- 5) Explain in detail about micro and macro economics
- 6) Discuss about economic growth and stability
- 7) Describe the nature and scope of business economics

- 8) Explain about Central economic problem in detail
- 9) What do you mean by Business Economics and describe the role of Business Economics?
- 10) Define business economics and discuss about scarcity and efficiency

Unit II

- 1) Explain the nature and scope of demand
- 2) Discuss in detail about law of demand
- 3) Describe the factors influencing the elasticity of demand
- 4) Explain the determinants of demand in detail
- 5) Discuss about the demand schedule and demand curve
- 6) Write about demand forecasting in detail
- 7) Describe the methods of demand forecasting
- 8) Explain the law of supply in detail
- 9) Describe the determinant of supply
- 10) Discuss the elasticity of supply in detail
- 11) Explain the various determinants of elasticity of supply

Unit III

- 1) Write in detail about continuous aggregate production function
- 2) Explain the Cobb-Douglas production function
- 3) Explain the various uses of production function in decision making
- 4) Describe the law of production in detail
- 5) Discuss the translog production function
- 6) Explain in detail about law of variable proportion
- 7) Describe about least cost combination principle and its limitation
- 8) Explain detail about theory of cost.
- 9) Write in detail about cost function
- 10) Explain in detail about marginal cost, total cost and short run total cost curve.

Unit IV

- 1) Explain the classification of market
- 2) Write in detail about perfect and imperfect market
- 3) Describe the different market structures
- 4) What do you mean by perfect competition and describe the features of perfect competition?
- 5) Write in detail about discriminating monopoly
- 6) What is Monopoly and discuss the features of monopoly?

- 7) What do you mean by oligopoly and describe the characteristics of oligopoly?
- 8) Explain monopolistic competition and describe the features of it
- 9) Discuss about social cost of monopoly
- 10) Explain the features of monopoly and monopolistic competition

Unit V

- 1) Define money and describe the functions of money
- 2) Explain in detail about measurement of money supply
- 3) Write in detail about demand and supply of money
- 4) Discuss the reasons for inflation and impacts of inflation
- 5) Discuss about money market equilibrium
- 6) Define national income and explain the difficulties in measurement of National Income
- 7) Explain in detail about national income and real income
- 8) Describe in detail about the concept and computation of national income
- 9) Define money and describe the money market demand supply
- 10) Explain the difference between inflation and unemployment trade off

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI

Non Major Elective

Introduction to Management
Question Bank
Semester III

Sub.Code: 21UBAN31

Time: 2 hours

Max Marks: 50

Section A (10x1=10 marks) K1(Re)

Choose the best answer

1. _____ are responsible for the entire organization, and conduct strategic planning:
a) Mid level managers b) **Top level managers**
c) CEO and CFO d) First level managers

- b) Owners
- c) Share holders
- d) Managers**

9. Management is _____

- a) Art
- b) Science
- c) Both art and science**
- d) Maths

10. Foreman supervisor, Finance officer, Accounts officer comes under _____ management.

- a) Lower level management**
- b) Middle level management
- c) Top level management
- d) All the above

UNIT II

1. Art is concerned with the application of _____ and _____.

- a) techniques and skills
- b) knowledge and techniques
- c) Managing and techniques
- d) skills and knowledge**

2. Art has _____ features.

- a) 6
- b) 5**
- c) 10
- d) 11

3. _____ is an organized body of knowledge.

- a) Art
- b) Management
- c) Science**
- d) Innovation

4. _____ makes a successful business man.

a) Creativity

b) Practice

c) Personal skills

d) Result oriented approach

5. Management is both a _____ as well as _____.

a) **Science and art**

b) skill and technique

c) business and salary

d) sole proprietor and partnership.

6. Science teaches one to _____ art to _____.

a) **know, do**

b) understand, learn

c) grow, develop

d) improve , work.

7. “A body of principles, techniques, skills and specialized knowledge “ is defined by _____.

a) Henry Fayol

b) Mc farland

c) Taylor

d) Adam Smith.

8. The association or council establishes the standards of performance for the _____.

a) dedication

b) art

c) science

d) professional.

9. The Principles of _____ unity is strength is applied in almost every organization and every situation.

a) Management

b) Science

d) Art

d) Espirt De corps.

10. Management is known as _____ and _____ science.

a) Moral and ethical

b) Social and moral

c) Ethical and soft.

d) Soft and social

Unit III

1) _____ is known as the father of scientific management.

a) Peter F.Drucker

b) Max weber

c) Henry Fayol

d) F.M Taylor

2) _____ are said to be known for the contributions of F.M Taylor.

a) Time study and Motion study were first conducted by him.

b) Management is the starting point of any institution.

c) Top management has more powers than various departments.

d) Methods of the planning, setting standards, performance appraisal and motivation are the contributions components of management by Objectives.

3. _____ level of management was mainly concentrated by Henry Fayol.

a) **Top level**

b) Low level

c) Middle level

d) All of the above.

4. _____ are considered to be the elements of management.

a) Planning

b) Organizing

d) All the above

5. Henry Fayol classified all the business activities into _____ functions?

a) Three

b) Seven

c) Six

d) Five

6. The concept of the scientific management by F.W Taylor was invented in _____ century.

a) 16th century

b) 18th century

c) 19th century

d) 20th century

7. The results of Hawthorne experiment have been published into _____ volumes.

a) Two

b) Four

c) Six

d) Eight

8. Prof .Elton Mayo and his team conducted researches in _____ phases.

a) Two

b) One

c) Four

d) Four

9. _____ was regarded as the founder and father of modern sociological and psychological industrial research.

- a) Elton Mayo **b) F.W. Taylor.**
d) None of these d) Henry Fayol.

10. Relay assembly test room experiment were conducted in _____ phases.

- a) One b) Four
c) Six **d) Three**

UNIT IV

1. _____ seeks to bridge the gap between where we are and where we want to reach?

- a) Organizing** **c) Planning**
b) Staffing d) Directing

2. _____ function of management is concerned with both ends and means.

- a) Organizing** **c) Planning**
b) Staffing d) Directing

3. Management contains a series of interrelated functions that include _____.

- a) Planning b) Organising

- a) Functional b) Operational
- c) Middle level **d) Top level**

10. Which is not a recognized skill of management?

- a) Human skill b) Technical skill
- c) Conceptual skill **d) Writing skill**

Section B (5x2=10) K2(Un)

Answer any questions in about 50 words each:

UNIT I

- 1) Define Management.
- 2) Write any two difference between management and administration.
- 3) Write a short note on lower level management.
- 4) List any two function lower level management
- 5) Write a short note on middle level management.
- 6) List any two function of middle level management
- 7) List any two function of top level management.
- 8) Write a short note on top level management.
- 9) Mention any two importance of Management.

UNIT II

- 1) State any two difference between management and administration.
- 2) Write a short note on management as a profession.
- 3) Write a short note on management as an art.
- 4) List any two characteristics of management as a science.
- 5) Write a short note on management as a discipline.
- 6) Write a short note on management as a activity
- 7) Write a short note on management as a group.
- 8) Write a short note on management as a Process.
- 9) Write a short note on management assess science

UNIT III

- 1) What is time study?
- 2) What is motion study?
- 3) What is fatigue study?
- 4) Write a short note on Espirit De Corps.
- 5) Write a short note on scalar chain.
- 6) Write a short note on unity of command.
- 7) Write a short note on unity of direction.
- 8) Write a short note on F W Taylor
- 9) What do you mean by centralization?
- 10) What is meant by method study?

Unit IV

- 1) Write a short note on planning
- 2) List any two objectives of planning
- 3) What do you mean by the term organising?
- 4) List any two objectives of organising
- 5) State any two features of coordination
- 6) What is staffing?
- 7) What do you mean by directing?
- 8) Write a short note on coordination
- 9) Mention some of the techniques of coordination
- 10) State any two characteristics of controlling

Unit V

- 1) Write a short note on manager
- 2) State any two qualities of manager
- 3) Mention any two functions performed by manager
- 4) Write any two responsibilities of manager
- 5) Write a short note on worker
- 6) State any two difference between manager and worker
- 7) Write in short about the decision making role performed by manager
- 8) Define manager
- 9) Write in short about informational role performed by manager.
- 10) Write in short about interpersonal role performed by manager

Section C (5x5=25) K3(Ap)

Answer the following questions choosing either (a) or (b) in 200 words each:

UNIT I

1. a) Briefly explain the term management.
(or)
b) Discuss the difference between management and administration.
2. a) What is middle level management?
(or)
b) Explain the functions of middle level management.
3. a) Explain the functions of top level management.
(or)
b) What is top level management?

4. a) Explain the functions of lower level management.

(or)

b) What is lower level management?

5. a) Explain the objectives of management.

(or)

b) What are the importance of management?

UNIT II

1. a) Explain management as a science.

(or)

b) Enumerate management as a profession.

2. a) Elaborate management as a discipline.

(or)

b) Enumerate management as a group.

3. a) State the difference between management and administration.

(or)

b) Explain management a process.

4. a) Elaborate management as an art.

(or)

b) Explain management as a activity .

5. a) Elaborate the characteristics of Management as science

(or)

b) Explain features of Management as an art.

UNIT III

1. a) State some of the Principles of management

(or)

b) Explain contribution of Henry fayol.

2. a) State some of the scientific principles of management

(or)

b) Explain contribution of Taylor.

3. a) Elaborate the illumination experiment.

(or)

- b) Explain relay test assembly experiment.
4. a) Elaborate mass interviewing programme.
(or)
b) Explain the features of scientific management
5. a) Elaborate the elements of scientific management
(or)
b) Explain bank wiring experiment.

UNIT IV

1. a) Explain the nature of organising.
(or)
b) Explain the nature of planing.
2. a) What are the objectives of planning?
(or)
b) What are the objectives of organising?
3. a) Explain the features of coordination.
(or)
b) What are the principles of directing?
4. a) What are the functions of staffing?
(or)
b) What are the techniques of coordination?
5. a) Explain the characteristics of controlling .
(or)
b) Explain the nature of staffing.

UNIT V

1. a) Discuss about manager.
(or)
b) Explain the role of manager.
2. a) Discuss the responsibilities of manager.
(or)
b) Describe the qualities of manager.

3. a) Explain the functions of performed by manager.
(or)
b) Explain the difference between manager and worker.
4. a) Explain the interpersonal role performed by the manager
(or)
b) Explain the information role performed by the manager.
5. a) Write in brief about managers
(or)
b) Write the decision making role performed by the manager.

Section D (3x10=10) K4(An)

Answer any question in about 400 words:

UNIT I

- 1) Define management and explain the levels of management.
- 2) State the importance of management.
- 3) Explain the features of management.
- 4) What are the objectives of management?
- 5) What are the characteristics of management?

QUESTION BANK

BBA - Semester III

Core SB - Logistics Management

Sub. Code: 21UBAS31

(for those who joined in 2021 and after)

Time : 3 hours

Max. : 75 Marks

Answer all the questions

SECTION - A

(10x1=10)

Choose the correct answer:

UNIT-I

INTRODUCTION TO LOGISTICS MANAGEMENT

1. _____ includes design and administration of systems to control the flow of materials, WIP and finished inventory to support business unit strategy.
 - a. **Logistics Management**
 - b. Materials Management
 - c. Bill of Materials
 - d. Distribution Management
2. _____ is the time that elapses between issuing replenishment order and receiving the material in stores.
 - a. Replenishment time
 - b. **Lead time**
 - c. Idle time
 - d. Replacement Time
3. Form utility is created by
 - a. **Operation function.**
 - b. Logistics function.
 - c. Procurement function.
 - d. Distribution function.
4. Place utility is created by
 - a. Operation function.
 - b. **Logistics function.**
 - c. Procurement function.
 - d. Distribution function.
5. Time utility is created by
 - a. Operation function.
 - b. Logistics function.
 - c. Procurement function.
 - d. **Distribution function.**

6. The upstream supply chain is:
 - a. exclusively inside an organization.
 - b. **procurement from suppliers.**
 - c. delivery of services to customers.
 - d. both the first and third answer above.
7. The downstream supply chain is:
 - a. exclusively inside an organization.
 - b. procurement of material from suppliers.
 - c. **delivery of services to customers.**
 - d. both the first and third answer above.
8. A supply chain is a sequence of firms that perform activities required:
 - a. to find products that are similar
 - b. wholesalers inventory selections
 - c. synergy in training
 - d. **to create and deliver goods**
9. A supply chain which includes the distribution of finished product and service?
 - a. **Outbound logistics**
 - b. Inbound logistics
 - c. Supply of goods
 - d. Transportation
10. Logistics is the part of supply chain involved with the forward and reverse flow of
 - a. Goods
 - b. Services
 - c. Cash
 - d. **All of these**

UNIT II

LOGISTICS DELIVERY AND FULFILMENT

1. Railway transportation the ownership in with.....
 - a. Manufacturer
 - b. Third Party
 - c. Buyer
 - d. **Government**
2. RO-RO concept means _____
 - a. Roll on – Ride Off
 - b. Ride on- Ride off
 - c. Roll Off- Roll on
 - d. **Roll on- Roll off**
3. _____ is most suitable for remote and hilly areas.
 - a. **Road transport**
 - b. Railway transport
 - c. Water transport
 - d. Pipeline
4. _____ is the fastest mode of transport.
 - a. Road transport
 - b. Railway transport
 - c. Water transport
 - d. **Air Transport**
5. _____ are used for vertical movement of materials, generally from one floor to another.
 - a. Conveyor belts
 - b. Cranes
 - c. **Elevators**
 - d. Towlines

6. _____ can move carton loads or pallet loads horizontally or vertically.
 a. Conveyor belts b. Cranes c. Elevators d. **Forklift trucks**
7. _____ is the process of planning implementation and control of transportation services to achieve organization goals.
 a. Logistics Management b. **Transportation Management**
 c. Supply Chain Management d. Distribution Management
8. _____ is the method of sorting, transporting and distributing products in unitized or standardized form in a container.
 a. Cold chain logistics b. ICD c. **Containerization** d. DFC
9. _____ is the most economical mode of transportation.
 a. Road transport b. Railway transport c. **Water transport** d. Air transport
10. Case fill rate is a _____ measure
 a. Customer service b. **Productivity** c. Financial d. Quality

UNIT III

COSTS AND PERFORMANCE MEASUREMENTS

1. The objective of performance measure is to achieve a _____.
 a. Benchmark b. Perfect distribution
 c. **Perfect order** d. Goal
2. _____ cost is one-time costs.
 a. **Fixed** b. Variable c. Joint d. Common
3. _____ cost is directly proportional to the volume of activity.
 a. Fixed b. **Variable** c. Joint d. Common
4. What are the cost related to logistics?
 a. warehouse cost b. quality cost c. inventory cost d. **All the above**
5. _____ is the quantifying efficiency and effectiveness in action.
 a. **performance measurement** b. cost measurement
 c. inventory measurement d. None of the above
6. _____ cost is directly proportional to the volume of activity.

- a. Fixed b. **Variable** c. Joint d. Common
7. What is not the facilities provided by port?
- a. Special warehouse b. Loading and unloading facility
- c. Workshop d. **ICD**
8. What is/are the internal performance measure?
- a. cost measure b. customer service measure
- c. productivity measure d. **All the above**
9. _____ Indicate the firms ability to meet customer expectations
- a. cost measure b. **customer service measure**
- c. productivity measure d. Asset management
10. What are the inventory carrying cost included in logistic activity?
- a. Capital cost b. Inventory service cost
- c. Storage space cost d. **All the above**

UNIT IV

LOGISTICS STRATEGY AND SUPPLY CHAIN MANGEMENT

1. _____ is a part of development of facility structures.
- a. Transportation b. **Warehousing** c. Sorting d. Logistics
2. _____ involves streamlining the distribution process in terms of physical and information efficiency.
- a. Technical b. **Channel** c. Channel Hierarchy d. Vertical Marketing System
3. The sequence of a typical manufacturing supply chain is
- a. Storage–Supplier–manufacturing–storage–distributor–retailer–customer
- b. Supplier–Storage–manufacturing–storage–distributor–retailer–customer
- c. **Supplier–Storage–manufacturing– distributor–storage–retailer–customer**
- d. Supplier–Storage–manufacturing–storage– retailer–distributor–customer
4. The purpose of supply chain management is
- a. provide customer satisfaction b. improve quality of a product
- c. **integrating supply and demand management** d. increase production

5. The termrefers to any idle resources that can be put to some future use.
 - a. Inventory b. Warehousing c. Logistics d. Procurement
6. The major decision areas in supply chain management are
 - a. **location, production, distribution, inventory**
 - b. planning, production, distribution, inventory
 - c. location, production, scheduling, inventory
 - d. location, production, distribution, marketing
7. _____ is developed to identify marketing and financial objectives of the firm.
 - a. LIS b. **Strategy** c. Plan d. Information System
8. Which of the following is not a part of supply chain management system?
 - a. Supplier b. Manufacturer c. Information Flow d. **Competitor**
9. _____ occurs when a company retains another business to perform some of its work activities.
 - a. **Outsourcing** b. KPO c. 3PL d. 4PL
10. _____ comprises of raw materials, components, and fuels, etc. which are required to facilitate manufacturing operations.
 - a. **Raw material inventory** b. Work in process inventory
 - c. Finished goods inventory d. Average inventory

UNIT V

GLOBAL LOGISTICS

1. _____ refers to supply chain practices that strive to reduce energy and environmental footprints in terms of freight distribution.
 - a. Inbound Logistics **b. Green Logistics** c. Outbound Logistics d. SCM
2. _____ is defined as the sale of products and services in foreign countries that are sourced or made in the home country
 - a. **Exporting** b. Importing c. Joint venture d. Licensing

3. _____ refers to buying goods and services from foreign sources and bringing them back into the home country
 a. Exporting **b. Importing** c. Joint venture d. Licensing
4. _____ is a business arrangement in which one company gives another company permission to manufacture its product for a specified payment.
 a. Exporting b. Importing c. Joint venture **d. Licensing**
5. _____ is a business arrangement in which two or more parties agrees to pool their resources for the purpose of accomplishing a specific task.
 a. Exporting b. Importing **c. Joint venture** d. Licensing
6. _____ refers to the process of utilizing information and technology infrastructure in the traditional supply chain process to simplify knowledge sharing, data transfer, etc.
 a. Inbound Logistics b. Green Logistics c. Outbound Logistics **d. E-Logistics**
7. The risk that is not covered in the marine insurance policy
 a. Improper packaging b. Ordinary leakage c. Nuclear war **d. All of the above**
8. The first step in the process of filing the claim
 a. Protection of cargo b. **Filing the claim** c. Notification d. None
9. _____ insurance is used to cover the damages occurred to the ship
 a. **Hull** b. Cargo c. Protective d. None
10. When theft is unorganized and unplanned, it is termed as _____
 a. **Pilferage** b. Theft c. Both a and b d. None of the above

SECTION – B

(5X2=10 marks)

Answer any five questions in about 50 words each:

UNIT-I

INTRODUCTION TO LOGISTICS MANAGEMENT

1. Define Logistics.
2. What is Supply chain management?
3. Difference between inbound and outbound logistics.
4. What the various cost involved in logistics management?

5. Give few examples of top logistics firm in the globe.
6. Define Supply chain.
7. What is inbound logistics?
8. What is outbound logistics?
9. List out few current trends in logistics
10. List out the logistic practices in supply chain. **UNIT II**

LOGISTICS DELIVERY AND FULFILMENT

1. Can you list the various mode of transportation?
2. Write short note on containerization?
3. What do you mean by Unitisation?
4. What do you mean by Palletization?
5. List out the types of ships used in water transportation?
6. What is port?
7. Write short on inland container depot 8. Give 2 importance of material handling.
9. What is bonded warehouse?
10. What is a private warehouse?

UNIT III

COSTS AND PERFORMANCE MEASUREMENTS

1. Define Performance Measurement.
2. State some needs of Performance measurement.
3. Give few objectives of performance measurement.
4. Define logistics Audit.
5. What are the levels of logistics performance?
6. Give the elements of internal performance measurement.
7. Explain the factors which influence the External measures.
8. Specify the objectives of logistics audit.
9. List the dimensions of performance measurement.
10. What are the costs involved in logistics?

UNIT IV

LOGISTICS STRATEGY AND SUPPLY CHAIN MANGEMENT

1. Interpret any three importance of SCM?
2. Define outsourcing
3. What is logistical Strategy?
4. Define SCM
5. What are the different strategies followed in supply chain?
6. Define Inventory.
7. Write the different categories of inventory.
8. What is meant by motive of holding inventory?
9. Outline the features of Warehousing.
10. What is Warehouse?

UNIT V GLOBAL

LOGISTICS

1. What is exporting?
2. What is licensing
3. What is joint venture
4. Write about green logistics
5. Write about E-Logistics
6. List out the technology used in logistics
7. Write about strategic logistics planning
8. What is pilferage insurance?
9. What is multimode insurance?
10. What is international transport insurance?

SECTION – C

(5X5=25marks)

Answer in about 200 words each by choosing either (a) or (b):

UNIT-I

INTRODUCTION TO LOGISTICS MANAGEMENT

1. a. Give a brief account on the objectives of Logistics Management.

(or)

b. Explain logistics' interface with marketing.

2. a. Explain in brief the nature and importance of Logistics Management.

(or)

b. Give a brief account on the various service benefits provided by Logistics.

3. a. Explain the various functions of Logistics Management.

(or)

b. Explain in brief the principles of logistics information.

4. a. How would you describe the goal of a Logistics and explain the impact of Logistics decision on the decisions on the success of a firm?

(or)

b. Brief the evolution of logistics

5. a. Explain the role of logistics in economy

(or)

b. Briefly explain about supply chain with example

UNIT II

LOGISTICS DELIVERY AND FULFILMENT

1. a. Brief the air transportation

(or)

- b. Explain about functions of Inland container depot
- 2. a. Describe the facilities provided by the port
(or)
b. Discuss about containerization in detail.
- 3. a. Explain the importance of warehousing in logistics management.
(or)
b. What is material handling? Explain the various forms of material handling equipments.
- 4. a. Explain order processing and its functions.
(or)
b. Explain the effective material handling techniques.
- 5. a. Brief the road transportation.
(or)
b. Brief the rail transportation

UNIT III

COSTS AND PERFORMANCE MEASUREMENTS

- 1. a. What is Performance Measurement? Discuss its functions in logistics management in detail.
(or)
b. Explain the procedure on Logistics Audit
- 2. a. Brief the levels of performance measurement in detail.
(or)
b. Discuss the various elements of Internal Performance measurements (or)
- 3. a. Discuss the various elements of External performance measurements.
(or)
b. Sketch the steps in logistics audit/ procedure followed in Audit.
- 4. a. Explain the major cost elements of Logistics system
(or)
b. Brief the accounting methods in logistics
- 5. a. Write a detail note on export clearance at ICD's.

(or)

- b. Write the functions of Container freight station.

UNIT IV

LOGISTICS STRATEGY AND SUPPLY CHAIN MANGEMENT

1. a. What is inventory? What are various objectives of it?

(or)

- b. Elucidate the following statement “A Warehouse should merely consist of walls enclosing an efficient handling system.

2. a. Explain the types of inventory in detail

(or)

- b. Describe the material handling

3. a. Brief about logistical intermediaries

(or)

- b. Discuss about outsourcing

4. a. Explain runway in Airport infrastructure.

(or)

- b. Explain in short about Canal infrastructure.

5. a. Explain in short about Rail infrastructure.

(or)

- b. Explain the airport infrastructure in India.

UNIT V

GLOBAL LOGISTICS

1. a. Explain the international distribution channel strategies

(or)

- b. Describe about green logistics

2. a. Brief about E-Logistics

(or)

b. Explain about trends in global logistics

3. a. Explain about benefits and risk associated with exporting

(or)

b. Explain about global logistics.

4. a. Explain the advantages of E-logistics

(or)

b. What are the types of theft associated with transportation of international cargo?

5. a. Explain in brief the importance of bill of lading.

(or)

b. What is demand forecasting? Explain the various methods of demand forecasting.

SECTION – D

(3x10=30 marks)

Answer any three of the following questions in about 400 words each:

UNIT-I

INTRODUCTION TO LOGISTICS MANAGEMENT

1. Give a detailed account on the historical development of International logistics.
2. Explain in detail the nature, importance and objectives of Logistics.
3. What are the principles of operations of Logistics?
4. Explain in detail about the various components of Logistics.
5. “Logistics is concerned with getting products and services where they are needed and when they are desired”- Elucidate.
6. Compare and contrast the different levels of logistics information system functionality.
7. Critically review the current trends in logistics with industry example.
8. Choose a successful Indian company of your choice which has got a phenomenal reach in rural markets and explain its outbound logistics operation in a detailed manner.
9. Elucidate the Recent trends in logistics network with suitable examples.
10. Explain the logistics practices in supply chain context.

UNIT II

LOGISTICS DELIVERY AND FULFILMENT

1. Describe the canal and water transportation
2. Brief the export clearance in freight station
3. Describe unitization, palletization and containerization
4. “transportation is essential decision in deciding logistic mix”-Elucidate the statement
5. Explain in detail the economic and service benefits provided by warehouses.
6. What are the handling and storage requirements to manage the warehouse resource?
7. Explain the various packaging constraints for efficient handling of cargo.
8. Explain in detail about Inventory carrying.
9. Define warehousing. Explain the various forms of warehousing.
10. Explain the effective way for handling materials.

UNIT III

COSTS AND PERFORMANCE MEASUREMENTS

1. Performance Measurement system tracks the health of the logistics process”. Explain.
2. Explain logistic audit.
3. Elucidate the cost related to logistics.
4. Explain the procedure on Logistics Audit
5. Explain the various kinds of ships in detail along with examples.
6. Explain the benefits containerization.
7. What are inland container depots? Explain the documents required at export clearance at ICD’s.
8. What are ICDs and CFS? Explain roles and functions of ICDs.
9. Explain the function of Container freight station.
10. Explain the constraints of containerization.

UNIT IV

LOGISTICS STRATEGY AND SUPPLY CHAIN MANGEMENT

1. Describe the supply chain management
2. Explain about inventory and material handling
3. Briefly explain about logistical strategy and warehousing
4. Explain in detail “Ocean transportation”.
5. Explain in detail “Air transportation”.
6. What are the various modes of transportation? Explain in details.
7. Give a detailed account on the importance of land and intermodal transportation.
8. Explain in detail about port infrastructure.
9. Explain rail and road infrastructure in detail.
10. What are the principles of transportation? Who are the participants in transportation decisions?

UNIT V

GLOBAL LOGISTICS

1. Discuss about a)exporting b)licensing c)joint ventures
2. Brief about global logistic scenario
3. Describe about the technology in logistics
4. Explain about controlling activity in logistics
5. Give a detailed account on the forecasting process.
6. Differentiate the various types of demand forecasting techniques..
7. Give a detailed account of the types of ships used in transportation of international cargo.
8. Give a detailed account on the various types of marine insurance.
9. What are the various dangers associated with the transportation of cargo by sea. Explain them in detail.
10. Give a detailed account on the process of filing an insurance claim.

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI
I BBA- Semester II
ALLIED IV –International Business
Question Bank

Sub.Code:21UBAA41
Max Marks: 75

Time: 3 hours

Section A

(10x1=10)

Answer all the questions.

UNIT I

1. Selling goods and services to a company in foreign country is referred to as _____
a) Import **b) Export** c) Trade d) Negotiate
2. The scope importance of _____ is much more in the growth of the economy
a) international business b) business etiquette c) formal business d) domestic market
3. international business is crucial for the _____
a) global economy b) domestic economy c) international business d) political
4. Free trade is NOT enacted by which of the following groups?
a) NAFTA **b)PETA** c) MARCO d) ASEANlitical
5. purchasing goods from a foreign company is known as _____
a) importing **b) exporting** c)geocentric approach d) polycentric approach
6. Multinational corporation also poses a challenge to _____ domestic industries.
a) Small scale b) long scale c) Multinational corporation d) High investment
7. _____ involves the trade of goods and services between two countries
a) International business b) Domestic market c) Host country d) Home country
8. _____ refers to the country where the headquarters is located
a)Home country b) Host country c) Domestic market d) International business
9. _____refers to the foreign countries where the company invests.
a) Host country b) Home country c) domestic market d) global economy

10. _____ to recruitment means that we hire people from our parent country to fill positions all over the world.

a) **Ethnocentric approach** b) Geocentric approach c) polycentric approach d) Regiocentric approach

Unit II

1. _____ theory of international trade does a country focus on producing goods it can make more efficiently than others?

a) **Smith's Absolute Advantage** b) Ricordo c) Marsal d) Heckscher-Ohlin

2. What concept is central to David Ricardo's theory of comparative advantage, focusing on the opportunity cost of producing goods?

a) unrelative cost b) **Relative Cost** c) normal cost d) Marginal cost

3. What key economic concept, related to giving something up to produce something else, is crucial in Ricardo's theory of comparative advantage?

a) **Opportunity Cost** b) disability cost c) marginal cost d) normal cost

4. What is the benefit a country gains by focusing on producing goods it excels in, according to Adam Smith?

a) normalization b) production c) **Specialization** d) Marketing

5. Which theory of international trade emphasizes the role of a country's abundant factors of production, like land or labor, in determining exports?

a) **Heckscher-Ohlin** b) Adam smith c) Ricardo d) Marsal

6. In the Heckscher-Ohlin theory, a country will tend to export goods that use its most _____ factors of production.

a) production b) **abundant** c) gains d) minimum

7. Theories of foreign trade all focus on how countries can optimize their _____ of goods and services.

a) sales b) cost c) **Production** d) none of the above

8. _____ is the overall activity that these theories aim to explain and promote benefits.

a) **Trade** b) sale c) purchase d) cost

9. While absolute advantage looks at pure production costs, comparative advantage considers the concept of _____ costs.

- a) gains **b) Opportunity** c) purchase d) loss

10. The ultimate goal of international trade, according to these theories, is for countries to achieve what kind of benefits?

- a) **Gains** b) opportunity c) loss d) sale

UNIT III

1. Which of the following is the result of a market in disequilibrium?

- a) Stable price **b) Price fluctuations** c) The price is at equilibrium d) Demand equals supply

2. What is disequilibrium in terms of a country's economy?

a) An economic state where the difference between the money entering the country and the money exiting the country is in equilibrium

b) An economic system where the state controls the means of production

c) A situation that occurs when the balance of payments in the country is out of equilibrium

d) A progressive taxation model for a nation

3. Balance of Payments is an accounting statement that records monetary transactions between _____.

a) Residents of a nation and the rest of the world

b) Non-residents and the rest of the world

c) Residents of a nation and non-residents

d) None of the above

4) The 'resident', whose monetary transactions get recorded under the Balance of Payments system, includes _____.

- a) Government agencies b) Individuals c) Firms **d) All of the above**

5. The components of a Balance of Payment account are _____.

- a) Capital Account b) Current Account **c) Both a and b** d) None of the above

6. The measures taken to improve the negative Balance of Payments include _____.

- a) Exchange control b) Currency devaluation c) Import substitution **d) All of the above**

7. In International Trade, IMF stands for _____.

a) International Monetary Fund

b) International Money Fund

c) International Market Fund

d) International Monetary Firm

8. International trade contributes and increases the world _____

a) Population b) Inflation **c) Economy** d) Trade Barriers

9. _____ refers to goods imported from one country and exported to another country

a) Third Party Trade **b) Entrecote trade** c) Export Trade d) EXIM Trade

10. International trade contributes and increases the world _____

a) Population b) Inflation **c) Economy** d) Trade Barriers

UNIT IV

1. _____ is the primary role of the International Monetary Fund (IMF) for its member countries?

a) Lender b) Market Access c) lenders d) Liquidity

2. The IMF aims to promote _____ key condition for a smoothly functioning international financial system?

a) Trade Rules b) Subsidies **c) Liquidity** d) Development Focus

3. _____ is the primary focus of the International Bank for Reconstruction and Development (IBRD), also known as the World Bank?

a) Lender **b) Development** c) Negotiations d) Compliance

4. The World Trade Organization (WTO) establishes what framework for international trade?

a) Trade Rules b) Challenges c) Access d) International

5. How does WTO membership potentially benefit a country like India?

a) Organization b) Development Focus c) Police **d) Market access**

6. What is one policy tool that the WTO seeks to regulate in international trade?

a) Subsidies b) Trade Rules c) developing d) Compliance

7. How does the WTO achieve its goals of promoting free trade and resolving trade disputes?

a) Liquidity b) policy **c) Negotiations** d) International

8. What are some potential challenges that India might face in implementing WTO agreements?

a) Market access **b) Challenges** c) Responsibility d) Subsidies

9. How does the WTO address the concerns of developing countries like India in international trade?

a) **Development Focus** b) Liquidity c) Market d) Lender

10. What is an important responsibility of WTO members, including India?

a) challenges b) Establishes c) **Compliance** d) Trade rules

UNIT V

1. What is the defining characteristic of international business, reflecting the growing links between economies?

a) **Globalization** b) maximization c) minimization d) Trade

2. What type of large companies operate across borders, often with production and sales in multiple countries?

a) Domestic Market b) **MNCs** c) FDI d) None of the above

3. What is the key difference between foreign direct investment (FDI) and exporting, where a company directly invests in facilities or operations abroad?

a) **Investment** b) loss c) increase d) Gain

4. What is the traditional method where a company produces goods domestically and then sells them to foreign buyers?

a) work b) **Export** c) import d) consideration

5. How can international business activities contribute to a country's Gross Domestic Product (GDP)?

a) workers b) managers c) **Management** d) Import

6. What is a key consideration for companies engaging in international business, involving understanding regulations and procedures for exporting goods?

a) **Procedure** b) requirements c) consideration d) None of the above

7. What is an essential aspect of exporting, ensuring adherence to customs regulations and documentation requirements?

A) photoshops b) **Documentation** c) places d) Filing

8. How can effective international business _____ practices improve a company's competitiveness in the global marketplace?

a) managerial b) required c) **Management** d) Analytics

9. What are some of the strategic choices a company might face when deciding between exporting and foreign direct investment?

a) **Alternatives** b) consideration c) natives d) all of the above

10. In addition to GDP growth, how can international business activities potentially benefit a country's economy?

a) value b) **Job Creation** c) Job Analysis d) none of the above

Section B

(5x2=10)

Answer any FIVE questions in about 50 words each:

UNIT-I

1. What is International Business.
2. Write any two importance of International business.
3. What is Cost Advantage? Explain with an example?
4. Define Complexity.
5. What are the Approaches of IB?
6. What is Ethnocentric Approach?
7. What is Franchising?
8. Write any two advantage of Multinational Corporation?
9. What are the Problems of Multinational Corporation?
10. What are the Important Ways to Export and Import

UNIT-II

1. What is Theories of International Trade
2. What are the Classical Theory of International Trade?
3. Explain Mercantilism?
4. Explain Absolute Advantage Theory of International Trade?
5. Write a short note on Comparative Advantage Theory of International Trade?
6. Explain Heckscher Ohlin Theory of International Trade?
7. Explain New Trade Theory of International Trade?
8. Explain Briefly about porter diamond model?
9. Give some may Causes Why have an a nation absolute cost. advantage?
10. What is porters Diamond Model?

UNIT-III

1. What are benefits of FDI?
2. What are disadvantages of FDI?
3. What are the measures taken by government to increase FDI in India?

4. What are the ways forward with FDI.
5. Explain briefly about New FDI policy.
6. What are sectors were prohibited by FDI
7. Explain about FDI in India and FDI routes in India.
8. Explain in detail about International trade.
9. Write about the types of business in detail.
10. How does FDI work?

UNIT-IV

1. What is Globalization?
2. What is international trade?
3. What are the major trends and developments in world trade?
4. What is known as forced Dynamism?
5. What is Trade protectionist?
6. Write any three forms of trade protectionist?
7. Give the types of traffic barriers?
8. What is known as Non- traffic barriers?
9. What is known as Traffic barriers?
10. What are the drivers of Globalization?

UNIT-V

1. What Is the concept of regional economic groupings in practice?
2. What is regional economics in international business?
3. What do you mean by international economic groupings?
4. What are the levels of economic integration?
5. What is multilateralism?
6. How multilateralism different from regionalism?
7. Write main contemporary issues in international business?
8. Write any institution which supports international business?
9. What is regional economic integration?
10. Write any two important regional economic groupings in the world?

Section C

(5x5=25)

Answer all questions in about 200 words each:

UNIT-I

- 1.a) Explain the merits of Multinational Corporation.
(or)

- b) Describe the Problems of Multinational Corporation.
- 2. a) Discuss the advantages of Multinational Corporation
(or)
- b) Write un brief about Modes of Entry into International Business?
- 3. a) Explain in brief about
(i) Exporting and Importing. (ii) Contract Manufacturing.
(or)
- b) What are the Approaches in business
- 4. a) Discuss the scope of International Business?
(or)
- b) Explain tha nature of International Business
- 5. a) What are the Importance of International Business?
(or)
- b) Explain in brief about Ethnocentric and Geocentric Approach.

UNIT-II

- 1.a) Explain the Classical Theory of International Trade?
(or)
- b) Explain in brief about Mercantilism with an example.
- 2. a) Write about Absolute Advantage Theory of International Trade in detail
(or)
- b) Explain Zero sum game Theory of International Trade?
- 3. a) Give brief explanation Comparative Advantage Theory of International Trade?
(or)
- b) Explain Heckscher Ohlin Theory International Trade?
- 4. a) Explain in brief about New Trade Theory of Internationa Trade
(or)
- b) Write a brief explanation of poter diamond model?
- 5. a) Explain factor endowment Trade Theory of International Trade?
(or)
- b) Explain positive sum game theory in detail

UNIT-III

- 1. a) What are the three ways of making FDI?
(or)
- b) What is Foreign Exchange market?
- 2. a) What is Foreign portfolio Investment?
(or)
- b) Define Direct Investment with examples.
- 3. a) What is Foreign Investment funds?
(or)
- b) Define Foreign investment funds, how it works and its types.
- 4. a) Give any two benefits of Foreign Direct Investment.
(or)
- b) What is Foreign Direct Investment?

5. a) Which are the factors affecting International investments?
(or)
b) Tell some reasons for Foreign Direct Investment.

UNIT-IV

1. a) Explain in brief about International trade
(or)
b) Discuss the major trends and developments in world trade?
2. a) Describe trade protectionist and its forms?
(or)
b) Explain the types of Traffic barriers?
3. a) Describe the types of Non- traffic barriers?
(or)
b) Explain in brief about Traffic barriers and Non- traffic barriers
4. a) Explain Globalization and its drivers
(or)
b) What is known as cooperation among countries. Give some examples.
5. a) What is international trade? Explain any two developments in world trade?
(or)
b) Explain briefly about the globalization and its drivers?

UNIT-V

1. a) Write shortly about regional economic groupings that are in practice?
(or)
b) What are the levels of regional economic integration?
2. a) Difference between regional and multilateralism?
(or)
b) Explain regionalism in briefly?
3. a) Explain multilateralism in briefly?
(or)
b) What are the important regional economic groupings in the world ?
4. a) Mention the contemporary issues in international business?
(or)
b) What is multilateralism, how it is different from regionalism?
5. a) What is the concept of regional economic groupings in international business?
(or)
b) What are the main types of regional economic integration?

Section D

(3x10=30)

Answer any THREE questions in about 400 words each:

UNIT I

1. What is International Business and state the importance of International Business
2. What are the Nature and Scope of International Business?
3. Explain in detail about the Approaches of IB and Modes of Entry into IB

4. Describe the merits and demerits of MNC'S in host country?
5. Describe the merits and demerits of MNC'S in home country?
6. What are the approaches of Business International
7. Explain the Modes of Entry into International Business?
8. Discuss in detail about the Importance of International Business
9. Explain in detail about MNC's.
10. Explain factors influencing MNC's?

UNIT-II

1. Explain Theories of International Trade in detail.
2. Explain in detail about Mercantilism?
3. Describe the Absolute Advantage Theory of Trade?
4. Discuss the Heckscher Ohlin Theory of International Trade in detail.
5. Explain in detail about Comparative Advantage Theory of International Trade.
6. Explain New Trade Theory of International Trade in detail.
7. Describe in detail about Porter diamond model ?.
8. Explain the H-O Theory of International Trade.
9. Explain in detail about factor endowment theory.
10. Explain positive sum game theory in detail

UNIT III

1. What are the important government authority in India concerning FDI?
2. What are regulatory framework for FDI in India?
3. Explain the viewpoints of MNC's in the home country.
4. Explain the Foreign exchange market and its functions.
5. Explain about Foreign Direct Investment.
6. Elucidate about the advantages and limitations of MNC's in the host country.
7. Write down the FDI in our home country.
8. Give an detail about types of Foreign Direct Investment and gives some examples of Foreign Direct Investment.
9. What is the difference between Foreign Direct Investment and Foreign Portfolio Investment?
10. Explain the reasons behind FDI?

UNIT IV

1. What is Globalization?
2. What is international trade?
3. What are the major trends and developments in world trade?
4. What is known as forced Dynamism?
5. What is Trade protectionist?
6. Write any three forms of trade protectionist?
7. Give the types of traffic barriers?
8. What is known as Non- traffic barriers?
9. What is known as Traffic barriers?
10. What are the drivers of Globalization?

UNIT V

1. Difference between regionalism and multilateralism?
2. Write in detail about regional economic groupings that are in practice?
3. Explain the contemporary issues in international business?
4. Explain multilateralism, how it is different from regionalism?
5. Explain the levels of regional economic integration?
6. Explain the concept of regional economic groupings?
7. Explain regional economic groupings and write the important regional economic groupings in the world?
8. Explain regionalism, how it is different from multilateralism?
9. Write in detail about the institutions support in international business?
10. What is regional economic integration? What are the 5 levels of regional economic integration?

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI

BBA – Semester IV

Core VI – Quantitative Techniques for Managers

Sub code: 21UBAC41

Question Bank

Section A

Unit 1

1. Operations research approach is
(a) **multi-disciplinary** (b) scientific (c) intuitive (d) all of the above
2. Operations research practitioners
(a) **do not predict future operations** (b) build more than one model (c) collect relevant data (d) recommend decision and accept
3. For analyzing a problem, decision-makers should study
(a) its qualitative aspects (b) its quantitative aspects (c) **both (a) and (b)** (d) neither (a) nor (b)
4. Decision variables are
(a) **controllable** (b) uncontrollable (c) parameters (d) none of the above
5. A model is
(a) an essence of reality (b) an approximation (c) an idealization (d) **all of the above**
6. Managerial decisions are based on
(a) an evaluation of quantitative data (b) the use of qualitative factors (c) results generated by formal models (d) **all of the above**
7. The use of decision models
(a) is possible when the variable's value is known (b) reduces the scope of judgement and intuition known with certainty in decision-making (c) require the use of computer software (d) **none of the above**
8. Every mathematical model
(a) must be deterministic (b) requires computer aid for its solution (c) **represents data in numerical form** (d) all of the above
9. A physical model is example of
(a) **an iconic model** (b) an analogue model (c) a verbal model (d) a mathematical model
10. An optimization model
(a) provides the best decision (b) provides decision within its limited context (c) helps in evaluating various alternatives (d) **all of the above**
11. The quantitative approach to decision analysis is a
(a) logical approach (b) rational approach (c) **scientific approach** (d) all of the above
12. The process of modifying an OR model to observe the effect upon its outputs is called
(a) **sensitivity analysis** (b) cost/benefit analysis (c) model validation (d) input variation
13. Operations research practitioners do not
(a) take responsibility for solution implementation (b) collect essential data (c) **predict future actions/operations** (d) build more than one model
14. OR approach is typically based on the use of

- (a) Physical model **(b) Mathematical model** (c) Iconic model (d) Descriptive model
15. The qualitative approach to decision analysis relies on
(a) Experience (b) Judgement (c) Intuition **(d) All of the above**

Unit – 2

16. In Linear Programming, the feasible region is formed by:
A) Constraints
B) Objective function
C) Both A and B
D) None
17. The optimal solution in a Linear Programming problem using graphical method occurs at:
A) A point inside the feasible region
B) An extreme point (corner point) of the feasible region
C) Any point in the infeasible region
D) None
18. The feasible region for a Linear Programming problem is:
A) A single point
B) A convex set of points
C) A straight line
D) Non-convex
19. The optimal solution using the graphical method can be found at:
A) Only the corner points
B) Any point in the region
C) Interior points of the region
D) The maximum number of corner points
20. In Linear Programming, the region where all constraints are satisfied is called the:
A) Solution space
B) Infeasible region
C) Feasible region
D) Bounded region
21. Infeasible solutions in Linear Programming are points that:
A) Do not satisfy at least one constraint
B) Satisfy all constraints
C) Lie within the solution space
D) None of the above
22. In a Linear Programming problem, if the feasible region is unbounded, the solution may be:
A) Unbounded
B) Unique
C) Finite
D) Infeasible
23. If the constraints of a Linear Programming problem contradict each other, the problem has:
A) Multiple solutions
B) No feasible solution
C) A unique solution
D) Infinite solutions
24. In a maximization Linear Programming problem, the objective function is:
A) Maximized at an infeasible point
B) Minimized at the origin
C) Maximized at a feasible corner point
D) Maximized in the infeasible region

25. The slope of a constraint line is determined by:
- A) The objective function
 - B) The coefficients of the variables in the constraint**
 - C) The intersection with the axes
 - D) None of the above
26. If a Linear Programming problem has an unbounded solution, it means that:
- A) The feasible region is bounded
 - B) The problem has no solution
 - C) The objective function can increase indefinitely**
 - D) The constraints are inconsistent
27. The graphical method is most suitable when the number of decision variables is:
- A) Two**
 - B) Three
 - C) Four
 - D) Any number
28. The constraints in a Linear Programming model represent:
- A) Objective function
 - B) Restrictions on the decision variables**
 - C) The feasible region
 - D) A bounded solution
29. If two or more constraints intersect at a corner point, it is known as a:
- A) Basic feasible solution**
 - B) Degenerate solution
 - C) Feasible region
 - D) None of the above
30. In Linear Programming, an extreme point that satisfies all constraints is called:
- A) An infeasible solution
 - B) A basic feasible solution**
 - C) A non-degenerate solution
 - D) None of the above
31. The graphical method of LP problem uses
- (a) objective function equation
 - (b) constraint equations
 - (c) linear equations
 - (d) all of the above**
32. A feasible solution to an LP problem
- (a) must satisfy all of the problem's constraints simultaneously**
 - (b) need not satisfy all of the constraints, only some of them
 - (c) must be a corner point of the feasible region
 - (d) must optimize the value of the objective function
33. Which of the following statements is true with respect to the optimal solution of an LP problem
- (a) every LP problem has an optimal solution
 - (b) optimal solution of an LP problem always occurs at an extreme point
 - (c) at optimal solution all resources are completely used
 - (d) if an optimal solution exists, there will always be at least one at a corner**

Unit 3

34. The initial solution of a transportation problem can be obtained by applying any known method. However, the only condition is that

- (a) **the solution be optimal**
- (b) the rim conditions are satisfied
- (c) the solution not be degenerate
- (d) all of the above

35. The dummy source or destination in a transportation problem is added to

- (a) **satisfy rim conditions**
- (b) prevent solution from becoming degenerate
- (c) ensure that total cost does not exceed a limit
- (d) none of the above

36. The occurrence of degeneracy while solving a transportation problem means that

- (a) **total supply equals total demand**
- (b) the solution so obtained is not feasible
- (c) the few allocations become negative
- (d) none of the above

37. An alternative optimal solution to a minimization transportation problem exists whenever opportunity cost corresponding to unused route of transportation is

- (a) positive and greater than zero
- (b) **positive with at least one equal to zero**
- (c) negative with at least one equal to zero
- (d) none of the above

38. One disadvantage of using North-West Corner Rule to find initial solution to the transportation problem is that

- (a) it is complicated to use
- (b) **it does not take into account cost of trans-shipment**
- (c) it leads to a degenerate initial solution
- (d) all of the above

39. The solution to a transportation problem with m -rows (supplies) and n -columns (destination) is feasible if number of positive allocations are

- (a) $m + n$
- (b) $m \times n$
- (c) **$m + n - 1$**
- (d) $m + n + 1$

Unit 4

40. As simulation is not an analytical model, therefore the result of simulation, must be viewed as

- a)unrealistic b)exact **c)approximation** d)simplified

41. The important step required for simulation approach in solving a problem is to

- a)test and validate the model b)design the experiment c)conduct the experiment **d)all of the above**

42. In the simulation method, the random number varies from
 a)-1 to 99 b)0-1000 c)**00-99** d)none of the above
43. The purpose of using simulation technique is to
 a)imitate a real world situation b)understand properties and operating characteristics of complex real life problems c)reduce the cost of experiment on a model of real situation d) **all of the above**
44. Samples are generated through some mechanical or electrical device are called
 a)**pseudo random numbers** b)Probability c)frequency d)none of the above
45. The purpose of using simulation technique is to
 (a) imitate a real-world situation (b)characteristics of complex real-life problems
 (c) reduce the cost of experiment on a model of real situation (d) **all of the above**
46. While assigning random numbers in Monte Carlo simulation, it is
 (a) not necessary to assign the exact range of random number interval as the probability
 (b) necessary to develop a cumulative probability distribution (c) necessary to assign the particular appropriate random numbers d)**all the above**
47. Large complicated simulation models are appreciated because
 (a) their average costs are not well-defined
 (b) it is difficult to create the appropriate events
 (c) **they may be expensive to write and use as an experimental device**
 (d) all of the above
48. Simulation should not be applied in all cases because it
 (a) requires considerable talent for model building and extensive computer programming efforts (b) consumes much computer time (c) provides at best approximate solution to problem (d) **all of the above**
49. Simulation is defined as
 (a) a technique that uses computers (b) an approach for reproducing the processes by which events by chance and changes are created in a computer (c) a procedure for testing and experimenting on models to answer what if . . . , then so and so . . . types of questions (d) **all of the above**
50. Few causes of simulation analysis failure are
 (a) inadequate level of user participation (b) inappropriate levels of detail (c) incomplete mix of essential skills (d) **all of the above**
51. To make simulation more popular, we need to avoid
 (a) large cost over runs (b) prolonged delays (c) user dissatisfaction with simulation results (d) **all of the above**
52. The important step required for simulation approach in solving a problem is to

- (a) test and validate the model (b) design the experiment (c) conduct the experiment (d) **all of the above**

Unit 5

53. Set which contains all possible outcomes is _____
a) event
b) empty set
c) **sample space**
d) probability
54. Any subset of sample space is known as _____
a) event
b) empty set
c) sample space
d) probability
55. If an event has only one sample point then it is called _____
a) **simple event**
b) compound event
c) impossible event
d) sure event
56. If an event has more than one sample point then it is called _____
a) simple event
b) **compound event**
c) impossible event
d) sure event
57. In a Binomial Distribution, if 'n' is the number of trials and 'p' is the probability of success, then the mean value is given by _____
a) **np**
b) n
c) p
d) $np(1-p)$
58. In a Binomial Distribution, if p, q and n are probability of success, failure and number of trials respectively then variance is given by _____
a) np
b) **npq**
c) np^2q
d) npq^2
59. For larger values of 'n', Binomial Distribution _____
a) loses its discreteness
b) **tends to Poisson Distribution**
c) stays as it is
d) gives oscillatory values
60. . In a Poisson Distribution, if 'n' is the number of trials and 'p' is the probability of success, then the mean value is given by?
a) **m = np**
b) $m = (np)^2$

- c) $m = np(1-p)$
d) $m = p$
61. If 'm' is the mean of a Poisson Distribution, then variance is given by _____
a) m^2
b) $m/2$
c) **m**
d) $m/27$.
62. Poisson distribution is applied for _____
a) **Continuous Random Variable**
b) Discrete Random Variable
c) Irregular Random Variable
d) Uncertain Random Variable
63. . Normal Distribution is applied for _____
a) **Continuous Random Distribution**
b) Discrete Random Variable
c) Irregular Random Variable
d) Uncertain Random Variabl
64. . The shape of the Normal Curve is _____
a) **Bell Shaped**
b) Flat
c) Circular
d) Spiked
65. The shape of the normal curve depends on its _____
a) Mean deviation
b) **Standard deviation**
c) Quartile deviation
d) Correlation

Section B

Unit 1

1. Define operations research.
2. What are the essential characteristics of operations research?
3. What is model?
4. What is system?
5. What are various phases of the OR problem?
6. What are the advantages of model building?
7. What are the methods in solving Operation research models?
8. State the features of OR solution

Unit 2

9. What do you mean by solution in Linear programming?
10. What is feasible solution?
11. What is infeasible solution?
12. What is known as unbounded solution?
13. Write down the steps in extreme point solution method
14. What is basic feasible solution?
15. What is multiple optimal solution?
16. What are the two conditions for the existence of multiple solution?
17. What is redundancy in linear programming?
18. What are the types of basic feasible solution?

Unit 3

19. What is North west corner method?
20. What is least cost method?
21. What is vogel's approximation method?

Unit 4

22. What is simulation? Give a few areas of its application.
23. With the help of a flow chart, briefly explain the simulation process.
24. What are the advantages of simulation?
25. What are the limitations of simulation?
26. What is Monte Carlo simulation?
27. Explain the procedure of simulation using random numbers.
28. Explain how simulation is useful in solving queuing and inventory problems.
29. What are the steps in monte- carlo simulation method?

Unit 5

30. State the concept of probability.
31. What do you mean by sample space?
32. What do you mean by events?
33. What do you know about simple event in probability?
34. What do you know about compound event in probability?
35. Find the probability that if a card is drawn at random from an ordinary pack, it is one of the court cards.
36. What is the probability of obtaining two heads in two throws of a single coin?
37. What is normal distribution?

38. What do you mean by poisson distribution?
39. What are the conditions under which poisson distribution is used?

Section C

Unit 1

1. Briefly trace the history of operations research. How did operations research develop after World War II?
2. Explain the features of OR.
3. Discuss the following: (a) OR as an interdisciplinary approach. (b) Scientific method in OR. (c) OR as more than a quantitative analysis of the problem
4. What is the purpose of a mathematical model? How does a model achieve this purpose? In your answer consider the concept of 'a model an abstraction of reality.'
5. What is a model? Discuss various classification schemes of models.
6. State the different types of models used in OR.
7. Explain briefly the general methods for solving these OR models.
8. Explain the steps involved in the solution of an operations research problem.
9. State any four areas for the application of OR techniques in financial management. How do they improve the performance of an organization?
10. State the opportunities and shortcoming of OR approach
11. Explain the application of software in OR.

Unit 2

12. Explain how to determine the feasible region in a maximization LP problem using the graphical method.
13. Explain the steps to solve linear programming in graphical method
14. Explain the steps to solve in extreme point solution method
15. Describe how the feasible region is determined for a minimization LP problem using the graphical method.
16. What steps are involved in solving a minimization LP problem graphically?
17. What is an unbounded solution in a Linear Programming problem, and how can it be identified graphically?
18. What is the graphical indication of multiple solutions in a Linear Programming problem?
19. Use the graphical method to solve the following LP problem. Maximize

$$Z = 15x_1 + 10x_2$$
subject to the constraints
(i) $4x_1 + 6x_2 \leq 360$, (ii) $3x_1 + 0x_2 \leq 180$, (iii) $0x_1 + 5x_2 \leq 200$ and $x_1, x_2 \geq 0$.
20. Use the graphical method to solve the following LP problem.
Maximize $Z = 2x_1 + x_2$
subject to the constraints (i) $x_1 + 2x_2 \leq 10$, (ii) $x_1 + x_2 \leq 6$, (iii) $x_1 - x_2 \leq 2$, (iv) $x_1 - 2x_2 \leq 1$ and $x_1, x_2 \geq 0$.

21. Use the graphical method to solve the following LP problem.
 Minimize $Z = 3x_1 + 2x_2$
 subject to the constraints
 (i) $5x_1 + x_2 \geq 10$, (ii) $x_1 + x_2 \geq 6$, (iii) $x_1 + 4x_2 \geq 12$ and $x_1, x_2 \geq 0$.
22. Use the graphical method to solve the following LP problem.
 Minimize $Z = -x_1 + 2x_2$
 subject to the constraints
 (i) $-x_1 + 3x_2 \leq 10$, (ii) $x_1 + x_2 \leq 6$, (iii) $x_1 - x_2 \leq 2$

Unit 3

23. A company has four warehouses, a, b, c and d. It is required to deliver a product from these warehouses to three customers A, B and C. The warehouses have the following amounts in stock: Warehouse : a b c d No. of units : 15 16 12 13 and the customers' requirements are Customer : A B C No. of units : 18 20 18. The table below shows the costs of transporting one unit from warehouse to the customer.

		Warehouse			
Customer		<i>a</i>	<i>b</i>	<i>c</i>	<i>d</i>
	<i>A</i>	8	9	6	3
	<i>B</i>	6	11	5	10
	<i>C</i>	3	8	7	9

Find the optimal transportation routes.

24. Write a brief note on advantages of model building.
25. Write a brief note on using North west corner method
26. Write a brief note on using Least cost method

Unit 4

27. A bakery keeps stock of a popular brand of cake. Previous experience shows the daily demand pattern for the item with associated probabilities, as given below:

Daily demand (number) : 0 10 20 30 40 50

Probability : 0.01 0.20 0.15 0.50 0.12 0.02

Use the following sequence of random numbers to simulate the demand for next 10 days. Random numbers: 25, 39, 65, 76, 12, 05, 73, 89, 19, 49. Also estimate the daily average demand for the cakes on the basis of the simulated data.

28. A company manufactures around 200 mopeds. Depending upon the availability of raw materials and other conditions, the daily production has been varying from 196 mopeds to 204 mopeds, whose probability distribution is as given below:

Production/day : 196 197 198 199 200 201 202 203 204

Probability : 0.05 0.09 0.12 0.14 0.20 0.15 0.11 0.08 0.06

The finished mopeds are transported in a specially designed three-storied lorry that can accommodate only 200 mopeds. Using the following 15 random numbers: 82, 89, 78, 24, 53, 61, 18, 45, 23, 50, 77, 27, 54 and 10, simulate the mopeds waiting in the factory?

- (a) What will be the average number of mopeds waiting in the factory?
- (b) What will be the number of empty spaces in the lorry?

29. A company trading in motor vehicle spare parts wishes to determine the levels of stock it should carry for the items in its range. The demand is not certain and there is a lead time for stock replenishment. For an item A, the following information is obtained:

Demand (units/day) : 3 4 5 6 7

Probability : 0.10 0.20 0.30 0.30 0.10

Carrying cost (per unit/day) : Rs 2

Ordering cost (per order) : Rs 50

Lead time for replenishment : 3 days Stock on hand at the beginning of the simulation exercise was 20 units.

Carry out a simulation run over a period of 10 days with the objective of evaluating the inventory rule: Order 15 units when present inventory plus any outstanding order falls below 15 units. You may use random numbers in the sequence of: 0, 9, 1, 1, 5, 1, 8, 6, 3, 5, 7, 1, 2, 9, using the first number for day one. Your calculation should include the total cost of operating this inventory rule for 10 days.

30. The management of ABC company is considering the question of marketing a new product. The fixed cost required in the project is Rs 4,000. Three factors are uncertain, viz., the selling price, variable cost and the annual sales volume. The product has a life of only one year. The management has the data on these three factors as under:

Selling Price (Rs)	Probability	Variable Cost (Rs)	Probability	Sales (Units)	Probability
3	0.2	1	0.3	2,000	0.3
4	0.5	2	0.6	3,000	0.3
5	0.3	3	0.1	5,000	0.4

Considering the following sequence of thirty random numbers: 81, 32, 60, 04, 46, 31, 67, 25, 24, 10, 40, 02, 39, 68, 08, 59, 66, 90, 12, 64, 79, 31, 86, 68, 82, 89, 25, 11, 98, 16. Using the sequence (First 3 random numbers for the first trial, etc.) simulate the average profit for the above project on the basis of 10 trials.

31. Two persons X and Y work on a two-station assembly line. The distributions of activity at their stations are

Time (in seconds)	Time Frequency for X	Time Frequency for Y
-------------------	----------------------	----------------------

10	4	2
20	7	3
30	10	6
40	15	8
50	35	12
60	18	9
70	8	7
80	3	3

- (a) Simulate operation of the line for eight items.
- (b) Assuming Y must wait until X completes the first item before starting work, will he has to wait to process any of the other seven items? What is the average waiting time of items. Use the following random numbers :
- For X : 83 70 06 12 59 46 54 and 04.
- For Y : 51 99 84 81 15 36 12 and 54.
- (c) Determine the inventory of items between the two stations. (d) What is the average production rate?

Unit 5

33. Explain how to determine the feasible region in a maximization LP problem using the graphical method.
34. Explain the steps to solve linear programming in graphical method
35. Explain the steps to solve in extreme point solution method
36. Describe how the feasible region is determined for a minimization LP problem using the graphical method.
37. What steps are involved in solving a minimization LP problem graphically?
38. What is an unbounded solution in a Linear Programming problem, and how can it be identified graphically?
39. What is the graphical indication of multiple solutions in a Linear Programming problem?
40. Use the graphical method to solve the following LP problem. Maximize
 $Z = 15x_1 + 10x_2$
subject to the constraints
(i) $4x_1 + 6x_2 \leq 360$, (ii) $3x_1 + 0x_2 \leq 180$, (iii) $0x_1 + 5x_2 \leq 200$ and $x_1, x_2 \geq 0$.
41. Use the graphical method to solve the following LP problem.
Maximize $Z = 2x_1 + x_2$
subject to the constraints (i) $x_1 + 2x_2 \leq 10$, (ii) $x_1 + x_2 \leq 6$, (iii) $x_1 - x_2 \leq 2$, (iv) $x_1 - 2x_2 \leq 1$ and $x_1, x_2 \geq 0$.
42. Use the graphical method to solve the following LP problem.
Minimize $Z = 3x_1 + 2x_2$
subject to the constraints
(i) $5x_1 + x_2 \geq 10$, (ii) $x_1 + x_2 \geq 6$, (iii) $x_1 + 4x_2 \geq 12$ and $x_1, x_2 \geq 0$.

43. Use the graphical method to solve the following LP problem.

Minimize $Z = -x_1 + 2x_2$

subject to the constraints

(i) $-x_1 + 3x_2 \leq 10$, (ii) $x_1 + x_2 \leq 6$, (iii) $x_1 - x_2 \leq 2$

Section D

Unit 2

1. The ABC Company has been a producer of picture tubes for television sets and certain printed circuits for radios. The company has just expanded into full scale production and marketing of AM and AM-FM radios. It has built a new plant that can operate 48 hours per week. Production of an AM radio in the new plant will require 2 hours and production of an AM-FM radio will require 3 hours. Each AM radio will contribute Rs 40 to profits while an AM-FM radio will contribute Rs 80 to profits. The marketing department, after extensive research has determined that a maximum of 15 AM radios and 10 AM-FM radios can be sold each week.
(a) Formulate a linear programming model to determine the optimum production mix of AM and FM radios that will maximize profits. (b) Solve this problem using the graphical method.
2. Anita Electric Company produces two products P1 and P2. Products are produced and sold on a weekly basis. The weekly production cannot exceed 25 for product P1 and 35 for product P2 because of limited available facilities. The company employs total of 60 workers. Product P1 requires 2 man-weeks of labour, while P2 requires one man-week of labour. Profit margin on P1 is Rs. 60 and on P2 is Rs. 40. Formulate this problem as an LP problem and solve that using graphical method.
3. Use the graphical method to solve the following LP problem.
Maximize $Z = 2x_1 + 3x_2$
subject to the constraints
(i) $x_1 + x_2 \leq 30$ (ii) $x_2 \geq 3$ (iii) $0 \leq x_2 \leq 12$ (iv) $0 \leq x_1 \leq 20$ (v) $x_1 - x_2 \geq 0$ and $x_1, x_2 \geq 0$.
4. A firm makes two products X and Y, and has a total production capacity of 9 tonnes per day. Both X and Y require the same production capacity. The firm has a permanent contract to supply at least 2 tonnes of X and at least 3 tonnes of Y per day to another company. Each tonne of X requires 20 machine hours of production time and each tonne of Y requires 50 machine hours of production time. The daily maximum possible number of machine hours is 360. All of the firm's output can be sold. The profit made is Rs 80 per tonne of X and Rs 120 per tonne of Y. Formulate this problem as an LP model and solve it by using graphical method to determine the production schedule that yields the maximum profit.
5. An advertising agency wishes to reach two types of audiences – customers with annual income greater than one lakh rupees (target audience A) and customers with annual income of less than one lakh rupees (target audience B). The total advertising budget is Rs 2,00,000. One programme of TV advertising costs Rs 50,000; one programme of radio advertising costs Rs 20,000. For contract reasons, at least three programmes ought to be on TV and the number of radio programmes must be limited to 5. Surveys indicate that a single TV programme reaches 4,50,000 prospective customers in target audience A and 50,000 in target audience B. One radio programme reaches 20,000 prospective customers in target audience A and

80,000 in target audience B. Determine the media mix so as to maximize the total reach.

6. Use the graphical method to solve the following LP problem.
Maximize $Z = 10x_1 + 6x_2$
subject to the constraints (i) $5x_1 + 3x_2 \leq 30$, (ii) $x_1 + 2x_2 \leq 18$ and $x_1, x_2 \geq 0$.
7. Use graphical method to solve the following LP problem:
Maximize $Z = 5x_1 + 4x_2$
subject to the constraints (i) $x_1 - 2x_2 \geq 1$, (ii) $x_1 + 2x_2 \geq 3$ and $x_1, x_2 \geq 0$
8. Use the graphical method to solve the following LP problem:
Maximize $Z = x_1 + x_2$
subject to the constraints (i) $3x_1 + 2x_2 \leq 12$ (ii) $5x_1 = 10$ (iii) $x_1 + x_2 \geq 8$ (iv) $-x_1 + x_2 \geq 4$ and $x_1, x_2 \geq 0$
9. Use the graphical method to solve the following LP problem:
Maximize $Z = 3x + 2y$
subject to the constraints (i) $-2x + 3y \leq 9$, (ii) $3x - 2y \leq -20$ and $x, y \geq 0$.
10. Use graphical method to solve the following LP problem.
Maximize $Z = -4x_1 + 3x_2$
subject to the constraints
(i) $x_1 - x_2 \leq 0$, (ii) $x_1 \leq 4$ and $x_1, x_2 \geq 0$

Unit 3

11. A firm manufacturing a single product has three plants I, II and III. They have produced 60, 35 and 40 units, respectively during this month. The firm had made a commitment to sell 22 units to customer A, 45 units to customer B, 20 units to customer C, 18 units to customer D and 30 units to customer E. Find the minimum possible transportation cost of shifting the manufactured product to the five customers. The net unit cost of transporting from the three plants to the five customers is given below:

		Customers				
		A	B	C	D	E
Plants	I	4	1	3	4	4
	II	2	3	2	2	3
	III	3	5	2	4	4

12. Determine an initial basic feasible solution to the following transportation problem by using (a) NWCR, (b) LCM and (c) VAM

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	S_1	21	16	15	3	11
	S_2	17	18	14	23	13
	S_3	32	27	18	41	19
	Demand	6	6	8	23	

13. Determine an initial basic feasible solution to the following transportation problem by using (a) the least cost method, and (b) Vogel's approximation method.

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	S_1	1	2	1	4	30
	S_2	3	3	2	1	30
	S_3	4	2	5	9	40
	Demand	20	40	30	10	

14. Determine an initial basic feasible solution to the following transportation problem by using (a) NWCM, (b) LCM, and (c) VAM.

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	A	11	13	17	14	250
	B	16	18	14	10	300
	C	21	24	13	10	400
	Demand	200	225	275	250	

15. Determine an initial basic feasible solution to the following transportation problem by using the North-West corner rule, where O_i and D_j represent i th origin and j th destination, respectively.

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	O_1	6	4	1	5	14
	O_2	8	9	2	7	16
	O_3	4	3	6	2	5
	Demand	6	10	15	4	

Unit 4

16. A book store wishes to carry a particular book in stock. The demand of the book is not certain and there is a lead time of 2 days for stock replenishment. The probabilities of demand are given below:

Demand (units/day) : 0 1 2 3 4

Probability : 0.05 0.10 0.30 0.45 0.10

Each time an order is placed, the store incurs an ordering cost of Rs 10 per order. The store also incurs a carrying cost of Re 0.5 per book per day. The inventory carrying cost is calculated on the basis of stock at the end of each day. The manager of the book store wishes to compare two options for his inventory decision.

A : Order 5 books when the present inventory plus any outstanding order falls below 8 books.

B : Order 8 books when the present inventory plus any outstanding order falls below 8 books. Currently (beginning of 1st day) the store has a stock of 8 books plus 6 books ordered two days ago and are expected to arrive the next day. Carryout simulation run for 10 days to recommend an appropriate option. You may use random numbers in the sequences, using the first number for day one. 89, 34, 78, 63, 61, 81, 39, 16, 13, 73

17. A dentist schedules all his patients for 30-minute appointments. Some of the patients take more 30 minutes some less, depending on the type of dental work to be done. The following summary shows the various categories of work, their probabilities and time actually needed to complete the work.

Category of Time Required Probability

Service (minutes)

Filling	45	0.40
Crown	60	0.15
Cleaning	15	0.15
Extraction	45	0.10
Checkup	15	0.20

Simulate the dentist's clinic for four hours and determine the average waiting time for the patients as well as the idleness of the doctor. Assume that all the patients show up at the clinic at exactly their scheduled arrival time starting at 8.00 a.m. Use the following random numbers for handling the above problem: 40 82 11 34 25 66 17 79

18. A firm has a single channel service station with the following arrival and service time probability distributions:

Interarrival Time		Probability	Service Time Probability (minutes) (minutes)	
10	0.10	15	0.08	
15	0.25	10	0.14	
20	0.30	15	0.18	
25	0.25	20	0.24	
30	0.10	25	0.22	
		30	0.14	

The customer's arrival at the service station is a random phenomenon and the time between the arrivals varies from 10 to 30 minutes. The service time varies from 5 minutes to 30 minutes. The queuing process begins at 10 a.m. and proceeds for nearly 8 hours. An arrival immediately, goes to the service facility if it is free. Otherwise it waits in a queue. The queue discipline is first-come first-served. If the attendant's wages are Rs 10 per hour and the customer's waiting time costs Rs 15 per hour, then would it be an economical proposition to engage a second attendant? Answer using Monte Carlo simulation technique.

The random numbers are 20,73,30,99,66,83,32,75,04,15,29,61,37,68,94

19. Observations of past data show the following patterns in respect of interarrival durations and service durations in a single channel queuing system. Using the random number table below, simulate the queue behaviour for a period of 60 minutes and estimate the probability of the service being idle and the mean time spent by a customer waiting to be served.

Interarrival Time		Service Time	
Minutes	Probability	Minutes	Probability
2	0.15	1	0.10
4	0.23	3	0.22
6	0.35	5	0.35
8	0.17	7	0.23
10	0.10	9	0.10

Random numbers 93 14 72 10 21 81 87 90 38 10 29 17 11 68 99 51 40 30 52 70

20. An investment corporation wants to study the investment projects based on three factors: market demand in units, price per unit minus cost per unit and the investment required.

These factors are felt to be independent of each other. In analyzing a new customer product , the corporation estimates the following probability distributions :

Annual Demand Units	Probability
20000	0.05
25000	0.10
30000	0.20
35000	0.30
40000	0.20
45000	0.10
50000	0.05

Price minus cost

Rs.	Probability
3.00	0.10
5.00	0.20
7.00	0.40
9.00	0.20
10.00	0.10

Investment Required Rs.	Probability
17,50,000	0.25
20,00,000	0.50
25,00,000	0.25

Using the Monte Carlo Simulation, determine the return on investment on the basis of 10 trials and using the following ten random numbers: 82, 84, 28, 82, 36, 92, 73, 91, 63, 29.

6.A plant has a large number of similar machines. The machine breakdown or failure is random and independent. The shift incharge of the plant collected the data about the various machines breakdown times, the repair time required on hourly basis, and the record for the past 100 observations. This is shown below was:

Time Between Recorded	Probability	Repair Time	Probability
Machine Breakdowns (hours)		Required (hours)	
0.5	0.05	1	0.28
1	0.06	2	0.52
1.5	0.16	3	0.20
2	0.33		
2.5	0.21		
3	0.19		

For each hour that one machine is down due to being, or waiting to be, repaired, the plant loses Rs 70 by way of lost production. A repairman is paid at Rs 20 per hour. (a) Simulate this maintenance system for 15 breakdowns. (b) How many repairmen should the plant hire for repair work.

21. Popa Ltd trade in a perishable commodity. Each day Popa Ltd. receives supplies of the goods from a wholesaler but the quantity supplied is a random variable, as is the subsequent retail customer demand for the commodity. Both supply and demand are expressed in batches

of 50 units and over the past working year (300 days), Popa Ltd. has kept records of supplies and demands. The results are given below:

Wholesaler	Number of Days	Customer's	Number of Days
Supplies	Occurring	Demand	Occurring
50	60	50	60
100	90	100	60
150	90	150	150
200	60	200	30

Popa Ltd. buys the commodity at Rs 6 per unit and sells at Rs 10 per unit. At present unsold units at the end of the day are worthless and there are no storage facilities. Popa Ltd. estimates that each unit of unsatisfied demand on any day costs them Rs 2. Using the random numbers: 8, 4, 8, 0, 3, 3, 4, 7, 9, 6, 1 and 5 (a) simulate six days trading and estimate the annual profit. (b) repeat the exercise to estimate the value of storage facilities.

Unit 5

22. Two cards are drawn successively with replacement from a well shuffled deck of 52 cards. Find the probability distribution of the number of aces.
23. An urn contains 4 white and 3 red balls. Let X be the number of red balls in a random draw of three balls. Find the mean and variance of X
24. The overall percentage of failures in a certain examination is 40. What is the probability that out of a group of 6 candidates at least 4 passed the examination?
25. If the probability that a man aged 60 will live to be 70 is 0.65 what is the probability that out of 10 men now 60 at least 8 will live to be 70 ?
26. machine produces an average of 20% defective bolts. A batch is accepted if a sample of 5 bolts taken from that batch contains no defective and rejected if the sample contains 3 or more defectives. In other cases, a second sample is taken. What is the probability that the second sample is required ?
27. The mean height of soldiers is 68.22 inches with variance of 10.8 inches. Assuming the distribution of heights to be normal, how many soldiers in a regiment of 1000 would you expect to be over 6 feet tall?
28. The average number of units produced by a manufacturing concern per day is 355 with a standard deviation of 50. It makes a profit of Rs 1.50 per unit. Determine the percentage of days when its total profit per day is (i) between Rs 457.50 and Rs 645.00, (ii) greater than Rs 682.50 (assume the distribution to be normal). The area between $z = 0$ to $z = 1$ is 0.34134, the area between $z = 0$ to $z = 1.5$ is 0.43319 and the area between $z = 0$ to $z = 2$ is 0.47725, where z is a standard normal variate.
29. In a large institution, 2.28% of employees have income below Rs 4,500 and 15.87% of employees have income above Rs. 7,500 per month. Assuming the distribution of income to be normal, find its mean and standard deviation.

30. The average number of customer arrivals per minute at a super bazaar is 2. Find the probability that during one particular minute (i) exactly 3 customers will arrive, (ii) at the most two customers will arrive, (iii) at least one customer will arrive.
31. Assuming that it is true that 2 in 10 industrial accidents are due to fatigue, find the probability that: (a) Exactly 2 of 8 industrial accidents will be due to fatigue. (b) At least 2 of the 8 industrial accidents will be due to fatigue
32. An insurance salesman sells policies to 5 men all of identical age and good health. According to the actuarial tables, the probability that a man of this particular age will be alive 30 years hence is $\frac{2}{3}$. Find the probability that 30 years hence (i) at least 1 man will be alive, (ii) at least 3 men will be alive

Section – E

Unit 1

1. What are various phases of the OR problem? Explain them briefly
2. Explain the distinction between (a) Static and dynamic models. (b) Analytical and simulation models. (c) Descriptive and prescriptive models.
3. Model building is the essence of the operations research approach. Discuss.
4. Why is the study of operations research important to the decision-maker?
5. Elaborate the Operation model in practice
6. Explain briefly the general methods for solving these OR models.
7. Explain about the application of OR
8. Discuss the softwares used for OR

Unit 2

9. Solve the following LP problem graphically:
 Maximize $Z = -x_1 + 2x_2$
 subject to the constraints
 (i) $x_1 - x_2 \leq -1$; (ii) $-0.5x_1 + x_2 \leq 2$ and $x_1, x_2 \geq 0$.
10. A diet for a sick person must contain at least 4,000 units of vitamins, 50 units of minerals and 1,400 calories. Two foods A and B are available at a cost of Rs. 4 and Rs. 3 per unit, respectively. If one of A contains 200 units of vitamins, 1 unit of mineral and 40 calories and one unit of food B contains 100 units of vitamins, 2 units of minerals and 40 calories. Formulate this problem as an LP model and solve it by graphical method to find combination of foods to be used to have least cost?
11. Use the graphical method to solve the following LP problem.
 Maximize $Z = 7x_1 + 3x_2$
 subject to the constraints
 (i) $x_1 + 2x_2 \geq 3$ (ii) $x_1 + x_2 \leq 4$ (iii) $0 \leq x_1 \leq 5/2$ (iv) $0 \leq x_2 \leq 3/2$ and $x_1, x_2 \geq 0$.
12. Use the graphical method to solve the following LP problem.
 Minimize $Z = 20x_1 + 10x_2$
 subject to the constraints
 (i) $x_1 + 2x_2 \leq 40$, (ii) $3x_1 + x_2 \geq 30$, (iii) $4x_1 + 3x_2 \geq 60$ and $x_1, x_2 \geq 0$.

13. The standard weight of a special purpose brick is 5 kg and it contains two basic ingredients B1 and B2. B1 costs Rs 5 per kg and B2 costs Rs 8 per kg. Strength considerations dictate that the brick should contain not more than 4 kg of B1 and a minimum of 2 kg of B2. Since the demand for the product is likely to be related to the price of the brick, graphically find out the minimum cost of the brick satisfying the above conditions.
14. A manufacturer produces two different models – X and Y of the same product. Model X makes a contribution of Rs 50 per unit and model Y, Rs 30 per unit, towards total profit. Raw materials r1 and r2 are required for production. At least 18 kg of r1 and 12 kg of r2 must be used daily. Also at most 34 hours of labour are to be utilized. A quantity of 2 kg of r1 is needed for model X and 1 kg of r1 for model Y. For each of X and Y, 1 kg of r2 is required. It takes 3 hours to manufacture model X and 2 hours to manufacture model Y. How many units of each model should be produced in order to maximize the profit?
15. Use the graphical method to solve the following LP problem:
 Maximize $Z = 3x_1 + 4x_2$
 subject to the constraints (i) $x_1 - x_2 = -1$ (ii) $-x_1 + x_2 \leq 0$ and $x_1, x_2 \geq 0$.
16. Use graphical method to solve the following LP problem:
 Maximize $Z = 3x_1 + 2x_2$
 subject to the constraints (i) $x_1 - x_2 \geq 1$ (ii) $x_1 + x_2 \geq 3$ and $x_1, x_2 \geq 0$.
17. Use graphical method to solve the following LP problem.
 Maximize $Z = -4x_1 + 3x_2$
 subject to the constraints
 (i) $x_1 - x_2 \leq 0$, (ii) $x_1 \leq 4$ and $x_1, x_2 \geq 0$.
18. Use the graphical method to solve the following LP problem:
 Maximize $Z = 6x_1 - 4x_2$
 subject to the constraints (i) $2x_1 + 4x_2 \leq 4$ (ii) $4x_1 + 8x_2 \geq 16$ and $x_1, x_2 \geq 0$

Unit 3

19. A firm manufacturing a single product has three plants I, II and III. They have produced 60, 35 and 40 units, respectively during this month. The firm had made a commitment to sell 22 units to customer A, 45 units to customer B, 20 units to customer C, 18 units to customer D and 30 units to customer E. Find the minimum possible transportation cost of shifting the manufactured product to the five customers. The net unit cost of transporting from the three plants to the five customers is given below:

		Customers				
		A	B	C	D	E
Plants	I	4	1	3	4	4
	II	2	3	2	2	3
	III	3	5	2	4	4

20. Determine an initial basic feasible solution to the following transportation problem by using (a) NWCR, (b) LCM and (c) VAM

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	S_1	21	16	15	3	11
	S_2	17	18	14	23	13
	S_3	32	27	18	41	19
	Demand	6	6	8	23	

21. Determine an initial basic feasible solution to the following transportation problem by using (a) the least cost method, and (b) Vogel's approximation method.

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	S_1	1	2	1	4	30
	S_2	3	3	2	1	30
	S_3	4	2	5	9	40
	Demand	20	40	30	10	

22. Determine an initial basic feasible solution to the following transportation problem by using (a) NWCM, (b) LCM, and (c) VAM.

		Destination				
Source		D_1	D_2	D_3	D_4	Supply
	A	11	13	17	14	250
	B	16	18	14	10	300
	C	21	24	13	10	400
	Demand	200	225	275	250	

23. Determine an initial basic feasible solution to the following transportation problem by using the North-West corner rule, where O_i and D_j represent i th origin and j th destination, respectively.

		Destination				
		D_1	D_2	D_3	D_4	Supply
Source	O_1	6	4	1	5	14
	O_2	8	9	2	7	16
	O_3	4	3	6	2	5
	Demand	6	10	15	4	

Unit 4

24. A book store wishes to carry a particular book in stock. The demand of the book is not certain and there is a lead time of 2 days for stock replenishment. The probabilities of demand are given below:

Demand (units/day) : 0 1 2 3 4

Probability : 0.05 0.10 0.30 0.45 0.10

Each time an order is placed, the store incurs an ordering cost of Rs 10 per order. The store also incurs a carrying cost of Re 0.5 per book per day. The inventory carrying cost is calculated on the basis of stock at the end of each day. The manager of the book store wishes to compare two options for his inventory decision.

A : Order 5 books when the present inventory plus any outstanding order falls below 8 books.

B : Order 8 books when the present inventory plus any outstanding order falls below 8 books. Currently (beginning of 1st day) the store has a stock of 8 books plus 6 books ordered two days ago and are expected to arrive the next day. Carryout simulation run for 10 days to recommend an appropriate option. You may use random numbers in the sequences, using the first number for day one. 89, 34, 78, 63, 61, 81, 39, 16, 13, 73

25. A dentist schedules all his patients for 30-minute appointments. Some of the patients take more 30 minutes some less, depending on the type of dental work to be done. The following summary shows the various categories of work, their probabilities and time actually needed to complete the work.

Category of Time Required Probability

Service (minutes)

Filling	45	0.40
Crown	60	0.15
Cleaning	15	0.15
Extraction	45	0.10
Checkup	15	0.20

Simulate the dentist's clinic for four hours and determine the average waiting time for the patients as well as the idleness of the doctor. Assume that all the patients show up at the clinic at exactly their scheduled arrival time starting at 8.00 a.m. Use the following random numbers for handling the above problem: 40 82 11 34 25 66 17 79

26. A firm has a single channel service station with the following arrival and service time probability distributions:

Interarrival Time		Probability	Service Time Probability (minutes) (minutes)	
11	0.10	15	0.08	
15	0.25	10	0.14	
20	0.30	15	0.18	
25	0.25	20	0.24	
30	0.10	25	0.22	
		30	0.14	

The customer's arrival at the service station is a random phenomenon and the time between the arrivals varies from 10 to 30 minutes. The service time varies from 5 minutes to 30 minutes. The queuing process begins at 10 a.m. and proceeds for nearly 8 hours. An arrival immediately, goes to the service facility if it is free. Otherwise it waits in a queue. The queue discipline is first-come first-served. If the attendant's wages are Rs 10 per hour and the customer's waiting time costs Rs 15 per hour, then would it be an economical proposition to engage a second attendant? Answer using Monte Carlo simulation technique.

The random numbers are 20,73,30,99,66,83,32,75,04,15,29,61,37,68,94

27. Observations of past data show the following patterns in respect of interarrival durations and service durations in a single channel queuing system. Using the random number table below, simulate the queue behaviour for a period of 60 minutes and estimate the probability of the service being idle and the mean time spent by a customer waiting to be served.

Interarrival Time		Service Time	
Minutes	Probability	Minutes	Probability
2	0.15	1	0.10
4	0.23	3	0.22
6	0.35	5	0.35
8	0.17	7	0.23
10	0.10	9	0.10

Random numbers 93 14 72 10 21 81 87 90 38 10 29 17 11 68 99 51 40 30 52 70

28. An investment corporation wants to study the investment projects based on three factors: market demand in units, price per unit minus cost per unit and the investment required.

These factors are felt to be independent of each other. In analyzing a new customer product , the corporation estimates the following probability distributions :

Annual Demand Units	Probability
20000	0.05
25000	0.10
30000	0.20
35000	0.30
40000	0.20
45000	0.10
50000	0.05

Price minus cost

Rs.	Probability
3.00	0.10
5.00	0.20
7.00	0.40
9.00	0.20
10.00	0.10

Investment Required Rs.	Probability
17,50,000	0.25
20,00,000	0.50
25,00,000	0.25

Using the Monte Carlo Simulation, determine the return on investment on the basis of 10 trials and using the following ten random numbers: 82, 84, 28, 82, 36, 92, 73, 91, 63, 29.

29. A plant has a large number of similar machines. The machine breakdown or failure is random and independent. The shift incharge of the plant collected the data about the various machines breakdown times, the repair time required on hourly basis, and the record for the past 100 observations. This is shown below was:

Time Between Recorded	Probability	Repair Time	Probability
Machine Breakdowns (hours)		Required (hours)	
0.5	0.05	1	0.28
1	0.06	2	0.52
1.5	0.16	3	0.20
2	0.33		
2.5	0.21		
3	0.19		

For each hour that one machine is down due to being, or waiting to be, repaired, the plant loses Rs 70 by way of lost production. A repairman is paid at Rs 20 per hour. (a) Simulate this maintenance system for 15 breakdowns. (b) How many repairmen should the plant hire for repair work.

30. Popa Ltd trade in a perishable commodity. Each day Popa Ltd. receives supplies of the goods from a wholesaler but the quantity supplied is a random variable, as is the subsequent retail customer demand for the commodity. Both supply and demand are expressed in batches

of 50 units and over the past working year (300 days), Popa Ltd. has kept records of supplies and demands. The results are given below:

Wholesaler	Number of Days	Customer's	Number of Days
Supplies	Occurring	Demand	Occurring
51	60	50	60
101	90	100	60
150	90	150	150
200	60	200	30

Popa Ltd. buys the commodity at Rs 6 per unit and sells at Rs 10 per unit. At present unsold units at the end of the day are worthless and there are no storage facilities. Popa Ltd. estimates that each unit of unsatisfied demand on any day costs them Rs 2. Using the random numbers: 8, 4, 8, 0, 3, 3, 4, 7, 9, 6, 1 and 5 (a) simulate six days trading and estimate the annual profit. (b) repeat the exercise to estimate the value of storage facilities.

Unit 5

31. A die is tossed twice. 'Getting an odd number on a toss' is considered a success. Find probability distribution of number of success. Also, find the mean and variance of the number of successes.
32. Two bad oranges are accidentally mixed with ten good ones. Three oranges are drawn at random without replacement from this lot. Obtain the probability distribution for the number of bad oranges
33. Out of 320 families with 5 children each, what percentage would be expected to have 2 boys, 3 girls, and at least one boy? Assume equal probability for boys and girls.
34. A factory produces razor blades and 1 in 500 blades is estimated to be defective. The blades are supplied in packets of 10. In a consignment of 10,000 packets, using poisson distribution, find approximately the number of packets which contain no defective blades.
35. A manufacturer of pins knows that on an average 5% of his product are defective. He sells pins in boxes of 100 and guarantees that no more than 4 pins will be defective. In how many boxes out of 1000, he will meet the guaranteed quality?
36. 1000 light bulbs with an average life of 120 days are installed in streets of Mumbai. Their length of life is normally distributed with variance 400 days. (i) How many will expire in less than 90 days? (ii) If it is decided to replace all the bulbs together what interval should be allowed between replacements if not more than 10% should expire before replacement?
37. An unbiased die is tossed 600 times. Use normal approximation to binomial to find the probability obtaining (i) more than 125 aces, (ii) number of aces between 80 and 110, (iii) exactly 150 aces

38. The average monthly sales of 5,000 firms are normally distributed with mean Rs 36,000 and standard deviation Rs 10,000. Find : (i) The number of firms with sales of over Rs 40,000. (ii) The percentage of firms with sales between Rs 38,500 and Rs 41,000. (iii) The number of firms with sales between Rs 30,000 and Rs 40,000.
39. An executive makes, on an average, 5 telephone calls per hour at a cost which may be taken as Rs 2 per call. Determine the probability that in any hour the telephone calls' cost (i) exceeds Rs 6, (ii) remains less than Rs 10.
40. An unbiased die is tossed three times. Find the probability of obtaining (a) no six Ten percent of items produced on a machine are usually found to be defective. What is the probability that in a random sample of 12 items (i) none, (ii) one, (iii) two, (iv) at the most two, (v) at least two items are found to be defective?, (b) one six, (c) at least one six, (d) two sixes and (e) three sixes.

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI-628001
Question Bank

B.B.A - Semester IV

CORE SB – Office Automation Sub.Code:21UBAS41

(for those who joined from 2012 and above)

Section A

Choose the best answer:

(10x1=10 marks)

UNIT I

1. Office management is the organization of office in order to achieve a _____ purpose.
a.**speciated** b.mental c.common d.general
2. Office management is concerned with _____, means, environment and purpose.
a.cash b.**personnel** c.card d.money
3. Office management is a part of _____ administrative management.
a.common b.special c.**general** d.different
4. Planning is a _____ process.
a.artificial b.natural c.physical d.**mental**
5. A budget is an estimate of _____ and expenditure.
a.**income** b.sales c.purchases d.exports
6. Schedules are timing fixed for _____ the programmed office activities.
a.starting b.**completing** c.scheduling d.working
7. A procedure is a _____ sequence of operations for handling business.
a.unplanned b.similar c.**planned** d.different
8. The office _____ must appoint the persons suitable for doing the work.
a.assistant b.peon c.clerk d.**manager**
9. Leadership is a process by which a manager _____ the work of others.
a.**guides** b.does c.schedules d.controls
10. Office manager acts like the _____ of a ship.

a.sailor**b.captain** c.passenger d.mechanic

UNIT II

11. Records refer to the _____ documents.

a.**informational** b.necessary c.unnecessary d.old

12.Records constitute the _____ of the entire organization.

a.need b.**memory** c.heart d.brain

13.Records facilitate evaluation of _____ of the enterprise.

a.planning b.punctuality c.**performance** d.process

14.Record is the _____ of progress.

a.thermometer b.nanometer c.speedometer d.**barometer**

15.Microfilming is also a _____ method.

a.**filing** b.mailing c.styling d.lining

16.Visible card records are placed in _____ trays.

a.straight b.**flat** c.vertical d.horizontal

17.The filing system should not be too_____.

a.cheap b.simple c.**expensive** d.standard

18.Indexing will help in _____ location of files.

a.difficult b.simple c.easy d.**quick**

19.Old records can be produced as evidence in _____ suits.

a.**legal** b.illegal c. financial d. territorial

20.If records are kept in a _____ manner it becomes easy to link them.

a.unsystematic b.**systematic** c.vertical d.horizontal

UNIT III

21.Forms have been designed for a _____ range of uses.

a.**wide** b.long c.short d.small

22.The form should be _____ to read and write.

- a.difficult b.**easy** c.short d.long
- 23.The form should be so designed that it ensures _____ in production.
- a.data b.date c.**economy** d.colour
- 24.The size of the form should be decided in accordance with the_____.
- a.size b.colour c.print d.**purpose**
- 25.Roll stationery consists of forms in a continuous_____.
- a.**roll** b.line c.order d.circle
- 26.Continuous stationery _____ time by avoiding the monotonous process.
- a. spends b.**saves**c.reduces d.lapses
- 27.Forms help in _____ information for record keeping.
- a.distributing b.sending c.**collecting** d.mailing
- 28.Forms control department will collect _____ 2 copies of each form.
- a.atmost b.maximum c.minimum d.**atleast**
- 29.Forms control _____ production cost of forms.
- a.**minimizes** b.maximises c.increases d.escalates
- 30.The forms control _____ will analyse the forms.
- a. captain b.**supervisor** c. merchant d.manager

UNIT IV

31. Office _____ means introduction of machines and equipments.
- a. **mechanization** b. method c. procedure d. formality
32. Office _____ are labour saving devices.
- a. methods b. **machines** c. procedures d. systems
33. Speed of office work is increased by.
- a. money b. men c. **machines** d. material
34. Mechanisation ensures _____ of work.
- a. speed b. fast c. capacity d. **accuracy**

35. Office records become _____ with the use of machines.
a. **uniform** b. different c. difficult d. strange
36. Machines cannot perform work with _____.
a. negligence b. **intelligence** c. insure d. support
37. Expenses of installing machinery are too _____.
a. medium b. moderate c. **high** d. low
38. _____ is also called Gelatine duplicator.
a. Pictograph b. Lectograph c. Nectograph. d. **Hectograph**
39. Multigraph is like a small _____ press in office.
a. **printing** b. texting c. exercise d. gym
40. Diazo is also known as _____ printing.
a. black b. **blue** c. yellow d. orange

UNIT V

41. Office systems are followed to avoid _____ of work.
a. **duplication** b. application c. implication d. supplication
42. Office routine is the series of steps in the _____ of office work.
a. addition b. **performance** c. replacement d. correction
43. Procedure is a _____ sequence of operations for handling business transactions.
a. unplanned b. suggested c. **planned** d. ordinary

- a. costly b. local c. standard d. **economical**
49. A system should avoid chances of _____ .
- a. **errors** b. work c. accuracy d. perfection
50. An office system should be _____.
- a. applicable b. **reliable** c. non applicable d. unapplicable

Section B

Answer the following in about 200 words:

(5x5=25marks)

UNIT I

51. a. Explain the characteristics of office management.
b. Elucidate the functions of office management.
52. a. Enumerate the functions of an office manager.
b. Elaborate the qualities of an office manager.
53. a. Discuss the duties of an office manager.
b. Narrate the importance of modern office.
54. a. What are the objectives of office?
b. Explain the primary functions of modern office.
55. a. Elucidate any five auxiliary functions of an office.

UNIT II

61. a. What are the significance of records? **(or)**
b. Explain any six purposes of maintaining records.
62. a. Elucidate any ten essentials of a good filing system. **(or)**
b. Explain the advantages of filing.
63. a. Enumerate the disadvantages of filing. **(or)**

- b. Elaborate the importance of filing.
64. a. Explain the advantages and disadvantages of centralized filing. (or)
- b. Elucidate the advantages and disadvantages of decentralized filing.
65. a. Explain any five methods of filing. (or)
- b. Enumerate the differences between vertical filing and horizontal filing.
66. a. Elaborate the advantages and disadvantages of vertical filing. (or)
- b. Explain the advantages and disadvantages of horizontal filing.
67. a. What is record management? Explain the lifecycle of a record. (or)

UNIT III

71. a. Write any 10 principles of forms design. (or)
- b. Explain the essential factors in forms design.
72. a. Elucidate the types of office forms. (or)
- b. Elaborate the objectives of forms control.
73. a. Enumerate the steps in forms control. (or)
- b. Explain the essentials of a good indexing system.
74. a. Write any 10 advantages of card index. (or)
- b. Elaborate the uses of card index system.
75. a. Explain the various kinds of indexes. (or)

UNIT IV

81. a. When should the office machines be used? (or)
- b. What do you understand from the term office machines? Explain the advantages of office machines.
82. a. Elucidate the disadvantages of office machines. (or)
- b. Explain any six machines that are used in the office.
83. a. Elaborate any five steps in regulating stationery? (or)
- b. Explain the types of furniture that are used at office.

84. a. Elucidate the factors to be considered while acquiring new furniture. (or)
b. What are the four different operations carried out by office machines?

UNIT V

91. a. Elaborate the principles of office systems. (or)
b. Distinguish the term Office system, Office Procedure and Office Routines
92. a. Explain the importance of office systems. (or)
b. Enumerate the advantages of systems and procedures.
93. a. How would you plan office systems and procedures? (or)
b. Explain the characteristics of a sound office system.
94. a. Enumerate the disadvantages of office system. (or)
b. Elaborate the advantages of office system.

Section C

Answer the following in about 400 words: (5x8=40marks)

UNIT I

1. a. Elaborate the various principles of scientific management. (or)
b. Explain the characteristics and functions of office management.
2. a. Enumerate the functions and qualities of an office manager. (or)
b. Is an office manager important in an organization? Explain his role.
3. a. Explain the traditional office and modern office, also explain how productive the office works? (or)
b. Elucidate the primary and secondary functions of modern office.

UNIT II

11. a. Explain the essentials and importance of a good filing system. (or)
b. Elucidate the advantages and disadvantages of filing system.

12. a. Distinguish the term centralized filing from decentralized filing. State the advantages and disadvantages of both filing system. (or)

b. Explain the various methods of filing.

3. a. Is filing system necessary in an organization? Justify with valid reasons. (or)

b. What is the importance of records management? (or)

14. a. Filing is a boon to modern office – Explain.

UNIT III

21. a. Elucidate the principles of forms design. (or)

b. Explain the advantages and disadvantages of office forms.

22. a. Enumerate the objectives and steps in forms control. (or)

b. Elaborate the essentials of a good indexing system. Also explain the uses of cards index system.

23. a. Explain the various kinds of indexes. (or)

b. Office forms are boon to the existing office atmosphere. Prove this statement.

24. a. What is card index? Explain its advantages and disadvantages. (or)

b. Office work was easy before the existence of forms? State Yes or No? Justify your answer with valid reasons.

UNIT IV

31. a. What are machines? Explain the advantages and disadvantages of office machines.(or)

b. Office machines can be used continuously throughout the day. Give reasons whether the statement is right or wrong.

32. a. Idle machines are idle capital. What do you think about this statement? Discuss. (or)

b. Elucidate the types of office machines.

33. a. Enumerate the different types of office machines. (or)

b. Is stationery necessary in an organization? Justify.

34. a. Enumerate the basic requirements of a good system of regulating stationery. (or)

b. Can an office function without furniture? Elaborate.

35. a. What are the factors to be considered while purchasing new furniture? Explain the types of furniture. (or)

UNIT V

41. a. What are office systems? Enumerate the principles of office systems. (or)

b. Elucidate the importance and advantages of office systems.

42. a. Enumerate the characteristics and disadvantages of office system. (or)

b. Explain the need and importance of office routine.

43. a. Discuss the advantages and disadvantages of office routine. (or)

(10x1=10)

Choose the correct answer:

UNIT - 1

1) CPU – central _____ unit

- a) product b) personal **c) processing** d) promotion

2) Father of computer is _____

- a) Charles Babbage** b) Henry Fayol c) Adam smith d) F.W. Taylor

3) Shortcut key for shut down is

- a) ctrl + F5 **b) Alt + F4** c) ctrl+F6 d) ctrl+ F8

4) ENIAC

- a) Electric Numerical integrator & calculator **b) Electronic numerical integrator & calculator**

- c) Electronic Numerical Inter & calculator d) Electronic Numerical integrator & calculus

5) EDVAC

- a) Electric Deal Van & Control **b) Electronic discrete variable automatic computer**

- c) Electronic Numerical Inter & calculator d) Electronic Numerical integrator & calculus

6) _____ computers consists microprocessor

- a) micro b) mini c) superb **d) macro**

7) _____ controls the data & organizes them

- a) control unit** b) memory c) primary d) secondary

8) _____ logic unit is the place where the actual execution of instruction takes place

- a) binary b) logical **c) arithmetic** d) analytical

9) _____ is a small device held in hand & pushed along a flat surface

- a) pen drive b) joystick **c) mouse** d) memory card
- 10) Secondary storage is otherwise called as _____ memory
- a) primary **b) auxiliary** c) second d) control

UNIT-2

- 11) The simplest way to rearrange text in your document is to
- a) cut ,copy & paste** b) drag & drop c) type & replace d) undo
- 12) Which tabs on the ribbon is used to find in the documents?
- a) home tab** b) insert tab c) review tab d)page layout tab
- 13) Which menu in MS word can be used to change character size & type face
- a) view b) tools **c) format** d) data
- 14) Which key should be prepared to start a new paragraph in MS word
- a) down cursor key b)shift + enter **c) enter key** d) ctrl + enter
- 15) Using find command in word, we can search____
- a) characters b) formats c) symbols **d) all the above**
- 16) MS word, for what does ruler help?
- a) to set tabs b) to set indents c) to change page margins **d) all the above**
- 17) On which tool bar can you find format painter tool?
- a) formatting tool bar **b) standard tool bar** c)drawing tool bar d) picture tool bar
- 18) Which of the following option is not available in insert >> picture?
- a) chart b) word art c) clip art **d)graph**
- 19) How to remove all character formats?
- a) shift + space bar **b) ctrl + spacebar** c) shift + enter d) ctrl + enter
- 20) Which file starts MS word?
- a) word.exe b) MS word.exe c) word2007.exe **d) winword.exe**

UNIT-3

- 21) Which is the short cut key to insert a new comment in a cell?
- a) F2 b) ctrl + F2 c) ctrl + F2 **d) shift + F2**

22) Which option allows you to bold all the negative values within the selected cell range

- a) zero formatting **b) conditional formatting**
- c) compare formatting d) negative formatting

23) “New comment” option can be found under ____ tab

- a) data** b) insert c) review d) view

24) In excel _____ may not contain in formula

- a) text constant b) number constant **c) circular reference** d) all the above

25) In maximum , how many sheets can be set as default while creating new word book

- a) 254 **b) 255** c) 256 d) no limit

26) You can edit existing excel data by pressing the

- a) F1 **b) F2** c) F3 d) F4

27) Which one is the last column header in excel 2007?

- a) XFD** b) XFL c) XFX d) XFI

28) What will be the result if you type A1 = B1 in cell C1?

- a) yes/no **b) true /false** c) value of A1 d) value of B1

29) In excel, by default numeric values appears in

- a) left aligned** b) right aligned c) center aligned d) justify

30) Which of the following is not a worksheet design direction?

- a) **efficiency** b) audit ability c) description d) clarity

UNIT-4

31) Which file format can be added to a power point show?

- a) .jpg b) .giv c) .wav **d) all the above**

32) Material consisting of text & numbers is best presented as

- a) a table slide** b) a bullet slide c) a title slide d) all the above

33) What is a motion path

- a) a type of animation entrance effect b) a method of advertising slides

c) a method of moving items on slide d) all the above

34) Which of the following should you use if you want all the slide in the presentation to have the same 'look' ?

a) a presentation design template b) the slide layout option
c) add a slide option d) out line view

35) Power point can display data from which of the following add-in software of MS office?

a) equation editor b) organization chart c) photo album **d) all the above**

36) To select one hyperlink another during a slide presentation, what do you press?

a) tab b) ctrl + k c) ctrl + h d) all the above

37) Special effects used to introduce slides in a presentation are called

a) effects **b) transactions** c) present animations d) custom animations

38) Which option can be used to set custom timings for slides in a presentation?

a) slider timings b) slider timer **c) rehearsal** d) slide show setup

39) Which key on the keyboard can be used to view slide show?

a) F1 b) F2 **c) F5** d) F10

40) A chart can be put as a part of presentation using

a) insert → **pictures** → **chart** **b) insert → chart** c) edit → **chart** d) view → **chart**

41) In MS access, text data type may contain maximum character of

a) 255 b) 256 c) 1064 d) no limit

42) Which of the following is not a valid data type in MS access?

a) memo **b) picture** c) currency d) auto number

43) In MS access "hyperlink" data type can store

a) web address b) **email address** c) path of a file d) all the above

44) Which of the following data type is used to store logical value in MS access?

a) true/false b) yes/no c) on/off d) all the above

45) In MS access "look up wizard" is used to

a) to select from previous values b) to select values from excel sheet
c) to select values from another table d) not a valid data type

- 46) Which of the following data type used to store picture ?
 a) picture b) **OLE object** c) memo d) picture cannot be stored
- 47) In MS access, which data type is appropriate to store large text & numbers?
 a) **text** b) memo c) OLE d) large text
- 48) In MS access, OLE objects data type can store
 a) Word documents b) MS excel spreadsheets c) sounds **d) all the above**
- 49) Auto number data type
 a) **can be sequential** b) can be random c) can be edited d) only a & b
- 50) A _____ database consist of a single large table
 a) **long file** b) small file c) flat file d) broad file

UNIT-5

51. HTML stands for _____
 a. **Hyper text markup language** b. Hyper text making language
 c. Hyper tendency mail language d. Hyper text manual language
52. Which of the following is not a search engine?
 a. Google b. yahoo c. bingo **d. piaahoo**
53. Which of the following is not a job portal?
 a.career.in **b.yepme.com** c.jobsgovt.com d.timesjob.com
54. This is a global collection of high powered computer that are connected together with cables, telephone lines, microwave dishes, satellites etc.,
 a. arpanet **b. internet** c. network d .intranet
55. _____ is a global communication system.
 a.intranet **b. internet** c. browser d. LAN
56. LAN-L stands for
a.Local b. locater c. large d. line
57. A _____ is a software application used to locate, retrieve, and display content on the World Wide Web, including Web pages, images, video and other files.
 a. internet b. HTTP c. **browser** d. intranet
58. Windows released in “Windows 95” in August _____.

- a. 1994 b. 1997 c. **1995** d. 1993
59. 106. _____ is formerly known as Mozilla.
- a. chrome b. **Mozilla firefox** c. opera d. apple safari
60. 107. “Speed dial” and “dial pad” are introduced by _____
- a. Mozilla b. chrome c. Microsoft internet explorer d. **opera**
61. All search engines work using a _____ phase.
- a. **3** b. 1 c. 6 d. 5
62. 109. WWW stands for
- a. whole wide web b. world web wide c. **world wide web** d. web crawler
63. Internet is wide network of computers and is open for _____
- a. only one b. **all** c. a group d. double
64. The visitor’s traffic is unlimited in _____
- a. browser b. intranet c. **internet** d. e-mail
65. Intranet is also a network of computers designed for a _____ of user.
- a. one b. all c. double d. **specific group**
66. For creating e-mail your password must be a minimum of _____ characters.
- a. 6 b. **8** c. 7 d. 10
67. E-Mail stands for
- a. **Electronic Mail** b. Electro Mail c. Electronical Mail d. Electronic Mailing
68. HTTP is the foundation for data communication for the world wide web (i.e. internet) since _____
- a. 1992 b. **1990** c. 1995 d. 1999
69. The HTTP _____ respond with a status line.
- a. client b. server side script c. database d. **server**
70. The _____ is a network-layer protocol that contains addressing information.
- a. HTTP b. server c. **internet protocol** d. e-mail
71. . A _____ is a document commonly written in Hyper Text Markup Language.
- a. server b. IP c. database d. **webpage**

Section B

(5 x 2 = 10)

Answer any FIVE of the following in about 50 words each:

UNIT 1

1. Mention any four hardware inputs in computer.
2. How to change wallpaper?
3. What are the major computer components?
4. What is a computer?
5. What are the five basic operation of Computer organisation?
6. Define / What Are the Operation Of Arithmetic Logic Unit {ALU}
7. Define Control Processing Unit {C PU}?
8. Define Control Unit {CU}?
9. What Is Peripheral Devices and their Types?
10. What is input device? What are they?
11. What are output device? What are they?
12. What is CRT?
13. What is LCD?
14. What you mean by software?
15. What are the classifications of software?
16. What is operating system?
17. What are utilities?
18. What are the types of computer language?
19. What is mnemonics?
20. What is meant by compiler?
21. What is called source program?
22. What is meant by assembler?

UNIT-II

1. How to start Ms-word?
2. How to open a previously saved file?
3. How to close the file menu?
4. How to save a Document?
5. How to save as file?
6. How to save a word document as a web page?
7. What is Text Formatting?
8. What are the examples of fonts?
9. How to change the font of text on numbers?
10. How to change the singe of text on numbers?
11. How to select a default font?
12. How to add animation to text?
13. What are the types of alignment?
14. How to create a first line indent?
15. How to create Bullets?
16. How to create numbering?
17. How to change a back ground color or texture?
18. What is proofreading?
19. How to add rows and column to a table?

20. How to delete a table and its contents?
21. How to delete cells rows or columns from a table?

UNIT-III

1. What do you mean by spread sheet?
2. Write any two usages of charts?
3. How to start the Excel?
4. Define Control panel.
5. How to open a new workbook?
6. What is cell reference?
7. Bring out the two functions of excel?
8. Define macros.
9. What are the types of formatting worksheets?
10. What are the steps under the numeric formatting?
11. What do you understand by alignment?
12. How to create the border?
13. How to change the row height?
14. How to change the column width?
15. Define auto formatting.
16. How to linking the workbooks?

UNIT-IV

1. How to save a Presentation?
2. How to create Power point slide?
3. How to insert word art?
4. How to insert table?
5. How to insert chart?
6. How to insert object?
7. How to view slide in full screen?
8. How to set timings in slide?
9. How to preset animation?
10. How to print a presentation?
11. What is the shortcut key for run the Power Point Presentation
12. . What is Database Management System (DBMS)?
13. What do you mean by data processing?
14. List some database applications.
15. What is MS-Access?
16. What is Database?
17. What is the extension of Access database file?
18. What is relational database?
19. What is a key field?
20. What is primary key?
21. What do you mean by foreign key?
22. What are the elements of a database?
23. What is a table?
24. What is a field?
25. What is a record?
26. What is a query?
27. What is a form?
28. What is a report?
29. What are the differences between a form and a report?
30. What is a macro?

31. What is a module?
32. What are the different Number field types in Access?
33. What do you mean by data processing?
34. What are the ten field types in Access?

UNIT-V

1. What is internet?
2. What are the disadvantages of an internet?
3. What is LAN?
4. What is WAN?
5. What is browser?
6. Differentiate between Intranet and internet?
7. What is Intranet?
8. Types of browser.
9. What is search engine?
10. What is HTTP?
11. What is client?
12. What is World Wide Web?
13. Mention any three features of browser?
14. What is Google chrome?
15. What is Internet protocols (Ip)?
16. What is URL?
17. What is webpage?

Section C

(5 x 5 = 25)

Answer in about 200 words each choosing either (a) or (b):

UNIT-I

1.a) Write a note on computer?

(or)

b) Expand the term “computer” & highlight its earlier age

2.a) Difference between hardware & software?

(or)

b) What is the modern age of computer?

3.a) What are the steps involved in shutting the computer?

(or)

b) How to change wallpaper?

4.a) Bring the difference between wallpaper & screen saver?

(or)

b) Explain the context “virus”

5.a) What are the drawbacks of computer?

(or)

b) Write a short note on i) RAM ii) ROM iii) LAN

UNIT-II

6.a) Write the features of MS word 2007?

(or)

b) How to cancel a document while printing

7.a) How to start the MS word?

(or)

b) What are the basic components in word document window?

8.a) What is file menu?

(or)

b) How to send e-mail?

9.a) How to open an document?

(or)

b) What is memo wizard & fax wizard?

10.a) Define editing text & show their functions?

(or)

b) How to do find & replace?

11.a) Define headers & footers?

(or)

b) How to edit a text in MS Word?

12.a) How will you add page number, date & time?

(or)

b) Explain any five options in file menu

13.a) What are the features of MS 2007?

(or)

b) How to create a web page?

14.a) What is memo wizard & fax wizard?

(or)

b) How to open an document ?

15.a) Explain the following terms; a) theme b) frames c) auto format d) style e) object

(or)

b) Explain the options in the format menu

UNIT-III

16.a) What is Microsoft excel?

(or)

b) How to save a work book in excel?

17.a)How will u setup a page in excel?

(or)

b)What is the difference between print & print preview?

18.a)How to create a content with restricted permission?

(or)

b)How will you preview a document before printing?

19.a)How will you delete a row & a column in excel?

(or)

b)What are the different ways to save a file?

20.a)Brief on any five charts available in excel

(Or)

b) Explain about sorting a data base in excel

21.a) What is meant by MS Excel? Give some uses of MS Excel.

(or)

b) What are the features of excel ?

22.a) What are the steps involved in starting excel?

(or)

b) Explain about the divisions in an excel screen.

23.a) What are the control keys used in an excel. Mention their functions

(or)

b) What are the steps involved in opening a network book?

24.a) How data is entered in the cell in an excel sheet ?

(or)

b) Explain brief about cell references & what are its types?

25.a) What are the steps in creating text , numbers & data series?

(or)

b) How to select cell ranges in an excel sheet ?

UNIT-IV

26.a) What are the Steps in formatting text on a slide. Give example

(or)

b) How to start a power point?

27.a) Explain the steps in creating power point presentation

(or)

b) How will you create a presentation using auto content wizard?

28.a) Write notes on i) inserting new slide ii) deleting a new slide iii) saving a prepared slide

(or)

b) How will you create a design template?

29.a) How will you create power point presentation using template?

(or)

b) How to create a blank presentation ?

30.a) What are the various steps involved in adding effects to layout of the existing presentation?

(or)

b) What is the purpose of action buttons?

31.a) How will you create a design template?

(or)

b) How can we print a presentation?

32.a) Write short notes on; i) title masters ii) handout masters iii) notes masters

(or)

b) How can we insert a slide?

33.a) How will you delete a slide

(or)

b) How can we print a presentation?

34.a) What is preset animation?

(or)

b) Explain the steps while inserting pictures?

35.a) What are the Steps in formatting text on a slide. Give example

(or)

b) How to start a power point

36.a) Explain the steps in creating power point presentation

(or)

b) How will you create a presentation using auto content wizard?

37.a) Write notes on i) inserting new slide ii) deleting a new slide iii) saving a prepared slide

(or)

b) How will you create a design template?

38.a) How will you create power point presentation using template?

(or)

b) How to create a blank presentation ?

39.a) What are the various steps involved in adding effects to layout of the existing presentation?

(or)

b) What is the purpose of action buttons?

40.a) How will you create a design template?

(or)

b) How can we print a presentation?

41.a) What are the features of queries ?

(or)

b) Write a note on data base

42.a) Explain the method of creating a table by entering data in MS data

(or)

b) Explain the following context a) tables b) queries c) forms

43.a) Explain sorting data in MS access

(or)

b) How to save a data ?

44.a) Write short notes on i) queries ii) forms iii) reports iv) relational database

(or)

b) Draw the opening Microsoft access screen

45.a) How will you create a database table ?

(or)

b) Explain the terms a) reports b) pages c) macros d) modules

46.a) Explain importing data from another table with diagram

(or)

b) Give the examples for the following in concepts of data base of employee a) personal file b) accounts file c) expenses record file

47.a) What is database view?

(or)

b) Expand RDBMS & its software's

48.a) How many relationships are possible between two tables or entities?

(or)

b) How to create blank data base

49.a) What do the following formatting symbols mean in format properties of fields? a) < b) >
c) "null" d) @ "not entered"

(or)

b) Write a note on opening & closing a data base

50.a) What are different forms of auto forms?

(or)

b) How will you enter data in a table?

UNIT-V

51. a) Write a short note on LAN.

(or)

b) What are the types of internet applications?

52. a) Differentiate LAN and WAN.

(or)

b) What are the various web browsing softwares?

53. a) Write about various popular search engines.

(or)

b) Write a note on Internet protocols and its types.

54. a) What is WWW? Write its features.

(or)

b) Write a short note on : i) HTTP ii) URL

55. a) Differentiate Internet and Intranet.

(or)

b) What are the types of Internet connections?

Section D

(3 x 10= 30)

Answer any THREE of the following in about 400 words each:

UNIT-I

1. Explain the generation of computer in detail
2. What are the types of computer?
3. What are the advantages of an internet?
4. What are the disadvantages of an internet?
5. Explain the purpose of network connection
6. Explain the parts of the computer
7. Describe the basic computer operations
8. Explain the types of printers
9. Write the types of storage devices
10. Explain the six categories of operating system tasks

UNIT-II

1. Explain view menu
2. Write a note on tool bar
3. Explain header & footer, foot note & end note
4. What is hyperlink?
5. How to give bullets & numberings for a text?
6. Explain mail merge
7. Explain window menu
8. What is table menu & also explain its contents
9. Explain drop cap & list direction
10. Write short note on: i)Alignment ii) Indentation iii) Paragraph spacing iv) Line spacing
11. How will insert book mark in your document?

12. What is a hyperlink?
13. How will you add borders & shades to your word?
14. What are the Steps in creating mail merge?

UNIT-III

1. How will you preview a web page?
2. What is page setup?
3. Explain header & footer
4. Explain any 20 short cut keys in excel
5. Explain the steps to print a worksheet. State various statistical & financial functions of MS excel
6. Discuss the features of work sheet in MS excel
7. What are the various formatting options available in excel worksheet?
8. Write down the steps involved in saving and editing the charts.
9. How will you insert cell, rows & columns in excel?
10. How will you change the font & add border to your spread sheet?
11. How will you audit work sheets?
12. How editing is done in worksheet?
13. Explain the excel functions in brief.
14. How a macro is created in excel?
15. How formatting is done in excel?
16. What is meant by charts? Discuss some of their components
17. What are the steps involved in creating a chart?
18. How to format charts with colours?
19. How a pivot table can be created?
20. What are the auditing featured used in worksheet?

UNIT-IV

1. How will you view a presentation ?
2. Write short notes on;
 - i. Normal view
 - ii. Outline view
 - iii. Slide view
 - iv. Slide sorter view
 - v. Slide show
 - vi. Notes page view
3. How will you add animation effects to the power point you have prepared?
4. What are the ways you will enter & edit text?
5. How will you include pictures in power point presentation?
6. How will you insert a text?
7. Explain the features of slide transition in power point presentation
8. How will you select text in place holder?
9. How will you process the slide show presentation in MS power point?
10. Write short notes on:
 - i. Deleting a text
 - ii. Moving a text
 - iii. Copying a text
11. Write a note on the process of inserting slide number, time & sounds in power point presentation
12. Briefly explain formatting text ?
13. Write about alignment
14. Write the note on header & footers
15. How will you insert clip art pictures in your presentation?
16. How will you insert object in your slide?
17. Analyze the different data base objects of MS access
18. What are the steps involved in creating database with wizard?
19. Describe the different ways to create reports in access
20. How to create table using table wizard?
21. How will access be helpful for data handling in big organization? Illustrate

22. List out the steps in entering & editing data in the table with suitable examples
23. How will you create i) table using wizard ii) database using database wizard
24. Explain creation of a table using data sheet view with diagram
25. What is the maximum size of an access database & what if, it reaches the limit?
26. Write the method of creating a table using design view with diagram
27. Explain the elements of a database in detail
28. What are the properties which come under field tab?
29. Explain the different number field types in access
30. Write a note on creation of query using the query wizard?
31. List out ten field types in access & explain detail
32. What are the processes in creating a query using design view?
33. What type of security is available with a Microsoft access database?
34. Explain report wizard in detail
35. State the meaning of following field properties;
 - a) Field size
 - b) Format
 - c) Input mask
 - d) Caption
 - e) Decimal places
 - f) Default value
 - g) Validation rule
 - h) Validation text
 - i) Required
 - j) Allow zero length
 - k) Indexed
36. State the meaning of form and bring out the steps in creation of form using wizard

UNIT-V

1. Give a brief notes on evolution of internet.
2. Elucidate the offerings from internet.
3. Bring out the disadvantages of internet.

4. Brief about Worldwide Web
5. Give a brief notes on a) URL b) HTTP
6. What do you mean by online shopping how will you do the online shopping using the application.
7. What do know about android application?
8. Write a short note on Internet Protocols.
9. Differentiate LAN and WAN.
10. What are the different types of Internet Connections?

ST. MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI

QUESTION BANK

BBA - Semester V

Core VII- Human Resource Management – Sub. Code: 21UMCC51

Choose the correct answer:

UNIT I

1. Human resources mean the _____.
a. **people** b. place c. material d. machine
2. HRM is the process of making efficient and effective use of _____resources.
a. company b. **human** c. material d. future
3. HRM – Human _____ Management.
a. Revival b. Renewal c. **Resource** d. Recognition
4. Planning is a process of determining the _____ goals.
a. personal b. physical c. mental d. **organizational**
5. Organising involves giving each subordinate a _____ task.
a. **specific** b. general c. physical d. mental
6. Staffing involves deciding what type of people should be _____.
a. recruited b. **hired** c. selected d. trained
7. _____ is the process of activating group efforts to achieve the desired goals.
a. Distributing b. Diagnosing c. **Directing** d. Disgusting
8. Controlling is the process of setting standards for _____.
a. perseverance b. publicity c. personality d. **performance**

9. Personnel management is an _____ process.

- a. **independent** b. dependant c. physical d. mental

10. HRP is a process by which an organization determines how it should _____ manpower.

- a. antire b. **acquire** c. aspire d. altire

UNIT II

11. Recruitment is a process of searching for and obtaining _____ for jobs.

- a. **applicants** b. duplicants c. implicants d. semplicants

12. Promotion implies _____ of an employee to a higher position.

- a. degrading b. **upgrading** c. initiating d. meditating

13. Transfer refers to _____ an employee from one job to another without change in position.

- a. terminating b. delegating c. **shifting** d. meditating

14. Professional associations are also called _____.

- a. mentors b. sensors c. twisters d. **headhunters**

15. Deputation means sending an employee to organization for _____ duration.

- a. **short** b. long c. medium d. mental

16. Another form of word of mouth method of recruitment is _____ pinching.

- a. employer b. **employee** c. manager d. team mate

17. Raiding is also known as _____.

- a. coaching b. searching c. **poaching** d. teaching

18. Screening is the _____ part of recruitment.

- a. single b. dependent c. independent d. **integral**

19. _____ is hiring the best candidate from the pool of applications.

- a. **Selection** b. training c. evaluating d. mentoring

20. Selection _____ recruitment.

- a. endures b. **follows** c. substitutes d. replaces

UNIT III

21. _____ involves assigning a specific job to each one of the selected candidates.
- a. **Placement** b. Training c. Directing d. Organising
22. Induction is welcoming a _____ employee to the organization.
- a. old b. **new** c. existing d. retired
23. Formal induction is a _____ programme to integrate the new entrant in the organization.
- a. unplanned b. desired c. **planned** d. mental
24. Training is the act of increasing the knowledge of an employee to do a _____ job.
- a. different b. common c. independent d. **particular**
25. Training is a short term _____ process.
- a. **technical** b. mechanical c. physical d. mental
26. Development is a long term _____ process.
- a. technical b. **theoretical** c. mental d. physical
27. Task analysis is also called _____ analysis.
- a. experiment b. procedure c. **job** d. training
28. Job analysis is also called _____ analysis.
- a. directional b. physical c. mental d. **operational**
29. Man analysis is a component in identifying _____ training needs.
- a. **employee** b. employer c. manager d. customer
30. JIT – Job _____ Training.
- a. Intuition b. **Instruction** c. Intimation d. Information

UNIT IV

31. Performance appraisal is the systematic evaluation of individual_____ .

a. **performance** b. appearance c. knowledge d. training

32. Job evaluation means _____ a job before an employee is appointed.

a. identifying b. **rating** c. evaluating d. mentoring

33. Performance appraisal means rating a job _____.

a. applicant b. giver c. **holder** d. finder

34. Performance appraisal is conducted to determine the _____ needs of an employee.

a. manufacturing b. personal c. medical d. **training**

35. Promotion is _____ movement of employee within the organization.

a. **vertical** b. downward c. sideward d. middleward

36. A transfer means lateral movement of employees within the _____ grade.

a. single b. **same** c. double d. different

37. Demotion is the _____ movement of an employee in the organizational hierarchy.

a. upward b. sideward c. **downward** d. middleward

38. _____ means the service agreement of an employee with the organization comes to an end.

a. Situation b. Transfer c. Placement d. **Separation**

39. VRS – Voluntary _____ Scheme.

a. **Retirement** b. Resolution c. Revival d. Retrenchment

40. Compensation is the _____ received by an employee in return for their contribution to the organization.

a. promotion b. **remuneration** c. demotion d. transfer

UNIT V

41. HR _____ refers to examination of policies to determine the effectiveness of HRM.

a. **Audit** b. management c. accounting d. calculation

42. An audit is a means by which organizations can _____ where it currently stands.

- a. treasure b. **measure** c. understand d. maintain
43. HRA is the _____ assessment of the strengths, limitations and need of existing HR.
- a. lawful b. legal c. **systematic** d. illegal
44. The objective of HRA is to review the _____ of the HR department and its activities.
- a. planning b. ability c. capacity d. **performance**
45. HRA is a _____ for evaluating the personnel activities of an organization.
- a. **tool** b. evidence c. proof d. document
46. MBO – Management by _____.
- a. Office b. **Objectives** c. Officer d. Originality
47. In _____ approach auditors identify Competitors Company as model.
- a. confidential b. compressed c. **Comparative** d. condensed
48. In _____ authority approach, auditors use standard set by an outside consultant as benchmark.
- a. inside b. outstanding c. onshore d. **outside**
49. In _____ approach performance is developed considering the company's existing information.
- a. **statistical** b. substantial c. supportive d. subtractive
50. In _____ approach auditors review past actions to calculate whether activities comply with legal requirements.
- a. competition b. **compliance** c. confidential d. community

2 marks

UNIT I

51. What is the meaning of HRM?
52. What is Personnel Management?

53. List the scope of HRM.
54. Write the objectives of HRM
55. State all the managerial functions of HRM.
56. Write any six operative functions of HRM
57. Write any two differences between HRM and personnel management.
58. What is HRP?
59. What are the factors of internal environment in HRM?
60. What are the factors of external environment in HRM?
61. Write any two reasons why we need HRP.
62. List any two importance of HRP.
63. Discuss any two reasons which would make HRP effective.
64. Write any two barriers to HRP.

UNIT II

61. What is recruitment?
62. Write any four factors affecting recruitment.
63. List any four internal sources of recruitment.
64. List any four external sources of recruitment.
65. Write any four steps involved in the recruitment process.
66. List the various methods of recruitment.
67. What is selection?
68. Describe any two reasons why you need selection.
69. Write any four methods involved in selection.
70. What is an interview?

UNIT III

- 71. What is placement?
- 72. What is induction?
- 73. List any two differences between placement and discussion.
- 74. What is training?
- 75. What is development?
- 76. List any two differences between training and development.
- 77. Give two reasons why training is necessary?
- 78. Write any two importance of training.
- 79. State any four steps involved in a training programme.

UNIT IV

- 81. What is promotion?
- 82. What is transfer?
- 83. Write any two differences between promotion and transfer.
- 84. What is compensation?
- 85. Write any two needs for compensation.
- 86. What are the various types of fringe benefits?
- 87. What is performance appraisal?
- 88. Write any two reasons for promotion.
- 89. Write any two reasons for transfer.
- 90. Write any two needs for performance appraisal.

UNIT V

- 91. What is HRA?

92. Is HRA necessary? Give two reasons.

93. What is the basis of HRA?

94. List the scope of HRA.

95. Write any 4 benefits of HRA.

96. Write any 2 objectives of HRA.

97. List the approaches to HRA.

7 marks

UNIT I

1. a. Briefly discuss the scope of HRM. (or)
b. What are the objectives of HRM?
2. a. Enumerate the various managerial functions of HRM. (or)
b. Elucidate the operative functions of HRM.
3. a. Explain any 5 major differences between HRM and PM. (or)
b. Brief the objectives of HRP.
4. a. What are the various needs for HRP? (or)
b. Explain the importance of HRP.
5. a. What the steps essential to make HRP effective? (or)
b. Explain the barriers / problems to HRP.
6. a. What are the various challenges faced by a HR manager? (or)
b. Briefly discuss the features of HRP.
7. a. What are the advantages of HRP? (or)

UNIT II

11. a. Explain the internal sources of recruitment. (or)

- b. Explain the external sources of recruitment.
12. a. Why is selection necessary in an organization? Explain. (or)
- b. Explain the various ability tests in selection.
13. a. Explain the differences between recruitment and selection. (or)
- b. Elucidate the internal factors affecting recruitment.
14. a. Enumerate the external factors affecting recruitment. (or)
- b. Explain the advantages and disadvantages of internal source of recruitment.
15. a. Elaborate the advantages and disadvantages of external source of recruitment. (or)
- b. Briefly discuss the recruitment process.
16. a. Elucidate the methods of recruitment. (or)
- b. Enumerate the different kinds of personality tests in selection.
17. a. Explain the four types of interviews. (or)
- b. What are the various disadvantages of conducting interview?
18. a. Discuss some guidelines that would make interviewing effective. (or)

UNIT III

21. a. Distinguish between induction and placement. (or)
- b. Explain the various differences between training and development.
22. a. List the objectives of induction. (or)
- b. What are the benefits of induction programme.
23. a. Explain the contents - types of induction. (or)
- b. Elucidate the three phases of induction programme.
24. a. How can you make an induction programme effective? (or)
- b. Enumerate the areas of training.

25. a. Explain the importance of training. (or)

UNIT IV

31. a. What are the objectives of promotion? (or)

b. Elucidate the characteristics of a good promotion policy.

32. a. Enumerate the requirements of a good transfer policy. (or)

b. Explain the various needs for transfers.

33. a. Elaborate the types of transfer policy. (or)

b. What is Demotion? Explain the causes.

34. a. Write short notes on: (or)

i) Separation ii) Retirement iii) Resignation

b. Write short notes on:

i) Layoff ii) Retrenchment iii) Dismissal

35. a. Distinguish between Job evaluation and Performance appraisal. (or)

b. Elucidate the purpose of performance appraisal.

36. a. Elaborate the three approaches of performance appraisal. (or)

b. Enumerate the advantages of compensation.

37. a.

UNIT V

41. a. Explain the need for HRA. (or)

b. Enumerate the benefits of HRA.

42. a. Elucidate the objectives of HRA.

b. Elaborate the benefits of HR.

43. a. Explain the types of HRA.

b. Discuss the scope of HRA.

12 marks

UNIT I

1. Explain the HRP process.
2. Enumerate the functions of HRM.
3. Elucidate the duties of HR manager.
4. Is HR manager necessary in an organization?
5. Elaborate the role of a HR manager.

UNIT II

11. Explain the internal and external sources of recruitment.
12. Explain the process of selection.
13. Recruitment is a boon to the organization? Explain.
14. Is recruitment necessary in an organization? Justify with reasons.
15. Discuss the effectiveness of selection process.
16. Elaborate the various interview techniques in selection process.

UNIT III

21. What is induction? Explain the purpose of induction.
22. Explain the various methods of induction.
23. What is training? Distinguish between Training and Development.
24. What are the various methods of training?
25. Elucidate the training process.

26. What are the benefits of training?
27. Training plays a vital role. Support this statement with valid reasons.
28. Training increases the efficiency of the employee and increases the turnover of the organization – True or False. Justify.

UNIT IV

31. Explain the process of performance appraisal.
32. Elaborate the traditional methods of performance appraisal
33. Explain the various components of compensation.
34. Explain the problems in performance appraisal.
35. How would you make performance appraisal more effective.
36. Is compensation necessary? Justify with reasons.

UNIT V

41. Elucidate the approaches to HRA.
42. Explain the scope and benefits of HRA.
43. Is HRA necessary in an organization? Justify with reasons.

ST.MARY'S COLLEGE (Autonomous) -THOOTHUKUDI

END SEMESTER EXMINATIONS

BBA

CORE VIII– RESEARCH METHODOLOGY Sub Code: 21UBAC51

Semester V

Section – A

Unit - 1

1. Which one of the following does not come under the objective of research? a) To explore
b) To diagnose
c) To describe
d) **To overview**
2. Research for the sake of enhancing knowledge is termed as _____
a) **Basic research**
b) Applied research
c) Empirical research
d) Qualitative research
3. Applied or practical research is termed as _____ based research having high practical relevance a) Emotion
b) Thinking
c) **Need**
d) Analytical
4. _____ research is concerned with qualitative phenomena generally involving study of human behavior. a) **Qualitative**
b) Quantitative
c) Longitudinal
d) Simulation

5. _____ involves the measurement of a phenomenon in quantitative terms.
- a) Longitudinal
 - b) Applied
 - c) **Quantitative**
 - d) Simulation
6. The _____ thinking acts in terms of problem situation.
- a) **Reflective**
 - b) Scientific
 - c) Social
 - d) Empirical
7. The _____ thinking is defined as an inductive-deductive mode of thinking or reasoning.
- a) Reflective
 - b) **Scientific**
 - c) Social
 - d) Analytical
8. _____ thinking is based upon cause-effect relationship and evidences. a)
- Reflective
- b) Social
 - c) Identical
 - d) **Scientific**
9. What is the fifth step in research process?
- a) Analyze data
 - b) **Collect data**
 - c) Define research problem
 - d) Interpret and report
10. What is the second step in research process?
- a) **Review of literature**
 - b) Formulate hypotheses

- c) Collect data
 - d) Analyze data
11. What is the third step in conducting a research?
- a) Define research problem
 - b) Frame hypotheses
 - c) **Formulate hypotheses**
 - d) Interpret hypotheses
12. What is the last step in conducting a research?
- a) Formulate hypothesis
 - b) Design research
 - c) Investigate
 - d) **Interpret and report**
13. All the items under consideration to any field of inquiry constitute a _____ a)
- Universe**
- b) World
 - c) Knowledge
 - d) Research
14. We may define social research as the systematic method of discovering new facts were quoted by _____ a) Alfred
- b) Hertzberg
 - c) **P.V.Young**
 - d) Edward

Unit- 2

15. A research _____ in general refers to some difficulty which a researcher experiences in the context or either a theoretical or practical solution. a) Analysis
- b) **Problem**
 - c) Hypothesis
 - d) Guideline

16. Which one of these does not come under the category of techniques involved in defining a problem?
- a) Statement of the problem
 - b) Understanding the nature of the problem
 - c) Rephrasing the research problem
 - d) **Solving the research problem**
17. The _____ design which deals with the method of selecting items to be observed for the given study. a) **Sampling**
- b) Research
 - c) Hypothesis
 - d) Empirical
18. A concept which can take on different quantitative values is called a _____
- a) Dependent variable
 - b) Independent variable
 - c) **Variable**
 - d) Control
19. The technical term _____ is used when we design the study minimizing the effects of extraneous independent variable. a) Variable
- b) **Control**
 - c) Relationship
 - d) Experiment
20. When a prediction or a hypothesized relationship is to be tested by scientific methods, it is termed as research _____. a) Design
- b) Sample
 - c) **Hypothesis**
 - d) Work
21. In an experimental hypothesis testing research when a group is exposed to usual conditions it is termed a _____. a) **Control group**

- b) Experimental group
 - c) Variable group
 - d) Testimonial group
22. When the group is exposed to some novel or special condition it is termed as _____
- a) Control group
 - b) **Experimental group**
 - c) Variable group
 - d) Testimonial group
23. The different conditions under which experimental and control groups are put are usually referred to as _____
- a) Experiments
 - b) Variable
 - c) **Treatments**
 - d) Control
24. Exploratory research studies is also termed as _____
- a) **Formulative**
 - b) Descriptive
 - c) Objective
 - d) Elaborative
25. According to the principle of _____ the experiment should be repeated more than once.
- a) Randomization
 - b) **Replication**
 - c) Experiment
 - d) Variable
26. In randomized block design, the principle of _____ is applied during blocks.
- a) Replication
 - b) Experiment
 - c) **Local control**

- d) Variable
27. A simple factorial design also known as _____ factorial design.
- a) **2×2**
 - b) 2×3
 - c) 3×2
 - d) 4×4
28. The word hypothesis is made up of two Greek roots which mean that it is some sort of _____
- a) Statements
 - b) **Sub statements**
 - c) Modalities
 - d) Sub modalities
29. Non parametric tests is also known as _____
- a) **Distribution free tests**
 - b) Unknown tests
 - c) Free tests
 - d) T test
30. _____ means taking things for granted so that the situation is simplified for logical procedure.
- a) Postulate
 - b) **Assumption**
 - c) Hypothesis
 - d) Research
31. _____ are the working beliefs of most scientific activity.
- a) **Postulate**
 - b) Assumption
 - c) Hypothesis
 - d) Research

Unit – 3

32. _____ design in fact means the joint procedure of selection and estimation.
- a) Research

- b) Hypothesis
 - c) **Sampling**
 - d) Experiment
33. _____ sampling involves division of the population of elementary units under consideration into groups or clusters that serve as primary sampling units.
- a) **Cluster**
 - b) Probability
 - c) Non probability
 - d) Random
34. _____ sampling is also called as accidental sampling
- a) Random
 - b) Probability
 - c) **Incidental**
 - d) Purposive
35. _____ sampling involves the selection of the sample units within each stratum or quota. a) Region
- b) **Quota**
 - c) Random
 - d) Probability
36. _____ sampling is another sampling design of relatively recent origin. a) **Sequential**
- b) Random
 - c) Probability
 - d) Quota
37. Law of _____ involves the probability principle.
- a) Replication
 - b) Randomization
 - c) **Statistical regularity**
 - d) Experiment

38. _____ is the corollary of the first law.
- a) Replication
 - b) **Inertia of the large sample**
 - c) Randomization
 - d) Experiment
39. _____ is an improvement over the simple random sampling.
- a) Simple random sampling
 - b) Stratified sampling
 - c) **Systematic sampling**
 - d) Repetitive sampling
40. Selection of intact group is also known as _____
- a) Stratified sampling
 - b) **Cluster sampling**
 - c) Repetitive sampling
 - d) Random sampling
41. The _____ sampling is selected by some arbitrary method because it is known to be representative of the total population.
- a) Cluster
 - b) **Purposive**
 - c) Judgmental
 - d) Random
42. _____ sampling both judgment and probability sampling.
- a) Random
 - b) Cluster
 - c) Judgmental
 - d) **Quota**
43. The _____ may be regarded as a form of interview on paper.
- a) Schedule
 - b) **Questionnaire**
 - c) Written communication
 - d) Data collection

44. The _____ observation is made in ordinary natural setting

- a) Controlled
- b) Common flagged
- c) **Uncontrolled**
- d) Control

45. Which one does not come under the category of primary data?

- a) Questionnaire
- b) Interview
- c) Telephone interview
- d) Existing literature

Unit – 4

46. _____ of data is a process of examining the collected raw data to detect errors and omissions.

- a) Questionnaire checking
- b) **Editing**
- c) Coding
- d) Classification

47. _____ refers to the process of assigning numerals or other symbols to answers so that responses can put into a limited number of categories.

- a) Questionnaire checking
- b) Editing
- c) **Coding**
- d) Classification

48. _____ includes checking the data for consistency and treatment of missing values.

- a) **Data cleaning**
- b) Data development
- c) Data preparation
- d) Data report

49. _____ is not always necessary but it may improve the quality of analysis sometimes.
- a) Data cleaning
 - b) **Data adjustment**
 - c) Data preparation
 - d) Data quality
50. A _____ is a property descriptive or characteristic of the entire population. a) Statistic
- b) Population
 - c) Sample
 - d) **Parameter**
51. The term _____ refers to a property, wherein the members of a population differ from one another. a) **Variable**
- b) Population
 - c) Sample
 - d) Parameter
52. _____ is the simplest measure of variability or dispersion.
- a) Quartile deviation
 - b) Average deviation
 - c) Standard deviation
 - d) **Range**
53. _____ of a set of sources is defined as the square root of the average of the squares of the deviation of each from the mean.
- a) Quartile deviation
 - b) Average deviation
 - c) **Standard deviation**
 - d) Range
54. _____ is the simplest kind of correlation to be found between the two sets of scores or variables.

- a) **Linear correlation**
 - b) Coefficient of correlation
 - c) Correlation
 - d) Regression
55. Product moment method is also known as _____ moment method.
- a) Karlson
 - b) Markson
 - c) **Pearson**
 - d) Maslow
56. _____ is used with data in the form of frequencies.
- a) Correlation
 - b) Regression
 - c) Sampling
 - d) **Chi square**
57. _____ is the extent to which a measuring instrument provides adequate coverage to the topic under study. a) **Content validity**
- b) Criterion related validity
 - c) Construct validity
 - d) Concurrent validity
58. _____ relates to our ability to predict some outcome or estimate the existence of some current condition. a) Content validity
- b) **Criterion related validity**
 - c) Construct validity
 - d) Concurrent validity

Unit – 5

59. The task of _____ is not an easy job, rather it requires a great skill and dexterity on the part of researcher. a) **Interpretation**
- b) Research
 - c) Report writing

- d) Analysis
60. _____ is the first step in writing a report.
- a) Preparation of the final outline
 - b) **Logical analysis of the subject matter**
 - c) Preparation of the rough draft
 - d) Preparation of the final bibliography
61. _____ is the second step in writing a report.
- a) **Preparation of the final outline**
 - b) Logical analysis of the subject matter
 - c) Preparation of the rough draft
 - d) Preparation of the final bibliography
62. _____ is the final step in writing a report.
- a) Preparation of the final outline
 - b) Logical analysis of the subject matter
 - c) Preparation of the rough draft
 - d) **Writing the final draft**
63. In its preliminary pages the report should carry a _____
- a) **Title and date**
 - b) Acknowledgement
 - c) Preface
 - d) Foreward
64. The _____ report is one which gives emphasizes on simplicity and attractiveness.
- a) Technical
 - b) **Popular**
 - c) Written
 - d) Oral

Section – B

Answer in about 50 words each:

Unit-1

1. Define research.

2. Give any two reasons for conducting research.
3. Define ethnography method.
4. What is the objective of formulative research study?
5. What is hypothesis testing?
6. What is the objective of diagnostic research study?
7. What is applied research?
8. Define social research.
9. What is simulation research?
10. Mention any two objectives of research.

Unit-2

11. What is research problem?
12. What is research design?
13. List out any two features of research design.
14. What do you mean by extraneous variable?
15. What is research hypothesis?
16. What do you mean by treatments?
17. What is dependent variable?
18. What is independent variable?
19. What is discrete variable?
20. What is continuous variable?
21. What is extraneous variable?
22. Define hypothesis.

Unit-3

23. Define sampling.
24. What is sampling technique?
25. What do you mean by data collection?
26. Define questionnaire.
27. What is questionnaire size?
28. What is ambiguity?
29. Define schedule.

- 30. Define observation.
- 31. Define interview.
- 32. What is primary data?

Unit-4

- 33. What is questionnaire checking?
- 34. What is editing?
- 35. What is coding?
- 36. What do you mean by classification of data?
- 37. What is tabulation?
- 38. What do you mean by graphical representation?
- 39. What is data cleaning?
- 40. What is data adjusting?
- 41. What do you mean by population?
- 42. What is range?
- 43. What is quartile deviation?
- 44. What is average deviation?
- 45. What is standard deviation?
- 46. What is correlation? 47. What is hypothesis?

Unit-5

- 48. What is interpretation?
- 49. What is technical report?
- 50. What is popular report?
- 51. What is oral presentation?
- 52. What do you mean by main text?
- 53. What is report?
- 54. What is end matter?
- 55. What is footnote?
- 56. What do you mean by documentation style?
- 57. What do you mean by treatment of quotation? **Section - C**

Answer in about 200 words each choosing either (a) or (b):

Unit-1

1. What are the objectives of research?
2. List out the characteristics of research.
3. What are the general qualities that a researcher should possess?
4. What are the specific qualities that a researcher should possess?
5. Give a brief note on approaches to research.
6. What are the characteristics of good researcher?
7. Give a brief note on scientific thinking and reflective thinking.
8. What are the assumptions of scientific method?
9. What are the significance of research?
10. Bring out the difference between research methods and methodology.
11. What are the criteria of good research?

Unit-2

12. Give a brief note on selecting a problem.
13. Write a short note on basic principles of experimental design.
14. Brief out research proposal or synopsis.
15. What are the criteria for evaluating research proposal or synopsis?
16. What are the different types of variables?
17. Elucidate exploratory research design.
18. Write a brief note on descriptive and diagnostic research design.
19. Elucidate experimental design.
20. What are the characteristics of good hypothesis?
21. List out the nature, functions and importance of hypothesis.

Unit-3

22. List out the advantages and requirements of good sample.
23. What are the common faults and characteristics of questionnaire?
24. Give a brief note on types of questionnaire.
25. What are the characteristics and purpose of questionnaire?
26. How would you administer a questionnaire?

27. What are the precautions to be considered in preparing a questionnaire?
28. What are the physical forms or ingredients of a questionnaire?
29. What are the steps in questionnaire construction?
30. List out the characteristic of a good questionnaire.
31. List out the various types of schedule.
32. What are the problems available in scheduling?
33. List out the difference between questionnaire and schedule.

Unit-4

34. How would you classify data?
35. What are the generally accepted principles of tabulation?
36. Give a brief note on data adjusting.
37. Write a brief note on some fundamental concepts of measures of central tendency.
38. Give a brief note on chi square test.
39. What are the techniques of developing measurement tools?
40. Write a brief note on hypothesis of means.
41. Give a brief note on coding and editing of data.
42. Write a brief note on questionnaire checking and graphical representation of data.
43. What is the difference between data cleaning and data adjusting?

Unit-5

44. Why should one carry out interpretation?
45. What are the techniques of interpretation?
46. What is the significance of report writing?
47. How should one write the main text of report?
48. What are the different types of report?
49. Give a brief note on oral presentation.
50. Give an example of writing a research report. **Section - D**

Answer in about 400 words each choosing either (a) or (b):

Unit-1

1. Give a detailed note on types of research.

2. List out the qualities of good researcher.
3. Give a detailed view on scientific method.
4. Elaborate the process of research.
5. What are the problems encountered by researcher in India?
6. Give a detailed note on social research.
7. Bring out the motivating factors and difficulties in social research.
8. Define scientific research. What are the limitations of scientific research?
9. Explain the steps in scientific research with the flow chart.
10. According to Stephen Wasby what are the assumptions of scientific method of research?

Unit-2

11. What are the techniques involved in defining a research problem?
12. Elucidate different types of research designs.
13. Give a detailed account on selection and formulation of research problem.
14. List out the concepts relating to research design.
15. Give a detailed account on types of experimental design.
16. Bring out the different types of hypothesis.
17. Elaborate statistical design.
18. What are the criteria for selecting a research problem? Explain.
19. How would you evaluate research problem?
20. List out the difference between descriptive and experimental research design.

Unit-3

21. Elucidate the different types of probability sampling.
22. Give a detailed account on non-probability sampling.
23. Give out an overall analysis of different types of sampling.
24. Write a brief note on size of sample.
25. Give a detailed account on questionnaire.
26. Elucidate the topic schedule in detail.
27. Elaborate the characteristics of scientific observation.
28. What are the advantages and limitation of observation?

- 29. List out the different types of observation with its advantages and limitation.
- 30. Elaborate the different types of interview with its advantages and disadvantages.
- 31. Elucidate interview process.

Unit-4

- 32. Elucidate data preparation process.
- 33. Elaborate measures of central tendency.
- 34. Give a detailed account on different measures of variability or dispersion.
- 35. Elaborate on the topic correlation.
- 36. Give a detailed account on goodness of measurement scales.
- 37. Elucidate scaling techniques.
- 38. List out the characteristics of hypothesis.
- 39. Elaborate on the topic hypothesis.
- 40. Give a detailed account on chi square tests.
- 41. Elaborate the different types of hypothesis.

Unit-5

- 42. What are the precautions of interpretation?
- 43. What are the different steps in writing report?
- 44. Elucidate the layout of research report.
- 45. What are the mechanics of writing a research report?
- 46. Give a detailed account on precautions for writing a research report.

Question Bank

BBA– Semester V

CORE IX-

Entrepreneurial Development

Sub.Code:21UBAC52

(for those who joined from 2014 and above)

Section A

(10x1=10 marks)

Choose the best answer:

Unit-1

1. An entrepreneur is _____
a) Risk bearer b) Agent c) Salesman d) Business man
2. Innovation is considered as hallmark for an entrepreneur is the view held by _____
a) Richard Cantillon b) Peter Drucker
c) **Joseph A. Schumpeter** d) David C. McClelland
3. According to Joseph A. Schumpeter, innovation can take place in _____ ways
a) 3 **b) 5** c) 7 d) 9
4. The employee who is entrusted with the responsibility to make innovation in the organization is called _____
a) Innovator b) Corporate Entrepreneur c) **Intreprenuer** d) None of above
5. The most suitable type of entrepreneur for a developing economy like India is _____
a) Innovation **b) Imitative** c) Fabian d) Drone
6. Which of the following is a characteristic of typical entrepreneur?
a) Choose high risk ventures. b) Choose low risk ventures.
c) **Choose moderate (or calculated) risk ventures.** d) Choose no risk ventures
7. Where individual skills are collectively integrated into a group, this is known as _____
a) Collective entrepreneurship b) Intrapreneurship
c) **Team entrepreneurship** d) Dual innovation

8. _____ is not an importance of entrepreneur

- a) Provides employment to the people b) Creates wealth for the nation
- c) Contributes towards research and development system **d) Provides self sufficiency**

9. Point out the quality in an entrepreneur _____

- a) Initiative
b) Lack of experience
c) Lack of confidence
d) Lack of decision making ability

10. While selecting of line a business, an entrepreneur must keep in his mind _____

- a) innovative **b) Risk involved** c) immitative d) rules

Unit-2

(or)

b)What do you mean institutional support?

19. a)State the meaning of NSIC?

(or)

b)Write a note on marketing support?

20. a)Briefly explain the meaning of SIDO?

(or)

b)Write the functions relating to co-ordination and to industrial development?

21. a)What do you know about SSID?

(or)

b)Explain the term SSID and its function?

22. a)Explain the function of SISI?

(or)

b)Explain the term DICs?

23. a)State the objective of industrial estate?

(or)

b)What are the functions of TCO?

24. a)Discuss the need for institutional support?

(or)

b)Write a note on technology support to small scale industries?

Unit-4

25. a) Define a small scale industry and give an over view of it.

(or)

b) What is a micro enterprise? Justify the need for developing micro enterprises in our country.

26. a)Elaborate the inter relationship between enterprise and society. Give examples.

(or)

b) Describe the main problems faced by small scale industries in India.

27. a) List down the four classifications of four rationale arguments.

(or)

b) Explain the objectives of developing small scale industries.

28. a) Enumerate the scope of SSI.

(or)

b) Write short notes on “Equality Arguments”

29. a) “Small Scale Enterprise is beautiful” Elaborate.

(or)

b) “Micro enterprises serve as seedbed of entrepreneurship development in the country” Explain.

30. a) Write short notes on :

i) Tax Holiday ii) Depreciation Allowance

(or)

b) Discuss the special tax benefits available to small enterprises working in rural and urban areas.

Unit-5

31. a)Explain the term ‘Project’ and define it.

(Or)

b) How will you classify the projects?

32. a)What do you understand by Project Identification?

(Or)

b)Discuss with examples, the process involved in Project Identification.

33. a) Define a Project Report/ Business Plan. Why is Project Report prepared?

(Or)

b) What are the significances of the preparation of the Project Report?

34. a) Write short notes on:

- i) Capital Cost and Source of Finance ii) Assessment of working Capital Requirement

(Or)

b) Briefly explain the contents of Business Plan.

35. a) What do you mean by EDP? Explain the needs of EDP in brief.

(Or)

b) Discuss about the objectives of EDP.

36. a) Explain the course contents and curriculum of an EDP.

(Or)

b) How will you evaluate the effectiveness or success of EDPs?

37. a) Mention the phases of EDP. Explain Training phase in brief.

(Or)

b) List out the preparations included in the Pre-training phase.

38. a) Discuss the major problems faced by EDPs in our country. Also give your suggestions to make EDPs more effective in the country.

(Or)

b) Write about Post Training phase.

Section C

Answer the following in about 400 words:

(5x8=40marks)

Unit-1

1. a) Explain the main functions performed by entrepreneurs.

(or)

b) Describe the types of entrepreneurs. Which one do you think most suitable for India.

2. a) Justify the need for & significance of entrepreneurs in an economy like India.

(or)

(or)

b) Write down the problems of rural Entrepreneurship?

Unit-3

12. a) Discuss the need for institutional support to small scale industries?

(or)

b) What is a district industries centre (DIC)?

13. a) Explain the functions of the DICs?

(or)

b) What factors do influence the emergence and development of entrepreneurship?

14. a) Explain how non-economic factors helping developing entrepreneurship?

(or)

b) Write notes on the following:

i) Labour ii) Capital iii) Need Achievement

iv) Withdrawal of status respect v) Social mobility

15. a) Explain in detail DICs?

(or)

b) Explain the function performed by SICO?

16. a) Explain the type of industrial estate?

(or)

b) What are the objectives of the industrial estate? What do you know about the industrial estate in India?

17. a) Write in detail about marketing support?

(or)

b) Explain in details about credit support?

Unit-4

18. a) Define a small scale industry. What are its chief characteristics?

(or)

b) What is the rationale behind the development of small scale industries in India. Also list out its objectives.

19. a) "For the industrial development of India, both small and large scale industries need to develop as mutually supportive and complimentary each other". Discuss.

(or)

b) Appreciate the role of small scale industries in the development of national economy.

20. a) It is said that small industries have become quite big over a period of time in India.

Explain with examples.

(or)

b) How do small scale enterprises contribute to the national cake? Discuss.

21. a) Elaborate the incentives & concessions offered by Govt. of India to Small scale & Tiny industries.

(or)

b) Write short notes on:

i) Rehabilitation Allowance ii) Investment Allowance

Unit-5

22. a)What is meant by Project Report? Explain the contents of Project Report.

(Or)

b)What do you mean by EDP? Explain the need for and objectives of EDP.

23. a)Discuss in detail about the course contents and curriculum of an EDP.

(Or)

b)Discuss the various phases involved in an EDP.

24. a)What do you understand by Project Identification? Discuss with examples, the project involved in Project Identification.

(Or)

b) Describe the steps involved in the identification and selection of a project.

25. a) How are projects classified? Discuss in detail about the various classifications of projects.

(Or)

b) What is the need for and significance of the preparation of a project? Explain with example.

ST. MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI

III B.B.A - End Semester Examinations

Question Bank

Core Elective –

IT Skills for Managers Sub.Code:21UBAE51

Semester V

Time: 3 hours

Max. : 75 Marks

Section – A

(10x1=10)

Choose the correct answer:

UNIT - 1

1) CPU – central _____ unit

- a) product b) personal **c) processing** d) promotion

2) Father of computer is _____

- a) Charles Babbage** b) Henry Fayol c) Adam smith d) F.W. Taylor

3) Shortcut key for shut down is

- a) ctrl + F5 **b) Alt + F4** c) ctrl+F6 d) ctrl+ F8

4) ENIAC

- a) Electric Numerical integrator & calculator **b) Electronic numerical integrator & calculator**

- c) Electronic Numerical Inter & calculator d) Electronic Numerical integrator & calculus

5) EDVAC

- a) Electric Deal Van & Control **b) Electronic discrete variable automatic computer**

- c) Electronic Numerical Inter & calculator d) Electronic Numerical integrator & calculus

6) _____ computers consists microprocessor

- a) micro b) mini c) superb **d) macro**

7) _____ controls the data & organizes them

- a) control unit** b) memory c) primary d) secondary

8) _____ logic unit is the place where the actual execution of instruction takes place

- a) binary b) logical **c) arithmetic** d) analytical

9) _____ is a small device held in hand & pushed along a flat surface

- a) pen drive b) joystick **c) mouse** d) memory card
- 10) Secondary storage is otherwise called as _____ memory
- a) primary **b) auxiliary** c) second d) control

UNIT-2

- 11) The simplest way to rearrange text in your document is to
- a) cut ,copy & paste** b) drag & drop c) type & replace d) undo
- 12) Which tabs on the ribbon is used to find in the documents?
- a) home tab** b) insert tab c) review tab d)page layout tab
- 13) Which menu in MS word can be used to change character size & type face
- a) view b) tools **c) format** d) data
- 14) Which key should be prepared to start a new paragraph in MS word
- a) down cursor key b)shift + enter **c) enter key** d) ctrl + enter
- 15) Using find command in word, we can search____
- a) characters b) formats c) symbols **d) all the above**
- 16) MS word, for what does ruler help?
- a) to set tabs b) to set indents c) to change page margins **d) all the above**
- 17) On which tool bar can you find format painter tool?
- a) formatting tool bar **b) standard tool bar** c)drawing tool bar d) picture tool bar
- 18) Which of the following option is not available in insert >> picture?
- a) chart b) word art c) clip art **d)graph**
- 19) How to remove all character formats?
- a) shift + space bar **b) ctrl + spacebar** c) shift + enter d) ctrl + enter
- 20) Which file starts MS word?
- a) word.exe b) MS word.exe c) word2007.exe **d) winword.exe**

UNIT-3

- 21) Which is the short cut key to insert a new comment in a cell?
- a) F2 b) ctrl + F2 c) ctrl + F2 **d) shift + F2**

22) Which option allows you to bold all the negative values within the selected cell range

- a) zero formatting **b) conditional formatting**
c) compare formatting d) negative formatting

23) “New comment” option can be found under ____ tab

- a) data** b) insert c) review d) view

24) In excel _____ may not contain in formula

- a) text constant b) number constant **c) circular reference** d) all the above

25) In maximum , how many sheets can be set as default while creating new word book

- a) 254 **b) 255** c) 256 d) no limit

26) You can edit existing excel data by pressing the

- a) F1 **b) F2** c) F3 d) F4

27) Which one is the last column header in excel 2007?

- a) XFD** b) XFL c) XFX d) XFI

28) What will be the result if you type A1 = B1 in cell C1?

- a) yes/no **b) true /false** c) value of A1 d) value of B1

29) In excel, by default numeric values appears in

- a) left aligned** b) right aligned c) center aligned d) justify

30) Which of the following is not a worksheet design direction?

- a) **efficiency** b) audit ability c) description d) clarity

UNIT-4

31) Which file format can be added to a power point show?

- a) .jpg b) .giv c) .wav **d) all the above**

32) Material consisting of text & numbers is best presented as

- a) a table slide** b) a bullet slide c) a title slide d) all the above

33) What is a motion path

- a) a type of animation entrance effect b) a method of advertising slides

c) a method of moving items on slide d) all the above

34) Which of the following should you use if you want all the slide in the presentation to have the same 'look' ?

a) a presentation design template b) the slide layout option
c) add a slide option d) out line view

35) Power point can display data from which of the following add-in software of MS office?

a) equation editor b) organization chart c) photo album **d) all the above**

36) To select one hyperlink another during a slide presentation, what do you press?

a) tab b) ctrl + k c) ctrl + h d) all the above

37) Special effects used to introduce slides in a presentation are called

a) effects **b) transactions** c) present animations d) custom animations

38) Which option can be used to set custom timings for slides in a presentation?

a) slider timings b) slider timer **c) rehearsal** d) slide show setup

39) Which key on the keyboard can be used to view slide show?

a) F1 b) F2 **c) F5** d) F10

40) A chart can be put as a part of presentation using

a) insert → **pictures** → **chart** **b) insert → chart** c) edit → **chart** d) view → **chart**

41) In MS access, text data type may contain maximum character of

a) 255 b) 256 c) 1064 d) no limit

42) Which of the following is not a valid data type in MS access?

a) memo **b) picture** c) currency d) auto number

43) In MS access "hyperlink" data type can store

a) web address b) **email address** c) path of a file d) all the above

44) Which of the following data type is used to store logical value in MS access?

a) true/false b) yes/no c) on/off d) all the above

45) In MS access "look up wizard" is used to

a) to select from previous values b) to select values from excel sheet
c) to select values from another table d) not a valid data type

- 46) Which of the following data type used to store picture ?
a) picture b) **OLE object** c) memo d) picture cannot be stored
- 47) In MS access, which data type is appropriate to store large text & numbers?
a) **text** b) memo c) OLE d) large text
- 48) In MS access, OLE objects data type can store
a) Word documents b) MS excel spreadsheets c) sounds **d) all the above**
- 49) Auto number data type
a) **can be sequential** b) can be random c) can be edited d) only a & b
- 50) A _____ database consist of a single large table
a) **long file** b) small file c) flat file d) broad file

UNIT-5

51. HTML stands for _____
a. **Hyper text markup language** b. Hyper text making language
c. Hyper tendency mail language d. Hyper text manual language
52. Which of the following is not a search engine?
a. Google b. yahoo c. bingo **d. piahoo**
53. Which of the following is not a job portal?
a.career.in **b.yepme.com** c.jobsgovt.com d.timesjob.com
54. This is a global collection of high powered computer that are connected together with cables, telephone lines, microwave dishes, satellites etc.,
a. arpanet **b. internet** c. network d .intranet
55. _____ is a global communication system.
a.intranet **b. internet** c. browser d. LAN
56. LAN-L stands for
a.Local b. locater c. large d. line
57. A _____ is a software application used to locate, retrieve, and display content on the World Wide Web, including Web pages, images, video and other files.
a. internet b. HTTP c. **browser** d. intranet
58. Windows released in “Windows 95” in August _____.

- a. 1994 b. 1997 c. **1995** d. 1993
59. 106. _____ is formerly known as Mozilla.
- a. chrome b. **Mozilla firefox** c. opera d. apple safari
60. 107. "Speed dial" and "dial pad" are introduced by _____
- a. Mozilla b. chrome c. Microsoft internet explorer d. **opera**
61. All search engines work using a _____ phase.
- a. **3** b. 1 c. 6 d. 5
62. 109. WWW stands for
- a. whole wide web b. world web wide c. **world wide web** d. web crawler
63. Internet is wide network of computers and is open for _____
- a. only one b. **all** c. a group d. double
64. The visitor's traffic is unlimited in _____
- a. browser b. intranet c. **internet** d. e-mail
65. Intranet is also a network of computers designed for a _____ of user.
- a. one b. all c. double d. **specific group**
66. For creating e-mail your password must be a minimum of _____ characters.
- a. 6 b. **8** c. 7 d. 10
67. E-Mail stands for
- a. **Electronic Mail** b. Electro Mail c. Electronical Mail d. Electronic Mailing
68. HTTP is the foundation for data communication for the world wide web (i.e. internet) since _____
- a. 1992 b. **1990** c. 1995 d. 1999
69. The HTTP _____ respond with a status line.
- a. client b. server side script c. database d. **server**
70. The _____ is a network-layer protocol that contains addressing information.
- a. HTTP b. server c. **internet protocol** d. e-mail
71. . A _____ is a document commonly written in Hyper Text Markup Language.
- a. server b. IP c. database d. **webpage**

Section B

(5 x 2 = 10)

Answer any FIVE of the following in about 50 words each:

UNIT 1

1. Mention any four hardware inputs in computer.
2. How to change wallpaper?
3. What are the major computer components?
4. What is a computer?
5. What are the five basic operation of Computer organisation?
6. Define / What Are the Operation Of Arithmetic Logic Unit {ALU}
7. Define Control Processing Unit {C PU}?
8. Define Control Unit {CU}?
9. What Is Peripheral Devices and their Types?
10. What is input device? What are they?
11. What are output device? What are they?
12. What is CRT?
13. What is LCD?
14. What you mean by software?
15. What are the classifications of software?
16. What is operating system?
17. What are utilities?
18. What are the types of computer language?
19. What is mnemonics?
20. What is meant by compiler?
21. What is called source program?
22. What is meant by assembler?

UNIT-II

1. How to start Ms-word?
2. How to open a previously saved file?
3. How to close the file menu?
4. How to save a Document?
5. How to save as file?
6. How to save a word document as a web page?
7. What is Text Formatting?
8. What are the examples of fonts?
9. How to change the font of text on numbers?
10. How to change the singe of text on numbers?
11. How to select a default font?
12. How to add animation to text?
13. What are the types of alignment?
14. How to create a first line indent?
15. How to create Bullets?
16. How to create numbering?
17. How to change a back ground color or texture?
18. What is proofreading?
19. How to add rows and column to a table?

20. How to delete a table and its contents?
21. How to delete cells rows or columns from a table?

UNIT-III

1. What do you mean by spread sheet?
2. Write any two usages of charts?
3. How to start the Excel?
4. Define Control panel.
5. How to open a new workbook?
6. What is cell reference?
7. Bring out the two functions of excel?
8. Define macros.
9. What are the types of formatting worksheets?
10. What are the steps under the numeric formatting?
11. What do you understand by alignment?
12. How to create the border?
13. How to change the row height?
14. How to change the column width?
15. Define auto formatting.
16. How to linking the workbooks?

UNIT-IV

1. How to save a Presentation?
2. How to create Power point slide?
3. How to insert word art?
4. How to insert table?
5. How to insert chart?
6. How to insert object?
7. How to view slide in full screen?
8. How to set timings in slide?
9. How to preset animation?
10. How to print a presentation?
11. What is the shortcut key for run the Power Point Presentation
12. . What is Database Management System (DBMS)?
13. What do you mean by data processing?
14. List some database applications.
15. What is MS-Access?
16. What is Database?
17. What is the extension of Access database file?
18. What is relational database?
19. What is a key field?
20. What is primary key?
21. What do you mean by foreign key?
22. What are the elements of a database?
23. What is a table?
24. What is a field?
25. What is a record?
26. What is a query?
27. What is a form?
28. What is a report?
29. What are the differences between a form and a report?
30. What is a macro?

31. What is a module?
32. What are the different Number field types in Access?
33. What do you mean by data processing?
34. What are the ten field types in Access?

UNIT-V

1. What is internet?
2. What are the disadvantages of an internet?
3. What is LAN?
4. What is WAN?
5. What is browser?
6. Differentiate between Intranet and internet?
7. What is Intranet?
8. Types of browser.
9. What is search engine?
10. What is HTTP?
11. What is client?
12. What is World Wide Web?
13. Mention any three features of browser?
14. What is Google chrome?
15. What is Internet protocols (Ip)?
16. What is URL?
17. What is webpage?

Section C

(5 x 5 = 25)

Answer in about 200 words each choosing either (a) or (b):

UNIT-I

1.a) Write a note on computer?

(or)

b) Expand the term “computer” & highlight its earlier age

2.a) Difference between hardware & software?

(or)

b) What is the modern age of computer?

3.a) What are the steps involved in shutting the computer?

(or)

b) How to change wallpaper?

4.a) Bring the difference between wallpaper & screen saver?

(or)

b) Explain the context “virus”

5.a) What are the drawbacks of computer?

(or)

b) Write a short note on i) RAM ii) ROM iii) LAN

UNIT-II

6.a) Write the features of MS word 2007?

(or)

b) How to cancel a document while printing

7.a) How to start the MS word?

(or)

b) What are the basic components in word document window?

8.a) What is file menu?

(or)

b) How to send e-mail?

9.a) How to open an document?

(or)

b) What is memo wizard & fax wizard?

10.a) Define editing text & show their functions?

(or)

b) How to do find & replace?

11.a) Define headers & footers?

(or)

b) How to edit a text in MS Word?

12.a) How will you add page number, date & time?

(or)

b) Explain any five options in file menu

13.a) What are the features of MS 2007?

(or)

b) How to create a web page?

14.a) What is memo wizard & fax wizard?

(or)

b) How to open an document ?

15.a) Explain the following terms; a) theme b) frames c) auto format d) style e) object

(or)

b) Explain the options in the format menu

UNIT-III

16.a) What is Microsoft excel?

(or)

b) How to save a work book in excel?

17.a)How will u setup a page in excel?

(or)

b)What is the difference between print & print preview?

18.a)How to create a content with restricted permission?

(or)

b)How will you preview a document before printing?

19.a)How will you delete a row & a column in excel?

(or)

b)What are the different ways to save a file?

20.a)Brief on any five charts available in excel

(Or)

b) Explain about sorting a data base in excel

21.a) What is meant by MS Excel? Give some uses of MS Excel.

(or)

b) What are the features of excel ?

22.a) What are the steps involved in starting excel?

(or)

b) Explain about the divisions in an excel screen.

23.a) What are the control keys used in an excel. Mention their functions

(or)

b) What are the steps involved in opening a network book?

24.a) How data is entered in the cell in an excel sheet ?

(or)

b) Explain brief about cell references & what are its types?

25.a) What are the steps in creating text , numbers & data series?

(or)

b) How to select cell ranges in an excel sheet ?

UNIT-IV

26.a) What are the Steps in formatting text on a slide. Give example

(or)

b) How to start a power point?

27.a) Explain the steps in creating power point presentation

(or)

b) How will you create a presentation using auto content wizard?

28.a) Write notes on i) inserting new slide ii) deleting a new slide iii) saving a prepared slide

(or)

b) How will you create a design template?

29.a) How will you create power point presentation using template?

(or)

b) How to create a blank presentation ?

30.a) What are the various steps involved in adding effects to layout of the existing presentation?

(or)

b) What is the purpose of action buttons?

31.a) How will you create a design template?

(or)

b) How can we print a presentation?

32.a) Write short notes on; i) title masters ii) handout masters iii) notes masters

(or)

b) How can we insert a slide?

33.a) How will you delete a slide

(or)

b) How can we print a presentation?

34.a) What is preset animation?

(or)

b) Explain the steps while inserting pictures?

35.a) What are the Steps in formatting text on a slide. Give example

(or)

b) How to start a power point

36.a) Explain the steps in creating power point presentation

(or)

b) How will you create a presentation using auto content wizard?

37.a) Write notes on i) inserting new slide ii) deleting a new slide iii) saving a prepared slide

(or)

b) How will you create a design template?

38.a) How will you create power point presentation using template?

(or)

b) How to create a blank presentation ?

39.a) What are the various steps involved in adding effects to layout of the existing presentation?

(or)

b) What is the purpose of action buttons?

40.a) How will you create a design template?

(or)

b) How can we print a presentation?

41.a) What are the features of queries ?

(or)

b) Write a note on data base

42.a) Explain the method of creating a table by entering data in MS data

(or)

b) Explain the following context a) tables b) queries c) forms

43.a) Explain sorting data in MS access

(or)

b) How to save a data ?

44.a) Write short notes on i) queries ii) forms iii) reports iv) relational database

(or)

b) Draw the opening Microsoft access screen

45.a) How will you create a database table ?

(or)

b) Explain the terms a) reports b) pages c) macros d) modules

46.a) Explain importing data from another table with diagram

(or)

b) Give the examples for the following in concepts of data base of employee a) personal file b) accounts file c) expenses record file

47.a) What is database view?

(or)

b) Expand RDBMS & its software's

48.a) How many relationships are possible between two tables or entities?

(or)

b) How to create blank data base

49.a) What do the following formatting symbols mean in format properties of fields? a) < b) > c) "null" d) @ "not entered"

(or)

b) Write a note on opening & closing a data base

50.a) What are different forms of auto forms?

(or)

b) How will you enter data in a table?

UNIT-V

51. a) Write a short note on LAN.

(or)

b) What are the types of internet applications?

52. a) Differentiate LAN and WAN.

(or)

b) What are the various web browsing softwares?

53. a) Write about various popular search engines.

(or)

b) Write a note on Internet protocols and its types.

54. a) What is WWW? Write its features.

(or)

b) Write a short note on : i) HTTP ii) URL

55. a) Differentiate Internet and Intranet.

(or)

b) What are the types of Internet connections?

Section D

(3 x 10= 30)

Answer any THREE of the following in about 400 words each:

UNIT-I

1. Explain the generation of computer in detail
2. What are the types of computer?
3. What are the advantages of an internet?
4. What are the disadvantages of an internet?
5. Explain the purpose of network connection
6. Explain the parts of the computer
7. Describe the basic computer operations
8. Explain the types of printers
9. Write the types of storage devices
10. Explain the six categories of operating system tasks

UNIT-II

1. Explain view menu
2. Write a note on tool bar
3. Explain header & footer, foot note & end note
4. What is hyperlink?
5. How to give bullets & numberings for a text?
6. Explain mail merge
7. Explain window menu
8. What is table menu & also explain its contents
9. Explain drop cap & list direction
10. Write short note on: i)Alignment ii) Indentation iii) Paragraph spacing iv) Line spacing
11. How will insert book mark in your document?

12. What is a hyperlink?
13. How will you add borders & shades to your word?
14. What are the Steps in creating mail merge?

UNIT-III

1. How will you preview a web page?
2. What is page setup?
3. Explain header & footer
4. Explain any 20 short cut keys in excel
5. Explain the steps to print a worksheet. State various statistical & financial functions of MS excel
6. Discuss the features of work sheet in MS excel
7. What are the various formatting options available in excel worksheet?
8. Write down the steps involved in saving and editing the charts.
9. How will you insert cell, rows & columns in excel?
10. How will you change the font & add border to your spread sheet?
11. How will you audit work sheets?
12. How editing is done in worksheet?
13. Explain the excel functions in brief.
14. How a macro is created in excel?
15. How formatting is done in excel?
16. What is meant by charts? Discuss some of their components
17. What are the steps involved in creating a chart?
18. How to format charts with colours?
19. How a pivot table can be created?
20. What are the auditing featured used in worksheet?

UNIT-IV

1. How will you view a presentation ?
2. Write short notes on;
 - i. Normal view
 - ii. Outline view
 - iii. Slide view
 - iv. Slide sorter view
 - v. Slide show
 - vi. Notes page view
3. How will you add animation effects to the power point you have prepared?
4. What are the ways you will enter & edit text?
5. How will you include pictures in power point presentation?
6. How will you insert a text?
7. Explain the features of slide transition in power point presentation
8. How will you select text in place holder?
9. How will you process the slide show presentation in MS power point?
10. Write short notes on:
 - i. Deleting a text
 - ii. Moving a text
 - iii. Copying a text
11. Write a note on the process of inserting slide number, time & sounds in power point presentation
12. Briefly explain formatting text ?
13. Write about alignment
14. Write the note on header & footers
15. How will you insert clip art pictures in your presentation?
16. How will you insert object in your slide?
17. Analyze the different data base objects of MS access
18. What are the steps involved in creating database with wizard?
19. Describe the different ways to create reports in access
20. How to create table using table wizard?
21. How will access be helpful for data handling in big organization? Illustrate

22. List out the steps in entering & editing data in the table with suitable examples
23. How will you create i) table using wizard ii) database using database wizard
24. Explain creation of a table using data sheet view with diagram
25. What is the maximum size of an access database & what if, it reaches the limit?
26. Write the method of creating a table using design view with diagram
27. Explain the elements of a database in detail
28. What are the properties which come under field tab?
29. Explain the different number field types in access
30. Write a note on creation of query using the query wizard?
31. List out ten field types in access & explain detail
32. What are the processes in creating a query using design view?
33. What type of security is available with a Microsoft access database?
34. Explain report wizard in detail
35. State the meaning of following field properties;
 - a) Field size
 - b) Format
 - c) Input mask
 - d) Caption
 - e) Decimal places
 - f) Default value
 - g) Validation rule
 - h) Validation text
 - i) Required
 - j) Allow zero length
 - k) Indexed
36. State the meaning of form and bring out the steps in creation of form using wizard

UNIT-V

1. Give a brief notes on evolution of internet.
2. Elucidate the offerings from internet.
3. Bring out the disadvantages of internet.

4. Brief about Worldwide Web
5. Give a brief notes on a) URL b) HTTP
6. What do you mean by online shopping how will you do the online shopping using the application.
7. What do know about android application?
8. Write a short note on Internet Protocols.
9. Differentiate LAN and WAN.
10. What are the different types of Internet Connections?

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI-628001
Question Bank

BBA - Semester V

Core X – Case Study Analysis Sub.Code:21UBAC53

(for those who joined from 2012 and above)

1. Hindustan Lever Limited is a reputed multinational company. It considers selection as an event in the total process of acquiring and developing managers. The company believes that the selection process must be consistent with other events in the total process for it to be effective. Hindustan lever has been one of the most favored companies by the prospective candidates for managerial position. The selection process of the company can be broken into three steps: such as- Screening of application forms, preliminary interview, and final selection.

In the first step the company usually receives a large number of applications for the positions advertised or through campus interview. Thereafter such applications are screened. Such applications usually contain brief information about the candidates. The selected candidates are then required to fill in a detailed application form. This form is quite elaborate and seeks factual information about the candidate and also about his attitudes and personality. A more strict screening of applications is made in this step. The company believes that to select a candidate it will not be enough to see the application forms only which may not be very reliable measure to select or reject the candidate. This calls for a brief preliminary interview to be held by company to get the best talents. So such interviews are conducted to interview as many candidates as is administratively possible.

Preliminary interview is conducted for about ten to twenty minutes usually by one manager. During this brief personal contract, some time is spent in discussing the nature of the job, the future career possibility of the applicant and the company's policy in this regard. Often a second interview is conducted before the applicant is rejected or selected for further consideration.

Final selection process is quite elaborate. This stage consists of two aspects-groups discussion and final interview. Group discussion is conducted in two stages. In the first group discussion, the chairman of the panel of selectors requests the group to select a subject which can be economic, political, social educational or even a lighter subject. The subject is decided by the group itself out of the various topics given to it. When the topic is finalized, the members of the group discuss it. In the second group discussion, a case is given. The case is distributed in advance. The evaluation of the group discussion is done by a board consisting of the personnel director, the director of the division in which the applicants have to be absorbed, a senior manager of the same division, and a senior manager of other division. The board evaluates the candidates along the following factors: Style of self-introduction by the candidate, his general knowledge and knowledge of his subject, clarity of thought and logic, lucidity of expression, tolerance of others views, persuasiveness and leadership qualities. Each selector is given a blank sheet to evaluate the candidates. He evaluates the candidates individually.

After the group discussion, personal interview is conducted by the board. On the completion of the individual interviews, the board members held discussion among themselves and then arrive at a consensus.

Questions:

1. what type of selection should be adopted by the company?
2. What is considered in time of screening the application forms?
3. What is the basic objective of the preliminary interview?
4. What should be the size of groups for final selection?
5. Why is a case distributed in advance amongst the candidates in final selection?
6. What is the information on the basis of which the personal interview is conducted?

2. Distribution management of a US company that manufactures and distributes industrial and consumer safety equipment was charged with the responsibility of developing a new plan for the company's logistics network—one that will maximize service to customers while achieving operational efficiency.

In Europe, the company's products are manufactured in Berlin, Germany; Châtillonsur Chalaronne, France; and Värnamo, Sweden. In addition, its products are sourced for the European market from other plants around the world and from external suppliers. Distribution centers at the different affiliates also served customers in their own countries and beyond. The purpose of the Establish project was to assess and verify that the company's logistics team's recommendation as described in their "Recommendation on the European Logistics Project", was optimal, identify weaknesses in their approach, and propose needed improvements. Establish obtained relevant information concerning the recommended site selection for the new distribution network and relevant information in the areas of requirements, imports/ exports, labor, etc. The company's information gathered to date and the site selection chosen by the company was then validated.

Evaluation was done according to Establish Distribution Strategy methodology, focusing on the demand analysis (volumes) and evaluation of the solution; i.e. Establish analyzed the project work already done and suggested a strategy as if it was done as a traditional project where Establish had been involved from the very beginning.

The strategy was assessed and additional analyses were compiled. Improvements were suggested and alterations in the strategy were presented. Since completion of this work, Establish has been involved in further detailing of the solution and implementation of the strategy on several markets.

3. Sweet Drinks Ltd is a drinks company whose core business is manufacturing and selling soft drinks to 80,000 outlets throughout India. The business of the company is good with annual turnover exceeding three billion of rupees. Profits are good and shareholders are often rewarded with lucrative dividends and bonuses. Four years back the company has diversified into the alcoholic drinks industry and has taken-over two small breweries located in western India. The company has also diversified into hotels with purchase of twenty-five hotels of three/four star category across the country. To its advantage the company has been able to obtain a monopoly for the sale of its soft drinks in its hotels and is beginning to establish itself as a brand name in the brewery industry. Part of the strategy of the company is to continue to purchase hotels, particular by targeting National Capital Region of Delhi where tourism is likely to pick up with the forthcoming Commonwealth Games.

The company also intends to construct a five star hotel in Gurgaon to take tax advantage announced recently by the finance ministers. Everything was going on well until recently, when a Public Interest Litigation from NGO accused the company of indulging in surrogate advertising of its brewery products. In fact the company has similar brand names for its soft drinks and brewery products. This triggered a lot of protests and demonstrations against the company. Newspapers were flooded with the articles against the company. There were also some demonstrations and some small incidents of stone pelting in a few of its hotels.

Questions:

- a. Discuss the factors related to SWOT analyses for the company?
- b. Explain how Sweet Drinks Ltd is achieving synergy?
- c. Explain the nature of diversification adopted by the company.

4. A company producing detergents for the local markets in suburban areas was facing increasing competition from branded products. The management decided to concentrate on controlling costs by recasting production and marketing processes and bargaining with suppliers to minimize cost of inputs. But there were limits of cost cutting by recasting process and optimize time utilization. Suppliers of inputs too were reluctant to yield to pressures. After a year, sales started declining fast. What else can the management do in the face of growing competition?

5. DD is the India's premier public service broadcaster with more than 1,000 transmitters covering 90% of the country's population across on estimated 70 million homes. It has more than 20,000 employees managing its metro and regional channels. Recent years have seen growing competition from many private channels numbering more than 65, and the cable and satellite operators (C & S). The C & S network reaches nearly 30million homes and is growing at a very fast rate. DD's business model is based on selling half – hour slots of commercial time to the programme producers and charging them a minimum guarantee.

For instance, the present tariff for the first 20 episodes of a programmeRs.30 lakhs plus the cost of production of the programme. In exchange the procedures get 780 seconds of commercial time that he can sell to advertisers and can generate revenue. Break-even point for procedures, at the present rates, thus is Rs.75,000 for a 10 second advertising spot. Beyond 20 episodes, the minimum guarantee is Rs.65 lakhs for which the procedures has to charge Rs.1,15,000 for a 10 second spot in order to break-even. It is at this point the advertisers face a problem – the competitive rates for a 10 second spot isRs.50,000. Procedures are possessive about buying commercial time on DD. As a result the DD's projected growth of revenue is only commercial time on DD. As a result the DD's projected growth of revenue is only 6-10% as against 50-60% for the private sector channels. Software suppliers, advertisers and audiences are deserting DD owing to its unrealistic pricing policy. DD has options before it. First, it should privates, second it should remain purely public service broadcaster and third, a middle path. The challenge seems to be exploit DD's immense potential and emerge as a formidable player in the mass media.

Questions:

- i. What is the best option, in your view, for DD?
- ii. Analyse the SWOT factors the DD has.
- iii. Why do you think that the proposed alternative is the best?

6. Dr. Sukumar inherited his father's Dey's Lab in Delhi in 1995. Till 2002, he owned 4 labs in the National Capital Region (NCR). His ambition was to turn it into a National chain. The number increased to 7 in 2003 across the country, including the acquisition of Platinum lab in Mumbai. The number is likely to go to 50 within 2 – 3 years from 21 at present. Infusion of Rs.28 crores for a 26% stake by Pharma Capital has its growth strategy. The lab with a revenue of Rs.75 crores is among top three Pathological labs in India with Atlantic (Rs.77 crores) and Pacific (Rs.55 crores). Yet its market share is only 2% of Rs.3,500 crores market. The top 3 firms command only 6% as against 40 – 45% by their counterparts in the USA. There are about 20,000 to 1,00,000 stand alone labs engaged in routine pathological business in India, with no system of mandatory licensing and registration. That is why Dr. Sukumar has not gone for acquisition or joint ventures. He does not find many existing laboratories meeting quality standards. His six labs have been accredited nationally whereon many large hospitals have not thought of accreditation.

The College of American Pathologists accreditation of Dey's lab would help it to reach clients outside India. In Dey's Lab, the bio-chemistry and blood testing equipments are sanitized every day. The bar coding and automated registration of patients do not allow any identity mix-ups. Even routine tests are conducted with highly sophisticated systems. Technical expertise enables them to carry out 1650 variety of tests. Same day reports are available for samples reaching by 3 p.m. and by 7 a.m. next day for samples from 500 collection centres located across the country. Their technicians work round the clock, unlike competitors. Home services for collection and reporting is also available. There is a huge unutilized capacity. Now it is trying to top other segments. 20% of its total business comes through its main laboratory which acts as a reference lab for many leading hospitals. New mega labs are being built to encash preclinical and multi – centre clinical trials questions.

Questions:

- i. What do you understand by the term Vision? What is the difference between 'Vision' and 'Mission'? What vision Dr. Sukumar has at the time of inheritance of Dey's lab? Has it been achieved?
- ii. For growth what business strategy has been adopted by Dr. Sukumar?
- iii. What is the marketing strategy of Dr. Sukumar to overtake its competitors?
- iv. In your opinion what could be the biggest weakness in Dr. Sukumar's business strategy?

7. Sweet Drinks Ltd is a drinks company whose core business is manufacturing and selling soft drinks to 80,000 outlets throughout India. The business of the company is good with annual

turnover exceeding three billion of rupees. Profits are good and shareholders are often rewarded with lucrative dividends and bonuses. Four years back the company has diversified into the alcoholic drinks industry and has taken-over two small breweries located in western India. The company has also diversified into hotels with purchase of twenty-five hotels of three/four star category across the country. To its advantage the company has been able to obtain a monopoly for the sale of its soft drinks in its hotels and is beginning to establish itself as a brand name in the brewery industry. Part of the strategy of the company is to continue to purchase hotels, particular by targeting National Capital Region of Delhi where tourism is likely to pick up with the forthcoming Commonwealth Games.

The company also intends to construct a five star hotel in Gurgaon to take tax advantage announced recently by the finance ministers. Everything was going on well until recently, when a Public Interest Litigation from NGO accused the company of indulging in surrogate advertising of its brewery products. In fact the company has similar brand names for its soft drinks and brewery products. This triggered a lot of protests and demonstrations against the company. Newspapers were flooded with the articles against the company. There were also some demonstrations and some small incidents of stone pelting in a few of its hotels.

Questions:

- a. Discuss the factors related to SWOT analyses for the company?
- b. Explain how Sweet Drinks Ltd is achieving synergy?
- c. Explain the nature of diversification adopted by the company.

8. Viking Sewing Machines Ltd., a large company, was engaged in manufacturing and marketing household sewing machines including electronic models and low-priced mechanical models. Sale of domestic sewing machines was declining all over the world in view of the increasing popularity of ready-made garments produced by companies using industrial sewing machines. At this stage there was a change in the ownership of Viking in 1997, when the CEO resigned and a new CEO took charge.

Under his leadership, Viking considered the following mission statements for the company:

- a. To develop, produce, market and sell sewing machines and related products which enhance the joy of creative sewing;
- b. To be a consumer-driven company ensuring growth, profitability and success by providing superior satisfaction to the consumers and our dealer partners by continuously adding value to the Viking Brand;
- c. To be recognised as the leading premier sewing machine company in the world; and d. To expand our business by creating demand for more creative uses of sewing.

Questions:

Which one of the above mission statements should the company adopt and why?

9. You supervise a group of 15 people of various specialties who were drawn from other groups in the company and brought together six months ago to work on a project. The work requires constant interaction between the various specialists in the group. They were cooperating well until two weeks ago when, on March 1, you brought up the subject of scheduling their summer vacations.

You told them to decide among themselves when each one should take his vacation, since they knew which people could be absent at the same time without disrupting the work. You gave them sheets listing the amount of vacation each was entitled to because of length of service. The periods are one week, two weeks, three weeks, and four weeks. You reminded them that company policy forbids split vacations, off-season vacations, and vacation scheduling that disrupts production. Although seniority governs vacation scheduling for hourly workers in the shop, it has never been established as a policy in salaried groups such as yours. The company has always stated that the requirements of would govern the scheduling. Since you turned over the vacation scheduling to your group, the opportunists are buzzing around making deals that will fix themselves up with the choice schedules.

People are aligning first with one faction and then with another, whichever will give them best deal. A few are refusing to deal on the grounds that their seniority or status should entitle them to first choice. All this political maneuvering is taking up time and interfering with the cooperation that is essential to the progress of the work.

Questions:

1. What should you do now?
2. How should a supervisor go about setting up policies in a newly formed group?
3. What cautions should a supervisor observe in bringing subordinates into decision making?
4. How much time should be allowed between bringing up a problem like this?
5. How can the supervisor ward off problems of conflict between status and seniority?

10. In March 2012, PepsiCo, the America-based Food and Beverages company, quietly removed the ‘SnackSmart’ labels from its food products and changed its cooking medium back to low cost palmolein from rice bran oil. Health activists opposed this move, which raised health concerns among consumers. The case also shows how the company promoted its products and why it changed the product ingredients. It raised ethical concerns about product communication and the promotion of the product.

Questions:

- » Discuss how PepsiCo promoted its snack products to increase market share.
- » Understand and discuss the ethical issues in product communication.

11. Manufacturing Industry: Well established, smooth running, multi-crore manufacturing giant, aspiring to be the "No.1" on not only business fronts but political and management horizons too. You are about to complete tenth year of service in this business house. You are happy and expecting a second promotion.

One fine day you board the bus in the morning to notice a very special silence. All the chirping, joking, gossiping has come to a stand still .You get to know that your company has

accepted the VRS recommendations by the central government. Your bus partner enquires about your age and the number of years of service.

The Company may shut down this plant possibly in the next fiscal year due to taxation and infrastructure problems. To begin with they want to cut down the manpower, beginning with managerial cadre, and then the vendors followed by the workers...

Earlier the govt did not allow job termination so easily. The recently elected govt. has a commitment of "job creation" in their electoral "Magna charta" of promises... One brainy idea has come in the form of termination of "old, experienced but sometimes difficult" employees under the guise of offering "golden shake hand" or "voluntary retirement" Contrast: On one side the country is facing grave shortage of skilled, experienced manpower on the other they are promoting schemes like VRS!!

Challenge:

- You have family of five to support.
- You have to shoulder a housing loan and a car loan.
- Having spent ten years in a particular industry it may not be easy to find a new job.
- VRS is for the employees above forty years of age and / or have completed ten years of service.
- Maximum package of Rs Five lacs is for those having completed 15 years and above.
- You can get a max. Of 2.90 Lacs. Only.
- Once you accept VRS, getting a new job may not be easy.
- If you do not opt for a VRS, possibility of transfer to a remote place or you may be asked to resign, and go without any compensation being in management cadre.

12. Industry: Retail

Melwyn Industries is one of the world's largest manufacturer and exporter of wrist watches and India's leading producer of watches sold under brand name Melwyn at exclusive Melwyn retail stores. It is a subsidiary of SANA a giant conglomerate dealing in automotive, steel and hospitality industry. Melwyn Industries was started 10 years ago and its watches gained distinct brand identities with a set of products aiming at different market segments. Currently the Melwyn umbrella has sub brands like ALPHA for executives, DIVA for women and REGAL- designer watches catering to the high-end segment.

Melwyn's Marketing Head now finds that its customer base consists mainly in the age group of above 25 years and would now like to target younger customers. The company has identified the youth segment - youth by age and youth by attitude- aged between 18 and 30 years as the core target- "They are bold, individualistic, non-conformist and go-getters,"and for them Melwyn has plans to shortly introduce fashionable watches under the sub brand RACE. Melwyn is in the process of choosing a brand ambassador and scripting a marketing strategy to emotionally connect with the aspirations of "cool and adventurous youngsters."

Questions:

1. Choose a brand ambassador for RACE.
2. Write a storyboard for a two minute advertisement on television.
3. List your choice of TV channels and other media.

13. Industry : Manufacturing

XYZ Ltd. has obtained a license for manufacturing state of the art machinery in India. The company is having a proven track record of three decades in marketing, sales, service and renovating of similar equipment imported from the collaborator.

You, Mr. A, are a talented graduate techie selected by the company at campus interview, along with a couple of your colleagues, with the assurance of getting a chance to work on a new project. This may give you a training opportunity abroad. You are happy as work, money and status are at your door! You can give better days to your retired mother and father.

You have joined after signing a bond. The HRD has given a one year training program comprising of three months each in four different departments. A week passes by and you and your colleagues find that the proposed project is yet to begin. You are required to work on nothing but recycling of old machines, from opening packages, dismantling, washing them in kerosene etc. etc. ... This work is a mismatch to your core competence.

During lunch break you meet Mr. B a post –graduate techie , who happened to join that very day, obviously on a better pay packet. At tea-break Mr. B comes to meet you to bid good –bye as he has resigned, because he finds the situation not suitable for his career. You are now shocked and worried.

What do you do now?

- Go to the top boss and discuss your fears.
- Keep quiet and wait till your bond period is over.
- Search for a better opportunity, this time get in depth information, break the bond and resign.

Questions:

1. What would you do if you are Mr. A?
2. If you are the Managing Director of XYZ Ltd, how would you handle the situation?

14. You have the opportunity to invest INR 100 billion for your company to develop a jet engine for commercial aircrafts. Development will span 5 years. The final product costing Rs. 500 million / unit could reach a sales potential, eventually of Rs. 2500 billion. The new engine can be placed in service 5 years from now, but only if it qualifies four years from now for certification clearing commercial use and only if it meets America's Federal Aviation Administration's (FAA) ever tightening standards for noise reduction. Certification also has to be obtained from India's Director General of Civil Aviation (DGCA).

There is competition from world-class manufacturers like Pratt and Whitney and Rolls Royce who are developing competing engines. If you decide to proceed with the project, you must also determine where the new engines will be produced and develop the manufacturing facilities. If you decline to proceed, your company could invest its resources elsewhere and based on its track record, get attractive returns.

Questions:

- (a) What would be your line of action?
- (b) In case of lengthy product design and development time, what kinds of risks are there?

15. The GM (Works) has problems with manufacturing budgets, meeting cost reduction targets, and dealing with new products manufacturing schedules. When an in depth interview (non-directive type) was conducted between the GM (Works) and the Chairman of the Company, the GM (Works) explained that many things are happening in the Company about which he is ignorant, particularly the preparation, new product integration, etc. He agrees to the view that the Company is interested in high-growth and high-profit, but he has never been given an Opportunity to review his own scheme of things and explain to the top management. The production culture of the company has never been assessed whereas the stringent rules are being directed by the finance and personnel departments. And sometimes, show because notices are being served to supervisors and senior employees. The Company is introducing new products without

Assessing the capability of the manufacturing system and the resources.

Questions:

(a) Under the above situation, if you are asked to work as a consultant to show the perspectives to the Board of Management, what action plans would you suggest?

(b) Does Business Process Re-engineering (BPR) help in situations like these?

16. The Assam Gas Cracker Project conceived as part of the Assam Accord signed in 1985 is yet to see the light of the day. It has been plagued by a host of problems starting from location to economic viability. Originally planned at Tengakhat, it was later shifted to a place called Lepetkata. The project is now being implemented by GAIL (a Government of India enterprise) as the lead promoter (70% share) with another public enterprise OIL (20% share) and the Government of Assam as minor partners. GAIL had to be brought in after India's largest private sector enterprise Reliance Industries backed out of the project saying that it was economically unviable. The land acquisition for the project (as of mid 2008) is yet to be completed and there is still a lot of uncertainty regarding the availability of raw materials for production. In the meantime, the project cost has spiraled many times over to INR 50 billion, which is likely to go up further.

Questions:

(a) Discuss the importance of Project Management in the light of the above situation.

(b) As a project manager employed with GAIL, what would be your line of action to see to it that the project is not delayed any further?

(c) Why do projects suffer from time and cost overruns?

17. Jyoti had given her branded laptop for servicing to an authorized service centre to repair a damaged USB port. The laptop was to be given the next day, but when she went to take it that day, she was told that it was not ready. Jyoti had to wait for four more days before she was finally given her laptop. Because she was in a hurry while receiving the repaired laptop, she did not check the workings of the laptop at that time. On reaching home and switching on the laptop, she noticed that that LCD display had become problematic. The next day, she again went to the service centre and reported the display problem. Jyoti was aghast when she was informed that as she had signed the delivery documents, the service centre cannot take responsibility for the display problem. She was asked to fill up a fresh service requisition form to get the problem

rectified and further was told that all expenses incurred in rectifying the problem had to be paid by her.

Questions:

- (a) Do you think that After Sales Service through a third party is a cause for concern? Justify.
- (b) There seems to be a breach of trust in the given caselet. How is breach of trust related to quality of service?
- (c) In the context of the given caselet, formulate a Quality Service Policy to ensure customer satisfaction.

18. Mr. Nathan, Sales Manager of Apex Electrical Co. Ltd. had just received a proposal from his Regional Manager at Bangalore for opening a sub-office in Madras and was considering what would be the best decision in the company's short run as well as long run interest. The company was in the business of manufacturing and marketing electric motors of a wide range of horse power that could be used as a prime mover in numerous applications. The company's factory and head office were situated in Bombay and it had its branch offices at New Delhi, Calcutta and Bangalore, each headed by a Regional Manager.

The Regional Office at Bangalore was responsible for sales in Karnataka, Tamil Nadu and Kerala. The company also maintained a godown at Bangalore which was used as the stocking centre for feeding sales in the complete region. The company's distribution network had grown over several years and as such there was no one rule by which the arrangements could be explained. In Karnataka, due to the proximity of the Regional Headquarters, the distribution network was closely controlled by the Regional Office. Company had several dealers covering the State and they all purchased goods directly from the Regional Office. All the dealers got a fixed percentage of discount. The ultimate prices to the consumers were fixed by the company. Each dealer covered a specific area which was generally one to several districts and the company discouraged one dealer interfering in other's territory. However, in main cities of Bangalore and Mysore, there were more than one dealer who collectively covered the sales in the city. The company salesmen regularly contacted the dealers and the office maintained good marketing information.

Questions:

- 1. What decision would you take if you were in place of Mr. Nathan?
- 2. Do you feel the proposal of a new sub-office is economically justified against the stated policy of the company? If yes, why? If no, then how could it be made justifiable?

19. In September 1990, Mr. Sarin, the Marketing Manager of Deepa Products (P) Limited was wondering what marketing and product positioning strategy the company should follow for launching their two new brands of toothpaste. Trust Night and Trust Regular in a market which was becoming highly competitive.

Deepa Products (P) Ltd. was one of the successful manufacturers of various types of packaging materials for both industrial and consumer products. Established in 1960, the company has shown substantial growth over the years. Much of the company's growth was attributed to the high quality of its products and also the systematic manner in which its marketing decisions were made. In 1990, keeping in view the growing market for consumer goods, the top management of the company decided to diversify into new consumer products

areas. In the first instance the company thought of entering into the toothpaste market. Depending upon their success in the market, the company would decide their expansion plans into other areas of consumer goods sector.

The company chose to enter toothpaste market simply because the market for toothpaste was growing fast almost by 15 to 20% in India and it provided enough profit opportunities. The market was dominated only by a very few players. Further Mr. Sarin felt that there was scope for capturing a significant market share in the growing toothpaste market, since the company's products had some unique features to meet the emerging new market segments.

Questions

1. What marketing strategy should be designed by Mr. Sarin to be able to achieve the targeted 5% market share ?
2. How should Deepa Products (P) Ltd. position Trust Regular and Trust Night to induce customers to buy it? What should be the key benefits of their toothpastes?
3. Should the company price its products economically, or should it aim for premium pricing?

20. A.N. Iron & Steel Company is a reputed concern engaged in the manufacture and sale of iron and steel for the last 25 years. The company has a big mine which is mechanised and the mine meets its input requirements of iron ore. The mining sites and crushing units are located at the hill top, and the beneficiation plant is located a few kilometres away in the valley.

The company has a number of light and heavy vehicles. There are two garages — the one at the hill top is much bigger than the other one in the valley. The garage on the hill top has two main sections, Light Vehicles (LV) and Heavy Vehicles (HV) Sections, and there was also a small Autoelectric Shop in one room attached to the LV Section. The Autoelectric Shop takes care of all the electrical jobs of the garage.

The hill top garage is under the charge of a Garage Manager who has under him one Assistant Manager and two Chargemen, one looking after the LV section and the other the HV Section. Bhushan, aged 35 years, was a Helper in the Autoelectric Shop. He joined the company as Khalasi when he was studying in Standard VIII 20 years ago. He was a sincere and devoted worker and soon picked up the different kinds of jobs that were being done by the Autoelectrician and his Helper. Previously, Bhushan was working as a Helper to Lalit, the Autoelectrician in the shop. But as Bhushan was quite competent in his job and Lalit could not manage Bhushan effectively, a working arrangement was evolved whereby both Lalit and Bhushan worked independently.

Two months ago, Lalit was transferred.

Questions: `

1. What is the main problem in the case ?
2. Examine Bhushan`s behaviour, explaining possible causes of his dissatisfaction.
3. Comment on the state of relationship between Anil and Bhushan.

21. A hospital was having financial problems. Occupancy was low, equipment costs were higher than expected, and the cost of supplies had increased. At the year`s end, a rumour began to circulate that there would be no salary raises and that personnel reductions were possible. The hospital`s five hundred employees were shocked by the

extent of the financial problems indicated by the rumors. They began to ask supervisors, "Does top-level management agree with this rumour or not?"

The managers made no comment, refusing to confirm or deny the rumour. The official communication from management was, "The matter is under study". Most employees believed there would be no pay increases and, as a result, their morale was getting low.

When management announced that there would be no layoffs and that there would be a 2-percent pay raise, the employees were delighted. Management was pleased with the employees' reaction, since six months before there were demands for a 10-percent pay increase and reduction of workloads

Questions:

1. Was the employee reaction to the 2-percent pay raise more favourable than it would have been if the rumour had not started?
2. Should management have taken action when the rumour started circulating?

22. Amrit Electrical is a family owned company of approximately 250 employees. Mr. Rajesh Khaitan recently took over as president of the company. A short time after joining the company, he, began to following a discussion with the HR director that the pay of the salaried employees was very much a matter of individual bargaining. Factory workers were not a part of the problem because they were unionized and their wages were set by collective bargaining. An examination of the salaried payroll showed that there were 75 employees ranging in pay from that of the president to that of receptionist. A closer examination showed that 20 of the salaried employees were females. Five of these were front time factory supervisors and one was the HR director. The other fourteen were non-management.

This examination also showed that the HR director was underpaid and that the five female supervisors were paid somewhat less than any of the male supervisors. However, there were no similar supervisory jobs in which there were both male and female supervisors. When questioned, the HR director said that she thought that the female supervisors were paid at a lower rate mainly because they were women and because they supervised less skilled employees than did the male supervisors. However, Mr. Khaitan was not convinced that this was true. He decided to hire a compensation consultant to help him. Together they decided that all 75 salaried jobs should be in the same job evaluation cluster, that a modified job evaluation method should be used and that the job descriptions recently completed by the HR director were correct and usable in the study, the job evaluation also showed that the HR director and the five female supervisors were being underpaid in comparison with the male employees.

Mr. Khaitan was not sure, what to do. If he gave these four female employees an immediate salary increase which may large enough to bring them upto where they should be, he was afraid the male supervisors could be upset and the female supervisors might comprehend the situation and demand arrears of pay. The Hr director agreed to take a sizeable salary increase with the no arrears of pay. So this part of the problem was solved. Mr. Khaitan believed that he had three choices relative to the female supervisors: (i) To gradually increase their salaries (ii) to increase their salaries immediately (iii) to do nothing.

Questions:

1. What would you do if you were Mr. Khaitan?
2. How do you think the company got into a situation like this in the first place?

23. A large, well known Canadian company had found full depreciation of the equipment which was used to make specialized automobile companies for north-American automobile producers. Although the equipment had been well maintained and worked well, it required to be handled by a large number of laborers. The result was the high labour costs that made the company's brake assemblies, manufacturer, and related products unprofitable. A decision was made to replace the equipment with more highly automated, numerically controlled machine tools. Since the economic value of the old equipment exceeded its value as scrap, the equipment was shipped to the company's Brazilian operations, where labour costs were considerable lower.

Upon arrival and after the setting up of a new facility, the company received numerous profitable orders from Brazil's rapidly growing automobile industry. Though the labour hours per product remained about the same the lower Brazilian labour rates allowed the new facility to be profitable. Soon a second shift was added and with it problems began.

The equipment began to experience a growing "downtime" because of machine failures and quality- particularly on part dimensions- declined dramatically. At a staff meeting the Brazilian plant manager met his staff, including several industrial engineers who had been trained in Canada and the United States. The engineers argued that the problems were almost certainly caused by maintenance since the machinery had worked well in Canada and initially in Brazil. The HR director agreed that it was perhaps the question of maintenance of the old machinery but he also noted that many of the on-machine instructions and maintenance manuals had not been translated into Portuguese. He also observed that the problems began after the second shift was hired.

Questions:

1. From the discussion of job analysis information and job design, what actions would you recommend to HR department?
2. Given the problems associated with the second shift, what differences would you look for between first shift and second shift workers?
3. Since the Canadian workers had considerable experience with the equipment but the workers particularly in second shift in Brazil had very little experience, what implications do you see for the job design?

24. Berkely Investments is a reputed finance company having 15 branches in different part of the country. In the home office there are more than 200 employees. This company has a performance rating under which the employees are rated at six months intervals by a committee of two executives. Graphic scales have been used as means of appraisal. The qualities considered are responsibility, initiative, and interest in work, leadership potential, co-operative attitude and community activity. After the performance is evaluated, the ratings are discussed with the concerned employees by their immediate boss who counsels them. The ratings aroused to influence promotions and salary adjustments the employees and also as a criterion for assigning further rating for them.

Recently three employees of the company called on the company's president to express their dissatisfaction with the ratings they had received. Their scores and composite ratings had been discussed with them. Because their ratings were comparatively low, they had been denied annual increments in salary. Approximately, two thirds of all the employees received such increments. The aggrieved employees argued that their ratings did not accurately represent their qualifications or performance. They insisted that "community activity" was not actually a part of their job and that what they do off the job is none of the company's business. They expressed their opinion that employees should organize union and insist that salary increase be automatic.

The threat of a union caused concern to the officers of the company. This particular experience convinced the top officers that ratings may represent a serious hazard to satisfactory relationship with employees. Even the chief executive finds that performance appraisal is a dangerous source of friction and its hazards outweigh its values; so it should be discontinued altogether.

Questions:

1. How far do you agree with the management that performance appraisal should be discontinued?
2. If you were the HR manager, how would you tackle the situation?
3. What modifications would you suggest in the performance appraisal system of the company?

25. Sumit Sethi was tired and dejected. His company's reputation and profits were at stake. Sumit had believed Gopal to be a promising employee; so he had recently promoted him to the top position in operations but Gopal's apathetic behaviour had now resulted in a major crisis for Reliable Couriers. Sumit was a bright student, topping his class in school. He always wanted to start his own business but unfortunately his father passed away in his last year of commerce graduation and Sumit was held back by family responsibilities.

After his graduation he started his career as a Marketing Executive in a well known logistics company. His hard work, dedication and people skills led to quick promotions and within four years he rose to the position of Regional Manager. In the meantime he had taken good care of his family - his younger brother was now in a good engineering college and his only sister married and settled. Two years ago he saw a good business opportunity in courier services and started Reliable Courier. Besides Nationwide wide delivery services, Reliable Courier had same day intra city delivery services through bike messengers and scheduled pickup and delivery services for major clients . Sumeet had recruited Gopal Verma a fresh graduate from a low income family, as his assistant to manage routine office work. Sumit found Gopal hardworking and enthusiastic, showing keen interest in learning other aspects of the business.

Sumit's business strategy was focused on institutional business and he impressed his corporate clients by excellent services. Reliable core strength was its streamlined operations - the key person behind this was dynamic Chief Operations Manager Vineet Seth. Reliable had now become a well known player in Courier services and had grown from a staff of twenty to three hundred. All the old employees were rewarded with promotions and Gopal was made the Assistant Operations Manager. Last month Reliable had won a major contract of servicing 500 branches of Indian National Bank (INB). This was a critical project. It would double Reliable profit this year and if serviced well could lead to similar contracts with other major banks. Things were moving satisfactorily but just then a personal urgency required Vineet Seth to move to Australia and so he resigned. This came at a time when Sumit was extremely busy planning a new premium service called Next Flight Out which

could be a first in India for achieving same day deliveries across India for important packages. Sumit was continuously travelling to meet and workout collaboration with a few airlines. Sumit promoted Gopal as Chief Operations Manager with a good raise and perks-Gopal had already worked as Assistant Manager Operations; Sumit also thought that instead of selecting an outside candidate for the top operations post, selecting Gopal would enthuse other employees as it supported the scope for good performers getting the top job.

Soon after the promotion, Gopal began having personal problems including financial ones. Sumit asked his Accountant to give Gopal a personal loan which he could pay back in installments from his salary. Gopal was also lax in the operations reporting and sometimes Sumit was unaware of his whereabouts. Gopal had cited personal problems when Sumit had asked him. Yesterday Sumit had received a complaint from the Head Office of INB that an urgent packet was still undelivered and that there were many instances in the last month of important packages not delivered on time and when contacted Gopal was not responding satisfactorily to their queries. Sumit was shocked but promised the INB officer that he would resolve their problems immediately. Sumit soon discovered that there were many other operations issues lying unattended. Sumit terminated Gopal's employment. As Sumit now tries to pacify his major client, he also wonders if he could have done anything earlier to help Gopal manage the responsibilities of his job and was it fair on his part to terminate someone who badly needed an income?

Questions:

Give three reasons for Gopal's failure as Chief Operations Manager?

ST.MARY'S COLLEGE (AUTONOMOUS) – THOOTHUKUDI

Question Bank

Semester VI - B.B.A

Core XI – Financial Management

Sub.Code:21UBAC61

Time: 3 hours

Max Marks: 75

Section A

(10x1=10)

Choose the following correct answer:

UNIT I:

1. _____ is a life blood of a business.
a) **Finance** b) circulation c) operation d) Decisions
2. The term profit is _____.
a) Definite b) Indefinite c) **vague** d) valid
3. _____ is necessary to maintain the borrowings at a reasonable level
a) **conservatism** b) flexibility c) solvency d) profitability
4. Rate of growth in sales also influences the _____.
a) **capital structure** b) Finance structure c) control d) solvency

a) efficiency b) natural goal c) **profit maximisation** d) generation of funds
6. _____ are decisions concerning the financial matters of a firm.
a) Investment decisions b) Dividend decisions c) long term decisions d) **Financing decisions**
7. _____ is a crucial function.
a) **cash management** b) Receivable management c) Finance management
d) Investment
8. The traditional approach is also called _____ approach.
a) Net income approach b) Net operating c) Millers d) **Intermediate**
9. _____ depends on the degree of risk assumed by investors .
a) Stability b) **cost of capital** c) Financial leverage d) capital structure
10. _____ are cost incurred for the issue of shares
a) capital market conditions b) **Floatation costs** c) Legal requirement d) corporate tax rate

UNIT II:

1. _____ are the most common source of finance.
a) Preference shares **b) Equality shares** c) Reserves and surplus d) Share capital
2. Net working capital may be _____.
a) **Positive** b) Negative c) Both be a & b d) None of these
3. _____ capital required for purchase of fixed assets.
a) **Fixed** b) Working c) Non- working d) Networking
4. _____ debentures is also known as naked debentures.
a) Secured **b) Unsecured** c) Convertible d) Non- convertible
5. _____ is a very important features of equity shares.
a) permanent capital b) control c) Right to dividend **d) Limited liability**
6. _____ are repaid after the stipulated period .
a) **Redeemable preference share** b) cumulative preference c) participating preference share d) Non convertible preference share
7. _____ working capital makes management complacent.
a) Gross **b) Excessive** c) Inadequate d) Net working
8. Change in price level is also affect the _____ recruitment.
a) Gross working capital **b) working capital** c) Fixed capital d) variable working capital
9. _____ is he most important source for raising permanent capital.
a) **Issue of shares** b) public deposit c) Issue of debentures d) self
10. _____ approach is to match the needs with appropriate sources.
a) conservative b) Aggressive **c) Hedging** d) Financial
11. _____ are also known as deep discount bounds.
a) zero interest bond **b) zero coupon bonds** c) secured bond d) Inserted bonds
12. secured debentures are also known as _____.
a) Bearer debentures b) convertible debentures c) Registered debentures
d) Mortgage debentures
13. _____ are undistributed profit used to finance the requirement of the business.
a) Dividend **b) Retained earning** c) Shares d) Debentures

14. A _____ is drawn based on mutual agreement.

- a) security b) conversion clause **c) repayment schedule** d) payment schedule

15. _____ is strengthens the financial position.

- a) Stable dividend b) Value of share c) Growth facility **d) Earning capacity**

UNIT III:

1. The word budget is derived from the _____ word.

- a) Latin **b) French** c) Greek d) Chinese

2. _____ budgets are generally for one or two years and are in the form of monetary terms.

- a) Short term** b) Long term c) Current d) Master

3. _____ is the document which lays down the details of the budgeting organization and procedures.

- a) Budget committee **b) Budget manual** c) Budget procedure d) Budget

4. Sales budget is a _____ .

- a) functional budget** b) expenditure budget c) master budget d) fixed budget.

5. A budget which is prepared for the entire organisation is called _____ budget.

- a) Short term b) Long term c) Current **d) Master**

6. The budget that can be prepared for different levels of activity is termed as _____ budget.

- a) fixed **b) flexible** c) current d) master

7. Which of the following is an approximation or guess?

- a) Budget** b) Estimate c) Forecast d) Plan

8. The budget which is prepared for few months or weeks is called _____ budget.

- a) Short term b) Long term **c) Current** d) Master

9. Which of the following is not a functional budget?

- a) **Flexible budget** b) Purchase budget c) Sales budget d) Production budget

10. Pick the odd one out:

- a) Principal factor b) Key factor **c) Budget factor** d) Governing factor

UNIT IV:

1. _____ is central concept in financial management.

- a) Historical cost b) future cost **c) cost of capital** d) specific cost
2. _____ is the cost of a particular source of capital.
- a) Future cost b) Composite cost c) Marginal cost **d) specific cost**
3. _____ cost is cost estimated for future.
- a) Future** b) Historical c) Composite d) Specific
4. _____ cost of capital is quite useful in this regard
- a) Average b) Implicit c) Specific **d) Marginal**
5. _____ is also called the internal rate of return.
- a) Specific cost b) Average cost **c) Explicit cost** d) Historical cost
6. Floating rate debt is also known as _____.
- a) variable rate debt** b) semi variable rate debt c) fixed rate debt d) variable inflation rate debt
7. _____ is more relevant in making investment decisions.
- a) specific cost **b) marginal cost** c) composite cost d) Explicit cost
8. _____ is the cost incurred in the past in past in procuring funds for the firm.
- a) Future cost **b) Historical cost** c) Implicit cost d) composite cost
9. _____ is the weighted average of the costs of different sources.
- a) Explicit cost b) Historical cost c) Implicit cost **d) Average cost**
10. _____ debt refers to debt which is to be redeemed after the stipulated period.
- a) Redeemable** b) Irredeemable c) cost of existing d) Average value
11. _____ is approximated by the current market yield of the debt.
- a) Redeemable debt b) Irredeemable **c) cost of debt** d) Average value debt
12. A _____ of dividend is payable on preference shares.
- a) Fixed rate** b) variable rate c) semi variable d) Redeemable rate
13. _____ method is also called earning model.
- a) Dividend price method b) dividend yield c) Realised yield **d) Earnings prince**
14. The _____ is the return foregone by shareholders.
- a) cost of equity capital **b) cost of retained earning** c) cost of preference share capital d) cost of capital
15. Weighted average cost of capital is also known as _____ of capital.

- a) specific cost b) variable cost **c) composite cost** d) explicit cost

UNIT V:

1. _____ method ignores the fact that profits can be reinvested.
a) Return **b) Accounting** c) pay back policy d) cash flow
2. _____ is usually decided on the basis of the cost of capital.
a) Fixed rate b) Variable rate c) Rate of return **d) cut off rate**
3. Capital budgeting decisions are divided into _____ types.
a) **3** b) 4 c) 5 d) 6
4. The first step in the process of capital budgeting is the conception of a _____ making idea.
a) **Profit** b) Loss c) Decisions d) Investment
5. _____ decisions are vital to any organisation.
a) capital expenditure **b) capital budgeting** c) capital Investment d) capital financing
6. _____ method can be improved to consider the time value of money.
a) Return b) pay back policy **c) Discounted pay back** d) Average rate
7. _____ is the cash outflow in the period in which an asset is purchased.
a) Working capital **b) Initial investment** c) Investment allowed d) Annual cash inflow
8. _____ may arise due to external factors constraints imposed by the management.
a) capital budgeting b) capital expenditure c) capital investment **d) capital rationing**
9. _____ is necessary in order to avoid unnecessary delays and cost over return.
a) Innovation **b) Implementation** c) Imitation d) Expansion
10. The replacement and modernization decisions are called _____ decisions.
a) Expansion b) Investment c) Diversification **d) cost reduction**
11. The expansion and diversification decisions are called _____ decisions.
a) Investment b) capital budgeting c) cost reduction **d) Revenue expansion**
12. The last stage in the process of capital budgeting is _____.
a) Implementation b) Project evaluation c) Final approval **d) Performance review**
13. The third step in the process of capital budgeting is _____.

- a) Implementation b) Final approval **c) project evaluation** d) Performance review
14. Capital investment proposals are of _____ types.
- a) 4 b) 5 **c) 3** d) 6
15. _____ is allowed in order to encourage capital investment in machinery and equipment.
- a) Initial investment b) Working capital **c) Investment allowance** d) Tax effects

Section B

(5x2=10)

Answer any FIVE of the following in about 50 words each:

UNIT – I:

1. Define financial management.
2. List out the objectives of financial management.
3. What do you mean by profit maximisation /
4. What are the advantages of wealth maximisation?
5. Describe wealth maximisation.
6. What are the three main categories of financial decisions?
7. What do you mean by long term investment decision?
8. What are the two main approaches of financial management?
9. List out any 2 limitations of traditional approach.
10. What are the functions of financial management under traditional approach.
11. Explain the term “Mergers & Acquisitions.”
12. What are the aims of finance function?
13. What do you mean by treasurer? List out its functions.
14. Explain the term “Controller” and list out its functions.
15. Define capital structure.
16. What are all the most important factors which determine the capital structure.
17. List out the features of capital structure.
18. Briefly explain the term “ Modigliani – Miller” approach.
19. Differentiate capitalisation and capital structure.
- 20 Differentiate financial structure and capital structure.

UNIT – II:

1. Explain the term “long term finance”.
2. What do you mean by equity shares.
3. List out the salient features of equity shares.
4. Write down the points included in merits of equity shares.
5. What are the limitations of equity shares.
6. What do you mean by preference shares.
7. List out the features of preference shares.
8. Write any 4 points on merits of preference shares.
9. List out the type of preference shares.
10. What do you mean by non – comestible preference shares.
11. What do you mean by debentures.
12. What are the features of debentures.
13. Write short notes on zero coupon bonds.
14. Write any 2 difference between shares & debentures.
15. List out the merits & demerits of debentures.
16. Explain the concept of working capital.
17. Mention any 4 items which included in current assets.
18. What are the classifications of working capital.
19. Write down the objectives of working capital.
20. What are the purpose of preparing the working capital?
21. List out the importance of working capital.
22. State the different sources of working capital available to the firm.

UNIT – III:

1. Define the term Budget.
2. Define the term budgetary control.
3. What is the difference between budget and budgeting?
4. What are the steps or characteristics of a good budgetary control system?
5. Essentials of budgetary control:

6. What is meant by Budget manual? What are its contents?
7. Explain Budget period:
8. What are the functions of a budget officer?
9. Briefly explain the duties of a Budget committee.
10. What do you mean by the term principal Budget factor?
11. What is a cash budget?
12. What is master Budget?
13. Explain the term control ratio.
14. Explain performance Budgeting.
15. What are the differences between flexible Budget and Fixed Budget?

UNIT – IV:

1. What is cost of capital ?
2. What are the features of cost of capital ?
3. List out the importance of cost of capital.
4. Differentiate explicit cost and implicit cost.
5. What are the 2 methods to compute the overall cost of capital of a firm?
6. What do you mean by the term 'Irredeemable debt'?
7. Explain the term "cost of existing debt".
8. What is average value of debt?
9. How will you compute net proceeds in the case of issuing at par, premium & discount?
10. What do you mean by "Floating rate debt"?

UNIT - V :

1. Define capital budgeting.
2. What are the examples of capital expenditure.
3. List out need of capital budgeting.
4. What are the types of capital expenditure decisions?
5. Write short notes on project evaluation.
6. What do you mean by pay – back period method.

7. Mention any 2 merits 2 demerits of pay – back period method.
8. What do you mean by average rate of return method?
9. Write the formula for computing ARR.?
10. How to calculate rate of return on average investment?
11. What are the 3 discounted cash flow methods for evaluating capital investment?

Section-c

Answer the following by choosing either a (or) b:

(5x5=25)

UNIT-I:

1.a) “ The objective of wealth maximisation is superior to profit maximisation”- Do you agree?

(OR)

b) What are the basic financial decisions? How do they involve risk-return trade off?

2.a) Investment, dividend and financing decisions are interrelated-comment.

(OR)

b) Explain the approaches to financial management.

3.a) Discuss in detail, the functions of financial management.

(OR)

b) What is finance function? What are it's aims?

4.a) Define capital structure. Explain it's significance.

(OR)

b) Write notes on:

a) Point of indifference. b) Capitalisation

c) Financial structure.

5.a) Discuss the Net Income and Net Operating Income approaches to capital structure.

(OR)

b) Explain the traditional approach to capital structure.

UNIT-II:

1.a) What are the different sources of long term finance? State the merits of each source.

(OR)

b) Explain the features of equity shares as a source of finance. What are its limitations?

2.a) What are preference shares? Explain the different types of preference shares?

(OR)

b) What is a debenture ? Discuss the different types of debenture?

3 a) Between equity shares and debentures which is profitable for raising additional long – term capital for a manufacturing company and why?

(OR)

b) Examine the merits and demits of the following instruments of raising finance.

a) Redeemable preference shares

b) Debentures

4a) Distinguish between equity shares and debentures

(OR)

b) Write short notes on :

1) Zero interest bonds

2) Zero coupon bonds

3) Convertible bonds

5.) What do you understand by working capital ? Explain the various types of working capital.

(OR)

b) Discuss the advantages of working capital for a manufacturing concern.

6.a) Explain the factors which determine the working capital needs of a firm.

(OR)

b) What are the different methods of forecasting working capital requirement of a business?

UNIT III:

1. a) Bring out the limitations of budgetary control.

(or)

b) From the following particulars, prepare a Production Budget of a Company for the year ended June 30, 2012.

Product	Sales (Units) (as per sales budgets)	Estimated Stock (units)	
		1 July 2011	30 June 2012
A	1,50,000	14,000	15,000
B	1,00,000	5,000	14,500

C	70,000	8,000	8,000
---	--------	-------	-------

2.a) From the following figures prepare material purchase budget for January.

	A	B	C	D
Estimated stock 1 st January	16,000	6,000	24,000	2,000
Estimated stock 31 st Jan	20,000	8,000	28,000	4,000
Consumption	1,20,000	44,000	1,32,000	36,000
Standard price per unit (Rs.)	25	5	15	10

(or)

b). Bruce plans to sell 1,08,000 units of a product in January 2008, 1,20,000 units in February, 1,32,000 units in March, 1,56,000 units in April and 1,38,000 units in May. At the beginning of the current year, there are 18,000 units of the product in stock. At the end of each month, the company plans to have an inventory equal to one-sixth of the sales for the next month.

Prepare production budget for the period January to April 2008, showing how many units must be produced.

3.a) Prepare a flexible budget for overheads on the basis of the following data. Ascertain the overheads rates at 50%, 60 %, and 70% capacity.

Particulars	At 60% capacity (Rs)
Variable overheads:	
Indirect material	6,000
Indirect labor	18,000
Semi – variable overheads:	
Electricity (40% fixed, 60% Variable)	30,000
Repairs (80% fixed, 20% Variable)	3,000
Fixed overheads:	
Depreciation	16,500
Insurance	4,500
Salaries	15,000
Total overheads	93,000
Estimated direct labour hours	1,86,000

(or)

b) Differentiate between fixed budget flexible budget.

- 4.a) A firm has a contract to supply 15,000 units of its only product during 2007.
The following were budgeted expenses and revenues.

Material	Rs. 10 per unit
Wages	Rs. 8 per unit
Work expenses (Fixed)	Rs. 50,000
Work expenses (Variable)	Rs. 6 per unit
General expenses (all Fixed)	Rs. 75,000

Profit is 20 % on sale price. Prepare a budget for 2007 showing the cost and profit

(or).

- b). From the following particulars, prepare a Sales Budget of ABC Ltd., for the year 2008 giving the sales for each quarter separately.

	Forecasted sales (units)	Selling price per unit (Rs)
I Quarter	1,000	10
II Quarter	1,200	11
III Quarter	1,100	10
IV Quarter	1,500	12

- 5.a) Draw material procurement budget (quantitative) from the following information:

Estimated sales of a product 40,000 units. Each unit of the product requires 3 units of material A and 5 units of material B.

Estimated opening balance at the commencement of the next year:

Finished Product	5,000	units
Material A	12,000	units
Material B	20,000	units

Materials on order

Material A	7,000	units
Material B	11,000	units

The desirable closing balance at the end of the next year:

Finished Product	7,000	units
Material A	15,000	units
Material B	25,000	units

Material on order

Material A 8,000 units

Material B 10,000 units

(or)

b) A company requires to calculate and present the budget for the next year from the following information:

Sales	Rs. 7,00,000
Direct material cost	40% of Sales
Direct wages 10 workers at	Rs. 200 per month
Factory overheads:	
Indirect labour:	
Works manager	Rs. 700 per month
Foreman	Rs. 200 per month
Stores and spares	3% on sales
Depreciation on machinery	Rs. 10,000
Lights and power	Rs. 2,000
Other sundries	10% on direct wages
Administration selling and distribution	Rs. 14,000 per year
Repairs and maintenance	Rs. 7,000.

UNIT – IV

1.a) What do you mean by cost of capital ? Explain its significance.

(Or)

b) Distinguish between:

(I) Specific cost and Composite cost

(ii) Average cost and Marginal cost

2.a) Why debit regarded as the cheapest source of finance for a profit making firm?

(Or)

b) Cost of preference capital is generally lower than cost of equity. state the reasons?

3. a) Sri Ganesh Industries Ltd issue 5,000 12% debentures of Rs.100 each at par. The tax rate is 40%. Calculate before tax and after tax cost of debt.

(or)

b) Victory Ltd issued Rs.2,00,000 9% debentures at a premium of 10%.The floatation costs (issue expenses) were 2%.The tax rate is 40%.Compute the cost of debt before tax and after tax.

4.a) Jayasurya Ltd. Issued Rs.60,000 10% debentures at a discount of 5%.The issue expenses were Rs.2,000.Assuming a tax rate of 40%,compute the before tax and after tax cost of debt.

(or)

b) A firm issue debentures of Rs.1,00,000 and realises Rs.98,000 after allowing 2% commission to brokers. The debentures carry an interest rate of 10%. The debentures are due for maturity at the end of the 10th year.

5.a) Sunrise Ltd issue Rs.50,00,000 12% redeemable debentures at a discount of 10%. The floatation cost are 4% and the debentures are redeemable after five years. Calculate before tax and after tax cost of debt assuming a tax rate of 40%.

(or)

b) A company issues Rs.10,00,000, 13%debentures at a discount of 5%.The debentures are redeemable after 5 years at a premium of 5%.Calucate before tax and after tax cost of debt, if the tax rate is 50%.

6.a) A five year Rs.100 debenture can be sold for a net price of Rs.97.50.The coupon rate of interest is 14% p.a. and the debenture will be redeemed at 5% premium. The tax rate is 50%. Compute the after tax cost of debenture.

(or)

b) A company has 11% debentures of Rs.100 each outstanding on December 31,2004 to be redeemed on December 31,2009.If new debentures could be issued in the beginning of 2005 at a net realisable price of Rs.90,compute the current cost of existing debt, assuming a tax rate of 40%.

7.a) A company issues 20,000 10% shares of Rs.100 each. The issue expenses were Rs.2per share. Calculate the cost of preference share capital if the shares are issued a) at par b) at a premium of 10% c) at a discount of 5%

(or)

b) A Ltd. Issues 10,000 9% preference shares of Rs.100 each. The shares are redeemable after 10 years at a premium of 5% Flotation costs are 2%

Calculate the effective cost of redeemable preference share capital.

8.a) Jay ant Ltd. Issued 5,000 10% preference shares of Rs.100 each at a premium of 10%. The shares are redeemable after 10 years. Floatation costs are 4%

Calculate the effective cost or redeemable preference capital

(or)

b) B Ltd. Issues 10,000 10% preference shares of Rs.100 each at a discount of 5%.The shares are redeemable after ten years and the issue expenses are 4%

Calculate the effective cost of redeemable preference share capital.

9.a) A company issues one core equity shares of Rs.100 each at a premium of 10%. The company has been consistently paying a dividend of 18 per cent for the past five years. It is expected to maintain the dividend in future also.

- a. Computer the cost of equity capital.
- b. What will be the cost of equity capital if the market price of the share is Rs.200 ?

(or)

b) An and Ltd. Offer for public subscription equity shares of Rs.10 each at a premium of 10%.The company pays an underwriting commission of 5% on the issue price. The equity shareholders expect a dividend of 15%.

- a) Calculate the cost of equity capital.
- b) Calculate the cost of equity capital, if the market price of the share is Rs.20

10,a) The market price of an equity share of G Ltd. Is Rs.80.The dividend expected a year hence is Rs.1.60 per share. The Shareholders anticipate a growth of 7% in dividends.

Calculate the cost of equity capital.

(or)

b)A company's share is quoted in the market at Rs.40 and the expected dividend for the next year is Rs.2 per share. Thereafter, the investors expect a growth rate of 5% p.a.

- a) Calculate the cost of equity capital.
- b) Calculate the market price per share if the expected growth rate is 6% p.a.
- c) Calculate the market price per share if the dividend of Rs.2 is maintained ,the cost of equity is 9% and the expected growth in dividends is 6% p.a.

UNIT – V

1.a) What do you understand by capital budgeting ? Examine its need 2 importance.

(or)

b)How capital expenditure decisions are classified?

2.a) Briefly explain the process of capital budgeting.

(or)

b) What are the factors which influence capital expenditure decisions.

3.a) Explain the various methods of evaluating capital expenditure decisions.

(or)

b) What is pay-back period ? what are its merits & demerits.

4.a) A project cost Rs 5,00,000 and yields annually a profit of Rs.80,000 after depreciation at 12% p.a. but before tax of 50%. Calculate payback period

(OR).

b) There are two projects A and B. The cost of the project is Rs.30,000 in each case. The cash inflows are as under:

Cash inflows

Year	Project A	Project B
1	10000	2000
2	10000	4000
3	10000	24000

5. a) An organization has a cut off payback period of 3 years and 6 months. Advice the company with regard to the following exclusive investments.

Project	Total Investment Rs	Annual Cash inflow Rs	Period of Inflow Rs
A	50000	15000	4 Years
B	80000	24000	5 Years
C	80000	20000	6 Years
D	40000	12000	5 Years
E	10000	1800	7 Years

(OR)

b) A company proposing to expand its production can go in either for an automatic machine costing Rs 2,24,000 with an estimated life of 5 1/2 years or an ordinary machine costing Rs.60,000 having an estimated life of 8 years. The annual sales and costs are estimated as follows:

	Automatic Machine	Ordinary Machine
	Rs	Rs
Sales	1, 50,000	1, 50,000
Costs:		
Material	50,000	50,000
Labour	12,000	60,000
Variable Overhead	24,000	20,000

6.a) A Ltd; is producing articles mostly by manual labour and is considering to replace it by a new machine. There are two alternative models X and Y of the new machine. Prepare a statement of profitability showing the payback period from the following information. Ignore taxation.

	Machine X	Machine Y
Estimated life of machine	4 years	5 years
Cost of machine	Rs. 9,000	18,000
Estimated savings in scrap	Rs. 500	800
Estimated savings in direct wages	Rs. 6,000	8,000
Additional cost of maintenance	Rs. 800	1,000
Additional cost of supervision	Rs. 1,200	1,800

(OR)

b) Calculate discounted payback period from the following information.

Cost of the project = Rs. 3, 00,000.

Life of the project = 5 years.

Annual cash inflows = Rs. 1, 00,000.

Year	1	2	3	4	5
P.V factor @ 10%	0.909	0.826	0.751	0.683	0.621

7. a) Project X initially costs Rs. 25,000. It generates the following cash inflows:

Year	Cash inflows	Present Value of Re.1at 10%
1	Rs. 9,000	0.909

2	Rs. 8,000	0.826
3	Rs. 7,000	0.751
4	Rs. 6,000	0.683
5	Rs. 5,000	0.621

Taking the cut-off rate as 10%, suggest whether the project should be accepted or not.

(OR)

b) The Alpha Co. Ltd., is considering the purchase of a new machine. Two alternative machines (A and B) have been suggested, each having an initial cost of Rs. 4,00,000 and requiring Rs.20,000 as additional working capital at the end of 1st year. Earnings after taxation are expected to be as follows:

Year	Cash Inflows	
	Machine A	Machine B
1	40,000	1,20,000
2	1,20,000	1,60,000
3	1,60,000	2,00,000
4	2,40,000	1,20,000
5	1,60,000	80,000

The company has a target of return on capital of 10% and on this basis, you are required to compare the profitability of the machines and state which alternative you consider financially preferable?

The following table gives the present value of Re. 1 due in 'n' number of years:

Year	1	2	3	4	5
P.V. factor @10%	0.91	0.83	0.75	0.68	0.62

8. a) The following are the cash inflows and outflows of a certain project.

Year	Outflows	Inflows
0	1,50,000	
1	30,000	30,000
2		30,000
3		50,000
4		60,000

5		40,000
---	--	--------

The salvage value at the end of 5 years is Rs. 40,000. Taking the cut off rate as 10%, calculate net present value.

Year	1	2	3	4	5
P.V.factor @10%	0.909	0.826	0.751	0.683	0.621

(Or)

b) Calculate the average rate of return for projects A and B from the following.

Particulars	Project A	Project B
Investments	Rs. 20,000	Rs. 30,000
Expected life(no value salvage)	4 years	5 years

Projected Net Income (after interest, depreciation and taxes)

Years	Project A (Rs)	Project B (Rs)
1	2,000	3,000
2	1,500	3,000
3	1,500	2,000
4	1,000	1,000
5	-----	1,000
	6,000	10,000

If the required rate of return is 12%, which project should be undertaken?

SECTION D

Answer any **THREE** of the following:

(3x10=30)

UNIT I:

1. Discuss the organisation of finance function in a large organisation.
2. Describe the functions of a)Treasurer b)controller.
3. Explain the relationship between finance function and other functions.
4. Discuss the significance of finance function.
5. Explain the Modigliani- Miller Hypothesis,
 - a)When there are no corporate taxes.
 - b)When there are corporate taxes.

6. What is an optimum capital structure? Explain its essential features.
7. Discuss the in detail, the factors which determine the capital structure of a firm.

UNIT II:

1. XYZ Ltd. has obtained the following data concerning the average working capital cycle for other companies in the same industry :

Raw material stock turnover	20 Days
Credit received	40 Days
Work-in-Progress Turnover	15 Days
Finished goods stock turnover	40 Days
Debtors' collection period	<u>60 Days</u>
	<u>95 Days</u>

Using the following data, calculate the current working capital cycle for XYZ Ltd. And briefly comment on it.

	(Rs. in '000)
Sales	3,000
Cost of Production	2,100
Purchase	600
Average raw material stock	80
Average work-in-progress	85
Average finished goods stock	180
Average creditors	90
Average debtors	350

2. From the following data, compute the duration of operating cycle for each of the two years and comment on the increase/decrease:

	Year 1	Year 2
Stock:		
Raw materials	20,000	27,000
Work-in-progress	14,000	18,000
Finished goods	21,000	24,000
Purchases	96,000	1,35,000
Cost of goods sold	1,40,000	1,80,000

Sales	1,60,000	2,00,000
Debtors	32,000	50,000
Creditors	16,000	18,000

Assume 350 Days per year for computational purposes.

3. A proforma cost sheet of a company provides the following particulars:

Elements of Cost

Material	40%
Direct Labour	20%
Overheads	20%

The following further particulars are available:

- It is proposed to maintain a level of activity of 2,00,000 units.
- Selling price is Rs.12/- per unit.
- Raw materials are expected to remain in stores for an average period of one month.
- Materials will be in process, on averages half a month.
- Finished goods are required to be in stock for an average period of one month.
- Credit allowed to debtors is two months.
- Creditor allowed by suppliers is one month.

You may assume that sales and production follow a consistent pattern.

You are required to prepare a statement of working capital requirements, a forecast Profit and Loss Account and Balance Sheet of the company assuming that:

	Rs.
Share Capital	15,00,000
8% Debentures	2,00,000
Fixed Assets	13,00,000

4. A proforma cost sheet of a company provides the following particulars:

<i>Elements of Cost</i>	<i>Amount per unit</i>
	<i>Rs.</i>
Raw Material	80

Direct Labour	30
Overheads	60
Total Cost	170
Profit	30
Selling Price	200

The following further particulars are available:

Raw materials are in stock on an average for one month. Materials are in process on an average for half a month. Finished goods are in stock on an average for one month. Credit allowed by suppliers is one month. Credit allowed to customers is two months. Lag in payment of wages is 1½ weeks. Lag in payment of overhead expenses is one month. One-fourth of the output is sold against cash. Cash in hand and at bank is expected to be Rs.25,000.

You are required to prepare a statement showing the working capital needed to finance a level of activity of 1,04,000 units of production.

You may assume that production is carried on evenly throughout the year, wages and overheads accrue similarly and a time period of 4 weeks is equivalent to a month.

5. From the following information you are required to estimate the net working capital:

	<i>Cost per unit</i>
	<i>Rs.</i>
Raw Materials	400
Direct labour	150
Overheads (excluding depreciation)	300
Total Cost	<u>850</u>
<i>Additional Information:</i>	<u>30</u>
Selling-Price	Rs.1,000 per unit

Output	52,000 units per annum
Raw Material in stock	average 4 weeks
Work-in-process:	
(assume 50% completion stage with full material consumption)	average 2 weeks
Finished goods in stock	average 4 weeks
Credit allowed by suppliers	average 4 weeks
Credit allowed to debtors	average 8 weeks
Cash at bank is expected to be	Rs.50,000

Assume that production is sustained at an even pace during the 52 weeks of the year. All sales are on credit basis. State any other assumption that you might have made while computing.

6. Texas Manufacturing Company Ltd. is to start production on 1st January, 1995. The prime cost of a unit is expected to be Rs.40 out of which Rs.16 is for materials and Rs.24 for labour. In addition, variable expenses per unit are expected to be Rs.8 and fixed expenses per month Rs.30,000. Payment for materials is to be made in the month following the purchases. One-third of sales will be for cash and the rest on credit for settlement in the following month. Expenses are payable in the month in which they are incurred. The selling price is fixed at Rs.80 per unit. The number of units manufactured and sold are expected to be as under:

January	900
February	1,200
March	1,800
April	2,100
May	2,100
June	2,400

Draw up a statement showing requirements of working capital from month to month, ignoring the question of stocks.

UNIT III:

1.Explain the various types of budgets.

2..Prepare a cash budget of Raj & co for April, May and June 1999:

Month	Sales	Purchases	Wages	Expenses
	Rs	Rs	Rs	Rs
January	80,000	45,000	20,000	5,000

February	80,000	40,000	18,000	6,000
March	75,000	42,000	22,000	6,000
April	90,000	50,000	24,000	7,000
May	85,000	45,000	20,000	6,000
June	80,000	35,000	18,000	5,000

Additional information:

- i) 10% of the purchase and 20% of sales are for cash.
- ii) The average collection period of the company is $\frac{1}{2}$ month and the credit purchases are paid regularly after one month.
- iii) Wages are paid half monthly .
- iv) Expenses are paid after one month lag.
- v) Cash balance on April 1,1999 may be assumed to be Rs. 15,000/-

3. For the production of 10,000 electric ovens, the following are the budgeted expenses:

	Rs. Per Unit
Direct material	60
Direct labour	30
Variable overhead	25
Fixed overhead (Rs. 1,50,000)	15
Variable expenses (direct)	5
Selling expenses (10% fixed) `	15
Administration expenses (Rs. 50,000 rigid for all levels of production)	5
Distribution expenses (20% fixed)	5
The total cost of sale per unit	160

Prepare a budget for the production of 6000, 7000, and 8,000 ovens, showing distinctly the marginal cost and the total cost.

4.A Company expects to have Rs. 37,500 cash in hand on 1st April, and requires you to prepare an estimate of cash position during the three months April, May and June. The following information is supplied to you:

Month	Sales Rs.	Purchases Rs.	Wages Rs.	Factory Exp. Rs.	Office Exp. Rs.	Selling Exp. Rs.
February	75,000	45,000	9000	7500	6000	4500

March	84,000	48,000	9750	8250	6000	4500
April	90,000	52,500	10500	9000	6000	5250
May	1,20,000	60,000	13500	11250	6000	6570
June	1,35,000	60,000	14250	14000	7000	7000

Other Information:

- i).Period of credit allowed by suppliers 2 months.
- ii) 20% of sales is for cash and period of credit allowed to customers is one month.
- iii) Delay in payment of all expenses - one month
- iv) Income Tax of Rs. 57500 is due to be paid on June 15th .
- v) The company is to pay dividends to shareholders and bonus to workers of Rs. 15000 and Rs 22500 respectively in the month of April.
- vi) Plant has been ordered to be received and paid in May. It will cost Rs. 1,20,000.

5.The expenses for budgeted production of 10,000 units in a factory are furnished below:

	per unit (Rs.)
Materials	70
Labour	25
Variable factory overhead	20
Fixed factory overhead (Rs. 1,00,000)	10
Variable expenses (Direct)	5
Selling expenses (10% fixed)	13
Distribution expenses (20% fixed)	7
Administration expenses (Rs. 50,000)	5
Total cost per unit (to make and sell)	<u>155</u>

Prepare a flexible budget for the production of 8000 and 12000 units showing clearly the variable and fixed cost.

Assume that administration expenses are fixed for all levels of production.

6. Prepare a flexible budget for overheads on the basis of the following data. Ascertain the overheads rates at 50%, 60 %, and 70% capacity.

Particulars	At 60% capacity (Rs)
Variable overheads:	
Indirect material	6,000
Indirect labor	18,000
Semi – variable overheads:	
Electricity (40% fixed, 60% Variable)	30,000
Repairs (80% fixed, 20% Variable)	3,000
Fixed overheads:	
Depreciation	16,500
Insurance	4,500
Salaries	15,000
Total overheads	93,000
Estimated direct labour hours	1,86,000

Differentiate between fixed budget flexible budget.

8. Sivan Ltd., wishes to prepare a cash budget from January. Prepare a cash budget for the first 6 months from the following estimated revenue and expenses.

Month	Total Sales Rs.	Material Rs.	Wages Rs.	Overheads	
				Production	Selling
				Rs.	Rs.
January	40,000	40,000	8,000	6,400	1,600
February	44,000	28,000	8,800	6,600	1,800
March	56,000	28,000	9,200	6,800	1,800
April	72,000	44,000	9,200	7,000	2,000
May	60,000	40,000	8,000	6,400	1,800
June	80,000	50,000	10,000	7,200	2,400

Cash balance on 1st January was Rs. 20,000. A new machine is to be installed at Rs. 20,000 on credit to be paid by two equal installments in March and April. Sales commission at 5% on total sales is to be paid within a month following actual sales. Rs 20,000 being the amount of share 2nd call may be received in March. Share premium amounting to Rs. 4,000 is also obtainable with the 2nd call.

Period of credit allowed by suppliers - 2 months

Period of credit allowed to customers - 1 month

Delay in payment of overheads - 1 month

Delay in payment of wages - ½ month

Assume cash sales as 50 % of total sales.

9. The budgeted output of the factory specializing in the production of a single product of the optimum capacity of 6,000 units per annum amounts of Rs. 1,76,048 as follows:

	Rs.	Rs
Fixed cost		20,688
Variable cost:		
Power	1,440	
Repair etc	1,700	
Miscellaneous	540	
Direct materials	49,280	
Direct labor	1,02,400	1,55,360
Total		1,76,048

Taking notes of the possible impact on sales turnover by market trend, the company decides to have a flexible budget with the production target of 3,200 and 4,800 units (The actual quantity proposed to be produced being left to a later date before commencement of budget period). Prepare the flexible budget for production levels at 50 % and 75%.

Assuming selling price per unit is maintained at Rs. 40 as at present, indicate the effect on net profit. Administration, selling and distribution expenses continue at Rs. 3,600.

UNIT IV:

1. Sri Ram industries ltd issued 10,000 10% debentures of Rs.100 each. The tax rate is 50%. Calculate the before tax and after tax cost debt if the debentures are issued

- a) at par b) at a premium of 10% c) at a discount of 10%

2. Venus Ltd. Issued 10,000 9% debentures of Rs.100 each at a premium of 5%. The maturity period is 5 years and the tax rate is 50%. Compute the cost of debentures to the company if the debentures are redeemable at par.

3. A company issues 10% debentures at par for a total value of Rs.10,00,000. The debentures are redeemable after 10 years at a premium of 10%. If the tax rate is 40%, compute the cost of debentures to the company

- (a) before tax (b) after tax.

4. A company issues 10,000 bonds of Rs.100 each at 14% p.a. Marketing costs are Rs.20,000. The bonds are to be redeemed after 10 years and the company is taxed at the rate of 40%.

Compute the cost of debt if the bonds are issued.

- a) at par b) at a discount of 5% c) at a premium of 5%

5. Alpha Ltd. Issued 10% redeemable preference shares (RPS) of Rs.100 each, redeemable after 10 years. The floatation costs were 5% of the nominal value. Compute the effective cost of the company if the issue is made at

- a) par b) a premium of 5% c) a discount of 5%

6. A company's is quoted in the market at Rs.40 and the expected dividend for the next year is Rs.2 per share. Thereafter, the investors expect a growth rate of 5% p.a.

- a) Calculate the cost of equity capital.
- b) Calculate the market price per share if the expected growth rate is 6% p.a.
- c) Calculate the market price per share if the dividend of Rs.2 is maintained, cost of equity is 9% and the expected growth in dividends is 6% p.a.

UNIT V:

1.A company has to choose one of the following two mutually exclusively projects.
Investment required for each project is Rs. 15,000. Both the projects have to be depreciated on straight line basis. The tax rate is 50%.

Year	Profit before depreciation	
	Project A	Project B
1	4200	4200
2	4800	4500
3	7000	4000
4	7000	5000
5	2000	10000

Calculate payback period.

2.R.ltd is considering the purchase of a new machine which will carry out the operations performed by labour. Damsel and shylock are alternative models. From the following information you are required to prepare a profitability statement and workout the payback period in respect of each machine.

Particulars	Machine(Damsel)	Machine(Shylock)
Estimated life of machine(years)	10	12
Cost of machine	Rs.300000	Rs500000
Cost of indirect materials p.a	Rs.12000	Rs.16000
Estimated savings in scrap p.a	20000	30000
Additional cost of maintenance	14000	22000
Additional cost of supervision	24000	32000
Estimated savings in direct wages:		
Employees not required(number)	150	200

Wages per employee p.a.	1200	
-------------------------	------	--

Taxation is to be regarded as 50% of profit (ignore depreciation for calculation of tax). Which model would you recommend?

3. For each of the following projects calculate (a) Payback period (b) Post payback profitability and (c) Post pay back profitability index.

1. **Initial outlay** - Rs 1, 00,000

Annual cash inflows- Rs 20,000

Estimated life 8 years

2. **Initial outlay:** -Rs 60,000

Annual cash inflows for first three years -Rs.15,000

Annual cash inflows for next five years -Rs.5,000

Estimated life 8 years -

Salvage value - Rs 8,000

4. Consider the following proposed investments with the indicated cash inflows.

Investment	Initial Outlay(Rs.'000)	Year end cash inflows		
		Year1(Rs'000)	Year(Rs'000)	Year(Rs'000)
A	200	200	Nil	Nil
B	200	100	100	100
C	200	20	100	30
D	200	200	20	20
E	200	140	60	100
F	200	160	160	80

Rank the investments deriving the Net Present Value using a discount rate of 10 percent and state your views.

Year	1	2	3
P.V.factor @20%	0.909	0.826	0.751

5.A choice is to be made between two competing proposals which require an equal investment of Rs 50,000 and are expected to generate net cash flows as under:

Particulars	Project I	Project II
End of year 1	25,000	10,000
End of year 2	15,000	12,000
End of year 3	10,000	18,000
End of year 4	Nil	25,000
End of year 5	12,000	8,000
End of year 6	6,000	4,000

The cost of capital of the company is per cent. The following are the present value factors at 10% per annum.

Year	1	2	3	4	5	6
P.V . Factor @ 10%	0.909	0.826	0.751	0.683	0.621	0.564

Which project proposal should be chosen and why ?

Evaluate the project proposals under:

- Pay – back period
- Discounted cash flow method
- Excess present value index

Max Marks: 75

Time: 3 hours

Section A

(10x1=10)

Answer all the questions.

UNIT I

1. In case of Sub-division of share capital the total number of share _____
a)**Increase** b)Decrease c)No change d)None of the above
2. Sec.39 of companies Act, 2013 is associated with:
a)Prospectus b)Minute Book c)**Minimum Subscription** d)None of these
3. A company is called an artificial person because _____
a) It is invisible and intangible
b) It cannot be used in the count of law
c) It does not have the shape of natural person
d) **It exists only in contemplation of law**
4. The _____ Company can be either private limited company or a public limited company, where the capital is not divided into shares.
a) Company limited by shares b) **Company limited by guarantee**
c) Unlimited company d) One person company
5. Minimum paid up share capital in case of a private company is _____
a)**Rs. 1 lakh** b)Rs. 10 lakh c)Rs. 25 lakh d)Rs. 100 lakh
6. As per Section 52 of the companies Act, 2013, the balance in the Security Premium Account cannot be utilized for
a)**Payment of dividend** b)Writing off discount on issue of shares
c)Issue of fully paid-up bonus share d) Capital losses
7. Mr. NandlalJhaveri decided to convert his sole proprietary jewellery business into a company of which he is the only member. As per the Companies Act 2013, this company is not required to prepare a:

- a) Profit and loss account b) **Cash flow statement**
c) Statement of changes in equity d) Balance sheet

8. As per the format of the Balance Sheet prescribed as per Schedule III of the Companies Act, 2013, those drafts which have passed are shown under the head _____

- a) **Cash and cash equivalents** b) Movable assets
c) Short term advance d) Balance with banks

9. Which of the following sections of Companies Act, 2013 facilitates amalgamation, absorption and reconstruction of companies?

- a) **319** b) 320 c) 410 d) 502

10. Preference share in India is issued by a company for a maximum period of:

- a) 10 years b) 15 years c) **20 years** d) Unlimited period

UNIT II

1. A _____ may think law as a set of rules which he must obey.

- a) **Citizen** b) Lawyer c) Legislator d) Judge

2. The law relating to contracts is contained in the Indian Contract Act _____

- a) 1882 b) 1892 c) **1872** d) 1972

3. Minor is the person who has not completed _____ years of age.

- a) 14 b) 16 c) **18** d) 21

4. _____ means something in return.

- a) Revocation b) **Consideration** c) Offer d) Tender

5. _____ is a legal substitute for a contract created by a law.

- a) E-Commerce b) Executory Contract c) Bilateral Contract d) **Quasi Contract**

6. _____ offer is expressed through words spoken or written.

- a) Specific b) Implied c) General d) **Express**

7. Indian Majority act was passed in the year _____

- a) 1874 b) 1827 c) **1875** d) 1860

8. _____ contract is a one to all contracts.

a) **Unilateral** b) Bilateral c) Quasi d) Executory

9. An agreement made without consideration is _____

a) Valid **b) Void** c) Illegal d) Voidable

10. Agreement = Offer + _____

a) **Acceptance** b) Promisor c) Agent d) Third Person

UNIT III

1. _____ is making good the actual loss sufficient.

a) Guarantee **b) Indemnity** c) Contract d) Assurance

2. The person who gives the guarantee is called _____

a) Principal debtor b) Creditor c) Promisor **d) Surety**

3. _____ is a contract to perform the promise of a third person in case of his default.

a) **Contract of Guarantee** b) Valid Contract c) Assurance d) Surety

4. The person to whom the guarantee is given is called _____

a) Principal debtor **b) Creditor** c) Promisor d) Surety

5. The person in respect of whose default the guarantee is given is called _____

a) **Principal debtor** b) Creditor c) Promisor d) Surety

6. A person who is not involved in the contract is _____

a) Principal debtor b) Creditor **c) Promisor** d) Surety

7. When a guarantee extends to a single transaction or debt is called _____ guarantee.

a) **Specific** b) Continuing c) Fidelity d) Static

8. When a guarantee extends to a series of transactions is called _____ guarantee.

a) Specific **b) Continuing** c) Fidelity d) Static

9. Indemnifier is otherwise called as _____

a) **Promisor** b) Promisee c) Creditor d) Debtor

10. _____ means substitution of a new contract of guarantee for an old one or either between the same parties.

a) Revocation **b) Novation** c) Surety d) Discharge

UNIT IV

1. Under the PF Act, 1952 “Insurance Fund” means _____.
 - a) Unit Linked Insurance Plan
 - b) Deposit Linked Insurance Fund**
 - c) Employees’ Group Accident Insurance
 - d) Medical Insurance Fund
2. The contribution which shall be paid by the employer to the Fund shall be
 - a) 5%
 - b) 7%
 - c) 12%
 - d) 10 %**
3. Section 2(d) of the Provident Fund Act defines
 - a) Hazardous Process
 - b) Employee
 - c) Employment
 - d) Controlled Industry**
4. The Act is applicable to every establishment which is a factory engaged in any industry specified in Schedule I and in which ----- persons are employed
 - a) 50 or more
 - b) 20 or more**
 - c) 15 or more
 - d) 10 or more
5. The age of dependent for obtaining dependent's benefit under the Employees State Insurance Act has now been enhanced from 18 years to _____.
 - a) 20 years
 - b) 22 years
 - c) 24 years
 - d) 25 years**
6. In order to qualify for sickness benefit, the insured worker is required to contribute for _____ days in a contribution period of 6 months.
 - a) 80
 - b) 70
 - c) **78**
 - d) 65
7. What is the maximum gratuity payable under the Act?
 - a) **20 lakh**
 - b) 15 lakh
 - c) 45 lakh
 - d) 60 lakh
 - e)
8. The eligibility condition for obtaining gratuity under the Payment of Gratuity Act, 1972 is
 - a) Completion of 2 years of Service
 - b) Completion of 3 years of Service
 - c) Completion of 4 years of Service
 - d) Completion of 5 years**
9. Completed year of service means _____.
 - a) service for 1 year**
 - b) service for 2 year
 - c) service for 3 year
 - d) service for 4 year
10. The payment of gratuity came into force on _____.

- a) 18th August 1970
- b) 16th September 1972

- c) 15th March 1969
- d) 11th February 1972

UNIT V

1. Till what age of the child will a mother get 2 nursing breaks in the course of her daily work?

- a) 12 months b) 6 monthsc) 18 monthsd) **15 months**

2. How many weeks in advance a written notice for maternity leave has to be given to the employer by the expecting women?

- a) 4 weeksb) **7 weeks**c) 1 weeks d) 8 weeks

3. What is the minimum number of days that a woman should have worked in an establishment before claiming the maternity benefit?

- a) 365 days b) 120 days c) **80 days** d) 240 days

4. Under the Child Labour (Prohibition and Regulation) Act, 1986, a child is one who has not completed his _____.

- a) 18 years b) 16 years c) 15 years d) **14 years**

5. The Child Labour (Prohibition and Regulation) Act, 1986 is an example of _____.

- a) Regulative Labour Legislation b) **Protective Labour Legislation**
- b) Social Security Legislation d) Welfare Legislation

6. As per The Child Labour (Prohibition and Regulation) Act, 1986 a child should not be permitted to work between _____.

- a) 8 PM- 7 AM b) **7 PM- 8 AM** c) 6 PM-7 AM d) 5 PM- 9 AM

7. The Ambulance Room is to be provided if a factory engages more than _____.

- a) 50 employees c) 200 employees
- b) 100 employees d) **500 employees**

8. Which one of the following is not a welfare provision under Factories Act, 1948?

- a) Canteen c) Crèches
- b) **Drinking water** d) First Aid

9. Under The Factories Act, 1948, the ultimate control over the factory is with _____.

- a) **Occupier** b) Managing director

c) Manager

d) Chairman

10. As per The Factories Act 1948, what is the working hour for adult _____.

a) 48

c) 54

b) 40

d) 45

Section B

(5x2=10)

Answer any FIVE questions in about 50 words each:

UNIT-I

1. What is Small Company?
2. What is Annual General Meeting?
3. What is Articles of Association?
4. What is incorporation of the company?
5. What is certificate of incorporation?
6. What is separate legal entity?
7. What is common seal?
8. What is perpetual succession?
9. What are the objectives of companies' act 2013?
10. What is private company?

UNIT-II

1. Law is not static – Explain.
2. Define a Contract.
3. What is an offer?
4. What is Revocation?
5. What is an acceptance?
6. Define Consideration.
7. Define Law.
8. What constitutes an offer?
9. Who is a minor?
10. Who is a person of an unsound mind?

UNIT-III

1. What is Indemnity?
2. What is Guarantee?
3. What is the Right of an Indemnifier?

4. What is the Right of Indemnity holder when sued?
5. Name the parties involved in Contract of Indemnity.
6. Name the parties involved in Contract of Guarantee.
7. What is a Surety?
8. What is a Creditor?
9. What is a Principal Debtor?
10. Who is a Promisor and Promisee?

UNIT IV

1. What is meant by the term 'Basic Wage'?
2. Who is an employer?
3. What do you mean by the term 'Employment Injury'?
4. What is meant by the term 'Recovery Officer'?
5. Write a short note on Family.
6. What is included in wages?
7. Who is an insurable employee?
8. What is meant by the term 'Retirement'?
9. What are the powers of controlling authority?
10. What do you mean by the term 'Remuneration'?

UNIT V

1. What is meant by the term 'Nursing Break'?
2. What is medical bonus?
3. What do you mean by prohibition of employment in maternity benefit?
4. What are the prohibitions of employment of children in certain occupation?
5. Write about the weekly holidays of a child?
6. What is Factory?
7. What is meant by the term 'Competent Person'?
8. What do you mean by the term 'Hazardous Process'?
9. Who is an occupier?
10. Who is a self-employed worker?

Section C

(5x5=25)

Answer all questions in about 200 words each:

UNIT I

1. a) What is a company and its features?

(or)

b) What is the difference between a private and a public company?

2. a) What is the process of forming a company?

(or)

b) What are the Memorandum of Association and Articles of Association?

3. a) What is the role of the Registrar of Companies?

(or)

b) What is the doctrine of ultra vires?

4. a) What is the concept of lifting the corporate veil?

(or)

b) What is the difference between a director and a shareholder?

5. a) What are the duties and responsibilities of a director?

(or)

b) What is the procedure for appointing and removing directors?

UNIT II

1. a) Explain the Indian Contract Act, 1872.

(Or)

b) How will you classify a contract according to validity?

2. a) How will you classify a contract according to formation?

(Or)

b) How will you classify a contract according to Performance?

3. a) What are the legal rules as to Offer?

(Or)

b) What are the legal rules as to Acceptance?

4. a) A contract without consideration is Void – Explain.

(Or)

b) What are the modes of Revocation?

5. a) Explain Minor in Capacity to Contract.

(Or)

b) Explain Persons of Unsound mind in Capacity to Contract.

UNIT III

1.a) Explain Contract of Indemnity.

(Or)

b) Explain Contract of Guarantee.

2.a) Explain the Kinds of Guarantee.

(Or)

b) What are the Rights of Surety?

3.a) Write down the differences between Contract of Indemnity and Contract of Guarantee.

(Or)

b) What is Extent of Surety's Liability?

4.a) Explain Discharge of Surety by Revocation.

(Or)

b) Explain Discharge of Surety by Conduct of the Creditor.

5.a) Explain Discharge of Surety by Invalidation of Contract.

(Or)

b) How is a Continuing Guarantee revoked?

UNIT IV

1) a) Explain the executive committee and also write the membership of executive committee.

(or)

b)Elaborate the Employees Deposit Linked Insurance Scheme.

2) a)Explain Employee's Pension Scheme and Fund.

(or)

b)Explicate the central board and also the function of central board in Employee's Provident Fund.

3) a)Discuss the powers and duties of Employee State Insurance Corporation.

(or)

b)Elucidate the standing committee and also write the powers and duties of standing committee.

4) a)Explain medical benefit council in Employee's State Insurance Act, 1948.

(or)

- b) Discuss about the rules relating to nomination in Payment of Gratuity Act, 1972.
- 5) a) Discuss about the 'Compulsory insurance and protection of gratuity'
(or)
b) Explain the powers of appropriate government to appoint authorities to hear and decide claims and complaints in ESI act.

UNIT V

1. a) Discuss the penalties and offences in Maternity Benefit Act, 1961.
(Or)
b) Elucidate the provisions relating to leave and nursing breaks in Maternity Benefit Act, 1961.
2. a) Explain child and also write about the child labour technical advisory committee.
(Or)
b) Discuss the health and safety of children permitted to work in establishment.
3. a) Elucidate the regulation of condition of work of children.
(Or)
b) Explicate the prohibition of employment of children in certain occupation.
4. a) Elucidate the employment of women in Factories Act, 1948.
(Or)
b) Explain certifying surgeons and also write the duties of certifying surgeon.
5. a) Explain inspectors and also write the powers of inspectors
(Or)
b) Explain site appraisal committee and also write the functions of site appraisal committee.

Section D

(3x10=30)

Answer any THREE questions in about 400 words each:

UNIT I

1. What is a company and its features?
2. What is the difference between a private and a public company?
3. What is the process of forming a company?
4. What are the Memorandum of Association and Articles of Association?

5. What is the role of the Registrar of Companies?
6. What is the doctrine of ultra vires?
7. What is the concept of lifting the corporate veil?
8. What is the difference between a director and a shareholder?
9. What are the duties and responsibilities of a director?
10. What is the procedure for appointing and removing directors?

UNIT II

1. Explain the essential elements of valid contract.
2. Explain the classification of contracts.
3. What are the legal rules as to offer?
4. What are the legal rules as to acceptance?
5. What are methods of Revocation?
6. What are the legal rules as to Consideration?
7. A contract without consideration is void – Explain.
8. Explain Capacity to Contract.
9. Explain in detail about Indian Contract Act, 1872.
10. Explain the provisions regarding the Persons of Unsound mind in Capacity to Contract.

UNIT III

1. Explain Contract of Indemnity and Contract of Guarantee.
2. Explain Discharge of Surety.
3. State the rights of
 - i) Creditor
 - ii) Principal Debtor
 - iii) Co-Sureties
4. Describe in detail about the differences between Contract of Indemnity and Contract of Guarantee.
5. Explain Discharge of Surety by Revocation?
6. Explain the Kinds of Guarantee.
7. Describe the Extent of Surety's Liability in detail.
8. Explain Discharge of Surety by Invalidation of Contract in detail.
9. Explain the revocation of Continuing Guarantee.
10. Describe the Rights of Surety in detail.

UNIT IV

1. Explain the provisions of Employees Provident Fund and Miscellaneous Act, 1952 regarding
 - i) Employees Provident Fund Scheme
 - ii) Employee's Pension Scheme and Fund.

2. Discuss about the employees provident appellate tribunal and modes of recovery in Employees Provident Fund and Miscellaneous Act, 1952
3. Explain about Employees Provident Fund Scheme Employee's Pension Scheme and Employees Deposit Linked Insurance Scheme in detail.
4. Explain the provisions of Employees Provident Fund and Miscellaneous Act, 1952 regarding
 - i) Central Board ii) Executive committee iii) State Board
5. Explain the provisions of Employees State Insurance Act, 1948 regarding
 - i) ESI Corporation ii) Standing committee iii) Medical benefit council
6. Describe the 'General provisions regarding benefits' in Employees State Insurance Act, 1948
7. Discuss about the nomination, determination and recovery of gratuity.
8. Discuss about
 - i) payment of gratuity ii) forfeiture of gratuity iii) exemption of gratuity
 - iv) compulsory insurance of gratuity v) protection of gratuity
9. Explain about the Equal remuneration Act, 1976 in detail.
10. Discuss Chapter II in Equal remuneration Act, 1976

UNIT V

1. Enumerate the important provision in Maternity Benefit Act, 1961.
2. Explain the provisions in Maternity Benefit Act, 1961
 - i) Prohibition of employment ii) Maternity benefits iii) Leave and nursing breaks
3. Enumerate the important provision in the Child Labour Regulation and Abolishment Act, 1986
4. Discuss the regulation of condition of work of children and prohibition of employment of children in certain occupation
5. Explain factory and the provisions relating to health in Factories Act, 1948.
6. Describe factory and the provisions relating to safety in Factories Act, 1948.
7. Explain the provisions of Factories Act, 1948 regarding
 - i) Employment of young person ii) Employment of women.
8. Explain the provisions of Factories Act, 1948 regarding
 - i) Welfare facilities ii) Weekly holidays.
9. Discuss about the provisions relating to registration and licensing of contractors.
10. Describe factory and the provisions relating to welfare in Factories Act, 1948.

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI-628001

Question Bank

B.B.A - Semester VI

Core XIII - Foreign Trade – Import and Export Procedure

Sub.Code:21UBAC63

Time: 3 hours

Max Marks: 75

Section A

(10x1=10 marks)

Choose the best answer

Unit – I

1. _____ refers to the exchange of goods, wares among people.
a) **Trade** b) Protection c) Dumping d) Export
2. _____ trade refers to exchange of goods within political boundaries.
a) **Internal** b) External c) Wholesale d) Retail
3. _____ trade extends beyond the political boundaries of the countries.
a) Internal b) **External** c) Wholesale d) Entrepot
4. The inflow of goods and services in the country is termed as _____.
a) **Import** b) Export c) Wholesale d) Entrepot
5. The outflow of goods and services in the country is termed as _____.
a) Import b) **Export** c) Wholesale d) Entrepot
6. The inflow of goods for immediate outflow is known as _____.
a) **Entrepot** b) Wholesale c) Retail d) Import
7. _____ is a kind of trade policy where home countries are protected from foreign competition.
a) Dumping b) **Protection** c) Quotes d) Tariffs
8. _____ refers to the sale of products in the foreign market at a lower price than in domestic market.
a) **Dumping** b) Protection c) Quotes d) Tariffs
9. _____ tariff is a duty on imported commodity.
a) **Import** b) Export c) Revenue d) Protection
10. _____ tariff is applied to get price and revenue.
a) Import b) **Export** c) Revenue d) Protection

Unit – II

11. The value of imports and export of visible items refers to balance of _____
a) **Trade** b) Payments c) Fund d) Import
12. IMF – International _____ Fund
a) Money b) **Monetary** c) Material d) Machine
13. WTO – World _____ Organization.
a) **Trade** b) Time c) Transaction d) Training
14. _____ capital includes RBI's holding in terms of foreign currency.
a) Private b) Public c) **Banking** d) Officials
15. _____ account refers to the donations, gifts etc.
a) Current b) Capital c) **Unilateral Payment** d) Official settlement
16. _____ balance includes current account balance and long term capital account balance.
a) **Basic** b) Net liquidity c) Official settlement d) Capital
17. In private capital when maturity is more than one year is _____ term.
a) **Long** b) Short c) Medium d) Very long
18. Invisible export is credited in _____ account.
a) capital b) **current** c) official settlement d) unilateral payment
19. _____ capital includes movement in the external financial assets.
a) Private b) Official c) **Banking** d) Nominal

Unit –III

20. The outflow of goods from a country where it is produced is termed as _____
a) Import b) **Export** c) Wholesale d) Entrepot
21. Exporter makes an offer in the form of _____
a) Inquiry b) Enquiry c) **Proforma invoice** d) Proposal
22. _____ is the request made by an importer to import certain goods.
a) **Inquiry** b) Enquiry c) Proforma invoice d) Proposal
23. _____ proposal is submitted by an exporter to export specific goods at specific price.
a) **Offer** b) Enquiry c) Proforma invoice d) Proposal
24. _____ form is not necessary for export of goods to Nepal and Bhutan.

- a) **GR-I form** b) Let Ship c) AR-4 d) Mate Receipt
25. _____ documents provide details of products at the time of loading.
a) Invoice b) Let Ship c) AR-4 **d) Mate Receipt**
26. _____ is the first stage in an export transaction.
a) Receipt b) Offer c) Order d) Enquiry
27. _____ is an exchange document needed by the customs official for granting permission for shipment.
a) GR-1 Form b) **Shipping bill** c) Export licence d) Carting order
28. The order given by the superintendent of the concern port is _____.
a) GR-1 Form b) Shipping bill c) Export licence **d) Carting order**
29. The port trust authorities after receiving the _____ issues the bill of lading.
a) GR-I form b) Let Ship c) AR-4 **d) Mate Receipt**

Unit – IV

30. The import of restricted items is given in _____ list.
a) Positive **b) Negative** c) Possessive d) Medium
31. Duty free licence is otherwise known as _____ licencing.
a) General **b) Advance** c) Optional d) Levy
32. Under advance licence, the period allowed to fulfill export obligation is _____ months.
a) 12 b) 15 **c) 18** d) 5
33. The basic document used for obtaining customs clearance of goods is called _____.
a) Bill of entry b) Bill of lading c) Bill of exchange d) Excise duty
34. The Customs Act was passed in _____.
a) 1960 b) 1961 **c) 1962** d) 1963
35. Additional customs duty is equal to _____ duty.
a) Excise b) Import c) Export d) Levy
36. A duty imposed for offsetting the adverse effects of increased imports is _____.
a) Excise b) Import c) Export **d) Anti dumping**
37. The first stage in the imposition duty is _____.
a) Charge b) Tax **c) Levy** d) Tariff
38. The point at which the goods are deemed to be imported into or exported outside India is _____ point.
a) Taxable b) Turning c) Normal d) Fixed
39. The duty imposed by law on import or exports is _____ duty.
a) Excise b) Import c) Export **d) Customs**

Unit – V

40. ITPO was established on _____.
a) 1992 b) 1993 c) 2000 d) 2005
41. APEDA was established on _____.
a) 1986 b) 1989 c) 1979 d) 1992
42. MAEDA is responsible for development of _____ products.
a) Marine b) Agriculture c) Coffee d) Rubber
43. C.S.S – Cash Compensatory _____.
a) Scheme **b) Support** c) System d) Subsidy
44. _____ board is responsible for the products that export tea, coffee, rubber.
a) Commodity b) APEDA c) MAEDA d) ITPO

45. MDA - _____ Development Assistance.
 a) Money **b) Market** c) Material d) Machine
46. Goods entered for home consumption are cleared on _____ Bill of Entry.
 a) red b) green c) yellow d) **white**
47. On the arrival of goods, the shipping line or the airline files _____.
 a) Bill of entry b) bill of lading c) GR-1 d) **IGM**
48. Section 6 of the Customs Tariff Act empowers the central government to levy a _____ duty.
 a) Additional b) Standard rate c) Countervailing d) **Protective**
49. _____ of the Customs Tariff Act empowers the central government to levy additional duty equal to excise duty.
 a) Section 5 b) Section 7 c) Section 3 d) **Section 8**
50. Goods imported to a _____ zone may be re-exported without any processing, in the same form.
 a) Export processing b) Import processing c) **Free trade** d) Developed

Section B

(5x2=10)

Answer any FIVE of the following in about 50 words each:

Unit – I

1. Define Trade.
2. What are the Types of Trade?
3. What is Internal Trade?
4. What is International Trade?
5. What is Protection?
6. What is meant by Dumping?
7. Why to Trade Internationally?
8. List out any 2 similarity between Internal and International Trade.
9. What is a Trade Policy?
10. What is meant by Imposing Import Restrictions?

Unit – II

11. What is Balance of Trade?
12. Define Balance of Payments.
13. Distinguish between Balance of Trade and Balance of Payments.
14. What is Current Account?
15. What is meant by Capital Account?
16. List the Credit items under Current Account.
17. What is Deflation?
18. What are the Visible and Non-Visible items?
19. What is Exchange Control?
20. What is Devaluation?

Unit – III

21. List out the Stages of Export Procedure?
22. What is Let Ship Order?
23. What is Mate Receipt?

24. What are the items that are involved in Proforma Invoice?
25. What is GR-I form?
26. What is a Shipping Bill?
27. What is Bill of Lading?
28. What is Carting Order?
29. What are Export Incentives?
30. What is an Export Promotion?

Unit – IV

31. What is Import?
32. What is EPCG?
33. What is Advance Licensing?
34. What is Bill of Entry?
35. What is Customs Duty?
36. What is Standard Rate of Duty?
37. What is Export Duty?
38. What is meant by Anti Dumping Duty?
39. What is meant by Levy of Custom Duty?
40. What is EPZ?

Unit – V

41. What is Export Promotion?
42. What is Ministry of Commerce?
43. What are Export Promotion Councils?
44. What is APEDA?
45. What are Incentives?
46. What is Marketing Assistance?
47. Write any 2 objectives of Marketing Assistance
48. Write any 2 objectives of Export Promotion?
49. What is Inspection Council?
50. What is ITPO?

Section-c

(5x5=25)

Answer the following in about 200 words each by choosing either a (or) b:

Unit – I

1. a) Why does an Economy Need International Trade?

(or)

b) Give the points of similarities between Internal and International Trade.

2. a) Explain the various Advantages of International Trade.

(or)

b) Explain in detail about the Importance of Per-Independent Foreign Trade of India.

3. a) Explain the Importance of Foreign Trade for a developing economy.

(or)

- b) Explain the global scenario of the developments in the Centrally Planned Economy.
4. a) Explain in detail about the developments in Non-Communist Countries.

(or)

- b) What is Protection? Explain the various Methods of Protection.

Unit – II

5. a) Explain the limitations of Import Duties.

(or)

- b) Explain in detail about Import Quotas.

6. a) Difference between Balance Trade and Balance of Payment..

(or).

- b) Explain any five advantages of Exchange Control.

7. a) Explain various Non-monetary Measures to correct Disequilibrium in Balance of Payments.

(or)

- b) Explain various Monetary Measures to correct Disequilibrium in Balance of Payments.

8. a) Explain the measuring deficit or surplus in Balance of Payment.

(or)

- b) Explain in detail about Current Account.

9. a) Write a short note on Capital Account.

(or)

- b) Write a short note on Balance of Payment.

Unit - III

10. a) Explain Duty Exemption Scheme in Export Promotion.

(or)

- b) Explain the various Kinds of Bill of Lading.

11. a) Explain the objectives of Export Incentives.

(or)

- b) Explain the Indirect Methods of Exchange Control..

12. a) Explain the various Functions of Export Incentives.

(or)

- b) Explain the Functions of Export Control.

13. a) Explain the Scope of Export Management.

(or)

- b) Write a note on Controlling Measures of Export Management.

14. a) Write a note on export planning.

(or)

b) Explain the Preliminary Stage of Export.

Unit – IV

15. a) Explain the Objectives Of Customs Duties.

(or)

b) Explain the Objectives of EPZ.

16. a) Explain the Procedure for Licensing under negative list.

(or)

b) Explain the eligibility to apply to Advance Licensing.

17. a) Explain the Import Duties.

(or)

b) Explain Custom Clearance.

18. a) Explain Import of Capital Goods.

(or)

b) What are the objectives of EPGC Scheme?

19. a) Explain Import under Duty Exemption Scheme.

(or)

b) Explain Bill of Entry.

20. a) What are the Features of Customs Duty?

(or)

b) What are the classifications of Customs Duty?

Unit – V

21. a) Explain in detail the Objectives of Export Promotion.

(or)

b) Explain the functions of EPC.

22. a) Explain the various functions of ITPO.

(or)

b) Explain EPCG.

23. a) Explain Duty Exemption Scheme.

(or)

b) Write a short on Incentives.

24. a) Write a short note on Marketing Assistance.

(or)

b) Explain the Import Facilities for Exporters.

SECTION D

Answer any THREE of the following in about 400 words each:

(3x10=30)

Unit – I

1. Explain the various features of International Trade.
2. Distinguish between Internal and International Trade.
3. Discuss the need for Protection in an under developed country.
4. List out the various arguments against Protection.
5. Give the arguments in support of the Trade Policy of Protection.
6. Examine critically the infant industry argument for Protection in developing country.

Unit – II

7. Explain the Components of Balance Of Payments?
8. List out the causes of Disequilibrium in Balance Of Payments.
9. Is Balance of Payments always in Equilibrium?
10. State the measures to Correct Disequilibrium in Balance Of Payments.
11. Explain in detail about exchange control.
12. What are the objectives of exchange control?
13. What are the direct methods of exchange control?
14. Explain the indirect methods of exchange control.

Unit – III

15. Explain the various Documents to be submitted during Export?
16. Explain the various Documents related to Payment.
17. Explain the shipping stage in Export Procedure.
18. Explain Production and Procurement stage in Export Procedure.
19. Explain Preliminary and Offer and receipt stage in Export Procedure.
20. Explain the need for Export Promotion.
21. Explain the functions of Export Management.
22. Enumerate Export Promotion.
23. Explain Export Procedure.

Unit – IV

24. Explain the application under EPCG scheme.
25. Explain the application to grand Advance License.
26. Explain the kinds of Custom Duties?
27. Explain the types of exemption in Levy of Custom Duty.
28. Explain Export Processing Zone.
29. Explain EOU in brief.
30. What are the steps involved in the process of Custom Clearance of imported goods?

Unit – V

31. Explain the organizational setup of Export Promotion.
32. Explain duty Exemption in Incentives.
33. Explain the facilities of Marketing Assistance.
34. Explain Export Promotion Council.
35. Explain the Major Problems of India's Export Sector.

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI
III BBA- Semester VI
Core XIV –Production and Operations Management
Question Bank

Sub.Code:21UBAC64

Time: 3 hours

Max Marks: 75

Section A

(10x1=10)

Answer all the questions.

UNIT 1

1. _____ is the process by which raw materials are converted into finished products.
a) **Production** b) Manufacturing c) System d) Control sub-system
2. _____ sub system is the heart of production function.
a) Production b) Control c) **Conversion** d) System
3. The activity of releasing the document is known as _____.
a) **Dispatching** b) Routing c) Estimating d) Inspection
4. _____ consists of fixing the flow lines for various materials from the stores to the packing of finished product.
a) Dispatching b) **Routing** c) Estimating d) Inspection
5. _____ production system is produced based on customer orders.
a) **Intermittent** b) Project c) Mass d) Batch
6. Food and fuel industry are the examples of _____ production system.
a) Intermittent b) Project c) Mass d) **Continuous**
7. Steel, cement industries are the examples of _____ production system.
a) Intermittent b) Project c) **Process** d) Continuous
8. JIT – Just In _____.
a) **Time** b) Technology c) Techniques d) Total
9. The shop floor planning and control is an _____ decision.
a) Strategic b) **Operating** c) Control d) Management

10. CPM – Critical _____ Method.

- a) **Path** b) Place c) Price d) Product

UNIT 2

1. _____ refers to the choice of region or a particular site for setting up a business.

- a) **Plant location** b) Plant layout c) Plant machinery d) Production planning

2. _____ refers to the arrangement of physical facilities such as tools, machines etc.

- a) Plant location **b) Plant layout** c) Plant machinery d) Production planning

3. In _____ layout the machines and equipments are arranged in one line depending upon the sequence of operations.

- a) **product** b) batch c) location d) combined

4. _____ layout is used for batch production.

- a) **process** b) batch c) location d) combined

5. In _____ layout the machines of similar types are arranged together at one place.

- a) **process** b) batch c) location d) combined

6. A combination of process and product layout is known as _____ layout.

- a) process b) batch c) location **d) combined**

7. _____ layout involves the movement of both man power and machines.

- a) process b) batch **c) fixed position** d) combined

8. The product layout is otherwise known as _____ layout.

- a) **line** b) batch c) fixed position d) combined

9. The fixed position layout is otherwise known as _____ layout.

- a) line b) batch **c) location** d) combined

10. Ships, boilers are the examples of _____ layout.

- a) line b) batch **c) fixed position** d) combined

UNIT 3

1. _____ documents provide instructions for converting raw materials into finished products.

- a) Loading b) Dispatching c) Routing **d) Scheduling**

2. _____ facility or work centre as per predetermined schedule.

- a) Loading** b) Dispatching c) Routing d) Scheduling

3. In _____ scheduling refers to the current schedule for the short range of planning horizon.

- a) master production **b) detailed** c) aggregate d) machine

4. The cost for typing, calling, transport comes under _____ cost.

- a) order** b) holding c) set up d) production

5. In _____ scheduling refers to the overall production schedule over the intermediate planning horizon.

- a) master production** b) detailed c) aggregate d) machine

6. _____ cost represents the holding of inventories in hand.

- a) carrying** b) holding c) set up d) production

7. Safety stock is otherwise known as _____

- a) buffer b) new c) old **d) extra**

8. _____ cost that are incurred on obtaining additional inventories.

- a) ordering** b) holding c) set up d) shortage

9. _____ consists of fixing the flow lines for various materials from the stores to the packing of finished product.

- a) Dispatching **b) Routing** c) Estimating d) Inspection

10. The activity of releasing the document is known as _____

- a) Dispatching** b) Routing c) Estimating d) Inspection

UNIT 4

1. Breakdown maintenance is also known as _____ maintenance.

- a) corrective** b) routine c) planned d) preventive

2. In _____ maintenance the work is carried out while the equipments are in running condition.

- a) **running** b) shut down c) routine d) preventive

3. Lubricating the machines is a part of _____ maintenance work.

- a) civil **b) mechanical** c) electrical d) routine

4. Transformers, motors, light, fans comes under _____ maintenance.

- a) civil b) mechanical **c) electrical** d) routine

5. Fencing, gardening, land scaping comes under _____ maintenance.

- a) civil** b) mechanical c) electrical d) routine

6. _____ is one of the objectives of Production management.

- a) Right quantity** b) Right cost c) Right person d) routine

7. EOQ stands for _____ Order Quantity

- a) Economic** b) Ecocentric c) Economy d) Exact

8. _____ quality of production manager allows him to adapt to changing situations

- a)Intelligence **b) Flexibility** c) Sympathy d) Innovative

9. _____ system is one of the type of production system.

- a)Intelligence **b) Intermittent** c) Method d) Innovative

10. Production planning is essential for _____ Management

- a)supply b) quality c) inventory **d) All the above**

UNIT 5

1. _____ study was developed to improve the performance of a given work.

- a) Work** b) Time c) Motion d) Method

2. _____ study is the analysis of the motion of an operator.

- a) Work b) Time **c) Motion** d) Method

3. _____ study is determines the amount of time allowed for the completion of a task.

- a) Work **b) Time** c) Motion d) Method

4. Method study is also known as _____

a) method analysis b) work measurement c) work study **d) method improvement**

5. _____ is two handled process chart in which micro motion of both hands are recorded.

a) Record b) Flow chart **c) SIMO chart** d) Examine

6. Micro motions are also known as _____

a) job cycle b) grasp c) rotation **d) therblings**

7. Memo motion study was developed by _____

a) Mundel b) Taylor c) Philip Kotler d) Franklin

8. The machines used for mass productions are _____ purpose.

a) Special b) General c) Automatic d) Semi Automatic

9. Production planning is essential for _____ management.

a) job cycle b) production **c) Quality** d) None of the above

10. The process of production planning and control starts with _____ .

a) Expediting b) Scheduling **c) Estimating** d) None of the above

Section B

(5x2=10)

Answer any FIVE questions in about 50 words each:

UNIT-I

1. Write about the scope of Production and Operations Management
2. Write in brief about Production system concept
3. What is Competitive Advantage?
4. What is Production?
5. Write about decision making in production.
6. What are the difference between production and operations management
7. What are the characteristics of production function?
8. Write down the importance of production function.
9. Write about the Nature of Production.
10. What are the duties and responsibilities of Production Managers?

UNIT-II

1. What is Plant Location?
2. What is Plant Layout?
3. What are the objectives of good layout?
4. What are the four types of Layout?
5. What are the factors affecting Plant Location?
6. What is Process Layout?
7. What is Product Layout?
8. What is Fixed Position Layout?

- 9.What is Combination Layout?
- 10.What are the steps in location selection?

UNIT-III

- 1.What is Production planning?
- 2.What is What is Production control?
- 3.Write down the elements of Production Control?
- 4.What is Routing?
- 5.What is Dispatching?
- 6.What is Expediting?
- 7.What is Follow up?
- 8.What is safety stock?
- 9.What is Inventory Management?
- 10.What is EOQ?

UNIT-IV

- 1.What is Plant Maintenance?
- 2.What is good housekeeping?
- 3.What is Safety Engineering?
- 4.Write about the organization for maintenance?
- 5.What are the merits of safety Engineering?
- 6.What are the demerits of safety Engineering?
- 7.Write about the Japanese 5S model.
8. Write short note on material matainence.
9. What is good housekeeping?
- 10.List any two types of maintenance.

UNIT-V

1. What is Work study?
2. What are the objectives of work study?
3. What is Methods study?
4. What is Work Measurement?
5. What are the objectives of Methods study?
6. What is Motion Study?
7. What is Memo motion study?
8. What are the benefits of Work Measurement?
9. Who is a Qualified worker?
10. What are the symbols used in process charting?

Section C

(5x5=25)

Answer all questions in about 200 words each:

UNIT I

1. a) Write a short note on the term production.
(or)

- b) Explain the term i) Conversion sub-system ii) Control sub-system
2. a) Explain decision making in production.
(or)
b) Explain the scope of production.
3. a) What are the importance of production management/
(or)
b) Explain the features of production management.
4. a) Explain the term dispatching.
(or)
b) Explain the term routing.
5. a) Explain project production flow.
(or)
b) Explain batch production flow.

Unit II

1. a) Explain plant location.
(or)
b) What is meant by ideal location?
- 2.a) Why facility location decision is important?
(or)
b) What are the different types of layout?
- 3.a) What is meant by plant layout?
(or)
b) What are the objectives of good plant layout?
- 4.a) What are the advantages of product layout?
(or)
b) What is meant by process layout?
- 5.a) What are the disadvantages of process layout?
(or)
b) What is meant by location layout?

UNIT III

- 1.a) Explain production planning.
(or)
b) Explain production control.

- 2.a) Explain the importance of control function.
(or)
b) What are the objectives of production planning and control?
- 3.a) What are the types of scheduling?
(or)
b) Explain the problems of scheduling.
- 4.a) What are information required in route sheet?
(or)
b) What are the functions of production control?
- 5.a) What are the phases in production planning?
(or)
b) What is meant by inventory management?

UNIT IV

- 1.a) What is meant by maintenance management?
(or)
b) What is meant by maintenance engineering?
2. a) What are the major area of maintenance?
(or)
b) Explain preventive maintenance.
- 3.a) What are the reasons for maintenance scheduling?
(or)
b) Define safety engineering.
- 4.a) What are the reasons for good housekeeping?
(or)
b) Explain running maintenance.
- 5.a) What is meant by maintenance policy?
(or)
b) What are the problems in maintenance scheduling?

UNIT V

- 1.a) Define work study.
(or)
b) What are the importance of work study?
- 2.a) What is meant by motion study?
(or)

- b) What are the objectives of method study?
- 3.a) Explain outline process chart.
(or)
b) What are the symbols used in process charting?
- 4.a) Explain flow process chart.
(or)
b) Define work measurement.
- 5.a) Explain the term productivity.
(or)
b) What is meant by SIMO chart?

Section D

(3x10=30)

Answer any THREE questions in about 400 words each:

UNIT I

1. Explain the characteristics of production management.
2. Explain the benefits derived from production management.
3. What are the functions of production management department?
4. Explain the role of production manager.
5. What are the duties of production manager in manufacturing organisation?
6. Difference between production and operation management.
7. Explain production system model.
8. Explain the nature of production.
9. Explain intermittent production system with examples and diagram.
10. Explain continuous production system with examples and diagram.

UNIT II

1. What are the considerations for selecting a plant location?
2. What are the objectives of plant layout?
3. What are the factors affecting plant location?
4. What are the principles of plant layout?
5. What are the steps involved in layout design procedure?
6. Explain product layout in detail.
7. Explain process layout in detail.
8. Explain fixed layout in detail.
9. Explain the types of layout.
10. Explain the objectives of plant layout.

UNIT III

1. Explain the elements of production control.
2. Explain production control system.

- 3.What are the factors determining production control procedures?
- 4.Explain the scope of production planning and control.
- 5.Explain the levels of production planning.
- 6.Explain the functions production planning.
- 7.Briefly explain the team dispatching.
- 8..Explain the objectives of scheduling.
- 9.Explain the elements of scheduling.
- 10.What are the major functions of PPC department?

UNIT IV

- 1.Explain Japanese 5's model.
- 2.Explain the implementation of good housekeeping.
- 3.Explain the scope of maintenance.
- 4.Explain the importance of maintenance management.
- 5.Explain the impact of poor maintenance.
- 6.What are the objectives of maintenance management?
- 7.Explain breakdown and predictive maintenance.
- 8.Explain routine and planned maintenance.
- 9.What are steps followed in maintenance planning?
- 10.What are the considerations in scheduling maintenance?

UNIT V

- 1.What are the objectives of work study?.
- 2.What are the benefits of work study?
- 3.Explain the relationship between time and motion study.
- 4.Explain the procedure for work study.
- 5.Explain the advantages of method study.
- 6.Explain the factors of method study.
- 7.Explain the procedure for method study.
- 8.What are the recording techniques used in method study?
- 9.Explain the benefits of work measurement.
- 10.What are the steps in work measurement?

I B.Sc. Botany – Semester I

Plant Diversity I (Algae, Bryophytes, Fungi and Lichen) - 21UBOC11

Question Bank

Section - A

Unit- I

1. The study of algae is called
(a) Mycology (b) **Phycology** (c) Pteridology (d) Bryology
2. According to Fritsch algae are classified into
(a) **11 classes** (b) 13 classes (c) 8 classes (d) 16 classes.
3. The dominant pigment found in the members of Cyanophyceae
(a) **c- phycocyanin** (b) chlorophyll (c) carotenoid (d) fucoxanthin.
4. The reserve food materials in brown algae
(a) **mannitol and laminarin** (b) starch and oil (c) glucose and fat (d) oil and fat.
5. Motile unicellular thallus
(a) *Chlorella* (b) *Volvox* (c) *Caulerpa* (d) ***Chlamydomonas***.
6. Foliaceous thallus is noted in
(a) *Cladophora* (b) ***Ulva*** (c) *Volvox* (d) *Spirogyra*.
7. Haplontic life cycle is characterized by
(a) **zygotic meiosis** (b) gametogenic meiosis (c) zygotic mitosis (d) meiosis.
8. When the alternating vegetative gametophytes and sporophytes are morphologically similar the alternation of generation is called
(a) **isomorphic** (b) heteromorphic (c) heterologous (d) diplontic.
9. Diploid adult and gametogenic meiosis are the characteristics features of
(a) haplobiontic life cycle (b) haplontic life cycle (c) **diplontic life cycle** (d) all of these.
10. Carposporangia are produced on
(a) **carposporophyte** (b) tetrasporophyte (c) gametophyte (d) carpospores.
11. Blue green algae are
(a) **prokaryotes** (b) eukaryotic (c) acellular (d) actinomycetes
12. Cell wall in algal cell consists of

- (a) **cellulose** (b) chitin (c) cutin (d) suberin
13. The pyrenoids are
 (a) protein bodies (b) starch bodies (c) **protein bodies with an envelope of starch**
 (d) starch bodies with an envelope of protein
14. The storage product in blue green algae are
 (a) manitol (b) **cyanophycean starch and protein** (c) algin (d) agar –agar
15. Floridean starch is found in
 (a) Chlorophyceae (b) **Rhodophyceae** (c) Myxophyceae (d) Phaeophyceae
16. The carpospores of *Gracilaria* are
 (a) haploid (b) **diploid** (c) triploid (d) tetraploid
17. Chlorophyll b is found in
 (a) blue green algae (b) **green algae** (c) brown algae (d) red algae

Unit- II

1. *Volvox* occurs in
 (a) **fresh water** (b) marine water (c) soil (d) hot springs.
2. The reserve food in *Oscillatoria* is
 (a) starch (b) **cyanophycean starch** (c) lipid (d) pyrenoid.
3. Sexual reproduction is absent in
 (a) *Volvox* (b) *Sargassum* (c) *Gracilaria* (d) ***Oscillatoria***.
4. *Oscillatoria* reproduces by the formation of
 (a) gametes (b) spores (c) **hormogones** (d) necridium.
5. *Volvox* belongs to the class
 (a) Phaeophyceae (b) Rhodophyceae (c) Cyanophyceae (d) **Chlorophyceae**.
6. The type of sexual reproduction in *Volvox* is
 (a) **oogamous** (b) isogamous (c) anisogamous (d) isomorphic.
7. The thallus of *Caulerpa* is
 (a) multicellular (b) **coenocytic** (c) saprophytic (d) parasitic.
8. *Caulerpa* reproduces by
 (a) vegetative and sexual (b) **vegetative and asexual** (c) sexual and asexual (d)
 fragmentation.

9. Transverse, longitudinal, cylindrical and interconnecting strands running across the cavity of *Caulerpa* thallus
(a) cisternae (b) **trabeculae** (c) xylem (d) vacuole.
10. In *Caulerpa* the chloroplast is
(a) cup-shaped (b) parietal (c) **discooid** (d) ribbon-shaped.
11. The structure of *Volvox* is
(a) unicellular (b) filamentous (c) thalloid (d) **colonial**
12. The species of *Caulerpa* are
(a) fresh water (b) **marine** (c) terrestrial (d) 50% fresh water
13. The sexual reproduction in *Volvox* is
(a) isogamous (b) anisogamous (c) **oogamous** (d) viviparous
14. *Volvox* is a member of the group
(a) Rhodophyceae (b) Phaeophyceae (c) **Chlorophyceae** (d) Myxophyceae
15. The plaque stage of *Volvox* consists of
(a) 2 cells (b) 4 cells (c) **8 cells** (d) 16 cells
16. *Volvox* colony is
(a) **coenobium** (b) coenocytic (c) ribbon like (d) filamentous
17. The heterocysts are characteristic to
(a) **Cyanophyceae** (b) Rhodophyceae (c) Phaeophyceae (d) Chlorophyceae
18. *Oscillatoria* reproduces by
(a) sexually (b) **vegetatively** (c) genetically (d) none
19. Air bladders are found in
(a) *Gracillaria* (b) *Volvox* (c) *Caulerpa* (d) ***Sargassum***.
20. In *Sargassum* the sex organs are borne on specialized branches called
(a) **receptacles** (b) conceptacles (c) air bladders (d) leaves.
21. The male sex organ in *Sargassum* is called as
(a) **antheridium** (b) oogonium (c) archegonium (d) ascogonium .
22. The sterile hair found in the conceptacle is called as
(a) **paraphysis** (b) stalk (c) antheridial branch (d) flagella.
23. Triphasic life cycle is noted in
(a) *Sargassum* (b) *Oscillatoria* (c) ***Gracilaria*** (d) *Volvox*.

24. Tetrasporophytes produce
(a) **tetraspores** (b) carpospores (c) spores (d) gametes.
25. Tetraspores are
(a) tetraploid (b) triploid (c) diploid (d) **haploid**.
26. *Gracilaria* belongs to the class
(a) **Rhodophyceae** (b) Chlorophyceae (c) Bacillariophyceae (d) Phaeophyceae.
27. Which of the following is an agarophyte?
(a) **Gracilaria** (b) *Volvox* (c) *Caulerpa* (d) *Sargassum*
28. The sexual reproduction in *Sargassum* is
(a) **oogamous** (b) apogamous (c) syngamous (d) alogamous
29. The narrow distal part of carpogonium of *Gracilaria* is
(a) trochophore (b) **Trichogyne** (c) trichogene (d) trochogene
30. The male gamete of *Gracilaria*
(a) antherozoid (b) spermatangia (c) **spermatium** (d) spermagonium
31. The end cell of the gonimoblast filament develops into
(a) tetrasporangium (b) zoosporangium (c) **carposporangium** (d) procarp
32. The thallus of *Vaucheria* is attached to the substratum by a
(a) attaching disc (b) hold fast (c) rhizoids (d) hapteron.
33. Siphonaceous thallus is noted in
(a) *Caulerpa* (b) *Sargassum* (c) *Gracilaria* (d) *Vaucheria*
34. The life cycle of *Vaucheria* is a
(a) haplontic type (b) diplontic type (c) diplohaplontic type (d) diplobiontic type

Unit- III

1. The thallus of *Marchantia* is
(a) **free living gametophyte** (b) free living sporophyte (c) saprophyte (d) parasite.
2. *Marchantia* thallus is provided with
(a) pegged rhizoides (b) smooth walled rhizoids
(c) **pegged rhizoides and smooth walled rhizoids** (d) roots
3. In *Marchantia* the gemma cups are seen on the
(a) **dorsal side** (b) ventral side (c) both sides (d) tip of the rhizoids.
4. Each antheridial chamber in *Marchantia* contains

- (a) many antheridia (b) **one antheridium** (c) 4 antheridia (d) 2 antheridia.
5. .Marchantiales belongs to the class
(a) bryopsida (b) **hepaticopsida** (c) anthocerotopsida (d) bryidae
6. Bryophytes are
(a) **amphibious plants** (b) hydrophytes (c) terrestrial plants (d) aquatic plants
7. A cylindrical sheath grows from the base of each archegonium after fertilization in *Marchantia* is
(a) **perigynium** (b) perichaetium (c) rays (d) calyptra
8. In *Marchantia* the zygote develops into
(a) **sporogonium** (b) gametophyte (c) thallus (d) capsule.
9. The dispersal of spores in *Marchantia* is facilitated by
(a) **movement of elaters** (b) rhizoides (c) insects (d) capsule wall.
10. In *Marchantia* the gametophytes are
(a) homothallic (b) **heterothallic** (c) aquatic (d) terrestrial
11. The life history of *Marchantia* is
(a) **diplohaplontic** (b) haplontic (c) diplontic (d) diplohaplobiontic
12. Sexual reproduction in *Marchantia* is
(a) **oogamous** (b) oviparous (c) apogamous (d) syngamous
13. The gametophyte of *Marchantia* is
(a) **haploid** (b) diploid (c) triploid (d) tetraploid
14. The male sex organ in Bryophytes is
(a) sporophyte (b) gametophyte (c) archegonia (d) **antheridia**
15. The stalk of gemmae of *Marchantia* is
(a) **unicellular** (b) bicellular (c) tricellular (d) multicellular
16. Elaters are _____ in nature
(a) xeroscopic (b) **hygroscopic** (c) circum mutation (d) telescopic
17. According to Rothmaler Bryophytes are classified into
(a) 2classes (b) **3 classes** (c) 4 classes (d) 5 classes
18. Spore mother cell in Bryophytes is
(a) Haploid (b) **diploid** (c) triploid (d) tetraploid
19. In *Marchantia* meiosis takes place

- (a) at the time of germination of zygote
- (b) at the time of germination of spores
- (c) **during the development of sporophyte**
- (d) during the differentiation of foot, seta and calyptras

20. Elaters of *Marchantia* are

- (a) haploid (b) **diploid** (c) triploid (d) polyploidy

Unit IV

1. Free living plasmodial thallus is seen in
(a) Zygomycetes (b) Oomycetes (c) **Myxomycetes** (d) Basidiomycetes
2. Organism that causes “white rust”
(a) *Aspergillus* (b) *Puccinia* (c) *Mucor* (d) ***Albugo***
3. All fungi are
(a) autotrophic (b) parasitic (c) symbiotic (d) **heterotrophic**
4. Fruit body of *Aspergillus* is
(a) apothecium (b) perithecium (c) pseudothecium (d) **cleistothecium**
5. Dolipore septum is characteristic to
(a) Ascomycetes (b) **Basidiomycetes** (c) Oomycetes (d) Chytridiomycetes
6. Closed ascocarp is
(a) **cleistothecium** (b) apothecium (c) perithecium (d) None of the above
7. In low temperature, sporangia of *Albugo* functions as
(a) germ tube (b) **zoosporangium** (c) conidium (d) plasmodium
8. The common food stored in fungi is
(a) starch (b) **glycogen and oil** (c) pigments (d) fat
9. *Albugo candida* is an example of
(a) **obligate parasite** (b) obligate saprophyte
(c) facultative saprophyte (d) facultative parasite
10. In *Albugo candida*, conidiosporangia are produced in
(a) acropetal succession (b) **basipetal succession** (c) mixed manner (d) irregular manner
11. The basal cell from where the conidiophore of *Aspergillus* arises is known as
(a) trophocyst (b) tip cell (c) **foot cell** (d) terminal cell
12. The reproductive organs of *Aspergillus* are
(a) antheridium and oogonium (b) spermatium and oogonium
(c) **antheridium and ascogonium** (d) spermatium and ascogonium
13. Organism that causes “white rust”
(a) *Aspergillus* (b) *Puccinia* (c) *Mucor* (d) ***Albugo***
14. The difference between septate hyphae and nonseptate hyphae is
(a) a difference in haploid and diploid cells.
(b) a distinction between saprotrophic fungi and parasitic or disease-causing fungi.

- (c)**determined by whether the hyphae have cross walls or lack cross walls.**
 (d)a distinction between sexual and asexual reproduction.
15. An individual filament of a fungus, with an elongated mass of cytoplasm, is called
 (a) a mycelium (b) a conidium (c) a basidiospore **(d)a hypha**
16. A dormant fungal structure that can survive unfavorable growing conditions is the
 (a) sporangium (b) ascocarp (c) basidium **(d) zygospor**
17. Which of the following is not involved in the production of sexual spores in fungi
 (a) meiosis (b) nuclear fusion **(c) fragmentation** (d) nuclear fusion and meiosis
18. Perfect stage of fungus implies that
 (a) the fungus is perfectly healthy (b) the fungus reproduces asexually
(c) the fungus reproduces sexually (d) the fungus produces resting spores
19. Study of fungi is
 (a) palynology (b) phycology **(c) mycology** (d) microbiology
20. Mycelium of *Albugo* is
(a) intercellular (b) intracellular (c) surface of host (d) surface of stem
21. Thread like filaments that constitute the body of fungi
 (a) paraphyses (b) rhizoids (c) haptera **(d) hyphae**
22. Septate mycelium is found in -----
 (a) Ascomycetes & Myxomycetes (b) Basidiomycetes & Phycomycetes
(c) Ascomycetes & Basidiomycetes (d) Ascomycetes & Phycomycetes
23. Ascocarp type of fruiting bodies are found in class-----
(a) Ascomycetes (b) Basidiomycetes (c) Phycomycetes (d) Myxomycetes
24. Basidiomycetes produces -----type of fruiting bodies
 (a) Ascocarp (b) cleistothecium **(c) Basidiocarp** (d) Basidiospore
25. The fungi in which sexual reproduction is absent are classified in class-----
 (a) Ascomycetes **(b) Deuteromycetes** (c) Phycomycetes (d) Myxomycetes
26. Female sex organ in *Albugo* is known as-----
 (a) Ascogonium **(b) Oogonium** (c) Archegonium (d) Antheridium
27. Sporangial arrangement in *Albugo* is -----succession
(a) Basipetal (b) Acropetal (c) Centripetal (d) Centrifugal
28. All species of *Albugo* are -----
 (a) Exophyte **(b) Parasites** (c) Saprophytes (d) Epiphytes
29. In *Albugo* the structure which absorbs food material from host is called-----
 (a) Mycelium **(b) Haustoria** (c) Rhizoids (d) Conidium
30. Zoospores in *Albugo* are -----
 (a) anteriorly biflagellate **(b) laterally biflagellate** (c) Quadriflagellate (d) Uniflagellate
31. Which of these is Coprophilous?
 (a) *Puccinia* **(b) Peziza** (c) *Aspergillus* (d) *Polyporus*
32. Which one of these is called as cup fungus?
(a) Peziza (b) *Cyathus* (c) *Pilobolus* (d) *Polyporus*

33. Apothecium in *Peziza* is a
 (a) **aerial and short lived** (b) underground and short lived
 (c) aerial and persistent (d) underground and persistent
34. The term "ascus" is based on the Greek root word meaning
 (a) club or bat (b) spore-forming (c) network (d) **bag or sac**
35. A sexual spore produced by a sac fungus is called
 (a) a mycelium (b) a conidium or conidiospore (c) **an ascospore** (d) a basidiospore
35. The coprophilic fungi inhabit
 (a) **dung substratum** (b) dead wood (c) decaying leaves (d) food articles
36. The number of basidiospores produced on each basidium is
 (a) 2 (b) **4** (c) 6 (d) 8
37. Dikaryotic cell has
 (a) two haploid nuclei (b) diploid zygotes
 (c) two dissimilar nuclei (d) **two dissimilar haploid nuclei**

UNIT V

1. Fruticose lichen is
 (a) *Parmelia* (b) ***Usnea*** (c) *Lecanora* (d) *Graphis*
2. Alga that mostly found in lichens is
 (a) **green alga** (b) red alga (c) brown alga (d) yellow green alga
3. Litmus dye is obtained from
 (a) *Usnea* (b) ***Rocella*** (c) *Ramalina* (d) *Cladonia*
4. The fertile layer of a fruit body bearing asci along with paraphyses is known as
 (a) **Hymenium** (b) Sub hymenium (c) Medulla (d) Cortex
5. Lichen is the association of an alga and a
 (a) **fungus** (b) bacterium (c) virus (d) bryophyte
6. The mode of life in lichen thallus is
 (a) saprophytic (b) parasitic (c) **symbiotic** (d) epiphytic
7. Lichens are bio indicators of
 (a) **air pollution** (b) water pollution (c) soil pollution (d) noise pollution
8. Saxicolous lichens grown on
 (a) **rocks** (b) soil (c) barks of trees (d) water
9. The vegetative reproduction in lichens takes place by
 (a) Oospores (b) Ascospores (c) Basidiospores (d) **Soredia**
10. When the fungal components are Basidiomycetes the lichen is known as
 (a) Phycolichen (b) Ascolichen (c) **Basidiolichen** (d) Deutrolichen
11. When the fungal components are ascomycetes the lichen is known as
 (a) Phycolichen (b) **Ascolichen** (c) Basidiolichen (d) Deutrolichen
12. In sexual reproduction of lichens the fruit body formed is of
 (a) apothecium (b) perithecium (c) **apothecium and perithecium** (d) cleistothecium

13. Asexual reproduction in lichens takes place by
(a) zygosporos (b) aplanospore (c) **pycnidiospore** (d) chlamydospore
14. In lichens sexual reproduction is carried out by
(a) **fungal partner** (b) algal partner (c) algal partner and fungal partner (d) phycobiont
15. If both algal cells and fungal hyphae are uniformly distributed in lichen formation, then called as
(a) **homoiomorous** (b) heteromorous (c) homioheteromorous (d) hemimorous
16. The male reproductive organ of lichen is called
(a) carpogonium (b) trichogyne (c) **spermagonium** (d) hymenium
17. The female reproductive organ of lichen is called
(a) **carpogonium** (b) trichogyne (c) spermagonium (d) hymenium
18. Usnic acid a broad spectrum antibiotic is obtained from
(a) Usnea (b) *Cladonia* (c) **Usnea and cladonia** (d) *Parmelia*
19. Which of the following lichen is called as the "Reindeer moss"
(a) Usnea (b) **Cladonia rangiferina** (c) *Cetraria islandica* (d) *Evernia*
20. Which of the following lichens are the pioneers in xerosere
(a) foliose lichens (b) fruticose lichens (c) **crustose lichens** (d) leprose lichens
21. Which statement is wrong about lichens
(a) some species are eaten by Reindeers
(b) lichens are indicators of pollution
(c) **they grow rapidly about 2 cm per day**
(d) they have symbiotic relationship between alga and fungus
22. Which of the following organisms is an intimate association of a fungus and algae
(a) **Lichens** (b) Bryophyta (c) Pteridophyta (d) None
23. The fungal component of Lichens are known as
(a) Phycobiont (b) Bryobiont (c) Pteridobiont (d) **Mycobiont**
24. The Algal component of Lichens are known as
(a) **Phycobiont** (b) Bryobiont (c) Pteridobiont (d) Mycobiont
25. Which component of Lichens constitutes about 98.99% of the tissues?
(a) Phycobiont (b) Bryobiont (c) Pteridobiont (d) **Mycobiont**
26. Which of the following is an example of Crustose lichens?
(a) *Cladonia* (b) **Rhizocarpon** (c) *Parmelia* (d) None
27. Which of the following possess flat, leaf like with lobed margins?
(a) *Cladonia* (b) *Rhizocarpon* (c) **Parmelia** (d) None
28. Which of the following is example of Fruticose lichens?
(a) **Cladonia** (b) *Rhizocarpon* (c) *Parmelia* (d) None
29. Which of the following relationship is seen in Lichens?
(a) Commensalism (b) **Symbiosis** (c) Amensalism (d) All
30. Lichens are known as pioneers of vegetation in
(a) Hydrosere (b) Halosere (c) Psammosere (d) **Lithosere**

32. Which of the following is considered as the farmers of nature?

- (a) Fungi (b) Bacteria (c) **Lichens** (d) All

Section - B

Unit I

1. Define Siphonaceous thallus with an example.
2. Define haplontic life cycle and cite one example
3. Write about the pigments and reserve food materials in Chlorophyceae
4. Define coenobium with an example
5. Differentiate between isogamy and anisogamy
6. Define diplontic life cycle and cite one example
7. What is heteromorphic alternation of generation? Give an example.
8. Write any three characteristic features of Bacillariophyceae
9. Write any three characteristic features of Xanthophyceae
10. Write any three characteristic features of Phaeophyceae

Unit II

1. Define incipient nucleus with an example.
2. What are the different types of movements exhibited in *Oscillatoria*? Explain.
3. How hormogones are produced in *Oscillatoria*
4. Define plakea stage of *Volvox*
5. Draw the diagram of *Volvox* colony showing daughter colonies
6. Draw a single cell of *Volvox* colony
7. What type of sexual reproduction is seen in *Volvox*? Name the sex organs.
8. Define coenocytic thallus. Give an example.
9. Differentiate microgamete and macrogamete of *Caulerpa*
10. Plant body of *Caulerpa* is a sporophyte or a gametophyte explain.
11. Write notes on zoogonidia stage
12. What is akinetes?
13. Write the systematic position of *Sargassum* according to Fritsch
14. Explain the female conceptacle in *Sargassum*
15. Draw the diagram showing V.S of cystocarp of *Gracilaria*.

16. Define diplobiontic life cycle with an example
17. Name any three nitrogen fixing blue green algae.
18. Mention any three uses of agar agar.
19. Why algae are used as food ? Give any two examples.
20. Name any two medicinally important algae and their role.

Unit- III

- 1.What are the different classes of bryophytes according to Rothmaler?
- 2.Mention any four characteristic features of the class Bryopsida.
- 3.Mention any four characteristic features of the class Hepaticopsida.
- 4.Mention any four characteristic features of the class Anthocerotopsida.
- 5.Write notes on rhizoids of *Marchantia*.
- 6.Draw the structure of gemma and label the parts.
- 7.What are elaters? What function it does?
- 8.Describe the structure of archegonium of *Marchantia*.
- 9.Describe the storage region of *Marchantia* gametophyte
10. What are the structures which you can see on the dorsal surface of the thallus of *Marchantia*.
11. Write the systematic position of *Polytrichum* .
12. Write about the occurrence and distribution of *Polytrichum*
13. Describe the Archegonia of *Polytrichum*
14. Describe the seta portion of *Polytrichum*
15. Give any two affinities between algae and bryophytes
16. Write any four medicinal uses of bryophytes.

UNIT IV

- 1.Name the disease caused by *Albugo*? Write the name of the host plant.
- 2.What are hyphae?
- 3.What is a mycelium ?
- 4.Compare and contrast septate and coenocytic hyphae.
- 5.What are haustoria?
- 6.What are conidia?
- 8.Describe how fungi obtain their food.
- 9.What are saprotrophs?

10. Write any two symptoms of white rust disease
11. Mention any two features of Gymnomycota
12. Define basipetal arrangement of sporangia .Cite one example.
13. Describe the structure of zoospore in *Albugo*
14. What type of sexual reproduction is seen in *Albugo* ? Name the sex organs .
15. Describe the conidiophore of *Aspergillus*.
16. Draw the fruit body of *Aspergillus* and label the parts
17. Describe the mycelium of *Peziza*
18. Which is the dikaryotic phase in *Peziza*? Explain.
19. Draw and label the parts of *peziza* cup

UNIT V

1. What are the two types of ascocarps found in lichens?
2. Differentiate soredia and isidia ?
3. Lichens are often held up as an example of mutualism. Do you agree? Outline the benefits for each of the bionts
4. How lichens are classified on the basis of habitat
5. Write any four features of crustose lichens
6. Write any four features of foliose lichens
7. Name a fruiticose lichen you have studied .Write any two important features
8. What are the different methods of vegetative reproduction seen in lichens
9. Which partner of the lichen is responsible for sexual reproduction? Name the sex organs.
10. Name the fruit body of *Usnea* and describe the hymenial region of the same.
11. With an example write any two medicinal uses of lichens.
12. How lichens are ecologically important.
13. Lichens are used as food for man .Why ? and how?
14. Write any two ecological importance of lichens
15. Write about the morphology of *Collema*
16. Write about the morphology of *Parmelia*
17. What is lichens?

Section C

Unit -I

1. List out the characteristics of Cryptophyceae
2. Name the different classes of algae based on Fritsch's classification.
3. Write the pigment and reserve food of class Rhodophyceae and Phaeophyceae.
4. Explain diplontic life cycle.
5. Explain haplontic life cycle.
6. Bring out the characteristics of Xanthophyceae.
7. Write down any five distinctive characteristics of algae.
8. List out the economic importance of algae.
9. Bring out the role of algae in medicine.

Unit- II

1. Write the systematic position and occurrence of *Oscillatoria*.
2. Describe the internal structure of stolon of *Caulerpa*.
3. Describe the structure of a single cell in *Volvox*.
4. Briefly explain the asexual reproduction in *Volvox*.
5. Describe the structure of *Volvox* colony.
6. Comment on reproduction in *Oscillatoria*.
7. Write briefly the thallus construction of *Caulerpa*.
8. Write notes on antheridium in *Volvox*.
9. Explain the sexual reproduction in *Caulerpa*.
10. Bring out the germination of oospore in *Volvox*.
11. Describe the internal structure of stipe of *Sargassum*
12. Write notes on cryptoblast.
13. Explain the external structure of sporophyte of *Sargassum*.
14. Describe the thallus structure of *Vaucheria*
15. Describe various types of vegetative reproduction found in *Vaucheria*

Unit -IV

1. Outline the classification of Bryophytes according to Rothmaler.
2. Write notes on rhizoids and scales in *Marchantia*
3. Describe the internal structure of *Marchantia* thallus.

4. How does *Marchantia* reproduce vegetatively.
5. Comment on gemma cup.
6. Describe the structure of the antheridium in *Marchantia*.
7. Enumerate any five characteristic features of Bryophytes.
8. What are the changes that occur after fertilization in *Marchantia*.
9. Describe the structure of the archegonium in *Marchantia*.
10. Write notes on calyptra, perichaetium and perigynium.
11. Describe the morphology of *Polytrichum*
12. Draw and explain the internal structure of the leaf of *Polytrichum*
13. Write about the sporophyte of *Polytrichum*
14. Affinities between algae and bryophytes.

Unit IV

1. Describe the asexual reproduction of *Albugo*.
2. Write down the general features of Ascomycetes.
3. Enumerate the important characteristics of Fungi.
4. Describe briefly various methods of sexual reproduction in fungi.
5. Explain the asexual reproduction of *Aspergillus*.
6. Describe the general characteristics of Basidiomycetes.
7. Describe the sexual reproduction in *Aspergillus*.
8. What are fungi? Give an account of asexual reproduction of fungi.
9. Give the systematic position of *Albugo* according to Alexopoulos and Mims. Write the important characters of the same
10. Give the graphic representation of life cycle of *Albugo*.
11. Draw and describe V.S. of leaf passing through sorus in *Albugo*.
12. Explain fertilization in *Albugo*.
13. Describe oogonium in *Albugo*.
14. Draw and describe the fruit body of *Aspergillus*.
15. Write the systematic position of *Polyporous* and explain its morphology with diagram
16. Describe the structure of apothecium of *Peziza* with labelled diagram.
17. Write about the types of spores produced by rust fungus in secondary host.
18. Explain the role of fungi in medicine.
19. Write short notes on uses of fungi in industry.

Unit V

1. How lichens are classified on the basis of morphology ?
2. Name and write any five uses of lichens.
3. How the lichens are classified based on anatomy?
4. Explain the sexual reproduction in *Usnea*.

5. Write short notes on asexual reproduction in lichens.
6. Write short notes on role of lichens in environment.
7. Give an illustrated account of external and internal structure of *Usnea*.
8. Write notes on crustose lichen.
9. Describe the sex organs of lichen.
10. Describe the characteristic features of foliose lichens.
11. Explain the occurrence and morphology of *Collema*.
12. Describe the distribution and external features of *Parmelia*

Section - D

Unit -I

1. Write an essay on the organization of thallus in algae.
2. Explain haplo diplontic life cycle with an example.
3. Explain triphasic life cycle.
4. Out line diplobiontic life cycle.
5. Explain isomorphic alternation of generation with suitable example.
6. Bring out the thallus organization in the filamentous algae.
7. Outline haplo biontic life cycle.
8. Explain anisomorphic alternation of generation.
9. Write in detail the classification of algae by Fritsch.
10. Enlist the economic and ecological importance of algae
11. Write the characteristic features of class Chlorophyceae, Phaeophyceae and Rhodophyceae.

Unit -II

1. Bring out the structure and reproduction of *Oscillatoria*.
2. Explain the life cycle of *Oscillatoria*.
3. Describe the sexual reproduction in *Volvox*.
4. Describe the structure of *Volvox* colony.
5. Describe the internal structure of stolon and assimilator in *Caulerpa*.
6. Explain reproduction in *Oscillatoria*.
7. Explain the life cycle of *Caulerpa* with suitable diagrams.
8. Describe the development and structure of antheridium and oogonium in *Volvox*.
9. What is oogamy. Illustrate with an example.
10. Describe the external structure of *Caulerpa*.

11. Describe the external structure of *Sargassum* and add a note on its economic importance
12. Write the internal structure of stipe and 'leaf'.
13. Explain sexual reproduction in *Sargassum*.
14. Describe the external and internal structure of *Gracilaria* thallus.
15. Outline the life cycle of *Gracilaria*.
16. Write notes on carposporophyte and tetrasporophyte.
17. Write the role of algae in agriculture and fisheries.
18. With suitable diagrams explain the life cycle of *Sargassum*.
19. Write an essay on the economic importance of algae.
20. Explain the sexual reproduction in *Gracilaria*.
21. Explain reproduction in *Vaucheria*
22. Explain the life cycle of *Vaucheria*

Unit -III

1. Describe the external and internal structure of gametophyte of *Marchantia*.
2. Write the salient features of Bryophytes.
3. Describe the structure of antheridiophore.
4. With suitable diagram describe the structure of archegoniophore.
5. Explain sexual reproduction in *Marchantia*.
6. Outline the classification of Bryophytes by Rothmaler
7. Describe the structure of sporophyte in *Marchantia*.
8. Write notes on scales, rhizoids and gemmae.
9. Briefly outline the life cycle of *Marchantia*.
10. Explain the structure of antheridium and archegonium in *Marchantia*.
11. What the occurrence, distribution, morphology and leaf anatomy of *Polytrichum*
12. Describe reproduction found in *Polytrichum*.
13. Describe the internal structure of sporophyte of *Polytrichum*.
14. Give the diagrammatic representation of the life cycle of *Polytrichum*
15. What is peat? What are the uses?
16. Biological, ecological, medicinal and horticultural importance of *Polytrichum*

Unit IV

1. Write an essay on various uses of fungi.

2. Explain the life pattern of *Aspergillus*.
3. Describe the life history of *Peziza*. Mentioning the features of special interest.
4. Give an account of structure and development of apothecium in *Peziza*.
5. What is an ascus? Describe the formation of ascus in *Peziza*.
6. Give the economic importance of fungi with respect to agriculture and food.
7. Give the applications of fungi in food, industries and medicine.
8. Explain the life pattern of *Polyporus*.
9. Give an account of the habit, habitat and external morphological features of *Polyporus*.

UNIT V

1. With suitable diagrams describe structure and reproduction of *Usnea*
2. Describe structural variations in lichens.
3. Write a detailed account on economic importance of lichen
4. What are lichens? Give the various views put forth to explain the nature of the association between the two components in the lichen thallus.
5. Write the systematic position and give an account of the habit, habitat and external morphological features *Parmelia*
6. Give an account of the habit, habitat and external morphological features of lichen.
7. Describe the structure of the fruit bodies in lichen.
8. Describe the life cycle of *Usnea*.
9. Explain the habit, habitat and external morphological features and the life cycle of *Usnea*
10. Write the systematic position and give an account of the habit, habitat and external morphological features *Collema*

Section- A

UNIT I

Choose the correct answer:

1. _____ Waste in the dustbin.
a) Dilute **b) Dispose** c) Handle d) Arrange
2. It _____ rain tonight.
a) May b) might c) can d) will

Answer all the following questions

3. *Oscillatoria* produce hormogonia _____ *Volvox*
4. *Volvox* and *Chlorella* _____ are aquatic organisms.
5. *Sargassum* reproduces vegetative, asexually _____ sexually.
6. Fungi cannot do photosynthesis. _____ they are placed under plant kingdom.
(Both, as well as, however, unlike)

7. Match the following

- | | | |
|-----------------|---|-------------------------------------|
| 1. Imperative | - | Statement |
| 2. Assertive | - | Request, order, instruction, advice |
| 3. Interogative | - | wonder |
| 4. Exclamatory | - | question |

8-12 Fill the paragraph with correct words

(mycelium, mitochondria, heterotrophic, parasite, chlorophyll, septum, dead materials)

Fungi are specialized organisms belonging to plant kingdom. Nutritionally _____. Based on their nutritional behaviour they are classified into saprophytic and _____. Fungi don't have _____ in their cells to synthesis their food. Their Plant body is made up of thread like structures called _____. Saprophytic fungi absorb food materials from _____.

Fill in the blanks with suitable modal verbs given in the bracket (may, should, will)

13. _____ I get in the car?
14. It _____ rain tonight
15. You _____ study for the exam

16. I _____ not speak another word

State whether the following statements are true or false

17. Modals are auxiliary verbs

18. Might express certainty of future actions.

19. Which is the most effective way of communication?

A) Speech (B) Gestures (C) Written communication (D) Code communication

UNIT II

1. A _____ is used to dissect and cut open the flower.

A) **Needle** B) coverslip C) microscope D) slide

2. The shape of the plant cell is rigid and is _____ to animal cell.

a) Like b) unlike c) similar to **d) in contrast**

3. Identify imperative sentence from the following

(a) Move the Slide until the sample is clearly viewed

(b) The Focus Knob is used to focus the sample

(c) The Condenser is readjusted for the clearest image

(d) The lenses should not be touched with your fingers

Choose words given in the brackets and fill in the below list of instructions appropriately.

(Rinse, Wear, Arrange, Dispose, Handle, Do not, Clean, Dilute)

4. lab coat before entering the lab.

5. eat in the lab.

6. the concentrated acids in the presence of your professor.

7. glassware with care.

8. the apparatus before and after the experiment.

9. Cells are gently smeared into a

A) Bunsen burner B) Test tube **C) Slides** D) Forceps

10. Litmus paper is used as an _____

11. Animal cell have cell wall True/False

12. Which one is branch of botany

A) Endoscope B) Pollination **C) Anatomy** D) Agronomist

13. To culture a sample, a _____ containing a culture medium is inoculated

A) Slides **B) test tubes** C) Petri dishes D) Indicator

UNIT III

Fill in the blanks

1. All the waters on the earth's surface is called _____

2. A body of permeable rock which can contain and transmit groundwater is _____

3. The process of keeping places clean and healthy _____
4. The constructive way of expressing "Let's vote on it" is
 - a) I disagree because
 - b) Have you considered.....
 - c) Does everyone agree?
 - d) I see it differently because....
5. Which cell organelle is called the Powerhouse of the cell?
 - a) Golgi apparatus b) Endoplasmic reticulum c) **Mitochondria** d) Cell wall
6. Pick up the correct pair
 - A) Leucoplast-Blue, red, yellow color plastids
 - B) Chloroplast-Green coloured plastids**
 - C) Chromoplast- Colourless plastids

7. Give your answer in the critical part of the conversation

Student: Ma'am Shall we plan a field trip for algae collection?

Teacher: Yes, with pleasure. The location would be coastal zone. Tell me the nearest coastal zone?

Students: _____

Teacher: Ok fine. We can collect marine algae. Which algae you expect to get from this coast?

Student: _____, _____, _____

Teacher: Can you collect *volvox* from marine water?

Student: (Yes/No)

True or false

8. Safranin gives color to the organelles of the cell.
9. Petunia is a beautiful animal
10. Mushroom is an edible alga.

UNIT IV

1. Clinical is a _____ word.
 - A) Monosyllabic B) bisyllabic **C) trisyllabic** D) tetrasyllabic
2. Write the synonym of myth
 - A) Unique** B) fantasy C) enormous D) surplus
3. Bryophytes are the amphibians of the plant kingdom _____
 - A) Informative B) persuasive C) interrogative D) Exclamatory
4. Reading is a vital means to learn any language

True/False
5. **Find the difference in the expressions of information in the following sentences (Active/passive)**

Experienced drivers **drive** the superfast trains.

6. Which one of the _____ is circular graph that represents data in percentile proportion to the whole.
A) Bar chart **B) Pie chart** C) Histogram D) Table
7. _____ are used to connect and relate ideas, sentences and paragraphs.
A) **Connectives and linkers** B) Synonyms C) Antonyms D) Syllabification
8. Frame the sentence using the word **infect**.
9. Who is the father of Indian Indian phycology
A) **M.O.P.Iyengar** B) J.C. Bose C) Linnaeus D) Gregor Mendel
10. _____ form avoids phrases and sentences
A) Bar chart B) Pie chart C) Histogram **D) Table**

UNIT V

1. During a power point presentation a _____ should be used while doing quantitative analysis.
A) Picture B) pie chart C) table D) images
2. _____ happens when water vapour becomes water droplets via cloud formation.
A) Condensation B) Evaporation C) Deposition D) Precipitation
3. Grafting and budding are the most widely used _____ Technique.
4. Vegetation propagation can be achieved by _____
5. The study of fruits is called _____
6. Specialized vegetative structure such as
A) Bulb B) Layer C) Anther D) Stamen
7. Snow and ice change to water vapour without becoming liquid is called
A) Sublimation B) Evaporation C) Transpiration D) Deposition
8. _____ is fleshy enlarged portions of underground stem.
9. Floriculture is a division of _____
10. The _____ includes water that is on the surface of the planet, underground and in the air.

Section B (5 X 2= 10)

Answer any FIVE of the following in about 50 words each

UNIT I

1. Who am I?
a) I am a saprophytic fungi commonly used as vegetative diet.
b) I live in soil and I am a friend of farmers.
2. Make two sentences using the connectors
a) Accordingly

b) Such as

3. What are Model auxiliaries and give example
4. List out the characters of vertebrates
5. Give any four examples on invertebrates

UNIT II

1. Define vaccine
2. Differentiate formal and informal communication
3. Pair work-Develop a conversation between a professor and a student observing algal stem section under microscope
4. Construct the single sentence definition using the following.

a) Chlorophyll	Pigment	Photosynthesis
b) Androecium	Anthers	Male reproductive part

5. What is the first step in the process?
6. What is the equipment used to perform a dissection?
7. Make a short story on Live and let live.

UNIT III

1. Make a small conversation regarding the recent monsoon flood.
2. Discuss few environment issues focused in COP 2021
3. Write few sentences about your college environment
4. Share your first day offline class experience
5. Compare and contrast plant cell with animal cell
6. Re frame Disagreements in Constructive Ways
 - a) That doesn't make sense at all.
 - b) You are dead wrong.

7. Read the passage given under and answer the questions

There are many essential plant nutrients, but they can be divided into two general groups based on the quantities of the nutrient needed for a healthy plant: the macronutrients, which are required in relatively large amounts, and the micronutrients, which are sometimes required in only trace amounts. This separation of macronutrients and micronutrients is a useful idea for tracking the importance of various minerals to plant nutrition. There are six basic macronutrients required virtually by all plants: nitrogen(N), phosphorus (P), potassium (K), sulphur (S), calcium (Ca), and magnesium(Mg). These are the main elements, apart from carbon (C), hydrogen (H), and oxygen (O), which are not considered plant nutrients.

1. How are essential nutrients classified?
2. According to the passage what are macronutrients?
3. Name the nutrients which are not taken as essential elements

UNIT IV

1. Make two sentences using the connectors
 - a) apart from
 - b) in the case of
 - c) besides
 - d) finally
2. Syllabify the following words
 - a) Deficiency
 - b) Phagocytosis
3. What are connectives and linkers?
4. Make two sentences using **connectives** and **lingers**
5. Write the different types of charts
6. Change active sentence into a passive one
7. The cattle grazed the entire field.
8. The workers are demolishing the unauthorized structure

UNIT V

1. Write any two steps involved in note making.
2. Frame the sentences using the following words:
 - a) Essential
 - b) infect
3. Define horticulture.
4. What is propagation?
5. Write about grafting.
6. Write notes on cutting.
6. What is the function of catalyst?
8. What is enzyme?
9. Write two importance of note making
10. What is evaporation?

Section C (5 x 4= 20)

Answer in about 100 words each choosing either (a) or (b)

UNIT I

1. Write five instructions to conserve water.
2. Write a dialogue between a teacher and student about the usage of microscope (formal conversation)
3. Write the Structure of Ascospore.
4. What is genetics?
5. What is synthetic gene?
6. Who is Gregor Mendel?
7. How to converse your friends who meet after a long time?

UNIT II

1. Write the flow chart about the dissection of *Datura* Flower.
2. Role play: Conversation between a Botany teacher and a student regarding the colonization of lichen.
3. What is the basic equipment used in biology experiments?
4. Write a single sentence definition- Melanin.
5. Using appropriate words compare and contrast between Nutrition in fungi.

UNIT III

1. Generate mind map on water cycle.
2. Read the following passage and answer the questions below.

Cell organelle is a specialized entity present inside a particular type of cell that performs a specific function. There are various cell organelles, out of which, some are common in most types of cells like cell membranes, nucleus, and cytoplasm. A number of fibrous structures are present in the cytosol that helps give shape to the cell while supporting cellular transport. A plasma membrane is composed of lipids and proteins where the composition might fluctuate based on fluidity, external environment, and the different stages of development of the cell. An additional non-living layer present outside the cell membrane in some cells that provides structure, protection, and filtering mechanism to the cell is the cell wall. Centrioles are tubular structures mostly found in eukaryotic cells which are composed mainly of the protein tubulin. A chloroplast is a type

of plastic that is involved in photosynthesis in plants and algae. Chloroplast contains an essential pigment called chlorophyll necessary to trap sunlight for the production of glucose. Cytoplasm refers to everything present inside the cell except the nucleus. Endoplasmic Reticulum (ER) is present as an interconnection of tubules that are connected to the nuclear membrane in eukaryotic cells. There are two types of ER based on the presence or absence of ribosomes on them: Rough ER (RER) with ribosomes attached on the cytosolic face of Endoplasmic Reticulum and thus is involved in protein synthesis. Smooth ER (SER) which lacks ribosomes and has a function during lipid synthesis. The Golgi Apparatus is the cell organelle mostly present in eukaryotic cells which is responsible for the packaging of macromolecules into vesicles so that they can be sent out to their site of action.

Questions:

- a) What is the role of Endoplasmic reticulum?
 - b) Is the cytoplasm considered as cell organelle? Justify
 - c) Write notes on chloroplast.
 - d) Write the function of centriole.
 - e) Add notes on Golgi apparatus.
3. Write the instructions to be followed during brain storming.
 4. Give some instructions to generate a mind map.
 5. What is GMO?
 6. Which cell organelle is called the powerhouse of the cell?

UNIT IV

1. Prepare a script for the speech on Bryophytes is amphibians of plant kingdom.
2. Rewrite the data given in the table in a paragraph of 100 words.

Sl. No.	Name of the animals	Animals died/annum
1.	Hares	3,014
2.	Hedge-hogs	5,377
3.	Rats	11,557
4.	Various small mammals	27,834
5.	Birds	1,11,728
6.	Amphibians	32,820
	TOTAL	1,92,330

3. Read the following comprehension passage related to anaemia and answer the questions.

Poverty, malnutrition and famine are self-explanatory causes of anaemia in the multitude of people living with iron deficiency in developing countries, especially children and pregnant women. In addition, a cereal-based diet decreases iron availability because phytates in grains sequester iron in a poorly absorbable complex.

Other common causes in developing countries include hookworm infections and schistosomiasis, which cause chronic blood loss. Strict vegan and vegetarian diets, mal absorption, and chronic blood loss resulting from heavy menstrual losses are well-known causes of iron-deficiency anemia in developed countries. Chronic blood loss from the gastrointestinal tract, including occult blood, especially in male patients and elderly patients, may reveal the presence of benign lesions, angio dysplasia, or cancer.

Answer the following questions:

1. What are the causes of anaemia in developing countries?
2. What is the meaning of the term ‘sequester’?
3. Which are the causes of blood loss?
4. List out the causes of iron-deficiency anaemia in developed countries.
5. What condition may reveal the presence of benign lesions, angio dysplasia, or cancer?
4. What are the types of Natural resources?
5. How to conserve nature and its resources?
6. Where do we find chloroplasts and chromoplasts pigments in plants?
7. Why Lysosomes are known as suicide bags?
8. What is Nucleoid?

UNIT V

1. a) Make notes of the following using annotate method.
Photosynthesis is defined as the process, utilized by green plants and photosynthetic bacteria, where electromagnetic radiation is converted into chemical energy and uses light energy to convert carbon dioxide and water into carbohydrates and oxygen. The carbohydrates formed from photosynthesis provide not only the necessary energy form the energy transfer within ecosystems, but also the carbon molecules to make a wide array of biomolecules. Photosynthesis is a light-driven oxidation-reduction reaction where the energy from the light is used to oxidize water, releasing oxygen gas and hydrogen ions,

followed by the transfer of electrons to carbon dioxide, reducing it to organic molecules. Photosynthetic organisms are called autotrophs because they can synthesize chemical fuels such as glucose from carbon dioxide and water by utilizing sunlight as an energy source. Other organisms that obtain energy from other organisms also ultimately depend on autotrophs for energy. One of the essential requirements for photosynthesis is the green pigment 'chlorophyll' which is present in the chloroplasts of green plants and some bacteria. The pigment is essential for 'capturing' sunlight which then drives the overall process of photosynthesis. Photosynthetic pigments are the molecules involved in absorbing electromagnetic radiation, transferring the energy of the absorbed photons to the reaction center, resulting in photochemical reactions in the organisms capable of photosynthesis. The molecules of photosynthetic pigments are quite ubiquitous and are always composed of chlorophylls and carotenoids. In addition to chlorophyll, photosynthetic systems also contain another pigment, pheophytin (bacterio pheophytin in bacteria), which plays a crucial role in the transfer of electrons in photosynthetic systems. Moreover, other pigments can be found in particular photosynthetic systems, such as xanthophylls in plants.

2. Write the steps involved in summary writing.
3. How to use laptop or personal computer
4. Describe the format of notes
5. What is immunity? And how to enhance immunity?
6. What are the steps involved water continually cycles around the planet.
7. What is the role of enzyme in your body?
8. Write short notes on
 - A) Cutting
 - B) Layering
9. Write horticulture divisions

Section D (2x10= 20)

Answer any TWO of the following in about 400 words each

UNIT I

1. Develop a story from given picture.

2. Write a essay on your favourite Scientist.
3. Write the stages of human life cycle.
4. What was Mendel's most important contribution?
5. Dialogue between a teacher and student about the usage of microscope (formal conversation)

UNIT II

1. List out the safety measures to be followed in the laboratory.
2. Explain the basic equipment used in biology experiments and write the uses of such equipment.
3. Write a single sentence definition
 - i) Pollination
 - ii) Hormone
 - iii) Carbohydrate
 - iv) Anatomy
 - v) Agronomist
4. Compare and contrast plant cell and animal cell.
5. How reading description helps the readers?

UNIT III

1. Write an essay on the famous scientist M.S. Swaminathan.
2. Write a problem solution essay on genetically modified crops.
3. Write an essay on the main ideas explained in the passage on 'Healthy Diet'.
4. Write an essay on economic importance of Algae.
5. Sketch mind maps for the following
 - i) Role of microbes in human nature
 - or
 - ii) Protein rich diet

UNIT IV

1. Write eight recommendations for reducing mosquito menace in your locality.
2. How to strengthening our immune system.
3. You are gifted with an android phone by your father, how will you manage the device

constructively?

4. Describe the process making coffee in your own words and write in a paragraph.
5. Explain the non-verbal communication in technical and scientific writings.

UNIT V

1. Try to make a note making on photosynthesis.
2. What is summary writing? Is it essential to possess the skill of summary?
3. Describe the vegetative structure of the plant.
4. Define Horticulture? What propagation technique would you use to cultivate Jasmine?
5. What steps you take class notes when your teacher explain a scientific concept.
6. What are the advantages and disadvantages of powerpoint slide show in classrooms?

Section - A

Unit –I

1. The histogen theory was proposed by
a) Schmidt b) **Hanstein** c) Scheupp d) Nageli
2. Tunica corpus theory was put forth by
a) **Schmidt** b) Hanstein c) Hofemeister d) Schleiden
3. Which of the following is associated with xylem?
a) Sieve plate b) Sieve cell c) **Tracheid** d) Companion cell
4. Vascular cambium and phellogen are
a) apical meristem b) **lateral meristem** c) permanent tissues d) intercalary meristem
5. Chlorenchyma is usually found in
a) **cortex** b) pericycle c) pith d) endodermic
6. A specialized parenchyma cell associated with sieve tube elements
a) **companion cell** b) cork cell c) complementary cell d) lenticel
7. A plate having single large perforation is called
a) foraminate b) reticulate c) sclariform d) **simple**
8. The lateral meristem is responsible for
a) Growth in cortex b) Growth in parenchyma
c) Growth in length d) **Growth in thickness**
9. Intercalary meristems are commonly found in
a) epidermis b) tip of the stem c) tip of the root d) **internodes of the stems**
10. All the xylem elements when mature are dead except
a) xylem parenchyma b) vessels c) **Tracheid** d) xylem fibres
11. The study of tissue is known as _____
a) Algology b) Mycology c) Pathology d) **Histology**
12. Collenchyma are characterized by the presence of

- a) elongated cells with deposits of cellulose and pectin all over the wall
 - b) **elongated cells with thickening at the corners**
 - c) isodiametric cells with depositsof cellulose and pectin all over the wall
 - d) isodiametric cells with thickening at the corners
13. A simple mechanical tissue devoid of lignin is
- a) parenchyma b)**collenchyma** c) chlrenchyma d) sclerenchyma
14. Secondary meristems results in
- a) **secondary growth** b)apical growth c) primary growth d) both b and c
15. Dermatogen gives rise to
- a) **Epidermis** b) pericycle c) pith d) endodermic
16. Sclereids are otherwise called as
- a) living cells b)**stone cells** c) bastfibres d) pits
17. The term phloem was introduced by
- a) Schmidt b) Hanstein c) Scheupp d) **Nageli**
18. Sieve tubes are characteristic in the phloem of
- a) Gymnosperms b) ferns c) **angiosperms** d) bryophytes
19. Xylem parenchyma stores food materials in the form of
- a) alkaloids b) **starch and oil** c) protein d) vitamins
20. The vascular bundle found in *Dracaena* stem is
- a) collateral b)amphicribal c) **amphivasal** d) bicollateral
21. Isolated region in periderm meant for gaseous exchange
- a) phellum b)phelloderm c) **lenticel** d) stomata
22. Secondary xylem is known as
- a) **wood** b) phloem c) bast d) sieve tubes
23. In *Boerhaavia*, secondary growth is due to the formation of
- a) Epidermis b)pith c) **accessory cambium** d) pericycle
24. Presence of cambium in the primary vascular bundle is called
- a) Interfascicular cambium b)**fascicular cambium** c) scattered vascular bundle
 - d) apical meristem
25. Bark of the tree is
- a) Epidermis b) **periderm** c) cork cambium d) rhizodermis

26. Primary medullary ray is found in between
 a) xylem and phloem b) vascular bundles
 c) cortex and vascular bundle d) **pith and vascular bundle**
27. Casparian thickening is seen in
 a) pericycle b) **endodermis** c) cortex d) pith
28. Arrangement of vascular bundle in dicot root is
 a) periderm b) **exarch** c) bicollateral d) endarch
29. Vascular bundles in dicot stem are
 a) open, collateral and exarch b) closed, collateral and endarch
 c) closed, collateral and exarch d) **open, collateral and endarch**
30. Arrangement of vascular bundle in *Dracaena* is
 a) open, and exarch b) **closed and endarch** c) closed exarch d) open and endarch
31. *Dracaena* belongs to
 a) **Liliaceae** b) Annonaceae c) Meliaceae d) Nyctaginaceae
32. The type of arrangement in which protoxylem lies towards the outside and metaxylem lies towards the inside is called
 (a) Mesarch (b) Endarch (c) **exarch** (d) None

Unit II

1. In dicot stems, the central portion is very hard and black in colour. This is called
 a) **heart wood** b) sap wood c) alburnum d) albumin
2. Which of the following give rise to the cork cambium?
 a) **Phellogen** b) phellem c) periderm d) phelloderm
3. The best method to determine the age of tree is
 a) to count the number of leaves b) **to count the number of annual rings**
 c) to count the number of flowers d) to count the number of branches
4. Secondary growth includes the formation of secondary vascular tissues and
 (a) **periderm** (b) Plerume (c) Epidermis (d) Cortex
5. Which is correct for dicot root?
 (a) **Absence of pith** (b) chlorenchymatous cortex
 (c) parenchymatous pith (d) endarch primary xylem
19. Pith is composed of

- (a) Collenchyma (b) **Parenchyma** (c) Sclerenchyma (d) chlorenchyma
20. A parenchymatous sheet of tissues separates the phloem strands from xylem and it becomes
(a) Pericycle (b) Endodermis (c) Stele (d) **Cambium**
21. The function of sap wood is
a) Protection b) mechanical support c) **conduction** d) gaseous exchange
22. Tyloses are usually found in
(a) **heart wood** b) sap wood c) alburnum d) albumin
23. Phellogen, phellem and phelloderm form
(a) Plerome (b) Dermatogen (c) **periderm** (d) monocot
24. Cambial ring is formed of
(a) fascicular cambium (b) **fascicular and interfascicular cambium**
(c) interfascicular cambium (d) cork
25. Vascular bundles with xylem and phloem in the same radius; side by side is
(a) **Collateral** (b) Bicollateral (c) Concentric (d) Blarel
19. Aerenchyma is seen in
a) terrestrial plants b) mesophytes c) xerophytes d) **hydrophytes**

Unit- III

1. A typical anther is
(a) bisporangiate (b) **tetrasporangiate** (c) trisporangiate (d) asporangiate.
2. The development of pollen grain inside the anther is called
(a) **microsporogenesis** (b) megasporogenesis (c) pollination (d) fertilization.
3. Ubisch bodies are associated with
(a) epidermis (b) endothecium (c) middle layers (d) **tapetum**.
4. The type of tapetum, with two different types of cells are called
(a) **dimorphic** (b) C-tapetum (c) P-tapetum (d) glandular tapetum.
5. The inner layer of the pollen wall is called as
(a) exine (b) endexine (c) ektexine (d) **intine**.
6. Pollengrains are
(a) diploid (b) **haploid** (c) triploid (d) polyploidy.
7. Pollen grains in a sporangium remain together to form a single mass called
(a) **pollinium** (b) corpusculum (c) caudicle (d) pollen.

8. The stomium helps in the
 - (a) **dehiscence** (b) dispersal of pollen grains (c) pollination
 - (d) development of pollen grains.
9. The nutritive layer of the anther
 - (a) epidermis (b) middle layers (c) **tapetum** (d) spores.
10. The part of the wall layer of anther which absorbs water is
 - (a) Endothelium (b) **Endothecium** (c) Tapetum (d) Integument
11. The main function of the tapetum is
 - (a) **Nutritive** (b) Protection (c) Storage (d) Reproduction
12. The innermost wall layer of an anther is
 - (a) Endothecium (b) **Tapetum** (c) integument (d) Endoderms
13. The function of the endothecium in anther
 - (a) Nutrition (b) **Dehiscence** (c) Protection (d) None
14. These are seen in the pollen tube
 - (a) Vegetative nucleus and 1 male nucleus (b) **Vegetative nucleus and 2 male nucleus**
 - (c) Vegetative nucleus and 3 male nuclei (d) Vegetative nucleus and 4 male nucleus
15. Male gametophyte is _____
 - (a) Nucellus (b) Stamen (c) Pollen grain (d) **Microsporangium**
16. Pollen grain is best defined as
 - (a) Spore mother cell (b) **Male sperm cell** (c) Partially developed male gametophyte
 - (d) partially developed embryo
17. Microsporangium in angiosperm is the
 - (a) Ovary (b) Ovule (c) Pollen (d) **Anther**
18. What function is lost if endothecium is absent in the wall of anther?
 - (a) Inhibition of pollen tube entry (b) **anther not dehisce** (c) lack of nutrition supply (d) None of these
19. Microspores are
 - (a) **Haploid** (b) Triploid (c) Diploid (d) Tetraploid
20. Pollen wall is mainly made up of
 - (a) **Cellulose** (b) Sporopollenin (c) Lipoprotein (d) Hemicellulose
21. Male gametophyte in angiosperms is usually with

- a) One sperm b) two sperms c) Three sperms d) **Four sperms**
22. The mature pollen grain is
a) **Microgametophyte** b) Megagametophyte c) Megasporocyte d) Microsporocyte
23. The number of sperm nucleus formed from the generative cell is
a) **Two** b) one c) four d) three
24. The ovule is attached to the placenta of the ovary by a short stalk known as
(a) **hilum** (b) micropyle (c) funicle (d) chalaza.
25. Anatropous ovule is also called
(a) erect ovule (b) **inverted ovule** (c) curved ovule (d) all of these.
26. Ovule with one integument is known as
(a) bitegmic (b) **unitegmic** (c) ategmic (d) orthotropus.
27. The functional megaspore is the first cell of the
(a) male gametophyte (b) **female gametophyte** (c) ovule (d) embryo.
28. In an eight nucleate embryo sac, the numbers of antipodal are
(a) 5 (b) **3** (c) 2 (d) 8.
29. Megaspore mother cell is
(a) haploid (b) **diploid** (c) triploid (d) none of these.
30. The small opening at the apex of the ovule is called as
(a) nucellar beak (b) embryo sac (c) hilum (d) **micropyle**.
31. Filiform apparatus is found in
(a) egg (b) antipodals (c) secondary nuclei (d) **synergids**.
32. The term synergid was proposed by
(a) **Strasburger** (b) Nemas (c) Maheswari (d) Jensen.
33. The female gametophyte is otherwise called as
(a) **embryo sac** (b) nucellus (c) endosperm (d) embryo.
34. Fertilization involves the fusion of
a) Female spore with male spores b) **Male gamete with female gamete** c) Male gametophyte with female gametophyte d) None of the above
35. In the ovule, the region opposite to micropyle is
a) Funicle b) **Chalaza** c) Micropyle d) integuments
36. Outer covering of an ovule is called

- a) **Integument** b) tapetum c) epidermis d) endothelium
37. Micropyle, Chalaza and funicle lie in the same line in this ovule
- a) **Orthotropous** b) Anatropous c) Campylotropous d) Amphotropous
38. Double fertilization was first found out by
- (a) **Nawaschin** (b) Nemac (c) Russell (d) Cass.
39. Mesogamy is common in
- (a) **Cucurbita** (b) Angiosperms (c) *Lilium* (d) *Casuarina*.
40. After fertilization the ovules developed into
- (a) fruits (b) endosperm (c) **seeds** (d) seed coat.
41. Style with conducting tissue is referred as
- (a) hollow style (b) solid style (c) **semi hollow style** (d) completely hollow style.
42. The stigmatic exudates help in
- (a) **adhesion of pollen grains** (b) protects from dehydration
(c) serve as nutrients (d) all of these.
43. The stigmas which do not secrete exudates are called as
- (a) **wet stigmas** (b) dry stigmas (c) solid stigmas (d) young stigmas.
44. Seed is the result of ripened
- a) **Ovule** b) Fruit c) Ovary d) Carpel
45. Entry of Pollen tube through micropyle end of the ovule is called
- a) **Porogamy** b) Chalazogamy c) Mesogamy d) Double fertilization
46. Megasporogenesis occurs in
- a) Integument b) Embryo sac c) **Nucellus** d) Chalaza
47. Micropyle, chalaza and funiculus are in straight vertical line in
- a) **Orthotropous ovule** b) Anatropous ovule
b) Campylotropous ovule d) Circinotropous ovule
48. In angiosperms double fertilization involves the fusion of one gamete with egg another gamete with _____
- a) Antipodal b) Synergid c) **Polar Nuclei** d) Another egg
49. Meiotic division in an ovule takes place in
- a) Megaspore b) archeporium c) nucellus d) **megaspore mother cell**
50. The fertilized egg is called

- a) **Zygote** b) Embryo c) Endosperm d) Nuclei
51. The cell play an important role in the growth of the pollen tube is
a) Antipodals b) Synergids c) Egg d) **Polar cells**
52. Progamy is
a) **Entry of the pollen tube in the ovule through the micropyle**
b) Entry of the pollen tube in the ovule through the chalaza
c) Entry of the pollen tube in the ovule through stigma and style
d) Entry of Pollen tube through the funicle
53. The function of the pollen tube in angiosperms is
a) Seed dispersal b) Germination c) **Sperm carrier** d) none of these
54. Pollen tube enters the ovule through the chalaza, which is known as
(a) Porogamy b) **Chalazogamy** c) Oogamy d) Anisogamy
55. The number of the nucleus in the matured embryosa c
a) 3 b) **8** c) 6 d) 9
56. Polygonum type of embryosa c is
a) Monosporic b) Bisporic c) Trisporic d) Tetrasporic

Unit- IV

1. The endosperm with uneven surface is called
a) **Ruminate** b) cellular c) helobial d) nuclear
2. The family that lacks endosperm
a) **Orchidaceae** b) Poaceae c) gramineae d) Acanthaceae
3. The endosperm is formed by the fusion of
(a) one male gamete and two polar nuclei (b) two male gametes and one polar nucleus
(c) two male gametes and two polar nuclei (d) **none of these.**
4. Development of endosperm without wall formation
(a) cellular endosperm (b) **nuclear endosperm** (c) helobial endosperm
(d) solid endosperm.
5. Endosperm is formed by

- (a) **fusion** (b) division (c) degeneration (d) triple fusion.
6. In angiosperms the endosperm is
(a) **triploid** (b) diploid (c) haploid (d) tetraploid.
7. Haustoria are common in
(a) nuclear endosperm (b) **cellular endosperm** (c) helobial endosperm (d) all of these.
8. In the octant stage an embryo consists of
(a) 10 cells (b) 12 cells (c) 4 cells (d) **8 cells**.
9. The single terminal cotyledon is called as
(a) radicle (b) plumule (c) **scutellum** (d) coleoptile.
10. In a monocot embryo the plumule is
(a) terminal (b) **lateral** (c) axillary (d) curved.
11. The type of endosperm of the seed of Antigonum is
a) Cellular b) Helobial c) Nuclear d) **Ruminate**
12. The type of endosperm restricted to monocot plant
a) **Helobial** b) Cellular c) Nuclear d) Ruminant
13. Ruminant endosperm is with
a) More nutrients b) **Irregular surface** c) Large Suspensor d) High oil content
14. Areca nut is an example of this type of endosperm
a) Nuclear b) cellular c) **Ruminate** d) Helobial
15. The most common function of endosperm is
a) Protection b) **Nutrition** c) Supporting d) Fusion
16. Perisperm in a seed is a part of
a) Cotyledon b) Endosperm c) **Nucellus** d) Endothecium
17. The zygote develops into an embryo by
a) meiotic division b) reduction division c) mitotic division d) cell division.
18. Endosperm is a fusion _____ number of nucleus
a) 3 b) 2 c) 4 d) 5
19. Formation of individuals without fusion is called _____
a) fertilization b) pollination c) **apomixis** d) amphimixis
20. Formation of individuals through fusion is called _____
a) **amphimixis** b) apomixis c) pollination d) dehiscence

21. _____ may be defined as the occurrence of two or more embryos in one ovule
a) **Polyembroyony** b) nucellus c) parthenocarpy d) embryogenesis

Unit – V

1. Paraffin wax is used for
(a) sectioning (b) staining (c) embedding (d) fixation.
2. In microtomy alcohol is used for
(a) dehydration (b) clearing (c) staining (d) mounting.
3. One of the following is the compound fixative
(a) formalin (b) Carnoy's fluid (c) ethyl alcohol (d) mercury chloride.
4. The removal of alcohol from the dehydrated material is called
(a) dehydration (b) fixation (c) killing (d) clearing.
5. FAA is a
(a) stain (b) fixative (c) mordant (d) absorbant
6. Which of the following is used as mountant
(a) formalin (b) canadabalsam (c) mercuric chloride (d) carnoy's fluid

Section B

Unit –I

1. What is primary meristem? Give examples
2. Define meristem
3. Name meristems based on their position in the plant body
4. List out the components of xylem tissue
5. Why is xylem called a complex tissue?
6. How does aerenchyma tissue help hydrophytes to float?

7. What are the different types of complex tissue?
8. Mention two structural differences between meristematic and permanent tissue
9. Differentiate between apical and intercalary meristems.
10. What is Lateral Meristems? Where is it present?
11. What is Histogen theory?
12. What is Tunica-Corpus theory?
13. List out the structural components of dicot stem
14. What is mean by nodal anatomy.
15. Write about xylem vessels
16. Draw any two structure of xylem elements
17. Draw any two structure of phloem elements

Unit - II

1. What is meant by endarch xylem?
2. What are annual rings? How are they formed?
3. What is Annual ring?
4. Differentiate between heart wood and sap wood
5. Define interfascicular cambium
6. What is stomata?
7. What forms the cambial ring in a dicot stem during the secondary growth?
8. Mention the different types of stomata?
9. What are hydrophytes?
10. What are xerophytes? Give some example
11. Mention any two modification present in xerophytes

12. What are medullary rays? Give their function.

13. Write any two adaptations of hydrophytes

14. What is Cork cambium or phellogen?

UNIT - III

1. What is tapetum?

2. Write notes on amoeboid tapetum.

3. Write note on glandular tapetum.

4. What are the pollen wall layers.

5. Write a note on Endothecium.

6. Define monothealous anther.

7. Define dithealous anther.

8. What is pollen kitt?

9. Define pollen tube.

10. What is Nemec- Phenomenon.

11. What are Synergids?

12. What are Antipodals?

13. Mention the different types of the ovule.

14. Write a note on the Crassinucellate type of ovule.

15. Write a note on the tenuinucellate type of ovule.

16. What is double fertilization?

17. Define megasporangium.

18. What is micropyle?
19. What is filiform apparatus?
20. What is porogamy?
21. Define chalazogamy.
22. What is mesogamy?

UNIT- IV

1. Name a plant with helobial endosperm.
2. Define triple fusion.
3. Name three different types of endosperms based on the nature of food materials.
4. What is ruminant endosperm?
5. What is perisperm?
6. Name the six types of embryo development in angiosperms.
7. Define proembryo.
8. Write any two functions of the endosperm.
9. Write a note on cellular endosperm.
10. Write notes on polyembryony.
11. what are apomixes?

Unit – V

1. What is killing fluids?
2. Define embedding
3. What is infiltration?

4. What are mordents? Give example
5. Explain deparaffinization
6. What is staining?
7. What is mouting? Give some examples for Mountants
8. What is micrometry?
9. Write the uses of micrometry.
10. What is ocular meter
11. How will you prepare a temporary slide for observation
12. What is the use of double staining

Section –C

Unit - I

1. Enumerate the different types of meristem based on position in the plant body
3. Explain the Tunica Corpus theory.
4. Define Tissue? What are its types?
5. What are the elements of xylem?
6. Describe the structure and functions of tracheids
7. Give an account of structure and functions of vessel.
8. Explain Histogen theory.
9. What are the differences between meristematic and permanent tissues?
10. What are the characteristic features of meristematic tissue?
11. Write notes on unilacunar anatomy with diagram.
12. Describe the multilacunar anatomy with diagram
13. Describe the multilacunar anatomy with diagram
14. Differentiate monocot and dicot stem

Unit - II

1. Write notes on the formation of periderm.
2. Write notes on the secondary growth of stem
3. Write about wood and its type
4. Describe the cortex of dicot stem.
5. Write about bark and lenticels
7. Describe the vascular bundles seen in *Dracaena*.
8. Explain the origin of secondary vascular cambium in dicot root
9. Write notes on adaptations of hydrophytes
10. Enlist the xerophytic adaptations

Unit - III

1. Describe the structure of a dithecous anther
2. Bring out the development of anther.
3. Explain amoeboid tapetum.
4. Write notes on glandular tapetum.
5. Enumerate the functions of the tapetum.
6. Discuss the nuclear behavior of the tapetum.
7. Write the development of the pollen wall
8. Describe the structure of the pollen wall with diagrams.
9. Explain the microsporogenesis.
10. Write the mechanism of dehiscence of the anther.

11. Describe the structure of an orthotropous ovule.
12. Write notes on nucellus.
13. Explain megasporogenesis.
14. Write the functions of synergids.
15. Write notes on filiform apparatus.
16. What are antipodals? Explain.
17. Write the importance of double fertilization.
18. Describe the structure of the female gametophyte.
19. Write the significance of double fertilization.

Unit- IV

11. Describe the development of any one type of endosperm.
12. Explain the type of endosperm in coconut
13. Differentiate nuclear endosperm and cellular endosperm.
14. Write notes on the functions of the endosperm.
15. Draw and label the dicot embryo.
16. Bring out the difference between a dicot embryo and a monocot embryo.
17. Describe the structure of the monocot embryo.
18. Classify the endosperm based on the mode of development.
19. Describe the structure of the dicot embryo.
20. Describe the development of the dicot embryo.

21. Write notes on cleavage embryony

22. Write notes on

- a) non-recurrent apomixes b) recurrent apomixes

Unit – V

1. Explain fixation and dehydration.
2. Write notes on embedding.
3. Give a short account on stains used in light microscopic preparations.
4. Write notes on fixation.
5. How will you prepare blocks for microtome section
6. How will you use microtome for sectioning? What are the precautions needed to be follow.
7. Write notes on double staining process
8. How will you use micrometry

Section –D

Unit -I

1. Write an essay on permanent tissues.
2. Give an account of the various theories explaining the organization of shoot apex.
3. What are the meristems? How will you classify the meristems?
4. Give an account of the various components of phloem.
5. Discuss the structure and functions of xylem.
6. Differentiate between primary structure of monocot and dicot stem with diagram
7. Write an essay on the root system of dicot plants with labeled diagram.
8. Give a detailed account on nodal anatomy

Unit -II

1. What is normal secondary growth? Write notes on the normal secondary growth in dicot stem.
2. How does anomalous secondary thickening take place in stem?
3. With suitable sketches, bring out the secondary growth in dicot root.
4. Differentiate an anomalous dicot stem structure with monocot stem.
5. Write an essay on structure and function of vascular cambium
6. What is wood? Give detailed notes on it.
7. Write about the protective system of plants
8. Write about the structure and function of epidermis and cuticle
9. What is stomata? Mention its types
10. With examples write the adaptive features present in hydrophytes
11. Explain the morphological and anatomical adaptations of xerophytes with diagram

Unit - III

1. Explain anther wall with diagrams.
2. Write an essay on the structure of dithecal anther.
3. Explain the nuclear behavior of the tapetum.
4. List out the functions of the tapetum.
5. Give an account of microsporogenesis.
6. Describe the structure of pollen grain with suitable diagrams.
7. Explain the structure of the pollen wall and add a note on its functions.
8. How do the male gametes develop from pollen grain?
9. Write an essay on the development of the pollen wall.

10. Write an essay on the structure and development of male gametophytes.
11. With suitable diagrams explain the structure of the orthotropous ovule.
12. Write an essay on types of ovules.
13. Explain tenuinucellate and crassinucellate ovule.
14. Write an essay on megasporogenesis.
15. Explain the structure and development of any one type of ovule that you have studied.
16. Write notes on egg apparatus and antipodals.
17. Differentiate microsporogenesis from megasporogenesis.
18. Explain the significance of microsporogenesis and megasporogenesis.
19. Explain double fertilization.
20. Bring out the significance of double fertilization.
21. What are the changes that occur in an ovary after fertilization?

Unit-IV

1. Explain the different types of endosperms with suitable examples.
2. Write in detail the development of endosperm in coconut.
3. Trace the development of nuclear endosperm.
4. Explain how ruminant endosperm is formed?
5. Give an account of the development of the dicot embryo.
6. Differentiate dicot embryo from monocot embryo.
7. Differentiate between cellular and helobial endosperm.

8. Differentiate the development of dicot and monocot embryos.
9. Bring out the different stages of the development of the dicot embryo.
10. What is endosperm? Write a note on its functions.
11. Explain the different types of polyembryony and add notes on its significance.
12. Explain the four types of apomixes.
13. Write an essay on the structure and dispersal mechanism of seed.

Unit – V

1. What is micrometry? How are the dimensions of the specimens measured with micrometer?
2. Explain the microtechniques involved in microscopic preparation of biological Samples
3. Describe the double staining procedure for permanent mounting
4. Write an essay on micrometry
5. Write the various steps in the preparation of materials for microtomy.
6. Give an account on fixatives.
7. What is micrometry? Write the working principle and operating procedure

UNIT I

Section A

1. The Watcher took a step back at his **lethal** tone
 - (a) to handle
 - (b) full of problems
 - (c) **very dangerous and able to kill**
 - (d) something that is discarded

2. Do not let a little stumble **disrupt** the vows
 - (a) **to stop or disturb something**
 - (b) full of problems
 - (c) very dangerous and able to kill
 - (d) something that is discarded

3. The government has undergone political **metamorphosis** since his election.
 - (a) a reaction to something
 - (b) physical harm that impairs the value
 - (c) **a complete change of form**
 - (d) happening in a short time or at a great rate

4. **Tissues** are made of a number of cells which are made of elements and atoms on the most fundamental level
 - (a) a region of plant tissue, found chiefly at the growing tips
 - (b) **any of the distinct types of material consisting of specialized cells and their products**
 - (c) action or process of differentiating
 - (d) physical harm that impairs the value

5. A ruler was needed in class in order for the students to measure the **girth** of the circular cans to determine which can was 6 inches
 - (a) the main woody stem of a tree
 - (b) parallel to the plane of the horizon

- (c) measurement of something from side to side
- (d) **measurement around the middle of something**

6. Vinay: Hey! Can we discuss on difference between plant and animal cell?

You: _____

Vinay: Plant cell possess cell wall

You: Animal cell do not possess cell wall

- (a) What is your name?
- (b) **Sure. We shall discuss**
- (c) Where are you from?
- (d) What is your question?

7. Match the correct pair

- i) Unique – causing complete change
- ii) Revolutionary - featuring new methods
- iii) Genuine - being the only one of its kind
- iii) Innovation – authentic

- (a) (i)b, (ii)a, (iii)d and (iv)c
- (b) (i)a, (ii)c, (iii)d and (iv)b
- (c) (i)c, (ii)a, (iii)b and (iv)d
- (d) (i)c, (ii)a, (iii)d and (iv)b**

Section B

1. Janaki Ammal Edavaleth Kakkat was an Indian botanist best remembered for her work on sugarcane and eggplant. An expert in cytogenetics (the genetic content and expression of genes in the cell), she conducted research on chromosome numbers and ploidy in a variety of garden plants while she was in England which led to new findings on the evolution of species and varieties. Her research played a vital role in understanding the nature of polyploidy in sugarcane and helped in choosing plant varieties for cross-breeding in order to produce the sweetest sugarcane. Born in late 19th century in Kerala, India, Ammal was encouraged to pursue her intellectual interests from a young age. Unlike in many other Indian families of those times where girls were not provided any opportunity for self-development, her family supported her from the very beginning. She developed an early interest in botany and studied

the subject at Queen Mary's College and Presidency College. Eventually she realized her interest in cytogenetics and went to the University of Michigan, U.S. for her higher studies. She returned to India after completing her studies and after working as a professor for some time, she joined the Sugarcane Breeding Institute, Coimbatore, as a geneticist. A very determined woman, she never married and dedicated her entire life to scientific pursuits.

Janaki Ammal was born on 4 November 1897 into a large family in Tellicherry, Kerala, India. Her father Dewan Bahadur Edavalath Kakkat Krishnan was a sub-judge of the Madras Presidency. She had six brothers and five sisters. She grew up in an era when most Indian girls were not even sent to school and women were discouraged from pursuing their professional interests. However, her family was an open-minded one and Janaki was encouraged to engage in intellectual pursuits. She developed an early interest in botany. After completing her schooling, she moved to Madras where she obtained a Bachelor's degree from Queen Mary's College. She proceeded to complete her B.Sc Honors from the Presidency College in 1921. While at the Presidency she acquired an interest in cytogenetics. A brilliant student, she was granted a scholarship to attend the University of Michigan, U.S. from where she earned her MS in 1925.

Janaki Ammal returned to India and taught at the Women's Christian College for a while before going to Michigan again as the first Oriental Barbour Fellow. She completed her D.Sc in 1931. She returned to India and accepted the post of Professor of Botany at the Maharaja's College of Science, Trivandrum, in 1932. She joined the Sugarcane Breeding Institute, Coimbatore, as a geneticist in 1934. The institute was created with the aim of improving the Indian sugarcane plant. At the institute, Ammal worked on sugarcane biology with T.S. Venkataraman who had successfully increased the production of sugarcane in the country over the past few years. Ammal's research in polyploidy helped to understand the nature of polyploidy in sugarcane. She was instrumental in creating a firm scientific basis for crossing and hybrids, and helped in choosing plant varieties for cross-breeding. She worked at the institute till 1939. She moved to England in 1940 to work as Assistant Cytologist at the John Innes Horticultural Institution in London. There she performed chromosome studies on a wide range of garden plants, and her studies on chromosome numbers and ploidy led to several new developments in the study of the evolution of species

and varieties. She then worked as cytologist at the Royal Horticultural Society at Wisley from 1945 to 1951. In 1951, the Prime Minister of India, Jawaharlal Nehru, invited her to return to her homeland and help in reorganizing the Botanical Survey of India (BSI). In 1952, she was appointed as Officer on Special Duty to the BSI, and eventually became the Director-General of the BSI. She went on to serve the Government of India in various other capacities over the ensuing years, including heading the Central Botanical Laboratory at Allahabad. During the later part of her career, she worked for a while at the Bhabha Atomic Research Centre at Trombay before moving to Madras in 1970 where she was named an Emeritus Scientist at the Centre for Advanced Study in Botany, University of Madras.

Janaki Ammal was a pioneer in the field of cytogenetics in India and her contribution to the development of sweeter hybrid varieties of sugarcane has been immense. At that time, the sweetest sugarcane in the world was the *Saccharum officinarum* variety from Papua New Guinea and India imported it from Southeast Asia. In a bid to improve India's indigenous sugarcane varieties, the Sugarcane Breeding Station had been set up at Coimbatore in the early 1920s. As a part of the Sugarcane Breeding Institute, she was instrumental in not only analyzing the geographical distribution of sugarcane across India, but also in selecting the best varieties for cross-breeding.

Professor C.V. Raman made Ammal a Fellow of the Indian Academy of Sciences in 1935 and she was elected a Fellow of the Indian National Science Academy in 1957.

- i. Why Janaki Ammal is known as pioneering cytogeneticist?
- ii. Why sugar cane breeding station was setup in Coimbatore?
- iii. Name the sugar cane species imported to India.
- iv. Why *Saccharum officinarum* was imported to India?
- v. What were the awards received by Janaki Ammal?
- vi. What are the major research works done by Janaki Ammal?
- vii. Who invited Janaki Ammal to return back to India and what was the purpose?

2. Read the passage carefully and answer the questions below

Tissues are made of a number of cells which are made of elements and atoms on the most fundamental level. Plant tissues are characterized and classified according to their structure and function.

Meristematic Tissues

Tissues where cells are constantly dividing are called meristems or meristematic tissues. These regions produce new cells. There are three types of meristems: (1) apical meristems, (2) lateral meristems, and (3) intercalary meristems.

Apical meristems

Apical meristems are located at or near the tips of roots and shoots. As new cells form in the meristems, the roots and shoots will increase in length. This vertical growth is also known as primary growth.

Lateral meristems

Lateral meristems account for secondary growth in plants. Secondary growth is generally horizontal growth. Growth of a tree trunk in girth. The *vascular cambium*, the first type of lateral meristem, is sometimes just called the cambium. The cambium is responsible for the production of cells and tissues that increase the thickness, or girth, of the plant. The *cork cambium*, the second type of lateral meristem, is much like the vascular cambium in that it is also a thin cylinder that runs the length of roots and stems.

Intercalary meristems

Intercalary meristems are found in grasses and related plants that do not have a vascular cambium or a cork cambium, as they do not increase in girth. This meristem will also actively produce new cells and is responsible for increases in length.

- i) What are tissues?
- ii) Define meristematic tissues
- iii) What are the different types of meristems?
- iv) Differentiate apical meristem from intercalary meristem
- v) What is the function of intercalary meristem?

3. a) Write the vocabulary for the following words

- (i) scrap (ii) manage (iii) lethal (iv) tissues (v) meristem

4. Answer the questions on reading the passage below

Simple Tissues

There are three basic types named for the type of cell that makes up their composition: (1) parenchyma tissue, (2) collenchyma tissue, and (3) sclerenchyma tissue.

Parenchyma tissue

Parenchyma cells form parenchyma tissue. Parenchyma cells are the most abundant of cell types and are found in almost all major parts of higher plants. These cells have thin walls, which flatten at the points of contact when many cells are packed together. Some parenchyma cells have many chloroplasts and form the tissues found in leaves. This type of tissue is called chlorenchyma. The chief function of this type of tissue is photosynthesis, while parenchyma tissues without chloroplasts are generally used for food or water storage. Additionally, some groups of cells are loosely packed together with connected air spaces, such as in water lilies, this tissue is called aerenchyma tissue.

Collenchyma tissue

Collenchyma cells form collenchyma tissue. These cells have a living protoplasm, like parenchyma cells, and may also stay alive for a long period of time. Their main distinguishing difference from parenchyma cells is the increased thickness of their walls.

Sclerenchyma tissue

Sclerenchyma cells form sclerenchyma tissue. These cells have thick, tough secondary walls that are embedded with lignin. At maturity, most sclerenchyma cells are dead and function in structure and support. Sclerenchyma cells can occur in two forms: Sclereids and fibers

Secretory Cells and Tissues

As a result of cellular processes, substances that are left to accumulate within the cell can sometimes damage the protoplasm. Thus it is essential that these materials are

either isolated from the protoplasm in which they originate, or be moved outside the plant body.

- i) What are the different types of simple tissues?
- ii) Differentiate chlorenchyma from aerenchyma tissue
- iii) What is collenchyma tissue
- iv) Name the two forms of sclerenchyma tissues
- v) What are sclerenchyma cells embedded with?

5. Frame sentence for the following words

- (a) lethal (b) metamorphosis (c) disrupt (d) tissues (e) storage

6. Write a conversation between two students on the similarities between plant and animal cell

7. Read the passage carefully and answer the questions below carefully

Plastids are membrane-bound organelles that have their own DNA. They are necessary to store starch, to carry out the process of photosynthesis. It is also used in the synthesis of many molecules, which form the building blocks of the cell. Some of the vital types of plastids and their functions are stated below:

Leucoplasts are found in non-photosynthetic tissues of plants. They are used for the storage of protein, lipid and starch.

Chloroplasts is an elongated organelle enclosed by phospholipid membrane. The chloroplast is shaped like a disc and the stroma is the fluid within the chloroplast that comprises a circular DNA. Each chloroplast contains a green coloured pigment called chlorophyll required for the process of photosynthesis. The chlorophyll absorbs light energy from the sun and uses it to transform carbon dioxide and water into glucose.

Chromoplasts

They are heterogeneous, coloured plastid which is responsible for pigment synthesis and for storage in photosynthetic eukaryotic organisms. Chromoplasts have red, orange and yellow coloured pigments which provide colour to all ripe fruits and flowers.

Vacuole occupies around 30% of the cell's volume in a mature plant cell. Tonoplast is a membrane that surrounds central vacuole. The vital function of central vacuole

apart from storage is to sustain turgid pressure against the cell wall. The central vacuole consists of cell sap. It is a mixture of salts, enzymes and other substances.

- i) What are plastids
- ii) What are chromoplasts?
- iii) What is tonoplast?
- iv) What are leucoplasts?

Section C

- 1. Write a conversation between teacher and a students on the differences between plant and animal cell.
- 2. Write the conversation between two students on differences between plant cell and animal cell.
- 3. Develop a story with the picture given below

- 3. Write a story from the picture below on the effects of global warming

4. Write the conversation between two students on differences between plant cell and animal cell.
5. Write the conversation between students on plant tissues

UNIT II

Section A

1. Select the glossary for hearing aid
 - (a) an instrument for converting sound waves into electrical energy
 - (b) being the only one of its kind
 - (c) an agreement of a dispute
 - (d) **A small amplifying device helps in hearing**
2. Select the glossary for microphone
 - (a) **an instrument for converting sound waves into electrical energy**
 - (b) being the only one of its kind
 - (c) pioneering
 - (d) A small amplifying device helps in hearing
3. The little house is a **genuine** bit of paradise
 - (a) **authentic**
 - (b) featuring new methods
 - (c) pioneering
 - (d) A small amplifying device helps in hearing
4. Technology and human **innovation** know no scarcity.

- (a) authentic
 (b) **featuring new methods**
 (c) pioneering
 (d) A small amplifying device helps in hearing
5. _____ is a process of passing information and understanding from one another
 (a) **communication** (b) listening (c) familiarize (d) debate
6. _____ is a logical argument carried out between two teams aimed at getting a conclusion on a topic.
 (a) **debate** (b) JAM (c) conclusion (d) welcome
7. In debate the team which has the most cogent argument will be considered as the _____
 (a) failure (b) runner (c) **winner** (d) all the above
8. The activity _____ is a spontaneous speech where the speaker articulates the ideas on the topic in a minute
 (a) debate (b) welcome (c) conclusion (d) **Just A Minute**
9. Select the benefits of Just A Minute
 (a) it improves the students vocabulary
 (b) it improves students thought process
 (c) students will learn to assimilate and condense their ideas
 (d) **all the above**
10. _____ can be defined as the most powerful and persuasive tool that a company uses as one of its marketing tool.
 (a) **advertisement** (b) speech (c) debate (d) competitions
11. _____ is a type of cell division in which one cell divides to produce two new cells that are genetically identical to itself.
 (a) cytokinesis (b) meiosis (c) **mitosis** (d) karyokinesis
12. _____ is the first stage of mitosis
 (a) metaphase (b) **prophase** (c) anaphase (d) telophase
13. _____ is the cutting down of trees in the forest in a large number.
 (a) conservation (b) protection (c) **deforestation** (d) afforestation
14. Select the harmful effects of deforestation
 (a) soil erosion

- (b) temperatures are reaching its extreme points
 - (c) global Warming
 - (d) all the above
15. _____ of nature means the preservation of forests, land, water bodies, minerals, fuels and natural gases
- (a) **conservation** (b) protection (c) deforestation (d) afforestation
16. Select the natural resources
- (a) air (b) water (c) sunlight (d) **all the above**
17. _____ originate from living beings and organic material like plants and animals.
- (a) **biotic** (b) abiotic (c) renewable (d) non renewable

Section B

1. Mitosis is a type of cell division in which one cell divides to produce two new cells that are genetically identical to itself. Plants show mitotic divisions in both haploid and diploid cells. The number of chromosomes in the parent and progeny cells is the same, it is also called as equational division. Though for convenience mitosis has been divided into four stages of nuclear division, it is very essential to understand that cell division is a progressive process and very clear-cut lines cannot be drawn between various stages. Mitosis is divided into the following four stages:

Prophase

Metaphase

Anaphase

Telophase

Prophase

Prophase which is the first stage of mitosis follows the S and G₂ phases of interphase. In the S and G₂ phases the new DNA molecules formed are not distinct but intertwined. Prophase is marked by the initiation of condensation of chromosomal material. The chromosomal material becomes untangled during the process of chromatin condensation. The centriole, which had undergone duplication during S phase of interphase, now begins to move towards opposite poles of the cell. The completion of prophase can thus be marked by the following characteristic events: Chromosomal material condenses to form compact mitotic chromosomes. Chromosomes are seen to be composed of two chromatids attached together at the centromere. Initiation of the assembly of mitotic spindle, the microtubules, the

proteinaceous components of the cell cytoplasm help in the process. Cells at the end of prophase, when viewed under the microscope, do not show golgi complexes, endoplasmic reticulum, nucleolus and the nuclear envelope.

Metaphase

The complete disintegration of the nuclear envelope marks the start of the second phase of mitosis, hence the chromosomes are spread through the cytoplasm of the cell. By this stage, condensation of chromosomes is completed and they can be observed clearly under the microscope. This then, is the stage at which morphology of chromosomes is most easily studied. At this stage, metaphase chromosome is made up of two sister chromatids, which are held together by the centromere. Small disc-shaped structures at the surface of the centromeres are called kinetochores. These structures serve as the sites of attachment of spindle fibres (formed by the spindle fibres) to the chromosomes that are moved into position at the centre of the cell. Hence, the metaphase is characterised by all the chromosomes coming to lie at the equator with one chromatid of each chromosome connected by its kinetochore to spindle fibres from one pole and its sister chromatid connected by its kinetochore to spindle fibres from the opposite pole. The plane of alignment of the chromosomes at metaphase is referred to as the metaphase plate. The key features of metaphase are:

Spindle fibres attach to kinetochores of chromosomes.

Chromosomes are moved to spindle equator and get aligned along metaphase plate through spindle fibres to both poles.

Questions

- i) Define mitosis
- ii) What are the different stages of mitosis?
- iii) What are the key features of metaphase?
- iv) What indicates the initiation of prophase?
- v) What are the characteristic events that marks the completion of prophase?

2. Nature has provided us numerous gifts such as air, water, land, sunlight, minerals, plants, and animals. All these gifts of nature make our earth a place worth living. Existence on Earth would not be possible without any of these. Now, while these natural resources are present on Earth in plenty. Unfortunately, the necessity of most of these has increased extremely over the centuries due to increase in the human population.

Conservation of nature means the preservation of forests, land, water bodies, and minerals, fuels and natural gases. Thus all these natural resources make life worth living on Earth. Life would not be imaginable without air, water, sunlight as well as other natural resources present on the earth. Thus, it is essential to conserve these resources in order to retain the environment integral.

- **Renewable Resources:** These are resources such as air, water and sunlight that refill naturally.
- **Non-Renewable Resources:** These are resources like fossil fuels and minerals that do not restock reform very slowly.
- **Biotic:** These originate from living beings and organic material like plants and animals.
- **Abiotic:** These come from non-living things and non-organic material. These comprise air, water and land as well as metals like iron, copper, and silver.

Natural resources are categorized into actual resources, reserve resources, stock resources and potential resources based on their development stage.

Many of the natural resources are being used at a faster rate as compared to their speed of production. There is a necessity for conservation of nature and the natural resources it offers. Here are some of the ways in which these resources can be conserved:

Water is available in abundance on Earth. This is one of the reasons people do not consider much before using it. However, if we keep using it at this speed. In future, we may not be left with as much of it.

Use only as much energy as you require. It is thus advised to limit the usage of electricity. Simple habits such as turning off the lights before parting your room, turn off the electric appliances after use. Switching to energy-saving fluorescent or LED bulbs can make a change.

Paper manufacturing depends only on trees. Increasing the use of paper means encouraging deforestation. This is one of the key reasons for concern is in today's time. Always ensure that you use only as much paper as necessary. Stop taking print outs and use e-copies instead to do your bit.

The government must be aware the methods such as mixed cropping, crop rotation. Also, the government should teach the minimum usage of pesticides, insecticides. Appropriate use of manures, bio-fertilizers, and organic fertilizers to the farmers.

Spreading awareness about the conservation of nature is always a necessary step. It can be achieved only when more and more people understand its importance and the ways in

which they can help. Besides this, it is essential to plant more trees. It is necessary to contribute towards lowering air pollution. We must use shared transport and employing rainwater harvesting systems to conserve nature.

Nature comprises of everything that surrounds us. The trees, forests, rivers, rivulets, soil, air all are the part of nature. Keeping nature and its resources integral. So, it is very important for the continuation of life on earth. It would be difficult to imagine life on earth, which has a spoiled natural environment. Therefore, taking appropriate steps to conserve nature in its untouched form. It must be a priority for the human race. Only human beings with their power and ability can save nature in its purest forms.

Questions

- i) What is conservation of nature?
- ii) What are the different types of natural resources?
- iii) Differentiate abiotic from biotic factors
- iv) What are renewable resources?
- v) What are non-renewable resources?
- vi) How to reduce the use of electricity
- vii). What are the various methods to reduce the use of natural resources?

3. Write the vocabulary for the following words

- (i) conservation (ii) deforestation (iii) biotic (iv) abundance
- (v) preservation

4. Write the vocabulary for the following words

- (i) immunity (ii) nutrition (iii) balanced (iv) healthy
- (v) diet

Section D

- 1. Write the conversation between two students on algae
- 2. Narrate a story from the picture given below

3. Write the conversation between students on the differences between algae and fungi

4. Write an essay from the passage given below

A healthy diet provides the body with essential nutrition - protein, micronutrients such as vitamins, adequate fibre, food energy. A healthy diet - fruits, vegetables, whole grains - little to no processed food or sweetened beverages.

A diet that contains all kinds of nutrients - balanced diet - good health - body strong - increases its immunity to fight against diseases - makes the mind sharp and healthy, which makes us mentally strong as well.

Healthy balanced diet - work better both at home and at office. Lack of healthy food - lead to fatigue and many other diseases. Food contributes - to the body but also to beautiful skin, hair, eyes and teeth. A balanced healthy diet - essential at any age, especially for a growing child. The diet of any child - healthy and balanced - child does not become obese - does not have to deal with other health problems related to obesity.

5. Write a role play as a scientist in conserving nature.

6. Write a dialogue writing between a botanist and a student on conserving nature.

Unit III

1. _____ is the practice of growing plants in an air or mist environment without the use of any substrate

(a) **aeroponics**

(b) tissue culture

- (c) callus culture (d) anther culture
2. Select the synonym for the word *creativity*
- (a) fake (b) selfish (c) discomfort (d) imagination
3. The invention of the railroad was a milestone in the history of transportation
- (a) **create a new device or process**
 (b) discover a new device or process
 (c) create a new place
 (d) imagination
4. The GR strategy for food crop productivity growth was explicitly based on the premise that
- (a) given appropriate institutional mechanisms
 (b) technology spillovers across political
 (c) technology spillovers across agroclimatic boundaries
 (d) **all the above**
5. International Maize and Wheat Improvement Centre (CIMMYT) is located in
- (a) **Mexico** (b) Philippines (c) India (d) USA
6. The International Rice Research Institute (IRRI) is located at
- (a) Mexico (b) Philippines (c) India (d) USA
7. The company invested heavily in new technology
- (a) **create a new device or process**
 (b) the application of scientific discoveries for practical purposes
 (c) a change in behavior in response to new or modified surroundings
 (d) to spread information, knowledge, opinions widely
8. _____ surrounds us and expresses itself in the form of innovative ideas in our everyday life
- (a) creativity (b) communication (c) listening (d) information
9. Microsoft Word is a word processing program that allows for the creation of both simple and refined documents.
- (a) Microsoft Word (b) Microsoft Powerpoint

- (c) Microsoft Excel (d) Microsoft Access
10. PowerPoint uses a graphical approach to presentations in the form of slide shows.
- (a) Microsoft Word (b) Microsoft Powerpoint
(c) Microsoft Excel (d) Microsoft Access
11. Excel is used to create graphs and charts.
- (a) Microsoft Word (b) Microsoft Powerpoint
(c) Microsoft Excel (d) Microsoft Access
12. _____ helps to analyze large amounts of information, and manage related data more competently than Microsoft Excel or other spreadsheet applications.
- (a) Microsoft Word (b) Microsoft Powerpoint
(c) Microsoft Excel (d) Microsoft Access
13. 10. Which of the following is the file extension of the PowerPoint application?
- (a) .jpg (b) .ppt (c) .html (d) .docs

Section B

1. Write an essay on green revolution
2. Write an essay on pseudoscience
3. How to prepare a new word file, and save the contents?
4. What are the steps involved in preparing a PPT and saving the data?
5. Write an essay on healthy diet
6. What were the new words reintroduced by Sasi Tharoor in English language

Section C

1. Write the conversation between two students on differences between plant cell and animal cell.
2. Write a dialogue between two students discussing on the dissimilarities and similarities of algae and fungi.
3. Write an essay from the passage given below

A healthy diet provides the body with essential nutrition - protein, micronutrients such as vitamins, adequate fibre, food energy. A healthy diet - fruits, vegetables, whole grains - little to no processed food or sweetened beverages.

A diet that contains all kinds of nutrients - balanced diet - good health - body strong - increases its immunity to fight against diseases - makes the mind sharp and healthy, which makes us mentally strong as well.

Healthy balanced diet - work better both at home and at office. Lack of healthy food - lead to fatigue and many other diseases. Food contributes - to the body but also to beautiful skin, hair, eyes and teeth. A balanced healthy diet - essential at any age, especially for a growing child. The diet of any child - healthy and balanced - child does not become obese - does not have to deal with other health problems related to obesity.

4. How to prepare a power point presentation on the topic conservation of nature.

5. Write the role of technology in communication according to Stephen Hawking.

UNIT IV

Section A

1. _____ is a special kind of listening skill, which helps the learners to encounter, understand, learn, discuss, and remember new ideas

(a) **Academic listening**

(b) Oral presentations

(c) Chatbots

(d) Emotions

2. _____ is the **condition in which the number of red blood cells or the haemoglobin concentration within them is lower than normal.**

(a) diarrhoea

(b) diabetes

(c) **anaemia**

(d) down syndrome

3. Select the symptoms may include

(a) fatigue, skin pallor

(b) shortness of breath, light-headedness

(c) dizziness or a fast heartbeat

(d) **all the above**

4. _____ supplements may be used for low vitamin levels.

(a) **Vitamin B**

(b) Vitamin A

(c) Vitamin C

(d) Vitamin D

5. Any motion picture that runs from fifteen seconds to forty five minutes in length.

(a) movie

(b) **short film**

(c) story

(d) advertisement

6. What are considered as challenges of pandemic situation?
- (a) adapting to lifestyle changes
 - (b) managing the fear of contracting the virus
 - (c) worry about people close to us
 - (d) **all the above**
7. What are the realities of frustration due to this pandemic situation?
- (a) temporary unemployment
 - (b) home-schooling of children
 - (c) lack of physical contact with other family members
 - (d) all the above
8. How come one can overcome frustration during this pandemic situation?
- (a) keep up with personal hygiene
 - (b) eat healthy meals at regular times
 - (c) Minimize newsfeeds
 - (d) **all the above**
9. _____ is the ability to transcend traditional ideas
- (a) **creativity**
 - (b) listening
 - (c) thinking
 - (d) acting
10. Select the synonyms for the word 'creativity'
- (a) imagination
 - (b) inspiration
 - (c) inventiveness
 - (d) **all the above**
11. _____ is the process of seeing the world in new ways and finding the hidden patterns.
- (a) **imagination**
 - (b) inspiration
 - (c) inventiveness
 - (d) creativity
12. Select the possible ways of creativity in science
- (a) logical thinking
 - (b) ability to come up with new ideas,
 - (c) ideas to focus on one that can be elaborated
 - (d) **all the above**
13. _____ is the process of initiation and development of an embryo from a zygote or a somatic cell
- (a) megasporogenesis
 - (b) **embryogenesis**
 - (c) microsporogenesis
 - (d) embryology
14. Embryo development occurs through an exceptionally organized sequence of cell division, enlargement and _____
- (a) cell cycle
 - (b) development
 - (c) **differentiation**
 - (d) growth

15. Embryos develop as passing through typical developmental stages, such as _____ stages for dicots

- (a) globular (b) heart
(c) torpedo and cotyledonary (d) **all the above**

Section B

1. Write an interpretation on Gerald Durrell's Animals for ever
2. Write an essay on frustrations of people in pandemic situation
3. Write the vocabulary for the following words
(a) callus (b) differentiation (c) cotyledon (d) epiphysis
4. Write a report on the program attended by you recently in the college campus
5. What is anemia and what are the symptoms?
6. Frame sentences using the words below
(a) communication (b) evident (c) initiation (d) development (e) transition

Section C

1. Embryogenesis is the process of initiation and development of an embryo from a zygote (zygotic embryogenesis) or a somatic cell (somatic embryogenesis). Embryo development occurs through an exceptionally organized sequence of cell division, enlargement and differentiation. Zygotic and somatic embryos share the same gross pattern of development. Both types of embryos develop as passing through typical developmental stages, such as globular, scutellar and coleoptilar stages for monocots, or globular, heart, torpedo and cotyledonary stages for dicots and conifers. Embryo development is bipolar, having a shoot and a radicular pole at opposite ends.

The physical, observable transition from a nonembryogenic cell to an embryogenic cell in somatic embryogenesis appears to occur when the progenitor cell undergoes an unequal division, resulting in a larger vacuolate cell and a small, densely cytoplasmic (embryogenic) cell. The embryogenic cell then either continues to divide irregularly to form a proembryonal complex or divides in a highly organized manner to form a somatic embryo.

The formation of the root apex involves derivatives of both the basal and apical cells of the two-cell embryo. The hypophyseal region, derived from the topmost cell of the suspensor, is incorporated into the embryo proper, giving rise to part of the root

cap, its initial cells and the ground meristem initial cells. The remainder, including the ground meristem and procambium, is contributed by the apical cell.

The delineation of the embryonic shoot apex is much more cryptic than that of root apex. The shoot apical meristem, the epiphysis, is determined in an early globular stage embryo before the cell cleavage that delineates the protoderm. The storage protein mRNA are not detected in epiphyseal cells but in cotyledonary cells at one embryonic stage, indicating a functional difference, and the O line is the lower boundary of the epiphysis. At the transition stage, the centrally localized epiphyseal cells divide more slowly than the cotyledon cell progenitors, resulting in the formation of a bilaterally symmetrical heart stage embryo.

Morphological changes during the transition from the globular stage to the heart stage are the first visible sign of the formation of the two embryonic organ systems: the cotyledons and the axis. The emergence of the cotyledons from a radically symmetrical globular embryo indicates that groups of cells in the apical region are induced to proliferate at specific sites. Polar auxin transport may be involved in directing these localized cell divisions.

Maturation is the terminal event of embryogenesis. In zygotic embryogenesis, maturation is characterized by attainment of mature embryo morphology, accumulation of storage carbohydrates, lipids and proteins, reduction in water content and a gradual decline or cessation of metabolism. Somatic embryos usually do not mature properly. Instead, due to environmental factors such as keeping a constant contact with inducing medium, somatic embryos often deviate from the normal developmental pattern by bypassing embryo maturation producing callus, undergoing direct secondary embryogenesis and/or germinating precociously. Somatic embryos growing from proembryonal complexes tend to develop asynchronously so that several stages are present in culture at any given time. Therefore, the most obvious developmental difference between zygotic and somatic embryos is perhaps that the latter lacks a quiescent resting phase.

i) Define embryogenesis?

ii) What are the physical, observable transition from a nonembryonic cell to an embryonic cell in somatic embryogenesis?

- iii) What is the role of root apex in embryogenesis?
4. What are the changes that occur transition from globular stage to heart stage?
5. Give the changes that occur in mature embryo during zygotic embryogenesis?
6. Write a conversation on the topic embryogenesis between two students.
7. Write a review on the book recently read by you.

Unit V

Section A

1. _____ is a powerful tool that has propelled changes, carved history and sustained culture and tradition.
- (a) **language** (b) revolution (c) chatbots (d) emotions
2. Power point can be accessed from _____
- (a) Screencastomatic (b) SPSS
- (c) Google docs (d) **Microsoft Office App**
3. _____ are substances that acts as a catalyst in living organisms
- (a) **Enzymes** (b) Proteins (c) Water (d) Amino acids
4. Examples of deficiency of a particular enzyme is
- (a) **albinism and phenylketonuria** (b) fever and phenylketonuria
- (c) albinism and high pressure (d) all the above
5. A large protein enzyme molecule is composed of one or more amino acid chains called _____
- (a) **polypeptide chains** (b) poly A (c) polynucleotide (d) polymer
6. If the enzyme is subjected to changes, such as fluctuations in _____ the protein structure may lose its integrity and its enzymatic ability.
- (a) light (b) moisture content
- (c) **temperature and pH** (d) none
7. _____ direct participant in the catalytic event and thus is required for enzymatic activity.
- (a) **cofactor** (b) Mg^{+} (c) metal (d) enzyme
8. The extension for powerpoint is _____

- (a) .jpeg (b) .docs (c) .ppt (d) .xls

9. The **INSERT** option enables you to add more visuals to your slides like

- (a) tables, pictures, shapes, icons (b) charts, add-ons, hyperlinks
(c) text box, word art, symbols (d) **all the above**

10. _____ option will enable you to present it in full screen

- (a) **slide show** (b) animation (c) transition (d) F4

Fill in the blanks with a conjunction or a participle that can connect the clauses.

11. I waited for them they came.

(till /until)

12. men sow, so shall they reap. (As/ Like)

13. I am as strong you are. (like/ than/ as)

14. He was tired that he could barely stand. (so/ very/ too)

15. It is certain he will be late. (whether/ that/ what)

16. a large sum of money, he gave up speculation. (Have lost/
Lost/ Having lost)

17. he will waste his time is certain. (That/ What/ Whether)

18. he is short-tempered, I like him. (Despite/ However
/Although)

19. Ask the guard it is time for the train to start? (whether
if/ Either)

20. I know all the facts, I cannot help you. (Unless/ Until /If)

21. The votes on each side equal, the chairman gave his casting
vote against the resolution. (was/ were /been /being)

22. tired, he stopped working. (Felt /Feeling /Having felt)

Section B

1. Enzyme, a substance that acts as a catalyst in living organisms, regulating the rate at which chemical reactions proceed without itself being altered in the process.

The biological processes that occur within all living organisms are chemical reactions, and most are regulated by enzymes. Without enzymes, many of these reactions would not take place at a perceptible rate. Enzymes catalyze all aspects of cell metabolism. This includes the digestion of food, in which large nutrient molecules (such as proteins, carbohydrates, and fats) are broken down

into smaller molecules; the conservation and transformation of chemical energy; and the construction of cellular macromolecules from smaller precursors. Many inherited human diseases, such as albinism and phenylketonuria, result from a deficiency of a particular enzyme.

Enzymes also have valuable industrial and medical applications. The fermenting of wine, leavening of bread, curdling of cheese, and brewing of beer have been practiced from earliest times, but not until the 19th century were these reactions understood to be the result of the catalytic activity of enzymes. Since then, enzymes have assumed an increasing importance in industrial processes that involve organic chemical reactions. The uses of enzymes in medicine include killing disease-causing microorganisms, promoting wound healing, and diagnosing certain diseases.

Chemical nature

All enzymes were once thought to be proteins, but since the 1980s the catalytic ability of certain nucleic acids, called ribozymes (or catalytic RNAs), has been demonstrated, refuting this axiom. Because so little is yet known about the enzymatic functioning of RNA, this discussion will focus primarily on protein enzymes.

A large protein enzyme molecule is composed of one or more amino acid chains called polypeptide chains. The amino acid sequence determines the characteristic folding patterns of the protein's structure, which is essential to enzyme specificity. If the enzyme is subjected to changes, such as fluctuations in temperature or pH, the protein structure may lose its integrity (denature) and its enzymatic ability. Denaturation is sometimes, but not always, reversible.

Bound to some enzymes is an additional chemical component called a cofactor, which is a direct participant in the catalytic event and thus is required for enzymatic activity. A cofactor may be either a coenzyme—an organic molecule, such as a vitamin—or an inorganic metal ion; some enzymes require both. A cofactor may be either tightly or loosely bound to the enzyme. If tightly connected, the cofactor is referred to as a prosthetic group.

- i) What are enzymes?
- ii) What are the functions of enzymes?
- iii) What are the industrial and medical applications of enzymes?
- iv) What is the chemical nature of enzymes?

v) What is cofactor?

2. What are the distinguishing features of powerpoint?

3. Write notes for the passage given below

Ethical competence is the quest for knowledge and action that defines right and wrong behavior. What does it mean to be ethically competent? Why is ethical competence so important? How is it achieved? The answers to these questions are in demand within and across academic disciplines and applied professions – medical, engineering, law, psychology, social work, public administration, and more. At its root, ethical competence resides in the human quest for knowledge and action that defines right and wrong behavior, the touchstone of ethics. Thus, an ethically competent person is one who through innate or learned behavior can distinguish between right and wrong and act accordingly.

4. What are the errors in power point presentation?

5. Write the minutes for the fresher's day meet.

Section C

1. Develop an essay from the passage given below

A drug is created – stages – processes - creating new drugs - distinguish between drug discovery - drug development. Drug discovery - subject new chemical entities - screening tests designed - detect - biological activity. Include in vitro - in vivo screens. History - changed gradually. Before 1990, medicines - chemical synthesis or were isolated from existing compounds exhibiting poly-pharmacology or side effects. Screenings - through low throughput screening. Recently - human receptors and substances - specific activity has proceeded - led to new drugs, Cimetizine - Ranitizine. Studies of DMPK and ADME - progressed - studies were applied to drug discovery. Change - low throughput screening to high throughput screening allowed mass screening. Since 2000 - advance - human genome - led to novel medicines - Aranesp, Epogen, and Enbrel - more biological - before.

Toxicology - adapted to drug discovery. Attempts - computers are increasing. Method of finding lead compounds - changed. Main six methods - find lead compounds are becoming popular - improve existing drugs - create new drugs on the basis of natural

products - rational drug design using protein crystallography – popular - high throughput screening, fragment screening and virtual screening. Two methods of designing structures - structure based design and ligand based. Targets - new lead compounds - eight targets - receptors, enzymes, ion-channels, nuclear receptors, kinases, bacterial/viral targets, human genome, and others. Process - drug discovery – complex - 4 to 8 years.

2. Imagine you are the principal of your college. Based in the following information, draft a circular that must be sent to the faculty and students.

- i. Heavy rain
- ii. Power failure
- iii. Online exam postponed
- iv. Subject: Professional English Course
- v. Original date of exam: 15.12.2021
- vi. Rescheduled date of exam: 19.12.2021 Write the draft in the space provided

3. Read the passage below carefully and make notes

Professional ethics means to develop professional competence with ethical human conduct. Developing ethical competence in the individual (profession) is the only effective way to ensure professional ethics. The development of ethical competence is a long term process to be achieved through appropriate value education. As profession is only a subset of the life activities, the competence in profession will only be the manifestation of one's right understanding. The salient features characterizing this competence can be summarized as follows:

1. Clarity about comprehensive human goal: Samadhan - Samridhi - Abhay - Sah-astitva, and its fulfilment through universal human order.
2. Confidence in oneself: Based on the right understanding of oneself and the rest of existence.
3. Mutually fulfilling behaviour: Clarity and confidence in ethical human conduct and its correlation with sustained personal as well as collective happiness and prosperity.
4. Mutually enriching interaction with nature: Self-sufficiency in fulfilment of physical needs; ability to assess the needs for physical facilities for the family and

their fulfilment through production systems ensuring harmony in the nature. In the light of the above, one acquires the ability to identify and develop appropriate (people-friendly and eco-friendly) technologies, production systems etc.

4. Paraphrase the passage below in your own words

Ancient Tamil Literature, Tholkappiyam is said to be the first written text in the world to describe six senses which related to external body parts. While the exact date of the Tholkappiyam is not known, based on linguistic and other evidence, it has been dated variously between the 5th century BCE and the 3rd century CE. While our sensory organs are capable of perceiving information only within the very narrow bandwidth of the particular sense, the mind is where the various perceptions come together to form a consensus of the truth. The individual senses of a person are incapable of knowing the absolute truth. It is impossible to simply touch a surface and know what it is made of. We can perceive, by touch, its surface irregularities, whether it is soft or hard, and a relative indication of its temperature. We can tap on it, and in hearing the sound, determine that perhaps it is metal or glass if it is thin enough to send a true indication, but a sheet of glass that is 2-inches thick cannot be perceived as glass without sight. We need multiple sensory perceptions to be fed to the mind to assist in determining the truth. We hear a sound that may be lightening, a gunshot, or something hitting another thing. In most cases it is extremely difficult to ascertain the truth from a single instance of sensory perception. We must use our other senses and our mind to better discern the truth. The “oldest Tamil work on grammar, poetics” was the Tholkappiyam. The Tholkappiyam considers all native elements, especially all animate beings, as part of a continuous series graded by degrees of sentience. One of its verses says: "beings with one sense are those that have the sense of TOUCH.

5. How to create a new power point presentation

6. What are the various steps involved in creating a power point presentation on the topic history of botany.

St. Mary's College (Autonomous) Thoothukudi

B.Sc. Botany

Semester III

Core III Plant Diversity II (Pteridophytes, Gymnosperms and Paleobotany)

Course Code: 21UBOC31

Section A

Unit I

1. Which of the following is regarded as the age of pteridophytes?
(a) **Early Paleozoic** (b) Middle Paleozoic (c) Late Paleozoic (d) All of the above
2. A plant in the division Lycopphyta differs from one in the division Psilophyta in having
(a) oogamy (b) true stems (c) **true roots and leaves** (d) a gametophyte stage
3. Which of the following is a member of Ligulopsida?
(a) *Pteridium* (b) ***Selaginella*** (c) *Equisetum* (d) *Lycopodium*
4. Pteridophyte Phylogeny Group, or PPG classification was proposed by
Smith (b) **Eric**s (c) Zimmerman (d) Linnaeus
5. Find out the incorrect statement pertinent to stele
a. **protostele is the most advanced stele** (b) medullated protostele is siphonostele
b. individual unit of dictyostele is meristele (d) protostele with star shaped xylem is Actinostele
6. The primitive type of stele is a
(a) **protostele** (b) dictyostele (c) amphiphloeic siphonostele (d) solenostele.
7. Amphiphloeic siphonostele has
(a) phloem towards innerside of xylem (b) phloem surrounded by xylem (c) **xylem on both sides surrounded by phloem** (d) phloem outside the xylem.
8. A stele without pith is
a) solenostele (b) siphonostele (c) **haplostele** (d) amphiphloeic siphonostele.
9. Heterospory is found in
(a) *Selaginella* (b) *Marsilea* (c) **both a and b** (d) *Lycopodium*
10. Heterospory means
(a) **presence of micro and megaspores** (b) presence of microspores

- (c) presence of megaspores (d) absence of megaspores
11. Microspores are produced in the
(a) **microsporangium** (b) megasporangium (c) microgametophyte (d) sporangium
12. Megasporangia are produced in the
(a) **megasporophyll** (b) microsporophyll (c) sporophyll (d) sporangia
13. The stele consists of star shaped xylem is
(a) **actinostele** (b) plectostele (c) protostele (d) haplostele.
14. Stellar theory was proposed by
(a) Sachs (b) **Van Tieghum and Douliot** (c) Foster and Gifford (d) Chang.
15. _____ is the feature of *Selaginella* bring closer towards seed habit
a) presence of alternation of generations (b) **presence of two different types of spores**
(c) presence of ligule (d) presence of only one type of spore

Unit II

1. The thin tongue like structure in *Selaginella* is _____
(a) **ligule** (b) synangium (c) sporocarp (d) rhizophore
2. Find out the matching pair with respect to spore formation
(a) ***Lycopodium* - homosporus** (b) *Selaginella* - homosporus
(c) *Dicranopteris* – heterosporus (d) *Marsilea* – homosporus
3. The sporangia occur in group is called
(a) **sorus** (b) sporophyte (c) sporophyll (d) leaf
4. Protocorm is found in
(a) ***Lycopodium*** (b) *Dicranopteris* (c) *Psilotum* (d) *Selaginella*
5. This type of embryogeny is seen in *Lycopodium*
(a) **endoscopic** (b) exoscopic (c) both (a) & (b) (d) ligule
6. *Lycopodium* is _____ pteridophyte
(a) **homosporous** (b) heterosporous (c) both (a) & (b) (d) sporocarp
7. The genus *Lycopodium* has sub genera
(a) Urostachya (b) Rhopalostachya (c) **both (a) & (b)** (d) *L.cernum* & *L.selago*.
8. In *Lycopodium clavatum* stem the type of stele is
(a) protostele (b) **plectostele** (c) haplostele (d) eustele.

9. Which type of antherozoids are present in *Selaginella*

- (a) aflagellate (b) **biflagellate** (c) multiflagellate (d) uniflagellate

10. Find out the botanical name of club moss

- (a) *Selaginella krassuiana* (b) ***Lycopodium clavatum*** (c) *Marsilea monophila* (d) *Pinus roxburghi*.

Unit III

1. *Marsilea* is a

- (a) soil fern (b) club fern (c) **water fern** (d) quill fern.

2. Which comes out of *Marsilea* sporocarp after dehiscence

- (a) microspore
(b) megaspore
(c) both microspore and megaspore
(d) **ring of gelatinous tissue along with microspore and megaspore**

3. The spores with pseudoinducium are found in

- (a) ***Adiantum*** (b) *Equisetum* (c) *Lycopodium* (d) *Marsilea*

4. Maiden hair fern is the name given to

- (a) *Pteris* (b) ***Adiantum*** (c) *Selaginella* (d) *Lycopodium*

5. Multiflagellate sperms are found in

- (a) *Selaginella* (b) *Lycopodium* (c) ***Adiantum*** (d) *Psilotum*

6. Circinate ptyxis condition is seen in

- (a) *Lycopodium* (b) ***Marsilea*** (c) *Dicranopteris* (d) *Selaginella*

7. Vegetative reproduction in *Marsilea* takes place by

- (a) **tubers** (b) gemma (c) resting buds (d) adventitious buds.

8. Which of the following species of *Marsilea* grows on dry land?

- (a) *M. minuta* (b) *M. quadrifolia* (c) *M. aegyptiaca* (d) ***M. rajasthanensis***

9. Amphiphloic siphonostele is found in the rhizome of

- (a) *Lycopodium* (b) ***Marsilea*** (c) *Dicranopteris* (d) *Selaginella*

10. The middle cortex in *Marsilea* is

- (a) parenchymatous (b) chlorenchymatous (c) **aerenchymatous** (d) sclerenchymatous

Unit – IV

1. Mycorrhizal root of a *Pinus* possess

- (a) algae (b) **fungi** (c) bacteria (d) virus.
2. Balloon like expansion of pollen wall of *Pinus* is called
(a) **wing** (b) elator (c) air bag (d) sheath.
3. In *Pinus* the scale leaves are called as
(a) foliage leaves (b) sporophylls (c) cataphylls (d) **needles**.
4. Find out the correct types of xylem elements given below pertinent to *Pinus* stem
(a) xylem fibre, xylem tracheid & xylem parenchyma
(b) xylem vessels, xylem parenchyma & xylem fiber
(c) xylem parenchyma, xylem vessels & xylem tracheid
(d) **xylem parenchyma, xylem tracheid & wood rays**
5. The xerophytic characters of *Pinus* needle are mainly to
(a) tide over long winter without injury (b) get protection from grazing animals
(c) **tide over continous drought** (d) resist against pathogens.
6. The ovule of *Pinus* is naked due to
(a) absence of integument (b) absence of nucellus
(c) absence of micropyle (d) **absence of ovary**
7. *Pinus* is the anemophilous plant with respect to pollination. It is effected by-----
(a) animals (b) **wind** (c) water (d) viruses
8. From the male cone of *Pinus* the pollen grains are liberated at
(a) 2 celled stage (b) **4 celled stage** (c) 8 celled stage (d) 16 celled stage
9. In *Gnetum* this is absent
(a) cone (b) **archegonium** (c) egg (d) secondary thickening
10. *Gnetum* leaf shows this type of venation
(a) Parallel (b) **reticulate** (c) palmately compound (d) pinnately compound.
11. Long micropyle is seen in the ovule of
(a) **Gnetum** (b) *Pinus* (c) *Cycas* (d) *Cupressus*.
12. Cleavage polyembryony is seen in
(a) **Pinus** (b) *Gnetum* (c) *Lycopodium* (d) *Psilotum*.
13. Anomalous secondary growth takes place in
(a) *Gnetum africanum* (b) *G. ula* (c) **both (a) & (b)** (d) *G. gnemon*.
14. Which of the following characters of *Gnetum* justify its inclusion in Gymnosperms?

- (a) reticulate venation (b) **naked ovule** (c) free nuclear division in the embryo sac
(d) dicotyledonary embryo

15. Find out the anomaly in stem of *Gnetum ula*

- (a) presence of bicollateral vascular bundles (b) presence of accessory cambium
(c) **presence of medullary bundle** (d) presence of invaded phloem

Unit- V

1. *Lyginopteris* comes under the order _____

- (a) **cycadofilicales** (b) Psilophyales (c) Ginkgoales (d) Coniferales

2. One of the following is fossil plant

- (a) *Pinus* (b) ***Lyginopteris*** (c) *Marsilea* (d) *Gnetum*.

3. This type of stele is found in *Rhynia*

- (a) **protostele** (b) siphonostele (c) dictyostele (d) plectostele.

4. *Lyginopteris* was assumed to be found in the _____ period

- (a) carboniferous (b) jurassic (c) triassic (d) **devonian**.

5. Paleobotany deals with

- (a) living plants (b) **fossil plants** (c) hill plants (d) water plants

6. *Rhynia* is a fossil

- (a) **Pteridophyte** (b) Gymnosperm (c) Bryophyte (d) Algae

7. *Lyginopteris oldhamia* is a constructed fossil plant. Which of the following name is given to its ovules and seeds?

- (a) ***Lygenostoma lomaxi*** (b) *Crossotheca* (c) *Lagenostoma* (d) *Calymatotheca hookeri*

8. Which of the following Gymnosperms yield resin, the source of turpentine

- (a) *Gnetum ula* (b) *Lyginopteris oldhamia* (c) ***Pinus roxburgii*** (d) *Cycas media*

9. The so called “sago palm” is _____

- (a) *Gnetum ula* (b) ***Cycas revoluta*** (c) *Pinus roxburgii* (d) *Gnetum africanum*

10. The internal structures are well preserved in this type of fossil _____

- (a) coal (b) incrustations (c) impression (d) **petrification**

Section B

Unit -1

1. Define stele
2. What is protostele?

3. Draw and label the parts of plectostele
4. Write the divisions of pteridophytes by Erics
5. What is heterospory?
6. Write any two general characters of Pteridophytes
7. Mention any two economic importance of Pteridophytes
8. Mention the general characteristics of Eligulopsida
9. What are the types of siphonostele?
10. Define seed habit.

Unit-II

1. Systematic position of *Lycopodium*
2. What is Sporophylls?
3. What is ligule?
4. Difference between homosporous and heterosporous
5. Write any two species of *Lycopodium* found in India
6. Draw and label the parts of *Lycopodium* stem
7. What is fragmentation?
8. What is trabeculae?
9. What is Rhizophore?
10. Draw and label the parts of *Selaginella* cone

Unit III

1. Write any two aquatic ferns
2. Draw and label the parts of *Marsilea* rhizome
3. Systematics position of *Adiantum*
4. What is sporocarp?
5. With suitable example explain amphiphloic siphonostele
6. What is pinna?
7. Graphic life cycle of *Adiantum*

8. What is circinate ptyxis?
9. What is known as heteromorphic alternation of generation?
10. What is aerenchyma?

Unit IV

1. What is Ovuliferous scale?
2. Cleavage polyembryony
3. Any two species of *Pinus*
4. What is monoecious plant?
5. Bands of xylem
6. Systematic position of *Gnetum*
7. Mention any two economic importance of *Gnetum*
8. Any two angiospermic characters of *Gnetum*
9. Any two gymnospermic characters of *Gnetum*
10. List out the xerophytic characters of *Pinus* needle
11. Transfusion tissue

Unit V

1. What are the types of fossils?
2. Mention any two economic importance of gymnosperm
3. Draw and label the internal structure of the stem of *Lyginopteris*
4. Write any two types of fossil.
5. Write any two external characters of *Rhynia*
6. What is petrification?
7. What is unique about a preserved fossil?
8. What is mold fossil?
9. Which subdivision of geologic time is the longest?
10. Write any two external characters of *Lyginopteris*.

Section C

Unit I

1. Outline the classification of Pteridophytes by Erics.
2. Mention any five economic importance of Pteridophytes
3. Explain the different types of steles seen in the pteridophyte plants you have studied.
4. Distinguish between protostele and dictyostele.
5. Write about the origin of seed habit in Pteridophytes.
6. What are the different types of protostele?
7. Define heterospory. Explain with an example.
8. Write notes on the medicinally important pteridophytes.
9. Explain siphonostele with examples.
10. Differentiate protostele from solenostele.
11. "Pteridophytes are potential biofertilizers as well as troublesome weeds" Explain

Unit II

1. Describe *Lycopodium* cone with suitable examples.
2. Explain the variations seen in the stele of *Lycopodium* stem.
3. Explain protocorm with an example.
4. Give an account on the spore producing organs of *Lycopodium*.
5. Draw and explain the structure of *Selaginella* rhizophore
6. With the help of labelled diagram, explain the structure of *Selaginella* stem
7. Differentiate between cones of *Lycopodium* and *Selaginella*
8. Describe the structure of strobilus of *Selaginella* with neat labelled diagram
9. Schematically represent the life cycle of *Selaginella*
10. Describe the external features of *Selaginella* sporophyte
11. Explain the distribution and habit of *Lycopodium*

Unit-III

1. Describe the external morphology of sporophyte of *Marsilea*.
2. Write notes on the male gametophyte of *Marsilea*.
3. Discuss the internal structure of rhizome of *Marsilea*.

4. Describe the structure of sporocarp of *Marsilea* with neat diagram.
5. Describe the internal structure of petiole of *Marsilea*.
6. Write notes on stele of *Marsilea* rhizome.
7. Write notes on the sorus of *Adiantum*.
8. Describe the internal structure of rhizome of *Adiantum*
9. Describe the external features of the leaf of *Adiantum* Write on the location and the type of sori observed on it.
10. Describe the asexual reproduction in *Adiantum*.

Unit-IV

1. Describe with diagram the internal structure of *Pinus* needle.
2. Describe the male cone of *Pinus* as observed in a longitudinal section. Write on the structure of microspore.
3. Describe the external features of male and female cones of *Gnetum*.
4. Describe the process of secondary thickening in the stem of *Gnetum*. Comment on the vessels of *Gnetum*.
5. Describe the young stem of *Gnetum*.
6. Describe the structure of *Gnetum* leaf.
7. Draw and describe the structure of *Gnetum* ovule.
8. Explain the structure of male cone of *Pinus*
9. What are the various anatomical characters seen in old stem of *Gnetum*?
10. List the angiospermic characters of *Gnetum*

Unit-V

1. Describe the internal structure of the stem of *Lyginopteris*
2. Describe the structure of sporophyte of *Rhynia*
3. Give a short account on geological time scale.
4. Describe the external features of *Rhynia*.
5. Explain the important characters of *Rhynia*.
6. Describe the internal structure of *Rhynia* stem.
7. Explain the structure of spore producing organ of *Rhynia*
8. Describe the external features of *Lyginopteris*.
9. Explain the ovule structure of *Lyginopteris*.

10. Explain petrification and impression
11. Describe the process of fossilization.
12. Elucidate the different kinds of fossils.
13. Mention any five economic importances of Gymnosperms.

Section – D

Unit- I

1. Explain heterospory and seed habit in Pteridophytes.
2. Write the classification of Pteridophytes by Erics.
3. Trace the stelar evolution in Pteridophytes.
4. Write an essay on the economic importance of Pteridophytes.
5. Write notes on
 - (a) food value of Pteridophytes
 - (b) protostele.
6. Write notes on
 - (a) medicinal importance of Pteridophytes.
 - (b) solenostele.
7. Explain heterospory and seed habit.
8. Differentiate the types of stele.
9. Explain alternation of generation.
10. Explain the general characters of pteridophytes.

Unit-II

1. With suitable diagram bring out sporangial distribution in the cone of *Selaginella*
2. Draw and describe the internal structure of *Lycopodium* stem
3. With sketches explain the various types of steles found in *Lycopodium*.
4. Illustrate the graphic life cycle of *Lycopodium* and describe its spore producing organ.
5. Describe the internal characters of *Selaginella* stem and rhizophore
6. Describe the morphology of *Lycopodium* sporophyte
7. Describe with neat diagram the structure of *Selaginella* cone
8. Draw and explain the life cycle of *Selaginella*
9. Describe the gametophytic generation of *Lycopodium*

10. Explain the internal structure of *Selaginella* leaf and ligule

Unit-III

1. Write an essay on the external and internal features of sporophyte of *Adiantum*
2. Give an account of the life cycle of *Adiantum*
3. Describe the external structure of sporophyte and gametophyte of *Adiantum*
4. Describe the life cycle of *Marsilea*.
5. Describe the internal structure of *Adiantum* petiole
6. Describe the internal structure of rhizomes and petiole of *Marsilea*.
7. Compare the spore producing structure of *Marsilea* and *Adiantum*
8. Write notes on
 - (i) heterosporous fern
 - (ii) sori.
9. Explain the structure of sporocarp, megasporangia and microsporangia of *Marsilea*.
10. Discuss about the sexual reproduction in *Adiantum*

Unit-IV

1. Describe with diagram the internal structure of *Pinus* needle
2. With neat diagram explain the structure of ovule of *Pinus*
3. Define cleavage polyembryony. Explain how it happens in *Gnetum*.
4. What are the various anatomical characters seen in the old stem of *Gnetum*.
5. Describe in detail the pollination and fertilization in *Pinus*.
6. Explain the structure of male and female cones of *Pinus*.
7. Explain the structure of male cone of *Pinus*.
8. Write an essay on life cycle of *Pinus*.
9. Describe the structure of ovule of *Gnetum*. Add a note on the pollination and fertilization.
10. Write an essay on life cycle of *Gnetum*

Unit-V

1. Write an essay on various types of fossils.
2. Outline the geological time scale.
3. Give a detailed account of morphological and anatomical features of any fossil gymnosperms you have studied
4. Gymnosperms are economically more useful- Discuss.

5. Narrate the Classification of gymnosperm by Chamberlain.
6. Elaborate the methods of fossilization.
7. Bring out the differences between the anatomical features of *Rhynia* and *Lyginopteris* stem.
8. Draw and describe i) structure of sporophyte of *Rhynia*
ii) ovule structure of *Lyginopteris*
9. Describe the external features of *Lyginopteris*.
10. Comment on geological time scale.

UNIT I

1. One of the following is present in blue green algae
(a) Galactan sulphate (b) **phycocyanin**
(c) any polysaccharide (d) floridean starch
2. Red colour of the red alga is due to
(a) Xanthophyll (b) chlorophyll a
(c) chlorophyll b (d) **phycoerythrin**
3. Which of the following algal division is characterized by possession of chlorophyll a and starch as the energy storage material, cellulosic cell wall and live in fresh water and marine habitats?
(a) **Chlorophyta** (b) Chrysophyta
(c) Phaeophyta (d) Rhodophyta
4. Laminarian is an energy storage material characteristic of
(a) Chlorophyta (b) Chrysophyta
(c) **Phaeophyta** (d) Rhodophyta
5. The study of algae is called
(a) Mycology (b) **Phycology** (c) Pteridology (d) Bryology
6. According to Fritsch algae are classified into
(a) **11 classes** (b) 13 classes (c) 8 classes (d) 16 classes
7. The dominant pigment found in the members of cyanophyceae
(a) **phycocyanin** (b) chlorophyll (c) carotenoid (d) fucoxanthin
8. The reserve food materials in brown algae
(a) **mannitol and laminarin** (b) starch and oil
(c) glucose and fat (d) oil and fat
9. The thallus of *Caulerpa* is
(a) multicellular (b) **coenocytic** (c) saprophytic (d) parasitic
10. *Caulerpa* reproduces by
(a) **vegetative and sexual** (b) vegetative and asexual
(c) sexual and asexual (d) fragmentation
11. Which of the following is green algae

- (a) *Caulerpa* (b) *Gracilaria* (c) *Sargassum* (d) *Hypnea*
12. Transverse, longitudinal, cylindrical and interconnecting strands are running across the cavity of *Caulerpa* thallus
 (a) cisternae (b) **trabeculae** (c) xylem (d) vacuole
13. In *Caulerpa* the chloroplast is
 (a) cup-shaped (b) parietal (c) **discoid** (d) ribbon-shaped
14. The narrow distal part of carpogonium of *Gracilaria* is
 (a) trochophore (b) **trichogyne** (c) trichogene (d) trochogene
15. The male gamete of *Gracilaria*
 (a) antherozoid (b) **spermatia** (c) zoospore (d) pollen grains
16. The end cell of the gonimoblast filament develops into
 (a) tetrasporangium (b) zoosporangium (c) **carposporangium** (d) procarp
17. Triphasic life cycle is found in
 (a) *Sargassum* (b) *Volvox* (c) *Oscillatoria* (d) *Gracilaria*
18. Agar-Agar is used in
 (a) industry (b) medicine (c) laboratories (d) **all of these**
19. *Gracilaria* belongs to the class
 (a) **Rhodophyceae** (b) Cryptophyceae (c) Bacillariophyceae (d) Phaeophyceae
20. Seaweeds are used as
 (a) food (b) fodder (c) **food and fodder** (d) none of these
21. The botanical name of dulse is
 (a) ***Rhodymenia palmata*** (b) *Sargassum*
 (c) *Laminaria* (d) none of the above
22. One of the antibiotic obtained from an alga is
 (a) **Chlorellin** (b) Streptomycin (c) Terramycin (d) none of these
23. Following seaweed is best exploited for extraction of iodine
 (a) **Kelps** (b) Sea grasses
 (c) Diatoms (d) Dinoflagellates
24. Alginates are
 (a) proteins (b) **carbohydrates** (c) fats (d) lipids
25. Plants which are not differentiated into roots, stem and leaves are grouped under
 (a) Gymnosperms (b) Angiosperms (c) **Thallophytes** (d) Pteridophytes

UNIT II

1. Study of fungi is
(a) Phycology (b) **Mycology** (c) Bryology (d) Limnology
2. The dolipore parenthesome is the hallmark of which among the following
(a) **Basidiomycetes** (b) Ascomycetes
(c) Deuteromycetes (d) Zygomycetes
3. If the thallus of an organism e.g., a fungus is entirely converted into one or more reproductive structure, it is called as
(a) Eucarpic (b) **Holocarpic** (c) Holozoic (d) Homothallic
4. Fungi can be distinguished from algae in which among the following characteristics?
(a) Cell wall is cellulosic
(b) Nucleus is present
(c) Mitochondria are absent
(d) **Cell wall is chitinous and chlorophyll absent**
5. Fungi usually producing eight spores in a sac-like structure belong to
(a) Phycomycetes (b) **Ascomycetes**
(c) Basidiomycetes (d) Deuteromycetes
6. In some parasitic fungi a globular or hook-like structure called _____ is formed at the point of contact with the host?
(a) Haustoria (b) **appressorium** (c) Holdfast (d) Hook
7. In which of the following classes *Agaricus* belongs to?
(a) **Basidiomycetes** (b) Ascomycetes
(c) Deuteromycetes (d) Myxomycetes
8. Identify the plant having mycorrhizal association?
(a) ***Pinus*** (b) *Caulerpa* (c) *Gracilaria* (d) *Marsilea*
9. Facultative saprophyte is
(a) **A parasite which can live as a saprophyte**
(b) Always a parasite
(c) Always a saprophyte
(d) May acquire parasitic mode of life
10. What is the name of the special hyphal tips through which parasitic fungi absorb nutrients directly from the cytoplasm of the living host?
(a) **Haustoria** (b) Mildew
(c) Constricting ring (d) All of the above

11. What does 'Perfect stage' of a fungus indicate?
 - (a) indicates that it can reproduce asexually
 - (b) indicates that it is perfectly healthy
 - (c) **indicates that it is able to form perfect sexual spores**
 - (d) All of the above
12. Death angel/death cap (*Amanita*) and Jack O Lantern mushroom are all examples of
 - (a) **Poisonous mushrooms**
 - (b) Edible mushrooms
 - (c) None of the above
 - (d) Both (a) and (b)
13. Fungi are _____ thallophytes
 - (a) non-plants
 - (b) **non-photosynthetic**
 - (c) non-motile
 - (d) autotrophs
14. Fungi do release _____ to break down of organic material or their host.
 - (a) chemicals
 - (b) **digestive enzymes**
 - (c) glycogen
 - (d) rhizomes
15. Body of fungi is known _____
 - (a) **thallus**
 - (b) chitin
 - (c) stem
 - (d) leaves
16. Which of the following chemical is used to kill fungi?
 - (a) Pesticide
 - (b) **Fungicide**
 - (c) Insecticide
 - (d) Algaecide
17. _____ are the root like structure of hyphae that anchor the fungus
 - (a) **rhizoids**
 - (b) stolons
 - (c) septa
 - (d) thallus
18. Coenocytic fungi are _____
 - (a) with septa
 - (b) one septa
 - (c) two septa
 - (d) **without septa**
19. Which property of fungi separates them from plants?
 - (a) have chlorophyll
 - (b) have stem
 - (c) **lack of chlorophyll**
 - (d) have petals
20. The organism on which the fungus feeds is called the _____
 - (a) **host**
 - (b) parasite
 - (c) saprophyte
 - (d) decomposer
21. The presence of the parasitic fungi may cause an abnormal condition to the host called _____
 - (a) endoparasite
 - (b) ectoparasite
 - (c) **disease**
 - (d) suspect
22. If the thallus of a parasitic fungus grow on the external surface of the host is called _____
 - (a) endoparasite
 - (b) **ectoparasite**
 - (c) host
 - (d) suspect
23. _____ cause wart diseases of field, garden crops and forest trees
 - (a) **destructive parasites**
 - (b) balanced parasites
 - (c) symbiosis
 - (d) saprophytes

24. The term 'fungus' was coined by
 (a) **Gaspard Bauhin** (b) De Bary (c) E.J. Butler (d) Sadasivan
25. Who among the following is given the honour of "Father of Modern Mycology"
 (a) Stanley (b) Bawden (c) **De Bary** (d) Micheli

UNIT III

1. Which among the following is also known as bog moss?
 (a) *Riccia* (b) ***Sphagnum*** (c) *Marchantia* (d) *Polytrichum*
2. The thalloid plant body is found in
 (a) ***Marchantia*** (b) *Sphagnum* (c) *Funaria* (d) *Salvinia*
3. In some of the liverworts, spore dispersal is aided by
 (a) **elaters** (b) peristome teeth (c) indusium (d) calyptra
4. Peat moss is used for transporting plants to distant places because
 (a) **it is hygroscopic** (b) it reduces transpiration
 (c) it is easily available (d) it serves as a disinfectant
5. Find the true statement about bryophytes
 (a) **they have chloroplasts** (b) they have archegonia
 (c) they are thalloid (d) all of the above
6. The first land inhabitant plants are _____
 (a) algae (b) fungi (c) **bryophytes** (d) Pteridophytes
7. Select the incorrect statement on bryophytes
 (a) Vascular tissue lacking
 (b) Independent sporophyte absent
 (c) **Gametophyte reduced and dependent**
 (d) Vegetatively reproduces by gemmae
8. Which of the following is the amphibian of the plant kingdom?
 (a) Pteridophytes (b) **Bryophytes** (c) Fungi (d) Gymnosperms
10. Which of the following bryophyte is water inhabitant?
 (a) ***Riccia fluitans*** (b) *Marchantia polymorpha*
 (c) *Aongstroemia julacea* (d) *Dendroceros*
11. Select the epiphyllous bryophyte
 (a) *Buxbaumia aphylla* (b) ***Radula protensa***
 (c) *Aongstroemia julacea* (d) *Mnium horum*

12. Which of the following bryophyte grows on rotten wood and grows more or less as saprophytes?
 (i) *Buxbaumia aphylla* (ii) *Radula protensa*
 (iii) *Aongstroemia julacea* (iv) *Mnium horum*
 (a) i & ii (b) i & iv (c) ii & iii (d) **iii & iv**
13. In bryophytes _____ absorb nutrients from moist soil
 (a) **rhizoids** (b) roots (c) calyptra (d) capsule
14. In bryophytes the spores are _____
 (a) **homosporus** (b) heterosporus (c) diploid (d) none
15. The spore of bryophytes germinates in to a filamentous or green
 (a) rhizoids (b) roots (c) calyptra (d) **protonema**
16. Venter is the part of
 (a) Sporogonium (b) Sporangium (c) Antheridium (d) **Archegonium**
17. Archesporium in bryophyte is
 (a) **A diploid tissue responsible for the formation of sporogenous tissue**
 (b) A part of archegonia
 (c) A haploid tissue responsible for the formation of gametophytic cells
 (d) None of the above
18. In which of the following groups would you place a plant which produces spores but lacks seeds and vascular tissue
 (a) Fungi (b) **Bryophytes** (c) Pteridophytes (d) Gymnosperms
19. Gemmae are vegetative reproductive structures found in
 (a) Angiosperms (b) **Bryophytes** (c) Algae (d) Gymnosperms
20. Which of the following is advanced bryophyte
 (a) *Riccia* (b) *Marchantia* (c) ***Polytrichum*** (d) *Funaria*
21. _____ is one of the highly developed moss
 (a) *Riccia* (b) *Marchantia* (c) ***Polytrichum*** (d) *Funaria*
22. Rhizome of *Polytrichum* shows the presence of scattered groups of empty, elongated cells called _____
 (a) **hydroids** (b) leptoids (c) sterome (d) amylome
23. *Polytrichum* is known as _____
 (a) **hair moss** (b) lantern moss (c) bog moss (d) liverworts
24. In *Polytrichum* the top of the capsule bears _____ which appears as a lid
 (a) annulus (b) diaphragm (c) peristome (d) **operculum**

25. The fertile portion of capsule in *Polytrichum* is _____
(a) operculum (b) **theca** (c) apophysis (d) peristome

UNIT IV

1. Identify the pteridophyte
(a) *Caulerpa* (b) *Gracilaria* (c) ***Marsilea*** (d) *Pinus*
2. Heterospory means
(a) **presence of micro and megaspores** (b) presence of microspores
(c) presence of megaspores (d) none of the above
3. Microspores are produced in the
(a) **microsporangium** (b) megasporangium
(c) megagametophyte (d) none of the above
4. Megasporangia are produced in the
(a) **megasporophyll** (b) microsporophyll
(c) sporophyll (d) none of the above
5. Which of the following plants comes under class leptosporangiopsida according to Smith?
(a) *Lycopodium* and *Marsilea* (b) *Selaginella* and *Marsilea*
(c) *Lycopodium* and *Selaginella* (d) ***Dicranopteris* and *Marsilea***
6. In which of the following group would you place a plant which produces spores, has vascular tissue and lacks seed
(a) Algae (b) Gymnosperm (c) **Pteridophyte** (d) Bryophyte
7. _____ pteridophytes are used as green manure
(a) *Azolla* (b) *Salvinia* (c) **both a and b** (d) *Pteris*
8. _____ is used in the treatment of liver diseases
(a) *Pteris cretica* (b) *Adiantum cristata*
(c) *Polypodium vulgare* (d) ***Selaginella botryoides***
9. _____ used in polishing wood surfaces
(a) *Azolla* (b) ***Equisetum*** (c) *Lycopodium* (d) *Marsilea*
10. This is aquatic vascular cryptogams having two types of spores. What type of plant is it?
(a) *Lycopodium* (b) *Dicranopteris* (c) ***Marsilea*** (d) *Gnetum*
11. What comes out of *Marsilea* sporocarp after dehiscence?
(a) only megaspore (b) only microspores
(c) **microspore along with gelatinous ring** (d) none of the above

12. *Marsilea* is a
 (a) soil fern (b) club fern (c) **water fern** (d) quill fern
13. Circinate ptyxis condition is seen in
 (a) *Lycopodium* (b) ***Marsilea*** (c) *Dicranopteris* (d) *Selaginella*
14. Vegetative reproduction in *Marsilea* takes place by
 (a) **tubers** (b) gemma
 (c) resting buds (d) adventitious buds
15. Which of the following species of *Marsilea* grows on dry land?
 (a) *Marsilea minuta* (b) *Marsilea quadrifolia*
 (c) *Marsilea aegyptiaca* (d) ***Marsilea rajasthanensis***
16. Amphiphloic siphonostele is found in the rhizome of
 (a) *Lycopodium* (b) *Dicranopteris* (c) ***Marsilea*** (d) *Selaginella*
17. The middle cortex in *Marsilea* is
 (a) **aerenchymatous** (b) parenchymatous
 (c) chlorenchymatous (d) sclerenchymatous
18. Amphiphloic siphonostele has
 (a) phloem towards innerside of xylem
 (b) phloem surrounded by xylem
 (c) **xylem on both sides surrounded by phloem**
 (d) phloem outside the xylem
19. According to G.M. Smith's classification of pteridophytes, *Marsilea* is placed under which division
 (a) **Pterophyta** (b) Lepidophyta (c) Psilophyta (d) Calamophyta
20. *Salvinia molesta* is used for the production of
 (a) biogas (b) green manure (c) paper (d) All the above
21. *Nephrolepis hirsutula* is used as
 (a) biogas (b) **insecticidal** (c) paper (d) food
22. Corms of *Isoetes* are eaten by
 (a) lizard (b) **ducks** (c) monkey (d) lion
23. *Pteridium aquilinum* is used as feed for
 (a) lion (b) tiger (c) **pigs** (d) monkey
24. *Azolla pinnata* is used as _____
 (a) **cattle feed** (b) anthelmintic (c) paper making (d) hair tonic

25. The rhizome of *Helminthostachys zeylanica* is used to cure _____
(a) dysentery (b) tuberculosis (c) fever (d) **All the above**

UNIT V

1. Name the major xylem element found in gymnosperms
(a) **Tracheids** (b) Vessels (c) Fibres (d) Sclereids
2. Pick out the vessel containing gymnosperm?
(a) *Pinus* (b) *Cycas* (c) *Taxus* (d) ***Gnetum***
3. In gymnosperms pollination is exclusively by
(a) Animals (b) **Wind** (c) Water (d) Insects
4. Megasporophyll is the term used in gymnosperm to denote
(a) carpels (b) stamens (c) leaves (d) **female cone**
5. The female cone is also known as
(a) **Ovulate strobilus** (b) Nucellus (c) Fruit (d) Micropyle
6. Which of the following is smallest gymnosperm
(a) ***Zamia pygma*** (b) *Cycas circinalis*
(c) *Pinus longifolia* (d) *Pinus excels*
7. Phloem of gymnosperm differ from angiosperm in
(a) having parenchyma (b) **having no companion cells**
(c) having no sieve tubes (d) having no sclerenchyma
8. In which of the following feature angiosperm resemble gymnosperm
(a) presence of ovules (b) **presence of tracheids**
(c) nature of endosperm (d) mode of fertilization
9. Egg is present in
(a) **Venter** (b) Neck (c) Antheridium (d) None
10. Endosperm in gymnosperm is
(a) **haploid** (b) diploid (c) triploid (d) tetraploid
11. *Pinus* commonly occurs
(a) in planes (b) **on hills** (c) near sea shores (d) in water
12. “Chilgozoa” edible seeds are obtained from
(a) *Pinus insularis* (b) *Pinus merkussii*
(c) ***Pinus gerardiana*** (d) *P. excelsa*
13. Mycorrhizal root of a *Pinus* possess
(a) algae (b) **fungi** (c) bacteria (d) virus

14. Balloon like expansion of pollen wall of *Pinus* is called
 (a) **wing** (b) elator (c) air bag (d) sheath
15. In *Pinus* the scale leaves are called as
 (a) foliage leaves (b) sporophylls (c) **cataphylls** (d) needles
16. The persistent nucellus of gymnosperm is known as
 (a) **perisperm** (b) endosperm (c) embryo (d) wood
17. In *Pinus* root the xylem is
 (a) X shaped (b) **Y shaped** (c) S shaped (d) Z shaped
18. The ovule of *Pinus* is naked due to
 (a) absence of integument (b) absence of nucellus
 (c) absence of micropyle (d) **absence of ovary**
19. *Pinus* is the anemophilous plant with respect to pollination. It is effected by _____
 (a) animals (b) **wind** (c) water (d) viruses
20. From the male cone of *Pinus* the pollen grains are liberated at
 (a) 2 celled stage (b) **4 celled stage**
 (c) 8 celled stage (d) 16 celled stage
21. Pollen grains of *Pinus* are released in large numbers, forming small cloud, often called
 (a) **shower of sulphur** (b) pollination drop
 (c) mucilaginous fluid (d) none of the above
22. Transfusion tissue is the characteristic feature of
 (a) ***Pinus* needle** (b) *Pinus* stem (c) *Cycas* leaf (d) *Cycas* root
23. Male cone of *Pinus* is also known as
 (a) pistillate strobilus (b) **staminate strobilus**
 (c) scale leaves (d) ovulate strobilus
24. The microspores develop into
 (a) **male gametophytes** (b) female gametophytes
 (c) egg (d) ovule
25. In gymnosperm _____ is the first cell of sporophyte generation
 (a) microspore (b) megaspore (c) ovule (d) **oospore**

Section B

Unit I

1. Write the systematic position of *Caulerpa* according to Fritsch
2. Differentiate between isogamy and anisogamy

3. Write down any five distinctive characteristics of algae
4. Draw and label the parts of female conceptacle.
5. What is agar- agar?
6. List out the uses of agar – agar
7. Name the different classes of algae based on Fritsch's classification.
8. Write the pigment and reserve food of class cyanophyceae.
9. List out the algae used as food
10. What is phycocolloid?

UNIT II

1. Define mycorrhiza?
2. Differentiate between facultative and obligate parasites. Give one example each.
3. Distinguish sclerotia from rhizomorph?
4. Describe facultative parasite? Give one example.
5. Distinguish between appressorium and infection thread.
6. Discuss conidiospores?
7. Explain coenocytic mycelium
8. Describe stroma
9. Define haustoria
10. Explain basidiocarp

UNIT III

1. Explain why bryophytes are called as 'the amphibians of plant kingdom'? 2. Explain the features of *Polytrichum* rhizome?
3. Distinguish between anthocerotopsida and bryopsida?
4. List why Anthocerotopsida named as hornworts
5. Draw capsule of *Polytrichum*
6. Define homosporous
7. Describe rhizoids
8. Define protonema
9. Explain hydroids in rhizome of *Polytrichum*

10. Discuss on perigonal leaves in *Polytrichum* reproductive structures

Unit IV

1. Explain ligule
2. Discuss the general characters of pteridophytes
3. Differentiate between homosporous and heterosporous
4. Explain circinate vernation.
5. Discuss amphiphloic siphonostelic
6. List out the uses of Pteridophytes
7. Draw and label the parts of *Marsilea* rhizome
8. Write the systematic position of *Marsilea* according to Smith
9. Draw and label the parts of *Marsilea* sporocarp
10. Draw and label the parts of *Marsilea* petiole

UNIT V

1. Explain dimorphic leaves.
2. Explain monoecious condition.
3. Differentiate phellum, phellogen and periderm in gymnosperms.
4. List out the different parts of *Pinus* archegonium?
5. What is coralloid root?
6. Differentiate between monoxyle and pycnoxylic wood.
7. State the purpose of albuminous tissue in *Pinus* needle.
8. List out the various conduction elements in *Pinus*.
9. Discuss on dimorphic branches in *Pinus*.
10. Draw and explain the internal morphology of *Pinus* root.

Section C

Unit I

1. Bring out the characteristic feature of algae.
2. Draw and explain the internal structure of *Caulerpa* rhizome.
3. Give an account of vegetative reproduction in *Caulerpa*
4. Outline diplontic life cycle with reference to *Caulerpa*.
5. Write briefly the thallus structure of *Caulerpa*

6. Explain the sexual reproduction in *Caulerpa*
7. Describe the internal structure of *Gracilaria* thallus
8. Write notes on *Gracilaria* cystocarp.
9. Write the pigment and reserve food of class Chlorophyceae and Rhodophyceae

UNIT II

1. Explain the various types of mycelial modifications in fungi?
2. Outline the different modes of nutrition in fungi?
3. Discuss on the structure of *Agaricus* basidiocarp
4. Explain the general characters of fungi
5. Discuss the role of fungi in brewing and baking industry
6. Write on the sexual reproduction of *Agaricus*.
7. Explain the types of mycelium in *Agaricus*.
8. Explain dolipore septum and parenthesome
9. Describe the role of fungi in food industry
10. Explain the fructification of *Agaricus*

UNIT III

1. Discuss the general characteristics of bryophytes
2. Explain the sexual reproduction in bryophytes with suitable diagrams.
3. Discuss the classification of bryophytes by Rothmaler (1951).
4. Discuss on the various economic importances of bryophytes
5. Describe the external morphology of *Polytrichum*
6. Explain the anatomy of *Polytrichum* rhizome.
7. Draw and explain the anatomy of aerial stem of *Polytrichum*
8. Discuss the leaf anatomy of *Polytrichum*
9. Outline the structure of antheridium in *Polytrichum*
10. Explain the structure of archegonium in *Polytrichum*

Unit IV

1. Outline the classification of pteridophytes of Smith
2. Define heterospory. Explain with an example.

3. Write notes on the medicinally important pteridophytes.
4. Describe *Marsilea* sporocarp with suitable examples.
5. Explain vegetative reproduction in *Marsilea*.
6. Describe the internal structure of *Marsilea* rhizome
7. Write notes on *Marsilea* petiole.
8. Narrate the structure of *Marsilea* leaf.

UNIT V

1. Discuss the general characters of gymnosperms
2. Give an account on the economic importance of gymnosperms.
3. Discuss the external morphology of *Pinus*
4. Discuss the internal morphology of *Pinus* young and old root
5. Explain the structure of young *Pinus* stem
6. Describe the internal structure of secondary growth in *Pinus* stem.
7. Draw and explain the structure of *Pinus* needle
8. Explain megasporogenesis in *Pinus*.
9. Describe microsporogenesis in *Pinus*.
10. Discuss on the structure of *Pinus* male cone
11. Describe the structure of *Pinus* female cone

Section D

Unit I

1. Write in detail the classification of algae by Fritsch.
2. Explain the life cycle of *Caulerpa* with suitable diagram
3. Write the internal structure of stipe and 'leaf'
4. Explain sexual reproduction in *Sargassum*.
5. Write the role of algae in agriculture, food and fodder.
6. With suitable diagrams explain the life cycle of *Sargassum*.
7. Write an essay on the economic importance of algae.

UNIT II

1. Discuss the general characteristics of fungi.
2. Explain the modes of reproduction in *Agaricus*.

3. Outline the life cycle of *Agaricus*.
4. Outline Alexopoulos and Mims (1979) system of classification of fungi.
5. Discuss on the economic importance of fungi
6. Explain on the fructification in *Agaricus*.

UNIT III

1. Outline the Rothmaler (1951) system of classification on bryophytes.
2. Discuss the general characters of bryophytes.
3. Detail the morphological and anatomical features of *Polytrichum* stem.
4. Examine the structure of *Polytrichum* sporophyte.
5. Discuss the lifecycle of bryophytes with reference to *Polytrichum*
6. Explain the economic importance of bryophytes

UNIT IV

1. Write on the salient features of the classification of Pteridophytes proposed by Smith.
2. Write an essay on the economic importance of Pteridophytes
3. Write notes on
 - (a) food value of Pteridophytes
 - (b) medicinal importance of Pteridophytes
4. Describe the life cycle of *Selaginella*
5. General characters of pteridophytes.

UNIT V

1. Write on the general features of gymnosperms
2. Discuss in detail the root and leaf anatomy of *Pinus*.
3. Outline the megasporogenesis and microsporogenesis in *Pinus*.
4. Discuss on the life cycle of *Pinus*.
5. Write an essay on economic importance of gymnosperms
6. Describe the anatomy of young and old stem in *Pinus*.

St. Mary's College (Autonomous), Thoothukudi
Department of Botany
NME I Plant Resource Utilization – 21UBON31

SECTION A

Choose the correct answer

UNIT I

1. Botanical name of rice is
(a) ***Oryza sativa*** (b) *Triticum aestivum* (c) *Zea mays* (d) *Triticum turgidum*
2. Rice belongs to the family
(a) Solanaceae (b) Fabaceae (c) **Poaceae** (d) Apiaceae
3. _____ endosperm is highly digestible
(a) cabbage (b) ginger (c) **rice** (d) brinjal
4. The inflorescence in rice is
(a) catkin (b) umbel (c) head (d) **panicle**
5. Rice grain is a one-seeded
(a) **caryopsis** (b) berry (c) hesperidium (d) drupe
6. In rice the lemma and palea together are known as
(a) anther (b) stamen (c) awn (d) **hull**
7. The presence of awn in rice is considered to be an advantage since
(a) **it is less subject to bird attacks** (b) it is less subject to effects of rain
(c) it is not affected by light (d) it is less affected by temperature
8. The color of the rice grain helps in
(a) **determining the quality and variety of rice** (b) determining the quality of plant height
(c) determining the height of plant (d) determining the land grown
9. _____ is a powdery mass consisting of aleurone layer
(a) **bran** (b) stamen (c) awn (d) hull
10. Which of the following is the most widely cultivated dwarf variety of rice in the world

- (a) IR-8 & IET-723
(c) IR-5, GR-28-25
- (b) **IR-8, IR-20, IR-22 & IR-36**
(d) IR-20, CR-42-38-173
11. Botanical name of wheat is
(a) ***Oryza sativa*** (b) *Triticum aestivum* (c) *Zea mays* (d) *Triticum turgidum*
12. Wheat belongs to the family
(a) Solanaceae (b) Fabaceae (c) **Poaceae** (d) Apiaceae
13. Which of the following is major wheat producing states in India
(a) **Punjab, Haryana, Uttar Pradesh, Rajasthan and Madhya Pradesh**
(b) Punjab, Haryana, Uttar Pradesh, Tamil Nadu and Kerala
(c) Tamil Nadu, Kerala, Punjab and Haryana
(d) Tamil Nadu, Kerala, Punjab and Karnataka
14. World staple food is
(a) pearl millet (b) maize (c) rice (d) **wheat**
15. Inflorescence in wheat is known as
(a) capitulum (b) panicle (c) **spike** (d) cyathium
16. The type of fruit in wheat is a single seeded
(a) drupe (b) berry (c) hesperidium (d) **caryopsis**
17. Central zigzag axis of wheat grain is known as
(a) **rachis** (b) awn (c) husk (d) glumes
18. Wheat protein is known as
(a) **glutenin** (b) amylase (c) lipase (d) pepsin
19. Wheat is a
(a) **tetraploid plant** (b) hexaploid plant (c) diploid plant (d) haploid plant
20. The bread wheat is
(a) *Triticum aestivum* (b) ***Triticum vulgare***
(c) *Triticum durum* (d) *Triticum spherococum*
21. The highest grown wheat species in India is
(a) ***Triticum aestivum*** (b) *Triticum vulgare*
(c) *Triticum durum* (d) *Triticum spherococum*
22. The most cultivated crop in India among cereals
(a) Rice (b) **Wheat** (c) Maize (d) Sorghum
23. Protein % in wheat

- (a) **10-12 %** (b) 40-60% (c) 90-100 % (d) 20-30%
24. Wheat is also known as
(a) **king of cereals** (b) minister of cereals (c) queen of cereal (d) poor man's cereal
25. Highest productivity of wheat is in _____ state of India
(a) West Bengal (b) **Punjab** (c) Maharashtra (d) Odisha
26. Botanical name of maize is
(a) *Oryza sativa* (b) *Triticum aestivum* (c) ***Zea mays*** (d) *Triticum turgidum*
27. Maize belongs to the family
(a) Solanaceae (b) Fabaceae (c) **Poaceae** (d) Apiaceae
28. Which of the following is major wheat producing states in India
(a) **Uttar Pradesh, Bihar, Punjab, Madhya Pradesh, Maharashtra, Rajasthan and Orissa**
(b) Tamil Nadu, Karnataka, Kerala and Andhra Pradesh
(c) Uttar Pradesh, Bihar, Punjab, Kerala and Andhra Pradesh
(d) Tamil Nadu, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Rajasthan and Orissa
29. The grain of maize is
(a) drupe (b) berry (c) hesperidium (d) **caryopsis**
30. Maize is also known as
(a) king of cereals (b) minister of cereals (c) **queen of cereals** (d) poor man's cereal
31. What is the name of maize protein
(a) glutenin (b) amylase (c) lipase (d) **zein**
32. Male inflorescence in maize is known as
(a) **tassel** (b) silk (c) catkin (d) spikelet
33. Female inflorescence in maize is known as
(a) tassel (b) **silk** (c) catkin (d) spikelet

UNIT II

1. Botanical name of soybean is
(a) *Vigna radiata* (b) *Phaseolus mungo* (c) *Zea mays* (d) ***Glycine max***
2. Soybean belongs to the family
(a) Solanaceae (b) **Fabaceae** (c) Poaceae (d) Apiaceae
3. Most important legume crop in the world is

- (a) bengal gram (b) black gram (c) **soybean** (d) green gram
4. The leaves in soybean are
(a) **trifoliate** (b) bifoliate (c) tetrafoliate (d) pentafoliate
5. The germination of seeds in soybean is inhibited by
(a) **excess moisture** (b) light (c) temperature (d) frost
6. Roots of ____ produce nodules to fix atmospheric nitrogen
(a) *Vigna radiata* and *Glycine max* (b) *Phaseolus mungo*
(c) *Cicer arietinum* (d) all the above
7. Fruit of soybean is known as
(a) **pod** (b) caryopsis (c) berry (d) drupe
8. Black colour of soybean seed is due to
(a) phycoerythrin (b) **anthocyanin** (c) tannin (d) alkaloids
9. Soybean is also known as
(a) wonder crop, yellow jewel (b) poor man's meat, boneless meat
(c) dairy plant (d) **all the above**
10. Which Indian state is known as soya state
(a) Tamil Nadu (b) Kerala (c) Andhra Pradesh (d) **Madhya Pradesh**
11. Which vitamin is destroyed when soybean pulses are heated?
(a) vitamin A (b) **vitamin B** (c) vitamin C (d) vitamin D
12. Botanical name of black gram is
(i) *Vigna radiata* (ii) *Phaseolus mungo* (iii) ***Vigna mungo*** (iv) *Glycine max*
(a) (i) & (ii) (b) (i) & (iii) (c) **(ii) & (iii)** (d) (iii) & (iv)
13. Fruit of black gram is
(a) **pod** (b) caryopsis (c) berry (d) drupe
14. *Vigna mungo* belongs to the family
(a) Zingiberaceae (b) **Fabaceae** (c) Poaceae (d) Apiaceae
15. Why black gram is called 'wooly pyool' because
(a) **stem and branches possess fairly long brown hairs** (b) fruit possess fairly long brown hairs
(c) flower possess fairly long brown hairs (d) root possess fairly long brown hairs
16. Fruit of green gram is
(a) **pod** (b) caryopsis (c) berry (d) drupe
17. Botanical name of green gram is

(a) ***Vigna radiata*** (b) *Phaseolus mungo* (c) *Zea mays* (d) *Glycine max*

18. *Vigna radiata* belongs to the family

(a) Lauraceae (b) **Fabaceae** (c) Poaceae (d) Myrtaceae

19. Botanical name of bengal gram is

(a) *Vigna radiata* (b) *Phaseolus mungo* (c) ***Cicer arietinum*** (d) *Glycine max*

20. *Cicer arietinum* belongs to the family

(a) Lauraceae (b) **Fabaceae** (c) Poaceae (d) Myrtaceae

21. The latest name of *Vigna radiata* is

(a) ***Phaseolus aureus*** (b) *Phaseolus mungo* (c) *Zea mays* (d) *Glycine max*

22. Botanical name of potato is

(a) ***Solanum tuberosum*** (b) *Triticum aestivum* (c) *Zea mays* (d) *Triticum turgidum*

23. *Solanum tuberosum* belongs to the family

(a) **Solanaceae** (b) Fabaceae (c) Leguminosae (d) Apiaceae

24. The swollen tips in the underground branches of potato is known as

(a) corm (b) rhizome (c) **tuber** (d) bulb

25. The tubers bear a number of _____ borne in the axils of aborted leaves

(a) periderm (b) eyes (c) corm (d) bulb

26. Potato is also known as

(a) **poor man's friend** (b) rich man's friend (c) my friend (d) your friend

27. Green color of potato is due to

(a) tannins (b) **glycoalkaloids** (c) terpenes (d) proteins

28. Indian potato research is located in

(a) Bankok (b) Odisha (c) West Bengal (d) **Shimla**

29. " True potato seed " was developed by

(a) **Dr. Ramanujan** (b) Dr. Reddy (c) Swaminthan (d) Phulwa

30. In potato tubers represent

(a) aerial stems (b) **underground stem**
(c) underground rhizome (d) underground root

31. Potato propagated by

(a) seeds (b) tubers (c) stems (d) roots

32. Botanical name of garlic is

- (a) *Allium sativum*
(c) *Zea mays*
33. *Allium sativum* belongs to the family
(a) **Liliaceae** (b) Zingiberaceae
34. Edible part in garlic is
(a) rhizome (b) corm
35. Pungency of garlic is due to
(a) vincristin (b) **diallyl sulphide**
36. Name the antibacterial substance present in garlic
(a) oleoresin (b) piperin
37. Name the water soluble aminoacid present in garlic
(a) oleoresin (b) **allin**
38. Botanical name of cabbage is
(a) *Oryza sativa*
(c) *Zea mays*
39. Cabbage belongs to the family
(a) Myrtaceae (b) Fabaceae
40. Edible part of cabbage is known as
(a) **head** (b) pod
41. The flavor in cabbage is due to the presence of the glycoside
(a) oleoresin (b) piperin
42. Anticancer property of cabbage is due to the presence of
(a) oleoresin (b) **indole-3-carbinol**
43. Sauerkraut is used to cure
(a) **scurvy** (b) night blindness
44. Botanical name of cauliflower is
(a) *Solanum nigrum*
(c) *Solanum tuberosum*
45. Cauliflower belongs to the family
(a) Myrtaceae (b) Fabaceae
46. The edible part of cauliflower is known as
(a) head (b) pod
- (b) *Brassica oleracea* var. *capitata*
(d) *Brassica oleracea* var. *botrytis*
- (c) Leguminosae (d) Brassicaceae
- (c) **cloves** (d) tuber
- (c) vinblastine (d) none
- (c) gluten (d) **allicin**
- (c) gluten (d) allicin
- (b) *Brassica oleracea* var. *capitata*
(d) *Triticum turgidum*
- (c) **Brassicaceae** (d) Apiaceae
- (c) bulb (d) capsule
- (c) **sinigrin** (d) allicin
- (c) gluten (d) allicin
- (c) sinigrin (d) allicin
- (b) *Brassica oleracea* var. *botrytis*
(d) *Solanum lycopersicum*
- (c) **Brassicaceae** (d) Lauraceae
- (c) curd (d) capsule

47. The characteristic flavor of cauliflower is due to the presence of
 (a) **di methyl tri sulphate** (b) tri methyl dii sulphate (c) indole-3-carbinol (d) allicin
48. Cauliflower was introduced in India during 1822 by
 (a) Dr. Swaminathan (b) **Dr. Jenson from London** (c) Dr. Nair (d) Dr. Rai
49. Botanical name of tomato is
 (a) *Oryza sativa* (b) *Brassica oleracea var. botrytis*
 (c) *Zea mays* (d) ***Solanum lycopersicum***
50. Red colour of tomato is due to the presence of
 (a) **lycopene** (b) carotenoid (c) prolycopene (d) Tomatine and saponine
51. Yellow colour of tomato is due to
 (a) lycopene (b) **carotenoid** (c) prolycopene (d) Tomatine and saponine
52. Tangeine colour of tomato is due to
 (a) lycopene (b) carotenoid (c) **prolycopene** (d) Tomatine and saponine
53. Toxic element found in tomatoes
 (a) lycopene (b) carotenoid (c) prolycopene (d) **Tomatine and saponine**
54. Tomato is universally termed as
 (a) **protective food** (b) allergic food (c) poor man's food (d) safe food
55. Tomato belongs to the family
 (a) **Solanaceae** (b) Fabaceae (c) Poaceae (d) Apiaceae
56. Botanical name of brinjal is
 (a) *Solanum tuberosum* (b) *Brassica oleracea var. botrytis*
 (c) *Solanum torvum* (d) ***Solanum melongena***
57. Brinjal belongs to the family
 (a) **Solanaceae** (b) Fabaceae (c) Poaceae (d) Apiaceae
58. Brinjal is good source of
 (a) vitamin A (b) **vitamin B** (c) vitamin C (d) vitamin D
59. Select the pigment present in brinjal
 (a) phycoerythrin (b) phycocyanin (c) **anthocyanin** (d) allicin
60. Toxin present in brinjal is
 (a) **solasodine** (b) allicin (c) oleoresin (d) gluten

UNIT III

1. Botanical name of banana is
 (a) *Musa paradisiaca subsp. sapientum* (b) *Carica papaya*
 (c) *Zea mays* (d) *Capsicum annum*
2. Banana belongs to the family
 (a) Leguminosae (b) Caricaceae (c) **Musaceae** (d) Solanaceae
3. Banana fruit is
 (a) **seedless berry** (b) capsule (c) siliqua (d) pod
4. The type of inflorescence seen in banana is
 (a) catkin (b) **spadix** (c) cyathium (d) head
5. The stem above the ground in banana is known as
 (a) **pseudostem** (b) rhizome (c) sucker (d) stolon
6. Banana is propagated by means of
 (i) pseudostem (ii) rhizome (iii) sucker (iv) stolon
 (a) i & ii (b) **ii & iii** (c) iii & iv (iv) iv & v
7. Banana is a rich source of dietary _____ used in nerve impulses and good source of energy
 (a) **potassium** (b) zinc (c) magnesium (d) iron
8. Leading producer of banana state in India
 (a) Karnataka (b) Punjab (c) Haryana (d) **Tamil Nadu**
9. Botanical name of papaya is
 (a) *Musa paradisiaca subsp. sapientum* (b) *Carica papaya*
 (c) *Zea mays* (d) *Capsicum annum*
10. *Carica papaya* belongs to the family
 (a) Leguminosae (b) **Caricaceae** (c) Musaceae (d) Solanaceae
11. Papaya fruit is
 (a) **berry** (b) capsule (c) siliqua (d) pod
12. Commercially papaya is propagated by means of
 (a) pseudostem (b) rhizome (c) sucker (d) **seeds**
13. The latex of papaya contains a digestive pepsin-like enzyme
 (a) **papain** (b) allicin (c) pepsin (d) renin
14. Yellow colour of papaya is due to
 (a) **caricaxanthin** (b) carotenoid (c) prolycopene (d) Tomatine and saponine

UNIT IV

1. *Ferula asafetida* is the botanical name of
(a) ginger (b) capsicum (c) coriander (d) **asafetida**
2. Asafetida belongs to the family
(a) **Umbelliferae** (b) Caricaceae (c) Musaceae (d) Solanaceae
3. The cortical region in stem and root of asafetida possess many
(a) oil glands (b) **schizogenous ducts** (c) tannins (d) alkaloids
4. *Zingiber officinale* is the botanical name of
(a) **ginger** (b) capsicum (c) coriander (d) asafetida
5. Ginger belongs to the family
(a) Umbelliferae (b) Caricaceae (c) Musaceae (d) **Zingiberaceae**
6. The pungent taste of ginger is due to
(a) **gingerin** (b) tannin (c) allicin (d) glutein
7. Ginger is vegetatively propagated by
(a) pseudostem (b) **rhizome** (c) sucker (d) stolon
8. The economically important part of *Zingiber officinale* is
(a) flower (b) **rhizome** (c) fruit (d) stolon
9. *Cinnamomum zeylanicum* is the botanical name of
(a) **cinnamon** (b) capsicum (c) coriander (d) asafetida
10. Cinnamon belongs to the family
(a) **Lauraceae** (b) Caricaceae (c) Musaceae (d) Zingiberaceae
11. Which part of the plant yields cinnamon
(a) flower (b) **bark** (c) fruit (d) stolon
12. During the process of drying the barks of cinnamon strips gets rolled to form
(a) flower (b) **quills** (c) fruit (d) stolon
13. *Syzygium aromaticum* is the botanical name of
(a) **cinnamon** (b) capsicum (c) coriander (d) asafetida
14. Cinnamon belongs to the family
(a) Lauraceae (b) Caricaceae (c) **Myrtaceae** (d) Zingiberaceae
15. Which part of the plant yields cloves

- (a) **flower buds** (b) bark (c) fruit (d) stolon
16. Clove oil prepared by distillation of cinnamon flower bud is rich in
(a) gingerin (b) tannin (c) allicin (d) **eugenol**
17. Capsicum belongs to the family
(a) Lauraceae (b) **Solanaceae** (c) Myrtaceae (d) Zingiberaceae
18. Which of the following is annual species of capsicum with short growing season
(a) ***Capsicum annum*** (b) *Capsicum frutescens*
(c) *Zea mays* (d) *Vitis vinifera*
19. The fruit type in capsicum is
(a) capsule (b) **berry** (c) siliqua (d) pod
20. The fruits of *Capsicum* are pungent due to the presence of volatile oil called
(a) gingerin (b) **capsaicin** (c) allicin (d) eugenol
21. Fruits of capsicum is rich in
(a) vitamin A (b) vitamin D (c) **vitamin C** (d) vitamin B
22. *Coriandrum sativum* is the botanical name of
(a) cinnamon (b) capsicum (c) **coriander** (d) asafetida
23. Coriander belongs to the family
(a) Lauraceae (b) **Umbelliferae** (c) Myrtaceae (d) Zingiberaceae
24. Which part of the plant yields coriander
(a) flower buds (b) bark (c) **fruit** (d) stolon
25. Pepper belongs to the family
(a) Lauraceae (b) **Piperaceae** (c) Myrtaceae (d) Zingiberaceae
26. Which of the following is botanical name of pepper
(a) *Capsicum annum* (b) ***Piper nigrum***
(c) *Zea mays* (d) *Capsicum frutescens*
27. The fruit type in pepper is
(a) capsule (b) berry (c) **drupe** (d) pod
28. The fruits of capsicum are pungent due to the presence of volatile oil called
(a) gingerin (b) capsaicin (c) **piperin** (d) eugenol
29. In pepper the flowers are borne on ____ inflorescence
(a) **catkin** (b) spadix (c) cyathium (d) head

UNIT V

1. Grapes is
 - (a) *Capsicum annum*
 - (b) *Capsicum frutescens*
 - (c) *Zea mays*
 - (d) ***Vitis vinifera***
2. The main wine producing country is
 - (a) **France**
 - (b) USA
 - (c) Switzerland
 - (d) India
3. Botanical name of tea is
 - (a) *Capsicum annum*
 - (b) ***Camellia sinensis***
 - (c) *Zea mays*
 - (d) *Vitis vinifera*
4. *Vitis vinifera* belongs to the family
 - (a) Lauraceae
 - (b) **Vitaceae**
 - (c) Myrtaceae
 - (d) Zingiberaceae
5. Tea belongs to the family
 - (a) Lauraceae
 - (b) Piperaceae
 - (c) Myrtaceae
 - (d) **Theaceae**
6. Compound responsible for colour of tea
 - (a) gingerin
 - (b) **theaflavins & thearubigins**
 - (c) piperin
 - (d) eugenol
7. Tea is
 - (a) **green gold**
 - (b) black gold
 - (c) white gold
 - (d) none
8. The alkaloid present in tea is
 - (a) gingerin
 - (b) **theine**
 - (c) piperin
 - (d) eugenol
9. Lemongrass oil is obtained from
 - (a) *Capsicum annum*
 - (b) ***Cymbopogon flexuosus***
 - (c) *Zea mays*
 - (d) *Vitis vinifera*
10. Lemon grass belongs to the family
 - (a) Lauraceae
 - (b) Piperaceae
 - (c) Myrtaceae
 - (d) **Poaceae**
11. Lemon grass oil contains the aldehyde
 - (a) gingerin
 - (b) **citral**
 - (c) piperin
 - (d) eugenol

SECTION B

UNIT I

1. Name the father of green revolution in India
2. Discuss the nutritional value of rice
3. Write the botanical description of wheat
4. Describe caryopsis
5. Name the most widely cultivated semi-dwarf varieties of rice in the world today.
6. Write binomial name of wheat, rice and maize
7. Write any two agricultural research stations located in Tamil Nadu
8. List out the economic importance of maize
9. Define hull
10. Explain aleurone layer
11. Differentiate shank from cob
12. Define kharif crop
13. List out the economic importance of zein
14. Explain shooting of the ear in wheat?
15. Define pod?

UNIT II

1. Write the botanical name of black gram and green gram
2. Define legume
3. Explain sauerkraut
4. What is rabi crop?
5. Define winnowing
6. Define olericulture
7. What are vegetables?
8. Summarize the importance of vegetables in human nutrition
9. What are tubers?
10. What are siliques?
11. What are bulbs?
12. List out the chief constituents that impart odour to garlic
13. What are biennials?
14. What is curd?

15. What is berry?
16. Name any two alkaloids present in tomato

UNIT III

1. What is rhizome?
2. Name the edible varieties of banana cultivated in India
3. What is the botanical name of banana and papaya?
4. List out the economic value of papaya
5. List out the economic importance of banana
6. Define pseudostem

UNIT IV

1. Discuss the botanical description of *Zingiber officinale*
2. List out the economic value of asafetida
3. What are quills?
4. Differentiate black pepper and white pepper
5. What is drupe?
6. Name the alkaloids present in pepper and their importance
7. Write the botanical name of cardamom and coriander

UNIT V

1. List out the distribution of tea in India
2. What is pruning?
3. Define weeding
4. What is plucking?
5. What is nursery?
6. What are the different types of wine available based on the percentage of alcohol, colour and quality of grapes
7. Name the chief source of wine and the best varieties of wine prepared in France.

SECTION C

UNIT I

1. Discuss the botanical description of rice.
2. Present the distribution and cultivation of wheat
3. Explain the plant body of wheat.
4. Illustrate the botanical description of maize plant?
5. How will you cultivate maize?
6. Write the economic importance of rice

UNIT II

1. What are the major soybean producing states in India? Explain the description of the plant.
2. Explain the cultivation, harvesting and economic value of black gram.
3. Discuss the cultivation, harvesting and nutritional value of green gram.
4. Present the description for modified stem vegetable.
5. Summarize the economic value of garlic.
6. Discuss the cultivation and economic importance of cabbage.
7. Present the economic and nutritional value of cauliflower.

UNIT III

1. Summarize the botanical description of banana.
2. Discuss the cultivation method of banana.
3. Explain how papaya is cultivated in large scale.
4. Illustrate the botanical description of papaya

UNIT IV

1. Explain how will you cultivate and harvest pepper?
2. Discuss on the cultivation and harvesting of cardamom.
3. Present the cultivation and harvesting of coriander and curry leaves?
4. Explain how will you cultivate Cloves? Add notes on economic and nutritional value?
5. Summarize the botanical description, distribution and cultivation of ginger

UNIT V

1. Explain the botanical description of *Camellia sinensis*.
2. Discuss the economic and nutritional value of grapes
3. Summarize the botanical description of *Cymbopogon citratus*
4. Explain the cultivation of cinnamon

Section D

UNIT I

1. Outline the cultivation, harvesting and economic importance of rice.
2. Critique on the cultivation, harvesting and economic value of maize.
3. Present the cultivation, harvesting and nutritional value of wheat?

UNIT II

1. Discuss the distribution, cultivation and harvesting of any two legumes?
2. Present the botanical description, cultivation and economic and nutritional value of any two vegetables.
3. Critique on the botanical description, cultivation and economic and nutritional value of brinjal

UNIT III

1. Outline the distribution, cultivation and harvesting of banana.
2. Critique on the distribution, cultivation and harvesting of papaya

3. Analyze the economic and nutritional value of papaya and banana.

UNIT IV

1. Analyze the botanical description, distribution and cultivation of capsicum
2. Critique on the botanical description, distribution and economic value of pepper
3. Outline the harvesting, cultivation, economic and nutritional value of cardamom
4. Present the botanical description, distribution and economic value of clove

UNIT V

1. Outline the cultivation and harvesting of *Camellia sinensis*
2. What are beverage crops? Detail their preparation from fruits.
3. Analyze the oil extraction technique from lemon grass

ST. MARY'S COLLEGE (Autonomous) – THOOTHUKUDI – 628 001
II B.Sc. Botany - Semester IV
Core IV - Taxonomy of Angiosperms and Economic Botany – Course Code: 21UBOC41

Section – A

Unit- I

1. Rhizome is
(a) underground stem (b) underground root (c) leaf (d) phyllode
2. Hesperidium fruit is seen in
(a) Myrtaceae (b) Annonaceae (c) Rutaceae (d) Brassicaceae
3. Plants with respiratory roots
(a) *Allium* (b) *Asparagus* (c) *Cuscuta* (d) *Avicennia*
4. Phyllode is a modified
(a) stem (b) root
(c) leaf (d) adventitious root
5. Phylloclade is a modified
(a) stem (b) root (c) leaf (d) none
6. Sagittate anthers are present in
(a) Poaceae (b) Rubiaceae (c) Rutaceae (d) Euphorbiaceae
7. Verticillaster inflorescence is seen in
(a) *Leucas* (b) *Ocimum* (c) *Annona* (d) *Brassica*
8. Epigynous flowers are having
(a) inferior ovary (b) Superior ovary
(c) half inferior ovary (d) none
9. Which one of the following is an insectivorous plant?
(a) *Nepenthes* (b) *Gloriosa* (c) *Pisum* (d) none
10. Bulb is a modified
(a) Underground stem (b) aerial stem (c) root (d) none
11. Prop roots are:
(a) tap roots (b) adventitious root
(c) secondary roots (d) all the above
12. Monocot can be distinguished from dicot by:
(a) aestivation (b) venation (c) both a and b (d) none
13. Axis of inflorescence is:
(a) pedicel (b) peduncle (c) petiole (d) petal
14. Arrangement of leaves on a stem or branch:

- (a) Venation (b) Aestivation (c) Inflorescence (d) Phyllotaxy
15. Ginger is:
 (a) Stem (b) Root (c) Leaf (d) Fruit
16. Number of female flower in a cyathium is:
 (a) 3 (b) 1 (c) 2 (d) 5
17. Caryopsis fruit is found in:
 (a) Pea (b) Wheat (c) Gram (d) Nuts
18. ————— are the non-essential parts of a flower
 (a) Androecium and gynoecium (b) Sepals and carpels
 (c) Sepals and petals (d) Sepals and gynoecium
19. Fruit of *Polyalthia longifolia*
 (a) Siliqua (b) Pepo
 (c) **Aggregate of berries** (d) Hesperidium
20. The type of inflorescence seen in Poaceae
 (a) Raceme (b) Cyme (c) **Spikelet** (d) Cyathium.

Unit- II

1. Which of the following symbols is used to represent the number of petals in a floral formula?
 (a) K
 (b) C
 (c) **A**
 (d) G
2. In a floral diagram, which feature is typically NOT represented?
 (a) Number of sepals
 (b) Arrangement of reproductive organs
 (c) **Size of the flower**
 (d) Type of symmetry
3. Which system of classification is based on natural relationships as proposed by Bentham and Hooker?
 (a) Phylogenetic
 (b) Artificial
 (c) **Natural**
 (d) Numerical
4. Engler and Prantl's system of classification is best described as:
 (a) A numerical system based on morphological traits
 (b) **A phylogenetic system based on evolutionary relationships**
 (c) An artificial system based on convenience
 (d) A natural system based on habitat

5. What is the primary purpose of binomial nomenclature?
 - (a) To provide common names for plants
 - (b) To give each species a unique scientific name**
 - (c) To categorize plants based on color
 - (d) To describe the habitat of a plant

6. Which of the following is a principle of the International Code of Botanical Nomenclature (ICBN)?
 - (a) Each plant must have a vernacular name
 - (b) The scientific name must be descriptive of the plant's habitat
 - (c) The name must be unique and universally accepted**
 - (d) Names can be changed freely by any botanist

7. In Bentham and Hooker's system of classification placing of Gymnosperms between dicotyledons and monocotyledons is a
 - (a) merit
 - (b) demerit**
 - (c) rule
 - (d) condition

8. The book which Linnaeus first proposed his classification is
 - (a) Theorie Elementaire
 - (b) Genea Plantarum
 - (c) Historia Plantarum
 - (d) Species Plantarum**

9. The classification of Linnaeus was mainly based upon
 - (a) Sepals
 - (b) Carpels
 - (c) Petals
 - (d) Stamens**

10. According to Bentham and Hooker a polypetalous plant with superior ovary and a nectary gland below the ovary is placed in the series.
 - (a) Calyciflorae
 - (b) Thalamiflorae
 - (c) Disciflorae**
 - (d) Heteromerae

11. Bentham and Hooker in their 'General Plantarum' proposed the classification of
 - (a) Tracheophytes
 - (b) Angiosperms
 - (c) Phanerogams**
 - (d) Plant Kingdom

12. Carolus Linnaeus proposed classification based on
 - (a) Nature system
 - (b) Phylogenetic system
 - (c) Modern system
 - (d) Artificial system**

13. The largest group of plant kingdom is
 - (a) non vascular cryptogams
 - (b) angiosperms**
 - (c) gymnosperms
 - (d) vascular cryptogams

14. Identify the Swedish naturalist known as father of modern botany.
 - (a) Carolus Linnaeus**
 - (b) Bentham and Hooker
 - (c) Gronovius
 - (d) George Clifford

UNIT III

1. Aggregate fruit is common in
 - (a) Annonaceae**
 - (b) Brassicaceae
 - (c) Rutaceae
 - (d) Lamiaceae

2. Guava belongs to which family?

- (a) **Myrtaceae** (b) Anacardiaceae (c) Rutaceae (d) Rubiaceae
3. Botanical name of curry leaves
(a) ***Murraya koenigii*** (b) *Murraya paniculata*
(c) *Citrus aurantifolia* (d) *Citrus sinensis*
4. Multicarpellary apocarpus pistil is characteristic of
(a) **Annonaceae** (b) Rutaceae
(c) Brassicaceae (d) Caesalpiniaceae
5. *Parkinsonia* is an example of
(a) **phyllode** (b) tendril climber (c) phylloclade (d) cladode
6. Fruit of *Polyalthia longifolia*
(a) siliqua (b) pepo
(c) aggregate of berries (d) hesperidium
7. Monocarpellary with marginal placenta is characteristic of
(a) **Caesalpiniaceae** (b) Annonaceae (c) Rutaceae (d) Myrtaceae
8. Obdiplostemonous arrangement of stamens is characteristic to the family
(a) Myrtaceae (b) **Rutaceae** (c) Annonaceae (d) Brassicaceae
9. Based on position of stamens in respect to petal flower of *Murraya* is described as
(a) tetradynamous (b) didynamous
(c) **diplostemonous** (d) none of the above
10. Aestivation of corolla in Caesalpiniaceae is
(a) **ascendingly imbricate** (b) descendingly imbricate
(c) valvate (d) twisted
11. *Eugenia caryophyllata* belongs to which family?
(a) Rutaceae (b) Annonaceae (c) Cucurbitaceae (d) **Myrtaceae**
12. Which type of placentation is characteristic of Myrtaceae
(a) Basal (b) Marginal (c) Parietal (d) **Axile**
13. Peculiarity in the ovary of Annonaceae
(a) multicarpillary syncarpous (b) **multicarpillary apocarpous**
(c) bicarpellary syncarpous (d) bicarpellary apocarpous
14. Which of the following characters are most likely agree with family Annonaceae?
(a) **hemicyclic flower with prominent thalamus**
(b) didynamous stamens with prominent disc
(c) zygomorphic flower with hypanthial cup
(d) epigynous flower with bicarpellary ovary
15. The systematic position of Cucurbitaceae according to Bentham and Hooker's system.
(a) Thalamiflorae, Parietales (b) Inferae, Asterales
(c) Calyciflorae, Rosales (d) **Calyciflorae, Passiflorales**

Unit- IV

1. Pitcher plant of Asclepiadaceae is
(a) *Asclepias* (b) ***Dischidia*** (c) *Hoodia* (d) *Calotropis*
2. Fruits of Asclepiadaceae is
(a) **follicle** (b) achene (c) berry (d) pepo
3. Inflorescence of *Hameliapatans* is
(a) **monochasial helicoid cyme** (b) monochasial scorpiod cyme
(c) dichasial cyme (d) polychasial cyme
4. Find out the botanical name of Gopuram thangi
(a) *Barleria prionitis* (b) *Ecobolium viridae*
(c) *Justicia procumbens* (d) ***Andrographis echioides***
8. Mark the plant which is belonging to the family Acanthaceae
(a) *Calotropis* (b) *Ixora* (c) *Brassica* (d) ***Barleria***
9. Plant, which yields chicle gum
(a) *Madhuca indica* (b) ***Manilkara zapota***
(c) *Mimusops elengi* (d) *Plumeria alba*
10. Illupei belongs to the family
(a) Acanthaceae (b) Asclepiadaceae
(c) **Sapotaceae** (d) Rubiaceae
11. What is the position of the family Acanthaceae in Bentham and Hookers classification.
(a) calyciflorae (b) Inferae
(c) **Bicarpellateae** (d) Thalamiflorae

Unit -V

1. Cyathium inflorescence is seen in the genus
(a) ***Euphorbia*** (b) *Hevea* (c) *Citrus* (d) *Coffea*
2. The type of inflorescence seen in Poaceae
(a) raceme (b) cyme (c) **spikelet** (d) cyathium
3. Family having didynamous stamens
(a) **Lamiaceae** (b) Amaranthaceae (c) Euphorbiaceae (d) Poaceae
4. Fruits of poaceae
(a) **caryopsis** (b) achene (c) follicle (d) nut
5. Genus possessing spike inflorescence is
(a) ***Achyranthes*** (b) *Euphorbia* (c) *Leucas* (d) *Ricinus*
6. Plant which yields bio-diesel
(a) ***Jatropha*** (b) *Hevea* (c) *Eucalyptus* (d) *Ricinus*

7. The plant used as an antidote against snake bite
 (a) *Gomphrena globosa* (b) ***Achyranthes aspera***
 (d) *Cucumis melo* (d) *Daemia extensa*
8. Gynobasic style is characteristic to the family
 (a) Euphorbiaceae (b) **Lamiaceae** (c) Amaranthaceae (d) Poaceae
9. In Vanda the modified tepal is called
 (a) rim (b) **labellum** (c) rostellum (d) mentum
10. Photosynthetic roots are present in
 (a) *Orchis* (b) *Habenaria* (c) ***Taeniophyllum*** (d) *Tainia*

Section B

UNIT I

1. What is taxonomy, and what are its main objectives?
2. What is the scope of taxonomy in biological sciences?
3. What was Mathew's significant contribution to the field of taxonomy?
4. What are tap roots? Give examples
5. State the main functions of stem
6. Explain the main parts of leaf with diagram
7. What are the functions of leaf?
8. Name the modification of leaf for climbing
9. Where does fibrous root arise from? Give examples
10. What is adventitious root?
11. What are stilt roots?
12. What is the use of pneumatophores?
13. What are the woody pointed structures seen on citrus stem called?
14. How is the stem modified in *Opuntia*?
15. What is the main function of petiole?
16. Define phyllotaxy.
17. Define venation?
18. What is Simple leaf?
19. What is whorled phyllotaxy?
20. Name any two modification of leaf
21. What is cyathium inflorescence?
22. What is gamosepalous ?

23. What is an actinomorphic flower?
24. Name the parts of carpel
25. Name any four types of placentation
26. Define aestivation.
27. What is a carpel? Name its parts
28. Differentiate between racemose and cymose inflorescence

UNIT II

1. Write any two merits of Bentham and Hooker's system of classification
2. Write any two de merits of Bentham and Hooker's system of classification
3. Write any two merits of Engler and Prantl's system of classification
4. Write any two demerits of Engler and Prantl's system of classification
5. Write short notes on Carolus Linnaeus
6. Define thalamiflorae
7. Write a note on Bentham and Hooker.
8. Briefly explain about Engler and prantl.

UNIT III

1. What is polypetalae?
2. Comment on hesperidium.
3. What is obdiplostemonous condition?
4. Define ascendingly imbricate aestivation.
5. Write short notes on tetradynamous stamens.
6. Define hemicyclic flower
7. Define cauliflory with an example
8. Comment on aggregate fruit of *Polyalthia*
9. Comment on aggregate fruit of *Annona*
10. Distinguish between hypogynous and epigynous flowers
11. Distinguish between syncarpous and apocarpous pistil
12. Distinguish siliqua and silicula fruits
13. Draw the floral diagram of a spirocyclic flower you have studied .
14. Give the botanical name of cabbage and cauliflower
15. Assigning to its respective family point out features of morphological interest in *Parkinsonia*
16. Write botanical names of two plants of family Myrtaceae

UNIT IV

1. Mention any two medicinal yielding plants in Asclepidaceae
2. Write short notes on verticillaster
3. Assign the genus *Calotropis* to its systematic position
4. Assign the genus *Adhatoda* to its systematic position
5. Assign the genus *Cinchona* to its systematic position
6. Comment on fruit dispersal in Acanthaceae
7. Write floral formula of *Calotropis*
8. Write the binomials of any two plants belong to Sapotaceae
9. Write the binomials of any two economically important plants belong to Sapotaceae
10. Comment on gynostegium.

UNIT V

1. Comment on monochlamydeae.
2. What is cladode? Give an example.
3. Mention any two types of inflorescence in Euphorbiaceae.
4. Assigning to its respective family point out features of morphological interest in *Euphorbia tirucalli*
5. Give the botanical name and family for wheat and maize
6. Name the type of inflorescence found in *Euphorbia* and *Leucas*
7. Give the binomial of any two green leafy vegetables from Amaranthaceae
8. What are cereals? Give two examples.
9. Mention the botanical name and parts used of castor
10. Assign the genus *Ocimum* to its systematic position
11. Write the old names of families lamiaceae and poaceae
12. Define spike with examples
13. Comment on spadix with examples
14. Provide short definitions for the following terms
15. Give two vegetative traits exhibited by many epiphytic orchids that may function as adaptations to the epiphytic environment.
16. Comment on spikelet with reference to Poaceae
17. Comment on spadix
18. Write short notes on sexuality of Arecaceae

19. Illustrate on pollinia of Orchidaceae

SECTION C

Answer in about 200 words

UNIT -I

1. Define taxonomy and explain its significance in biological sciences.
2. Describe special type of inflorescence with suitable diagrams.
3. Write about the types of racemose inflorescence.
4. Describe adventitious root modification with example.
5. Give an account of dry indehiscent fruits.
6. Give an account of tap root modification.
7. Write notes on aerial stem modification.
8. Differentiate phyllode and phylloclade with examples.
9. Write about different types of polypetalous corolla.
10. Give an account of cymose inflorescence.
11. With suitable examples explain simple fleshy fruits.
12. Describe the parts of leaf with neat labelled diagram
13. Describe the types of flowers based on position of ovary and position of floral parts on thalamus
14. Define placentation. Describe any four types of placentation
15. Define phyllotaxy? Describe the three types give and examples
16. What is compound leaf? Explain two types of compound leaf with diagram.

UNIT II

1. What are the merits and demerits of Bentham and Hooker's classification.
2. What is herbarium? Explain the methods of its preparation.
3. What are the merits and demerits of Engler and Prantlsclassification
4. How would you distinguish the natural and phylogenetic classification
5. What are the three classes of phanerogams? Explain
6. Write notes on sub classes under dicotyledons as in Bentham and Hooker's classification of plants.
7. Write short notes on monocotyledonae in Engler and prantl system".
8. Explain the following terms with suitable examples.
a.inferae, b. heteromerae, c. bicarpellatae
9. Comment upon the following

a) thalamifloare b) disciflorae c) calcyflorae

10. How Bentham and Hooker classified monocotyledons? Explain

11. Write notes on

a) polypetalae b) gamopetalae c) monochlamydae

UNIT III

1. Describe the characteristic features of Rutaceae.

2. Describe the family characters of Myrtaceae

3. Draw the longitudinal section and give floral diagram of a typical flower of Annonaceae.

4. Enumerate the floral characters of Caesalpiniaceae.

5. Write notes on fruits of Annonaceae.

6. Give an account on economically important plants of Myrtaceae and their uses.

7. Write notes on

a) Hesperidium

b) Phyllode

8. List out the primitive characters of Annonaceae.

9. Enumerate the floral characters of Myrtaceae.

10. Write notes on

a) Aggregate of Berries.

b) Economic importance of Myrtaceae.

11. Write notes on salient features of the family Annonaceae.

12. Give an account on economically important plants of Rutaceae and their uses.

13. Write notes on a) Tetradynamous stamens

b) Hemicyclic flower

UNIT IV

1. Describe the vegetative features of Rubiaceae and mention any two economically useful plants.

2. Describe the floral structure of *Calotropis* and explain the pollination mechanism.

3. Give an account on gynoecium of Asclepidaceae.

4. Explain the fruit of Acanthaceae.

5. Write notes on

a) follicle and pepo

- b) Gynostegium.
- 6. Give an account on floral characters of Rubiaceae.
- 7. Enumerate the floral characters of Acanthaceae
- 8. Write an account on the economic importance of Sapotaceae.
- 9. Write notes on
 - a) Stipules of Rubiaceae
 - b) Translator
- 10. Give an account on economically important plants of Acanthaceae

UNIT V

- 1. Explain the spikelet of Poaceae.
- 2. Enumerate the useful plants of Euphorbiaceae and their uses.
- 3. Write notes on
 - a) Pollination mechanism in Lamiaceae.
 - b) Cyathium inflorescence.
- 4. Describe the floral characters of Lamiaceae
- 5. Enumerate the economic importance of Poaceae
- 6. Describe floral characters of Lamiaceae.
- 7. Write notes on economic importance of Amaranthaceae
- 8. Enumerate the floral characters of Amaranthaceae
- 9. Draw and describe the flower L.S. of any one member of Lamiaceae you have studied.
- 10. Describe the floral variations in Poaceae.
- 11. Enumerate the different types of inflorescence in Euphorbiaceae
- 12. List out the economic importance of Arecaceae.
- 13. Write the ethnomedicinal uses of the family Orchidaceae.

SECTION D

Answer in about 400 words:

UNIT I

- 1. Define taxonomy and explain its significance in biological sciences.
- 2. Describe adventitious root modification with examples.
- 3. Write an account on simple and compound fleshy fruits you have studied.
- 4. Describe the special type of inflorescence with examples.

5. Write an essay on racemose type of inflorescence.
6. Give an account on aerial stem modifications.
7. Write an essay on underground stem modifications.
8. What are the modifications seen in leaf? Explain with suitable examples.
9. Write notes on
 - a) Tendril climbers
 - b) Fusiform root
 - c) Compound umbell
9. Write an essay on androecium of flowers.
10. Write an essay on different types of corolla.

UNIT II

1. Define floral formula and describe the symbols employed in constructing a floral formula.
2. Explain the importance of floral diagrams in botany.
3. Outline the key principles of the International Code of Botanical Nomenclature (ICBN).
4. Summarize the natural system of classification studied by you.
5. Explain phylogenetic system of classification by Engler and Prantl.

UNIT III

1. Describe the family characters and economic importance of Caesalpiniaceae.
2. Explain the floral characters of Rutaceae and add a note on its economic importance.
3. Give an account on floral characters of Annonaceae and add a note on its primitive characters.
4. Write a brief account on the characters of Myrtaceae. Point out any four economic importance.
6. Write notes on
 - a) aggregate of berries.
 - b) ascendingly imbricate aestivation.
 - c) androecium of Caesalpinaceae
7. Write an essay on the family characters of Annonaceae.
8. Compare Caesalpiniaceae with Annonaceae.

9. Write notes on
 - a) fruits of Rutaceae.
 - c) fruits of Myrtaceae.
10. Compare the family Annonaceae with that of Myrtaceae.

UNIT –IV

1. Bring out the salient features of the family Sapotaceae. Give the botanical name of any four plants.
2. Compare the floral characters of Asclepiadaceae with that of Rubiaceae.
3. Write an essay on the distinguishing characters of Sapotaceae
4. Compare the characters of the family Asclepiadaceae with Acanthaceae.
5. Describe the family Apocynaceae and add a note on its economic importance.
6. Describe the floral characters of Rubiaceae and add a note on its economic importance.
7. Write notes on
 - (a) gynostegium
 - (c) stipules of Rubiaceae
8. Compare the families Rubiaceae and Sapotaceae
9. Write notes on
 - (a) economic importance of Sapotaceae
 - (b) economic importance of Rubiaceae
10. Compare the family Rubiaceae with Acanthaceae.

UNIT V

1. Describe the floral characters and pollination in Lamiaceae.
2. Write an essay on family characters and economic importance of Euphorbiaceae.
3. Describe the diagnostic features of Poaceae and give the botanical name of any four economically important plants and their uses.
4. Write an essay on the family Amaranthaceae.
5. Compare the inflorescence of Euphorbiaceae and Poaceae
6. Compare the family Lamiaceae with Amaranthaceae.
7. Write an essay on the characteristic features of the family Lamiaceae and add a note on its economic importance.
9. Write notes on

(a) pollination mechanism in Lamiaceae

(b) economic importance of Poaceae

10. Write an essay on floral characters of Euphorbiaceae and add a note on its economic importance.

11. Write notes on

(a) cyathium

(b) spikelet

(c) spadix.

12. Write an essay on family characters and economic importance of Arecaceae.

13. Give an account on floral characters of Orchidaceae.

ST. MARY'S COLLEGE (AUTONOMOUS), THOOTHUKUDI

Question Bank

II B.Sc Zoology

Semester IV

Allied: II Angiosperm Taxonomy and Plant Physiology Subject Code:21UBOA41

Section – A

Unit- I

1. Rhizome is
 - (a) underground stem (b) underground root (c) leaf (d) phyllode.
2. Hesperidium fruit is seen in
 - (a) Myrtaceae (b) Annonaceae (c) Rutaceae (d) Brassicaceae.
3. Plants with respiratory roots
 - (a) *Allium* (b) *Asparagus* (c) *Cuscuta* (d) *Avicennia*.
4. Phyllode is a modified
 - (a) stem (b) root (c) leaf (d) adventitious root.
5. Phylloclade is a modified
 - (a) stem (b) root (c) leaf (d) none of the above.
6. Sagittate anthers are present in
 - (a) Poaceae (b) Rubiaceae (c) Rutaceae (d) Euphorbiaceae.
7. Verticillaster inflorescence is seen in
 - (a) *Leucas* (b) *Ocimum* (c) *Annona* (d) *Brassica*.
8. Epigynous flowers are having
 - (a) inferior ovary (b) Superior ovary (c) half inferior ovary (d) none of the above.
9. Which one of the following is an insectivorous plant?
 - (a) *Nepenthes* (b) *Gloriosa* (c) *Pisum* (d) none of the above.
10. Bulb is a modified
 - (a) Underground stem (b) aerial stem (c) root (d) none of the above
11. Prop roots are:
 - (a) Tap roots (b) Adventitious root (c) Secondary roots (d) All
12. Monocot can be distinguished from dicot by:
 - (a) Aestivation (b) Venation (c) Both 1 and 2 (d) None of these
13. Axis of inflorescence is:
 - (a) Pedicel (b) Peduncle (c) Petiole (d) Petal
14. Arrangement of leaves on a stem or branch:
 - (a) Venation (b) Aestivation (c) Inflorescence (d) Phyllotaxy
15. Ginger is:
 - (a) Stem (b) Root (c) Leaf (d) Fruit
16. Number of female flower in a cyathium is:
 - (a) 3 (b) 1 (c) 2 (d) 5
17. Caryopsis fruit is found in:
 - (a) Pea (b) Wheat (c) Gram (d) Nuts

18. ————— are the non-essential parts of a flower
 (a) Androecium and gynoecium (b) Sepals and carpels (c) Sepals and petals
 (d) Sepals and gynoecium
19. Fruit of *Polyalthia longifolia*
 (a) Siliqua (b) Pepo (c) **Aggregate of berries** (d) Hesperidium
20. The type of inflorescence seen in Poaceae
 (a) Raceme (b) Cyme (c) **Spikelet** (d) Cyathium.

Unit- II

- Bentham and Hooker's system of classification is a
 (a) artificial system (b) **natural system** (c) phylogenetic system (d) evolutionary system
- In Bentham and Hooker's system of classification placing of Gymnosperms between dicotyledons and monocotyledons is a
 (a) merit (b) **demerit** (c) rule (d) condition
- In which century, Linnaeus proposed the system of classification ?
 (a) 15th (b) 16th (c) **17th** (d) 18th.
- The book which Linnaeus first proposed his classification is
 (a) Theorie Elementaire (b) .Genea Plantarum (c) Historia Plantarum (d) **Species Plantarum.**
- The classification of Linnaeus was mainly based upon
 (a) Sepals (b) Carpels (c) Petals (d) **Stamens**
- According to Bentham and Hooker a polypetalous plant with superior ovary and a nectary gland below the ovary is placed in the series.
 (a) Calyciflorae (b) Thalamiflorae (c) **Disciflorae** (d) Heteromerae.
- Bentham and Hooker in their `General Plantarum` proposed the classification of
 (a) Tracheophytes (b) Angiosperms (c) **Phanerogams** (d) Plant Kingdom.
- Carolus Linnaeus proposed classification based on
 (a) Nature system (b) Phylogenetic system (c) Modern system (d) **Artificial system**
- The largest group of plant kingdom is
 (a) non vascular cryptogams (b) **angiosperms** (c) gymnosperms (d) vascular cryptogams
- Classification of plants in to different groups is known as

- (a) Physiology (b) Morphology (c) **Systematic botany** (d) Pathology
11. Who are the scientists proposed natural system of classification
- (a) Carolus Linnaeus (b) **Bentham and Hooker**
 (c) Adolf Engler and Karl Prantl (d) Arthur Cronquist and Adjunct
12., a great Swedish naturalist is rightly known as the father of modern botany.
- (a) **Carolus Linnaeus** (b) Bentham and Hooker (c) Gronovius (d) George Clifford
13. George Bentham and Sir Joseph Dalton (1862-83.) published a 3 volume work known as ...
- (a) **Genera plantarum** (b) Hortus upplandicus (c) System naturae (d) Hortus cliffortianus
14. Members of this sub-class have flowers with single whorl of perianth.
- (a) polypetalae (b) gamopetalae (c) **monochlamydeae** (d) microspermæ
15. Which one of the series is not belonging to class monocotyledons?
- (a) **microembryæ** (b) microspermæ (c) calycineæ (d) coranareæ
16. Pick up the correct set of series from the list below belong to Subclass Monochlamydeae according to Bentham & Hooker
- (a) Coronariceæ, Calycineæ, Microspermæ
 (b) **Curvembryæ, Micrembryæ, Unisexuales**
 (c) Apocarpæ, Curvembryæ, Micrembryæ
 (d) Unisexuales, Coronarieæ, Microspermæ
17. Aggregate fruit is common in
- (a) **Annonaceæ** (b) Brassicaceæ (c) Rutaceæ (d) Lamiaceæ.
18. Botanical name of curry leaves
- (a) ***Murraya koenigii*** (b) *Murraya paniculata* (c) *Citrus aurantifolia* (d) *Citrus sinensis*
19. Multicarpellary apocarpus pistil is characteristic of
- (a) **Annonaceæ** (b) Rutaceæ (c) Brassicaceæ (d) Caesalpiniaceæ.
20. Parkinsonia is an example of
- (a) **phyllode** (b) phylloclade (c) tendril climber (d) cladode
21. Fruit of *Polyalthia longifolia*

- (a) siliqua (b) pepo (c) **aggregate of berries** (d) hesperidium.
22. Monocarpellary with marginal placenta is characteristic of
(a) **Caesalpiniaceae** (b) Annonaceae (c) Rutaceae (d) Myrtaceae.
23. Obdiplostemonous arrangement of stamens is characteristic to the family
(a) Myrtaceae (b) **Rutaceae** (c) Annonaceae (d) Brassicaceae.
24. Based on position of stamens in respect to petal flower of *Murraya* is described as
(a) tetradynamous (b) didynamous (c) **diplostemonous** (d) none of the above.
25. Aestivation of corolla in Caesalpiniaceae is
(a) **ascendingly imbricate** (b) descendingly imbricate (c) valvate (d) twisted.
26. Peculiarity in the ovary of Annonaceae
(a) multicarpillary syncarpous (b) **multicarpillary apocarpous**
(c) bicarpellary syncarpous (d) bicarpellary apocarpous
27. _____ except this families were odd sepals are posterior
(a) **Caesalpiniaceae** (b) Annonaceae (c) Rutaceae (d) Myrtaceae
28. Which of the following pair of plants belong to Rutaceae
(a) *Annona squamosa* and *Polyalthia longifolia*
(b) ***Citrus aurantifolia* and *Murraya koengii***
(c) *Murraya koengii* and *Cassia alata*
(d) *Polyalthia longifolia* and *Citrus aurantifolia*

UNIT III

1. Pitcher plant of Asclepiadaceae is
(a) *Asclepias* (b) ***Dischidia*** (c) *Hoodia* (d) *Calotropis*.
2. Fruits of Asclepiadaceae is
(a) **follicle** (b) achene (c) berry (d) pepo.
3. Inflorescence of *Hamelia patans* is
(a) **monochasial helicoid cyme** (b) monochasial scorpioid cyme
(c) dichasial cyme (d) polychasial cyme.
4. In *Calotropis* the pollination mechanism is
(a) **Translator mechanism** (b) Lever mechanism (c) Javelin mechanism (d) None
5. Pollinium in Asclepiadaceae refers to
(a) **agglutinated pollen grains** (b) fused anther (c) corolline corona (d) pentangular stigma

6. Mark the plant which is belonging to the family Rubiaceae
(a) *Calotropis* (b) ***Oldenlandia*** (c) *Brassica* (d) *Barleria*
7. All are belonging to subclass polypetalae except
(a) Rutaceae (b) Annonaceae (c) **Rubiaceae** (d) Caesalpineaceae
8. Cyathium inflorescence is seen in the genus
(a) ***Euphorbia*** (b) *Hevea* (c) *Citrus* (d) *Coffea*.
9. The type of inflorescence seen in Poaceae
(a) raceme (b) cyme (c) **spikelet** (d) cyathium.
10. Fruits of poaceae
(a) **caryopsis** (b) achene (c) follicle (d) nut.
11. The botanical name of a barley is
(a) ***Avena sativa*** (b) *Hordeum vulgare* (c) *Pennisetum typhoideum* (d) *Sorghum vulgare*.
12. The inflorescence in Graminae is
(a) Capitulum (b) Cymose (c) Panicle (d) **Spike of spikelet**
13. Sugar is obtained from the plant
(a) *Triticum vulgare* (b) *Zea mays* (c) *Bambusa tuldo* (d) ***Saccharum officinarum***

UNIT IV

1. Phenyl mercuric acetate
(a) **reduces transpiration rate** (b) reduces photosynthesis
(b) reduces respiration (d) kills the plant
2. The amount of water held by the soil after drainage is known as
(a) mineral water (b) soil water (c) **field capacity** (d) gravitational capacity
3. In soil, water available for plants is
(a) **capillary water** (b) hygroscopic water
(b) gravitational water (d) chemically bound water
4. Turgidity of the cells is maintained by
(a) osmotic pressure (b) wall pressure (c) **turgor pressure** (d) diffusion pressure
5. Wilting of a plant results from excessive
(a) respiration (b) photosynthesis (c) absorption (d) **transpiration**
6. According to Steward's starch hydrolysis theory, which one of the following is the principal reason for the opening of stomata during daytime?

- (a) **photosynthetic utilization of CO₂ in guard cells**
 - (b) influx of K⁺ ions into guard cells under the influence of ABA hormone
 - (c) conversion of sugar into starch in guard cells
 - (d) efflux of K⁺ ions from guard cells under the influence of ABA hormone
7. A leaf peeling of *Tradescantia* is kept in a medium having 10% NaCl. After a few minutes if we observe the leaf peel under the microscope, we are likely to see
- (a) entry of water into the cell (b) **exit of water from the cell**
 - (b) diffusion of NaCl into the cell (d) the cells bursting out
8. Stomata opens due to accumulation of
- (a) **K⁺** b) Na⁺ c) Ca⁺ d) Mg⁺
9. Attraction of water molecules to polar surfaces is known as
- (a) cohesion b) capillarity c) surface tension d) **adhesion**
10. Which of the following is not a purpose of transpiration?
- (a) supplies water for photosynthesis
 - (b) **helps in translocation of sugars from source to sink**
 - (c) maintains shape and structure of the plants
 - (d) Transports minerals from the soil to all parts of the plant
11. Cohesion theory of water movement in plants was put forth by
- (a) **Henry Dixon** b) F. F. Blackman c) Melvin cycle d) Hans. A. Krebs
12. Which of the following force is responsible for raising water up to 100 m of tall plants?
- (a) root pressure b) capillary action c) **transpiration pull** d) air pressure
13. The first process by which water enters into the seed coat when a seed is placed in suitable environment for germination is
- (a) osmosis b) **imbibition** c) absorption d) none of these
14. When the concentration of the soil solutes is low, the absorption of water is
- (a) remain normal b) decreased c) **increased** d) stopped
15. When pea seeds and wheat grains are soaked in water, pea seeds showed more swelling than the wheat. The reason is
- (a) cell membrane of pea seeds is more permeable
 - (b) presence of less hydrophilic colloids in the wheat grains
 - (c) **imbibition capacity of proteins is more than that of starch**

- (d) cell walls of wheat grains are less permeable
16. Increasing humidity in atmosphere decreases the rate of
(a) glycolysis b) photosynthesis c) **transpiration** d) growth
17. If water enters in a cell, the pressure exerted by its swollen protoplast is
(a) osmotic pressure b) diffusion pressure deficit c) **turgor pressure** d) imbibitions
18. Which of the following is the most accepted theory for movement of water through plants?
(a) passive transport b) capillarity c) **cohesion theory** d) root pressure
19. With an increase in the turgidity of a cell, the wall pressure will
(a) **increase** b) decrease c) fluctuate d) remain unchanged
20. Opening and closing of stomata is due to the
(a) gaseous exchange b) **change in turgor pressure of guard cells**
(b) hormonal change in guard cells d) respiration
21. Living cells placed in isotonic solution retain their size and shape. This is based on the concept of
(a) diffusion b) **osmosis** c) transpiration d) imbibitions
22. Transport of food material in higher plants takes place through
(a) **phloem** b) xylem c) epidermis d) endodermis
23. Passive absorption of water by the root system is the result of
(a) **tension on the cell sap due to transpiration**
(b) increased respiratory activity in root cells
(c) forces created in the cells of the root
(d) osmotic force in the shoot system
24. In which of the following plants, there will be no transpiration?
(a) plants growing in hilly regions (b) **aquatic, submerged plants**
(b) plants living in deserts (d) aquatic plants with floating leaves
25. Conduction of sap in plants occurs through
(a) heart wood b) bark c) **xylem** d) all the above
26. Conversion of starch to organic acid is essential for stomatal
(a) closure b) **opening** c) initiation d) growth
27. Diffusion of water from selectively permeable membrane is known as

- (a) active absorption b) passive absorption c) **osmosis** d) diffusion
28. Dixon and Jolly are associated with
- (a) light reaction of photosynthesis b) anaerobic respiration
- (c) **cohesion theory of ascent of sap** d) Apical dominance
29. If CO₂ concentration suddenly increases around the leaf, one of the following events occurs
- (a) stomata open gradually (b) stomata open suddenly
- (b) transpiration will not be affected
- (c) decrease in transpiration due to sudden closure of stomata
- (d) **decrease in transpiration due to sudden closure of stomata**
30. If the concentration of external solution is more than the cytoplasm, the solution is known as
- (a) **hypertonic** (b) isotonic (c) hypotonic (d) none of these
31. A cell becomes turgid when placed in
- (a) **isotonic solution** b) hypertonic solution c) hypotonic solution d) all of these
32. When a cell is fully turgid, which one of the following become zero?
- (a) turgor pressure b) wall pressure c) **diffusion pressure deficit** d) osmotic pressure
33. Active K⁺ exchange mechanism is the cause for opening and closing of stomata. It was proposed by
- (a) Devlin b) **Levitt** c) Seath d) Khorana
34. The direction and the rate of water movement from cell to cell is based on
- (a) **diffusion pressure deficit** (b) incipient plasmolysis
- (b) turgor pressure d) wall pressure
35. The water potential of pure water at atmospheric pressure is
- (a) – 2.3 bar b) + 2.3 bar c) **zero bar** d) one bar
36. Loss of water through the stomata of leaves is known as
- (a) guttation (b) exudation (c) **transpiration** d) evaporation
37. During rainy season wooden doors are difficult to open or close because of
- (a) Plasmolysis b) **imbibitions** c) osmosis d) diffusion
38. Plasmolysis occurs due to
- (a) absorption b) osmosis c) endosmosis d) **exosmosis**

39. Water absorption takes place through
 (a) Lateral roots b) root cap c) **root hairs** d) tap root
40. Which of the following phenomena cools the surface of leaves?
 (a) guttation b) photorespiration c) **transpiration** d) assimilation

UNIT V

- What does happen in the light *independent* reactions of photosynthesis?
 (a) light is absorbed (b) ATP is produced (c) **glucose is produced** (d) water is used
- What is the role of NADPH in photosynthesis?
 (a) provide energy (b) **donate electrons** (c) provide carbon dioxide (d) store oxygen
- Where do the light dependent reactions occur?
 (a) mitochondrial matrix (b) stroma (c) stomata (d) **thylakoid membrane**
- Where do the light independent reactions take place?
 (a) mitochondrial matrix b) **stroma** c) stomata d) thylakoid membrane
- RUBISCO enzyme is also called as
 (a) carboxytetra mutase (b) **carboxydimutase** (c) carboxytrimutase (d) carboxyunimutase
- Emerson effect proves
 (a) **concept of two photosystems in plant** (b) photophosphorylation
 (c) photorespiration (d) there are light and dark reaction in photosynthesis
- Light reaction of photosynthesis results in formation of _____.
 (a) O₂ (b) NADPH + H⁺ (c) ATP (d) **all of these**
- Dark reaction requires light reaction for
 (a) carboxylation of RUBP (b) regeneration of RUBP
 (c) **reduction of PGA** (d) formation of hexose sugar
- Kranz anatomy is the characteristic feature of
 (a) **C₄ plants** (b) C₃ plants (c) CAM plants (d) all dicot plants
- Absorption spectrum of chlorophyll shows maximum absorbtion in _____ light.
 (a) red (b) **blue** (c) yellow (d) blue-violet
- A dicot plant which adapts C₄ pathway for carbon fixation is _____.
 (a) wheat (b) **amranthus** (c) maize (d) mango
- The source of CO₂ for calvin cycle in C₄ plant is

(a) **Malic acid** (b) OAA (c) PEP (d) RuDP

13. What will happen to the rate of photosynthesis if sodium bicarbonate is added in the water having hydrilla plant in a beaker

(a) the rate of photosynthesis will remain normal (b) the rate of photosynthesis will be decreased (c) the rate of photosynthesis will be stopped (d) **the rate of photosynthesis will be accelerated**

14. For the process of photosynthesis all except one of the following items are essential.

Point out the exception

(a) CO₂, optimum temperature (b) **glucose and oxygen**
(c) water and minerals (d) light and chlorophyll

15. In the Calvin cycle, the assimilatory power is used during

(a) formation of PGA
(b) **conversion of PGA to PGAL**
(c) formation of fructose 1- 6 diphosphate from PGAL
(d) formation of glucose from fructose – di- phosphate

16. Which is sensitive to longer wavelength of light?

(a) photolysis (b) **PSI** (c) PS II (d) photophosphorylation

17. Reduction of co-enzyme NADP depends on

(a) reduction of CO₂ (b) evolution of O₂ (c) **photolysis of water** (d) formation of ATP

18. Calvin cycle involves

(a) oxidative phosphorylation
(b) oxidative carboxylation
(c) **reductive carboxylation**
(d) reductive phosphorylation

19. In C₄ plants, carboxylation is twice, it can be represented as

(a) pyruvic acid + CO₂ and malic acid + CO₂ (b) RuDP + CO₂ and pyruvic acid + CO₂
(b) **PEP + CO₂ and RuDP + CO₂** (d) PEP + CO₂ and malic acid + CO₂

20. In non-cyclic photophosphorylation

(a) ATP is generated (b) both PSI and PSII are involved
(b) **electron flow is unidirectional** (d) **all the above**

21. During photosynthesis PGA is converted into PGAL. Find out the type of this reaction

- (a) isomerization (b) **reduction** (c) oxidation (d) phosphorylation
22. In C₃ pathway, the first stable compound is
(a) PGAL (b) OAA (c) **PGA** (d) RUDP
23. In non-cyclic photophosphorylation, the electron ejected from P₆₈₀ is replaced by electron from
(a) NADP (b) **water** (c) ferridoxin (d) chlorophyll-a
24. 85-90% (9/10) of all photosynthesis in the world is carried out by
(a) shrubs (b) **algae of the oceans** (c) herbs (d) scientists in the laboratory
25. The source of oxygen evolved during photosynthesis is
(a) **H₂O** (b) CO₂ (c) chl-a (d) glucose
26. In C₄ plants, synthesis of glucose occurs in
(a) spongy cells (b) **bundle sheath cells** (c) mesophyll cells (d) palisade cells
27. Which one occurs during both cyclic and non-cyclic photophosphorylation
(a) **Formation of ATP** (b) release of O₂
(b) formation of NADPH₂ (d) involvement of both PSI and PSII
28. For synthesis of one molecule of glucose, the requirement of ATP and NADPH₂ is respectively
(a) 15 and 10 (b) 12 and 8 (c) 30 and 15 (d) **18 and 12**
29. Which of the following element is found in chlorophyll?
(a) copper (b) **magnesium** (c) calcium (d) chlorine
30. _____ are placed one above the other to form stack of coins
(a) oxysomes (b) F1 particles (c) cristae (d) **thylakoids**
31. ATP synthesis during light reaction is
(a) **photophosphorylation** (b) photolysis
(c) oxidative phosphorylation (d) phosphorylation
32. Calvin was given Nobel prize in 1961 for his discovery of
(a) **mode of carbon fixation** (b) photosynthesis (c) photolysis of water (d) light reaction
33. The number of photons needed for the evolution of one molecule of oxygen is
(a) **8** (b) 2 (c) 12 (d) 18
34. C₄ plants show very high rate of photosynthesis as compare to C₃ plants, because of
(a) dicarboxylation (b) bundle sheath cells

- (b) **absence of photorespiration** (d) all the above
35. Donor and acceptor of electrons is the same chlorophyll molecule in
(a) **cyclic photophosphorylation** (b) photorespiration
(c) substrate level Phosphorylation (d) non-cyclic photophosphorylation
36. C₄ plants can perform photosynthesis
(a) even in low light intensity (b) **even in low CO₂ concentration**
(c) both (A) and (B) (d) only in high intensity of light and high CO₂ concentration
37. Photosynthetically active radiations are represented by wavelength of
(a) 640-650 nm (b) 600-950 nm (c) **400-700 nm** (d) 340-450 nm
38. C₄ cycle was discovered by
(a) Hill (b) Calvin (c) **Hatch and slack** (d) Blackman
39. Carbon dioxide is fixed during
(a) light reaction (b) **dark reaction** (c) aerobic respiration (d) anaerobic respiration
40. CO₂ acceptor in C₃ plants is
(a) Xylulose-5-phosphate (b) 3-phosphoglyceric acid (c) **Ribulose 1, 5 diphosphate** (d) Phosphoenol pyruvic acid
41. Growth is a
(a) **irreversible increase in size** (b) reversible increase in size
(c) reversible increase in shape (d) increase in volume
42. Dormancy of seed is
(a) phase of active growth (b) **phase of inactive growth**
(c) phase of stimulated growth (d) dead condition
43. The condition of viable seed unable to germinate even in presence of favourable environmental condition is called
(a) **dormancy** (b) secondary dormancy
(c) dead seed (d) none of these
44. The growth in dormant organ is
(a) completely stopped (b) continuous (c) **temporarily arrested** (d) permanently arrested
45. Dormancy in seeds of *Xanthium* is due to

- (a) seed coat impermeable to water
 - (b) seed coat impermeable to gases**
 - (c) need for after ripening period
 - (d) mechanically resistant seed coat
46. Dormancy if occur due to internal factors, it is called
- (a) imposed dormancy (b) **innate dormancy** (c) quiescence (d) dormancy
47. Softening or rupturing of hard seed coat for breaking dormancy is called
- (a) chilling** (b) vernalization (c) stratification (d) **scarification**
48. The chemical substances like phenolics, coumarins, ferulic acid are
- (a) growth hormones (b) growth regulators
 - (b) germination inhibitors** (d) germination promoters
49. The seeds which cannot germinate in absence of light is called
- (a) positively photoblastic seed** (b) negatively photoblastic seed
 - (c) photosensitive seed (d) photoperiodic seeds
50. Germination inhibitors leached out from one plant may inhibit germination of seeds of other plants is called as
- (a) allelopathy (b) **allelopathy** (c) competitive absorption (d) aromapathy
51. Which of the following growth regulator is not used to break dormancy?
- (a) auxine** (b) gibberellins (c) cytokinins (d) **abscisic acid**
52. Keeping seeds in well aerated moist condition at 1-10°C temperature for weeks and months is called
- (a) pre-ripening (b) **stratification** (c) scarification (d) impaction
53. By which method, testa is made permeable to water
- (a) vernalization (b) **scarification** (c) stratification (d) impaction
54. Which of the following is a growth inhibitor
- (a) auxin** (b) cytokynin (c) giberllins (d) **ABA**
55. Threshing, chopping, rupturing seeds by hands or machines is called
- (a) scarification (b) chemical scarification (c) **mechanical scarification** (d) stratification
56. Imposed dormancy can be caused due to
- (a) immature embryo (b) hard and resistant seed coat
 - (b) non availability of water and O₂** (d) mature embryo

57. Plant growth can be measured by
(a) horizontal microscope (b) crescograph (c) auxanometer (d) **all the above**
58. Apical dominance is due to
(a) abscisic acid (b) gibberellic acid (c) **auxin** (d) cytokinin
59. Hormone related with cell division is
(a) NAA (b) IAA (c) **cytokinin** (d) GA3
60. Which of the following is mainly concerned with root initiation?
(a) kinetin (b) GA3 (c) **IAA** (d) ABA
61. The photoperiodic stimulus perceived by
(a) **leaves** (b) buds (c) meristem (d) flowers
62. Garner and Allard are credited for the discovery of
(a) phototropism (b) **photoperiodism** (c) photorespiration (d) photomorphogenesis
63. Which of the following is absorbed by phytochrome?
(a) Red Light (b) **Far – Red Light** (c) Blue Light (d) All the above
64. The hormone produced as a result of photoperiodic induction is known as
(a) cytokinins (b) **florigen** (c) vernalin (d) auxin
65. The inhibitory effect of red light on flowering during critical dark period in short day plants can be overcome by
(a) **far-red light** (b) blue light (c) infra- red rays (d) ultraviolet rays
66. The inhibition of flowering in SDPs by interruption of dark period with red light and its reversal by far- red light involves the operation of
(a) cryptochrome (b) florigen (c) vernalin (d) **phytochrome**
67. P_R form of phytochrome is
(a) red in colour (b) **blue in colour** (c) green in colour (d) black in colour
68. Dark period is critical in
(a) **short day plants** (b) long day plants (c) day neutral plants (d) all the above
69. Example of a long day plant is
(a) *Xanthium pennsylvanum* (b) Bioloxi variety of soybean
(d) Maryland Mammoth variety of tobacco (d) ***Hyoscyamus niger***
70. Which type of phytochrome predominates in etiolated seedlings?
(a) **Type I** (b) Type II (c) Both Type I and II (d) Type III

71. Vernalization is also called as
(a) springification (b) yarovization (c) chilling effect (d) **all of these**
72. The hormone which stimulates the flowering in vernalized plant is
(a) florigen (b) **vernalin** (c) cytokinin (d) gibberellins
73. Vernalization is
(a) growth curve related to light
(b) effect of photoperiods on plant growth
(c) **induction to flower by low temperature**
(d) diurnal photoperiodicity
74. In which of the following, rate of growth slows down and comes to steady stage
(a) lag phase (b) log phase (c) exponential phase (d) **stationary phase**
75. Photoperiodism is associated with synthesis of
(a) vernalin (b) colchicine (c) abscisic acid (d) **florigen**
76. The type of germination in which cotyledons come above the ground is called as
(a) **epigeal** (b) hypogeal (c) viviparous (d) oviparous
77. Longevity of seed can be prolonged by keeping them at
(a) dry condition and low temperature (b) **humidity of low temperature**
(c) under aerated condition (d) high temperature
78. The plant which needs light period shorter than critical period is called
(a) **SDP** (b) LDP (c) DNP (d) SLDP

Section B

UNIT I

1. What are tap roots? Give examples
2. State the main functions of stem
3. Explain the main parts of leaf with diagram
4. What are the functions of leaf?
5. Name the modification of leaf for climbing
6. Where does fibrous root arise from? Give examples
7. What is adventitious root?
8. What are stilt roots?

9. What is the use of pneumatophores?
10. What are the woody pointed structures seen on citrus stem called?
11. How is the stem modified in *Opuntia*?
12. What is the main function of petiole?
13. Define phyllotaxy.
14. Define venation?
15. What is Simple leaf?
16. What is whorled phyllotaxy?
17. Name any two modification of leaf
18. What is cyathium inflorescence?
19. What is gamosepalous ?
20. What is an actinomorphic flower?
21. Name the parts of carpel
22. Name any four types of placentation
23. Define aestivation.
24. What is a carpel? Name its parts
25. Differentiate between racemose and cymose inflorescence

UNIT II

1. Write the objectives of classification of plants
2. What are the defects of artificial system of classification?
3. What are the aims of classification ?
4. Write any two merits of Bentham and Hooker's system of classification
5. Write any two de merits of Bentham and Hooker's system of classification
6. Write short notes on Carolus Linnaeus
7. Define thalamiflorae
8. Write a note on Bentham and Hooker.
9. Define hemicyclic flower
10. Define cauliflory with an example
11. Comment on aggregate fruit of *Polyalthia*
12. Comment on aggregate fruit of *Annona*

13. What is polypetalae?
14. Comment on hesperidium.
15. What is obdiplostemonous condition?
16. Define ascendingly imbricate aestivation.
17. Write short notes on tetradynamous stamens

UNIT III

1. Mention any two medicinal yielding plants in Asclepidaceae
2. Assign the genus *Calotropis* to its systematic position
3. Assign the genus *Adhatoda* to its systematic position
4. Write floral formula of *Calotropis*
5. Comment on monochlamydeae.
6. What is cladode? Give an example.
7. Mention any two types of inflorescence in Euphorbiaceae.
8. Assigning to its respective family point out features of morphological interest in *Euphorbia tirucalli*
9. Give the botanical name and family for wheat and maize
10. Comment on spikelet with reference to Poaceae
11. Comment on spadix

UNIT IV

1. Imbibition
2. Osmotic pressure.
3. Distinguish between apoplast and symplast
4. Transpiration.
5. Diffusion pressure deficit
6. Osmosis
7. Plasmolysis
8. Deplasmolysis
9. Turgor Pressure
10. Gravitational water
11. Transpiration

12. Transpiration pull
13. Water Potential
14. Root pressure
15. Active absorption of water

UNIT V

1. Quantasomes
2. Accessory pigments
3. Warburg's effect
4. Redox potential
5. Composition of pigment system I and II
6. Absorption spectrum
7. Red drop
8. Quantum yield
9. Quantum requirement
10. Kranz anatomy
11. Phases of growth
12. Plant growth regulators
13. Photoperiodism
14. Scarification
15. Apical dominance
16. 2-4 D
17. Foolish seedling of rice
18. Richmond-Lang effect
19. Vernalization
20. Long day plants
21. Short day plants
22. Seed dormancy
23. Phytochrome
24. Floral hormone
25. Quiescent

SECTION C

Answer in about 200 words:

UNIT -I

1. Describe special type of inflorescence with suitable diagrams.
2. Write about the types of racemose inflorescence.
3. Describe adventitious root modification with example.
4. Give an account of dry indehiscent fruits.
5. Give an account of tap root modification.
6. Write notes on aerial stem modification.
7. Differentiate phyllode and phylloclade with examples.
8. Write about different types of polypetalous corolla.
9. Give an account of cymose inflorescence.
10. With suitable examples explain simple fleshy fruits.
11. Describe the parts of leaf with neat labelled diagram
12. Describe the types of flowers based on position of ovary and position of floral parts on thalamus
13. Define placentation. Describe any four types of placentation
14. Define phyllotaxy? Describe the three types give and examples
15. What is compound leaf? Explain two types of compound leaf with diagram.

UNIT II

1. What are the merits and demerits of Bentham and Hooker's classification
2. Distinguish between natural and artificial system of classification
3. Explain the following terms with suitable examples.
a.inferae, b. heteromerae, c. bicarpellatae
4. Comment upon the following
a) thalamifloare b) disciflorae c)calcyflorae
5. How Bentham and Hooker classified monocotyledons? Explain
6. Write notes on
a) polypetalae b) gamopetalae c) monochlamydae
7. Describe the characteristic features of Rutaceae.
8. Draw the longitudinal section and give floral diagram of a typical flower of Annonaceae.

9. Enumerate the floral characters of Caesalpiniaceae.
10. Write notes on fruits of Annonaceae.
11. Write notes on
 - Hesperidium
 - Phyllode
12. List out the primitive characters of Annonaceae
13. Write notes on Aggregate of Berries.
14. Write notes on salient features of the family Annonaceae.
15. Give an account on economically important plants of Rutaceae and their uses.
12. Write notes on a) Tetradynamous stamens
 - b) Hemicyclic flower

UNIT III

1. Describe the vegetative features of Rubiaceae and mention any two economically useful plants.
2. Describe the floral structure of *Calotropis* and explain the pollination mechanism in it.
3. Give an account on gynoecium of Asclepidaceae.
4. Write notes on Stipules of Rubiaceae.
5. Explain the spikelet of Poaceae.
6. Enumerate the useful plants of Euphorbiaceae and their uses.
7. Give an account on floral characters of Rubiaceae.
8. Enumerate the economic importance of Poaceae
9. Describe the floral variations in Poaceae.

UNIT IV

1. List out the significance of osmosis in plants
2. What is transpiration? Write its significance in plant life.
3. Write the types of transpiration in plants.
4. Transpiration is often described as a necessary evil. How far do you agree with this statement?
5. Differentiate between active absorption and passive absorption

6. write notes on soil water
7. Explain briefly the vital theory of ascent of sap.
8. Write short notes on plasmolysis
9. Reason out why grape fruit burst when they are kept in the ordinary water.
10. Differentiate between osmotic pressure and turgour pressure.

UNIT V

1. Write notes on Emerson enhancement effect
2. Outline Hatch and Slack pathway.
3. Point out the differences between cyclic and non – cyclic photophosphorylation
4. Compare and contrast C_3 and C_4 cycle.
5. Draw a labeled diagram of chloroplast and describe its role in photosynthesis.
6. List out the significance of C_4 cycle.
7. Mention the characteristics of C_4 plants.
8. What do you understand by cyclic photophosphorylation?
10. Write notes on two photo systems.
11. Write the role of photosynthetic pigments in higher plants.
9. Write short note on Grand period of growth
10. What are auxins? Give their physiological roles in higher plants
11. What are the physiological roles of gibberellins?
12. Discuss the practical applications of auxin.
13. Discuss the role of cytokinins in the leaf senescence.
14. Differentiate between auxins and cytokinins
15. Describe the role of light in flowering
16. Differentiate between short day plants and long day plants
17. Explain the importance of photoperiodism
18. What is photoperiodism? Discuss the phenomenon with reference to short day plants.
19. Write note on photoperiodic induction
20. What is phytochrome? Differentiate between phytochrome (R) and phytochrome (FR)
21. What are the various theories explaining the mechanism of vernalization in plants?
Explain.
22. Explain the practical applications of vernalization

23. Mention the various factors causing dormancy of seed.
24. Explain the methods of breaking seed dormancy.

SECTION D

Answer in about 400 words:

UNIT –I

1. Describe adventitious root modification with examples.
2. Write an account on simple and compound fleshy fruits you have studied.
3. Describe the special type of inflorescence with examples.
4. Write an essay on racemose type of inflorescence.
5. Give an account on aerial stem modifications.
6. Write an essay on underground stem modifications.
7. What are the modifications seen in leaf? Explain with suitable examples.
8. Write notes on
 - a) Tendril climbers.
 - b) Fusiform root.
 - c) Compound umbell.
9. Write an essay on androecium of flowers.
10. Write an essay on different types of corolla.

UNIT II

1. Give the classification of Bentham and Hooker. Mention its merits and demerits.
2. Write an essay on the classes of angiosperms in Bentham and Hooker's classification.
3. Describe the family characters and economic importance of Caesalpiniaceae.
4. Explain the floral characters of Rutaceae and add a note on its economic importance.
5. Give an account on floral characters of Annonaceae and add a note on its primitive characters.
6. Write notes on
 - a) aggregate of berries.
 - b) ascendingly imbricate aestivation.
 - c) androecium of Caesalpinaceae.

7. Write an essay on the family characters of Annonaceae.
8. Compare Caesalpiniaceae with Annonaceae.
9. Write notes on
 - a) fruits of Rutaceae.

UNIT III

1. Write an essay on family characters and economic importance of Euphorbiaceae.
2. Describe the diagnostic features of Poaceae and give the botanical name of any four economically important plants and their uses.
3. Compare the inflorescence of Euphorbiaceae and Poaceae
4. Write an essay on floral characters of Euphorbiaceae and add a note on its economic importance.
12. Write notes on
 - (b) cyathium
 - (c) spikelet
 - (d) spadix.

UNIT IV

1. Discuss various physical processes involved in the movement of solids, liquids and gases in and out of the cells in plants.
2. Explain the phenomenon of plasmolysis. How can you make use of it in determining the osmotic pressure of cell sap?
3. What is DPD? Discuss it with relation to plant cell.
4. What is water potential? How is it used to explain the osmotic relations of plant cells?
5. Describe the mechanism of water absorption in higher plants
6. Justify Dixon and Jolly's theory of ascent of sap in trees.
7. Discuss the involvement of K^+ and H^+ in stomatal opening and closing.
8. Explain glycolate metabolism theory on stomatal movement.
9. Discuss the starch – glucose interconversion theory which explain the mechanism of stomatal movement.
10. Write an essay on stomata and their role in transpiration.

UNIT V

1. Give a critical account of the various factors influencing photosynthesis
2. Give an account of the mechanism by which plants convert CO_2 in to carbohydrates.
3. Describe cyclic and non- cyclic electron transport.
4. What is dark reaction in photosynthesis? How does it take place in C_3 plants?
5. Explain how CO_2 is converted into sugars by sugarcane plant?
6. Write an essay on light reaction of photosynthesis in detail.
7. Typical grasses are more productive – Justify.
8. Define photophosphorylation. Explain the process in detail. How does it differ from oxidative phosphorylation?
9. What do you understand by growth in plants? How it is measured.
10. What are phyto hormones? Give a comparative account of the physiological effects of auxins, gibberellins and cytokinins in plants
11. What are gibberellins? How are they synthesized in plants? Discuss their physiological role in higher plants.
12. Describe the physiological effects and practical application of auxins.
13. What is phytochrome? How does it mediate the phytomorphogenetic response? Describe its role in flowering.
14. What are cytokinins? Describe their physiological effect and practical applications.
15. Describe the Phenomenon of vernalization in higher plants and add a note on its practical utility.
16. What is photoperiodism? Explain the physiology of photoperiodism in plants.
17. Explain physiological and biochemical changes taking place during seed germination.
18. Write an essay on seed dormancy.

St. Mary's College (Autonomous) – Thoothukudi

Non-Major Elective

Food Technology

Sub.code: 21UBON41

(for those who joined in July 2021 and after)

Section A

Unit I

1. Yellow coloured vegetables are rich source
 - (a) Vitamin A
 - (b) Vitamin B
 - (c) **Vitamin C**
 - (d) Vitamin D
2. Vitamin which is not found in Fruits and Vegetables is :
 - (a) Vitamin A
 - (b) Vitamin B1
 - (c) Vitamin B6
 - (d) **Vitamin B12**
3. Vitamin D is chemically known as
 - (a) Retinol
 - (b) Cabalanin
 - (c) **Calciferol**
 - (d) Tocopherol
4. Vegetables from the fruit classification include:
 - (a) **Pumpkin, cucumber, tomato**
 - (b) Tomato, leek, kohlrabi
 - (c) Leek, tomato, eggplant
 - (d) Eggplant, okra, rhubarb
6. Why should vegetables and fruits should only be washed immediately prior to preparation?
 - (a) There is less chance of bruising the food
 - (b) **Food is more likely to spoil if stored wet**
 - (c) Washing too soon increases workload
 - (d) Dirt helps protect the food during storage
8. Red colour of carrot is due to:
 - (a) Lycopene
 - (b) Anthocyanin
 - (c) **Carotene**
 - (d) Quercetin
9. Cruciferous vegetables form rich sources of.....
 - (a) **Glucosinolates**
 - (b) Indole acetic acid
 - (c) Carcinogenic
 - (d) Indoles
10. Bacteria that require a higher temperature for their growth
 - (a) **Thermophiles**
 - (b) Mesophiles
 - (c) Psychrophiles
 - (d) both a and b
11. Green leafy vegetables are good source of
 - (a) **vitamins and minerals**
 - (b) fat
 - (c) carbohydrate
 - (d) protein
12. Which one of the following is a low respiring vegetable?
 - (a) potato
 - (b) **brocoli**
 - (c) sweet corn
 - (d) cabbage
13. Vegetables are subjected to drying after:
 - (a) Sulfuring
 - (b) Sulphitation
 - (c) **Blanching**
 - (d) None of these
14. Benzoic Acid is most effective to:
 - (a) Mould
 - (b) **Yeast**
 - (c) Bacteria
 - (d) Virus
15. Vacuum cooling is most suitable for:
 - (a) Fruits
 - (b) Tubers
 - (c) **Leafy vegetables**
 - (d) None of these
16. Storage of fruits and vegetables, where the gas composition is changed from that of normal atmosphere and a precise control is maintained over the atmospheric composition during storage period is known as:
 - (a) **Controlled Atmospheric (CA) storage**
 - (b) Modified Atmospheric (MA) storage
 - (c) Cold storage
 - (d) Hypobaric storage

17. Some vegetables are scored and salted in order to leach out bitterness, this process is known as:
 (a) Refreshing (b) Curing (c) Blanching (d) **Disgorging**
18. Why should strong-flavoured vegetables be blanched before braising?
 (a) To stop discolouration (b) **To remove the bitter taste** (c) To preserve the flavor
 (d) To present better
19. Bacteria can grow and develop rapidly in
 (a) 30 ° C and 40 ° C (b) **20 ° C and 53° C** (c) 10 ° C and 15 ° C (d) 10 ° C and 20° C
20. Name the toxic material produced by the fungus
 (a) **Mycotoxin** (b) Zymase (c) riboflavin (d) glucosinolate
21. Name the antioxidant present in Citrus peel
 (a) Indoles (b) glucosinolate (c) **limnoids** (d) carotein
22. Enzymes are inactivated by the temperature above
 (a) 50°C (b) **80°C** (c) 60°C (d) 70°C
23. Lye peeling is done at a temperature of
 (a) 75°C (b) 84°C (c) **93°C** (d) 105°C
23. What is the main cause of wilting in fresh vegetables?
 (a) **Loss of moisture** (b) Incorrect temperature (c) Careful handling (d) Incorrect storage
24. Tomato fruits for canning are harvested at:
 (a) Mature green stage (b) **Red ripe stage** (c) Immature green stage (d) Half-ripe/pink stage
25. Potatoes that have greening on their skins indicates?
 (a) They are poisonous (b) They are old
 (c) **They have been stored poorly** (d) They are young
26. Which fresh vegetables do not require refrigeration?
 (a) Tomato, potato, cauliflower and carrots
 (b) Broccoli, eggplant, swede, turnip and sweet corn
 (c) **Pumpkin, potato, sweet potato and onions**
 (d) Carrot, pumpkin, green beans and onions
27. Mango fruits can be best stored at a temperature of
 (a) **8°C** (b) 16°C (c) -4°C (d) 0°C
28. Fruits and vegetables are kept in boiling water / live steam to remove the skin during canning. This is known as
 (a) **Blanching** (b) Syruping (c) Exhausting (d) Brining
29. Which one of the following factors does not affect the heat penetration in the can
 (a) Colloids (b) Sugar and salt concentration (c) Size of the can
 (d) **Colour of the content**
30. Hot lye solution is a solution of
 (a) Sodium bicarbonate (b) **Caustic soda** (c) Sodium chloride (d) Sodium sulphate
31. Name the process developed by the central food technological research institute for fumigation
 (a) **Durofume** (b) Nitrofume (c) Renifume (d) Formofume

Unit II

1. What are the ingredients that can inhibit the formation of the gluten structure, resulting in bread that does not rise well?
(a) Whole wheat flour (b) Rye flour (c) salt (d) **all of the above**
2. Liquid is an important part of breadmaking. What percentage of flour weighs as much as the liquids?
(a) 40-60 % (b) 60-69 % (c) **69-74 %** (d) 74-88 %
3. At what temperature is yeast best active?
(a) 30-50 F (b) **70-90 F** (c) 110-130 F (d) 10- 15 F
4. At what temperature is yeast killed?
(a) above 100 F (b) above 110 F (c) **above 120 F** (d) 90 F
5. Which ingredient adds tenderness and fineness of texture as well helps retain moisture?
(a) salt and baking soda (b) **sugar and butter** (c) dry milk and baking soda (d) baking soda
6. What is the correct method to check for cake doneness?
(a) **insert a tooth pick or cake tester** (b) when the centre of the cake is pressed it does not bring back (c) insert a spoon (d) top sinks in the middle
7. What ingredient makes an angel food cake rise?
(a) baking soda (b) **beaten egg whites** (c) baking powder (d) yeast
8. Angel food cake or Sponge cake are leavened by?
(a) shortening (b) egg yolk (c) **egg foam** (d) baking powder
9. Which of the following is true about creaming fat for cakes?
(a) function is to entrap air (b) creaming mixes sugar with the fat (c) this functions as leavening (d) **all of the above**
10. Which of the following pan is recommended for a foam cake?
(a) round cake pans (b) loaf cake pan (c) pie pan (d) **tube pan**
11. The function of a surfactant added to shortening is:
(a) to aid in blending (b) to aid in emulsifying (c) to leaven (d) **a & b**
12. Which answers below is not about the characteristics of Butter or Shortened Cakes?
(a) This cake is contained high ratio of shortening or solid fat (b) This cake is moist and tender (c) This cake has a delicate texture (d) **This cake is contained low ratio of shortening or solid fat**

Unit III

1. The predominant bacteria of milk that produces lactic acid, which is responsible for the sour taste of milk?
(a) **Streptococcus** (b) Psychrophilic (c) Coliform (d) all the above
2. What is the principal carbohydrate in the milks of all mammals?
(a) **Lactose** (b) Glucose (c) Sucrose (d) Fructose
3. Soft fats in milk fat are:-
(a) Lauric & Stearic (b) Capric & Lauric (c) **Oleic & Butyric** (d) Oleic & Lauric
4. ____ is a milk process that makes milk more easily digested by those with a sensitive digestive system.
(a) Ionization (b) Evaporation (c) Pasteurization (d) **Homogenization**
5. Temperature used in UHT treatment is:-
(a) 90-100 °C (b) 100-120 °C (c) 120-125 °C (d) **130-140 °C**
6. Tests for proper pasteurization are based on the activity of which enzyme?

- (a) Lactase (b) Diastase (c) **Phosphatase** (d) Catalase
7. Butter milk is a fluid product resulting from the manufacture of?
(a) Cheese (b) Yogurt (c) Ice cream (d) **Butter**
8. Legal butter must contain at least what percentage of fat?
(a) 70 % (b) **80 %** (c) 90 % (d) 95 %
9. The high nutritive value of cheese is due to:-
(a) High mineral contents (b) **High protein contents** (c) Taste & flavor (d) All of the above
10. Food value of ice cream depends to a large extent on its?
(a) Flavor (b) Volume (c) **Composition** (d) None of the above
11. Which of the following is obtained by fermenting milk?
(a) Gundruk (b) **Cheese** (c) Sinki (d) Kombucha
12. The large holes in the cheese are due to _____
(a) Oxygen production (b) **Carbon dioxide production** (c) Sulfur dioxide release
(d) Lead dioxide release

Unit IV

1. Fruits from the vine classification include:
(a) Fig, lychee, orange (b) Grape, banana, raspberry (c) Lychee, kiwifruit, passion fruit
(d) **Passion fruit, kiwifruit, watermelon**
2. Which of the following plant hormone is considered as ripen
(a) Cytokinin (b) GA3 (c) **Ethylene** (d) IAA
3. Saccharine cannot be used in jam making. What is the reason?
(a) It does not have preserving property (b) **It will not form a gel**
(c) It does not have sweet taste (d) Both a and b
4. Name the instrument used to test the setting of jam
(a) Radiometer (b) Bubblemeter (c) **Refractometer** (d) Lactometer
5. Find out the thickening agent for ketchup
(a) Saccharine (b) **Pectin** (c) Starch (d) Cellulose
6. Albinism is an important physiological disorder of:
(a) plum (b) peach (c) **strawberry** (d) cherry
7. Which of the following uses the fruit ingredient and not the fruit juice?
(a) **Jam** (b) Jelly (c) Squash (d) Neither of the mentioned
8. Which of the following in a jelly/ jam is responsible for the formation of gel?
(a) **Pectin** (b) Acid (c) Water (d) Sugar
9. Which acid is pectin made from?
(a) Pectic acid (b) **Polygalacturonic acid** (c) Pectic & Polygalacturonic acid
(d) Neither of the mentioned
10. Which of the following holds untrue with respect to jam making?
(a) Boiling water to concentrate the mixture is an important step
(b) The fruit is heated to soften it, extract pectin and then boiled rapidly to increase sugar content to about 70%
(c) High methoxyl pectin is used in jam and low methoxyl in gelling agents in milk products (d) **All of the above**
11. Statement 1: Jam cannot be made using pulp of more than one fruit.
Statement 2: Acid and Pectin content is more in over-ripe fruits than in under-ripe fruits.
(a) True, False (b) True, True (c) **False, False** (d) False, True

Unit V

1. Traditionally millets are pounded using _____

- (a) Large scale miller (b) Mortar and Pestle (c) commercial mixer grinder (d) All the above.
2. Finger millets are commonly known as _____
 (a) Jowar (b) Bajra (c) Sorghum (d) **Ragi**
3. Barnyard millet is also commonly known as what in India?
 (a) Kangni (b) **Sanwa** (c) Kodon (d) Chena
4. Which of the following states is the largest producer of Bajra millet in India?
 (a) **Rajasthan** (b) Maharashtra (c) Kerala (d) Assam
5. Which state is the largest producer of Proso millet in India?
 (a) Karnataka (b) Punjab (c) Kerala (d) **Madhya Pradesh**
6. _____ in millet can help lower cholesterol
 (a) Riboflavin (b) Vitamin C (c) **Niacin** (d) Vitamin E
7. What is the botanical name of finger millet?
 (a) Panicummiliaceum (b) Echinochloafrumentacea (c) Sorghum bicolor
 (d) Eleusinecoracana
8. Millets crop belong to a family?
 (a) **Poaceae** (b) Leguminosae (c) Cruciferae (d) Fabaceae
9. When compared with other grains, millets have a high reputation because
 (a) It is susceptible to damage (b) It attracts pests easily (c) **less susceptible to insect attack** (d) Requires large storage space
10. Which of the following millets contains the highest calcium and mineral content?
 (a) **Finger millet** (b) Proso millet (c) Foxtail millet (d) Little millet

Section B

Unit I

1. Mention any four fruits rich in vitamin C.
2. Vegetables and fruits are functional foods- Justify.
3. Mention any two factors affecting storage life of vegetables.
4. Write any four green-leafy vegetables.
5. Name any two roots and tubers.
6. Write the name of any four berries.

7. Mention any two high respiring vegetables.
8. Give any two low respiring vegetables.
9. Write any two roles of vegetables in cookery.
10. List any two fruits and their nutritive value.
11. Define food preservation
12. What is food spoilage?
13. Preservatives-Define.
14. What does mean refrigeration?
15. Comment on fermentation.
16. Write any two importance of food preservation
17. Mention the causes of food spoilage.
18. List the defects of chemical preservation
19. Write any four chemical preservatives
20. Comment on citric acid.
21. What is canning?
22. What is blanching?
23. Comment on canning of bean
24. What is lye peeling?
25. Write any four fruits suitable for canning.
26. Write about any two factors that affect the penetration of heat in the can.
27. Give any two advantages of exhausting.
28. What are the three types of cookers used in canning?
29. What are the advantages of tin containers?
30. Give any two disadvantages glass containers
31. Comment on lacquering.
32. Define freeze drying.
33. Comment on foam mat drying
34. Give any two limitations of drying.
35. Mention any two advantages of dehydration

Unit II

1. List the different ingredients used in bread making.
2. Mention the good characteristics of good bread?
3. Write any three equipments used in the baking industry.
4. What is the role of yeast in bread making?

5. Define icing.
6. What are the different types of icing?
7. What do you understand by emulsified type of shortening?
8. Mention the role of flour in cake making.
9. What is shortening?
10. What is gluten-free flour?
11. What is whipping?
12. What factors affect the quality of cake?
13. List out the internal characteristics of the cake.
14. List out the internal characters of the cake.

Unit III

1. What do you mean by curing cheese?
2. What are the uses of butter?
3. What is churning?
4. Draw the flow chart on the preparation of butter
5. Draw the flow chart of the preparation of ghee
6. What is pasteurization?
7. Define the HTST process.
8. Define UHT Process,
9. List out the different types of ice creams.

Unit IV

1. What is the purpose of adding thickening agents to tomato ketchup
2. Write the difference between thick and thin sauce.
3. Define fruit juice.
4. Write any two chemical preservatives used in fruit juices.
5. What is the principle behind jam preparation?
6. Mention any four fruits suitable for jam preparation
7. Write about two tests for the setting of the jam.
8. What is squash?
9. What are the different forms of fruit juice?
10. Mention any four nutritive values of fruits?
11. List out the fruit-spoiling organism.
12. Draw a flow chart of the process for making fruit squashes

Unit V

1. List the different ingredients used in millet laddu making.
2. Write notes on decortication.

3. List the health benefits of millet.
4. Write the different types of millet and their nutritive value.
5. list out the different ways to incorporate millet into your diet.
6. Write notes on hand pound method of millet processing.
7. Write notes on the machine method of millet processing.
8. Draw the flow chart of the preparation of millet bread.
9. How to prepare millet porridge?
10. List the different ingredients used in millet roti making.

Section C

Unit I

1. Write notes on the storage of vegetables.
2. List out the nutritive value of roots and tubers.
3. Give an account on the nutritive value of green leafy vegetables.
4. List out the roles of vegetables in cookery.
5. Describe the factors affecting the storage life of vegetables.
6. Give an account of the causes of food spoilage.
7. Write notes on enzymatic spoilage of food.
8. Explain the factors which affect the refrigeration of food.
9. Write briefly about types of freezing in food preservation.
10. What are the effects of freezing on the nutritive value of foods?
11. Describe any three chemical preservatives.
12. Describe the spoilage of food by bacteria.
13. Discuss the spoilage of food caused by moulds and yeast
14. Write short notes on the spoilage of food by yeast.
15. Write an essay on food preservation
16. Discuss the chemical preservation of food
17. Write notes on microbial spoilage.
18. Explain the principles of food preservation with examples.
19. Describe any two physical methods of food preservation in detail.
20. List out the advantages of blanching and scalding.
21. Write notes on (i) syruiping (ii) brining
22. Describe the methods of peeling
23. Write the procedure for the preparation of any one canned vegetable

24. Write notes on different methods of washing in the canning procedure

Unit II

1. Explain the role of ingredients in bread making.
2. What is cake icing? Explain the different types of cake icing.
3. Explain the characteristics of good bread.
4. Enlist the various bread faults that occur in bread making and explain.
5. Explain the various equipment used in the baking industry.
6. Explain the various bread-making methods used in the bakery.

Unit III

1. What is cheese? Explain how it is prepared.
2. How butter is prepared? and mention its uses.
3. Draw the flow chart on the preparation of butter and explain.
4. Draw the flow chart of the preparation of ghee and explain
5. Explain the process of pasteurization.
6. Write an essay on the HTST process.
7. Explain the UHT Process.
8. List out the different types of ice creams and the preparation of ice creams.

Unit IV

1. Write notes on fruit composition.
2. Describe the preparation of lemon squash.
3. Write short notes on tomato sauce.
4. Describe the preparation of mixed fruit jam
5. Comment on the preparation of pineapple juice
6. Write notes on the preparation of tomato jam.
7. Write any one squash preparation you have studied.
8. Explain the method of preparation of tomato ketchup.
9. Enumerate the composition and nutritive value of fruits with examples.

Unit V

1. Write the procedure for millet roti preparation.
2. Write the procedure for millet laddu preparation.
3. Explain the different ways to incorporate millet into diet.
4. Discuss the health benefits of millets.
5. Enumerate the nutritive value of millets.

6. Write notes on different types of millets;
7. Write notes on the preparation of millet porridge.
8. Explain the hand-pound method of millet processing.
9. Explain the hand machine method of millet processing.
10. Explain the method of preparation of millet bread.

Section D

Unit I

1. Write an essay on the factors affecting the storage life of vegetables.
2. Write in detail about the vegetable spoilage.
3. Explain the different types of vegetable preservation.
4. Write an essay on the process and preparation of pickles.
5. Outline the steps involved in the canning process of vegetable preservation. Write notes on The canning of carrot.
6. Outline the different methods of drying process of vegetable and fruit preservation. Write notes on the drying of mango.
7. Explain the preparation of Mixed vegetable soup.
8. Discuss the procedure for tomato soup preparation.
9. Explain the different chemical preservatives used for the preservation of vegetables and fruits.
10. Explain the procedure for mango pickle preparation

Unit II

1. Write an essay on the ingredients and process of making bread.
2. Explain the equipment used in the bakery for bread and cake making.
3. Discuss the corrective measures for making a cake.
4. Discuss the different types of icings.
5. Simplify the general process of cake baking (any one type) and enlist the ingredients, tools and instruments used.
6. Predict the quality characteristics and corrective measures of cake preparation.

Unit III

1. How do different types of sterilization processes of milk increase the shelf life of the milk?
Discuss.
2. Explain the preparation of butter in detail.

3. How paneer is prepared? and mention its uses.
4. Discuss elaborately the preparation of ghee.
5. Elaborate on general process of preparation of ice cream. Write the procedure for Vanilla ice cream preparation.
6. Discuss the pasteurization process and its importance in the dairy industry

Unit IV

1. Explain the preparation of lemon squash.
2. Write an essay on tomato sauce preparation.
3. Describe the preparation of mixed fruit jam.
4. Discuss the method of lemon squash preparation.
5. Comment on the preparation of pineapple juice
6. Describe the preparation of grape juice
7. Discuss in detail the composition and nutritive value of fruits with examples.
8. Explain the different factors causing fruit spoilage.

Unit V

1. Explain the procedure for millet roti preparation.
2. Discuss the procedure for millet laddu preparation.
3. Explain the different ways to incorporate millet into diet.
4. Explain the health benefits of millet.
5. Enumerate the nutritive value of millets.
6. Write notes on different types of millets;
7. Explain the preparation of millet porridge.
8. Explain the hand-pound method of millet processing.
9. Explain the machine method of millet processing.
10. Explain the method of preparation of millet bread

III B. Sc BOTANY
Semester V
Common Core – Biotechnology Sub Code: 21UBCC51
QUESTION BANK

Section - A

Unit-I

1. Which among the following is not an application of Biotechnology in chemical industry?
a. Production of Ethanol b. Production of Acetone
c. Production of Enzymes d. **Production of Golden rice**
2. Development of drug delivery systems is an application of Biotechnology in
a. Food Industry b. Agriculture c. **Medicine** d. Veterinary
3. Who is the founder of rDNA technology?
a. Boyer and Cohen b. Paul Berg c. Watson d. Eli Lilli
4. pBR 322 consists ofbase pairs
a. 4052 b. **4363** c. 4039 d. 4000
5. _____ is a plasmid carrying the cos site of a λ phage DNA
a. pBR 322 b. **cosmid** c. M13 bacteriophage d. Ti plasmid
6. _____ is a hybrid DNA formed by the joining of a plasmid and a λ phage DNA carrying a cos site
a. phasmid b. plasmid c. **cosmid** d. cos cell
7.deals with the computer based sequencing of the genome of an organism
a. **Genomics** b. Proteomics c. Bioinformatics d. Bioethics
8. The single stranded extensions of λ DNA are complementary to each other and consist of nucleotides
a. **12** b. 11 c. 13 d. 14
9. SV 40 consists ofkilo base pairs
a. **5.2** b. 8.5 c. 6.4 d. 9.3
10. Lambda phage is avirus
a. animal virus b. **bacterial virus** c. foreign gene d. retro virus
11. The cloning vector containing suitable expression signals for maximum gene expression is called
a. strong promoter b. TTGACA c. **expression vector** d. YAC
12. DNA sequence that moves from one place to another within a genome is called
a. SV 40 b. M 13 c. **transposon** d. expression vectors
13. In recombinant DNA technology the term “chemical weapon” refers to
a. ligase b. **restriction endonuclease** c. S1 nuclease d. isoschizomer.
14. The name biotechnology was coined by _____ in 1917
a. **Karl Ereky** b. M.D.Trevan c. Antony Lewis d. Zobel
15. _____ are small circular double stranded extra chromosomal DNA present in bacterial cell
a. cosmid b. **plasmid** c. M13 vector d. phasmid
16. _____ is called as fertility plasmid
a. **F-plasmid** b. conjugation plasmid c. R-plasmid d. CoI plasmid
17. The essential region of gene map of X DNA has _____ genes
a. **37** b. 54 c. 36 d. 60

18. Charon phage is an example for _____ vector
 a. replacement b. **insertion** c. substitution d. non-replacement
19. The bacterium with prophage is called _____
 a. **lysogenic** b. progenic c. lytic d. pregene
20. M13 is a _____ bacteriophage that infects *E.coli*
 a. coiled b. **filamentous** c. mono layered d. non-filamentous
21. The DNA of Lambda phage consists of _____ base pairs
 a. **48,502** b. 48,512 c. 48,532 d. 48,535
22. The copy number of pBR322 can be increased upto 3000 by adding _____ to the culture
 a. colin b. **chloremphenicol** c. adenine d. phenicol
23. Which part of the Ti-plasmid transmits during *Agrobacterium* infection?
 a. ori b. opine catabolism c. vir genes d. **T-DNA**
24. Which among the following is used in transient expression systems?
 a. Agrobacterium b. Tobamo virus c. CaMV d. **Gemini virus**
25. The enzyme that joins two DNA molecules
 a. Restriction endonuclease b. Peptidase c. **Ligase** d. Methylase
26. _____ are the extrachromosomal, self-replicating double stranded and circular DNA molecules.
 a. **plasmids** b. viral DNAs c. cosmids d. yeast
27. The DNA that carries the desired gene to the host is called
 a. **cloning vector** b. insertional inactivation c. cDNA d. marker
28. The probe DNA labelled with radioactive P 32 emits _____ particles.
 a. alpha b. **beta** c. delta d. gamma
29. Which among the following is a non-coding region of eukaryotic cells having tandem repeats of a sequence?
 a. **Satellite DNA** b. Primer c. Target region d. rDNA
30. In _____ process the nitrocellulose filter having DNA fragments is dried in between dry filter papers at high temperature.
 a. blotting b. hybridization c. **packing** d. microarray
31. The size of pBR322 vector is _____.
 a. 4363 kb b. **4363 bp** c. 4.363 bp d. 4563 kb.
32. _____ is not correct about an ideal plasmid vector.
 a. double stranded b. **big** c. presence of genetic marker d. small.
33. Which of the following entities of a plant contain their own genomes, distinct from the nucleus?
 a. Golgi apparatus b. Ribosome c. **Chloroplast** d. Mitochondra
34. What are problems associated with Gemini Virus?
 a. **Deletion and rearrangement** b. Size irregularities
 c. Infect only Monocot plants d. Low gene Expression
35. Which was the first plant used for cloning experiment?
 a. **Turnip** b. Potato c. Tomato d. Brinjal

Unit-II

1. Introductions of rDNA into cells by electricity is called
a. transfection b. **electroporation** c. microinjection d. cDNA
2. Selection of recombinants by the activity of the inserted gene is called
a. blue white selection b. **direct selection** c. insertional inactivation d. brown selection
3. The DNA that carries the desired gene to the host is called
a. **cloning vector** b. insertional inactivation c. cDNA d. marker
4. The enzyme that joins two DNA molecules
a. Restriction endonuclease b. Peptidase c. **Ligase** d. Methylase
5. The process of intake of DNA fragments added to the media by the bacteria is called as
a. **Transformation** b. transduction c. transfection d. microinjection
6. During transformation heat shock is given by heating the cells to _____.
a. 40°C b. **42°C** c. 50°C d. 100°C
7. The virus mediated gene transfer using bacteriophages is called as
a. Transformation b. **transduction** c. transfection d. microinjection
8. Chemical used for gene transfer methods _____.
a. **Calcium chloride** b. Sodium Chloride c. Calcium acetate d. Sodium acetate
9. Introduction of DNA by exposure to high voltage electric pulse is _____.
a. Transformation b. transduction c. transfection d. **electroporation**
10. The method widely used for transform in vitro animal cell culture that uses lipid vesicles or liposome
a. **Liposome mediated transformation** b. Microinjection
c. Transfection d. Transduction
11. Direct delivery of genes into the nucleus of the cells using microneedles is _____.
a. Liposome mediated transformation b. **Microinjection**
c. Transfection d. Transduction
13. Retroviral method of transgenesis employs
a. **mulv** b. TMV c. camv d. ALV
14. What do you call a set of cloned fragments that collectively represent the genome of a particular organism?
a. **DNA library** b. RNA library c. cDNA library d. Protein Library
15. Which library represents the transcripts of an organism?
a. Genomic DNA library b. RNA library c. **cDNA library** d. Protein Library
16. Which among the following is not a step in PCR
a. Denaturation b. Annealing c. Extension d. **Sublimation**
17. Which among the following is based on hybridization alone other than combined with blotting?
a. PCR b. Southern blotting c. Northern blotting d. Western blotting
18. Who invented the western blotting technique?
a. Stark b. Alwine c. Southern d. **Towbin**
19. Which among the following is a protein based blotting?
a. Southern blotting b. Northern blotting c. Eastern d. **Western blotting**
20. Western blotting is the technique for the detection of
a. specific DNA in a sample b. specific RNA in a sample c. **specific protein in a sample** d. specific glycolipid in a sample

21. Labelled antibodies are used to detect
 - a. detect the presence of particular DNA molecule in southern blotting
 - b. detect the presence of particular RNA molecule in southern blotting
 - c. detect the presence of particular protein molecule in southern blotting
 - d. detect the presence of particular protein molecule in western blotting**
22. Which of the following technique is suitable for identifying mRNA molecule in a sample
 - a. Western blotting
 - b. Southern blotting
 - c. Northern blotting**
 - d. Eastern blotting
23. Which of the following technique doesn't involve electrophoresis for the separation of biomolecules.
 - a. Dot blotting**
 - b. Southern blotting
 - c. Northern blotting
 - d. Western blotting
24. Probe is a
 - a. protein for detecting a specific DNA molecule
 - b. short piece of labelled DNA which are complementary to the nucleic acid strand to be detected
 - c. short piece of labelled DNA or RNA which are complementary to the nucleic acid strand to be detected**
 - d. None of them
25. Which of the following technique is most suitable for detecting the presence of a gene product
 - a. Dot blotting
 - b. Southern blotting
 - c. Plaque blotting**
 - d. Western blotting
26. Aminobenzyloxymethyl filter paper is commonly used for transfer in
 - a. Dot blotting
 - b. Southern blotting
 - c. Northern blotting**
 - d. Western blotting

Unit III

1. Who is known as the father of plant tissue culture?
 - a. Bonner
 - b. Laibach
 - c. Haberlandt
 - d. Gautheret
2. The pair of hormones required for a callus to differentiate are_____
 - a. Auxin and cytokinin**
 - b. Auxin and Absciscic acid
 - c. Cytokinin and gibberellin
 - d. Ethylene and Auxin
3. Which of the following is the main application of embryo culture?
 - a. Clonal propagation
 - b. Production of embryoid
 - c. Induction of somaclonal variations
 - d. Overcoming hybridisation barriers**
4. Haploid plants can be obtained from_____.
 - a. Anther culture**
 - b. Bud culture
 - c. Leaf culture
 - d. Root culture
5. In-plant tissue culture, the callus tissues are generated into a complete plantlet by altering the concentration_____
 - a. Sugars
 - b. Amino Acids
 - c. Hormones**
 - d. Vitamins and minerals
6. The solid tissue culture medium is different from liquid medium, because it contains_____
 - a. Amino acids**
 - b. Hormones
 - c. Vitamins and salts
 - d. Agar**
7. Who is the inventor of *in vitro* pollination?
 - a. Bojwani
 - b. Heberlandt
 - c. Maheshwari**
 - d. Murashigue
8. Which is the most common tissue culture medium?
 - a. White's medium
 - b. MS medium**
 - c. Gamborg's medium
 - d. Nitsch medium
9. Which one of the following lacks in plant suspension culture?
 - a. enrichment of macronutrients
 - b. maintenance of pH
 - c. solidification of the medium
 - d. supply of energy of growth

10. Which was the first plant used for successful anther culture?
a. **Ginkgo biloba** b. Oryza sativa c. Auracaria d. Tobacco
11. Which among the following is NOT an animal culture medium?
a. DMEM b. Hans F12 c. RPMI d. **White's medium**
12. Which among the following cell line is most suitable for suspension culture?
a. Hela b. MCF-7 c. **HL60** d. HEK
13. High Auxin:Cytokinin ratio favours
a. callus development b. root growth c. **shoot growth** d. flower development
14. The process of splitting the cells and distributed in new vessels for growing is termed as
a. passaging b. trypsinization c. inoculation d. incubation
15. Basal medium for animal culture lacks
a. nonessential amino acids b. vitamins c. inorganic salts d. **serum**
16. Embryonic stem cells are derived from the _____
a. **umbilical cells** b. cells of infant c. ovary d. human embryos
17. Identify the main constituents of culture media for animal cell growth
a. cytokines b. interferons
c. **glucose and glutamine** d. glucagon
18. Indicate the small part isolated from an animal for in vitro culturing in the specific medium
a. embryoid b. synthetic clone c. callus d. **explant**
19. Which of the following methods is used to culture anchorage dependent cells?
a. **monolayer culture** b. perfusion culture
c. suspension culture d. hybridoma technology
20. The primary source of human embryonic stem cells is
a. an unfertilized egg b. the trophoblast
c. **the inner cell mass of a blastocyst** d. the foetal tissue obtained from a post-implantation embryo
21. Embryonic stem cells are pluripotent. What does ' pluripotent' mean?
a. Ability of a single embryonic stem cell to develop into an adult stem cell
b. **Ability of a single embryonic stem cell to develop into many different cell types of a body**
c. Ability to induce cancer
d. Ability to heal different types of diseases
22. The grid culture technique was devised by
a. Fell and Robinson b. **Trowell** c. Arthur d. Alec Jeffrey
23. In the artificial synthesis of skin the proliferation and differentiation of keratinocytes is achieved by
a. HeLa cell b. **3T3 fibroblast** c. CHC d. pepsin
24. In the recreation of artificial cartilage _____ is required as the ground matrix in its architecture.
a. **collagen** b. myosin c. tubulin d. nestin

Unit IV

1. Pick from the following one chemical used to disinfect water.
a. **Chlorine** b. Washing soda c. Silica d. Coal
2. Which of the following is/are products of wastewater treatment?
a. Biogas b. Sludge c. **Both biogas and sludge** d. Aerator

3. Coliform bacteria in water is an indication of the presence of
 - a. radioactive wastes
 - b. excess fertilizer
 - c. decaying animals and plants
 - d. **human feces**
4. The activated sludge process is sometime referred as
 - a. **fluid bed biological oxidation system**
 - b. fixed bed biological oxidation system
 - c. turning bed biological oxidation system
 - d. none of the above
5. BOD stands for
 - a. **biochemical oxygen demand**
 - b. british oxygen demand
 - c. british oxygen depletion
 - d. biological oxygen depletion
6. This cleanup approach includes removal of groundwater or soil from its natural setting to permit for bioremediation
 - a. Bioaugmentation
 - b. in situ bioremediation
 - c. **ex situ bioremediation**
 - d. Phytoremediation
7. Bioremediation
 - a. usage of microbes to create new organisms
 - b. usage of anaerobic bacteria to create new antibiotics
 - c. **usage of microbes to destroy environmental pollutants**
 - d. usage of aerobic bacteria to create new vaccines
8. Ananda Chakraborty received the first U.S. patent for a GM entity. The entity was
 - a. The GloFish
 - b. a transgenic mouse expressing the growth hormone gene
 - c. Cloned *E.coli*
 - d. **Pseudomonas engineered to degrade petroleum**
9. _____ bacterium can withstand the dosage of radiation, which are several times higher than what human cells can tolerate
 - a. *Escherichia coli*
 - b. *Conus magus*
 - c. ***Deinococcus radiodurans***
 - d. *Staphylococcus aureus*
10. A process using microbes to convert toxic industrial wastes to less toxic or non-toxic compounds is
 - a. Precipitation
 - b. Complement fixation
 - c. Bioconversion
 - d. **Bioremediation**
11. In *Penicillium chrysogenum*, the maximum antibiotic production occurs during the _____.
 - a. **The second phase**
 - b. Third phase
 - c. First phase
 - d. In all three phases
12. At normal the pH value of penicillin remains in _____.
 - a. Solvent phase
 - b. Precipitates
 - c. **Aqueous phase**
 - d. Both (a) and (b)
13. Which of the following fermentation processes is used in the production of penicillin?
 - a. Aerobic fermentation followed by anaerobic fermentation
 - b. Anaerobic fermentation
 - c. **Aerobic fermentation**
 - d. Anaerobic fermentation followed by aerobic fermentation
14. After the fermentation process, penicillin is recovered as
 - a. Penicillin
 - b. Sodium penicillin
 - c. Calcium penicillin
 - d. **Potassium penicillin**
15. The penicillin produced at large scale by fermentation is
 - a. **Penicillin-G**
 - b. Penicillin-A
 - c. Penicillin-X
 - d. None of these
16. The strain of fungi used for large scale production of penicillin is,
 - a. ***Penicillium chrysogenum***
 - b. *Saccharomyces cerevisiae*
 - c. *Aspergillus niger*

- d. None of these
17. Penicillin can kill,
a. **Bacteria** b. Fungi c. Algae d. Protozoa
18. The pH to be maintained in penicillin fermentation is,
a. 4 b. **6.5** c. 8 d. More than 9
19. Penicillin interferes with _____ synthesis of actively growing sensitive organisms.
a. Protein b. Nucleic acid c. **Cell wall** d. Cell membrane
20. After fermentation ethanol is recovered by
a. Centrifugation **b. Distillation** c. Filtration d. Cell disintegration
21. Aquatic fern used to increase yield in paddy field
a. *Rhizobium* b. *Anabaena* c. ***Azolla*** d. *Azotobacter*
22. Which of the following nitrogen fixers is found in rice fields associated with *Azolla*?
a. *Tolypothrix* b. *Frankia* c. ***Anabaena*** d. *Spirulina*
23. Identify the modern technology/ies with respect to the evolution of biotechnology.
a. Gene cloning b. polymerase chain reaction c. bacterial cell culture d. **Both (a) and (b)**
24. Principal aim of Environmental Biotechnology is to
a. Only the clean – up of the residual effect of earlier human occupation
b. Only minimize the harmful solids, liquids or gaseous outputs or their effect on environment
c. **Both cleanup of the residual effects and minimize the harmful materials output/effect**
d. Manufacturing products in more quantities.

Unit V

1. DNA probe is a short piece of labeled
a. double stranded DNA **b. single stranded DNA**
c. multistranded DNA d. circular DNA
2. The gene used to treat genetic disease is called
a. **remedial gene** b. gene probe c. gene chip d. genome
3. The direct delivery of a remedial gene into proper organ of a patient to correct the genetic defect is called as
a. embryo therapy **b. in-vivo therapy** c. patient therapy d. ex-vivo therapy
4. Name the gene therapy which introduces a remedial gene into sperm, egg or zygote
a. **germ line** b. somatic cell c. tissue grafting d. foetal
5. Name the oligonucleotide strand that directly blocks the translation of mRNA of defective gene
a. Antisense RNA b. **Antisense DNA** c. Proviral DNA d. Duplex DNA
6. The specificity of a probe DNA to its target DNA is called
a. gene probe b. gene chip c. depurination d. **stringency**
7. Name the DNA which is unique to an individual
a. **Satellite DNA** b. Single stranded DNA c. r DNA d. Duplex DNA
8. Distinguishing the individuals according to the DNA print pattern is called
a. Southern blotting b. Northern blotting c. **DNA profiling** d. hybridization
9. Which one of the following is an example for live virus vaccine?
a. **Vaccines for Newcastle disease** b. Recombivax HB
c. FMD vaccine d. Polyvalent vaccine

10. What is the trade name for Hepatitis-B- vaccine?
a. **Recombivax HB** b. Live virus vaccine c. FMD vaccine d. FC vaccine
11. Identify the year of completion of Human Genome Project
a. **2003** b. 2007 c. 2006 d. 2009
12. The Private Company involved in human genome sequencing parallel with HGP was
a. Roche b. Gilead c. **Celera** d. Genentech
13. Find the oligonucleotide strand that directly blocks the translation of mRNA of defective gene
a. Antisense RNA b. **Antisense DNA** c. Proviral DNA d. Duplex DNA
14. What is the trade name for Hepatitis-B- vaccine ?
a. **RecombivaxHB** b. Live virus vaccine c. FMD vaccine d. FC vaccine

Section - B

UNIT I

1. List out the uses of restriction endonuclease
2. What are plasmids?
3. Mention the uses of pBR 322 plasmid
4. Differentiate between the lytic and lysogenic life cycle of lambda phage
5. Write short notes on replacement vectors
6. Bring out the advantages of lambda phage.
7. Name the branches of biotechnology?
8. What is natural plasmid vector?
9. Define F₁ plasmid vector?
10. Write short notes on replacement vector?
11. What are the characteristics of natural plasmid?
12. Write a note on M13 phage.
13. Write a note on shuttle vector.
14. What is pBR322?
15. Enlist desirable characteristics of a good vector?
16. What are the function of MCS in pBR322 vector?
17. Name the vectors designed from M13?
18. What are palindromic sequences?
19. Write any two restriction enzymes and their recognition sites.
20. Comment on DNA methylases
21. What are the features of Gemini virus?
22. Write the genomic organization of tobamo virus?
23. What are the structural components of Ti plasmid
24. How does the initiation of *Agrobacterium* infection occur?
25. What is the importance of RB sequence and LB sequence of T-DNA?
26. Name any two genetic markers.
27. What are the characteristics of artificial plasmid?
28. Write a note on M13 phage.

UNIT II

1. Define gene cloning
2. What are the steps involved in gene cloning technique?
3. What do you mean by genomic library?
4. What is ligation?
5. Define transformation

6. What is meant by electroporation?
7. Comment on gene gun method.
8. List the methods to introduce rDNA into cells.
9. Write a note on microinjection technique.
10. Comment on transfection.
11. Comment on Retroviruses
12. What is DNA library?
13. What are the applications of southern blotting?
14. Write any significant differences between Southern and Northern techniques.
15. What are the stages of PCR cycle?

UNIT III

1. What is totipotency?
2. What are the important steps in plant tissue culture?
3. What are the sterilization processes used in tissue culture/
- 4 .Differentiate solid culture and liquid culture?
5. What is callus?
6. What are the important components of animal culture medium?
7. What is artificial skin?
8. Comment on embryonic stem cells.
9. What is meant by regenerative medicine?
10. Comment on induced pluripotent stem cells.
11. Differentiate pluripotent and multipotent cells.
12. Write the difference between adult stem cells and embryonic stem cells.
13. What is plasma clot method?
14. Comment on raft method.
15. What are the popular animal cell lines?
16. Define chemically defined media
17. Discuss monolayer culture
18. Write a short note on the embryonic stem cells.
19. Draw a neat labelled sketch of plasma clot method
20. Write short notes on artificial skin

Unit IV

1. List the process of degradation in oxidation ponds
2. Define bioaugmentation
3. Write the role of composting in bioremediation
4. What are genetically engineered biocontrol agents?
5. What are *nif* genes
6. What are interferons
7. Role of slope leaching in biomining
8. Sources of penicillin
9. What is a biofertilizer?
10. How do biofertilizer promote plant growth?

Unit V

1. What are gene probes?
2. List out the advantages of DNA probes
3. Define gene therapy

4. How is antisense gene therapy done?
5. What is meant by DNA profiling?
6. What is Recombivax?
7. Comment on DNA vaccines
8. What are polyvalent vaccines?
9. Mention the importance of vaccinia virus in recombinant vaccines.
10. Mention the goals of Human Genome Project

Section - C

UNIT I

1. Enlist the scope of animal biotechnology in various fields of life science
2. Analyse the role of restriction enzymes in genetic engineering
3. Explain the various types of plasmids
4. Discuss the lytic and lysogenic life cycles of lambda phage with a sketch
5. Comment on insertion vectors of lambda phage
6. Write a brief account on M13 based vectors
7. Point out the salient features of SV40
8. Explain pBR322 vector
9. Write a note on CaMV virus
10. Differentiate RNA and DNA viruses based on their application in rDNA technology
11. What are the important applications of Gemini virus?
12. Illustrate a T_i plasmid.

UNIT II

1. Distinguish between transformation and transduction
2. Outline the steps involved in gene cloning.
3. Write shorts on transformation and electroporation
4. Describe the microinjection technique with neat diagram
5. Write short notes on virus vector methods
6. Give a brief account on biolistics
7. Comment on liposome mediated gene transfer
8. Write short notes on nonvirus vector methods.
9. Describe on PCR and southern blotting?
10. Discuss on DNA library.

Unit III

1. Write on various types of tissue culture media.
2. Describe on various animal culture media
3. Discuss mono layer culture and immobilized cell culture
4. Describe on various aseptic techniques use in tissue culture
5. Describe the composition of plant tissue culture medium with special reference to MS medium
6. What are the different animal organ growing techniques? Detail each of them.
7. Describe embryo culture and embryo rescue.
8. List the applications of embryonic stem cells.
9. Writ note on different types of stem cells.
10. How are stem cells obtained from different source?
11. Comment on the applications of organ culture in regenerative medicine.
12. Discuss the steps involved in cell culture technique

13. Describe the various approaches for the immobilized culture of cell lines
14. Give an illustrated account of the culture of embryonic stem cells
15. Differentiate between raft culture and grid culture
16. Elucidate the tissue engineering of artificial skin

Unit IV

1. Role of trickling filters in sewage treatment
2. Explain the role of land farming in bioremediation
3. Describe role of genetically engineered microbes in human health care products
4. Write the role of genetically engineered microorganisms in agriculture
5. Write the process involved in the production of ethanol
6. Describe the chemical production of biodiesel

Unit V

1. What are DNA probes? Mention their applications.
2. Enumerate the applications of DNA Fingerprinting.
3. Describe ex-vivo gene therapy with an example.
4. How gene therapy is used in diagnosis of genetic diseases.
5. Write down the procedure for preparing FMD vaccine.
6. Describe the methods of DNA sequencing.
7. Enlist the potential benefits of HGP.
8. Explain the methodology of DNA fingerprinting
9. Explain the DNA vaccines
10. Discuss Celera genomics HGP
11. Describe the methods of DNA sequencing
12. Explain the potential benefits of HGP

Section - D

UNIT I

1. Write an account on restriction enzymes
2. Comment on animal viral vector SV40
3. Explain the structure and advantages of pBR322
4. List out the importance of biotechnology.
5. Explain modifying enzymes and add a note on their uses
6. Explain the structure and advantages of Ti plasmid
7. Bring out the structure and life cycle of lambda phage vector
8. Bring out the structure and life cycle of M13 bacteriophage vector
9. Detail the mechanism of *Agrobacterium* mediated gene transfer
10. Discuss on the various plant RNA viruses

UNIT II

1. Discuss on various molecular hybridization techniques.
2. Describe the various methods used in the introduction of cloned genes in to the host cells
3. Explain the various steps involved in gene cloning technique
4. Write short notes on electroporation, liposome mediated gene transfer and particle bombardment
5. Explain viral and nonviral vector methods of gene transfer
6. Enumerate the method of screening of recombinants

UNIT III

1. Write a note on plant organ culture and its applications
2. Enumerate the various steps involved in animal cell culture
3. Explain various animal cell culture media and cell lines
4. Delineate plant tissue culture technique
5. Describe *in vitro* pollination and plant embryo culture.
6. Explain the embryonic stem cell technology and write on its application.
7. Give a detailed account on the different methods of organ culture. Comment on artificial skin cultures.
8. What is culture medium? Explain its types and applications in animal cell and tissue culture.
9. Analyze the strategies of monolayer culture of cell lines
10. Evaluate the techniques of organ culture
11. "Tissue engineering provides suitable tissues for implantation in patients" – Justify

UNIT IV

1. Discuss on the various biotechnological methods for sewage treatment.
2. What are the various steps involved in the treatment of waste water?
3. Write the methods of extracting minerals from their ores by microorganisms
4. Explain industrial production of penicillin
5. Describe the various steps involved in mass cultivation of *Azolla*.

UNIT V

1. Discuss the methods and mechanisms of DNA diagnosis in medicine.
2. Write in detail somatic cell gene therapy.
3. Describe the methodology of DNA fingerprinting and its applications
4. Give an elaborate account on recombinant vaccines
5. What is Human Genome Project? Mention its goal and techniques

St. Mary's College (Autonomous) – Thoothukudi

B.Sc. Botany

Semester V

Core VI

Biochemistry

Course Code: 21UBOC51

Section - A

Choose the correct answer:

UNIT- I

1. The H^+ ion concentration of a solution is called
a) pka (b) **pH** (c) pH scale (d) ka.
2. An acid is a substance that yields
a) protons (b) hydroxyl ion (c) electron (d) base.
3. The pH of rain water under unpolluted condition ranges from
(a) 6.5 to 7.5 (b) 8.3 to 9 (c) 5 to 7.5 (d) **7 to 7.5**
4. The capacity of a solution to resist alteration in its pH value is known as
(a) acetate buffer (b) **buffer capacity** (c) basic buffer (d) acidic buffer.
5. Which among the following is not a property of Ionic bond?
a) Losing of electrons (b) Gain of electrons (c) **Sharing of electrons** (d) Transfer of electrons
6. If a bond is made up of a large number of organic compound, then the bond is termed as?
a) Ionic bond (b) Metallic bond (c) **Covalent bond** (d) Dipolar bond
7. Atoms undergo bonding in order to _____
a) **Attain stability** (b) Lose stability (c) Move freely (d) Increase energy
8. A chemical bond formation that involves the complete transfer of electrons between atoms is _____
a) **ionic bond** (b) covalent bond (c) metallic bond (d) partial covalent bond
9. The bond between two atoms of the same element is
a) polar covalent bond (b) ionic bond (c) **non-polar covalent bond** (d) none of the above
10. Which bond acts like a bridge two molecules formed by a covalent bond
a) Covalent bond (b) Ionic bond (c) **Hydrogen bond** (d) Metallic bond
11. The Henderson Hasselbalch equation explains the relationship between-

a) pH and pOH b) pH and logK_a c) **pH and pK_a** d) pOH and pK_a

UNIT- II

1. D -Glucose is a reducing sugar because it undergoes an oxidation-reduction reaction at the anomeric carbon. One of the product of this reaction is
(a) D-galactose (b) **D- gluconate** (c) D- glucuronate (d) D-ribose
2. When two carbohydrates are epimers:
(a) one is a pyranose, the other is a furanose (b) one is an aldose, the other a ketose
(c) they differ in length by one carbon (d) **they differ in the configuration around one carbon**
3. Which of the following is not true about monosaccharides?
(a) They are white crystalline solids (b) They are soluble in water (c) **They can be hydrolysed** (d) They have sweet taste
4. Which of the following sugar give positive test with Seliwanoff's test?
(a) **Sucrose** (b) Glucose (c) Galactose (d) Mannose
5. Carbohydrates are organic compounds made up of
(a) carbon and hydrogen (b) **carbon, hydrogen and oxygen**
(c) carbon, hydrogen, oxygen and nitrogen (d) carbon and oxygen
6. Monosaccharides are
(a) aldoses (b) ketones (c) **both (a) and (b)** (d) none of these
7. The most common monomer of starch is
(a) xylose (b) **glucose** (c) cellobiose (d) ribose
8. Minimum number of carbon in a monosaccharide is
(a) 1 (b) 2 (c) **3** (d) 4
9. All of the following are disaccharides except
(a) maltose (b) **cellulose** (c) cellobiose (d) lactose
10. Table sugar is a disaccharide, made up of
(a) **glucose and fructose** (b) glucose and galactose
(c) 2 moles of glucose (d) glucose and mannose
11. Carbohydrates occur naturally in
(a) **D-form** (b) C-form (c) Both (a) and (b) (d) α -form

12. Which of the following polysaccharides are found in a typical plant cell wall?
(a) cellulose, hemicellulose and pectin (b) cellulose, starch and pectin
 (c) cellulose, hemicellulose and chitin (d) all of these
13. Starch is a homopolysaccharide, consisting of
 (a) amylose and N-acetyl glucosamine **(b) amylose and amylopectin**
 (c) amylose and pectin (d) amylopectin and chitin
14. Cellulose is made up of repeating units of
(a) D glucose with β 1-4 linkage (b) D glucose with β 1-2 linkage
 (c) D glucose α 1-4 linkage (d) D glucose α 1-2 linkage
15. In maltose, 2 moles of glucose are bonded by
 (a) β 1-4 linkage (b) β 1-6 linkage **(c) α 1-4 linkage** (d) α 1-2 linkage
16. Following are the characteristic features of milk sugar except
 (a) disaccharide **(b) made up of glucose and lactose** (c) sweet in taste (d) glucose and galactose
13. The main site for gluconeogenesis is
 (a) kidney **(b) liver** (c) brain (d) muscle
17. Cellulose fibers resemble with the protein structure in the form of
(a) β - sheets (b) α - helices (c) β - turns (d) none of these
18. Give the uses of polysaccharide cellulose, starch and hemicellulose in the right order:
(a) structure, storage, structure (b) structure, structure, storage
 (c) All storage (d) storage, structure, storage
19. What biochemical test is used for testing the sugar level in blood?
(a) Benedict's test (b) Biuret test (c) Ninhydrin test (d) all of these.
20. If you remove all of the functional groups from an organic molecule so that it has only carbon and hydrogen atoms, the molecule becomes
 (a) carbohydrate (b) protein (c) lipid **(d) hydrocarbon**
21. With respect to galactose, glucose is
(a) a stereoisomer (b) a structural isomer (c) not an isomer (d) unrelated except that they are both sugars
22. Glucose is a
 (a) protein (b) disaccharide (c) nucleic acid **(d) monosaccharide**

23. Animals store glucose in the form of
 (a) amylose **(b) glycogen** (c) glycerol (d) guanine
24. In the formation of a macromolecule, what type of reaction would join two subunits together?
 (a) hydrophobic reaction (b) hydrolysis reaction
(c) dehydration reaction (d) denaturation reaction
25. Find the reason why that cellulose so difficult for most animals to digest.
(a) they don't have the proper enzyme to break the bonds between subunits
 (b) cellulose is made up of chitin, which is indigestible
 (c) the bonds holding cellulose subunits together are extremely stronger
 (d) there are many hydrogen bonds holding the subunits together
26. Identify which one of the following is not a disaccharide
 (a) sucrose (b) maltose (c) lactose **(d) amylose**
27. Tell the empirical formula for carbohydrates
 (a) $(\text{CHO})^2$ **(b) $(\text{CH}_2\text{O})_n$** (c) $2(\text{CHO})_n$ (d) $(\text{C}_2\text{HO})_n$
28. Identify the term that molecules that have the same chemical formula but have different molecular structures
 (a) isotopes (b) ions (c) structural isotopes **(d) isomers**

UNIT – III

- Identify the generally occurring amino acids group found in proteins
 (a) D - series **(b) L - series** (c) α - series (d) all of these
- Identify which of the following amino acids possess two asymmetric carbon atoms and thus have 4 optical isomers
(a) threonine and isoleucine (b) threonine and methionine
 (c) isoleucine and methionine (d) glycine and proline
- Name which of the following non-protein aminoacids play metabolic roles
 (a) L –ornithine (b) L –CitruLine (c) L – alanine **(d) all of these**
- Name the person who defined that proteins have four basic structural levels of organization
 (a) Irving Geis (b) Watson and Crick (c) **Linderstrom - Lang** (d) Ramachandran

5. Recall-Based on the nature of hydrogen bonding (whether intra-molecular or inter-molecular) there are two regular types of secondary structure in protein. They are
(a) α – helix and β pleated sheet (b) α – helix and γ pleated sheet
 (c) α – helix and α pleated sheet (d) none of these
6. Name which protein is believed to be responsible for degenerative disease
(a) prion(b) virion (c) kuru (d) chaperonins
7. Tell Protein folding and assembly *in vivo* sometimes requires the aid of a special proteins named
(a) molecular chaperones(b) molecular scissors (c) molecular markers (d) lygases
8. Identify which of the following is an example for globular protein
(a) antibody (b) collagen (c) elastin (d) fibroin
9. Following are the characteristics of protein except
 (a) colloidal nature(b) coagulation (c) amphoteric nature **(d) non-functional**
10. Identify which of the following changes led by denaturation of proteins
 (a) decrease in their solubility (b) cessation of their biological activity
 (c) decrease in size and shape of the molecule **(d) all of these**
11. Tell-Reaction between glutamic acid and sodium hydroxide gives mono sodium glutamate, which is commonly called
 (a) glutamates **(b) ajinomoto**(c) taste maker(d) none of these
12. Name the result of reaction between aminoacid and benzaldehyde
 (a) phosgene (b) ethylester **(c) Schiff's base**(d) benzylamino purine
13. Name the disease caused by Abnormal catabolic pathway of phenylalanine in human beings
(a) phenylketonuria(b) alkaptonuria (c) both (a) and (b) (d) albinism
14. Identify the key intermediate in the synthesis of aromatic amino acids
 (a) pyruvate **(b) chorismate**(c) shikimate (d) erythrose
15. Name the compound from which the amino group of tyrosine is derived from
 (a) α –ketoglutarate **(b) glutamate** (c) aspartate (d) isocitrate
16. Identify which of the following are carrier proteins.
(a) myoglobin, hemoglobin(b) collagen, fibroin
 (c) casein myosin (d) insulin and ovalbumin

17. Name the Proteins which are soluble in water
(a) keratin (b) prolamine (c) **protamines** (d) glutelins
18. Name the ion at which isoelectric point proteins exist
(a) diplanar ions (b) **zwitter ions** (c) anions (d) cations
19. Identify which of the followings is true regarding protein denaturation
(a) is a shape change (b) **is always irreversible**
(c) may be caused by a pH change (d) could result from a temperature change
20. Identify the most complex structure of protein
(a) primary (b) secondary (c) tertiary (d) **quaternary**
21. Name the functional group $-NH_2$
(a) carboxyl group (b) **amino group** (c) hydroxyl group (d) phosphate group
22. Name the bond that joins two amino acid subunits in the formation of a macromolecule
(a) ionic bond (b) phosphor-di-ester bond (c) hydrogen bond (d) **peptide bond**
23. Name the sequence of amino acids in a polypeptide
(a) **primary structure** (b) secondary structure (c) tertiary structure (d) quaternary structure
24. Name the globular configuration of a protein
(a) primary structure (b) secondary structure (c) **tertiary structure** (d) quaternary structure
25. Name at which level(s) of protein structure would you expect to find disulfide bridges
(a) secondary (b) tertiary (c) quaternary (d) **all of these**
26. Identify the characteristic of proteins
a) Some may enhance the rate of specific chemical reactions
b) They may form either long, thin fibrous molecules or compact, rounded globular molecules
c) They store genetic information for cellular metabolism.
d) **Both (a) and (b)**
27. Identify the dicarboxylic amino acids
(a) arginine and histidine (b) **aspartic and glutamic acid**
(c) histidine and cysteine (d) serine and threonine
28. Name the amino acid that gives yellow coloured complex with ninhydrin reagent?

(a) asparagine (b) leucine (c) **proline**(d) glycine

29. Tell-Proteins react with biuret reagent and give a violet coloured complex. It is because of the presence of

(a) tyrosine(b) phenylalanine(c) tryptophan (d) **peptide bonds**

UNIT- IV

- Find that the active sites of the enzymes are formed of
(a) substrate molecules (b) **amino acids** (c) ES complex (d) all of these.
- Name the factor in which the enzyme enhance the reaction rate by lowering
(a) **the activation energy** (b) substrate binding (c) temperature (d) pressure.
- Identify the uses of Vitamin K
(a) Change of prothrombin into thrombin
(b) **Synthesis of prothrombin**
(c) Change of fibrinogen to fibrin
(d) Formation of thromboplastin
- Name the vitamin which causes Calcium deficiency in the body
(a) Vitamin C b) **Vitamin D** c) Vitamin A d) Vitamin E
- Name the deficiency disease of Vitamin C or ascorbic acid
(a) **Scurvy** b) Antibody synthesis c) Rickets d) Pellagra
- Name the vitamin deficiency which causes the Haemorrhagic disease of new born
(a) **Vitamin K** b) Vitamin B12 c) Vitamin A d) Vitamin B6
- Identify which of the following families do folic acid and panthothenic acid belong
a) Vitamin C b) Vitamin K c) Vitamin A d) **Vitamin B complex**
- Identify the correctly matched pair.
a) **Vitamin E - Tocopherol** b) Vitamin D - Riboflavin
c) Vitamin B - Calciferol d) Vitamin A - Thiamine
- Find the deficiency which causes Continuous bleeding from the injured part.
a) Vitamin A b) Vitamin B c) **Vitamin K** d) Vitamin E
- Identify the fat soluble vitamin and its related deficiency disease
a) **Retinol- Xerophthalmia** b) Cobalamine-Beri beri
c) Calciferol- Pellagra d) Ascorbic acid- Scurvy
- Find out the mismatched pair.

- a) Vitamin A- Xerophthalmia b) Vitamin D- Rickets
c) **Vitamin K- Beriberi** d) Vitamin C-Scurvy
12. Identify the fat soluble vitamin.
a) Vitamin A and D b) Vitamin E c) Vitamin K d) **All the above**
13. Identify the water soluble vitamin
a) Vitamin A b) Vitamin E and K c) **Vitamin B and C** d) Vitamin D
14. Find the other name of Vitamin A
a) Thiamine b) **Ratinol** c) Riboflovin d) Pyridoxin
15. Find the other name of Vitamin B1
a) Pyridoxin b) Rationol c) Niacin d) **Thiamine**
16. Find the other name of Vitamin B2
a) Niacin b) Calcepherol c) Thiamine d) **Riboflovin**
17. Find the other name of Vitamin B3
a) Pantothenic acid b) **Niacinc** c) Folic acid d) Ratinol
18. Find the other name of Vitamin B5
a) **Pantothenic acid** b) Folic acid c) Ratinoll d) Tocopherol
19. Identify the deficiency of Vitamin D
a) Anemia b) **Rickets** c) Night blindness d) Scurvy
20. Name the vitamin that helps in coagulation of blood
a) Vitamin C b) Vitamin B c) Vitamin D d) **VitaminK**
21. Find out the number of classes in which the enzymes are grouped by the enzyme commission
(a) 5 classes (b) 7 classes (c) 10 classes (d) **6 classes** .
22. Name the non-protein part of enzyme
(a) apoenzyme (b) holoenzyme (c) **prosthetic group** (d) exoenzyme.
23. Identify what The active sites of the enzymes made of
(a) substrate molecules (b) **amino acids** (c) ES complex (d) all of these.
25. Find out the function of pectinase
(a) wine making (b) coffee industry
(c) improving the quality of fruit juices (d) **all of these.**

UNIT - V

1. Name the chemical name of the bees-wax
(a) myricyl palmitate (b) acetyl palmitate (c) tetracosanol (d) tetratriacosanol.
2. Identify the composition of simple fat.
(a) **a glycerol and three fatty acids** (b) glycerol and two fatty acids
(c) glycerol and single fatty acids (d) one fatty acid and 3 glycerols.
3. Name the process caused by Lysolecithin
(a) hemolysis (b) formation of red blood cells
(c) **accumulation of cholesterol** (d) lysis of fat.
4. Find out the reason why a liquid fat is placed on water, it spreads uniformly and form a thin layer, due to
(a) carboxyl group (b) hydrocarbon chain(c) glycerol (d) **carboxyl group and hydrocarbon chain.**
5. Name the type of Cholesterol
(a) compound lipid (b) simple lipid (c) alcohol (d) **derived lipid.**
6. Identify the composition of Saturated alcohols found in lipid molecules
(a) glycerol (b) cholesterol (c) acetyl alcohol (d) **all of these**
7. Identify Which of the following is found abundantly in animal fats?
(a)**palmitic acid and stearic acid** (b) palmitic acid and linoleic acid
(c) stearic acid and linolenic acid(d) linoleic acid and linoleic acid
8. Identify an example for simple lipids
(a) lecithin (b) wax (c) cephalins (d) **none of the above**
9. Find the composition of Neutral lipids
(a) glycerides and cholesterolsters (b) **glycerides and fattyacids**
(c) triglycerides and fatty acids d) triglycerides and glucose
10. Show that most of the triglycerides of nature are mixed triglycerides i.e., they contain 2 or more fatty acid units in the molecule. Such triglycerides are said to be
(a) symmetrical (b) **asymmetrical** (c) geometrical (d) isomers
11. Find an example for plant fat
(a) **Corn oil** (b) butterfat (c) both (a) and (b) (d) corn flour

12. Name the composition of carnauba wax where the fatty acids are esterified with following alcohols
 (a) **tetracosanol** (b) palmitic acid (c) glycerol (d) glycol
13. Find that in the absence of lecithin, accumulation of lipids occurs in the liver upto 30%, and the condition is referred as
 (a) **fatty liver** (b) fat deposits (c) cirrhosis (d) fibroid liver
14. Find the reason why snake bite causes hemolysis
 (a) **snake venom contain lecithinase** (b) snake venom contain lysolecithins
 (c) Snake venom is poisonous (d) snake venom induce blood clotting
15. Tell that Cephalins resembles lecithin except
 (a) choline replaced by amine (b) **choline is replaced by serine or ethanolamine**
 (c) choline is replaced by cysteine (d) none of these
16. Name the cause of Niemann-Pick disease
 (a) cephalin (b) lecithin (c) **spingomyelin** (d) ethanolamine
17. Find out glycolipid from the following
 (a) cerebrosides (b) **sphingomyelins** (c) phenanthrene (d) lecithin
18. Identify which of the following is non saponifiable fat.
 (a) sulfolipids (b) **cholesterol** (c) phospholipids (d) glycolipids
19. Show that All the steroids are considered as derivatives of a fused and fully saturated ring system called
 (a) **sterane** (b) sertine (c) phenanthrene (d) pentane
20. Find the molecular formula of cholesterol
 (a) **C₂₇H₄₅OH** (b) C₁₄H₂₇OH (c) C₂₇H₄₆OH (d) C₁₄H₂₆OH
21. Name the first step in cholesterol synthesis is conversion of acetyl CoA into
 (a) **mevalonate** (b) oxaloacetate (c) isoprene units (d) farnesyl pyro phosphate
22. Name the process of oxidation of saturated fatty acids
 (a) α-oxidation (b) **β-oxidation** (c) oxidative decarboxylation (d) none of these.

Section - B

Answer in about 200 words:

UNIT – I

1. Define pH.

2. Describe buffer?
3. Describe buffer action.
4. Write notes on biological buffer.
5. Define ionic bond
6. Explain covalent bond
7. Write notes on Vander val force.
8. Define acid base concept.
9. Differentiate the types of bonds.
10. Write notes on biomolecules?

UNIT -II

1. Define isomers. Give examples.
2. Explain isomerism
3. Describe optical isomers
4. Draw the structure of α D glucose.
5. Define mutarotation.
6. Differentiate reducing sugar and non-reducing sugars.
7. Distinguish aldoses from ketoses.
8. Name two examples for reducing sugars.
9. What is enolization?
10. Draw the structure of lactose.
11. Draw the structure of maltose
12. Name any two homopolysaccharides.
13. List out the nutritional value of carbohydrates

UNIT – III

1. Write the general formula of an amino acid.
2. Define isoionic point.
3. Write down the ionization of alanine when titrated with alkali and acid.
4. Write the structural formula of any one sulphur containing amino acid.
5. Show the molecular structure of monocarboxylic amino acid.
6. Write a note on disulphide bond.

7. Write short notes on Ramachandran Plot.
8. Write any two important characteristics of collagen.
9. Write any two examples for globular protein.
10. What is meant by deamination?

UNIT – IV

1. Write the role of oxido-reductases.
2. What are isoenzymes?
3. Define active site.
4. Define activation energy.
5. Write short notes on apoenzyme
6. List out the sources of vitamin B and C.
7. Differentiate coenzyme and prosthetic group
8. Write short notes on fat soluble vitamins?
9. Write short notes on holoenzyme?
10. Name the antifertility vitamin.
11. Write the role of catalysts

UNIT – V

1. Write notes on simple lipids? Give an example.
2. Define phospholipids.
3. Write notes on glycolipids?
4. Write the generic formula of triglycerides.
5. Draw the structure of α - lecithin.
6. Draw the molecular structure of cholesterol.
7. Write the reason that why is saturated fat harmful even when consumed within the recommended limits?
8. Differentiate fat and oil.
9. Write about fatty acids.
10. Write the reason that why does butter turn rancid if left unrefrigerated for some time?

Section C

5 marks

UNIT – I

1. Explain Handerson Hassel Balch equation.
2. Write notes on biological buffers.
3. Discuss buffer capacity.
4. Comment on pH scale.
5. Explain covalent and non covalent bonds with suitable example
6. Differentiate the types of bonds.
7. Explain biomolecules.
8. Explain chemical bonds.
9. Explain acid base concept.
10. Explain about pH activity.

UNIT – II

1. Represent the different form of molecular structure of glucose.
2. Write any three chemical properties of monosaccharides.
3. Differentiate between reducing and non-reducing sugars. Give examples.
4. Draw the molecular structure of maltose and sucrose.
5. How is sucrose hydrolysed? Explain.
6. Write on any one heteropolysaccharide.
7. Comment on amylopectin.
8. Give a brief account on cellulose.

UNIT – III

1. Outline the classification of aminoacids based on composition.
2. Discuss the chemical properties of amino acids.
3. Summarize the physical properties of amino acids.
4. Discuss the classification of amino acids based on their group.
5. Explain the biologically important peptides and its functions.

6. Summarize the types of bonds involved in protein structure
7. Discuss the primary structure of protein.
8. Explain the tertiary structure of protein.
9. Explain the nutritional importance of proteins

UNIT – IV

1. Discuss the factors affecting the enzymes action.
2. Explain the classification of enzymes.
3. Summarize the characteristic features of active site.
4. Explain activation energy.
5. Explain lock and key hypothesis.
6. Explain the mechanism of action of coenzyme
7. Discuss the concept of intermolecular fit.
8. Explain the deficiency symptoms of vitamin B.
9. Discuss the sources of vitamin D and E
10. Explain the sources of vitamin A and vitamin C.

UNIT – V

1. Discuss the chemical properties of lipid.
2. Explain the classification of lipids.
3. Explain the molecular structure of triglycerides.
4. Discuss the physical properties of fats.
5. Discuss the differences between animal and plant fats.
6. Classify the different types of fatty acids with an example
7. Explain derived lipids with an example.
8. Explain saponification by giving an appropriate reaction.
9. Explain and draw the structure of cholesterol.
10. Discuss the nutritional importance of lipids.

Section – D

UNIT -I

1. Examine buffer action with suitable example.

2. Outline the biomolecules.
3. Simplify Handerson Hassel Balch equation.
4. Analyze biological buffers.
5. Discuss buffer capacity.
6. Comment on pH scale.
7. Outline covalent and non covalent bonds with suitable example
8. Organize biomolecules.
9. Outline the chemical bonds.
10. Simplify acid base concept.
11. Analyze pH activity.

UNIT -II

1. Organize the structure and properties of sucrose.
2. Simplify the properties of monosaccharides.
3. Outline the structure of homopolysaccharides that you have studied.
4. Construct the storage polysaccharide with suitable example.
5. Outline the structure of structural polysaccharide you studied.
6. Compare cellulose and starch.
7. Outline the different structural configuration of fructose.
8. Organize the structure of disaccharides and their properties
9. Outline the different structural configuration of glucose
10. Organize the structure and properties of maltose

UNIT – III

1. Simplify the chemical properties of amino acids.
2. Outline the classification of amino acids based on composition.
3. Outline the classification of amino acids based on R group.
4. Diagrammatically explain primary structure of protein
5. Outline the various bonds that stabilize the structure of a functional protein? Explain.
6. Outline the nutritional importance of proteins
7. Outline the biologically important peptides and its functions.
8. Simplify the properties of protein.
9. Analyse the quaternary structure of protein.

10. Diagrammatically explain the quaternary structure of hemoglobin
11. Organise the tertiary structure of protein.

UNIT – IV

1. Organise the mechanism of enzyme action.
2. Outline the classification of enzyme proposed by the International Union of Biochemistry (IUB).
3. Outline the nomenclature of enzyme
4. Analyse the different factors affecting enzyme activity.
5. Simplify the mechanism of action of coenzyme.
6. Organise the sources and deficiency diseases related to vitamin B.
7. Organise the sources and deficiency diseases related to vitamin D.
8. Organise the sources and deficiency diseases related to vitamin E.
9. Organise the sources and deficiency diseases related to vitamin K.
10. Organise the sources and deficiency disease related to vitamins A.

UNIT – V

1. Analyse the structure and properties of carotenoids.
2. Simplify the nutritional importance of lipids .
3. Diagrammatically explain the structure of compound lipids.
4. Simplify the chemical properties of lipids.
5. Outline the classification of lipids.
6. Distinguish the structure and biological functions of phospholipid and glycolipid with an example.
7. Organise the structure of derived lipids
8. Organise the structure of simple lipid.
9. Diagrammatically explain the structure of steroids.

St. Mary's College (Autonomous), Thoothukudi

III B.Sc. Botany

Semester V

Core III

Ecology and Phytogeography

Subject Code: 21UBOC52

Section A

Unit I

1. 'Habitat' is
 - (a) A place to buy furniture and furnishings
 - (b) The same as an ecosystem
 - (c) A particular area inhabited by plants and animals**
 - (d) The number of different organisms living in a specific area
2. How an organism is suited to live in a particular place is called
 - (a) Competition
 - (b) Adaptation**
 - (c) Addition
 - (d) Participation
3. 'Biodiversity' is described as
 - (a) The range of different species in an environment**
 - (b) The seasonal and daily changes in an environment
 - (c) The way species differ from one another
 - (d) The influence of physical factors on an environment
4. Which of these are not competed for by plants?
 - (a) Light
 - (b) Minerals
 - (c) Warmth**
 - (d) Water
5. The biggest impacts are made on the environment by
 - (a) the migration of organisms
 - (b) Predation
 - (c) Human interference**

(d) Competition

6. All the nonliving parts of an ecosystem are referred to as

(a) the community

(b) biotic factors

(c) abiotic factors

(d) biomes

1. Which of the following would be a biotic factor in an ecosystem?

(a) bacteria

(b) soil

(c) temperature

(d) rainfall

8. The types and numbers of species in a given area is most greatly determined by the area's

(a) biotic factors

(b) recipitation

(c) climate

(d) biodiversity

10. Abiotic factors affect an ecosystem and include all of these except the

(a) quantity and quality of water

(b) nitrogen-fixing bacteria

(c) amount of light available

(d) quantity of minerals

11. The most important single factor affecting the biosphere is

(a) solar radiation

(b) precipitation

(c) the biotic community

(d) wind

12. Collectively, physical factors such as light, temperature, and moisture that affect an organism's life and survival are called the

(a) biotic environment

(b) ecosystem

(c) abiotic environment

(d) niche

13. The rate of photosynthesis carried on by plants living in a body of water depends upon the

(a) oxygen content of the water

(b) amount of light that penetrates the water

(c) nitrogen content of the water

(d) elevation of the body of water

14. Ecology is the study of the interaction of living organisms

(a) with each other and their habitat. b.

(b) and their communities.

(c) with each other and their physical environment.

(d) and the food they eat

15. Ecological models are useful for

(a) making predictions about future ecological changes

(b) testing predictions about future ecological changes.

(c) evaluating proposed solutions to environmental problems.

(d) All of the above

16. The **physical location of an ecosystem in which a given species lives is called**

(a) Habitat

(b) niche.

(c) tropical level

(d) biotic zone.

17. Which of the following are adaptations for avoiding unfavorable conditions?

(a) migration

(b) dormancy

(c) body temperature regulation

(d) all of the above

18. The study of interactions between living organisms and environment is called

(a) ecosystem

(b) phytogeography

(c) ecology

(d) phytosociology

19. Which one of the following factors is biotic?
- (a) photoperiod
 - (b) CO₂ content of the soil**
 - (c) texture and porosity of soil
 - (d) rainfall
20. Solubility and availability of plant nutrients related to
- (a) soil pH**
 - (b) soil porosity
 - (c) soil temperature
 - (d) soil colour
21. Which is the characteristic feature of a physiological dry soil?
- (a) there is plenty of water in the soil
 - (b) light available to the plant is not sufficient
 - (c) soil is stony
 - (d) concentration of salt is very high in soil water**
22. The term biosphere is used for the zone of earth where life exists
- (a) on the lithosphere surface
 - (b) in the hydrosphere
 - (c) in the lithosphere and hydrosphere
 - (d) in the lithosphere hydrosphere and atmosphere**

Unit II

1. The chief anatomical feature of all hydrophytes is
- (a) Absence of stomata
 - (b) Sunken stomata
 - (c) Well developed aerenchyma**
 - (d) Well developed xylem
2. Submerged hydrophytes have
- (a) Stomata on both surface
 - (b) Stomata on leaf surface
 - (c) No stomata**
 - (d) Stomata on lower surface
3. The stem of submerged water plants is soft and weak because
- (a) They are absolutely devoid of xylem
 - (b) They totally lack phloem
 - (c) They do not have stomata
 - (d) The supporting tissue and xylem are**

poorly developed

4. Which is not a hydrophytic character?

- (a) Abundant air spaces and air chambers
- (b) Presence of more xylem and sclerenchyma**
- (c) Stomata absent or only on upper side of the leaf
- (d) Poor development of fruit

5. The hydrophyte that have contact with water only

- (a) *Nymphaea* (b) ***Ceratophyllum*** (c) *Vallisneria* (d) *Typha*

6. Find the pair of hydrophytes that are neither in contact with soil nor air

- (a) *Vallisneria*, *Hydrilla* **(b) *Hydrilla*, *Utricularia***
- (c) *Salvinia*, *Azolla* (d) *Limnophila*, *Ceratophyllum*

7. In submerged hydrophytes, gaseous exchange occurs through

- (a) Hydathodes (b) Stomata (c) **General body surface** (d) Injured parts

8. Hydrophytes like *Nymphaea* and *Nelumbo* are

- (a) Free floating hydrophytes (b) Amphibious plant
- (c) Submerged rooted hydrophytes **(d) Rooted hydrophytes with free floating leaves**

9. Vivipary seed germination is found in

- (a) hydrophytes (b) xerophytes (c) **mangroves** (d) land plants.

10. Sunken stomata and multiple epidermis are found in

- (a) hydrophytes (b) **xerophyte** (c) halophytes (d) mesophytes

11. Water plants usually have

- (a) **reduced vascular system** (b) well developed stomatal system
- (c) reduced Root system (d) well developed vascular system

12. Pneumatophores are seen in

- (a) hydrophytes (b) xerophytes (c) **mangroves** (d) land plants.

13. Submerged hydrophyte is

- (a) *Eichbornia* (b) *Pistia* (c) *Lemna* **(d) *Hydrilla***

14. *Avicennia* and *Rhizophora* are

- (a) hydrophyte (b) xerophyte **(c) mangrove** (d) land plant

Unit III

1. The last community in a succession is called
(a) Ecosystem (b) **Climax community** (c) Ecotone (d) Serial community
2. The invasion of a community in succession involves
(a) ecesis, aggregation and competition (b) migration, , aggregation and competition
(c) aggregation , competition and coaction (d) **migration, ecesis and aggregation**
3. Mark the correct sequence of events occurring during ecological succession ecological succession
(a) migration, nudation, ecesis and aggregation
(b) migration, ecesis , nudation and aggregation
(c) migration, ecesis , aggregation and nudation
(d) Nudation, migration, ecesis and aggregation
4. Mark the pioneer in a hydrosere
(a) **Diatoms** (b) *Hydrilla* (c) *Nymphaea* (d) *Typha*
5. The pioneers in xerarch succession is the
(a) **Crustose lichen** (b) Mosses (c) Foliose lichens (d) Shrubs
6. The final stable community in an ecological succession is called the
(a) Final community (b) Ultimate community
(c) **Climax community** (d) Serial community
7. The process of successful establishment of the species in a new area is called
(a) Sere (b) Climax (c) Invasion (d) **Ecesis**
8. The formation of a climax community from an abandoned farm land is an example of
(a) Autogenic succession (b) Allogenic succession
(b) Primary succession (d) **Secondary succession**
9. Development of a bare area without any life form is called
(a) **Nudation** (b) Ecesis (c) Sere (d) Reaction
10. All the statement are correct regarding ecological succession except the last community in a succession is called
(a) Ecosystem (b) **Climax community** (c) Ecotone (d) Seral community
11. Which one of the following statements is correct for secondary succession
(a) **It occurs on a deforested site**

- (b) It follows primary succession
- (c) It begins on a base rock
- (d) It is similar to primary succession except that it has a relatively slower pace
12. When vegetation of any region reaches climax it is
- (a) Xerophytic (b) **Mesophytic** (c) Hydrophytic (d) Lithophytic
13. Which of the following is not a climax vegetation
- Forests (b) **Hydrophytes** (c) Savannah (d) Grasses
14. Vascular tissues are poorly developed in
- hydrophytes** (b) xerophytes (c) halophytes (d) land plants
15. Plants complete their life cycle within short duration
- (a) drought enduring (b) **drought escaping** (c) drought resistant (d) lithophytes
16. The vegetational succession develops in xeric habitat is called as
- (a) hydrosere (b) **xerosere** (c) lithosere (d) lalosere
17. The initial stage in the successor of hydrosere is
- (a) submerged (b) **phytoplankton** (c) floating (d) reed swamp.
18. When the succession starts on the extreme bare area where there was no previous vegetation
- (a) secondary succession (b) **primary succession**
- (c) tertiary succession (d) none of the above
19. Development of a bare area without any form of life is
- (a) invasion (b) migration (c) **nudation** (d) aggregation
20. Monoclimax theory was proposed by
- (a) Whittaker (b) **Clements** (c) Braun (d) Tansley
21. The plant succession starts in the aquatic environment is known as
- (a) xerarch (b) **hydrarch** (c) serule (d) Lithosere
22. Xerophytes have longer root system
- (a) To grant mechanical support (b) Due to light factor
- (c) **To draw water from deeper zone** (d) To avoid water

Unit IV

1. Phytogeography deals with:

- (a) Animal distribution (b) **Plant distribution** (c) Climate studies (d) Soil formation

2. The 'theory of tolerance' in phytogeography was proposed by:
(a) Darwin (b) **Shelford** (c) Linnaeus (d) Wallace
3. Endemism refers to:
(a) The widespread distribution of species (b) The extinction of species (c) **Species confined to a particular area** (d) Species present worldwide
4. Which of the following is NOT a factor influencing the vegetation regions in India?
(a) Climate (b) **Industrialization** (c) Soil (d) Altitude
5. The Western Ghats in India are known for their:
(a) Desert vegetation (b) **Tropical evergreen forests** (c) Temperate grasslands (d) Alpine vegetation
6. In India, mangrove vegetation is most prominently found in:
(a) Thar Desert (b) **Sundarbans** (c) Deccan Plateau (d) Nilgiris
7. Which biome is characterized by the presence of large herbivores and savanna-like vegetation?
(a) Temperate grasslands (b) **Tropical savanna** (c) Boreal forest (d) Tundra
8. The tundra biome is most commonly found in:
(a) Tropical regions (b) Temperate zones (c) **Polar regions** (d) Coastal areas
9. The characteristic vegetation of tropical rainforests includes:
(a) Deciduous trees (b) **Evergreen trees** (c) Conifers (d) Xerophytes
10. India's temperate biome is most commonly found in:
(a) The Thar Desert (b) **Himalayan regions** (c) The Deccan Plateau (d) Western Ghats
11. What type of vegetation is characteristic of the Great Indian Desert (Thar Desert)?
(a) Deciduous forest (b) **Thorn forest and scrub** (c) Alpine meadows (d) Mangroves
12. The biome with permafrost and lichens as dominant vegetation is:
(a) Tropical rainforest (b) Savanna (c) Temperate grassland (d) **Tundra**
13. Which of the following Indian states is known for its alpine vegetation?
(a) Kerala (b) Gujarat (c) **Himachal Pradesh** (d) Rajasthan
14. Vegetation regions in India are categorized primarily based on:
(a) Language (b) **Climate and topography** (c) Population (d) Political divisions
15. The biome found in regions with mild, moist winters and hot, dry summers is:
(a) Desert (b) **Mediterranean biome** (c) Tropical rainforest (d) Tundra

Unit V

1. The study of plant geography primarily focuses on:
(a) Plant physiology (b) **Distribution of plants** (c) Soil composition (d) Plant genetics
2. Dispersal and migration in plants involve:
(a) Only human interference (b) Only animal vectors (c) **Natural agents like wind, water, and animals** (d) None of these
3. The "age and area hypothesis" was proposed by:
(a) Darwin (b) Linnaeus (c) **J.C. Willis** (d) Humboldt
4. A continuous range of plant distribution refers to:
(a) Species confined to a single area (b) **Unbroken geographic spread of species** (c) Random distribution (d) Seasonal migration
5. Which of the following is an example of cosmopolitan distribution?
(a) Mangroves (b) Conifers (c) **Grass species** (d) Polar lichens
6. Circumpolar distribution refers to species found around:
(a) Equator (b) **Polar regions** (c) Tropics (d) Coastal areas
7. Circumboreal distribution is characteristic of:
(a) Alpine regions (b) **Northern hemisphere forests** (c) Desert ecosystems (d) Mangrove vegetation
8. Circumastral distribution is seen in plants located:
(a) Tropics (b) **Southern hemisphere** (c) Northern hemisphere (d) Coastal regions
9. Pantropical plant distribution is common in:
(a) Temperate zones (b) Polar regions (c) **Tropical regions** (d) Sub-arctic zones
10. Discontinuous distribution in plant geography refers to:
(a) Uniform spread of species (b) **Isolated populations in different regions** (c) Seasonal migrations (d) Limited distribution due to geography
11. The theory of continental drift was proposed by:
(a) Darwin (b) Linnaeus (c) **Alfred Wegener** (d) Wallace
12. According to Wegener's theory, the supercontinent was named:
(a) Gondwana (b) **Pangaea** (c) Laurasia (d) Eurasia

13. Discontinuous plant distribution can be explained by:

- (a) Random dispersal (b) Human intervention (c) **Plate tectonics and continental drift** (d) Climate alone

14. Which of the following is NOT a type of plant distribution?

- (a) Cosmopolitan (b) Circumpolar (c) Circumboreal (d) **Universal distribution**

15. The term "pantropical" refers to plants distributed in:

- (a) Polar regions (b) Temperate forests (c) **Tropical regions across continents** (d) Deserts

Section B

Unit I

1. Climate
2. Precipitation
3. Hydrologic cycle
4. Snow, hail and dew
5. Proportion of gases in the atmosphere air
6. Effect of strong wind on vegetation
7. Soil profile
8. 'B' Horizon
9. Soil moisture
10. Soil nutrients
11. Soil organisms
12. Soil air
13. Soil water
14. Soil texture
15. Soil color
16. Soil aeration
17. Mycotrophy
18. Capillary and hygroscopic water
19. Effects of grazing and browsing on plant
20. Role of insects in pollination
21. Role of animals in dispersal of fruits and seeds
22. Carnivorous plants

23. Myremecophily
24. Soil heaving
25. Parasitic plants
26. Symbiosis
27. Mycorrhiza
28. Soil erosion caused by water
29. Soil erosion caused by wind
30. Biotic agencies causing soil erosion
31. Consequence of soil erosion
32. Factors affecting soil erosion

Unit II

1. Haptophytes
2. Rhizophytes
3. Planophytes
4. Planktophytes
5. Pleutophytes
6. Macrophytes
7. Submerged hydrophytes
8. Pseudovivipary
9. Gemmipary
10. Diaphragms
11. Hydathodes
12. Microphyllly
13. Ericoid leaves
14. Sclerophily
15. Trichophylly
16. Phyllodes
17. Chylocauly
18. Succulents

Unit III

1. Causes of succession

2. Monoclimax theory
3. Polyclimax theory
4. Primary succession
5. Secondary succession
6. Hydrosere
7. Xerosere
8. Submerged hydrophyte
9. Floating hydrophyte
10. Amphibious hydrophyte
11. Heterophylly
12. Anatomical modification in hydrophytes
13. Xeric habitats
14. Drought escaping plants
15. Xeromorphic and xeroplastic characters
16. Phylloclades
17. Pneumatophore
18. Vivipary
19. Autotrophic and herterotrophic succession
20. Psammosere

Unit IV

1. Define phytogeography.
2. What does the theory of tolerance explain?
3. Define endemism.
4. What is meant by phytogeography of India?
5. List two factors influencing the vegetation regions of India.
6. Name one vegetation region of India.
7. What are biomes?
8. Give an example of a tropical biome.
9. Name a major temperate biome.
10. What is the primary characteristic of tundra vegetation?
11. Mention two types of vegetation found in India.

12. What are the main climatic factors affecting plant distribution?
13. Define the term "vegetation region."
14. What does "terrestrial biome" refer to?
15. List one example of an endemic plant species in India.

Unit V

1. Define plant geography.
2. What is dispersal in plant geography?
3. Explain migration in plants.
4. What is the "age and area hypothesis"?
5. Name two agents of plant dispersal.
6. What is continuous range in plant distribution?
7. Define cosmopolitan distribution.
8. What is circumpolar distribution?
9. Give an example of circumboreal plant distribution.
10. What does circumastral distribution indicate?
11. Define pantropical distribution with an example.
12. What is discontinuous distribution?
13. Who proposed the theory of continental drift?
14. What was the name of the supercontinent in Wegener's theory?
15. List two causes of discontinuous plant distribution

Section C

Unit I

1. Classify the soil on the basis of texture
2. Mention the soil types on the basis of colour
3. Differentiate nitrogen fixation from mycotrophy

4. "A horizon is said to be more fertile"- Explain
5. What are the organisms present in the soil?
6. Write notes on soil water
7. Name the minerals commonly found in any three types of soil
8. What is organic matter? Write different process of decomposition
9. What are the physical properties of soil
10. Explain the agencies causing soil erosion

Unit II

1. Differentiate free floating hydrophytes from floating-leaved anchored hydrophytes
2. What are emergent hydrophytes
3. List out the anatomical characters of hydrophytes
4. Write the physiological characters of hydrophytes
5. Differentiate drought escaping plants from drought resisting plants
6. Write the morphological characters of xerophytes
7. What are the anatomical adaptation of xerophytes

Unit III

1. Comment on climax concept
2. List out the causes of succession
3. Give notes on mono climax and poly climax theories.
4. Give a detail account on hydrosere
5. Give a detail account on xerosere
6. List out the adaptations of hydrophytes
7. List out the adaptations of xerophytes
8. Define halophyte. Give notes on its adaptation

Unit IV

1. Write a short note on the scope of phytogeography.
2. Explain the theory of tolerance with an example.
3. Discuss the concept of endemism and its importance.
4. Explain the major vegetation regions of India with examples.
5. Describe the characteristics of tropical biomes.
6. Write about temperate biomes and their adaptations.

7. Discuss the unique features of tundra biomes.
8. What are the key factors affecting the distribution of vegetation in India?
9. Compare tropical and temperate biomes.
10. Explain the significance of endemism in Indian phytogeography.

Unit V

1. Explain the significance of plant dispersal in phytogeography.
2. Describe the concept of migration in plants with examples.
3. Write a short note on the "age and area hypothesis."
4. Differentiate between continuous and discontinuous plant distribution.
5. Discuss the characteristics of cosmopolitan plant distribution.
6. Elaborate on circumpolar and circumboreal plant distributions.
7. Write about circumastral and pantropical distributions with examples.
8. Explain the concept of discontinuous distribution with its causes.
9. Discuss the major ideas behind Wegener's theory of continental drift.
10. Explain the role of continental drift in shaping plant distribution patterns.

Section D

Unit I

1. What is Environment? What are various factors which influence the plant life?
2. Illustrate the interaction among plants growing in community.
3. What are the effects of biological factors on plants?
4. Explain the effects of human activities on vegetation.
5. Give an account of role of edaphic factors in distribution of plants.
6. What is precipitation? How does it determine the nature of Vegetation?
7. Write a short note on soil nutrients.
8. Explain the role of animals in the dispersal of fruits and seeds.
9. Describe the soil organism.
10. Describe the effects of temperature on plants.
11. What are the significant effects of wind on vegetation?
12. Explain the symbiotic activities of microorganisms with plants.
13. How does the soil temperature influence the properties of soil?
14. What are the miscellaneous effects of animals on plants?

15. Define soil erosion? Give an account of various factors causing soil erosion

Unit II

1. What are hydrophytes? Give their important morphological and anatomical characters
2. Briefly discuss the ecological adaptations of xerophytes
3. What are halophytes? Describe the characters of halophytes
4. Give the different types of hydrophytes

Unit III

1. Give a detailed account on xerophytic plants and its adaptation.
2. Write an account on the morphological and anatomical adaptation of hydrophytes.
3. Give an account on halophytes.
4. How are xerophytes classified? Explain the adaptations of xerophytes.
5. Explain how halophytes adapted anatomically and physiologically.
6. What are different types of hydrophytes? Mention their physiological adaptations.
7. Give an account of sequential stages of a xerosere.
8. Explain the successive events in hydrosere.
9. What is plant succession? Explain with reference to hydrosere.
10. Explain the various steps in the general process of succession.
11. Describe the popular theories about the climax concept.
12. What is ecological succession? Explain the phenomenon in a pond.
13. Describe the nature and causes of succession commencing from a dry barrier region.
14. Define succession? Describe the causes, trends and basic types of succession

Unit IV

1. Define phytogeography and explain its significance in the study of plant distribution.
2. Elaborate on the theory of tolerance and its implications for plant survival.
3. Discuss endemism in detail, providing examples from Indian vegetation.
4. Describe the phytogeography of India and its key characteristics.
5. Explain the vegetation regions of India, with examples of their unique plant types.
6. Write a detailed note on tropical biomes, discussing their characteristics and plant adaptations.

7. Compare the features of temperate and tundra biomes, highlighting their ecological significance.
8. Discuss the major terrestrial biomes, providing one example each from tropical, temperate, and tundra regions.
9. Analyze the role of climate, soil, and topography in shaping vegetation regions of India.
10. Explain the interrelation between endemism and the biodiversity of India's vegetation.

Unit V

1. Define plant dispersal and explain its types in detail.
2. Discuss the concept of plant migration with examples from different regions.
3. Elaborate on the "age and area hypothesis" and its relevance in plant geography.
4. Describe continuous and discontinuous distribution, providing examples for each.
5. Explain cosmopolitan, circumpolar, and circumboreal plant distributions with suitable examples.
6. Analyze circumastral and pantropical distributions in the context of global vegetation.
7. Discuss the theory of continental drift and its impact on the distribution of plants.
8. Explain the concept of discontinuous distribution with reference to specific plant species and their geographic locations.
9. Write a detailed note on Wegener's theory of continental drift and its relevance to phytogeography.
10. Discuss the combined effects of dispersal, migration, and continental drift on plant distribution patterns globally.

ST.MARY'S COLLEGE (Autonomous) - THOOTHUKUDI- 628 001

**Core III – Biostatistics and Bioinformatics – 21UBOC53
(For those who joined in July 2021)**

**UNIT I
Section A**

1. The application of statistical methods in biology is called
(a) biochemistry (b) biophysics (c) **biostatistics** (d) bioinformatics
2. Biostatistics is also called as
(a) numerology (b) **biometry** (c) geometry (d)
3. Who is regarded as the father of biostatistics?
(a) Fischer (b) Karl Pearson (c) **Francis Galton** (d) Francis Bacon
4. The term biometry was coined by
(a) Fischer (b) Francis Galton (c) Karl Pearson (d) **Walter Weldon**
5. The branch of biostatistics that deals with methods of collection, organization and presentation of data is called as
(a) inferential biostatistics (b) **descriptive biostatistics** (c) comparative biostatistics (d) none
6. In biostatistics, group of individual taken for the study is called as
(a) block (b) **population** (c) group (d) flock
7. What is the first step in biostatistics?
(a) analyze data (b) organize data (c) **collect data** (d) present data
8. The data collected by the investigator is called as
(a) secondary data (b) **primary data** (c) continuous data (d) discrete data
9. Data collected from the published research journals is an example of
(a) primary data (b) **secondary data** (c) unpublished data (d) discrete data
10. The available sources of data are
(a) primary (b) secondary (c) **primary and secondary** (d) none
11. A small representative fraction of a population is called
(a) data (b) **sample** (c) group (d) block
12. When several unbiased samples are drawn from the same population, the sampling technique is
(a) **random sampling** (b) nonrandom sampling (c) nonprobability sampling
(d) purposive sampling
13. In stratified random sampling

- (a) samples are chosen at random (b) **samples are chosen at random from different strata of a population** (c) samples are drawn from selected clusters
(d) samples are selected according to administrative convenience.
14. At a local community college, five statistics classes are randomly selected and all of the students from each class are interviewed. What sampling technique is used?
(a) systematic (b) **cluster** (c) stratified (d) random
15. Data when classified on the basis of time is -----
(a) **chronological** (b) geographical (c) quantitative (d) qualitative
16. Data collected from the newspapers is an example of -----
(a) primary data (b) **secondary data** (c) unpublished data (d) primary and unpublished
Data
17. The number of items a variable is repeated is called as
(a) variable (b) frequency (c) class (d) mid class
18. Data collected according to the occurrence of an event in time is known as
(a) geographical data (b) qualitative data
(c) chronological data (d) quantitative data
19. Which of the following is not characteristics of statistics
(a) it is an aggregate of facts (b) it is not numerically expressed
(c) affected by multiplicity of causes (d) none of the above
20. Which method is not used for collection of primary data?
(a) direct observation (b) oral investigation
(c) data from agency (d) questionnaires
21. Class mark of the class 35-44 is
(a) 39 (b) 39.5 (c) 38 (d) 38.5

Section B

1. What is sample?
2. Define sampling.
3. What is tabulation?
4. Write any two objectives of classification of data.

5. What is random sampling?
6. What is primary data?
7. What is secondary data?
8. Write any two differences between primary and secondary data
9. What is classification of data?
10. Define continuous series
11. Compare primary data and secondary data.
12. Find the class range i) 32-44 ii) 10-22

Section C

1. Distinguish between primary and secondary sources of data with suitable examples
2. Differentiate between primary and secondary data
3. Enumerate the advantages and disadvantages of primary and secondary data
4. What is stratified random sampling? Give an example
5. Mention the importance of sampling
6. List the merits and demerits of sampling
7. Distinguish between chronological and geographical classification with examples
8. Describe qualitative and quantitative classification with examples
9. The following data shows the length of *Polyalthia* leaves. Prepare a frequency table.
19.5, 20, 21.6, 21.8, 22, 22, 22, 22.3, 22.3, 22.4, 22.5, 22.7, 23.3, 23.4, 23.6,
23.6, 23.8, 23.8, 24.2, 24.3, 24.3, 24.3, 24.5, 24.5, 24.5, 24.6, 24.6, 24.7, 24.7,
24.8, 25, 25, 25.2, 25.7, 25.6, 26.5, 26.9, 27.2, 27, 27.5, 27, 27.3, 27.2, 27.2,
27.8, 27.5, 28.5, 28, 28.8, 30
10. Differentiate between class limit, class interval and class frequencies.
11. Categorize the types of classification of data
12. Number of pods in pea plants is given below.
39, 53, 55, 52, 35, 45, 49, 52, 48, 33, 48, 47, 50, 51, 53,
54, 53, 50, 48, 49, 31, 33, 50, 51, 53, 55, 52, 49, 51, 50,
51, 50, 58, 59, 57, 59, 60, 58, 51, 44, 41, 55, 44, 50, 50

Construct simple frequency table and overlapping cumulative frequency table

Section D

1. Give an account of the different ways of classification of data with suitable examples
2. What is sampling? Describe the various random sampling techniques used in biological investigation
3. Write the components of a good statistical table using a model table
4. What is sampling error? Add a note on its importance
5. Analyse the methods of collection of data.

UNIT II

Section A

1. Pie diagram is a type of
(a) line diagram (b) **circular diagram** (c) square diagram (d) rectangle diagram
2. Percentage frequency distribution is represented by
(a) frequency polygon (b) ogive curve (c) **pie diagram** (d) frequency table
3. Continuous variables are represented by
(a) **histogram** (b) line diagram (c) bar diagram (d) Pie chart
4. ----- diagram consists of equally spaced vertical rectangular bars of equal width, placed on
a common horizontal base line
(a) line (b) **bar** (c) pie (d) none of the above
5. Which is the simplest method of diagrammatic representation of data?
(a) **line diagram** (b) bar diagram (c) pie diagram (d) cartogram
6. A pictogram is
(a) a photograph (b) a way of measuring the impact of data presentation techniques (c)
an illustration where each bar is replaced by a picture or series of pictures chosen to
represent the data
7. A pie chart is
(a) a chart demonstrating the increasing incidence of obesity in society (b)
only used in
catering management research (c) **an illustration where the data are divided into**

proportional segments according to the share of the total value of the data

(d) any

form of pictorial presentation

8. The number of observations corresponding to a particular class is known as -----
----- of that class

(a) **frequency** (b) class limit (c) mid-point (d) none

9. Themid – point of a class is obtained by

(a) adding upper and lower limits (b) deducing upper limit from lower limits

(c) **dividing the difference of upper and lower limits by 2** (d) none of these

10. While forming a grouped frequency distribution, the number of classes should be

(a) less than 5 (b) less than 10 (c) more than 20 (d) **between 5 and 20**

11. Frequency distribution of two variables can be presented through a -----
frequency table

(a) univariate (b) **bivariate** (c) grouped (d) none

12. A histogram is represented by

(a) **an adjoining bar chart** (b) a simple bar chart (c) a multiple bar chart (d) a
component bar chart

13. The relative frequencies of particular components represented visually as sectors
of a circle

are illustrated using

(a) bar chart (b) frequency polygon (c) **pie chart** (d) histogram

14. Headings of vertical columns in a table is -----

(a) **captions** (b) stubs (c) title (d) body

15. The heading of a row in a statistical table is known as

(a) **stub** (b) caption (c) title (d) footnote

16. Caption, stub and body are components of

(a) diagram (b) **table** (c) graph (d) questionnaire

17. Tabulation is the process of arranging data in

(a) different rows (b) different columns (c) **rows and columns** (d) nine of
these

16. The headings of the horizontal rows in a table is known as

(a) captions (b) **stubs** (c) head note (d) foot note

17. _____ give information like units of measurements used to express the value?
 (a) **head note** (b) captions (c) foot note (d) stubs
18. Table which is prepared on the basis of original data collected is called as
 (a) derivative (b) primary (c) manifold tables (d) none of the above
19. Bar diagram used for presenting several items of a variable in order to make comparative study is known as
 (a) simple bar diagram (b) component
 (c) percentage (d) multiple
20. Pie diagrams are considered as
 (a) one dimensional diagram (b) two dimensional diagram
 (c) three dimensional diagram (d) all the above

Section B

1. Define presentation of data
2. What is pictogram?
3. What is line diagram?
4. Write any two differences between histogram and bar diagram.
5. What is bar diagram?
6. What is histogram?
7. What are the types of bar diagram?
8. Write any two uses of histogram.
9. List out the parts of table
10. Define presentation of data

Section C

1. What is pictogram? Give an example
2. The following data is on the number of plants in botanical garden in four cities of India. Represent the data in multiple bar diagram and percent bar diagram.

City	Herb	Shrub	Tree	Climber
Ooty	868	950	500	285
Kodaikanal	983	1200	950	300
Kothakiri	780	700	150	450

			0	
Kolkotta	560	800	700	800

- What are line graphs? Write the applications of line graph in biology with examples.
- Differentiate between simple and complex table with example
- Draw a histogram with the help of following data

No. of. Pods	15-17	18-20	21-23	24-26	27-29	30-32	33-35	36- 38	39-4
No. of. plants	5	6	8	12	22	18	15	9	5

- Rainfall in seven towns of Tamilnadu was recorded as follows in the year 2014 (cm). Draw a pie diagram and bar diagram on the basis of data

Chennai	Trichy	Trinelveli	Nagercoil	Madurai	Tuticorin	Salem
150	230	125	360	240	175	210

- Categorize the types of bar diagram
- Construct a pie graph with the given information .Twenty students were given a final exam. After the test, the teacher graded each test and found that six students made an A, five students made a B, five students made a C, two students made a D, and two students made an F.

Section D

- Describe the construction and use of pie – diagram with an example
- What is histogram? How is it drawn?
- Explain different types of bar diagram used in statistics
- What do you mean by frequency and frequency distribution? Mention the steps to prepare a frequency table
- Explain any two diagrammatic presentation of data with suitable examples
- What is meant by tabulation? Explain different types of tables with suitable examples

7. Analyse the graphic presentation of data.
8. Draw a table and explain its parts.

UNIT III

Section A

1. Which is always the best measure of central tendency?
(a) **Mean** (b) Median (c) Mode (d) None of the above
2. The calculated averages are
(a) Mean (b) GM (c) HM (d) **All the above**
3. The positional measure of central tendency is
(a) Mean (b) **Median** (c) GM (d) None of the above
4. Which average is affected most by the values of extreme items
(a) **Mean** (b) Median (c) Mode (d) HM
5. The sum of the deviation
(a) **Mean** (b) Median (c) Mode (d) None of the above
6. One of the method of determining mode is
(a) $\text{Mode} = 2 \text{ median} - 3 \text{ mean}$ (b) $\text{Mode} = 2 \text{ median} + 3 \text{ mean}$ (c) **$\text{Mode} = 3 \text{ median} + 2 \text{ mean}$** (d) None of these
7. Which of the following is the most unstable average
(a) Mean (b) Median (c) **Mode** (d) None of the above
8. Which of the measures of central tendency can be determined graphically
(a) Median (b) Mode (c) Mean (d) **both a and b**
9. The sum of the deviations of a set of 'n' values from their arithmetic mean is
(a) **0** (b) 1 (c) -1 (d) None of these
10. Which measure of central tendency cannot be computed from 'open-end' classes
(a) **Mean** (b) Median (c) Mode (d) None of the above
11. Median is
(a) The most frequent value (b) **middle most value** (c) least frequent value
(d) None of these
12. Given mean = 25 and median = 25, the mode would be
(a) **25** (b) -25 (c) 20 (d) None of the above
13. Histogram is useful to locate graphically the value of
(a) Mean (b) Median (c) **Mode** (d) None of the above
14. The sum of squares of deviation is least when measured from
(a) **Mean** (b) Median (c) Mode (d) None of the above

15. Which of the following is the best measure of dispersion?
 (a) Range (b) Q.D (c) M.D (d) **S.D**
16. The absolute measures of dispersion are
 (a) Range (b) Q.D (c) M.D (d) **All the above**
17. Standard deviation is usually calculated from _____
 (a) **Mean** (b) Median (c) Mode (d) None of the above.
18. The ratio between experimental and observed results is represented by
 (a) Theta value (b) **Chi-square** (c) Variance ratio (d) None of these
19. Chi-square test is
 (a) **test of significance of overall deviation square** (b) Student's test
 (c) Used to test the significance difference between two means (d) All of these
20. Chi-square test was developed by
 (a) W.S. Gossett (b) Karl Pearson (c) **A.R. Fisher** (d) Pascal
21. _____ is used in testing goodness of fit
 (a) **Chi-square** (b) t-test (c) correlation (d) regression
22. Chi-square value _____ with the increase in the degree of freedom
 (a) Decreases (b) **increases** (c) Equal (d) all the above
23. X^2 refers to
 (a) t-test (b) **chi-square** (c) f-test (d) regression
24. Test of significance between experimental values and theoretical values is called -

 (a) t-test (b) **chi-square** (c) f-test (d) regression
25. 't' test was first applied by
 (a) Fisher (b) **W.S. Gossett** (c) Karl Pearson (d) Muller
26. Find the mode of the following data 4, 3, 2, 4, 3, 4, 3, 2, 4, 3, 1, 4
 (a) 3 (b) 2 (c) **4** (d) 1
27. Identify which of the following is not a measure of central tendency
 (a) median (b) mean (c) **standard deviation** (d) mode
28. Identify which of these symbols is used to represent a chi-square test
 (a) C (b) Q (c) T (d) **x^2**

Section B

- What are measures of central tendency?
- Write the types of central tendencies used in statistics
- Define arithmetic mean

4. Calculate the mean from the number of spikelets per spike in Wheat: 18, 20, 21, 19, 28, 22, 29, 30, 31, and 35.
5. Give formula for calculation of mean.
6. Define median.
7. List the merits and demerits of mode.
8. Give formula for calculation of mode.
9. Find the mode of the following data 10, 11, 10, 12, 12, 11, 9, 8, 11, 11.
10. Define standard deviation.
11. Give formula for calculation of standard deviation.
12. Calculate median: 4.0, 5.7, 3.9, 4.2, 6.6, 7.0, 7.9, 8.0, 9.0, 10
13. Write formula for calculation of median.
14. Write the formula for determining chi – square test.
15. Define chi square test.
16. Differentiate between observed frequency and expected frequency.
17. What is null hypothesis?
18. What is goodness of fit?
19. Enlist the applications of student's t-test?
20. Write down the characteristics of chi – square test.

Section C

1. What are measures of central tendency? Write its types
2. Calculate the mean, median and mode: 10, 11, 10, 11, 9, 7, 9, 11, 12, 10.
3. Enumerate the merits and demerits of mean
4. Mention the merits and demerits of median and mode
5. The numbers of clusters per plant of a blackgram variety are given below.
Calculate the arithmetic mean, median and mode
10, 15, 17, 19, 20, 13, 12, 10, 17, 22, 10
6. Calculate the arithmetic mean from the data given in the table

Number of leaves	5	10	15	20	25	30	35	40
Number of plants	6	5	9	4	3	6	4	3

7. The data recorded on the number of chlorophyll deficient plants in a lentil population is given below. Calculate the median and mode.

Number of chlorophyll deficient plants	5	7	6	8	10	9
Number of plants	34	14	20	24	25	33

8. Calculate the arithmetic mean from the following data

Plant height (cm)	0 - 10	10 - 20	20 - 30	30 - 40	40 - 50	50 - 60
No. of varieties	5	10	25	30	20	10

9. Find the median and mode from the data given below

No. of pods / plant	1-5	6-10	11-15	16-20	21-25	26-30	31-35	36-40	
No. of plants	7	10	16	32	24	18	10	5	

10. Write merits and demerits of standard deviation.

11. Calculate the mean for the following data.

Age (x)	f
20 - 25	10
25 - 30	20
30 - 35	30
35 - 40	15
40 - 45	12
45 - 50	10
50 - 55	25

12. Compute the median for the following data.

No. of roots	No. of plants
3 - 5	2
5 - 7	4
7 - 9	5

9 - 11	3
11 - 13	2
13 - 15	3
15 - 17	1

13. A coin is tossed 100 times. Results were counted, 65 heads and 35 tails were obtained. Is this result a significant departure from the expected result?

14. According to a genetic model black coat colour in mice is inherited as a simple dominant trait, and brown colour is inherited as a recessive trait. A cross between pairs of heterozygous black mice produces an F₂ generation consisting of 220 black and 60 brown mice. Does this ratio differ significantly from the expected ratio?

15. The F₂ generation resulting from crosses between heterozygous red owls contained 16 red and 8 gray owls. Are these results consistent with the genetic theory that red is dominant over gray?

Section D

1. Calculate the mean, median and mode from the following frequency distribution

Number of fruits / plant	15-25	25-35	35-45	45-55	55-65	65-75
No. of plants	4	11	19	14	0	2

2. Calculate the standard deviation for the following data

X	10	20	30	40	50	60	70
F	1	5	12	22	17	9	4

3. Calculate the standard deviation for the following data

Number of pods	0 - 10	10-20	20-30	30-40	40-50	50-60	60 - 70
Number of plants	4	6	20	12	10	5	4

4. The number of fully matured potatoes on 50 plants were counted with following results:

No. of. Potatoes	0	1	2	3	5	7	10
------------------	---	---	---	---	---	---	----

No. of. Plants	5	2	4	10	12	14	3
----------------	---	---	---	----	----	----	---

- (i) How many potatoes were there in all?
 - (ii) What was the average number of potatoes per plant?
 - (iii) What was the modal number potato?
5. Discuss various steps in the procedure of testing the hypothesis.
 6. What is student's test? Explain its applications in biological research.
 7. Write the working procedure of chi-square test and enumerate its important applications.
 8. The following data shows the number of serrations in Neem leaf lets. Calculate the mean,
median and mode.
11, 11, 12, 14, 6, 13, 11, 8, 8, 11, 10, 4, 9, 5, 13, 10, 10, 12, 11, 13, 13, 12, 12, 9, 3, 12, 9, 13, 9, 11, 9, 11, 9, 9, 11, 10, 12, 9, 7, 13, 10, 12, 12, 10, 9, 12, 11, 7, 13, 12
 9. (a) In F₂ generation, mendel obtained 621 tall plants and 187 dwarf plants out of the total of 808. Test whether these two types of plants are in accordance with the mendelian monohybrid ratio of 3:1 or that they deviate from this ratio.
 10. In a mendelian experiment on breeding, four types of plants are expected to occur in the proportion of 9:3:3:1. The observed frequencies are: 891 round and yellow, 316 wrinkled and yellow, 290 round and green and 119 wrinkled and green. Find the chi – square and examine the correspondence between the theory and the experiment.
 11. Evaluate the SD for the following data. (K5)

x	0 - 10	10 - 20	20 - 30	30 - 40	40 - 50	50 - 60
f	7	10	14	12	9	8

12. Two dihybrids are crossed in a situation where complete dominance without linkage and other complications is assumed. The F₂ generation shows 85 both dominant, 28 one dominant one recessive, 35 one recessive one dominant and 12 both recessive. Is this result significantly different from the expected frequencies dictated by the genetic model?
13. In order to test whether any association exists between the attributes (factors, qualitative variables) sex and eye colour, 100 persons were identified with regard to

these colours. Test on the basis of the following data whether such an association exists between the two attributes.

Men with blue eyes - 20
 Men with brown eyes – 30
 Women with blue eyes - 24
 Women with brown eyes – 26

14. In order to relate smoking cigarettes with lung cancer, 300 smokers and 400 non-smokers, randomly chosen from a town, were screened for symptoms of cancer. While 50 out of the 400 non-smokers showed symptoms of cancer. On the basis of this data, can it be suggested that development of lung cancer has a strong bearing on smoking?

15. In a garden pea, yellow cotyledon colour is dominant to green and inflated pod shape is dominant to constricted form. When these traits were considered jointly in self-fertilized dihybrids, the progeny appeared in the following numbers: 193 green inflated; 184 yellow constricted; 556 yellow inflated; 61 green constricted. Test the data for independent assortment.

16. In a cross between black and white coloured mice, the F₂ individual segregated into 787 black and 277 white coat coloured individuals. If you have to test that these results agree with the expected ratio 3:1. Then apply Chi-square $P = 5\%$.

17. In a cross between green and yellow pod garden pea plants, the F₂ individual segregated into 428 green and 152 yellow coloured pod individuals. If you have to test that these results agree with the expected ratio 3:1. Then apply Chi-square $P = 5\%$. Test for goodness of fit.

18. In a cross between violet red and white flowered garden pea plants, the F₂ individual segregated into 47 violet red and 40 white flowered individuals. If you have to test that these results agree with the expected ratio 1:1. Then apply Chi-square $P = 5\%$. Test for goodness of fit.

The following table gives the classification of 100 workers according to sex and the nature of work. Test whether the nature of work is independent of the sex of the work.

	Skilled	Unskilled
Male	40	20
Female	10	30

19. Test whether the prevalence of carriers of filarial is associated with sex.

Sex	No. of carriers	No. of non carriers
Male	78	412
Female	57	553

20. A random sample of 500 students were classified according to economic condition of their family and also their merit.

Merit	Economic condition			Total
	Rich	Middle class	Poor	
Meritorious	42	137	61	240

Non meritorious	58	113	89	260
Total	100	250	150	500

21. In a nutritional study, 13 children were given a usual diet plus vitamins A and D tablets. While the second comparable group of 12 children was taking the usual diet. After 12 months, the gain in weight in pounds was noted as given in the table. Can you say that vitamins A and D were responsible for this difference?

A	5	3	4	3	2	6	3	2	3	6	7	5	3
B	1	3	2	4	2	1	3	4	3	2	2	3	-

22. Compare the mean of two samples of two horticultural plots, each divided into six equal sub-plots. Organic fertilizer is added to plot 1 and chemical fertilizer is added to plot 2. The yield of fruits from plot 1 and 2, in kg/sub-plot is given below. Can we say the yield due to organic fertilizer is higher than due to chemical fertilizer?

Plot 1	6.2	5.7	6.5	6.0	6.3	5.8
Plot 2	5.6	5.9	5.6	5.7	5.8	5.7

23. From the following data on the weights in mg of species of insect before and after feeding a type of food, test whether a significant mean difference exists.

Before	17	17	18	21	22	17	23	23
After	18	17	20	24	23	15	25	22

UNIT IV

Section A

- The role of NCBI is to develop new information technologies to aid our understanding of
 - molecular and genetic process**
 - physiological process
 - anatomical process
 - all the above
- The data that are collected from biological world are called
 - molecular data
 - biological data**
 - computational data
 - genetic data
- EMBL database is maintained in collaboration with
 - NCBI and DDBJ
 - Entrez and Swiss prot
 - DDBJ and GenBank**
 - GenBank and Entrez
- Composite databases store data of different
 - structural database
 - secondary database
 - molecular database
 - primary databases**
- The term bioinformatics was coined by

- (a) **Pauline Hogeweg** (b) Watson
(c) Sanger (d) Watson and Crick
6. What is the scope of bioinformatics primarily concerned with?
(a) the application of algorithms to study the structure of proteins
(b) **the application of biological data and computational methods to solve biological problems**
(c) the use of laboratory techniques to study genes
(d) the creation of protein sequences using genetic modification
7. Which of the following is NOT a nucleic acid database?
(a) NCBI (b) DDBJ (c) EMBL (d) **PDBsum**
8. What is the primary purpose of protein databases?
(a) To store information about protein structures only
(b) **To provide information on the sequences and structures of proteins**
(c) To catalog gene sequences
(d) To maintain records of biological species
9. Which of the following is a secondary protein database?
(a) UniProt (b) PDB (c) **SCOP** (d) SGD
10. What does the TIGR database specialize in?
(a) Protein sequences
(b) **Genomic sequences and functional annotations**
(c) Structural protein databases
(d) Gene expression data
11. The SGD database is specifically focused on which organism?
(a) *Escherichia coli* (b) *Saccharomyces cerevisiae*
(c) *Homo sapiens* (d) *Arabidopsis thaliana*
12. Which database would you consult for a 3D representation of protein structures?
(a) EMBL (b) SCOP (c) **PDBsum** (d) DDBJ
13. Which of the following is a primary protein database?
(a) SCOP (b) CATH (c) **UniProt** (d) PDBsum
14. The CATH database provides information related to:
(a) Genomic sequences (b) **Protein structures and classifications**
(c) Metabolic pathways (d) Gene expression data
15. What is the primary function of biological databases in bioinformatics?
(a) To create new protein sequences
(b) **To store and organize large sets of biological data for easy retrieval and analysis**
(c) To design new experimental techniques for biological research
(d) To generate 3D models of nucleic acids
16. Which of the following is a structure database for proteins?

(a) EMBL **(b) PDB** (c) DDBJ (d) SGD

17. The DDBJ database is a collaborative effort involving which countries?
(a) USA, UK, and Germany **(b) Japan, USA, and UK**
(c) Japan, China, and South Korea (d) Canada, USA, and France
18. The PDBsum database is primarily used for:
(a) Viewing protein 3D structures (b) Analyzing gene expression data
(c) Classifying protein families (d) Storing genomic sequence data
19. Which of the following best describes a composite protein database?
(a) A database that stores only raw sequence data
(b) A database that combines primary, secondary, and functional annotations
(c) A database that provides only protein structure information
(d) A database that categorizes protein families based on structure alone

Section B

1. Explain bioinformatics
2. Discuss on Entrez database
3. Express what are the primary functions of protein databases in bioinformatics?
4. Differentiate primary and secondary protein databases with examples.
5. Indicate the role of the SGD database?
6. Explain what information is typically provided by the SCOP database?
7. Discuss the collaborative nature of the DDBJ database. Which countries are involved in
this initiative?
8. Summarize how does the TIGR database contribute to genomic research?

Section C

1. Present the scope of bioinformatics
2. Produce the role of DNA Data Bank of Japan
3. Show the role of biological database NCBI
4. Relate the roles of specialized genome databases such as SGD in genomic research.
5. Compile the importance of structure database PDBsum in bioinformatics.

Section D

1. Critique the role of European Molecular Biology Laboratory
2. Outline the types and uses of protein databases. NCBI
3. Define bioinformatics and examine its significance in biological research.

4. Analyze the role of specialized genome databases like SGD and TIGR in genomic studies.
5. Evaluate the significance of structural databases CATH, SCOP and PDBsum in bioinformatics.

UNIT V

Section A

1. _____ describes genes in different species that derive from a common ancestor
 - (a) Analogy
 - (b) **Orthology**
 - (c) Paralogy
 - (d) all the above
2. _____ is the input sequence or sequence identifier with which all the sequences in a database are compared during BLAST search
 - (a) Masking
 - (b) Homology
 - (b) **Query**
 - (d) Similarity
3. _____ is a fixed procedure embodied in a computer program
 - (b) **algorithm**
 - (b) conservation
 - (c) E value
 - (d) gap
4. The interpretation of a multiple sequence alignment can act as the basis of analyses of
 - (a) biodiversity
 - (b) drug designing
 - (c) **evolutionary relationship**
 - (d) none of the above
5. The removal of repeated or low complexity regions from a sequence so that sequences are removed
 - (a) **masking**
 - (b) analogy
 - (c) paralogous
 - (d) orthologs
6. Write the bioinformatics tool used for molecular structural visualization
 - (a) ChemSketch
 - (b) Moldraw
 - (c) **RasMol**
 - (d) Chimera
7. Identify the protein data bank which provides chemical and structural information about small molecules
 - (a) Raswing
 - (b) **Ligand Expo**
 - (c) QMol
 - (d) Arguslab
8. What is the primary purpose of sequence alignment in bioinformatics?
 - (a) To determine the molecular weight of proteins
 - (b) **To identify similarities and differences between biological sequences**
 - (c) To predict protein structures
 - (d) To analyze gene expression levels
10. Which of the following best describes dynamic programming in the context of sequence alignment?
 - (a) A method for generating 3D protein models
 - (b) **An optimization algorithm used to align sequences efficiently**
 - (c) A technique for clustering sequences into groups

- (d) A statistical method for predicting gene function
10. Which algorithm is commonly used for local alignment?
(a) Needleman-Wunsch (b) **Smith-Waterman**
(c) Clustal W (d) BLAST
11. What is the main function of the BLAST algorithm in bioinformatics?
(a) To perform structural alignment of proteins
(b) **To identify homologous sequences in databases**
(c) To visualize molecular structures
(d) To model drug interactions with target proteins
12. Which of the following tools is specifically designed for multiple sequence alignment?
(a) RASMOL (b) FASTA
(c) **Clustal W** (d) Ligand Explorer
13. What is the primary use of the RASMOL software?
(a) Drug design and molecular docking
(b) Sequence alignment and analysis
(c) **Visualization of molecular structures**
(d) Statistical analysis of genomic data
14. Which of the following statements about FASTA is true?
(a) It is primarily used for structural visualization of proteins.
(b) **It is a sequence alignment tool that uses a heuristic approach for rapid searching.**
(c) It is a software for drug design and molecular docking.
(d) It is a database for storing genomic information.
15. What type of analysis does Ligand Explorer facilitate in drug design?
(a) Visualization of protein structures
(b) Prediction of secondary structure of proteins
(c) **Molecular docking simulations**
(d) Comparative genomic analysis

Section B

1. Discuss the uses of T-coffee
2. Express short notes on Cluster W
3. Explain drug designing
4. Extend sequence alignment and explain its importance in bioinformatics.
5. Discuss the advantages of using dynamic programming for sequence alignment.
6. Express the role of RASMOL in molecular visualization.
7. Explain how does Ligand Explorer assist in the drug design process?

Section C

1. Compile about the pair wise sequence alignment
2. Relate between local and global sequences alignment.
3. Show ligand explorer with reference to drug designing.
4. Compile why are sequence alignments important in the study of genetics and protein function?
5. Produce how dynamic programming algorithms work for aligning sequences and the significance of this method in bioinformatics.
6. Present the role of the BLAST algorithm in sequence alignment.
7. Construct how multiple sequence alignment is performed using Clustal W.
8. Show how RASMOL can be used to analyze protein structures.

Section D

1. Organize the different gene sequencing alignment using bioinformatics tools with examples.
2. Analyze the molecular visualization tool RasMol.
3. Evaluate the role of Ligand Explorer in drug design and development.
4. Evaluate the BLAST algorithm and its application in bioinformatics.

Section A

Unit I

1. Name the tendency of an offspring to resemble its parent is called as (K1)
(a) Variation
(b) Resemblance
(c) **Heredity**
(d) Inheritance
2. Name the scientist, who is known as the “Father of Genetics” (K1)
(a) **Mendel**
(b) Morgan
(c) Bateson
(d) Watson
3. Identify the alternate form of a gene (K1)
(a) Recessive character
(b) Alternate type
(c) **Allele**
(d) Dominant character
4. Find the genotypic ratio of a monohybrid cross (K1)
(a) 3:1
(b) **1:2:1**
(c) 9:3:3:1
(d) 2:1:1
5. Find the crossing of F1 to either of the parents is known as (K1)
(a) **Test cross**
(b) F1 cross
(c) Back cross
(d) All of the above
6. Identify which of the following statements is true regarding the “law of segregation”? (K1)
(a) Segregation of factors is due to the segregation of chromosomes during meiosis
(b) Law of segregation is the law of purity of genes
(c) Alleles separate from each other during gametogenesis
(d) **All of the above**
7. Find the Mendel's tool in which Homozygosity and heterozygosity of an individual can be determined (K1)
(a) **Test cross**

- (b) Back cross
 - (c) Self-fertilization
 - (d) All of the above
8. Find which of the following is an exception to Mendel's law (K1)
- (a) Linkage**
 - (b) Independent assortment
 - (c) Purity of gametes
 - (d) Dominance
9. Find why Pea plants were used in Mendel's experiments (K1)
- (a) They were cheap
 - (b) They were available easily
 - (c) They had contrasting characters**
 - (d) All of the above
10. Find from the following which is the smallest unit of genetic material produces a phenotypic effect on mutation (K1)
- (a) Gene
 - (b) Muton**
 - (c) Nucleic acid
 - (d) Recon
11. Find who is/are rediscovered Mendel's findings (K1)
- (a) Correns
 - (b) Tschermak
 - (c) De Vries
 - (d) All**
12. Match the correct option for alleles (K1)
- (a) Linked genes**
 - (b) Alternate forms of genes
 - (c) Homologous chromosomes
 - (d) Chromosomes that have crossed over
13. Identify the correct option regarding the Genes (K1)
- (a) Particular DNA segment which determines the heredity of a particular trait**
 - (b) Half DNA segment of somatic cells
 - (c) Whole DNA
 - (d) Half DNA segment
14. Name the set of observable characteristics and is the sum of genetic and environmental effects. (K1)
- (e) genotype
 - (f) phenotype**
 - (g) both genotype and phenotype
 - (h) neither genotype or phenotype
15. Find the ratio, after cross-fertilization of true-breeding tall and dwarf plants, the F1 generation was self-fertilized. The resultant plants have genotype in the ratio (K1)
- (a) 1:2:1 (homozygous tall : heterozygous tall : dwarf)**
 - (b) 1:2:1 (heterozygous tall : homozygous tall : dwarf)
 - (c) 3:1 (tall : dwarf)

- (d) 3:1 (dwarf : tall)
16. Identify which of the following characteristics of pea plants was not used by Mendel in his experiments (K1)
- (a) seed colour
 - (b) seed shape
 - (c) **pod length**
 - (d) flower position
17. Find how many contrasting characteristics of pea plants were taken by Mendel took (K1)
- (a) eight
 - (b) **seven**
 - (c) six
 - (d) five
18. Find If both genotype and phenotype shows the same ratios of 1:2:1 in the F₂ generation, it shows (K1)
- (a) **incomplete dominance in monohybrid cross**
 - (b) complete dominance in monohybrid cross
 - (c) dihybrid cross
 - (d) co-dominance
19. Identify which of the following is determined by test cross (K1)
- (a) whether two traits are linked or not
 - (b) **the genotype of F₂ plant**
 - (c) whether the two species will breed successfully or not
 - (d) number of alleles in a gene
20. Name the tool which determines the genotype of dominant plant (K1)
- (a) pedigree analysis
 - (b) back cross
 - (c) **test cross**
 - (d) dihybrid cross
21. Find the definition of test cross (K1)
- (a) cross between two recessive homozygotes
 - (b) cross between dominant homozygote and heterozygote
 - (c) cross between two F₁ hybrids
 - (d) **cross between an F₁ hybrid and recessive homozygote**
22. Find why the lack of independent assortment of two genes is occurred (K1)
- (a) recombination
 - (b) crossing over
 - (c) **linkage**
 - (d) repulsion
23. Name the cross where the sources of gametes are reversed (K1)
- (a) **reciprocal cross**
 - (b) reverse cross
 - (c) dihybrid cross
 - (d) test cross
24. Recall the gene of seven characters chosen by Mendel are located on (K1)
- (a) **four chromosomes**

- (b) five chromosomes
 - (c) six chromosomes
 - (d) seven chromosomes
25. Identify what, according to Mendel, was responsible for the inheritance of specific traits (K1)
- (a) Genes
 - (b) **Factors**
 - (c) Chromosomes
 - (d) DNA

Unit II

1. Find the Phenomenon of two or more than two genes affecting the expression of each other is called (K1)
 - (a) Crossing over
 - (b) Pairing
 - (c) **Gene interaction**
 - (d) Linkage
2. Identify which of the following ratio shows complementary gene interaction (K1)
 - (a) **9:7**
 - (b) 15:1
 - (c) 1:2:1
 - (d) 9:3:3:1
3. Find which of the following does not show Mendel's law of inheritance (K1)
 - (a) Masking gene interaction
 - (b) Epistasis
 - (c) Supplementary gene interaction
 - (d) **Codominance**
4. Identify what is epistasis (K1)
 - (a) Type of linkage
 - (b) **Masking or modifying gene effect**
 - (c) Upper portion of a chromosome
 - (d) Group of genes
5. Find which of the following is NOT the type of epistasis. (K1)
 - (a) Dominant
 - (b) Recessive
 - (c) **Collabrative**
 - (d) Supplementary
6. Identify the correct ratio, which shows the masking gene interaction. (K1)
 - (a) **12:3:1**
 - (b) 9:3:4
 - (c) 1:2:1
 - (d) 9:7
7. Identify the activity of one gene is suppressed by the activity of a non-allelic gene (K1)
 - (a) Pseudo-dominance
 - (b) Hypostasis

- (c) Epistasis
 - (d) **Incomplete dominance**
8. Find the phenomenon on which F₂ generation represents 9:7 ratio. (K1)
- (a) Incomplete dominance
 - (b) Co-dominance
 - (c) **Epistasis**
 - (d) Complementary interaction
9. Name the scientist who observed the phenomenon of incomplete dominance (K1)
- (a) De Vries
 - (b) **Correns**
 - (c) Tschermak
 - (d) None of the above
10. Find the other name for "incomplete dominance" (K1)
- (a) **Blending inheritance**
 - (b) Co-dominance
 - (c) Pseudo-dominance
 - (d) All the above
11. Name the correct new comb colour in poultry appears by collaboration of two dominant gene is (K1)
- (a) **walnut**
 - (b) single
 - (c) rose
 - (d) pea
12. Identify the example of epistatic gene is studied (K1)
- (a) comb colour of poult
 - (b) sweet pea
 - (c) **cucurbita pepo**
 - (d) none of the above
13. Find the correct phenomenon, in shorthorn cattle genes for red (r₁), and white (r₂) coat colour occur. Crosses between red (r₁r₂) and white (r₂r₂) produced (r₁r₂) roan. This is an example of (K1)
- (a) complementary genes
 - (b) epistasis
 - (c) **codominance**
 - (d) incomplete dominance
14. Name the phenomenon in which F₁ hybrid is intermediate between the two parents (K1)
- (a) codominance
 - (b) dominance
 - (c) blending inheritance
 - (d) **incomplete dominance**
15. Identify the correct phenotypic ratio obtained in quantitative inheritance of a dihybrid cross is (K1)
- (a) 1 : 2 : 1
 - (b) **1 : 4 : 6 : 4 : 1**
 - (c) 1 : 6 : 15 : 20 : 15 : 6 : 1
 - (d) 9 : 3 : 3 : 1

16. Grain colour in wheat is determined by three pairs of polygenes. Following the cross AABBCC (dark colour) \times aabbcc (light colour), in F₂ generation what proportion of the progeny likely to resemble either parent (K1)
- (a) none
 - (b) less than 5 per cent**
 - (c) one third
 - (d) half

Unit III

1. Name the cell division stage in which crossing over occurs (K1)
 - (a) Diakinesis stage
 - (b) Anaphase stage
 - (c) Pachytene stage**
 - (d) Leptotene stage
2. Identify the percentage of people that cross over is higher when (K1)
 - (a) the genes are in a distinct cell.
 - (b) there is no relationship between genes.
 - (c) connected genes are near to one another.
 - (d) related genes are separated by a large distance.**
3. Find the effect of linking of gene (K1)
 - (a) the development of more dominant phenotypes
 - (b) the development of more wild phenotypes
 - (c) the development of more parental phenotypes**
 - (d) more recombinant phenotype formation
4. Name the scientist who discovered the linkage (K1)
 - (a) Blakeslee
 - (b) Sutton
 - (c) Muller
 - (d) Bateson**
5. Find why Mendel did not recognize the linkage phenomenon in his experiments (K1)
 - (a) there were many chromosomes to handle
 - (b) characters he studied were located on different chromosomes**
 - (c) he did not have powerful microscope
 - (d) he studied only pure plants
6. Identify the process in which coupling and repulsion are the two faces of (K1)
 - (a) crossing over
 - (b) linkage**
 - (c) chiasmata
 - (d) mutation
7. Identify why Mendel observed that some characters did not assort independently. Later researchers found it (K1)
 - (a) Crossing-over
 - (b) Linkage**
 - (c) Dominance of one trait over the other
 - (d) Amitosis

8. Name the phenomenon during meiosis in which exchange of genetic material between chromatids of homologous chromosomes (K1)
 - (a) synapsis
 - (b) chiasmata
 - (c) transformation
 - (d) **crossing over**
9. Find when the Holliday model is proposed (K1)
 - (a) 1982
 - (b) 1960
 - (c) **1964**
 - (d) 1984
10. Identify which type of DNA is connected by a holiday junction (K1)
 - (a) **Homologous DNA duplex**
 - (b) Heteroduplex DNA
 - (c) Mutated DNA
 - (d) Asymmetric DNA
11. According to the Holliday model, the first step of recombination involves a nick in (K1)
 - (a) **only one DNA strand of each of the two homologous chromosomes.**
 - (b) only one DNA strand of only one of the two homologous chromosomes.
 - (c) both DNA strands of each of the two homologous chromosomes. both DNA strands of each of the two homologous chromosomes.
 - (d) both DNA strands of only one of the two homologous chromosomes.
12. When the F1 (Rr x RY) flies with red eyes are inbred the F2 offsprings are
 - (a) completely red eyed females and no male with white eyes
 - (b) completely white eyed males and no red eyed females
 - (c) **half male red eyed, half male white eyed and all females with red eyes**
 - (d) completely white eyed male and female
13. The characters attributed to plasmagones are transmitted through
 - (a) male and female
 - (b) **female**
 - (b) male
 - (d) all the above
14. The failure of fertile F1 hybrids to produce fertile F2 individuals is
 - (a) hybrid sterility
 - (b) hybrid inviability
 - (c) **hybrid breakdown**
 - (d) gametic isolation
15. Mutations that can affect small portion of a gene is
 - (a) **Point mutation**
 - (b) Back mutations
 - (c) Phase shift mutations
 - (d) Polar mutations

Unit IV

1. _____ help in tracing the ancestors of the living organisms
 - (a) **palaeontological evidences**
 - (b) neurological evidences
 - (c) biochemical evidences
 - (d) anatomical evidences
2. Which of the following transitional forms reveal links between reptiles and birds
 - (a) *Seymouria*
 - (b) ***Archaeopteryx***
 - (c) *Eustheopteron*
 - (d) all the above
3. The structures which are functionally similar but structurally different are called
 - (a) homologous organs
 - (b) **analogous organs**
 - (c) vestigial organ
 - (d) atavism

4. Separation of *Citrus* leaf the lamina from wing petiole by means of a joint or constriction is an example of ____
 (a) **atavism** (b) vestigial organ (c) analogous organs (d) connecting link
5. Vermiform appendix is an example of
 (a) homologous organs (b) **vestigial organ** (c) analogous organs (d) atavism
6. Origin of life from pre-existing living things is termed as
 (a) Abiogenesis (b) **biogenesis** (c) evolution (d) all the above
7. Theory on inheritance of acquired characters is proposed by
 (a) Darwin (b) **Lamarck** (c) Oparin (d) Huxley
8. Finches in Galapagos island is an example of
 (a) **geographical** evidence (b) taxonomic evidence
 (c) paleontology (d) morphological evidence
9. Sudden appearance of variants which strikingly differed from their parents are called
 (a) evolution (b) variation (c) **mutation** (d) Lamarckism
10. _____, a group of fossil plants popularly known as seed ferns lived in carboniferous period
 (a) **Pteridosperms** (b) *Rhynia*
 (c) Cycads (d) *Archaeopteryx*

Unit V

1. Identify which phenomenon is the best example of natural selection in moth populations:
 (a) **Industrial melanism in peppered moths**
 (b) Migration of birds
 (c) Hibernation of bears
 (d) Symbiosis in corals
2. Find the factor that best explains the rise in resistant insect populations after extensive pesticide use:
 I. Random mutation
 II. Genetic drift
III. Natural selection
 IV. Artificial selection
3. Recall the concept that explains why some bacteria become resistant to antibiotics:
 I. Inherited immunity
II. Natural selection
 III. Artificial selection
 IV. Genetic isolation
4. Name the term that describes the increased survival of darker-colored moths in polluted environments:
 I. Adaptive radiation
II. Industrial melanism
 III. Convergent evolution

- IV. Genetic drift
5. Define industrial melanism:
- I. A form of mimicry in moths
 - II. The appearance of darker individuals due to pollution**
 - III. Increased reproductive success in dark-winged birds
 - IV. Adaptation in arctic animals during the winter
6. Match the following examples with the type of evolutionary phenomenon they illustrate:
- 1. Pesticide resistance in insects
 - 2. Industrial melanism in moths
 - 3. Antibiotic resistance in bacteria
- I. Artificial selection
 - II. Convergent evolution
 - III. Natural selection
- Answer:
- 1 → c) Natural selection
 - 2 → c) Natural selection
 - 3 → c) Natural selection
7. Quote Charles Darwin's contribution to the concept of natural selection:
- I. "The survival of the fittest"
 - II. "Mutations are the driving force of evolution"
 - III. "Species evolve by accumulating favorable traits over generations"**
 - IV. "Environment determines genetic makeup"
8. Identify the type of natural selection that favors average individuals in a population:
- (a) **Stabilizing selection**
 - (b) Disruptive selection
 - (c) Directional selection
 - (d) Sexual selection
9. Find the selection type that results in a shift of a population's traits toward one extreme:
- (a) Disruptive selection
 - (b) **Directional selection**
 - (c) Stabilizing selection
 - (d) Balancing selection
10. Recall the term used for the process where one species gives rise to many different species adapted to various environments:
- (a) **Adaptive radiation**
 - (b) Sympatric speciation
 - (c) Genetic drift
 - (d) Gene flow
11. Name the type of natural selection that promotes extreme traits at both ends of the distribution curve:
- (a) Stabilizing selection
 - (b) **Disruptive selection**
 - (c) Directional selection
 - (d) Artificial selection
12. Define adaptive radiation:
- (a) The process of individuals evolving into entirely new species due to genetic mutations

- (b) **The rapid evolution of different species from a common ancestor, each adapted to a different environment**
 - (c) The transfer of genetic material between species through horizontal gene transfer
 - (d) The merging of two populations into one species due to similar environmental pressures
13. Match the following examples with the correct types of natural selection or speciation:
- I. **Darwin's finches on the Galápagos Islands**
 - II. **Moths evolving to have darker or lighter coloration in polluted areas**
 - III. **Butterflies favoring bright colors to attract mates**
- (a) Sexual selection
 - (b) Adaptive radiation
 - (c) Directional selection
- Answer:** i → (b) Adaptive radiation
 ii → (c) Directional selection
 iii → (a) Sexual selection
14. **Quote** the key principle behind organic evolution as stated by Darwin:
- (a) **"All species are related by descent from a common ancestor"**
 - (b) "The most successful individuals are those that adapt fastest"
 - (c) "Species remain constant until disrupted by external events"
 - (d) "Evolution is guided by purpose and design"
15. Identify the genus to which modern humans belong:
- (a) **Homo**
 - (b) Australopithecus
 - (c) Pan
 - (d) Neanderthal
16. Find the isolation mechanism that prevents species from interbreeding because they occupy different habitats:
- (a) Temporal isolation
 - (b) Behavioral isolation
 - (c) **Habitat isolation**
 - (d) Mechanical isolation
17. Recall the type of isolation that occurs when species reproduce at different times of the day or year:
- (a) Behavioral isolation
 - (b) **Temporal isolation**
 - (c) Geographic isolation
 - (d) Ecological isolation
18. Name the process by which one species splits into two or more distinct species:
- (a) **Speciation**
 - (b) Genetic drift
 - (c) Gene flow
 - (d) Mutation
19. Define the term "reproductive isolation":
- (a) The complete cessation of reproduction in a population
 - (b) **The inability of different species to produce fertile offspring**
 - (c) The separation of populations due to physical barriers
 - (d) The reduction in population size due to environmental factors
20. Match the following examples with the type of isolation mechanism they illustrate:
- I. **Two species of frogs that mate at different times of the year**

II. Birds of the same species developing different mating dances

III. Two populations of fish separated by a newly formed river

(a) Behavioral isolation

(b) Temporal isolation

(c) Geographic isolation

Answer: I → (b) Temporal isolation

II → (a) Behavioral isolation

III → (c) Geographic isolation

21. Quote the role of isolation in speciation:

(a) **"Isolation prevents gene flow, allowing populations to diverge and form new species."**

(b) "Isolation increases genetic diversity by merging populations."

(c) "Isolation accelerates mutation rates, speeding up evolution."

(d) "Isolation decreases competition, which drives natural selection."

Section B

Unit I

1. Write notes on test cross? (K1)
2. Recall why Mendel selected pea plants for his experiments? (K1)
3. Explain Mendel's Hybridization technique. (K2)
4. Discuss Mono hybridization test (K2)
5. Express the phenomenon of dominance (K2)
6. Explain law of segregation (K2)
7. Summarize law of independent assortment (K2)
8. Compare the incomplete dominance with codominance (K2)
9. Discuss the variation in dominance reaction (K2)

Unit II

1. Explain non epistatic inter allelic genetic interaction (K2)
2. Discuss epistatic interaction (K2)
3. Express the phenomenon of dominant epistatic interaction (K2)
4. Explain recessive epistatic interaction (K2)
5. Summarize the duplicate genes with cumulative effects (K2)
6. Compare the dominant epistatic interaction with recessive epistatic interaction (K2)
7. Discuss the inheritance of multiple genes (K2)
8. Explain the phenomenon behind the kernel color in Wheat (K2)
9. Summarize the duplicate gene action (K2)

Unit III

1. Explain Linkage (K2)
2. Discuss the scientist's views on linkage (K2)

3. Express the characteristics of crossing over- (K2)
4. Indicate the types and mechanism of crossing over (K2)
5. Summarize the Hoiday's model of crossing over (K2)
6. Explain criss-cross inheritance? (K2)
7. Define mutation (K1)
8. Explain mutagens (K2)
9. Describe somatic mutation (K1)
10. Define germinal mutation (K2)
11. Discuss on spontaneous mutation (K2)
12. Explain tautomers (K2)
13. Summarize on induced mutation (K2)
14. Define photoreactivation (K1)
15. Describe sex-linked inheritance (K1)
16. Explain cytoplasmic inheritance (K2)

Unit IV

1. Describe the mutation theory (K1)
2. Define fossil (K1)
3. Explain variation (K2)
4. Describe the theory of natural selection (K1)
5. Define struggle for existence (K1)
6. Discuss on survival of the fittest (K2)
7. Explain organic evolution (K2)
8. Discuss on vestigial structure (K2)
9. Write any two plant fossils reported in paleontological evidence (K1)

Unit V

1. Describe atavism with suitable example (K1)
2. Define theory of natural selection (K1)
3. Explain isolation (K2)
4. Discuss on seasonal isolation (K2)
5. Describe sexual isolation (K1)
6. Define mechanical isolation (K1)
7. Discuss gametic isolation (K2)

8. Explain hybrid inviability (K2)
9. Discuss hybrid sterility (K2)
10. Describe hybrid break down (K1)
11. Define speciation (K1)

Section C

Unit I

1. Compile the mechanisms of incomplete dominance with suitable example. (K3)
2. Show the mono hybridization test with an example (K3)
3. Present the phenomenon of dominance and law of segregation (K3)
4. Demonstrate law of independent assortment with the suitable example (K3)
5. Present the concept of codominance with suitable example (K3)

Unit II

1. Compile the mechanisms of different types of genes interactions. (K3)
2. Show the phenomenon of recessive epistatic interaction with suitable example (K3)
3. Present the genetic concept behind the Comb shapes in fowls (K3)
4. Demonstrate the inheritance of multiple genes in kernel colour in wheat (K3)
5. Present the cumulative effects of duplicate genes with suitable example (K3)

Unit III

1. Compile the concept of linkage in genetics. (K3)
2. Demonstrate the characteristics, types and mechanism of crossing over (K3)
3. Present the Scientist's views on linkage (K3)
4. Show the Hoiday's model of crossing over (K3)
5. Demonstrate the phenomenon of extra-chromosomal inheritance with suitable example (K3)
6. Present the molecular basis of point mutation. (K3)
7. Show sex-linked inheritance with reference to *Drosophila* eye colour (K3)
8. Present male sterility in maize (K3)
9. Analyze extra-nuclear inheritance with reference to plastid inheritance in plants (K4)
10. Present point mutation and write their molecular basis (K3)
11. Compile induced mutations and their types (K3)

Unit IV

1. Distinguish analogous organs and vestigial organs (K4)
2. Relate the biochemical evidences of origin of life. (K3)
3. Present the biochemical evidences of organic evolution (K3)

4. Compile the evidences of organic evolution with reference to comparative anatomical characters (K3)
5. Present the evidences of organic evolution with reference to neurological theories (K3)
6. Examine germplasm theory on organic evolution (K4)
7. Present the theory of mutation by De Vries (K3)

Unit V

1. Demonstrate industrial melanism as supportive evidence of evolution (K3)
2. Produce the supportive evidence with reference to resistance to pesticides (K3)
3. Distinguish adaptive radiation and organic evolution (K4)
4. Present phenomenon of natural selection (K3)
5. Compile the premating mechanisms of isolation (K3)
6. Present the post mating mechanisms of isolation (K3)

Section C

Unit I

1. Outline the Mendel's work on hybridization technique (K4)
2. Analyze the Mendel's Mono hybridization test with suitable example (K4)
3. Compare incomplete dominance to codominance (K4)
4. Organize the (K4)
5. Simplify the phenomenon of dominance and law of segregation with suitable genetic experiments (K4)
6. Differentiate the incomplete dominance with codominance by suitable examples (K4)

Unit II

1. Outline the non epistatic inter allelic genetic interaction in the comb shapes of fowls (K4)
2. Analyze the dominant epistatic interaction in fruit colour of squash (K4)
3. Compare incomplete dominance to codominance (K4)
4. Organize the duplicate gene action. (K4)
5. Simplify the inheritance of multiple genes in wheat kernal (K4)
6. Differentiate the dominant epistatic interaction with recessive epistatic interaction (K4)
7. Evaluate the inheritance of multiple genes in wheat kernal (K5)

Unit III

1. Outline the scientist's views on linkage (K4)
2. Analyze the characteristics, types and mechanism of crossing over (K4)
3. Compare crossing over to linkage (K4)
4. Simplify the Holiday's model of crossing over (K4)
5. Analyze the sex linked inheritance in *Drosophila* with reference to eye colour. (K4)
6. Chromosomal aberration

Unit IV

1. Explain the various types of natural selection theory (K2)
2. Categorize the paleontological evidences on origin of life on earth. (K4)
3. Discuss about the biochemical evidences on origin of life on earth. (K2)
4. Organize the various types of supportive evidences of organic evolution. (K4)
5. Support the theory of acquired characters by Lamarck (K5)
6. Analyze Darwinian theory of organic evolution (K4)
7. Critique the theories on origin of life (K5)

Unit V

1. Organize the various types of isolating mechanisms. (K4)
2. Categorize any two supportive evidences of natural selection (K4)
3. Examine phylogeny of terrestrial plants and origin of man (K4)
4. Critique various mechanisms of isolation and their role in speciation (K5)

Section A

Unit I

1. Phenyl mercuric acetate
 - (a) **reduces transpiration rate** (b) reduces photosynthesis
 - (c) reduces respiration (d) kills the plant
2. The amount of water held by the soil after drainage is known as
 - (a) mineral water (b) soil water (c) **field capacity** (d) gravitational capacity
3. In soil, water available for plants is
 - (a) **capillary water** (b) hygroscopic water
 - (c) gravitational water (d) chemically bound water
4. Turgidity of the cells is maintained by
 - (a) osmotic pressure (b) wall pressure (c) **turgor pressure** (d) diffusion pressure
5. Wilting of a plant results from excessive
 - (a) respiration (b) photosynthesis (c) absorption (d) **transpiration**
6. According to Steward's starch hydrolysis theory, which one of the following is the principal reason for the opening of stomata during daytime?
 - (a) **photosynthetic utilization of CO₂ in guard cells**
 - (b) influx of K⁺ ions into guard cells under the influence of ABA hormone
 - (c) conversion of sugar into starch in guard cells
 - (d) efflux of K⁺ ions from guard cells under the influence of ABA hormone
7. A leaf peeling of *Tradescantia* is kept in a medium having 10% NaCl. After a few minutes if we observe the leaf peel under the microscope, we are likely to see
 - (a) entry of water into the cell (b) **exit of water from the cell**
 - (c) diffusion of NaCl into the cell (d) the cells bursting out
8. Stomata opens due to accumulation of

- (a) **K⁺** b) Na⁺ c) Ca⁺ d) Mg⁺
9. Attraction of water molecules to polar surfaces is known as
(a) cohesion b) capillarity c) surface tension d) **adhesion**
10. Which of the following is not a purpose of transpiration?
(a) supplies water for photosynthesis
(b) **helps in translocation of sugars from source to sink**
(c) maintains shape and structure of the plants
(d) Transports minerals from the soil to all parts of the plant
11. Cohesion theory of water movement in plants was put forth by
(a) **Henry Dixon** b) F. F. Blackman c) Melvin cycle d) Hans. A. Krebs
12. Which of the following force is responsible for raising water up to 100 m of tall plants?
(a) root pressure b) capillary action c) **transpiration pull** d) air pressure
13. The first process by which water enters into the seed coat when a seed is placed in suitable environment for germination is
(a) osmosis b) **imbibition** c) absorption d) none of these
14. When the concentration of the soil solutes is low, the absorption of water is
(a) remain normal b) decreased c) **increased** d) stopped
15. When pea seeds and wheat grains are soaked in water, pea seeds showed more swelling than the wheat. The reason is
(a) cell membrane of pea seeds is more permeable
(b) presence of less hydrophilic colloids in the wheat grains
(c) **imbibition capacity of proteins is more than that of starch**
(d) cell walls of wheat grains are less permeable
16. Increasing humidity in atmosphere decreases the rate of
(a) glycolysis b) photosynthesis c) **transpiration** d) growth
17. If water enters in a cell, the pressure exerted by its swollen protoplast is
(a) osmotic pressure b) diffusion pressure deficit c) **turgor pressure** d) imbibitions
18. Which of the following is the most accepted theory for movement of water through plants?
(a) passive transport b) capillarity c) **cohesion theory** d) root pressure
19. With an increase in the turgidity of a cell, the wall pressure will

- (a) **increase** b) decrease c) fluctuate d) remain unchanged
20. Opening and closing of stomata is due to the
(a) gaseous exchange b) **change in turgor pressure of guard cells**
(c) hormonal change in guard cells d) respiration
21. Living cells placed in isotonic solution retain their size and shape. This is based on the concept of
(a) diffusion b) **osmosis** c) transpiration d) imbibitions
22. Transport of food material in higher plants takes place through
(a) **phloem** b) xylem c) epidermis d) endodermis
23. Passive absorption of water by the root system is the result of
(a) **tension on the cell sap due to transpiration**
(b) increased respiratory activity in root cells
(c) forces created in the cells of the root
(d) osmotic force in the shoot system
24. In which of the following plants, there will be no transpiration?
(a) plants growing in hilly regions (b) **aquatic, submerged plants**
(c) plants living in deserts (d) aquatic plants with floating leaves
25. Conduction of sap in plants occurs through
(a) heart wood b) bark c) **xylem** d) all the above
26. Conversion of starch to organic acid is essential for stomatal
(a) closure b) **opening** c) initiation d) growth
27. Diffusion of water from selectively permeable membrane is known as
(a) active absorption b) passive absorption c) **osmosis** d) diffusion
28. Dixon and Jolly are associated with
(a) light reaction of photosynthesis b) anaerobic respiration
(c) **cohesion theory of ascent of sap** d) Apical dominance
29. If CO₂ concentration suddenly increases around the leaf, one of the following events occurs
(a) stomata open gradually (b) stomata open suddenly
(c) transpiration will not be affected
(d) **decrease in transpiration due to sudden closure of stomata**

30. If the concentration of external solution is more than the cytoplasm, the solution is known as
(a) **hypertonic** (b) isotonic (c) hypotonic (d) none of these
31. A cell becomes turgid when placed in
(a) isotonic solution (b) hypertonic solution (c) **hypotonic solution** (d) all of these
32. When a cell is fully turgid, which one of the following become zero?
(a) turgor pressure (b) wall pressure (c) **diffusion pressure deficit** (d) osmotic pressure
33. Active K^+ exchange mechanism is the cause for opening and closing of stomata. It was proposed by
(a) Devlin (b) **Levitt** (c) Seath (d) Khorana
34. The direction and the rate of water movement from cell to cell is based on
(a) **diffusion pressure deficit** (b) incipient plasmolysis
(c) turgor pressure (d) wall pressure
35. The water potential of pure water at atmospheric pressure is
(a) -2.3 bar (b) $+2.3$ bar (c) **zero bar** (d) one bar
36. Loss of water through the stomata of leaves is known as
(a) guttation (b) exudation (c) **transpiration** (d) evaporation
37. During rainy season wooden doors are difficult to open or close because of
(a) Plasmolysis (b) **imbibitions** (c) osmosis (d) diffusion
38. Plasmolysis occurs due to
(a) absorption (b) osmosis (c) endosmosis (d) **exosmosis**
39. Water absorption takes place through
(a) Lateral roots (b) root cap (c) **root hairs** (d) tap root
40. Which of the following phenomena cools the surface of leaves?
(a) guttation (b) photorespiration (c) **transpiration** (d) assimilation

Unit II

1. The conversion of nitrogen to ammonia or nitrogenous compounds is called as
(a) nitrogen assimilation (b) **nitrogen fixation** (c) denitrification (d) nitrification
2. Plants absorb nitrogen in the form of
(a) nitrites (b) nitrates (c) ammonium (d) **all of the above**
3. Plants cannot utilize molecular N_2 in the atmosphere because
(a) N_2 has double bonds making it highly stable

- (b) abundance in the atmosphere inhibits absorption
- (c) **N₂ has triple bonds making it highly stable** (d) none of these
4. Symbiotic N₂ fixing cyanobacteria are present in all except
(a) *Anthoceros* (b) *Azolla* (c) *Cycas* (d) ***Gnetum***
5. All of the following are free living N₂ fixers except
(a) ***Rhizobium*** (b) *Azotobacter* (c) *Rhodospirillum* (d) *Clostridium*
6. Which of the following N₂ fixer is involved in symbiotic association with legumes forming root nodules?
(a) ***Rhizobium*** (b) *Azotobacter* (c) *Rhodospirillum* (d) *Clostridium*
7. Splitting of dinitrogen molecule into free nitrogen atom in biological N₂ fixation is carried out by
(a) hydrogenase (b) **nitrogenase** (c) dinitrogenase (d) nitrate reductase
8. To fix one molecule of nitrogen
(a) 6 ATP molecules are required
(b) 12 ATP molecules are required
(c) **16 ATP molecules are required**
(d) 20 ATP molecules are required
9. The root nodules of legumes contain a pink pigment which has high affinity for oxygen is
(a) nod haemoglobin (b) **leghaemoglobin** (c) haemoglobin (d) bacterial haemoglobin
10. The process of conversion of soil NO₃⁻ to N₂ is called
(a) nitrification (b) **denitrification** (c) ammonification (d) nitrogen fixation
11. Leghaemoglobin creates
(a) **anaerobic condition for optimum activity of nitrogenase**
(b) aerobic condition for optimum activity of nitrogenase
(c) required oxygen concentration for optimum activity of nitrogenase
(d) suitable environment for nodule formation
12. Which element is required for nodulation in legumes?
(a) Mn (b) Fe (c) **Mo** (d) Bo
13. The most widely accepted theory to explain the translocation of carbohydrates in higher plants
(a) root pressure

- (b) osmotic theory
 - (c) imbibitions theory
 - (d) **mass flow theory**
14. Ion can be accumulated against concentration gradient due to
- (a) mass flow (b) **active uptake** (c) passive uptake (d) donan equilibrium
15. Which of the following bacterium brings about denitrification?
- (a) *Pseudomonas* (b) *Rhizobium* (c) *Azotobacter* (d) *Nitrobacter*
16. Hydroponics is
- (a) growing of aquatic plants (b) growing of floating aquatic plants
 - (c) **soilless cultivation of plants** (d) growing of plants inside water
17. Molybdenum is involved in metabolism
- (a) translocation of solutes (b) tryptophan synthesis
 - (c) ABA synthesis (d) **nitrate reduction**
18. The best and most economical light source for growing plants hydroponically is
- (a) incandescent (b) fluorescent (b) sodium (c) **sunlight**
19. Hydroponically grown plants differ principally from soil grown plants by
- (a) light requirements (b) oxygen requirements
 - (c) **nutrient requirements** (d) support mechanism
20. Munch hypothesis is based on
- (a) translocation of food due to imbibition force
 - (b) translocation of food due to TP gradient and imbibition force
 - (c) **translocation of food due to Turgor Pressure (TP) gradient**
 - (d) none of these

Unit III

1. What does happen in the light *independent* reactions of photosynthesis?
 - (a) light is absorbed (b) ATP is produced (c) **glucose is produced** (d) water is used
2. What is the role of NADPH in photosynthesis?
 - (a) provide energy (b) **donate electrons** (c) provide carbon dioxide (d) store oxygen
3. Where do the light dependent reactions occur?
 - (a) mitochondrial matrix (b) stroma (c) stomata (d) **thylakoid membrane**
4. Where do the light independent reactions take place?

- (a) mitochondrial matrix b) **stroma** c) stomata d) thylakoid membrane
5. RUBISCO enzyme is also called as
(a) carboxytetra mutase (b) **carboxydimutase** (c) carboxytrimutase (d) carboxyunimutase
6. Emerson effect proves
(a) **concept of two photosystems in plant** (b) photophosphorylation
(c) photorespiration (d) there are light and dark reaction in photosynthesis
7. Light reaction of photosynthesis results in formation of _____.
(a) O₂ (b) NADPH + H⁺ (c) ATP (d) **all of these**
8. Dark reaction requires light reaction for
(a) carboxylation of RUBP (b) regeneration of RUBP
(c) **reduction of PGA** (d) formation of hexose sugar
9. Kranz anatomy is the characteristic feature of
(a) **C₄ plants** (b) C₃ plants (c) CAM plants (d) all dicot plants
10. Absorption spectrum of chlorophyll shows maximum absorbtion in _____light.
(a) red (b) **blue** (c) yellow (d) blue-violet
11. A dicot plant which adapts C₄ pathway for carbon fixation is_____.
(a) wheat (b) **amranthus** (c) maize (d) mango
12. The source of CO₂ for calvin cycle in C₄ plant is
(a) **Malic acid** (b) OAA (c) PEP (d) RuDP
13. What will happen to the rate of photosynthesis if sodium bicarbonate is added in the water having hydrilla plant in a beaker
(a) the rate of photosynthesis will remain normal (b) the rate of photosynthesis will be decreased (c) the rate of photosynthesis will be stopped (d) the rate of photosynthesis will **be accelerated**
14. For the process of photosynthesis all except one of the following items are essential. Point out the exception
(a) CO₂, optimum temperature (b) **glucose and oxygen**
(c) water and minerals (d) light and chlorophyll
15. In the Calvin cycle, the assimilatory power is used during
(a) formation of PGA
(b) **conversion of PGA to PGAL**

- (c) formation of fructose 1- 6 diphosphate from PGAL
 (d) formation of glucose from fructose – di- phosphate
16. Which is sensitive to longer wavelength of light?
 (a) photolysis (b) **PSI** (c) PS II (d) photophosphorylation
17. Reduction of co-enzyme NADP depends on
 (a) reduction of CO₂ (b) evolution of O₂ (c) **photolysis of water** (d) formation of ATP
18. Calvin cycle involves
 (a) oxidative phosphorylation
 (b) oxidative carboxylation
 (c) **reductive carboxylation**
 (d) reductive phosphorylation
19. In C₄ plants, carboxylation is twice, it can be represented as
 (a) pyruvic acid + CO₂ and malic acid + CO₂ (b) RUDP + CO₂ and pyruvic acid + CO₂
 (c) **PEP+ CO₂ and RUDP + CO₂** (d) PEP + CO₂ and malic acid + CO₂
20. In non-cyclic photophosphorylation
 (a) ATP is generated (b) both PSI and PSII are involved
 (c) electron flow is unidirectional (d) **all the above**
21. During photosynthesis PGA is converted into PGAL. Find out the type of this reaction
 (a) isomerization (b) **reduction** (c) oxidation (d) phosphorylation
22. In C₃ pathway, the first stable compound is
 (a) PGAL (b) OAA (c) **PGA** (d) RUDP
23. In non-cyclic photophosphorylation, the electron ejected from P₆₈₀ is replaced by electron from
 (a) NADP (b) **water** (c) ferridoxin (d) chlorophyll-a
24. 85-90% (9/10) of all photosynthesis in the world is carried out by
 (a) shrubs (b) **algae of the oceans** (c) herbs (d) scientists in the laboratory
25. The source of oxygen evolved during photosynthesis is
 (a) **H₂O** (b) CO₂ (c) chl-a (d) glucose
26. In C₄ plants, synthesis of glucose occurs in
 (a) spongy cells (b) **bundle sheath cells** (c) mesophyll cells (d) palisade cells
27. Which one occurs during both cyclic and non-cyclic photophosphorylation

- (a) **Formation of ATP** (b) release of O₂
 (c) formation of NADPH₂ (d) involvement of both PSI and PSII
28. For synthesis of one molecule of glucose, the requirement of ATP and NADPH₂ is respectively
 (a) 15 and 10 (b) 12 and 8 (c) 30 and 15 (d) **18 and 12**
29. Which of the following element is found in chlorophyll?
 (a) copper (b) **magnesium** (c) calcium (d) chlorine
30. _____ are placed one above the other to form stack of coins
 (a) oxysomes (b) F1 particles (c) cristae (d) **thylakoids**
31. ATP synthesis during light reaction is
 (a) **photophosphorylation** (b) photolysis
 (c) oxidative phosphorylation (d) phosphorylation
32. Calvin was given Nobel prize in 1961 for his discovery of
 (a) **mode of carbon fixation** (b) photosynthesis (c) photolysis of water (d) light reaction
33. The number of photons needed for the evolution of one molecule of oxygen is
 (a) **8** (b) 2 (c) 12 (d) 18
34. C₄ plants show very high rate of photosynthesis as compare to C₃ plants, because of
 (a) dicarboxylation (b) bundle sheath cells
 (c) **absence of photorespiration** (d) all the above
35. Donor and acceptor of electrons is the same chlorophyll molecule in
 (a) **cyclic photophosphorylation** (b) photorespiration
 (c) substrate level Phosphorylation (d) non-cyclic photophosphorylation
36. C₄ plants can perform photosynthesis
 (a) even in low light intensity (b) **even in low CO₂ concentration**
 (c) both (A) and (B) (d) only in high intensity of light and high CO₂ concentration
37. Photosynthetically active radiations are represented by wavelength of
 (a) 640-650 nm (b) 600-950 nm (c) **400-700 nm** (d) 340-450 nm
38. C₄ cycle was discovered by
 (a) Hill (b) Calvin (c) **Hatch and slack** (d) Blackman
39. Carbon dioxide is fixed during

- (a) light reaction (b) **dark reaction** (c) aerobic respiration (d) anaerobic respiration
40. CO₂ acceptor in C₃ plants is
- (a) Xylulose-5-phosphate (b) 3-phosphoglyceric acid (c) **Ribulose 1, 5 diphosphate**
- (d) Phosphoenol pyruvic acid

Unit-IV

1. The process of respiration in green plants occurs
- (a) only when stomata are open
- (b) only when photosynthesis ceases
- (c) only when photosynthesis is in progress
- (d) **at all times**
2. F₁ particles are located in
- (a) mitochondrial matrix (b) **cristae** (c) perimitochondrial space (d) outer membrane
3. The site of glycolysis in a cell is
- (a) chloroplast (b) nucleus (c) **cytoplasm** (d) mitochondria
4. Krebs's cycle takes place in
- (a) vesicles of endoplasmic reticulum (b) **mitochondrial matrix**
- (c) dictyosomes (d) lysosome
5. Common immediate source of energy in cellular activity
- (a) NAD (b) **ATP** (c) DNA (d) RNA
6. Conversion of pyruvic acid into ethyl alcohol is facilitated by the enzyme
- (a) carboxylase (b) phosphatase
- (c) dehydrogenase (d) **decarboxylase and dehydrogenase**
7. During respiration yeast converts glucose to
- (a) ethanol and water (b) ethanol and oxygen
- (c) **ethanol and CO₂** (d) lactic acid and CO₂
8. The net gain of ATP produced during the oxidation of one glucose molecule in a plant cell
- (a) **38** (b) 30 (c) 32 (d) 24
9. The terminal acceptor of electrons in the ETC is
- (a) H₂O (b) **O₂** (c) H₂ (d) Cyt b
10. End product of citric acid/Krebs cycle is
- (a) citric acid (b) pyruvic acid (c) lactic acid (d) **CO₂ and water**

11. The first phase in the break down of glucose
(a) **glycolysis** (b) E.T.C (c) Krebs's cycle (d) oxidative decarboxylation
12. Incomplete oxidation of glucose into pyruvic acid with several intermediate steps is known as
(a) TCA cycle (b) HMS pathway (c) **glycolysis** (d) oxidative decarboxylation
13. In Krebs's cycle GTP is formed in
(a) oxidative phosphorylation (b) **substrate level phosphorylation**
(c) cyclic phosphorylation (d) non-cyclic phosphorylation
14. End products of aerobic respiration are
(a) sugar and O_2 (b) **CO_2 , H_2O and energy** (c) CO_2 and energy (d) water and energy
15. Oxidative phosphorylation is the production of
(a) ATP in photosynthesis
(b) **ATP in respiration**
(c) NADPH in photosynthesis
(d) NADPH in respiration
16. End product of glycolysis is
(a) acetyl CoA (b) **pyruvic acid** (c) glucose 1 phosphate (d) fructose 1 phosphate
17. EMP can produce a total of
(a) 6 ATP (b) **8 ATP** (c) 24 ATP (d) 38 ATP
18. The overall goal of glycolysis, Krebs cycle and the electron transport system is in the formation of
(a) ATP in one large oxidation reaction (b) sugars
(c) **ATP in small stepwise units** (d) nucleic acids
19. During which stage, the complete oxidation of glucose yields greatest numbers of ATP molecules
(a) Krebs's cycle (b) glycolysis (c) **electron transport chain** (d) conversion of pyruvic acid into acetyl Co A
20. Which of the following is the key intermediate compound linking glycolysis to the Krebs's cycle?
(a) malic acid (b) pyruvic acid (c) **acetyl CoA** (d) ATP
21. In glycolysis, during oxidation electrons are removed by

- (a) ATP (b) **NAD** (c) molecular O₂ (d) glyceraldehydes 3 phosphate
22. Out of 38 ATP molecules produced per glucose, 32 ATP molecules are formed from NADH/FADH₂ in
- (a) EMP (b) Krebs cycle (c) oxidative decarboxylation (d) **respiratory chain**
23. Apparatus to measure the rate of respiration and R.Q. is
- (a) manometer (b) auxanometer (c) photometer (c) **respirometer**
24. Which stage of respiration requires the input of energy as ATP?
- (a) **glycolysis** (b) link reaction (c) Krebs cycle (d) oxidative phosphorylation
25. Which compound is not involved in the Krebs cycle?
- (a) oxaloacetate (b) **triose phosphate** (c) citrate (d) acetyl CoA
26. Which of the following steps of respiration does not yield ATP?
- (a) glycolysis (b) **link reaction** (c) Krebs cycle (d) oxidative phosphorylation
27. Where does oxidative phosphorylation take place?
- (a) cell cytoplasm (b) mitochondrial matrix
- (c) outer mitochondrial membrane (d) **inner mitochondrial membrane**
28. How many decarboxylation reactions are required to convert citrate to oxaloacetate in the Krebs cycle?
- (a) 1 (b) **2** (c) 4 (d) 6
29. The most common substrate of respiration is
- (a) fats (b) aminoacids (c) **glucose** (d) sucrose
30. During respiration, the substrate is
- (a) reduced (b) hydrogenated (c) carbonated (d) **oxidized**
31. Which of the following molecule enters the Krebs cycle?
- (a) lactate (b) citrate (c) **acetyl CoA** (d) CO₂
32. Cellular respiration releases energy by breaking down
- (a) **food molecules** (b) ATP (c) CO₂ (d) H₂O
33. Which of the following is not a product of glycolysis?
- (a) NADH (b) pyruvic acid (c) ATP (d) **glucose**
34. Which one of the following acts as an electron carrier in cellular respiration?
- (a) **NAD⁺** (b) pyruvic acid (c) ADP (d) ATP

35. In the presence of oxygen, glycolysis is followed by
 (a) lactic acid fermentation (b) alcoholic fermentation
 (c) photosynthesis (d) **Krebs cycle**
36. Cellular respiration is called as aerobic process because it requires
 (a) light (b) **O₂** (c) glucose (d) exercise
37. Which of the following passes light energy electrons into the electron transport chain?
 (a) **NADH and FADH₂** (b) ATP and ADP (c) citric acid (d) acetyl CoA

Unit - V

1. Growth is a
 (a) **irreversible increase in size** (b) reversible increase in size
 (c) reversible increase in shape (d) increase in volume
2. Dormancy of seed is
 (a) phase of active growth (b) **phase of inactive growth**
 (c) phase of stimulated growth (d) dead condition
3. The condition of viable seed unable to germinate even in presence of favourable environmental condition is called
 (a) **dormancy** (b) secondary dormancy
 (c) dead seed (d) none of these
4. The growth in dormant organ is
 (a) completely stopped (b) continuous (c) **temporarily arrested** (d) permanently arrested
5. Dormancy in seeds of *Xanthium* is due to
 (a) seed coat impermeable to water
 (b) **seed coat impermeable to gases**
 (c) need for after ripening period
 (d) mechanically resistant seed coat
6. Dormancy if occur due to internal factors, it is called
 (a) imposed dormancy (b) **innate dormancy** (c) quiescence (d) dormancy
7. Softening or rupturing of hard seed coat for breaking dormancy is called
 (a) chilling (b) vernalization (c) stratification (d) **scarification**

8. The chemical substances like phenolics, coumarins, ferulic acid are
(a) growth hormones (b) growth regulators
(c) **germination inhibitors** (d) germination promoters
9. The seeds which cannot germinate in absence of light is called
(a) **positively photoblastic seed** (b) negatively photoblastic seed
(c) photosensitive seed (d) photoperiodic seeds
10. Germination inhibitors leached out from one plant may inhibit germination of seeds of other plants is called as
(a) allopathy (b) **allelopathy** (c) competitive absorption (d) aromapathy
11. Which of the following growth regulator is not used to break dormancy?
(a) auxine (b) gibberellins (c) cytokinins (d) **abscisic acid**
12. Keeping seeds in well aerated moist condition at 1-10°C temperature for weeks and months is called
(a) pre-ripening (b) **stratification** (c) scarification (d) impaction
13. By which method, testa is made permeable to water
(a) vernalization (b) **scarification** (c) stratification (d) impaction
14. Which of the following is a growth inhibitor
(a) auxin (b) cytokynin (c) giberllins (d) **ABA**
15. Threshing, chopping, rupturing seeds by hands or machines is called
(a) scarification (b) chemical scarification (c) **mechanical scarification** (d) stratification
16. Imposed dormancy can be caused due to
(a) immature embryo (b) hard and resistant seed coat
(c) **non availability of water and O₂** (d) mature embryo
17. Plant growth can be measured by
(a) horizontal microscope (b) crescograph (c) auxanometer (d) **all the above**
18. Apical dominance is due to
(a) abcisic acid (b) gibberellic acid (c) **auxin** (d) cytokinin
19. Hormone related with cell division is
(a) NAA (b) IAA (c) **cytokinin** (d) GA3
20. Which of the following is mainly concerned with root initiation?

- (a) kinetin (b) GA3 (c) **IAA** (d) ABA
21. The photoperiodic stimulus perceived by
(a) **leaves** (b) buds (c) meristem (d) flowers
22. Garner and Allard are credited for the discovery of
(a) phototropism (b) **photoperiodism** (c) photorespiration (d) photomorphogenesis
23. Which of the following is absorbed by phytochrome?
(a) Red Light (b) **Far – Red Light** (c) Blue Light (d) All the above
24. The hormone produced as a result of photoperiodic induction is known as
(a) cytokinins (b) **florigen** (c) vernalin (d) auxin
25. The inhibitory effect of red light on flowering during critical dark period in short day plants can be overcome by
(a) **far-red light** (b) blue light (c) infra- red rays (d) ultraviolet rays
26. The inhibition of flowering in SDPs by interruption of dark period with red light and its reversal by far- red light involves the operation of
(a) cryptochrome (b) florigen (c) vernalin (d) **phytochrome**
27. P_R form of phytochrome is
(a) red in colour (b) **blue in colour** (c) green in colour (d) black in colour
28. Dark period is critical in
(a) **short day plants** (b) long day plants (c) day neutral plants (d) all the above
29. Example of a long day plant is
(a) *Xanthium pennsylvanicum* (b) Bioloxy variety of soybean
(c) Maryland Mamooth variety of tobacco (d) *Hyoscyamus niger*
30. Which type of phytochrome predominates in etiolated seedlings?
(a) **Type I** (b) Type II (c) Both Type I and II (d) Type III
31. Vernalization is also called as
(a) springification (b) yarovization (c) chilling effect (d) **all of these**
32. The hormone which stimulates the flowering in vernalized plant is
(a) florigen (b) **vernalin** (c) cytokinin (d) gibberellins

33. Vernalization is
- (a) growth curve related to light
 - (b) effect of photoperiods on plant growth
 - (c) **induction to flower by low temperature**
 - (d) diurnal photoperiodicity
34. In which of the following, rate of growth slows down and comes to steady stage
- (a) lag phase (b) log phase (c) exponential phase (d) **stationary phase**
35. Photoperiodism is associated with synthesis of
- (a) vernalin (b) colchicine (c) abscisic acid (d) **florigen**
36. The type of germination in which cotyledons come above the ground is called as
- (a) **epigeal** (b) hypogeal (c) viviparous (d) oviparous
37. Longevity of seed can be prolonged by keeping them at
- (a) dry condition and low temperature (b) **humidity of low temperature**
 - (c) under aerated condition (d) high temperature
38. The plant which needs light period shorter than critical period is called
- (a) **SDP** (b) LDP (c) DNP (d) SLDP

Section B

Unit I

1. Imbibition
2. Osmotic pressure.
3. Distinguish between apoplast and symplast
4. Transpiration.
5. Diffusion pressure deficit
6. Osmosis
7. Plasmolysis
8. Deplasmolysis
9. Turgor Pressure
10. Gravitational water
11. Transpiration
12. Transpiration pull

13. Water Potential
14. Root pressure
15. Active absorption of water

Unit II

1. Macronutrients
2. Trace elements
3. Denitrification
4. Leghemoglobin
5. Nitrogenase
6. Asymbiotic nitrogen fixers
7. NPK
8. Hydroponics
9. Translocation of organic solutes
10. Source and sink

Unit III

1. Quantasomes
2. Accessory pigments
3. Warburg's effect
4. Redox potential
5. Composition of pigment system I and II
6. Absorption spectrum
7. Red drop
8. Quantum yield
9. Quantum requirement
10. Kranz anatomy

Unit IV

1. Respiration
2. Types of respiration
3. Respiratory quotient

4. EMP pathway
5. ATPase complex
6. Inhibitors of pentose phosphate pathway
7. Lactic acid fermentation
8. Citric acid cycle
9. terminal oxidation
10. Warburg-Dicken's pathway

Unit V

1. Phases of growth
2. Plant growth regulators
3. Photoperiodism
4. Scarification
5. Apical dominance
6. 2-4 D
7. Foolish seedling of rice
8. Richmond-Lang effect
9. Vernalization
10. Long day plants
11. Short day plants
12. Seed dormancy
13. Phytochrome
14. Floral hormone
15. Quiescent

Section C

Unit I

1. List out the significance of osmosis in plants
2. What is transpiration? Write its significance in plant life.
3. Write the types of transpiration in plants.

4. Transpiration is often described as a necessary evil. How far do you agree with this statement?
5. Differentiate between active absorption and passive absorption
6. write notes on soil water
7. Explain briefly the vital theory of ascent of sap.
8. Write short notes on plasmolysis
9. Reason out why grape fruit burst when they are kept in the ordinary water.
10. Differentiate between osmotic pressure and turgour pressure.

Unit II

1. What are different sources of nitrogen to plants?
2. Write short notes on soilless culture and its significance
3. Mention symptoms of N, P and K deficiency.
4. List out the symptoms of S, Ca, and Mg deficiency
5. What are the general functions of essential elements in plants?
6. What is the path of translocation of organic in higher plants?
7. Distinguish between nitrogen fixation and denitrification
8. Write notes on denitrification
9. List out the differences between symbiotic and asymbiotic nitrogen fixation

Unit III

1. Write notes on Emerson enhancement effect
2. Outline Hatch and Slack pathway.
3. Point out the differences between cyclic and non – cyclic photophosphorylation
4. Compare and contrast C_3 and C_4 cycle.
5. Draw a labeled diagram of chloroplast and describe its role in photosynthesis.
6. List out the significance of C_4 cycle.
7. Mention the characteristics of C_4 plants.
8. What do you understand by cyclic photophosphorylation?
9. Write notes on two photo systems.
10. Write the role of photosynthetic pigments in higher plants.

Unit IV

1. Define respiration and mention its significances in plants

2. List out the differences between aerobic and anaerobic respiration.
3. Schematically represent EMP pathway and add its significance in the mechanism of respiration
4. Write the significance of pentose phosphate pathway
5. Write notes on significance of Kreb's cycle

Unit V

1. Write short note on Grand period of growth
2. What are auxins? Give their physiological roles in higher plants
3. What are the physiological roles of gibberellins?
4. Discuss the practical applications of auxin.
5. Discuss the role of cytokinins in the leaf senescence.
6. Differentiate between auxins and cytokinins
7. Describe the role of light in flowering
8. Differentiate between short day plants and long day plants
9. Explain the importance of photoperiodism
10. What is photoperiodism? Discuss the phenomenon with reference to short day plants.
11. Write note on photoperiodic induction
12. What is phytochrome? Differentiate between phytochrome (R) and phytochrome (FR)
13. What are the various theories explaining the mechanism of vernalization in plants? Explain.
14. Explain the practical applications of vernalization
15. Mention the various factors causing dormancy of seed.
16. Explain the methods of breaking seed dormancy.

Section D

Unit I

1. Discuss various physical processes involved in the movement of solids, liquids and gases in and out of the cells in plants.
2. Explain the phenomenon of plasmolysis. How can you make use of it in determining the osmotic pressure of cell sap?
3. What is DPD? Discuss it with relation to plant cell.
4. What is water potential? How is it used to explain the osmotic relations of plant cells?
5. Describe the mechanism of water absorption in higher plants

6. Justify Dixon and Jolly's theory of ascent of sap in trees.
7. Discuss the involvement of K^+ and H^+ in stomatal opening and closing.
8. Explain glycolate metabolism theory on stomatal movement.
9. Discuss the starch – glucose interconversion theory which explain the mechanism of stomatal movement.
10. Write an essay on stomata and their role in transpiration.

Unit II

1. Describe the mass flow hypothesis of translocation of organic solutes in higher plants. Give its merits and demerits.
2. Write an explanatory note on loading and unloading in phloem transport
3. Explain the role and deficiency symptoms of any six macro elements
4. Describe the process of translocation of solutes in plants.
5. Describe the mechanism of nitrogen fixation in nodules of leguminous plants

Unit III

1. Give a critical account of the various factors influencing photosynthesis
2. Give an account of the mechanism by which plants convert CO_2 in to carbohydrates.
3. Describe cyclic and non- cyclic electron transport.
4. What is dark reaction in photosynthesis? How does it take place in C_3 plants?
5. Explain how CO_2 is converted into sugars by sugarcane plant?
6. Write an essay on light reaction of photosynthesis in detail.
7. Typical grasses are more productive – Justify.
8. Define photophosphorylation. Explain the process in detail. How does it differ from oxidative phosphorylation?

Unit IV

1. Explain various steps in respiration after the formation of pyruvic acid
2. Give an account of the factors affecting rate of photosynthesis
3. Describe the citric acid cycle in plants and explain how ATP is generated in aerobic respiration
4. Explain Pentose Phosphate Pathway/ Hexose Monophosphate Shunt
5. What is terminal oxidation? Describe the process with reference to respiration in plants

6. Draw any two of the following pathways. No description is required

(a) EMP pathway

(b) PPP pathway

(c) TCA cycle

Unit V

1. What do you understand by growth in plants? How it is measured.
2. What are phyto hormones? Give a comparative account of the physiological effects of auxins, gibberellins and cytokinins in plants
3. What are gibberellins? How are they synthesized in plants? Discuss their physiological role in higher plants.
4. Describe the physiological effects and practical application of auxins.
5. What is phytochrome? How does it mediate the phytomorphogenetic response? Describe its role in flowering.
6. What are cytokinins? Describe their physiological effect and practical applications.
7. Describe the Phenomenon of vernalization in higher plants and add a note on its practical utility.
8. What is photoperiodism? Explain the physiology of photoperiodism in plants.
9. Explain physiological and biochemical changes taking place during seed germination.
10. Write an essay on seed dormancy.

Section - A

Unit I

1. Father of Microbiology is _____.
a) Louis Pasteur b) Lister c) **A.V. Leewenhock** d) Robert Koch
2. Compound Microscope was first discovered by _____.
a) A.V. Leewenhock b) Pasteur c) **Johnsen & Hans** d) None of these
3. The term bacteriophage was coined by _____.
a) **De'Herelle** b) F.W. Twart c) Beijernick d) Jwanosky
4. The functions of plasmid are _____.
a) DNA replication b) Protein synthesis c) Cell wall synthesis d) **None of the above**
5. Endotoxin produced by gramnegative bacteria is present in _____.
a) Peptidoglycan b) **Lippolysacharide** c) Theichoic acid d) Inner membrane
6. Staining material of gram positive bacterium is _____.
a) Fast Green b) Haematoxylon c) Crystal violet d) **Safranin**
7. Bacterial pili mainly contain _____.
a) Carbohydrates b) Lipids c) **Proteins** d) Minerals
8. Bacterial ribosomes are composed of _____.
a) Protein and DNA b) Protein and mRNA c) **Protein and rRNA** d) Protein and tRNA
9. A bacterium containing prophage is called as _____.
a) Lytic b) **Lysogen** c) Lytogen d) None of these
10. The procedure of differential staining of bacteria was developed by _____.
a) A.H. Gram b) **H.C. Gram** c) N.C. Gram d) H.A. Gram
11. Autolysis is done by _____.
a) Mitochondria b) **Lysosomes** c) Golgi bodies d) Peroxisomes
12. The bacterial cell multiplication is usually by _____.
a) Mitosis b) Meiosis c) Conjugation d) **Binary fission**

13. Rod shaped bacteria are known as _____.
a) Cocci b) Comma forms c) **Bacilli** d) Plemorphic forms
14. The differences between Gram positive and Gram negative bacteria is shown to reside in the _____.
a) **Cell wall** b) Nucleus c) Cell membrane d) Mesosomes
15. Capsule formation occurs in the presence of _____.
a) Albumin b) Charcoal c) **Serum** d) Starch
16. Bacterial locomotion is accomplished by _____.
a) Fimbria b) Flagella c) Cytoskeleton d) **Both a and b**
17. Bacteria multiply by _____.
a) Spore formation b) **Simple binary fission** c) Conjugation d) Gametes
18. Alexander Fleming worked on _____.
a) Fermentation
b) Small Pox Vaccine
c) **Discovery of Penicillin**
d) DNA structure
19. Generation time of *Esherichia coli* is _____.
a) **20 minutes** b) 20 hours c) 20 days d) 200 hours

Unit II

1. The process in which all living cells, spores and viruses are completely destroyed from an object is called _____.
a) Disinfection b) Pasteurization c) **Sterilization** d) Antisepsis
2. Which of the following is not a type of sterilization?
a) Batch b) Continuous c) Filter d) **Submerged**
3. The highest feasible temperature for batch sterilization is _____.
a) 124°C b) 120°C c) **121°C** d) None of these
4. How long does it take for the autoclave to complete its cycle?
a) 30-35 minutes
b) 50 minutes to 1 hour
c) **15-20 minutes**

- d) 10-15 minutes
5. A gas used for fumigation is _____.
a) Ethylene b) Nitrous oxide c) **Sulphur dioxide** d) Oxygen
6. Nutrient broth, a liquid media contains beef extract and peptone respectively in how much amounts?
a) **0.3%, 0.5%** b) 0.7%, 0.3% c) 0.2%, 0.4% d) 0.1%, 0.6%
7. Which of the following is a complex media for fungal growth?
a) **Potato Dextrose Agar (PDA) media**
b) MacConkey Agar media
c) Nutrient broth
d) Luria-Bertani media
8. Which of the following instrument is used for sterilizing the media after it has been prepared?
a) Incubator
b) Inoculum Needle
c) Laminar Air Flow Chamber
d) **Autoclave**
9. Which culture media is used to grow most types of bacteria and fungi?
a) MacConkey Agar
b) Blood agar
c) Sabouraud agar
d) **Nutrient agar**
10. Which of the following is used as a solidifying agent for media?
a) **Agar** b) Yeast extract c) Beef extract d) Peptone
11. Nichrome loop wire is used in which of the following techniques?
a) **Streak plate**
b) Pour plate
c) Spread plate
d) Roll tube technique
12. Batch cultures are type of suspension culture where
a) Medium is continuously replaced

- b) **Medium is loaded only at the beginning**
 - c) No depletion of medium occurs
 - d) Cellular wastes are continuously removed and replaced
13. Which type of medium supports the growth of a wide range of microorganisms?
- a) Selective medium
 - b) Differential medium
 - c) **Nutrient medium**
 - d) Enriched medium
14. Which type of growth medium is designed to inhibit the growth of certain microorganisms while allowing others to grow?
- a) **Selective medium**
 - b) Differential medium
 - c) Nutrient medium
 - d) Enriched medium

Unit III

1. A virus is made up of _____.
 - a) **Protein coat and nucleic acid**
 - b) Protein coat and mitochondria
 - c) Nucleic acid and cell membrane
 - d) Nucleic acid, cell wall and cell membrane
2. The protein coat of viruses that enclose the genetic material is called _____.
 - a) Virion
 - b) **Capsid**
 - c) Peplomers
 - d) Capsomers
3. Which of the following statements are true about a virion?
 - a) Lytic phage
 - b) Lysogenic phage
 - c) The viral capsid
 - d) **An infectious and fully formed viral particle**
4. Which of the following is the genome of the virus?
 - a) DNA
 - b) RNA
 - c) **DNA or RNA**
 - d) DNA and RNA
5. Which of the following has a complex symmetry?
 - a) **T4 phage**
 - b) Adenovirus
 - c) Influenza virus
 - d) All of the above

6. The viral envelope is made up of _____.
 a) Proteins b) Glycoproteins c) Lipids and Proteins d) **All of the above**
7. A fully formed infectious viral particle is called _____.
 a) **Virion** b) Viriod c) Capsid (d) Virusoid
8. The shape of the TMV is _____.
 a) **Rod-shaped** b) Oval shaped c) Cuboidal shaped d) Spherical shape
9. Viruses that attack bacteria are called _____.
 a) Virophage b) Lysophage c) **Bacteriophage** d) None of the above
10. Which of the following are the main functions of the capsid?
 a) Determines the antigenic specificity of the virus
 b) Protects genetic material from nuclease attack
 c) **Both A and B**
 d) None of these
11. Which organism is most used for the production of citric acid?
 (a) *Saccharomyces* (b) *E. Coli* (c) ***Aspergillus Niger*** (d) *Aerobacter aerogens*
12. Oxalic acid is a byproduct in the production of
 a) Vit B₁₂ (b) **Citric acid** (c) Penicillin (d) Streptomycin
13. Which of the following is the chemical name of vitamin B₁₂?
 (a) **cyanocobalamine** (b) ascorbic acid
 (c) N acetyl muranic acid (d) N acetyl glucosamine
14. Mark the promising choice of organism for large scale production of citric acid
 a) *Penicillium notatum* (b) ***Aspergillus*** (c) *Mucor* (d) *Candida*

Unit IV

1. Yoghurt is the fermentation product of milk. bacteria are used as the starter culture
 (a) *E.coli* and yeast (b) ***Streptococcus thermophilus* and *Lactobacillus bulgaricus***
 (c) *Candida sp* and *Rhizopus* mould (d) *Mucor sp* and *Penicillium notatum*
2. Souring is the type of meat spoilage. What is the probable reason?
 (a) **microbial production of organic acid** (b) purification of protein
 (c) oxidation of protein (d) accumulation of coloured microbial compounds.
3. The optimum temperature for prolonged storage of meat

- (a) $0^{\circ} - 1^{\circ} \text{ C}$ (b) $5^{\circ} - 10^{\circ}$ (c) **$-12^{\circ} \text{ C} - 28^{\circ} \text{ C}$** (D) -196° C
4. Which of the following are indicators with reference to potability of H_2O ?
 (a) **member of Enterobacterium** (b) member of Methanobacterium
 (c) member of acetobacterium (d) member of photoautotrophs
5. Coliforms are considered as indicators of water contamination. Because they
 (a) cause disease (b) they produce gas (c) **abundantly seen in water**
 (d) form metallic sheen in medium
6. Mark the food which is classified as highly perishable food
 (a) Potato (b) Nuts (c) sugar (d) **dairy products**
7. Yeast acted upon apple juice and produce juice with alcoholic taste. Find out the reason
 (a) **yeast convert carbohydrate into ethanol** (b) sterol into ethanol
 (c) Cholesterol into ethanol (d) succinic acid into fumaric acid
8. Which of the following genera belongs to coliform group?
 (a) *Klebsiella* (b) *Shigella* (c) ***Escherichia*** (d) *Salmonella*
9. Blanching is a method of
 (a) Food spoilage (b) **Food preservation** (c) Milk spoilage (d) None
10. Quality of milk is determined by
 (a) Erlich test (b) Dehydrogenase test (c) **Phosphatase test** (d) Gutaminase test
11. Microbial spoilage of bread is commonly due to
 (a) ***Bacillus*** (b) *Mucor* (c) *Streptomyces* (d) *Clostridium*
12. The spoiled food have unpleasant aroma. This is due to
 (a) alteration in the physical nature of microbes
 (b) **alteration of biochemical composition** of food
 (c) change in texture of food
 (d) alteration in the physical nature of food
13. Putrefaction is the process of food contamination. The process involves conversion of protein into
 (a) **Amino acid and ammonia** (b) fatty acid and glycerol (c) alcohol and gases (d) none
14. Foods can be preserved by adding salts and sugars. What phenomenon operates upon addition of these preservatives?
 (a) **osmosis** (b) reverse osmosis (c) plasmolysis (d) freezing

15. Desiccation is the physical method of food preservation. The process involves
(a) **removal of water from the food** (b) absorption of water by food from atmosphere
(c) Freezing of H₂O in the food (d) removal of biomolecules from the food
16. Which of the following radiation is used for food preservation?
(a) UV and cosmic rays (b) **Gamma rays and UV rays**
(c) Radio waves and water waves (d) Gamma rays and seismic waves.
17. Blanching of fruits and vegetables refers to
(a) **bleaching with scalding** (b) dyeing with scalding
(c) bleaching with cold water (d) softening with cold water
18. Which of the following is the toxin secreted by molds causes food spoilage
(a) ampicillin (b) chlorellin (c) flagellin (d) **aflatoxin**
19. Q fever is the milk borne disease caused by
(a) *Lactobacillus* (b) **Rickettsia** (c) *Mycobacterium bovis* (d) *Bacillus abortus*
20. Brucellosis is human bacterial disease showing severe symptom in the body. Which is the following is the agent of infection
(a) Water (b) **milk** (c) air (d) food
21. Which type of fermentation is used to make yoghurt?
(a) acetic acid fermentation (b) **lactic acid fermentation** (c) alcoholic fermentation
(d) ethanol fermentation
22. SCP stands for
(a) Stress Cultivated plant (b) **Single Cell Protein** (c) Soma Clonal Plant
(d) Somatic Cultivated Plantlet
23. Which of the following is the most common source of SCP?
(a) **Single celled yeast** (b) Multicellular yeast (c) Unicellular algae
(d) Unicellular bacteria
24. Which of the following is not an advantage of SCP?
(a) Used as a protein-rich diet (b) Reduce environmental pollution (c) **Increases water pollution** (d) Increase in supply of protein
25. The protein content which is extracted from mixed or pure cultures of yeasts, bacteria, algae, and fungi is called
(a) Triple cell protein (b) Double cell protein (c) **Tetra cell protein**

(d) Single Cell Protein

Section B

Unit I

1. Write the contribution of Alexander Flemming
2. What is parasitic nutrition?
3. Name the developer of Penicillin and note down its uses?
4. Name the types of microscope?
5. What is binary fission?
6. Discuss about the contribution of Louis Pasteur
7. Differentiate between saprophytic and symbiotic.
8. Name the organisms associated with penicillin production.

Unit II

1. Define fumigation
2. Name the types of medium used for culture of micro-organisms
3. What is agar plate culture
4. Write down the types of sterilization
5. What is autoclave?
6. Write the media for micro organisms

Unit III

1. Define virus
2. Write down the types of virus
3. Describe T4 bacteriophage
4. What is fermentation?
5. Draw and label the parts of tower fermentor
6. Write the biochemical name of Vitamin B₁₂
7. Write the protocol for citric acid production
8. Name the types of fermentor?
9. List out the uses of Vit B₁₂.

10. Draw and label the parts of air lift fermentor.

Unit IV

1. Discuss about single cell protein.
2. Explain the spoilage of bread.
3. Define potable water
4. Write the types of pasteurization
5. Write the different sources of contamination of milk
6. List out the methods of food preservation.
7. What is rancidity?
8. Name any two bacteria that cause rancidity
9. What are the objectives of food preservation?
10. Write the different sources of contamination of food
11. Comment on water microflora
12. Name any two bacteria that cause meat spoilage
13. What are the sources of contamination of milk?
14. What is Blanching?
15. What is Potable water?

Unit V

1. Summarize the basic concept of germplasm theory.
2. Summarize the symptoms of leaf curl of papaya
3. Summarize the plant disease caused by fungi.
4. Summarize the tikka disease of groundnut
5. Explain the bacterial leaf spot of Mango
6. Discuss the Blast of paddy

Section C

Unit I

1. Discuss the contributions of Alexander Flemming.
2. Write a brief account on reproduction of bacteria
3. Illustrate the ultra structure of bacteria
4. Write short notes on different nutrient types

5. Enlist the scope of microbiology
6. Show the difference between Chemosynthetic and Photosynthetic nutritional method in bacteria
7. Present the different types of pasteurization of milk
8. What is antibiotic? Write down the uses of penicillin
9. Explain microbial production of penicillin
10. Explain modes of action of penicillin

Unit II

1. Differentiate between the batch culture and continuous culture.
2. Write down the steps in preparation of PDA and Czapek-Dox medium.
3. Briefly explain the methods of sterilization.
4. Discuss the method for culturing broth culture.
5. Explain the agar slant culture.

Unit III

1. Discuss the general characters of Virus
2. Illustrate the structure of T4 bacteriophage
3. Write short notes on multiplication of T4 bacteriophage.
4. Briefly explain uses of citric acid
5. What is antibiotic? Write down the uses of penicillin
6. Describe microbial production of vitamin B₁₂.
7. Explain microbial production of citric acid
8. Describe stirred tank and airlift bioreactors.
9. Define bioreactor and explain the different types
10. Draw and explain tower fermentor

Unit IV

1. What are the different methods of pasteurization of milk?
2. What is food spoilage? How it is brought about by microorganism?
3. Write about bacterial flora of milk
4. What are the sources of contamination of milk?
5. Discuss spoilage of fruits and vegetables?

6. Write an account of analysis of water samples for coli form bacteria?
7. Enumerate the methods of food preservation.
8. How will you determine portability of water?
9. Enlist the microbes concerned with food spoilage?
10. What are the advantages of single cell protein?

Unit V

1. Present the symptoms and control measures of blast of paddy.
2. Compile the symptoms and control measures of Bacterial leaf spot of Mango
3. Describe the control measure of red rot of sugarcane and tikka disease of ground nut
4. Explain briefly the host-microbe interaction

Section D

Unit I

1. Discuss the morphology and ultra-structure of bacteria with diagram
2. Explain the reproduction of bacteria
3. Describe the types of nutrition types in bacteria
4. Analyze the different types of reproduction methods in Bacteria.
5. Elucidate the industrial production of antibiotic penicillin.
6. Explain pasteurization methods used in milk

Unit II

1. Enumerate the media types for micro organisms.
2. Explain the methods of culturing bacteria
3. Discuss the methods of sterilization

Unit III

1. Describe the characteristics of virus and explain the types of viruses based on structure with diagrams
2. Illustrate the structure and multiplication of T4 bacteriophage.
3. Describe the microbial production of B 12 Vitamins.
4. Elucidate the industrial production of antibiotic penicillin.
5. Discuss about stirred tank and airlift bioreactor.
6. Define fermenters and explain the different types in detail.

7. Describe the process of vitamin B 12 production and list out its uses
8. Explain submerged process of fermentation.
9. Describe commercial production of citric acid.
10. Discuss about the raw materials and factors essential for production of vitamin B 12.

Unit IV

1. Write an essay on Single Cell Protein
2. Explain the different method of food preservation.
3. Describe the various micro organisms and their role in milk.
4. Write an essay on different methods of purification of potable water.
5. What is food spoilage? How it is brought about by microorganism?
6. “Milk is an excellent medium for the growth of microorganism”- Discuss
7. Write an essay on analysis of water samples for coli form bacteria.
8. Explain the sources of contamination of milk and the types of bacteria in milk
9. Enumerate the microbes responsible for spoilage of meat and egg and the method of preservation
10. Explain pasteurization methods used in milk
11. What is potable water? Explain the test for potability of water.

Unit V

1. Simplify the causal organism, symptoms and control measures of Tikka disease of Groundnut
2. Evaluate the symptoms, disease cycle and control measures of Red rot of sugarcane
3. Describe the symptoms, disease cycle and control measure of Bacterial leaf spot of Mango
4. Explain the Symptoms and control measure of Blast of paddy and Leaf curl of Papaya

Section A

Unit I

1. Write the composition of the plasma membrane
(a) protein (b) lipids (c) cellulose (d) **protein and Lipids**
2. Name the individual who coined the term 'Cell'
(a) Leeuwenhoek (b) Flemming (c) Robert Brown (d) **Robert hooke**
3. Tell what facilitates cell secretion from the following options:
(a) plastids (b) endoplasmic reticulum (c) **golgi apparatus** (d) nucleolus
4. Find the chief composition of the cell wall of a plant among the following options
(a) hemicellulose (b) phospholipids (c) proteins (d) **cellulose**
5. Write the term for intercellular connections of plant cells from the following options
(a) middle lamella (b) micro fibrils (c) matrix (d) **plasmodesmata**
6. Write the cell organelle that acts as the supporting skeletal framework of the cell
(a) Golgi apparatus (b) **endoplasmic reticulum** (c) nucleus (d) mitochondrion
7. Find where cellulose is abundantly present from the following options
(a) **cell wall** (b) protoplasm (c) plasma membrane (d) nucleus
8. Find how plant cell differs from animal cell in having
(a) **cell wall** (b) ribosomes (c) golgi bodies (d) cytoskeleton
9. Identify the structural and functional unit of all living organisms
(a) ribosome (b) **cell** (c) organ (d) organelle
10. Identify the membrane surrounding the vacuole of a plant cell
(a) plasmamembrane (b) cell wall (c) **tonoplast** (d) nuclear membrane
11. Identify where the double membrane is absent from the following options
(a) mitochondrion (b) chloroplast (c) nucleus (d) **lysosome**
12. Identify the cell organelle found only in plants
(a) mitochondrion (b) ribosomes (c) nucleus (d) **plastids**
13. Identify the organelle that contains enzymes that digest old cells

nucleus (b) ribosome (c) **lysosome** (d) golgi body

14. Name the person who introduced the term endoplasmic reticulum

(a) **Porter and Kallman** (b) Palade and Porter (c) Cosmillo Golgi (d) Kolliker

15. Find the organelle known as the powerhouse of a cell from the following options:

(a) chloroplast (b) **mitochondrion** (c) golgi apparatus (d) nucleolus

16. Write the main function of Ribosomes

(a) respiration (b) photosynthesis (c) **protein synthesis** (d) fat synthesis

17. Identify which cell organelle is not bounded by a membrane from the following options:

(a) lysosome (b) ER (c) nucleus (d) **ribosome**

18. Write another name for Karyotheca

(a) **nuclear envelope** (b) nucleus (c) nuclear pore (d) nucleolus

19. Identify the membranous discs found in chloroplasts

(a) granum (b) **thylakoid** (c) chlorophyll (d) stroma

20. Cristae of mitochondria helps in

(a) **respiration** (b) transpiration (c) absorption (d) translocation

21. Identify where 80s ribosomes are seen

(a) **eukaryotic cell** (b) prokaryotic cell (c) blue green algae (d) bacteria

22. Find the correctly matched organelle with its product:

(a) nucleolus — DNA (b) **mitochondria — ATP** (c) golgi apparatus — lipid (d) smooth endoplasmic reticulum — protein

23. Find the combination of subunits that make up 70s ribosomes:

(a) **50s and 30s** (b) 50s and 40s (c) 40s and 30s (d) 20s and 50s

24. The rough ER is so named because it has an abundance of _____ on it.

(a) mitochondria (b) lysosome (c) **ribosomes** (d) vesicles

25. Find where ATP synthase involved in oxidative phosphorylation are present in mitochondria.

(a) outer membrane (b) matrix (c) **F₁ particles** (d) inner membrane

26. Name the scientist who first observed mitochondria.

(a) **Kolliker** (b) Schimper (c) Altmann (d) Robert Hook

27. Find the space known as that separates the outer and inner membranes of chloroplast.

- (a) **periplastidal space** (b) perimitochondrial space (c) perinuclear space (d) plasmodesmata
29. Find out the minute spherical particles present in the membrane of thylakoid
(a) **quantosomes** (b) F1 Particle (d) electron transport particle (d) stroma
30. Find out the cell with 80s ribosomes
(a) **eukaryotic cell** (b) prokaryotic cell (c) Both eukaryotic and prokaryotic cell (d) bacterial cell
31. Name the person who first coined the term endoplasmic reticulum
(a) Kolliker (b) Schimper (c) Altmann (d) **Porter**

Unit II

- Find the term for the study of nucleus.
(a) alcology (b) mycology (c) pathology (d) **karyology**
- Identify the term for a nucleus without a nuclear membrane.
(a) **nucleoid** (b) chromatin (c) nucleolus (d) heterochromatin
- Identify where genes are located.
(a) **chromosomes** (b) nucleolus (c) nuclear membrane (d) plasma membrane
- Identify the feature used to recognize different types of chromosomes by the positions separating the two arms.
(a) genes (b) **centromere** (c) spindle (c) nucleus
- Identify the process known as division of cytoplasm.
(a) karyokinesis (b) **cytokinesis** (c) cell division (d) protokinesis
- Identify where mitosis is taking place.
(a) reproductive cells (b) somatic cells (c) **both (a) and (b)** (d) none of these
- Find the term for a chromosome without centromere.
(a) telocentric (b) metacentric (c) submetacentric (d) **acentric**
- Find what is responsible for pulling chromatids towards poles.
(a) cell plates (b) **spindle fibres** (c) centromere (d) none
- Find when chromosomes become tetravalent.
(a) leptotene (b) zygotene (c) **pachytene** (d) diplotene

10. Identify the process that maintains the same genetic constitution qualitatively and quantitatively.
(a) meiosis (b) **mitosis** (c) amitosis (d) none
11. Find the alternative name for Meiotic II division.
(a) heterotypic division (b) homotypic **division** (c) reduction division (d) direct division
13. Find the stage in which chromosomes are arranged in an equatorial plate.
(a) prophase (b) telophase (c) anaphase (d) **metaphase**
14. Identify the stage in which daughter chromosomes move towards the poles of the spindle.
(a) **anaphase** (b) metaphase (c) prophase (d) telophase
15. Identify the stage during which crossing over occurs.
(a) **pachytene** (b) zygotene (c) leptotene (d) diplotene
16. Identify the controlling center of the cell
(a) mitochondria (b) chloroplast (c) **nucleus** (d) ribosomes
17. Name the person who first discovered the nucleolus.
(a) **Fontana** (b) Robert Hook (c) Arnon (d) Flemming
18. Find the stage in which daughter chromosomes move towards the poles of the spindle.
(a) **anaphase** (b) metaphase (c) prophase (d) telophase

Unit III

1. Chargaff discovered “the equivalence rule”. Pick up the correct concept derived through the rule from the option below
(a) **amount of purines equalled to amount of pyrimidines** (b) amount of thymine equalled the amount of adinine (c) amount of guanine equalled to amount of cytosine (d) all the above
2. Name the phenomenon of genetic transformation encountered by Griffith facilitated to prove
(a) **DNA is the genetic material** (b) protein is the genetic material (c) both protein and DNA as genetic material (d) smooth wall S₃ bacteria is the genetic material
3. Name the scientist who proposed that the equivalence rule states that in DNA the amount of purines equalled the amount of pyrimidines.
(a) Tatum in 1960 (b) Watson in 1963 (c) **Chargaff in 1950** (d) Jacob in 1950

4. In Griffith's experiment a harmless variant of *S. pneumoniae* become pathogenic when mixed with heat killed pathogenic variant as a result of
(a) **Transformation** (b) Conjugation (c) Transduction (d) Mutation
5. Identify the transforming principle of Griffith experiment in *Diplococcus pneumoniae* is
(a) RNA (b) protein (c) **DNA** (d) histones
6. Name the scientist who performed blender experiments and proved DNA is the genetic material
(a) **Alfred Hershey and Martha Chase (1952)** (b) Laderberry and Tatum (1946)
(c) Oswald Avery and McCleod (1940) (d) Frederic Griffith and Avery (1956)
7. Except one all these organisms were used to prove DNA is the genetic material
(a) TMV (b) Phage T₂ (c) *Diplococcus pneumonia* (d) ***Lactobacillus lacti***
8. Identify the isotopic labels were used to prove DNA is the genetic material by Hershey and Chase in T₂ phage
(a) **³²P and ¹⁵S** (b) ¹⁴C and ¹⁷N (c) ¹⁸O and ²H (d) ³⁵P and ¹²S
9. Name the genetic material of TMV
(a) protein (b) DNA (c) **RNA** (d) mosaic leaf
10. Chargaff discovered "the equivalence rule". Select the correct concept derived through this rule-----
(a) A+G=T+C (b) **A=T and G=C** (c) A+C =G+T (d) A=C and G=A
11. Deoxyribonucleoside is the part of DNA. A nucleoside constitutes
(a) **a base + deoxyribosugar** (b) a base + a phosphate group (c) a phosphate + ribosugar
(d) two nitrogenous bases
12. All the statements are **TRUE** regarding DNA structure except-----
(a) DNA has double helical structure
(b) **The individual nucleotides are linked together by glycosidic bond**
(c) Coiled to the diameter of DNA duplex is 20Å⁰
(d) double stranded structure is stabilized by hydrogen bonds
13. Name the technique used to construct the molecular model for DNA
(a) **X-ray diffraction** (b) Autoradiography (c) Microscopic (d) Electrophoretic

Unit IV

- Find out in which phase of the cell cycle does DNA replication occur.
(a) G0 (b) G1 (c) **S** (d) G2
- Name the enzyme responsible for initiating DNA replication
(a) DNA polymerase I (b) DNA polymerase III (c) polymerase II (d) **primase**
- Name the most appropriate enzyme that catalyses the process of DNA polymerization.
(a) ligase (b) topoisomerase (c) **DNA polymerase** (d) RNA polymerase
- Identify the substrate for DNA polymerization.
(a) Ribonucleoside triphosphate (b) **Deoxynucleoside triphosphate** (c) small nucleotide riboprotein (d) heteronuclear RNA
- Identify the **Correct** statement.
(a) **RNA primers are required to initiate DNA synthesis**
(b) RNA primers are required to initiate RNA synthesis
(c) DNA polymerase can synthesis DNA strand without template
(d) RNA polymerase can involve DNA synthesis
- During the replication of DNA, the synthesis of DNA on lagging strand take place in segment. These segments are
(a) abortive primer (b) methylated cap (c) **Okazaki segment** (d) Leading strands
- Find out the enzyme responsible for Unwinding of DNA.
(a) **Helicase** (b) Ligase (c) Hexonuclease (d) Topoisomerase
- Identify the functional role of RNA in DNA duplication
(a) RNA serve as terminator (b) RNA serve as initiator (c) serve as the enhancer (d) **RNA serves as primer**
- Identify the correctly matched pair.
(a) Helicase -- give termination signal to DNA
(b) DNA Polymerase -- catalyse RNA synthesis
(c) **SSB -- prevent rewinding of helix**
(d) rho factor – unwind double helix
- After unwinding of DNA for replication which of the template acts as the leading strand
(a) 3' → 5' template (b) **5' → 3' template** (c) both b and c (d) none
- Identify the model best describe the DNA replication.

- (a) **semi conservative** (b) conservative (c) dispersive (d) both (a) and (b)
12. Find out the start point of DNA replication in Eukaryotes
(a) replicon (b) replisome (c) TATA box (d) **okazaki fragment**
13. Name the template strands associated with okazaki fragment
(a) leading strand (b) leading product site (c) **lagging strand** (d) duplex DNA strand
14. Name the alkylating agents from the following
(a) **hydrazine** (b) UV rays (c) bromouracil (d) aminopurine
15. Name the phenomenon which cause DNA duplication?
(a) transcription (b) **replication** (c) translation (d) mutation
16. Name the normal function of a promoter.
(a) Binding of the small subunit of the ribosome
(b) Serve as an origin of DNA replication
(c) carrying genetic code
(d) **Serve as a binding site for RNA polymerase**
17. Name the unit of a gene can undergo crossing over and recombination
(a) intron (b) exon (c) muton (d) **recon**
18. Identify the most simplest unit of a gene
(a) cistron (b) **mutan** (c) recon (d) operon
19. Identify the **incorrect** statement with respect to a gene
(a) operons have structural and regulatory genes
(b) cistrons are the unit have intron to protein synthesis
(c) **introns are the coding sequence of a gene**
(d) muton are undergo mutation
20. Name the substrate from which RNA synthesised?
(a) deoxyribonucleotide (b) **ribonucleoside triphosphate** (c) ribonucleio protein (d) all the above
21. _____ end of the primary transcript undergo polyadenylation
(a) **5' OH end** (b) intron branching point (c) intron exon junction (d) 3' OH end
22. Identify from the following which does not have intron?
(a) DNA (b) Non -Processed pseudogen (c) **Processed mRNA** (d) Primary RNA transcript

23. Find out the function of a promoter in DNA
 (a) **Initiate transcription** (b) Regulate termination (c) Encodes translation (d) Transcribe repressor
24. Identify the enzyme is involved in transcription.
 (a) DNA Polymerase (b) **RNA Polymerase** (c) Amino acyl tRNA transferase (d) both (b) and (c)
25. Name the process involved in the RNA formation on the DNA template.
 (a) Translation (b) transduction (c) **transcription** (d) transformation
26. Identify the process that lies between replication and translation?
 (a) transition (b) transversion (c) **transcription** (d) transduction
27. Upstream in the transcription unit refers to
 (a) **sequence before the startpoint** (b) sequence below the startpoint (c) sequence at the palindrome site (d) sequence in the elongation site

Unit V

- The concept of triplet codon and code of universal were proved by the scientist. If so ----- and ----- are the termination codon for the prokaryotes
 (a) **UAG and UAA** (b) UAA and AUG (c) AUG and UAA (d) CCA and ACA
- UUC is the triplet codon of aminoacid phenyl alanine present in the mRNA. Find out its anticodon in tRNA
 (a) **TTG** (b) AAC (c) AAG (d) TTC
- Name the RNA molecule that serves as an adapter molecule during protein synthesis
 (a) rRNA (b) mRNA (c) **tRNA** (d) hnRNA
- Name the first aminoacid formed during the polypeptide chain formation in prokaryotes.
 (a) Methionine, (b). N.methionine, (c). **N.formyl methionine** (d) all the above
- Identify the end product of translation.
 (a) polyribonucleotide (b) deoxyribonucleonides (c) **Polypeptide** (d) all the above
- The concept of triplet codon and code is not ambiguous were proved by scientists. Pick up the triplet code from the list below for methionine.
 (a) **AUG** (b) UUG (c) CCA (d) AGU
- Protein synthesis is effected by collective involvement of 3 RNAs. Find out the role of mRNA in translation

- (a) transfer of amino acid **(b) carrying genetic code** (c) activation of amino acid (d) synthesis of DNA from RNA
8. Name the scientist who gave clover leaf model to tRNA
 (a) Watson and Crick (1960) (b) R **Hotley** (**1965**) (c) S. Ukim (1973) (d) Rosealind Franklin (1960)
9. Find out the conserved base sequence of intron branch point
 (a) **Adenine** (b) Guanine (c) cytosine (d) thymine
10. Except one all others are not consensus sequence of intron – exon splicing junction
 (a) UGGA (b) CUAG (c) **GUAG** (d) AGGU
11. All tRNA molecules have unpaired CCA sequence at the 3' end. Recall its significance
 (a) **binding with the enzyme amino acyl synthetase** (b) recognizing codon of mRNA
 (c) binding of ribosomes (d) accepting amino acid to be transported.
12. Recall: Polysomes refers to
 (a) **cluster of ribosome** (b) cluster of homozygous genes (C) cluster of structural genes
 (d) cluster of introns
13. Recall: Anticodon is an unpaired triplet of bases in an exposed position of
 (a) *m*-RNA (b) *r*-RNA (c) ***t*-RNA** (d) *s*-RNA
14. Name the enzyme which helps in the activation of amino acid before being added to polypeptide chain
 (a) polymerase (b) ligase (c) **amino acyl RNA synthetase** (d) transformylase.
15. Name the first amino acid incorporated in proteins of bacteria.
 (a) **N formyl methionine** (b) alanine (c) glycine (d) leucine.
16. Identify which form RNA has a structure resembling clover leaf
 (a) ***t*-RNA** (b) *r*-RNA (c) *m*-RNA (d) *hn*-RNA
17. Name the RNA, that picks up specific amino acid, from pool in the cytoplasm, to ribosome during protein synthesis.
 (a) *m*-RNA (b) ***t*-RNA** (c) *r*-RNA (d) *d*-RNA
18. Identify which of the following genes is not a structural gene of the lac operon?
 (a) *lacA* (b) ***lac I*** (c) *lac Y* (d) *lac Z*
19. Name a gene of operon which synthesizes a repressor protein.
 (a) operator gene (b) structural gene (c) promoter gene (d) **regulator gene**

20. Identify the function of the promoter gene in lac operon
(a) terminate transcription (b) regulates enzymes synthesis (c) regulates *m*-RNA transcription (d) both '**b**' and '**c**'
21. Jacob and Monod studied lactose metabolism in *E.coli* and proposed operon concept, which is applicable for
(a) **prokaryotes** (b) eukaryotes (c) protozoanes (d) none
22. Find out that The lac operon is an example of
(a) regulatory operon (b) **inducible operon** (c) repressible operon (d) overlapping genes
23. Name the function of regulator gene in operon concept
(a) **repressor** (b) regulator (c) inhibitor (d) initiator
24. Identify which one of the regulatory elements of gene repress gene expression
(a) **silencer** (b) enhancer (c) promoter (d) none

Section B

Unit I

1. Discuss the functions of cell.
2. Differentiate eukaryotic and prokaryotic cells
3. Discuss the components of a typical plant cell.
4. Differentiate rough and smooth endoplasmic reticulum.
5. Summarize the functions of vacuole.
6. Illustrate the components of endoplasmic reticulum
7. Discuss about microtubules.
8. Explain why mitochondria are called the powerhouse of the cell.
9. Summarize the function of chloroplast.
10. Illustrate the structure and function of F1 particles in mitochondria.
11. Discuss about the quantasome of thylakoid membrane
12. Differentiate 70s and 80s ribosomes
13. Discuss the structure of poly ribosomes

Unit II

1. Explain the structure of nuclear pore complex.

2. Discuss about nucleoplasm of nucleus
3. Illustrate the structure of a typical somatic chromosome
4. Discuss the chromonemata of chromosome
5. Discuss the function of nucleolus
6. Define chromomere.
7. Summarize any three functions of centromere
8. What is SAT chromosome?
9. Explain the term "ideogram".
10. Explain why meiotic division is called reduction division.
11. Explain the homotypic division
12. Differentiate euchromatin and heterochromatin.
13. Explain the Pachytene stage of meiosis
14. Discuss the chromomere of chromosome

Unit III

1. Express the central dogma of life.
2. Infer the characteristics of genetic material.
3. Discuss Chargaff's rule.
4. Differentiate the smooth and rough strain of *Streptococcus pneumonia* from Griffith experiment.
5. Illustrate Hershey and chase experiment.
6. Differentiate the types of DNA.
7. Explain B- DNA.
8. Differentiate the right- and left-handed helix.
9. Discuss DNA repair.
10. Express the causes for DNA damage.
11. Explain mutation.
12. Express the significance of DNA repair.
13. Discuss RNA.

Unit IV

1. Discuss DNA replication.
2. Explain rolling circle model of replication in prokaryotes.

3. Express the enzymes involved in replication.
4. Infer replication fork.
5. Differentiate helicase from topoisomerase.
6. Relate the role of promoter in replication.
7. Indicate the types of promoter in prokaryotes and Eukaryotes.
8. Express the types of terminators.
9. Compare the units of genes
10. Discuss Jumping gene.
11. Illustrate the steps in transcription.

Unit V

1. Discuss about Genetic code.
2. Express the characteristics of genetic code.
3. Interpret the work of Nirenburg.
4. Infer the work of Khorana.
5. Explain translation.
6. Illustrate the activation of amino acid during protein synthesis.
7. Differentiate mRNA, rRNA and tRNA.
8. Distinguish Codon and anti codon.
9. Differentiate Start and stop codon.
10. Discuss nonsense codon.
11. Explain One gene one enzyme hypothesis.
12. Restate the Operon concept.
13. Associate *lac z* gene.

Section C

Unit I

1. Present the structure and functions of chloroplast.(K3)
2. Compile the structure and components of endoplasmic reticulum.(K3)
3. Compile the structure and components of Golgi complex. (K3)
4. Show the structure and functions of nucleolus(K3)
5. Present any six functions of nucleus(K3)
6. Show the structure of 70s and 80s ribosomes(K3)

7. Present the structure of mitochondrial cristae.(K3)
8. Compile the structure of granum of chloroplast(K3)
9. Present the structure and functions of vacuole.(K3)
10. Compile the structure of eukaryotic cell.(K3)

Unit II

1. Present the structure and functions of nucleolus.(K3)
2. Present any six functions of nucleus.(K3)
3. Show different shapes of chromosomes based on the positions of centromere.(K3)
4. Show the different types of chromatin found in the chromosomes.(K3)
5. Compile the structure and functions of centromere.(K3)
6. Present the functions of chromosomes.(K3)
7. Present the metaphase stage in first meiosis.(K3)
8. With neat diagram, differentiate between metaphase and anaphase in mitosis.(K3)
9. Show the significance of meiosis.(K3)
10. Present the different stages of mitosis.(K3)
11. Present the structure of polytene chromosome.(K3)
12. Show the structure of lampbrush chromosome.(K3)

Unit III

1. Compile the scope of molecular biology. (K3)
2. Present Griffith experiment to prove DNA as genetic material. (K3)
3. Show Hershey and chase to prove DNA as genetic material. (K3)
4. Experiment Avery model to prove DNA as genetic material. (K3)
5. Produce the Work of Franklin and Wilkin's in discovering the structure of DNA. (K3)
6. Compile the nature of genetic material. (K3)
7. Present notes about DNA damage. (K3)

Unit IV

1. Compile the steps in replication in prokaryotes. (K3)
2. Present Messelson and Stahl's experiment to prove semi conservation model of DNA replication. (K3)
3. Compute the role of enzymes in DNA replication. (K3)

4. Relate types of promoters and its function. (K3)
5. Predict the units of genes and its function. (K3)

Unit V

1. Compile the characteristic of genetic code. (K3)
2. Present Nirenburg and Khorana work on genetic code. (K3)
3. Compute the steps involved in translation. (K3)
4. Show the organelles involved in translation. (K3)
5. Present the structure of tRNA. (K3)
6. Show the regulation of gene. (K3)
7. Predict the role of Inducible and repressible enzymes in gene regulation. (K3)
8. Demonstrate Britten and Davidson model of gene regulation in eukaryotes. (K3)

Section D

Unit I

1. Compare the characters of prokaryotic and eukaryotic cells.(K4)
2. Diagrammatically explain the structure and functions of mitochondria. (K4)
3. Differentiate 70s and 80s ribosomes and add notes on its functions. . (K4)
4. Diagrammatically explain the structure and functions of chloroplast. (K4)
5. Analyse the ultra structure and functions of endoplasmic reticulum . (K4)
6. Analyse the ultra structure and functions of endoplasmic reticulum . (K4)
7. Analyse the ultra structure and functions of Golgi complex. (K4)

Unit II

1. Analyze the ultra structure of chromosomes
2. Diagrammatically explain the different stages of prophase in first meiosis
3. Conclude the structure of giant chromosomes
4. Diagrammatically explain the different stages of mitosis.
5. Analyze the structure and functions of nucleus

Unit III

1. Organize the History and scope of Molecular biology. (K4)
2. Simplify the experiments to prove DNA as genetic material. (K4)

3. Break down the experiment to prove RNA as genetic material. (K4)
4. Support Wason and Crick model of DNA. (K5)
5. Evaluate DNA Damage and repair. (K5)

Unit IV

1. Examine the mechanism of DNA replication in eukaryotes. (K4)
2. Support the mechanism of DNA transcription in eukaryotes. (K4)
3. Organise the types of genes and its function. (K4)
4. Simplify the structure of promoter and its function in prokaryotes and eukaryotes. (K4)
5. Evaluate the mechanism of DNA replication in prokaryotes. (K5)
6. Defend the semi conservation model of DNA replication using Messelson and Stahl's experiment. (K5)

Unit V

1. Investigate genetic code and its characteristics. (K4)
2. Simplify the types of RNA. (K4)
3. Analyze Britten and Davidson model of gene regulation in eukaryotes. (K4)
4. Outline an essay on gene regulation. (K4)
5. Evaluate the mechanism of translation. (K5)
6. Critique *lac* operon model of gene regulation in prokaryotes. (K5)

Section - A

Unit I

1. What is the average pH value of seawater?
(a) 3.8 to 4.2 (b) 5.6 to 6.4 (c) **7.5 to 8.4** (d) 11.2 to 12.8
2. Two gases dissolved in seawater are of metabolic importance: ____ and ____.
(a) **CO₂, O₂** (b) H₂, N₂ (c) CO, O₂ (d) CO, NO
3. One of the most important roles of bacteria in marine food webs is:
(a) Causing fish diseases
(b) **Recycling of nutrients**
(c) Being the main food source for jellyfish
(d) Being the main food source for copepods and euphausiids
4. Some bacteria, such as cyanobacteria, are -----
(a) Carnivores (b) Herbivores
(c) Omnivores (d) **Primary producers**
5. Most of the salt dissolved in seawater is:
(a) Calcium carbonate (CaCO₃) (b) Iron oxide (Fe₂O₃)
(c) **Sodium chloride (NaCl)** (d) Ammonium nitrate (NH₄NO₃)
6. Which ocean zone contains over 75% of the total volume of the world's oceans?
(a) Bathyal zone (b) Neritic zone (c) Photic zone (d) **Abyssal zone**
7. Seawater in the vicinity of a major phytoplankton bloom is characterized by...
(a) low CO₂ and high nutrient content (B) low O₂ and high nutrient content.
(c) **high O₂ and low nutrient content** (D) high CO₂ and low nutrient content
8. Which feature is at the greatest depth in the ocean?
(a) **Abyssal plain** (b) Continental shelf
(c) Submarine canyon (d) Continental rise
9. Chlorinity of sea water is related to the total amount of what substance dissolved in the water?
(a) oxygen (b) organic matter (c) **salts** (d) pollution
10. When carbon dioxide dissolves in water, the water becomes slightly more:
(a) acidic; its pH is higher (b) **acidic; its pH is lower**
(c) alkaline; its pH is higher (d) alkaline; its pH is lower
11. Oceans cover about ____ of the earth's surface.

- (a) 50% (b) 60% (c) **70%** (d) 80%

12. The ocean zone that covers the continental shelf is the

- (a) estuary (b) **coastal zone** (c) littoral zone (d) benthic zone

13. The open sea contains ____% of the surface area of the oceans and ____% of its plant and animal life.

- (a) 95 . . . 5 (b) **90 . . . 10** (c) 90 . . . 25 (d) 80 . . . 25

14. Which of the following choices is false? Oceans are important because they

- (a) regulate climates.
(b) provide a source of many natural resources, such as minerals and fossil fuels.
(c) **are one of the most highly productive ecosystems in the world on a unit area basis.**
(d) participate in the biogeochemical cycles.

15. Organisms living in coastal areas must adapt to what changes?

- (a) **water level and degree of salinity** (b) water level and amount of sunlight
(c) temperature and availability of oxygen (d) temperature and availability of nutrients

16. The yellow-green color of coastal waters as compared to the blue color of the open ocean is a result of what?

- (a) A lower salinity (b) **A high concentration of organic materials**
(c) A higher copper content of sediment (d) A low copper content of sediment

17. What is the name for the submerged edges of continents with gradual slopes?

- (a) **Continental shelves** (b) Abyssal plain
(c) Submarine canyon (d) Continental rise

18. The properties that must be known to determine the density of sea water.

- (a) **pressure, salinity and temperature** (b) pressure, salinity and oxygen
(c) carbon dioxide, salinity and oxygen (d) pressure, salinity and nitrogen

19. What type of shore is most biologically diverse?

- (a) Sandy beach (b) Mud flat (c) Salt marsh (d) **Rocky shore**

20. What characterizes the aphotic zone of the ocean?

- (a) **not enough sunlight for photosynthesis to occur**

(b) enough sunlight for photosynthesis to occur

(c) not enough CO₂ for photosynthesis to occur

(d) none of the above

21. Which of the following is the correct order of zones going from the shore to the deep ocean?

- (a) sublittoral, hadal, bathyal, abyssal
(b) hadal, sublittoral, bathyal, abyssal
(c) **sublittoral, bathyal, abyssal, hadal**
(d) bathyal, sublittoral, abyssal, hadal

22. The deep-water areas of the open ocean are called the

- (a) **abyssal zone** (b) Hypolimnion (c) Neritic zone (d) Intertidal zone

24. The zone of lighted ocean where marine autotrophs are able to thrive is called:

- (a) the disphotic zone **(b) the euphotic zone**
(c) the aphotic zone (d) the mesopelagic zone

25. The open ocean environment, in general

- (a) pelagic (b) benthic (c) neritic (d) oceanic

26. The open ocean environment, over the continental shelves.

- (a) pelagic (b) benthic **(c) neritic** (d) oceanic (e) hadal

UNIT- II

1. The smallest size of plankton are the

- (a) nanoplankton **(b)ultraplankton** (c) microplankton (d)miniplankton

2. In sampling plankton it is important to

- (a) tow the net as fast as possible to sample large volumes of water in short period
(b) carefully document the depth of the net
(c) use a constant size mesh for zooplankton and phytoplankton
(d) all of the above

3. Red tides are produced by certain species of

- (a) Mollusca (b) diatoms (c) pteropods **(d) dinoflagellates**

4. The first trophic level of the sea is made up of

- (a) meroplankton (b) fish (c) jellyfish **(d) diatoms**

5. In your explorations as a marine biologist, you find a new species of algae floating on the surface of a coastal zone. You would most likely classify this species as

- (a)phytoplankton** (b) zooplankton (c) benthos (d) nekton

6. Phytoplankton are _____.

- (a)microscopic ocean plants** (b) plants on the seashore
(c)small floating sand grains (d) marine animals that are good swimmers

7. Scientists can observe primary productivity in the ocean from space by measuring the

- (a) temperature of the surface water (b) depth of the euphotic zone
(c) amount of chlorophyll in surface waters (d) salinity of surface waters

UNIT- III

1. Which of the following are economically important phycocolloids derived from macroalgae?

- (a) agar **(b)carrageenan** (c)kelp (d) both (a)and (b)

2. Alginic acid occur in the cell walls of

- (a) *Sargassum* (b) *Turbinaria* (c) *Cystophyllum* **(d) all of above.**

3.The botanical name of dulse is

- (a) ***Rhodymeniapalmate*** (b)*Sargassum* (c) *Laminaria* (d) none of the above.

4. One of the antibiotic obtained from an alga is

- (a) **Chlorellin** (b) Streptomycin (c) Tetramycin (d) none of these.

5. Vitamins rich natural resource is

- (a) *Gracilaria* (b) *Ulva* (c) *Hypnea* (d) **all the above.**

6.*Chlorella* is a best research tool because of its

- (a) rapid growth (b) simple structure (c) short life span (d) **all the above.**

7. Following seaweed is best exploited for extraction of iodine

- (a) **Kelps** (b) Sea grasses (c) Diatoms (d) Dinoflagellates

8.Alginates are

- (a) proteins (b) **carbohydrates** (c) fats (d) lipids.

9.The botanical name of sea lettuce

- (a) *Rhodymenia palmate* (b)*Sargassum wightii* (c) *Laminaria pinnata* (d) ***Ulva***

lactuca

10.An alga used in liming of soil

- (a) *Rhodymenia* (b)***Lithothamnion*** (c) *Laminaria* (d) *Ulva*

11. Bluegreen algae are used to reclaim

- (a) **alkaline soil** (b) acidic soil (c) both (a) and (b) (d)none of the above

12.A phycocolloid used as culture medium in the laboratory

- (a) **agar** (b) algin (c) caragenean (d) none of the above

13.A phycocolloid occurring in the cell walls of brown algae

- (a) agar (b) **algin** (c) caragenean (d) none of the above

14.The common source of carragenin is

- (a) ***Chondrus*** (b)*Lithothamnion* (c) *Laminaria* (d) *Ulva*

15.Diatomite is otherwise known as

- (a) agar (b) algin (c) caragenean (d) **kiselgour**

16. Carrageenan is obtained from

- (a) ***Hypnea***(b) *Ulva*(c) *Padina*(d) none of the above.

17. Diatoms

- (a)are single-celled phytoplankton (b) have radial symmetry
(c)have pillbox shaped frustules (d)**all of the above**

18. Diatoms with bilateral symmetry are called _____ diatoms.

- (a)centric (b) autotrophic (c) **pennate** (d) oblate

19. Diatoms are able to stay afloat in the photic zone because
- (a) they have low density tissue that balances the high density frustule
 - (b) they produce oil as a storage product
 - (c) they have a pair of flagella for limited mobility
 - (d) both (a) and (b) are correct**
20. Dinoflagellates
- (a) have no mobility of their own
 - (b) have cell walls made of silica
 - (c) migrate vertically in response to sunlight
 - (d) all of the above**
21. In Tamil Nadu industrially important sea weeds are cultivated at
- (a) **Mandapam**
 - (b) Coimbatore
 - (c) Trichy
 - (d) none of the above.
22. Culture of living organisms in the liquid medium is called
- (a) **aquaculture**
 - (b) algal culture
 - (c) sericulture
 - (d) agriculture
23. Pure algal cultures are employed to study
- (a) the growth pattern and morphology
 - (b) method of reproduction
 - (c) cytological and physiological characteristics
 - (d) all the above**
24. Seaweed culture is widely done in
- (a) China
 - (b) Japan
 - (c) Korea
 - (d) all the above**
25. Medium which is best for the algal culture
- (a) **Chu 10 medium**
 - (b) MS medium
 - (c) White's medium
 - (d) none of the above.
26. Method of mass culture of algae
- (a) bubbling method
 - (b) stirring culture
 - (c) shaking method
 - (d) all the above.**
27. Commonly cultivating seaweed of Tamil Nadu
- (a) ***Gracilaria***
 - (b) *Laminaria*
 - (c) *Porphyra*
 - (d) none of these.
28. Which is not true about seaweeds?
- (a) They lack real roots, stems, or leaves
 - (b) All seaweeds are single celled organisms**
 - (c) There are brown, red, and green types
 - (d) They provide food for many types of marine animals
29. Sargassum weed is a type of _____.
- (a) tree
 - (b) flower
 - (c) brown seaweed**
 - (d) green seaweed
30. Some seaweeds are attached to the ocean floor by a _____.
- (a) holdfast**
 - (b) stem
 - (c) root
 - (d) special glue

UNIT- IV

1. Confluent zone of sea water and fresh water is termed as

- (a) **estuaries** (b) salt marshes (c) Oceanic province (d) neritic province.
2. Vivipary is an adaptative feature of
(a) *Avicennia* (b) ***Rhizophora*** (c) *Salicornia* (d) *Suaeda*.
3. Pneumatophores are
(a) positively geotropic (b) negatively phototropic
(c) **positively phototropic** (d) chemotropic
4. Major mangrove strand of Tamil Nadu
(a) **Pitchavaram** (b) Punakayal (c) Ramanathapuram (d) none of the above.
5. Find out the true mangrove from the following
(a) *Suaeda* (b) ***Rhizophora*** (c) *Cressa* (d) *Salicornia*
6. Generally mangroves escape high salinity by
(a) ultra-filtration mechanism in the root (b) salt glands
(c) **both (a) and (b)** (d) none of these
7. Mangroves are ecologically highly influential since they harbour
(a) biodiversity (b) prevent shore line erosion
(c) supply livelihood (d) **all of the above**
8. Mangroves live in
(a) physically dry soil (b) physiological dry soil
(c) rocky crevices (d) none of the above.
9. Mangroves maintain high osmotic potential than surroundings by
(a) **accumulating salts** (b) accumulation of vitamins
(c) secondary metabolites (d) none of the above.
10. Xerophytic character seen in *Avicennia*
(a) sunken stomata (b) thick epidermal cells
(c) water storing tissues (d) **all of these**
11. Estuaries exhibit
(a) constant temperature and salinity
(b) constant temperature and variable salinity
(c) variable temperature and constant salinity
(d) **variable temperature and salinity**
12. Estuaries and coastal wetlands are important for all of the following reasons except
(a) spawning and nursery grounds for marine fish and shellfish.
(b) filtering out waterborne pollutants from swimming and wildlife areas.
(c) breeding grounds for waterfowl.

(d)providing coral for limestone production and the tourist trade.

14. Mangrove swamps serve all of the following functions except

- (a)erosion protection for the coastline.
- (b)prevention of typhoon and hurricane damage.
- (c)entrapment of sediment washed off the land.

(d)salt mining.

15. Organisms of the intertidal zone

- (a)are constantly being swept away.
- (b)are exposed to constant salinity levels.
- (c)are exposed to both air and underwater conditions.**
- (d)must avoid drowning at high tide.

16. Which of the following correctly lists types of organisms in aquatic ecosystems from shallowest to deepest?

- (a)plankton, nekton, benthos**
- (b) plankton, benthos, nekton
- (c) benthos, plankton, nekton
- (d) benthos, nekton, plankton

17. What is the difference between swamps and marshes?

- (a)Marshes attract birds, swamps attract amphibians.

(b)Marshes are freshwater, swamps are saltwater.

- (c) Marshes contain non-woody plants; swamps contain woody plants.
- (d)Marshes are salt water; swamps are fresh water.

18. Which of the following would be considered among the most productive of ecosystems?

- (a)barrier island
- (b)estuary**
- (c) river
- (d) salt marsh

19. A mangrove that has prop-like roots is the _____.

- (a)black mangrove**
- (b) red mangrove
- (c) white mangrove
- (d) buttonwood

20. A coastal body of water connected to the ocean and supplied with fresh water from a river is an _____

- (a) Shelf
- (b)Inlet
- (c)Estuary**
- (d)Atoll

21. What is the average salinity of an estuary?

- (a) 23 ppt
- (b)12 ppt
- (c)8ppt
- (d)17ppt**

22. Which of these statements is FALSE concerning estuaries?

- (a) Larvae are often abundant there.
- (b) Estuaries are in danger of development and pollution.
- ((c) Very few autotrophs live in estuaries, but many animals can be found there.**
- (d) Estuaries are places where saltwater and fresh water meet.

23. Primary productivity in estuaries is high because of:

- (a) light is seasonal and dim **(b) nutrients are abundant**
- (c) symbiotic autotrophs live within the tissues of estuary animals
- (d) nutrients are abundant and light is seasonal and dim

UNIT- V

1. The symbiotic dinoflagellate that lives within coral tissue is called:
 - (a) kelp (b) Riftia **(c) zooxanthellae** (d) polyp.
2. The commensal algae that live in the tissues of the coral polyps:
 - (a) provide carbon dioxide and phosphates for the polyps
 - (b) feed on the tissues of the polyps and are dangerous parasites
 - (c) are the main cause of coral bleaching, and are threatening the reefs of the world
 - (d) provide additional nourishment and oxygen to the polyps through photosynthesis.**
3. Coral reefs are found only in areas:
 - (a) of deep water below 200 meters (660 feet) (b) of cold water or in cold currents. **(c) tropical latitudes with warm temperatures and slightly higher salinity**
 - (d) near rivers of stream deltas.
4. According to Darwin, the last stage in the cycle of reef formation is:
 - (a) the fringing reef **(b) the atoll** (c) the algal rim (d) the barrier reef.
5. Life in productive tropical reefs is characterized by:
 - (a) extreme competition for food, territory, and reproductive opportunities**
 - (b) very few species, but large numbers of each species
 - (c) large adults in each species that reproduce late in life
 - (d) organisms with extremely long lifespans.
6. Minamata disease is caused by
 - (a) mercurypoisoning** (b) cadmium poisoning
 - (c) cobalt poisoning (d) chlorine poisoning.
7. Red tide is caused by
 - (a) Dinoflagellates **(b) Diatoms** (c) *Chlorella* (d) *Gracilaria*.
8. Genetically modified microorganism used in abatement of oil pollution
 - (a) ***Pseudomonas putida*** (b) *Xanthomonas citri*
 - (c) *Bacillus subtilis* (d) none of the above.
9. Which one of the following is a coral reef forming organism
 - (a) Zoochlorellae **(b) Chlorella** (c) *Chlamydomonas* (d) none of the above.
10. A coastal body of water connected to the ocean and supplied with fresh water from a river is an

- (a) Shelf (b) Inlet (c) **Estuary** (d) Atoll

11. Atolls are

- (a) **coral reefs** (b) mangroves (c) sea grass beds (d) none of the above.

12. Oil pollution is due to

- (a) leakages of offshore drilling (b) ship wreck

- (c) **both (a) and (b)** (d) none of the above.

13. Rain forest of ocean

- (a) **Coral reefs** (b) sea grass bed (c) mangroves (d) salt marshes.

14. Algal bloom causes

- (a) reduce DO (b) reduce BOD (c) reduced COD (d) **all the above.**

15. Thermal pollution causes

- (a) **heat shock to marine biota** (b) heat shock to fisher folk

- (c) alter ocean current (d) alter waves and tides.

16. What sea has a name based on the seasonal blooms of algae that color the surface of the water?

- (a) **Red Sea** (b) brown sea (c) dead sea (d) black sea

17. What is the term for landforms that are produced by the growth of coral reefs around the shores of islands that have subsided over the centuries?

- (a) polyps (b) **atolls** (c) barrier reef (d) buttress reef

18. How are coral reefs formed?

- (a). Movements of the Earth's crust due to plate tectonics

- (b) Tiny plants related to diatoms that deposit the mineral silica

- (c) **Tiny animals related to sea anemones that deposit the mineral calcium carbonate**

19. What is the main mineral in a coral reef?

- (a) Halite (b) **Calcite** (c) Gypsum (d) Feldspar

20. Individual coral animals are called:

- (a) anemones (b) ctenophores (c) **polyps** (d) zooxanthellae

21. The optimal water temperature for coral is:

- (a) 16-18^o C (b) 18-21^o C (c) 21-23^o C (d) **23-25^o C**

22. All of the following threaten the survival of coral reefs except

- (a) increased ultraviolet light from stratospheric ozone depletion.

- (b) eroded soil from deforestation and poor land management

- (c) chemical pollution

- (d) **predation by sharks.**

23. What part of a coral reef is above a depth of 20 meters?

- (a) **Buttress zone** (b) Supralittoral zone (c) Hermatypic zone (d) Bathyal zone

24. What is the type of exoskeleton formed by corals?

- (a) Hydrogen Calcite (b) **Calcium Carbonate** (c) Limestone (d) Phosphate

25. Thriving coral reefs require

- (a) cloudy water (b) cool water
(c) **dissolved oxygen and nutrients** (d) salinity that fluctuates with the tides.

26. All of the following threaten the survival of coral reefs except

- (a) increased ultraviolet light from stratospheric ozone depletion
(b) eroded soil from deforestation and poor land management
(c) chemical pollution
(d) **predation by sharks**

27. All of the following threaten the survival of coral reefs except

- (a) increased ultraviolet light from stratospheric ozone depletion
(b) eroded soil from deforestation and poor land management
(c) chemical pollution
(d) **collection tourists.**

28. One class of pollutants that can cause excessive growth of algae is

- (a) radioactive substances (b) oxygen-demanding wastes
(c) **inorganic plant nutrients** (d) organic chemicals.

29. Thermal pollution

- (a) raises the solubility of oxygen in water
(b) lowers the respiratory rates of aquatic organisms
(c) nurtures spawning fish
(d) **can kill organisms adapted to a particular temperature range by thermal shock.**

30. Which of the following is false?

- (a) Oil evaporates and undergoes decomposition
(b) **The environment recovers more slowly from crude oil spills than from refined oil spills**
(c) Recovery from oil spills is faster in warm water than in cold water
(d) Estuaries and salt marshes suffer the most damage from oil pollution and cannot be effectively cleaned up.

31. Water pollution from oil can be prevented by

- (a) instituting a national energy policy based on decreased reliance on fossil fuels
(b) prohibiting oil drilling in ecologically sensitive areas

(c) requiring double hulls on oil tankers

(d) All of these answers.

32. Which environment has historically been the most stable?

(a) desert (b) **coral reef** (c) tundra (d) tropical rain forest

Section - B

Unit I

1. Spring tide
2. Phytoplankton
3. Zooplankton
4. Bacterioplankton
5. holoplankton
6. macroplankton
7. microplankton
8. nanoplankton
9. picoplankton
10. neritic province
11. Oceanic province
12. Nekton
13. euphotic zone
14. disphotic zone
15. aphotic zone
16. epipelagic zone
17. mesopelagic zone
18. bathypelagic zone
19. bioluminescence
20. littoral zone
21. sublittoral zone
22. bathyal zone
23. abyssal zone
24. hadal zone
25. decomposers
26. Salinity
27. Continental shelf

28. Upwelling
29. neap tide
30. seawater density
31. seawater pressure

Unit II

1. phytoplankton
2. plankton net
3. Preservation of phytoplankton
4. Gross primary production
5. Factors affecting primary production
6. Adaptations of planktons for floating life
7. Characters of marine bacteria
8. Geochemical activity
9. Nitrification
10. Ammonification
11. Denitrification
12. Bacteria involved in N₂ fixation

Unit III

1. Carrageenan
2. Alginic acid
3. Chlorellin
4. Kelps
5. Alginates
6. nori
7. SLF
8. algae in reclamation of soil
9. kombu
10. algae as fodder
11. *Acetabularia*
12. Agarophytes
13. Alginophytes
14. Carragenophytes
15. Diatomite
16. any four properties of agar

17. any four properties of alginic acid
18. kieselguhr
19. any four uses of agar
20. any four uses of alginic acid
21. any four uses of diatomaceous earth
22. centric diatoms
23. pennate diatoms
24. frustules
25. Bladder type diatoms
26. Needle type diatoms
27. Ribbon shape diatoms
28. Branched type diatoms
29. Dinoflagellates
30. Red tides
31. Halosphaera
32. Phaeocystis
33. Silico-flagellates
34. Coccoliths

Unit IV

1. Vivipary
2. Pneumatophores
3. Estuary
4. Pitchavaram
5. any two morphological adaptations of mangroves
6. psammophytes
7. mangrove fauna
8. Prop root
9. Crescentic dunes
10. Linear dunes
11. Star dunes
12. Dome dunes
13. Any two adaptations of psammophytes
14. Any two bioactive compounds from psammophytes
15. Any two significances of psammophytes

16. Saltwedge estuaries
17. Partially mixed estuaries
18. Fjords
19. Bar – built estuaries
20. Polyhaline

Unit V

1. Minamata disease
2. Any two sources of marine heavy metal pollution
3. Any two control measures of marine heavy metal pollution
4. Any two sources of marine oil pollution
5. Any two control measures of marine oil pollution
6. Marine algal blooms
7. *Pseudomonas putida*
8. Oil degrading bacteria
9. GMO for pollution abatement
10. Marine biotoxin
11. Saxitoxins
12. Neurotoxic shellfish poisoning
13. Domoic acid
14. Coral reef
15. Conservation of coral reef
16. Conservation of island

Section C

UNIT -I

1. Give an account of Spatial classification of the marine environment
2. Discuss the role of salinity in the marine environment.
3. Write an essay on the fauna of rocky shores.
4. Describe the adaptations of deep sea organisms.
5. Discuss “Sea is a Biological Environment
6. Write about the physical properties of the seawater.
7. Write about the zonation’s in the sea.
8. What are benthic forms? Briefly describe their structure.

9. Give an account on the chemical properties of the sea water.
10. Describe abyssal life of a sea.
11. On the availability of light how the marine environment is classified

UNIT II

1. Describe the methods for measuring primary productivity in the sea.
2. Describe any one of the methods of sampling phytoplanktons.
3. Describe the structural adaptations seen in phytoplanktonic diatoms and dinoflagellates.
4. Explain the methods that are adopted to estimate phytoplanktonic production.
5. Define primary production. What are the factors that affect primary production?
6. Write notes on plankton net.
7. Give an account on the collection of phytoplankton.
8. Write notes on preservation of phytoplankton
9. Describe the laboratory culture of algae.
10. Describe the method of production of unicellular algal food.
11. What are the different methods adopted for cultivation of seaweeds?
12. Give an account on the cultivation of *Gracilaria*.
13. Write about requirements for culture of micro algae in laboratory.
14. Write notes on algal food in aquaculture
15. What is the role of marine bacteria in the sea?

UNIT- III

1. How will you get sodium alginate? Write its uses.
2. Describe briefly the agar yielding marine algae.
3. Write notes on role of algae in research.
4. Give an account of antibiotics and vitamins from algae.
5. Describe the process of extraction of agar.
6. Write notes on carrageenophytes.
7. Write briefly about the extraction of carrageenan.
8. Write notes on importance of agar.
9. Discuss the significance of marine natural products.
10. Write an essay on marine toxins.
11. Explain the importance of seaweeds.
12. Write notes about utilization of marine algae as human food?

13. Explain the commercial cultivation of *Gracilaria*.

14. What are the algae used as fodder? Explain.

UNIT -IV

1. What are the morphological adaptations seen in mangroves?
2. How mangroves are adapted anatomically to their environment.
3. What is the role of pneumatophore in marine environment?
4. What is the role of mangroves in prawn culture?
5. How mangroves protect the environment.
6. Write notes on mangrove forest in Tamil Nadu.
7. Give an account on fauna of estuaries.
8. Explain the environmental conditions in estuaries.
9. Write notes on
 - i. vivipary
 - ii. physiological adaptations of mangroves.
10. List any 5 taxa of mangrove vegetation.
11. Define estuary. Give an account of the types of estuaries.
12. Describe the physico-chemical parameters of the estuary
13. Write an essay on estuarine plankton
14. Give an account of the finfish in estuaries.
15. Describe the distribution of mangrove ecosystems in India.
16. Write an essay on the estuarine food web.
17. Write notes on
 - i. Negative estuary
 - ii. Estuarine birds
 - iii. Estuarine benthos
18. Discuss the impacts of dredging in marine habitats.
19. What are psammophytes? Write their importance in preventing soil erosion?
20. Differentiate salt marshes from mangroves.

UNIT -V

1. Write about the marine pollution and its effects on marine life forms with special reference to heavy metal pollution.
2. Explain the role of microorganisms in the removal of oil pollutants in marine habitat.
3. Write notes on the conservation of mangrove ecosystem.
4. Define coral reefs. Add a note on the need for their conservation.
5. Write notes on thermal pollution.
6. Give an account on oil pollution.
7. Write notes on radioactive pollution.
8. What are Islands? Add a note on the need for their conservation.
9. Write notes on marine bio- toxins.
10. Give an account of the special features of coral reefs.
11. Write an essay on the ecology of coral reefs. Discuss the role of biotechnology in controlling marine pollution.
12. Give account of the sources and treatment of oil pollution in sea
13. Write an essay on thermal pollution in the sea

Section - D

UNIT –I

1. Write an essay on chemical characteristics of seawater.
2. Write an essay on the classification of marine habitat.
3. Write notes on
 - i. rocky shore
 - ii. physical properties of seawater.
4. Write about the characteristics and adaptations of benthic and pelagic life in the sea.
5. Write an essay on the role of marine bacteria in the economy of sea.
6. Give an account on planktons and their adaptations for floating life.
7. What are the characteristic features of abyssal zone and add a note on the adaptations found in them?
8. “The intertidal zone represents one of the most stressful environments in terms of changing environmental conditions”. Explain the comment using specific examples of stress and how organisms are able to survive in the intertidal zone.

UNIT – II

1. Write an essay on the economic importance of marine bacteria.
2. Write an essay on the methods of collection, isolation and preservation of planktons

3. Give an account of the characteristics of phytoplankton. Add a note on their role in the ecosystem of the sea.
4. Explain a simple methodology to isolate, purify and mass culture of microalgae.
5. Write an essay on unicellular algal food.
6. Mention the seaweeds that are cultivated in India. Write an account on their methods of cultivation.
7. Define aquaculture and write an essay on the role of phytoplanktons in the field of aquaculture.
8. Write an essay on the cultivation of any two seaweeds.
9. “Knowledge of life history is essential for cultivation of alga” - Justify.
10. Write an essay on the laboratory culture of algae.

UNIT - III

1. What are the steps involved in commercial production of Porphyra? Explain.
2. Write an essay about agricultural uses of marine algae.
3. With suitable examples write about the industrial importance of marine algae.
4. Write an essay on the potential value of algae in research and antibiotics.
5. Give an account on the preparations, properties and uses of agar-agar.
6. Give an account on the preparations, properties and uses of algin.
7. What are carrageenophytes? How carrageenan is extracted from marine algae.
8. Write notes on
 - i. uses of carrageenan
 - ii. vitamins from algae
 - iii. agarophytes.
9. Write an essay on the economic importance of marine algae.
10. Write an essay on the role of algae in agriculture.
11. Give an account on algae as food and fodder.
12. Write an essay on seaweed cultivation.

UNIT - IV

1. How mangroves are adapted to their environment.
2. What are mangroves? Explain the environmental conditions of mangrove formation.
3. Write an essay on the role of mangroves in protecting the environment.
4. Give an account on mangroves of Tamil Nadu.
5. Write an essay on mangrove dwelling animals.
6. How will you improve the productivity of estuary?

7. Give an account on flora and fauna of estuary.
8. How estuaries are classified? What are the environmental conditions prevailing in that region?
9. Protection and regeneration of mangroves are necessary - Discuss.
10. Write notes on
 - (a) vivipary
 - (b) *Avicennia*
 - (c) Pitchavaram.
11. Write an essay on salt marshes.
12. Give an account on coastal sand dune vegetation and their importance.

UNIT -V

1. Discuss the adverse effects of radioactive pollution on marine environment.
2. Write about the effects of oil-spill on marine based industries. Add note on their remedial measures.
3. Write an essay on the role of GMOs on pollution abatement.
4. What are the sources of thermal pollution and its effects on environment? Add note on its control.
5. Conservation of coastal ecosystem is an urgent need - Discuss.
6. Write an essay on marine pollution.
7. Write an essay on the conservation of mangroves.
8. Give an account on coral reefs.
9. Write an essay on marine bio-toxins.
10. What are algal blooms and how they are caused? Add a note on its harmful effects.

St. Mary's College (Autonomous), Thoothukudi.

Re-accredited with 'A+' Grade by NAAC (4th cycle)

UNIT-I
UNIT I PERIODIC PROPERTIES AND CONCEPT OF ELECTRON TRANSFER
Section – A **(1 Mark)**
Choose the correct answer

- 1.The basis of modern periodic law is -----
a) atomic size b) atomic number c) atomic volume d) atomic mass (Ans:b)
- 2.Which of the following has zero electron affinity?
a) nitrogen b) oxygen c) fluorine d) neon (Ans:d)
- 3.On moving down the group, the radius of an ion -----
a) decreases b) increases c) does not change d) none (Ans:b)
- 4.Which among the following has the maximum ionization energy?
a) alkali metals b) alkaline earth metals c) halogens d) noble gases (Ans:d)
- 5.The electron affinity of an atom is -----
a) directly proportional to its size b) inversely proportional to its size
c) independent of its size d) None (Ans:b)
- 6.Among the following which has the higher electron affinity value?
a) F b) O c) N d) C (Ans:a)
- 7.Noble gases have _____ electron affinity
a) high b) low c) zero d) none (Ans:c)
- 8.Which of the following periodic property decreases while moving from top to bottom of a group?
a) covalent radii b) ionic radii c) covalent bond length d) ionization energy (Ans: d)
- 9.Which of the following periodic property increases while moving from top to bottom of a group?
a) covalent radii b) electron affinity c) eletronagativity d) ionization energy (Ans:a)
- 10.The alkali metal with lowest ionization energy is
a)Li b)Na c)Cs d)K (Ans:c)

11. The oxidation number of chromium in $\text{Cr}_2\text{O}_7^{2-}$ ion is

- a) -2 b) +7 c) +6 d) -6

(Ans: c)

12. One of the following statement is wrong

- a) During oxidation, O.N of the effective element increase
b) During reduction, O.N of the effective element decrease
c) Oxidation is de-electronation process
d) Reduction is loss of electrons

(Ans: d)

13. Oxidation involves -----

- a) gain of electrons b) loss of electrons c) both loss and gain d) all

(Ans: a)

14. Redox reaction is a ----- a) Proton transfer reaction b) electron transfer reaction

- c) Ion combination reaction d) Reaction in solution

(Ans: b)

15. Oxidation is defined as -----

- a) gain of electrons b) loss of electrons c) loss of neutrons d) gain of neutrons

(Ans: b)

16. $2\text{K}_2\text{MnO}_4 + \text{Cl}_2 \longrightarrow 2\text{KMnO}_4 + 2\text{KCl}$ is an example of ----- reaction

- a) redox b) chlorination c) Reduction d) Neutralisation

(Ans: a)

17. $\text{Zn}^{2+}(\text{aq}) + 2\text{e}^- \longrightarrow \text{Zn}(\text{s})$. This reaction is -----

- a) Oxidation b) Reduction c) Redox d) None

(Ans: b)

18. Rusting of iron is a/ an -----

- a) Oxidation b) Reduction c) Hydrolysis d) Precipitation

(Ans: a)

19. The compound that can work both as an oxidizing and reducing agent is

- a) KMnO_4 b) H_2O_2 c) BaO_2 d) $\text{K}_2\text{Cr}_2\text{O}_7$

(Ans: b)

20. In the redox reaction $\text{Zn} + \text{CuSO}_4 \longrightarrow \text{ZnSO}_4 + \text{Cu}$

- a) Zn is reduced b) Cu is oxidized c) Both are reduced d) Cu is reduced

(Ans: d)

Section – B

(2 Marks)

Answer the following questions

1. Define the term atomic radii.
2. How Ionisation energy vary in a group and in a period.
3. What is electron affinity.

4. Give an account of Pauling scale of electronegativity.
5. Define the term ionization energy
6. What is electronegativity.
7. Define the term covalent radii.
8. Give any two merits of long form of periodic table.
9. How atomic radii vary in a group and in a period.
10. Define Oxidation number.
11. What is meant by an oxidant?
12. Distinguish between oxidation and reduction.

Section – C (6 Marks)

Answer the following questions

1. What are the merits and demerits of long form of periodic table?
2. What is meant by covalent radius and ionic radius? How does it vary in a group and in a period?
3. How is electronegativity calculated using Pauling's scale?
4. Define the terms electron affinity. What are the factors which affect electron affinity?
5. What is meant by electronegativity? How does it vary in a group and in a period?
6. What is meant by an oxidant? Write any three oxidation reactions of H_2O_2
7. Give the reduction properties of Fe(II)
8. Discuss the electron transfer concept of a redox reaction

Section – D (10 Marks)

Answer the following questions

1. Discuss the basis and salient features of the long form of the periodic table.
2. How does electronegativity calculated using Pauling, Mullikan and Allred – Rochow scales.
3. What are the applications of electronegativity concept?
4. Define the terms ionization energy. How does it vary in a group and in a period?
5. What is meant by electronegativity? Write the factors which affect electronegativity.
6. Balance the following reaction:

UNIT II BASIC CONCEPTS OF ORGANIC CHEMISTRY

Section A (1 Mark)

Choose the correct answer

1. Aliphatic compounds can also be called as ----- compounds.
a) Alicyclic b) Close chain c) Acyclic d) Homocyclic (Ans c)
2. When different atoms like N,S,O are present in the ring then it is called as -----
a) Heterocyclic b) Homocyclic c) Polycyclic d) Acyclic (Ans a)
3. Anthracene is an example of ----- compound.
a) Monocyclic b) Alicyclic c) Heterocyclic d) Polycyclic (Ans b)
4. Cyclobutane is an example of ----- compound.
a) Monocyclic b) Alicyclic c) aromatic d) Polycyclic (Ans d)
5. The root word Dodeca represents -----chain length.
a) C₁₀ b) C₁₃ c) C₁₂ d) C₁₁ (Ans c)
6. The IUPAC name of CH₃-CH₂-CH=CH₂ is -----
a) 1- Butene b) 2- Butyne c) 2-Butene d) 3- Butyne (Ans d)
7. The suffix name of ketone is -----
a) -ol b) -one c) -al d) -oate (Ans b)
8. The other name for carbocyclic compounds is -----
a) Homocyclic b) heterocyclic c) acyclic d) polycyclic (Ans a)
9. Citric acid obtained from citrus fruits is the ----- name of the compound.
a) Trivial b) derived c) systematic d) Geneva (Ans a)
10. ----- is also called as wood naphtha, wood spirit or carbinol.
a) Ethyl alcohol b) methyl alcohol c) alcohol d) propyl alcohol (Ans b)
11. IUPAC names are also called as ----- names.
a) Geneva b) derived c) common d) trivial (Ans a)
12. The generic root word for any carbon chain is -----
a) alky- b) alke- c) alk- d) none (Ans c)
13. In the saturated hydrocarbon chain the suffix -ane is ----- to designate the compound.
a) Primary suffix b) Primary prefix c) Secondary suffix d) secondary suffix (Ans a)
14. -----to indicate the functional group present in the compound.
a) Primary suffix b) Primary prefix c) Secondary suffix d) secondary suffix (Ans c).
15. -----is used to designate the saturation and unsaturation of the carbon chain.
a) Secondary suffix b) primary prefix c) secondary prefix d) primary suffix (Ans d)
16. The root word -yne is used to represent the ----- bond in the carbon chain.
a) single b) double c) triple d) tetra (Ans c)
17. To indicate the alcohol functional group present in a compound the suffix -ol is used.

- a) -ol b) -al c)- yl d) -oyl (Ans a)
- 18.To indicate the aldehyde functional group present in a compound the suffix ----- is used.
a) -ol b) -al c)- yl d) -oyl (Ans b)
- 19.To indicate the acyl group present in a compound the suffix ----- is used.
a) -ol b) -al c)- yl d) -oyl (Ans b)
- 20.To indicate the ketone present in a compound the suffix ----- is used.
a) -one b) -oate c)- oic d) -oyl (Ans a)
- 21.To indicate the carboxylic acid present in a compound the suffix ----- is used.
a) -one b) -oate c)- oic d) -oyl (Ans c)
- 22.The substituents derived by the removal of one hydrogen atom of an alkane is called -----
a) alkenyl b) alkynyl c)alkyl d)alkoxy (Ans c)
- 23.If *sec*- Butyl and *tert*- Butyl group is present, the first letter to be considered in naming is
a) s b) B c) t d) yl (Ans b)
24. The prefix carbylamino is used to represent ----- functional group.
a) -NH₂ b) - RNH c) -N-C d) R₂N (Ans c)
- 25.The prefix amino is used to represent ----- functional group.
a) -NH₂ b) - RNH c) -N-C d) R₂N (Ans a)
- 26.The prefix name of -O-is -----
a) azo b) epoxy c) oxo d) alkoxy (Ans b)
- 27.The prefix name of -OH is -----
a) Hydroxy b) epoxy c) oxo d) alkoxy (Ans a)
- 28.In a polyfunctional compound the principal functional group is added as ----- to the parent hydrocarbon.
a) suffix b) prefix c) terminal d)substituent (Ans a)
- 29.The equivalent weight of silver is-----
a) 187 b) 108 c) 107 d) 105 (Ans b)
- 30.Molecular weightof an organic acid is determined by -----
a) silver salt method b) platinic chloride c) Zeisel d) chromyl chloride (Ans a)
31. Acetylene possess ----- hybridization.
a) sp³ b)sp² c)sp d) dsp² (Ans:c)
- 32.Inductive effect is -----
a) temporary effect b) permanent effect
c) combination of I and M effect d) combination of- I and -M effect (Ans b)

33. Carbanion ion is _____ hybridised?

- a) sp b) sp^2 c) sp^3 d) dsp^2 (Ans c)

34. Heterolysis of C – Cl bond produces -----

- a) Two free radicals b) Two carbonium ions
c) Two carbanions d) one cation and one anion (Ans d)

35. Homolytic fission of a hydrocarbon will liberate

- a) carbonium ions b) carbanions c) Free radicals d) carbenes (Ans c)

36. Heterolytic fission of a hydrocarbon will liberate

- a) carbonium ions b) carbanions c) both (a) and (b) d) carbenes (Ans c)

37. Which of the following carbocation is least stable?

- a) 3° alkyl b) 2° alkyl c) 1° alkyl d) methyl (Ans d)

38. Carbonium ion is _____ hybridised?

- a) sp b) sp^2 c) sp^3 d) dsp^2 (Ans b)

Section-B

(2 Marks)

Answer the following

1. Define functional group.

2. What are called aliphatic compounds?

3. What are called cyclic compounds?

4. What do you mean by polycyclic compounds?

5. What are called heterocyclic compounds?

6. What do you mean by trivial name of the compound?

7. What do you mean by common name of the compound?

8. What do you mean by derived name of the compound?

9. What do you mean by systematic name of the compound?

10. What do you mean by aromatic compound? Give examples.

11. What is called IUPAC system of nomenclature?

12. Why the systematic names are also called Geneva names?

13. Write the derived names of carbinol.

14. Write the derived names of acetic acid.

15. Write the derived names of acetylene.

16. Explain the lowest sum rule of IUPAC.

17. How the longest chain is selected based on IUPAC system?

18. How the parent chain is selected based on IUPAC system?

19. How the carbon atoms are numbered in the carbon chain based on IUPAC system?

20. How the substituents are numbered in the carbon chain based on IUPAC system?
21. Write the preference order of the carbon chain when it contains double bond, triple bond and substituents according to IUPAC.
22. How the acyclic polyaldehydes are named according to IUPAC system?
23. Write the priority order of the functional groups according to IUPAC system.
24. Define empirical formula and molecular formula.
25. Define hybridization
26. What is electromeric effect?
27. What is inductive effect? Give example.
25. What is meant by the homolytic and heterolytic fission of a covalent bond?
26. Give the structures of carbonium ion and carbanion.
27. Explain the terms carbonium ion and carbanion with examples.
28. Define the term free radicals?
29. Explain polymerisation reaction.

Section - C

(6 Marks)

Answer the following questions

1. How organic compounds can be classified ?
2. What are systems adopted for naming organic compounds ?
3. What are the rules of IUPAC system adopted for naming acyclic compounds?
4. What are the rules of IUPAC system adopted for naming alkenes ?
5. What are the rules of IUPAC system adopted for naming alkynes ?
6. What are the rules of IUPAC system adopted for naming acyclic compounds?
7. What are the rules of IUPAC system adopted for naming compounds with substituents?
8. How the acyclic polyfunctional compounds are named according to IUPAC system?
9. Give the structure of the following. I) 3-pentanone ii) 2,4-pentadiene iii) 3-ethyl 2,2-dimethyl hexane iv) 3-hydroxy butanal.
10. Percentage composition of an organic substance as determined by analysis was carbon 14.5, hydrogen 1.8, chlorine 64.46, oxygen 19.24. Calculate its empirical formula.
11. Explain sp^3 hybridisation with an example.
12. Explain inductive and resonance effects with examples.
14. What are free radicals? Discuss their generation and stability.
15. Explain the formation of carbonium ions and carbanions.
16. Explain substitution and addition reactions with an example.

Section- D

(10 Marks)

Answer the following

1. Explain the rules of IUPAC nomenclature for complex organic compounds.

2. Write the structure of the following compounds.

- | | |
|-------------------------|-----------------------------|
| i) propionic acid | ii) 1,6-heptadiene-4-ol |
| iii) 4-amino-2-butanone | iv) 3-methyl-1-butene |
| v) 2,4 dimethyl hexane | vi) propane-1, 3-dioic acid |
| vii) pent-3-ene-2-one | viii) 1-butanal. |

3. Write the IUPAC names for the following compound

4. A monoacid organic base gave the following results on analysis:-

- 0.100g gave 0.2882g CO_2 and 0.0756g water
- 0.200g gave 21.8 ml nitrogen at 15°C and 750mm
- 0.400g of the platinichloride left on ignition, 0.125g of Pt.

What is the molecular formula of the base?

5. How molecular weight of the organic substance is determined by i) Silver salt method ii) chloroplatinic salt method

6. An organic compound gave the following percentage composition : C= 77.4, H= 7.52 ; N=

14.56. 0.2325g of the same compound gave 27.08ml of nitrogen at N.T.P. The vapour density of the compound is 46.5. Calculate the empirical and molecular formula of the compound.

7. What is meant by hybridization? Explain sp^2 and sp^3 hybridisation with suitable examples.
8. Discuss hyper conjugation and steric effect with suitable examples..
9. Discuss the shapes and stability of reaction intermediates.
10. Explain the types of organic reactions.

Unit III Basic Quantum Chemistry

Section – A

(1 Mark)

Choose the correct answer

1. An expression relating momentum and wavelength of a particle in motion was derived by -----
a) De Broglie b) Einstein c) Bohr d) Newton (Ans: a)
2. The equation $mv=p$, where p represents -----
a) velocity b) momentum c) motion d) wavelength (Ans: b)
3. Heisenberg's uncertainty principle is a proof for ----- of electron.
a) dual nature b) kinetic energy c) potential energy d) motion (Ans: a)
4. The probability of finding a particle at a particular point is proportional to the square of the ----- at that point.
a) wave function b) wavelength c) energy d) potential energy (Ans: a)
5. ----- represents a definite space around the nucleus where there is a maximum probability of finding an electron of specific energy.
a) atom b) orbit c) molecule d) orbital (Ans: d)
6. An atomic orbital can have only ---- electrons.
a) 2 b) 1 c) 5 d) 7 (Ans: a)
7. The size of the 's' orbital increases as the value of ----- increases.
a) m b) s c) l d) n (Ans: d)
8. The orbitals that are symmetrically spherical are ---- orbitals.
a) f b) d c) p d) s (Ans: d)
9. The shape of p orbital is -----
a) spherical b) dumb bell c) double dumb bell d) triple dumb bell (Ans: b)
10. dx_y , dy_z , dz_x are called ----- orbitals.
a) axial b) non axial c) symmetrical d) unsymmetrical (Ans: b)

11. The number of nodal planes for electron in 5s orbital is -----

- a) 1 b) 2 c) 3 d) 4 (Ans:d)

12. Which orbital has the following quantum number? $n = 2, l = 1$ and $m = 0$

- a) 2s b) $2p_x$ c) $2p_y$ d) $2p_z$ (Ans:b)

13. Which orbital is having the lowest energy?

- a) 4d b) 4s c) 5s d) 4p (Ans:b)

14. One among the following statements refer to the d orbital?

- a) It is spherical b) There are three types of orbitals
c) It is non-directional d) The value of azimuthal quantum no is 2 (Ans:d)

15. For an orbital $l = 2$, hence $n =$

- a) 1 b) 2 c) 3 d) 4 (Ans:c)

16. The orbital which has the values $n = 3, l = 2$ and $m = 0$

- a) $3p_x$ b) $3d_z^2$ c) 4s d) 6s (Ans: b)

17. The correct distribution of valency electrons of carbon atom in its ground state

18. Which of the following electronic arrangement is against Hund's rule?

(Ans:c)

Section – B

(2 Marks)

Answer the following questions

1. What are the significance of de-Broglie concept.

2. State Heisenberg's uncertainty principle.

3. Write Schrodinger wave equation.
4. What is called Eigen value?
5. What is called Eigen function?
6. What is an atomic orbital?
7. State Aufbau principle.
8. Write the electronic configuration of elements with atomic number 19 and 24.
9. Give a short note on Azimuthal quantum number.
10. State Hund's rule.

Section- C

(6 Marks)

Answer the following questions choosing either (a) or (b)

1. Derive an expression for de Broglie equation.
2. Write the fundamental postulates of Schrodinger wave equation.
3. Draw the shapes of atomic orbitals.
4. Write a note on 'g' and 'u' character of atomic orbitals.
5. State and explain Pauli's exclusion principle.
6. Explain a) Aufbau principle b) Hund's rule

Section- D

Answer the following questions

(10 Marks)

1. Explain the significances of Schrodinger wave equation.
2. Explain the radial and angular parts of the wave function and their significance.
3. Explain the origin of four quantum numbers. Discuss their significances.
4. State a) Hund's rule b) Aufbau principle c) Pauli's exclusion principle
5. Write the electronic configuration of the elements with atomic number 6 to 30.

UNIT IV NUCLEAR CHEMISTRY

Section – A

(1 Mark)

Choose the correct answer

1. Radioactive disintegration differs from a chemical change in being
 - a) nuclear process
 - b) an exothermic process
 - c) a spontaneous process
 - d) a unimolecular first order reaction

(Ans :a)
2. Which of the following does not contain material particles?
 - a) alpha rays
 - b) beta rays
 - c) anode rays
 - d) gamma rays

(Ans:d)
3. What is the binding energy in Boron nucleus if its mass defect is 0.08181 amu?

a) 1.2×10^{-4} ergs/nucleus b) 8.2×10^{-4} ergs/nucleus

c) 10.2×10^{-4} ergs/nucleus d) 1.9×10^{-4} ergs/nucleus

(Ans:a)

4. Which is the correct statement?

a) isotopes are always radioactive b) alpha rays are always negatively charged

c) beta rays are always negatively charged d) gamma rays can be deflected in a magnetic field (Ans:c)

5. Which is not emitted by radioactive substance?

a) alpha particle b) beta particle c) positron d) proton

(Ans:c)

6. In radioactive decay, which of the following moves the fastest?

a) alpha particle b) beta particle c) gamma particle d) positron

(Ans:c)

7. In terms of energy, 1 amu is equal to

a) 100 J b) 931.5 MeV c) 931.1 Kcal d) 10^7 erg

(Ans:b)

8. Unstable substances exhibit higher radioactivity due to

a) low n/p ratio b) high n /p ratio c) n/p = 1 d) none of these

(Ans:a)

9. Nuclear Fission reactions are

a) Chain reaction b) Thermal reaction c) Photodisintegrations d) Uncontrollable

(Ans:a)

10. Which one of the following atomic number of Uranium is used in Rock dating?

a) 238 b) 235 c) 226 d) 248

(Ans:a)

11. The radioactive isotope used in the treatment of thyroid is

a) Co- 60 b) P- 32 c) Fe -59 d) I -131

(Ans:d)

12. Radio carbon is produced in air by the reaction between

a) ${}^7_1\text{N}^{14} + {}^0_0\text{n}^1$ b) ${}^6_6\text{C}^{12} + {}^2_2\text{He}^4$ c) ${}^7_7\text{N}^{14} + {}^1_1\text{H}^1$ d) ${}^7_7\text{N}^{14} + {}^2_2\text{He}^4$

(Ans:a)

13. In radio carbon dating technique the carbon isotope used is

a) C-12 b) C-13 c) C-14 d) C-15

(Ans:b)

14. Which of the following is a magic number

a) 25 b) 40 c) 50 d) 60

(Ans:c)

15. A cyclotron can not accelerate-----

a) Deutrons b) Neutrons c) Alpha particles d) Proton

(Ans:b)

16. The principle used in Hydrogen bomb is

a) Nuclear fission b) Nuclear fusion c) Nuclear explosion d) Chemical reaction (Ans:b)

17. Isotopes have same chemical properties because they have the same

a) atomic mass b) atomic number c) mass number d) number of neutrons (Ans: b)

18. X and Y are isotones. Their mass numbers are 70 and 72 respectively. If the atomic number of X is 34, what is that of Y?

a) 32 b) 36 c) 30 d) 32 (Ans: b)

19. Which pair represents isobars?

a) ${}_{19}\text{K}^{40}$ and ${}_{18}\text{Ar}^{40}$ b) ${}_{2}\text{He}^3$ and ${}_{2}\text{He}^4$ c) ${}_{12}\text{Mg}^{24}$ and ${}_{12}\text{Mg}^{25}$ d) ${}_{19}\text{K}^{40}$ and ${}_{20}\text{Ca}^{41}$ (Ans: a)

20. When the parent nucleus emits a β^- particle, the daughter element is shifted in the periodic table

a) one place to the right b) one place to the left

c) two places to the right d) two places to the left (Ans: a)

21. Nuclear energy is the result of conversion of

a) Neutrons to protons b) Protons to neutrons c) Mass into energy d) neutrons to neutrons (Ans: c)

22. The number of electrons in carbon-12 is?

a) 6 b) 12 c) 17 d) 0 (Ans: a)

Section - B

(2 Marks)

Answer the following questions

1. What is mass defect?
2. Define the term nuclear binding energy.
3. Write note on n/p ratio.
4. What is linear accelerator?
5. Explain the term packing fraction.
6. Define half life period.
7. What do you mean by artificial radioactivity.
8. What are magic numbers? Give an example.

Section - C

(6 Marks)

Answer the following questions

1. What are isotopes, isobars and isotones? Give examples.
2. Explain the principles involved in nuclear fission and fusion reactions.
3. Write notes on a) mass defect b) n/p ratio.
4. What is nuclear fusion? Write a brief note on hydrogen bomb.
5. Write a note on cyclotron.
6. Define mass defect. Write a note on packing fraction of nuclei.

7. Explain the working of thermal reactors.
8. Enumerate Soddy's group displacement laws with examples.
9. What are magic numbers? Explain with examples.
10. Differentiate induced and artificial radioactivity.

Section - D (10 Marks)

Answer the following questions

1. Discuss artificial radioactivity
2. Explain the terms a) Packing fraction b) nuclear binding energy
3. Explain the relationship between a) n/p ratio and nuclear stability b) Packing fraction and mass defect
4. Write notes on a) nuclear fusion reaction b) nuclear fission reaction
5. Write a note on linear accelerator.
6. Give an account on radio carbon dating.
7. Explain how radio- active isotopes are used in
i)medicine ii)tracer technique.

Unit V Analytical Methods

Section-A (1 Mark)

Choose the correct answer

1. What is the molarity of oxalic acid when 1.575 g of it is dissolved in 250 mL of solution
a) 0.5 M b) 0.05 M c) 0.03 M d) 0.04 M (Ans:b)
2. What is the molarity of a solution of Na_2CO_3 containing 5.3 g of the substance in 250 ml of the solution
a) 0.2 M b) 0.1 M c) 0.3 M d) 0.02 M (Ans:a)
3. What is the amount of Na_2CO_3 present in 400 mL of N/10 Na_2CO_3
a) 1.12 g b) 2.12 g c) 5.3 g d) None (Ans: b)
4. What is the molarity of 4% NaOH solution
a) 0.1 M b) 0.2 M c) 1 M d) 2 M (Ans:c)
5. The molarity of a glucose solution containing 36 g of glucose per 400 ml of the solution is
a) 1.0 b) 0.5 c) 2.0 d) 0.05 (Ans: b)
6. The percentage of HCl containing 10 ml in 100 ml of water is _____
a) 10 b) 1 c) 0.5 d) 3 (Ans:a)
7. The indicator used in EDTA titrations is -----

- a) phenolphthalein b) methyl orange c) ferroin d) eriochrome black T (Ans:d)
8. Potassium ferricyanide is used as _____ indicator in dichrometry.
a) self b) external c) internal d) adsorption (Ans:b)
9. Which of the following can not be used as a standard substance?
a) $K_2Cr_2O_7$ b) $KMnO_4$ c) $CuSO_4$ d) $H_2C_2O_4$ (Ans:b)
10. The indicator which is not used in acid-base titration is _____
a) phenolphthalein b) methyl orange c) ferroin d) xyenol orange (Ans:c)
11. Which of the following is used as a secondary standard
a) $K_2Cr_2O_7$ b) $KMnO_4$ c) $CuSO_4$ d) $H_2C_2O_4$ (Ans:b)
12. In volumetry, solution of known strength is called-----
a) link b) analyte c) standard d) titrand (Ans:c)
13. In volumetry, titrand is otherwise called ----
a) link b) analyte c) standard solution d) normal solution (Ans:c)
14. The suitable indicator used for the titration of weak acid and strong base is.
a) phenolphthalein b) methyl orange c) methyl red d) naphthalene (Ans :b)
15. The aim of drying in air oven is to remove ---- from the precipitate.
a) impurities b) moisture c) co-precipitation d) post-precipitation (Ans :b)
16. Interfering radical among the following is -----
a) phosphate b) chloride c) sulphate d) carbonate (Ans :a)
17. _____ Gas is evolved when nitrate salt is heated
a) NO_2 b) NO c) NO_3 d) $N_2 O$ (Ans :a)
18. A substance reacts with dil. HCl to give a colourless gas which turns lime water milky. The substance is _____
a) carbonate b) chloride c) Sulphide d) Phosphate (Ans:a)
19. Brown ring test is used to detect _____.
a) carbonate b) nitrate c) fluoride d) oxalate (Ans : b)
20. In the brown ring test, the brown colour of the ring is due to the formation of _____.
a) Nitrosulphate b) Fericsulphate c) Nitric ferrous d) nitrosoferroussulphate (Ans :d)
21. The reaction of nitrate ion with copper turnings and conc. H_2SO_4 , the blue solution formed is due to
a) copper nitrate b) copper sulphate c) copper carbonate d) copper oxalate (Ans:a)
22. A salt solution containing H_2SO_4 decolourises a dilute solution of potassium permanganate. The anion of the salt is _____
a) fluoride ion b) oxalate ion c) sulphide ion d) phosphate ion (Ans :b)

23. A solution of a salt in water on addition of dil. HCl gives a white precipitate, soluble in hot water.

The salt contains _____

- a) Lead ions b) cadmium ion c) Bismuth ion d) Nickel ion (Ans :a)

24. II group reagent in qualitative analysis is H_2S in the presence of _____.

- a) dil. HCl b) dil. HNO_3 c) dil. H_2SO_4 d) dil. H_3PO_3 (Ans :a)

25. The gas with rotten egg smell is _____

- a) ZnS b) H_2S c) CuS d) NiS (Ans:b)

26. The confirmatory test for chloride ion is _____

- a) Chromyl chloride tests b) Brown ring test c) Ethyl borate test d) Calcium chloride test (Ans:a)

27. In the confirmatory test for chloride, the red orange vapours are evolved. This is due to the formation of

- a) Chromyl chloride (CrO_2Cl_2) b) Chromyloxy chloride
c) Chloro chromyl d) chromic chloride (Ans:a)

28. The colour of the precipitate formed, when AgNO_3 is treated with Bromide solution -----

- a) Pale Blue b) White c) Pale yellow d) Brown (Ans :c)

29. Ammonium molybdate test used to detect _____.

- a) Phosphate b) Borate c) Sulphate d) Sulphide (Ans:a)

30. Phosphate ions are eliminated by _____ reagent.

- a) Zirconyl phosphate b) Zirconylsulphate c) Zirconyl oxalate d) Zirconyl chloride (Ans:d)

31. Borate is identified by _____ test.

- a) Ethyl borate b) Chromyl chloride c) brown ring d) chromyl chloride (Ans:a)

32. The reagent used to eliminate borate, fluoride and chromate is _____

- a) Con. HCl b) Con. H_2SO_4 c) Con. HNO_3 d) con. NaOH (Ans:a)

33. The I group cations like Pb, Ag etc. are precipitated as chloride by adding _____

- a) dil. HNO_3 b) dil. HCl c) dil. H_2SO_4 d) dil. H_3PO_3 (Ans:b)

34. The II group cations like Cu, Cd, Bi etc. are precipitated as sulphide by adding _____.

- a) H_2S in the presence of dil. HCl b) H_2S in the presence of dil. H_2SO_4
c) H_2S in the present of dil. HNO_3 d) H_2S in the presence of dil. H_3PO_3 (Ans :a)

35. Oxalate anions are eliminated by roasting. During roasting oxalate anions are converted into

- a) bicarbonate b) sulphate c) Carbonates d) Chloride (Ans :c)

36. Ammonium ions are identified by adding _____ reagent.

- a) Nessler's b) sodium dihydrogen phosphate c) Dimethyl glyoxime d) ammonium carbonate (Ans:a)

37. _____ reagent gives rosy red precipitate with nickel salt solutions made alkaline with ammonia solution.

- a) Potassium ferricyanide b) Dimethyl glyoxime
c) Potassium ferri cyanide d) Nessler's reagent (Ans :b)

38. The colour of the precipitate formed when H_2S is passed into cadmium salt solution

- a) Yellow b) blue c) brown d) green (Ans:a)

39. In the elimination of interfering radical, roasting is performed for

- a) borate b) fluoride c) oxalate d) phosphate (Ans:c)

40. With H_2S , copper ion in acid medium gives _____ colour precipitate.

- a) black b) brown c) pink d) yellow (Ans:a)

41. Interfering radical among the following is -----

- a) phosphate b) chloride c) sulphate d) carbonate (Ans:a)

42. The colour of silver bromide precipitate is -----

- a) pale yellow b) green c) white d) pink (Ans:a)

43. Confirmatory test for borate is----- test

- a) ammonium molybdate b) chromyl chloride c) ethyl borate d) Nessler's reagent (Ans:c)

44. Repeated acidification followed by evaporation method is employed to eliminate ---

- a) bromide b) oxalate c) fluoride d) phosphate (Ans:c)

45. In the confirmatory test for chloride, the red orange vapours are evolved. This is due to the formation of -----

- a) Chromyl chloride b) Chromyloxy chloride c) Chloro chromyl d) chromic chloride (Ans: a)

46. The average value of a set of replicate experiments is called -----

- a) Mean b) Mode c) Median d) deviation (Ans:a)

47. -----deviation is the difference between the individual value and the average value.

- a) Mean b) Mode c) Median d) deviation (Ans:d)

48. The degree of agreement between the measured value and true value is called-----

- a) Precision b) accuracy c) deviation d) Average (Ans:b)

49. Errors in reading the burette is ----- error.

- a) Methodic b) personal c) operative d) instrumental (Ans:b)

Section - B

(2 Marks)

Answer all the questions

1. What do you mean primary and secondary standard.
2. Define normality and molarity.

3. What are indicators? Give examples.
4. Give an account of external indicator.
5. Mention the types of indicators used for EDTA titrations.
6. What are complexometric titrations?
7. Explain self indicator with an example.
8. What do you mean by the terms titrant and titrand.
9. How will you choose the indicator for acid base titrations?
10. State the volumetric principle of titrimetry.
12. Differentiate iodometric and iodimetric titrations.
13. Give the meaning of the term 'digestion of a precipitate'. Why does a precipitate require to be digested?
14. What is post precipitation? How is it prevented?
15. Distinguish between co-precipitation and post precipitation.
16. How carbonate salts are identified. Give the equation.
17. What are the radicals present in second group? Write the group separation.
18. Give the test for borate.
19. What is brown ring test.
20. How phosphate salts are identified?
21. How Magnesium can be tested?
22. Define error.
23. What is called Accuracy?
24. What is meant by Median?
25. Define standard deviation.

Section -C

(6 Marks)

Answer all the questions

1. What are the criteria of a standard solution? List out the requisites of the primary standards.
2. Calculate the normality, molarity of oxalic acid solution containing 126 g in 200 ml.
3. Write a note on self indicator.
4. Define the following terms i) titrant ii) indicator iii) end point iv) titrand
5. Explain redox titration with example.
6. What steps have to be adhered to in order to avoid co-precipitation?
7. What is meant by post precipitation? Illustrate it with an example.
8. Differentiate between co-precipitation and post precipitation with suitable examples.

9. What is co-precipitation? Explain what steps have to be adhered to in order to avoid co-precipitation?
10. Interfering radicals should be eliminated. Give reason.
11. Write note on the following i) Brown ring test ii) ethyl borate test.
12. Explain the following (i) Ammonium molybdate test for phosphate.ii) Chromyl chloride test for chromate.
13. How will you eliminate the following interfering radicals.i) Oxalate ii) Phosphate.
14. Explain how chromate and borate interfere in cation analysis'
15. Explain a)Mean b) Mode c) Standard deviation

Section - D

(10 Marks)

Answer all the questions

1. What are titrations? Explain different types of titrations with examples.
2. Differentiate iodometric and iodimetric titration methods.
3. Comment on the principle and role of EDTA in complexometric titrations.
4. Write notes on i) external ii) internal indicator.
5. Write a note on choice of an acid-base indicator.
6. Explain volumetric principle and write briefly about different methods of expressing the strength of the solution.
7. What are the qualities of a good precipitate? How are wash solutions selected to prevent the loss of precipitate during the course of washing?
8. Write notes on: a) Post precipitation b) Selective precipitants
9. What are the different types of precipitants? Explain with suitable examples.
10. What is co-precipitation? What are the different types? Mention the steps to avoid co-precipitation.
11. Discuss the principle of solubility product principle in qualitative analysis..
12. What is the role of common ion effect in the qualitative group analysis of basic radicals?
13. Write the confirmatory test for any five simple radicals.
14. How Strontium, calcium, ammonium, nickel and manganese are tested.
15. Explain the types of error.

ST.MARY'S COLLEGE (Autonomous) – THOOTHUKUDI
QUESTION BANK

III B.Sc Chemistry

Skill Enhancement Course Professional English for Chemistry I Sub. Code: 21UCHPE1
Semester – I – November 2021

(for those who joined in July 2021 and after)

Time: 3 Hours

Max. Marks: 60

UNIT 1: COMMUNICATION
SECTION A (10 X 1 = 10)

Choose the correct answer:

10 x 1 = 10

Read the passage and answer the following questions

5x1 = 5

Saccharin derives its name from the word "saccharine", meaning "sugary". Sodium saccharin (benzoic sulfimide) is a non-nutritive or artificial sweetener with effectively no food energy. It is commonly used as sugar substitute.

1. Saccharin derives its name from the word _____

- a) saccharine b) sacchar c) sugar d) sweet Ans: a

2. Saccharin means _____

- a) salty b) sugary c) sweet d) bitter Ans: b

3. _____ is a non-nutritive or artificial sweetener with effectively no food energy.

- a) Calcium saccharin b) benzoic sulfimide c) benzyl d) benzyl amide Ans: b

4. Saccharin is commonly used as _____ substitute.

- a) salt b) sugar c) bitter d) blender Ans: b

5. Saccharin has _____ calorific value.

- a) less b) average c) high d) no Ans: d

The orange colour of carrot is due to the presence of beta carotene. The red colour of tomato fruit is due mainly to a carotenoid called lycopene. Lycopene is not the only pigment found in tomato plants. Chlorophylls are obviously present in all green plants and in tomato leaves. The pigments in tomato fruit act as antioxidants to protect your cells. Beta carotene is a provitamin A carotenoid, or a nutrient that the body readily converts into vitamin A. Research has found that eating a carotenoid-rich diet, including beta carotene, supports eye health and prevents eye diseases.

6. The orange colour of carrot is due to the presence of
 a) beta carotene b) chlorophyll c) Vitamin d) lycopene Ans: a
7. The red colour of tomato is due to the presence of
 a) beta carotene b) chlorophyll c) Vitamin d) lycopene Ans:d
8. The greencolour of plants is due to the presence of
 a) beta carotene b) chlorophyll c) Vitamin d) lycopene Ans:b
9. The pigments in tomato fruit act as _____ to protect your cells.
 a) antidrug b) antibiotics c) antioxidants d) anti carcinogens Ans:c
10. _____ supports eye health and prevents eye diseases.
 a) beta carotene b) chlorophyll c)Vitamin d) lycopene Ans:a

Section B

(5 x 2 = 10)

Answer the following in about 50 words each

11. Give specific information on the following terms.

- a) Root Vegetable b) Vitamins

12. Write F against facts and O against opinions.

- a) Lavoisier's law" is indicative of his success in making this principle a foundation of modern chemistry.
- b) Lavoisier developed an experimentally based theory of the chemical reactivity of oxygen.

13. Can hydroxychloroquine prevent the severity of COVID-19?

14. Write the important Marie's contribution to the field of science.

15. Use the expressions

- a) In my opinion.....
- b) I feel absolutely certain that

16. Rearrange the given words:

1) prevent/treat/and/medication/to/used/a/HCQ/is/Malaria

2) had/toxicities/compound/significant/the

17. Draw a flowchart to express Marie Curie contributions.

18. Frame Sentences using the following words: a) invention b) contribution

Section C (5 x 4 = 20)

Answer the following in about 100 words each

19. What do you know about the Patenting of scientific products?

20. Fill in the blanks with suitable words:

(Root, Central Asia, tap root, orange)

The carrot is a _____ vegetable, most commonly observed as _____ in color. Carrot is originated from _____. The most commonly eaten part of the plant is _____.

21. Discuss the pros and cons of following product

22. Give Synonyms: a) invention b) contribution c) artificial d) toxic

23. Give Antonyms: a) invention b) contribution c) artificial d) toxic

24. Who is called the father of chemistry and how he elevates chemistry?

Section D (2 x 10 = 20)

Answer any two in about 400 words each

25. Describe the role of Antoine Lavoisier to chemistry.

26. Give the differences between Sugar and Saccharine.

27. Read the following passage and make a mind map for the uses of Hydroxychloroquine.

Hydroxychloroquine treats rheumatic disorders such as systemic lupus erythematosus, rheumatoid arthritis, and porphyria cutanea tarda, and certain infections such as Q fever and certain types of malaria. It is considered the first-line treatment for systemic lupus erythematosus. Certain types of malaria, resistant strains, and complicated cases require different or additional medication. The medicine is widely used to treat primary Sjögren syndrome but does not appear to be effective. Hydroxychloroquine is widely used in the treatment of post-

Lymearthritis. It may have both an antispirochete activity and an anti-inflammatory activity, similar to the treatment of rheumatoid arthritis.

28. Write the important 10 sentences based on the passage about the Curie's important work.

The importance of Mme. Curie's work is reflected in the numerous awards bestowed on her. She received many honorary science, medicine and law degrees and honorary memberships of learned societies throughout the world. Together with her husband, she was awarded half of the Nobel Prize for Physics in 1903, for their study into the spontaneous radiation discovered by Becquerel, who was awarded the other half of the Prize. In 1911 she received a second Nobel Prize, this time in Chemistry, in recognition of her work in radioactivity. She also received, jointly with her husband, the Davy Medal of the Royal Society in 1903 and, in 1921, President Harding of the United States, on behalf of the women of America, presented her with one gram of radium in recognition of her service to science. For further details, cf. Biography of Pierre Curie. Mme. Curie died in Savoy, France, after a short illness, on July 4, 1934. Curie developed methods for the separation of radium from radioactive residues in sufficient quantities to allow for its characterization and the careful study of its properties, therapeutic properties in particular.

UNIT 2 DESCRIPTION

THE SPIRIT OF CHEMICAL SCIENCES

SECTION A (10 X 1 = 10)

Choose the correct answer:

10 x 1 = 10

1. _____ can be used as lubricant.

- a) Vaseline b) phenol c) NaCl d) HCl Ans: a

2.

Hydroxychloroquine is a less toxic derivative of chloroquine and was discovered in 1945 as part of the efforts to lessen the toxic effects of chloroquine. It was approved for use in the US in 1955, and since then has been used for the treatment of a wide variety of diseases including arthritis, Systemic Lupus Erythematosus (SLE) etc. Hydroxychloroquine (HCQ), is a medication used to prevent and treat malaria. It is also used for the treatment of rheumatoid arthritis, lupus, and porphyria cutanea tarda. HCQ is being studied to prevent and treat coronavirus disease 2019 (COVID-19). High-quality evidence of benefit for such use is lacking, with concerns of potential harm from its side effects. Hydroxychloroquine is on the World Health Organization's list of essential Medicines, which has the most the safest and most effective medicines needed in a health system. In 2017, it was the 128th most commonly prescribed medication in the United States, with more than five million prescriptions. The speculative use of hydroxychloroquine for COVID-19 threatens its availability for people with established symptoms.

2. Hydroxychloroquine is a _____ derivative

- a) Toxic b) hazardous c) dangerous d) less toxic Ans: d

3. Hydroxychloroquine is a medication used to prevent and treat _____

- a) Fever b) vomiting c) typhoid d) malaria Ans: d

4. _____ is being studied to prevent and treat coronavirus disease 2019.

- a) NaCl b) HCl c) HCQ d) KCl Ans: c

5. HCQ is used for the treatment of _____

- a) rheumatoid arthritis b) lupus c) porphyria cutanea tarda d) All the above Ans: d

6. Definition has _____ distinct elements.

- a) 2 b) 3 c) 4 d) 5 Ans: a

7. An abacus is an ancient device used for arithmetic calculation is a _____

- a) Definition b) extended definition c) article d) description Ans: a

8. _____ is an effective speaking activity
 a) listening b) Reading c) writing d) Role play Ans: d
9. _____ is interesting with imaginary people and imaginary situations.
 a) listening b) Reading c) writing d) Role play Ans: d
10. A _____ describes how something works, beginning with general information to specific.
 a) Process Description b) Reading c) writing d) Role play Ans: a

Section B (5 x 2 = 10)

Answer the following in about 50 words each

11. What is definition?
12. What is extended definition?
13. What are terms?
14. What do you mean by reading between the lines?
15. What is an role play?
16. Name the ways to speed up reading and comprehending skills.
17. What is a process description?
18. In what ways a process can be described?

Section C (5 x 4 = 20)

Answer the following in about 100 words each

19. Explain the steps involved in writing definition.
20. What are the steps involved to write extended definitions?
21. Write extended definitions for Ozone and Scientist.
22. Use these verbs and frame sentences
 a. strike the match b. generate heat
23. Fill in the blanks with suitable words:
 Gold, Potassium chlorate, 1805, 5th Century, Other metals
 Wooden sticks coated with sulphur paved the way as a catalyst for fire in _____
 Chancel opted wooden stick with _____ than phosphorus. Hennig Brandt
 dreamt of _____ from other _____ in his Life time.
24. Say True or False
 a) Vaseline is a moisturizing agent.
 b) The Rod wax is used to heal cuts and burns.
 c) Vaseline is a non-medicinal product.
 d) Vaseline is carcinogenic.

Section D

Answer any two in about 400 words each

25. Draw a flowchart to represent the uses of petroleum jelly using the following paragraph

Petroleum jelly can be used to lubricate zippers and slide rules. It was also recommended by Porsche in maintenance training documentation for lubrication (after cleaning) of "Weatherstrips on Doors, Hood, Tailgate, Sun Roof". The publication states, "...before applying a new coat of lubricant..." "Only acid-free lubricants may be used, for example: glycerine, Vaseline, tire mounting paste, etc. These lubricants should be rubbed in, and excessive lubricant wiped off with a soft cloth." It is used in bullet lubricant compounds. Petrolatum is also used as a light lubricating grease as well as an anti-seize assembling grease. Petroleum jelly is a useful material when incorporated into candle wax formulas. The petroleum jelly softens the overall blend, allows the candle to incorporate additional fragrance oil, and facilitates adhesion to the sidewall of the glass. Petroleum jelly is used to moisten nondrying modelling clay such as [plasticine](#), as part of a mix of hydrocarbon. It can be used as a release agent for plaster molds and castings. It is used in the leather industry as a waterproofing cream.

26. Imagine you are a leader in a pollution control board. You are explaining to your team mates the importance of green house gases and you have to submit a project on the effects of the emissions.

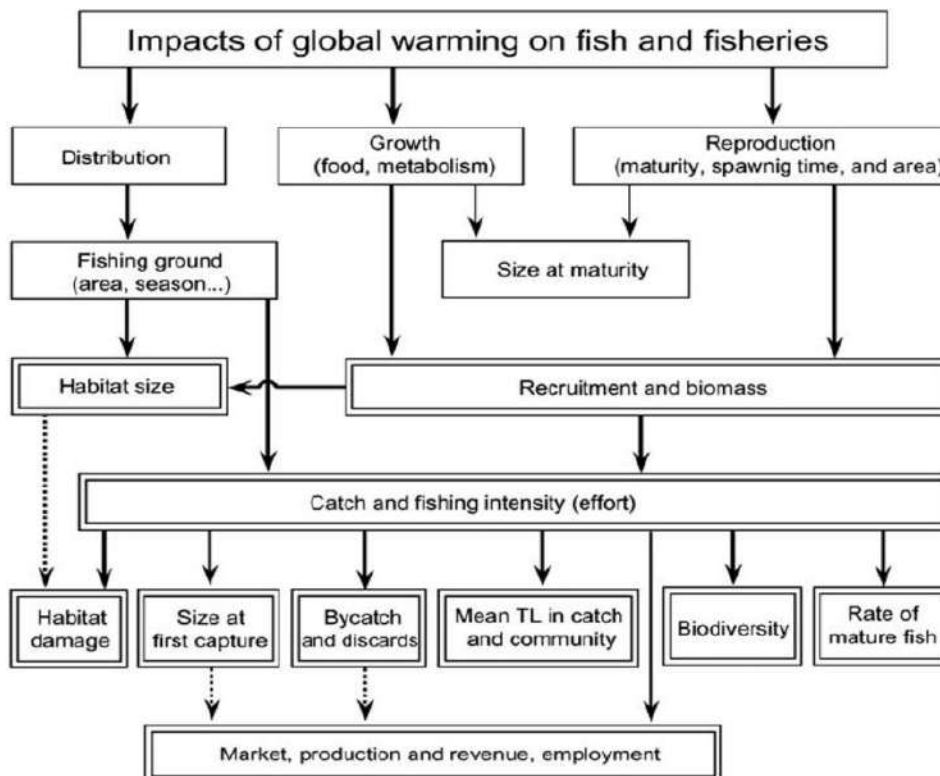

a) Identify the type of graph given.

- b) What are the gases mentioned in the graph?
- c) Which emission of gas is more in the above graph?
- d) What are the effects of green house gas emissions?
- e) What will the increase in the usage of green house leads to?

27. Explain the green house effect using the following picture.

28. Write a passage with the help of this flowchart.

UNIT 3: NEGOTIATION STRATEGIES
SECTION A (10 X 1 = 10)

Choose the correct answer:

10 x 1 = 10

Read the following passage carefully and answer the given questions (5 Marks)

A soap bubble is a closed soap film: due to the difference in outside and inside pressure, it is a surface of *constant* mean curvature. When two bubbles merge, they adopt a shape which makes the sum of their surface areas as small as possible, compatible with the volume of air each bubble encloses. If the bubbles are of equal size, their common wall is flat. If they aren't the same size, their common wall bulges into the larger bubble, since the smaller one has a higher internal pressure than the larger one, as predicted by the Young–Laplace equation. When a soap bubble is in contact with a solid or a liquid surface wetting is observed. On a solid surface, the contact angle of the bubble depends on the surface energy of the solid. A soap bubble has a larger contact angle on a solid surface displaying ultra-hydrophobicity than on a hydrophilic surface. On a liquid surface, the contact angle of the soap bubble depends on its size - smaller bubbles have lower contact angles. When a bubble is blown with warm air, the bubble will freeze to an almost perfect sphere at first, but when the warm air cools, and a reduction in volume occurs, there will be a partial collapse of the bubble. A bubble, created successfully at this low temperature, will always be rather small; it will freeze quickly and will shatter if increased further. Freezing of small soap bubbles happens within 2 seconds after setting on snow

1. A soap bubble is a _____ soap film
a) open b) closed c) isolated d) interferal Ans: b
2. The common wall is _____ when the bubbles of same size merge.
a) round b) flat c) elliptical d) circular Ans: b
3. When a soap bubble is in contact with a solid or a liquid surface _____ is observed.
a) drying b) wetting c) vaporising d) filling Ans: b
4. When a bubble is blown with warm air, the bubble will freeze to _____.
a) square b) rectangle c) sphere d) circle Ans: c
5. Reduction in bubble size will occur when the bubble gets cooled and then it leads to _____.
a) merge b) collapse c) glitter d) enlarge Ans: b

Choose the right word for the following

6. Nuclear Chemistry involves the production and use of _____ sources
a) radioactive b) petroleum c) environmental d) synthetic Ans: a
7. Synthetic polymers are _____ polymers.
a) natural b) radioactive c) isotopic d) man-made Ans: d

8. _____ is used for electrical switches

- a) Bakelite b) PVC c) Bakelite d) PET Ans: a

9. Which plastics will replace synthetic polymers ?

- a) Thermoplastics b) Thermosetting c) Bioplastics d) Natural plastics Ans: c

10. _____ are made from crops.

- a) Bio fuels b) Petroleum c) Diesel d) Crude oil Ans: a

Section B (5 x 2 = 10)

Answer the following in about 50 words each

11. What is listening?
12. What is Mind Mapping?
13. What is LSRW?
14. Write a short note on group discussion on biomass.
15. What is Interference?
16. Do you like Soap Bubbles? Why ?
17. Can bioplastics replace synthetic plastics. State reason.
18. Mention the ways that we can avoid the plastic usage.

Section C (5 x 4 = 20)

Answer the following in about 100 words each

19. Frame 'Wh' Questions to the answers given below

- a) Foam.
- b) Soap bubbles lasts for a few seconds.
- c) Interferences of different colours.
- d) constant mean curvature.

20. Find the missing letters and write the word

1. R A _ I O _ C _ I V I _ Y
2. _ O S _ T R _ N
3. I _ O M _ R I _ M.
4. F _ S _ I _ N.

21. Write a few words about synthetic polymers

22. Make sentences using the following words: Biomass, Biofuels, Synthetic Polymers, Soap Bubble.
23. Write a short paragraph detailing the similarities and differences between biomass and biofuels.
24. Prepare a short talk on advantages of nuclear energy.

Section D

Answer any two in about 400 words each

25. Who is Alfred Nobel? Why he created nobel prize ?
26. Who am I?
- a. am an extremely thin film of soapy water
 - b. I am a curved band of different colours that appears in the sky when the sun shines through rain.
 - c. I am a mass of small air bubbles on the surface of a liquid.
 - d. I am the process of a liquid changing or being changed into a gas.
 - e. I am the feeling that everything is spinning around you and that you are unable to balance.
27. Mention the scientific concepts involved in soap bubble formation using mind mapping .
28. Why biofuels is essential for the current scenario?

UNIT 4: PRESENTATION SKILLS
SECTION A (10 X 1 = 10)

Choose the correct answer:

10 x 1 = 10

Read the passage and answer the following questions

5x1 = 5

Methyl isocyanate (MIC) is an organic compound with the molecular formula CH_3NCO . Synonyms are isocyanatomethane, methyl carbamate and MIC. Methyl isocyanate is an intermediate chemical in the production of carbamate pesticides. The initial effects of exposure were coughing, severe eye irritation and a feeling of suffocation, burning in the respiratory tract, blepharospasm, breathlessness, stomach pains and vomiting. People awakened by these symptoms fled from the plant. . Primary causes of deaths were choking, reflexogenic circulatory collapse and pulmonary oedema. the gas cloud most likely also contained chloroform, dichloromethane, hydrogenchloride, methylamine, dimethylamine, trimethylamine and carbon dioxide. Missing or insufficient fields for research are female reproduction, chromosomal aberrations, cancer, immune deficiency, neurological sequelae, post traumatic stress disorder (PTSD) and children born after the disaster. Late cases that might never be highlighted are respiratory insufficiency

1. Methyl isocyanate is an_____ compound.
a) Organic b) Inorganic c) physical d) biochemical Ans: a
2. Methyl isocyanate is an intermediate chemical in the production of_____ pesticides.
a) carbon b) carbamate c) sulphate d) nitrate Ans: b
3. An initial exposure to radiation involves
a) Irritation b) suffocation c) stomach pain d) All the above Ans: d
4. Primary cause for the disaster is
a) Choking b) reflexogenic circulatory collapse
b) Oedema d) All the above Ans: d
5. Later cases of disaster mainly involves_____
a) Respiratory insufficiency b) choking c) fever d) vomiting Ans: a
6. Gas cloud involves_____
a) Methyl amine b) ethyl alcohol c) ethanol d) Oxygen Ans: a
7. _____leakage leads to Bhopal Disaster.
a) Carbamate b) Methyl isocyanate c) Methanol d) Methyl cyanide Ans: b

Read the passage and answer the following questions **5x1 = 5**

X-rays are a type of radiation called electromagnetic waves. X-ray imaging creates pictures of the inside of your body. The images show the parts of your body in different shades of black and white. This is because different tissues absorb different amounts of radiation. Calcium in bones absorbs x-rays the most, so bones look white. Fat and other soft tissues absorb less and look gray. Air absorbs the least, so lungs look black.

8. _____ in bones absorb x rays most.
a) Calcium b) Potassium c) Cadmium d) Aluminium Ans: a
9. _____ looks gray in xrays.
a) Fat b) Air c) Minerals d) Vitamins Ans: a
10. Different Tissues absorb _____ amount of radiation
a) Less b) same c) Different d) Very less Ans: c

Section B (5 x 2 = 10)

Answer the following in about 50 words each

11. What is MIC?
12. Do you know the long term health effects of Bhopal Disaster?
13. Bhopal Disaster release highly toxic substances. Discuss it's important effects
14. Xrays discovery is very important in medical field. Justify.
15. Who is J.J.Thomson?
16. Do you think anaesthesia is very essential? Why
- 17.

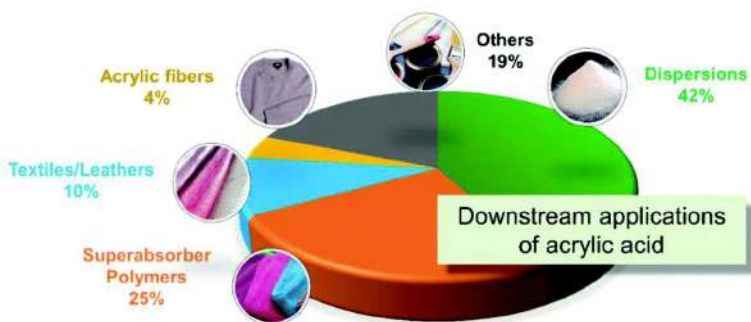

1. What is the pH range for strong base?

a) 0-2 b) 3-6 c) 8-11 d) 12-14

2. What is the pH range for strong acid?

a) 0-2 b) 3-6 c) 8-11 d) 12-14

18. Explain the chart :

Section C (5 x 4 = 20)

Answer any two in about 100 words each

19. Mention the long term health effects of Bhopal Disaster.

20. Write five sentences about the significance of Xrays.

21. Write the achievement of J.J.Thomson on your own.

22. What is pH?

23. What is Anaesthesia?

24. Write the steps to make Volcanoes.

Section D

Answer any two in about 400 words each

25. Write a essay on Bhopal Disaster

26. Write some important applications of anaesthesia.

27. Using this image, mention some important applications of polymers.

28. Explain the science behind the volcanic Eruption.

UNIT 5: CRITICAL THINKING SKILLS

SECTION A (10 X 1 = 10)

Choose the correct answer:

10 x 1 = 10

Read the passage and answer the following questions

Milk in India was adulterated with diluted water, detergent, fat and even urea. Some of the adulterants that are used in milk are water, chalk, urea, caustic soda and skimmed milk, while Khoya is adulterated with paper. Coffee seeds, on the other hand are adulterated with tamarind seeds, mustard seeds and also chicory. Textured vegetables are often coloured with different dyes and substances. Common adulterants in fruits and vegetables are oxytocin sachharin. sugar used in making these sweets might be adulterated with tar dye. The most commonly adulterated dal is arhar dal and is usually adulterated with metanil yellow. Papaya seeds, black berries are the common adulterant used in black pepper. Most common adulterants in ice cream are pepperonil, thylacetate, butraldehyde, emil acetate, nitrate, washing powder. Wheat is very commonly adulterated with ergot. Honey is commonly adulterated with molasses sugar to increase the bottle quantity.

1. Milk is adulterated with _____
a) Detergent b) oxygen c) hydrogen d) carbon Ans: a
2. Coffee seeds are adulterated with _____
a) Tamarind b) mustard c) chicory d) All the above Ans: a
3. Vegetables are coloured with _____
a) Fats b) dyes c) phenol d) soap Ans: b
4. Fruits are adulterated with _____
a) Oxytocin b) sorbitol c) methanol d) ethanol Ans: a
5. Dal is adulterated with _____
a) Metanil Yellow b) methanol c) ethanol d) cadmium Ans: a
6. Pepper is adulterated with _____ seeds.
a) Orange b) papaya c) mustard d) linseed Ans: b
7. Adulterant used in ice cream is _____
a) Pepperonil b) ethylacetate c) butraldehyde d) All the above Ans: d
8. _____ is used as adulterant in black pepper.
a) Pepperonil b) ethylacetate c) butraldehyde d) Black Berries Ans: d

9. Wheat is very commonly adulterated with _____.

a) Pepperonil b) ethylacetate c) butraldehyde d) ergot Ans: d

10. Honey is commonly adulterated with _____ to increase the bottle quantity.

a) Pepperonil b) molasses sugar c) butraldehyde d) Black Berries Ans: b

Section B (5 x 2 = 10)

Answer the following in about 50 words each

11. What are hazards?

12. Give synonyms: Toxicity, Exposure.

13. Give antonyms: Infectious, Flammable

14. Fill in the blanks with the missing letter

1. H _ Z _ R D _ U _

2. C _ N C _ N _ R _ T _ O N

15. Write the applications of hydrogen bomb.

16. Mention a hazard that use experience in your daily life.

17. Name some safety tips.

18. What is adulteration?

Section C (5 x 4 = 20)

Answer the following in about 100 words each

19. Write your own thoughts on hazard entering into the living organisms.

20.

Size	density	Oxygen	Neon
One - atom	Particle	Chemical bonds	complexity

A molecule is the smallest _____ in a chemical element or compound. Molecules can vary greatly in _____ and _____. The element helium is a _____ molecule.

21. Using this image, write few sentences on adulterant.

WATCH WHAT YOU EAT			
FOOD	ADULTERANT	HEALTH HAZARD	
Tea	Used tea leaves processed and coloured	Liver disorder	
Milk	Unhygienic water and starch	Stomach disorder	
Edible oils	Un-edible oils	Carcinogenic	
Turmeric powder	Lead chromate	Liver disorder	

22. Prepare a poster on Hazards.

23. What do you know about molecules? Give some examples.

24. How tea and coffee seeds get adulterated?

Section D

Answer any two in about 400 words each

25.. Chemical hazards cause major harm to life. Justify this statement.

26. Explain how chemicals enter the body through the following ways.

27. Make a note on industrial chemistry and it's importance

28. Explain the following picture in chemical aspects.

UNIT I -Atomic structure and Chemical bonding

Section-A

(1 mark)

Choose the correct answer

1. Azimuthal quantum number 'l' represents the
a) Energy of orbitals b) radius of orbitals
c) shape of orbitals d) directional behavior of orbitals **(Ans c)**
2. Splitting of spectral lines in a magnetic field is _____
a) Hoffman effect b) Zeeman effect
c) Chemelir effect d) green house effect **(Ans b)**
3. The molecular orbital obtained by the addition overlap of two atomic orbitals
a) Bonding molecular orbital b) antibonding molecular orbital
c) non bonding molecular orbital d) zero bonding molecular orbital **(Ans a)**
4. The bond order for Hydrogen molecule is
a) 3 b) 2 c) 1 d) 0 **(Ans c)**
5. The electronic configuration of copper is
a) $[\text{Ar}] 4s^2 3d^9$ b) $[\text{Ar}] 4s^1 3d^{10}$
c) $[\text{Ar}] 4s^0 3d^{10}$ d) $[\text{Ar}] 4s^2 3d^{10}$ **(Ans b)**
6. The hydrogen bonding present in water is
a) inter molecular b) intra molecular
c) extra molecular d) outer molecular **(Ans a)**
7. Which is not true about the principal quantum number
a) it represents the size of an electron orbit
b) it represents the binding force between the nucleus and the electron
c) 'n' assumes the integral values including zero
d) it governs the allowed energy levels in an atom **(Ans c)**
8. Which of the following has $3d^{10}$ configuration

a) Cu^+ b) Cu^{2+} c) Cu^{2-} d) Cu^{3+} **(Ans a)**

9. The quantum number that specifies the orientation in space for orbital is the

- a) Principal quantum number
- b) Magnetic quantum number
- c) Azimuthal quantum number
- d) Spin quantum number **(Ans b)**

10. H- atoms are held together to form H_2 molecule by

- a) Hydrogen bond
- b) Covalent bond
- c) Ionic bond
- d) Coordinate bond **(Ans b)**

Section B

(2 marks)

Answer the following

1. Define atomic orbital
2. Write any two difference between orbit and orbital
3. What are quantum numbers?
4. What is principal quantum number?
5. What is azimuthal quantum number?
6. What is magnetic quantum number?
7. What is spin quantum number?
8. Define Pauli's exclusion principle.
9. Define Aufbau's principle.
10. State Hund's rule
11. Define lattice energy.
12. Write any two difference between bonding MO and antibonding MO.
13. Define bond order
14. What is meant by overlap zone?
15. What is called forbidden band?
16. What is meant by Keesom forces?
17. What are Debye forces?
18. What are London forces?

Section C

(6 marks)

Answer the following questions

1. Sketch Born-Haber cycle for NaCl molecule and derive an equation for lattice energy
2. Draw the molecular orbital diagram of N₂ molecule and calculate bond order.
3. Draw the MO diagram of H₂ and O₂ molecules and calculates its bond order.
4. Discuss the effects of H-bonding
5. Enumerate the differences between Bonding MO and antibonding MO

Section D

(10 marks)

Answer the following

1. What is metallic bond? Explain the electrical properties of conductors, insulators and semiconductors on the basis of band theory
2. Account for Hydrogen bonding and explain its types and effects
3. Explain in detail the four types of van der Waals forces
4. Sketch the molecular orbital diagrams of N₂ and O₂ molecule and calculate their bond orders.

UNIT II :BASIC CONCEPTS OF ORGANIC CHEMISTRY

SECTION – A

Choose the correct answer

1. C-C bond length is the shortest in
a) ethane b) ethylene c) acetylene d) benzene **(Ans c)**
2. _____ is an axis through which the molecule is rotated gives arrangement identical with the original molecule
a) centre of symmetry b) axis of symmetry
c) plane of symmetry d) alternating axis of symmetry **(Ans b)**
3. Pair of molecules related to each other as an object and mirror image are known as _____
a) enantiomers. b) diastereomers c) anomers d) conformers **(Ans a)**
4. The compound with no asymmetric carbon atom is
a) lactic acid. b) malic acid c) tartaric acid d) acetic acid **(Ans d)**

5. Molecules rotating the plane of polarized light through left side are denoted by _____ isomers
 a) d- b) l- c) D- d) L- (Ans b)
6. The dextrorotatory compounds rotate the plane of polarized light _____
 a) towards left b) towards right c) towards up d) towards down (Ans b)
7. The maleic acid is the ----- of the isomer.
 a) meso form b) anti c) trans d) cis form (Ans d)
8. Mixing of one s and three p orbitals is to give four orbitals is called _____ hybridization.
 a) sp³ b) sp² c) sp d) sp²d³ (Ans a)
9. sp² hybridization is present in _____
 a) methane b) acetylene c) ethylene d) glycerol (Ans c)
10. Reactions in which two groups are lost from neighboring atoms are known as _____
 a) polymerization b) elimination c) substitution d) addition (Ans b)

SECTION – B

Answer the following questions

1. Define hybridization.
2. What is meant by optically active compounds?
3. What is an enantiomer?
4. What is meant by diastereomer?
5. Define racemic mixture.
6. Explain the term resolution.
7. Define centre of symmetry.
8. What are dissymmetric molecules?
9. What are electrophiles?
10. What is an addition reaction?

SECTION – C

Answer the following questions

1. What are called elements of symmetry?
2. Explain the optical activity of the compound.
3. Define resolution. Explain the methods of resolution.
4. Write a note on racemization.
5. How the configuration of fumaric and maleic acid can be determined?
6. Explain i) electrophilic addition ii) nucleophilic addition
7. Differentiate resonance and tautomerism.

SECTION – D

Answer the following questions

1. Explain the methods of resolution of racemic mixture.
2. Explain the different types of substitution reactions.
3. Explain Huckel's rule with examples.
4. Explain the concept of hybridization with examples.
5. Discuss the various types of polymerization reaction.

Unit III

Nuclear chemistry

Section A

Choose the correct answer

1. The age of fossils is determined by

a) Activation analysis b) Using radio phosphorous c) Using ${}^7\text{N}^{14}$ d). Radio carbon dating
(Ans d)

2. The radio isotope used in the treatment of cancer

a) I-131 b) Co-60 c)Na-24 d) P-32
(Ans b)

3. Which of the following is an artificial radioactive series?

a) $4n$ b) $4n+1$ c) $4n+2$ d) $4n+3$ (Ans b)

4. Nuclear fission reactions are

a)Chain reaction b)Thermal reaction c)Photo disintegrations d)chemical reactions
(Ans a)

5. Nuclear fusion requires

a)Low temperature b)Coolants c)Very high temperature d)Moderate temperature (Ansc)

7. In radio carbon dating technique the carbon isotope used is

a)C-12 b)P-32 c) C-14 d)C-12, C-13 and C-14
(Ans c)

8. Splitting up of heavier nuclei into two or more lighter nuclei is called
 a)nuclear fission b)Nuclear fusion c)thermal reaction d)Chemical reaction
 (Ans a)
9. Coolant used in nuclear reactor is
 a)Water b)Calcium carbonate c)Uranium d)boron
 (Ans a)
10. Fuel used in nuclear reactor is
 a) Petroleum b)Coal gas c)Uranium d)Cadmium
 (Ans a)
11. The radio isotope used in the treatment of thyroid is
 a)C0-60 b)P-32 c)Fe-59 d)I-131
 (Ans d)

Section B

Answer all the questions

(2marks)

1. Define mass defect.
2. What is Rock dating?
3. What is alpha decay?
4. Define stellar energy.
5. What is isobar? Explain using some examples.
6. What are isotones in nuclear chemistry? Give example.
7. What do you understand about the nuclear isomer? Give example. Explain clearly.
8. What is the basic difference between nuclear and chemical reaction?
9. Why moderators are used in thermal reactors?
10. What is natural and artificial radioactivity?

Section C

Answer all the questions

(6marks)

1. What are the differences between chemical reactions and nuclear reactions? Why the change in energy so higher for nuclear reactions than chemical reactions?
2. Explain the following terms with at least two examples for each. Isotopes, isobars, isotones and nuclear isomers.

3. i) Comment about radioactive decay series ii) State group displacement law with examples.
4. How age of fossil and archeological sample will be estimated using $C-14$ isotope? Explain using first order kinetics.
5. What are medical applications of radio nuclides? List some other applications also.

Section D

Answer all the questions

(10marks)

1. Explain: i) What is radioactivity?
 ii) What is the relation between $t_{1/2}$ and λ ?
 iii) What are radioactive decay series?
 iv) What do you understand about them
 v) Write all four decay series.
2. What are the fundamental particles of atom? Comment about their charges and their masses. Explain the following terms with at least two examples for each. Isotopes, isobars, isotones and nuclear isomers with at least two examples
3. What is nuclear fission? Write a brief notes on an atomic bomb?
4. What is nuclear fusion? Describe the principle of a) Hydrogen bomb b) Stellar energy .

UNIT IV - CHEMICAL KINETICS AND PHOTOCHEMISTRY

Section A

1. The half life period is independent of the reactants in the case of
 a) first order b) second order c) third order d) zero order **(Ans a)**
2. The half life period is inversely proportional to the concentration of the reactants in the case of
 a) first order b) second order c) third order d) zero order **(Ans b)**
3. _____ is used in traffic signals .
 a) Fluorescent dyes b) organic dyes
 c) a paste of radium with zinc sulphide d) inorganic dyes **(Ans a)**
4. The photosensitiser used in photosynthesis is
 a) Light b) CO_2 c) H_2O d) Chlorophyll **(Ans d)**
5. The emission of light by jelly-fish is an example of
 a) Bioluminescence b) Chemiluminescence c) Fluorescence d) Photosensitization **(Ans a)**

6. The reverse of photochemical reaction is
 a)Bioluminescence b)Chemilumescence c)Fluorescence d)Photosensitization **(Ans b)**
7. The rate of the photochemical reaction depends on the
 a) Concentration b) Pressure c) Intensity of light d) Temperature **(Ans c)**
8. The emission of light by a firefly is due to
 a) Fluorescence b) Phosphorescence c) Photosensitisation d) Bioluminescence **(Ans d)**
9. The molecularity of unimolecular reaction is
 a) 0 b)1 c)2 d)3 **(Ans b)**
10. _____ can have fractional value
 a) order b)rate c)molecularity d) speed **(Ans a)**

Section B

(2 marks)

1. Define rate of a reaction ,also mention its unit.
2. Mention any two factors which influence the rate of a reaction.
3. Define order and molecularity of a reaction
4. What is half life period? How is it related to initial concentration in first , second and third order reaction?
5. For a first order reaction show that $t_{1/2}$ is independent of the initial concentration of the reactant
6. Prove that $t_{1/2}$ of a second order reaction varies inversely with the concentration
7. Describe any one method of determining the order of reaction
8. State Stark-Einstein's law of photochemical equivalence.
9. Define phosphorescence citing suitable examples

Section C

(5 marks)

1. Define rate of a reaction and enumerate the factors affecting the rate of a reaction
2. Differentiate order and molecularity of a reaction
3. Derive the rate expression for first order reaction
4. Define zero order reaction also mention the characteristics of zero order reaction
5. Write a short note on flash photolysis
6. Differentiate thermal and photochemical reaction

7. Define quantum yield. Discus a method of determining the quantum yield.
8. List down the differences between phosphorescence and fluorescence

Section D

(12 marks)

1. Derive the rate expression for first order reaction and mention its characteristics
2. Derive the rate expression for second order reaction
3. How is order of a reaction determined by the following methods i) integration method ii) graphical method iii) Half-life method iv) Differential method
4. State and explain the following laws of photochemistry i) Grothus-Draper law ii) Lambert-Beer law iii) Stark-Einstein law
5. Discuss in detail i) chemiluminescence ii) Bio luminescence

UNIT V - ELECTROCHEMISTRY

Section- A

1. pH Scale is
a) 0 - 14 b) 0 - 7 c) 7 - 14 d) 1 - 14 **(Ans: a)**
2. The pH of a solution, whose H^+ ion concentration is 10^{-4} mol/lit is
a) 8 b) 6 c) 4 d) 5 **(Ans: c)**
3. Henderson equation is used to calculate the _____ of a buffer solution.
a) pH b) Acidity c) Equilibrium constant d) Molality **(Ans: a)**
4. Buffer solution maintains ----- constant
a) Normality b) Temperature c) Pressure d) pH **(Ans: d)**
5. EMF of the cell is measured using
a) Thermometer b) Potentiometer c) Actinometer d) Calorimeter **(Ans: b)**
6. Conc. Sulphuric acid used in lead acid battery is
a) 32-34% b) 50% c) 10% d) 20% **(Ans: a)**

7. Each cell in a lead acid battery produces an emf of

- a) 2.5 V b) 2 V c) 1.5 V d) 1.0 V **(Ans: b)**

8. Heat energy is converted into electrical energy in

- a) fuel cell b) galvanic cell c) Leclanche cell d) voltaic cell **(Ans: a)**

9. In a fuel cell, the heat energy is converted into----- energy.

- a) Mechanical b) Electrical c) Solar d) Light **(Ans: b)**

10. Rusting of iron is an example of

- a) alloy b) reduction c) corrosion d) coating **(Ans: c)**

Section -B

1. Define specific conductance and molar conductance
2. What is ionic conductance? How is it related to ionic mobility?
3. Define ionic mobility.
4. The ionic conductance of Na^+ ion is $50.1 \text{ ohm}^{-1} \text{ cm}^2 \text{ mol}^{-1}$. Calculate its ionic mobility?
5. Mention the pH value for a neutral, acidic and basic solution.
6. Define standard electrode potential
7. Define corrosion with example.

Section -C

1. Derive Henderson equation. Mention its applications.
2. Define pH? How will you determine the pH of a solution using colorimetric method?
3. Discuss calomel electrode.
4. Illustrate the various applications of pH and buffer in biological systems.
5. Discuss in detail about lead acid battery and mention its uses
6. Explain fuel cell with example.
7. What are dry cells? Draw and explain the working of Leclanche cell.

Section- D

1. What is corrosion? Explain any four methods for the prevention of corrosion.
2. i) What are Buffer solutions? Explain the applications of buffer in biological systems and mention the significance
ii) Explain fuel cell.
3. Write notes on i)Hydrogen electrode ii)electrochemical series
4. Define i) EMF of a cell ii) Electrode potential iii)Standard electrode potential
5. Define i) specific conductance ii) ionic conductance iii) equivalent conductance iv) molar conductance.
6. i) The resistance of decinormal solution of the salt occupying a volume between two platinum electrodes 1.8cm apart and 5.4 cm^2 in area was found to be 32 ohms. Calculate the equivalent conductance of the solution.
ii) The conductance cell containing 0.01N NaCl solution at 25°C showed a resistance of 384 ohms. Calculate the specific and equivalent conductance of NaCl solution (cell constant = 0.45705 cm^{-1})

- The value of n represents -----
a) The shape of orbitals
b) The size of the orbit
c) Angular momentum of an electron
d) Spin of an electron
(Ans:b)
- Which orbitals has the following quantum numbers ? $n = 2$ $l = 0$ and $m = 0$
a) $2s$ b) $2p_x$ c) $2p_y$ d) $2p_z$
(Ans:a)
- Azimuthal Quantum number “ l ” represent the -----
a) Energy of orbitals
b) Radius of orbitals
c) Shape of orbitals
d) Directional behavior
(Ans:c)
- How many d-orbitals are oriented along the axis ?
a) 5 b) 4 c) 3 d) 2
(Ans:a)
- As per Aufbau principle the energy of $3p$, $3d$, $4s$, $4p$ orbitals are such that
a) $3p > 3d < 4s < 4p$ b) $3p < 4s < 3d < 4p$ c) $3p < 3d < 4s < 4p$ d) $3d < 3p < 4s < 4p$
(Ans:c)
- London forces are -----
a) Strong forces b) Weak forces c) Very weak forces d) Very strong forces
(Ans:c)
- H-atoms are held together to form H_2 molecule by -----
a) Hydrogen bond b) Covalent bond c) Ionic bond d) Dative bond
(Ans:b)
- Which among the following bonds has maximum bond strength?
a) Sigma bond b) Pi-bond c) Coordinate bond d) hydrogen bond
(Ans:a)
- Which bond is formed When two electron clouds overlap along their axis?
a) Pi-bond b) Sigma bond c) Coordinate bond d) Ionic bond
(Ans:b)
- Germanium doped with Arsenic atoms is an example of -----
a) p-type semiconductor b) n-type semiconductor c) Conductor d) Insulator
(Ans:b)

Section-B

(2marks)

Answer all the questions

1. State Pauli's exclusion principle
2. Define MO theory
3. What is hydrogen bonding
4. What are London forces?
5. Define Aufbau principle?
6. What is lattice energy?
7. Define bond order?
8. Define Quantum numbers?

Section-C

(6marks)

Answer all the questions

1. What are the four quantum numbers? How are they related to each other?
2. How is lattice energy calculated using the Born-Haber cycle.
3. What are the differences between bonding molecular orbital and antibonding molecular orbital?
4. Draw the molecular orbital diagram of oxygen and explain why the oxygen molecule is paramagnetic.
5. Draw the M.O diagram of N_2 and calculate its bond order.
6. Explain types and effects of hydrogen bonding.

Section-D

(10marks)

Answer all the questions

1. Explain the Quantum numbers and their significance.
2. Discuss MO theory of bonding.
3. Discuss the MO configuration of N_2 and O_2 .
4. What are semiconductors? Discuss band theory of metallic bonding.
5. What is hydrogen bonding? What are the different types of hydrogen bonding and explain them.

UNIT II BASIC CONCEPTS IN ORGANIC CHEMISTRY

Section- A

Choose the correct answer

(1 mark)

1. sp^3 Hybridization is possible in ---- molecule.

- a) methane b) ethylene c) acetylene d) ethane (Ans:a)

2. Ethylene molecule undergoes ----- hybridization.

- a) sp^2 b) sp c) sp^3 d) dsp^2 (Ans:a)

3. The molecule which possess sp hybridisation is -----

- a) methane b) acetylene c) Ethylene d) ethane (Ans:b)

4. BF_3 is an example of -----

- a) positive electrophile b) neutral nucleophile
c) neutral electrophile d) negative nucleophile (Ans:c)

5. Dehydration of alcohol is an example of ----- reaction.

- a) addition b) substitution c) elimination d) polymerisation (Ans:c)

6. Isoprene polymerises to give polyisoprene. This is a ----- reaction.

- a) polymerization b) addition c) elimination d) substitution reaction (Ans: a)

7. An example of non-benzenoid aromatic compound is -----

- a) benzene b) Naphthalene c) furan d) pyrene (Ans: c)

8. How many π electrons are present in Naphthalene?

- a) 1 b) 10 c) 3 d) 6 (Ans:b)

9. A plane that cuts the molecule into two equal halves which are the mirror images of each other is called ---- of symmetry.

- a) centre b) plane c) axis d) alternating axis (Ans: b)

10. Molecule having no element of symmetry of any kind is known as ----- molecule.

- a) symmetry b) dissymmetric c) asymmetry d) nonsymmetry (Ans: c)

11. A carbon atom surrounded by ---- different atoms or groups is known as chiral centre.

- a) 3 b) 2 c) 4 d) 1 (Ans: c)

12. The process of converting an optically active compound into the racemic modification is known as -----

- a) resolution b) racemisation c) tautomerism d) Isomerism (Ans: b)

13. Stereoisomerism in which compounds have same structural formula but different configuration is called -----isomerism.

- a) Geometrical b) unsymmetry c) keto-enol d) diastereoisomer (Ans: a)

14. Molecules having only few elements of symmetry are known as ----- molecules.

- a) symmetry b) dissymmetric c) asymmetry d) nonsymmetry (Ans: b)

15. Erythrose and threose is a -----

- a) enantiomer b) racemic mixture c) diastereoisomer d) geometrical isomerism (Ans: c)

16. Maleic acid is a ----- form of Geometrical isomerism.

- a) trans b) meso c) anti d) cis (Ans: d)

17. A molecule not superimposable on its mirror image is called as ----- molecule.

- a) Symmetric b) asymmetric c) dissymmetric d) achiral (Ans: c)

18. Acetoacetic ester is an example of ----- tautomerism

- a) Keto-enol b) Nitro-acinitro c) amido-imido d) Nitro-nitroso

19. Which one of the following is optically active -----

- a) malonic acid b) lactic acid c) trichloroacetic acid d) meso tartaric acid (Ans: b)

20. A molecule with no element of symmetry is called ----- molecule.

- a) Symmetric b) asymmetric c) dissymmetric d) achiral (Ans: b)

21. Stereoisomers which are not mirror images of each other are known as -----

- a) Diastereoisomers b) optical isomers c) enantiomers d) optical antipodes (Ans: a)

Section- B

(2 Marks)

Answer all the questions

1. What is called Hybridization?
2. What are called electrophiles?
3. What is called polymerization reaction?
4. What is known as Huckel's rule?
5. Define Aromaticity with examples.
6. What are called non-benzenoid aromatic compounds?
7. What is called optical isomerism ?
8. What is called chiral centre?

9.What is called racemic mixture?

10.Define resonance.

Section -C

(6 Marks)

Answer all the questions

- 1.Explain the Hybridization of Methane and Ethylene.
2. Explain addition reactions with suitable example.
- 3.What are benzenoid compounds?
- 4.Write notes on i) Racemisation ii) resolution of racemic mixtures.
- 5.Write the difference between resonance and tautomerism?

Section- D

(10 Marks)

Answer all the questions

- 1.Explain sp^3 , sp^2 , sp hybridization with an example.
- 2.Explain the different types of organic reactions.
3. What are benzenoid and non benzenoid compounds? Give examples
- 4.Define Isomerism. Explain the symmetry of elements.
- 5.Explain Keto-enol tautomerism and differentiate the resonance and tautomerism.

Unit III Nuclear Chemistry

Section – A

(1 Mark)

Choose the correct answer

1. Isotones are the atoms of different elements having same number of -----
a) neutrons b) protons c) electrons d) mesons (Ans:a)
- 2.-----are the atoms of different elements having different atomic number but same mass number.
a) Isobars b) Isotones c)Isotopes d) Isomers (Ans:a)
- 3.Hydrogen bomb works on the principle of -----
a) Nuclear fission b) Nuclear fusion c) spallation d) elastic scattering (Ans:b)
- 4.Atom bomb works on the principle of -----
a) Nuclear fission b) Nuclear fusion c) spallation d) elastic scattering (Ans: a)
- 5.-----is used as a moderator.
a) cadmium b) Graphite c) boron d) bismuth (Ans: b)
- 6.A device which generates electricity by controlled fission reaction is -----.

- a) generator b) thermal reactor c) nuclear reactor d) moderator (Ans:b)
7. Thermal reactor is a device which generates electricity by -----
 a) Nuclear fusion b) spallation c) controlled fission reaction d) scattering (Ans: c)
8. The energy released by stars from a series of nuclear fusion reaction is called -----
 a) Stellar energy b) nuclear energy c) binding energy d) ionization energy (Ans: a)
9. ----- is an artificial radioactive series.
 a) Neptunium b) Thorium c) Uranium d) Actinium (Ans: a)
10. Mass defect is a measure of -----
 a) Binding energy b) Ionisation energy c) Activation energy d) Kinetic energy (Ans:a)
11. C -14 isotope is used in -----
 a) Carbon dating b) Tracer technique c) Artificial transmutation d) Medicine (Ans:a)
12. Actinium is a nucleide in the ----- series.
 a) $4n+1$ b) $4n+2$ c) $4n+3$ d) $4n$ (Ans:c)
13. The isotope that is used in the treatment of cancer is ---
 a) I-131 b) Co-50 c) U-233 d) Th-234 (Ans:b)
14. In terms of energy, 1 amu is equal to -----
 a) 100 J b) 10^7 erg c) 931.1 Kcal d) 931.1 MeV (Ans:d)
15. Which one of the following atomic number of Uranium is the most radioactive?
 a) 238 b) 235 c) 226 d) 248 (Ans: b)
16. Sr-90 isotope is used for the treatment of -----
 a) heart disorder b) anaemia c) blood cancer d) corneal cancer (Ans: d)

Section – B

(2 Marks)

Answer all the questions

1. What are called Isobars?
2. What are called Nuclear isomers?
3. What are called thermal reactions?
4. What is nuclear fission?
5. What are nuclear reactions?
6. Define nuclear fission with example.
7. Differentiate radioactive series.
8. Define group displacement law.

9. Define mass defect.
10. Give any four applications of radio isotopes in medicine.

Section – C

(6 Marks)

Answer all the questions

1. Compare chemical reactions and nuclear reactions.
2. Explain the principles involved in nuclear fission and fusion reactions.
3. Give the differences between Nuclear fission and Nuclear fusion reaction.
4. What is nuclear reaction? Explain the types of nuclear reactions.
5. Write notes on a) mass defect b) Group displacement law
6. Explain Carbon dating and rock dating.
7. Write the applications of radioactive isotopes in medicine.

Section – D

(10 Marks)

Answer all the questions

1. Distinguish Chemical Reaction and Nuclear reaction.
2. Explain the applications of Nuclear fission reaction.
3. Give the nuclear fusion reactions involved in
 - i) Proton – Proton chain
 - ii) Carbon – Nitrogen Cycle.
4. Write notes on a) nuclear fusion reaction b) nuclear fission reaction
5. What is a nuclear reactor? Explain the functions of the various components of the reactor.
6. Discuss the applications of radioactive isotopes in medicine.

UNIT IV BIOMOLECULES

Section – A

(1 Mark)

Choose the correct answer

1. The number of hydroxyl group present in glucose is _____.
a) 6 b) 5 c) 4 d) 3 (Ans: b)
2. Choose the monosaccharide among the following
a) Cane sugar b) raffinose c) starch d) glucose (Ans: d)
3. An example for disaccharide is _____.
a) Glucose b) sucrose c) cellulose d) starch (Ans: b)
4. A molecule of starch is built up of a large number of -----

a) Glucose b) Lactose c) Sucrose d) maltose (Ans: a)

5. Glucose and Mannose are -----

a) Epimers b) C₂ epimers c) Anomers d) Isomers (Ans: b)

6. The specific rotation of α -D(+) Glucose is -----

a) +111° b) +19° c) +52.5° d) 100° (Ans: a)

7. Amino acids are building blocks of -----

a) Oil b) Fat c) Protein d) Carbohydrate (Ans: c)

8. The only optically inactive α -amino acid occurring in nature is

a) Glycine b) Alanine c) Phenyl alanine d) Tyrosine (Ans: a)

9. Proteins are combinations of -----

a) β -Amino acids b) α -Amino acids c) α and β -Amino acids d) γ -Amino acids (Ans: b)

10. With Millon's reagent protein gives the colour -----

a) Yellow b) Purple c) Black d) White precipitate (Ans: a)

11. Proteins are assigned -----

a) Primary structure b) Secondary structure c) Tertiary structure d) All the above (Ans: d)

Section – B

(2 Marks)

Answer all the questions

1. What are carbohydrates?

2. Classify carbohydrates based on their saccharide units.

3. What are called called Oligosaccharides?

4. What are polysaccharides?

5. Draw the configuration of glucose.

6. Draw the configuration of fructose.

7. What is called epimerisation?

8. Define mutarotation.

9. Draw the structure of starch?

10. Define Amino acids.

11. Classify amino acids based on their nutritional requirement.

12. What are essential amino acids?

13. What is called peptide linkage?

14. What are simple proteins?

15. Define conjugated proteins with example.

16. Write any two colour reactions of proteins.

Section – C

(6 Marks)

Answer all the questions

1. How are carbohydrates classified? Give examples.

2. Bring out the following conversions i) aldose to ketose ii) ketose to aldose

3. How will you convert the following i) Glucose to fructose ii) Fructose to glucose.

4. Explain the term mutarotation with a suitable example.

5. Write notes on : Epimerisation.

6. Write brief notes on starch and cellulose.

7. Discuss any two classifications of amino acids.

8. How are proteins classified on the basis of their function?

9. How proteins can be isolated?

10. Write the colour reactions of proteins.

11. Explain the primary structure of protein.

Section – D

(10 Marks)

Answer all the questions

1. Define carbohydrates. How are they classified?

2. How will you convert a) Glucose — Fructose b) Fructose — Glucose
 c) Glucose—Arabinose d) Arabinose—Glucose

3. Discuss the study of starch and cellulose.

4. Classify amino acids on the basis of (i) acidic/basic nature and (ii) chemical structure.

5. How are proteins classified? Explain with example.

6. Explain the structure of proteins.

UNIT V CHROMATOGRAPHY

Section – A

(1 Mark)

Choose the correct answer

1. In adsorption chromatography the stationary phase is -----

a) solid b) liquid c) Gas d) solution (Ans:a)

2. The principle of chromatography is -----

a) absorption b) adsorption c) solidification d) liquefaction (Ans:b)

3.The difference in the degree of ----- leads to the separation of components in a mixture.

a) concentration b) racemization c) isolation d) adsorption (Ans:d)

4. In adsorption column chromatography, the column is packed with ----

a) ion exchange resin b) alumina c) cotton d) jute (Ans:b)

5. In Thin layer chromatography the adsorbent are coated on a ----- as a thin film.

a) paper b) wood c) glass plate d) steel plate (Ans:c)

6. Softening of hard water can be done using ----- chromatography.

a) Ion exchange b) column c) paper d) column (Ans:a)

7. In TLC, the components can be identified using -----

a) silica gel b) Alumina c) Rf value d) Kd value (Ans:c)

8. In which type of chromatography both the stationary and mobile phases are liquid?

a) Adsorption b) partition c) Ion exchange d) absorption (Ans:a)

9. Column chromatography is used to remove ----- during purification of compounds.

a) moisture b) impurities c) ions d) atoms (Ans:b)

10. In qualitative analysis of amino acids, peptides, carbohydrates, lipids ----- chromatography is used.

a) Thin layer b) Column c) Paper d) Ion-exchange (Ans:a)

Section-B

(2 Marks)

Answer all the questions

1. Define Chromatography.

2. What is the principle of Adsorption chromatography?

3. What is an adsorbent?
4. Write the Principle of Column chromatography.
5. Mention any two applications of Column chromatography.
6. Write the Principle of Thin layer chromatography.
7. Mention any two applications of Column chromatography.
8. Write the Principle of Column chromatography.
9. Mention any two applications of Column chromatography.
10. What is called R_f value?

Section -C

(6 Marks)

Answer all the questions

1. How chromatography is classified?
2. Mention some characteristics of good adsorbent.
3. Explain the experimental method of Column chromatography.
4. Mention few applications of Thin layer chromatography.
5. How R_f value is noted in TLC?

Section – D

(10 Marks)

Answer all the questions

1. Define Chromatography. How it is classified?
2. Explain principle of adsorption chromatography. Mention the characteristics of good adsorbents.
3. Explain the principle and applications of Column Chromatography.
4. Explain the principle and applications of Thin layer Chromatography.
5. Explain the principle and applications of Ion exchange Chromatography.

ST. MARY'S COLLEGE (AUTONOMOUS) – Thoothukudi

I B.Sc. Chemistry

Allied Paper I

Allied Biochemistry-I

Sub. Code : 21UCBA11

Semester I

(For those who joined in July 2021 and after)

Question Bank

UNIT – 1 Introduction to Bio-Chemistry

SECTION A

(1 Mark)

Choose the correct answer

1. The organic substance present in our body is _____
(a) Water (b) Gases (c) Proteins (d) all the above. Ans:(c)
2. The cell containing 81% is _____
(a) Inorganic compound (b) Organic compound (c) Proteins (d) Nucleic acids Ans:(a)
3. The element present in large quantity on earth _____
(a) Hydrogen (b) Carbon (c) Nitrogen (d) Silicon Ans:(d)
4. How many elements are essential for different forms of life _____
(a) 24 (b) 26 (c) 28 (d) 30 Ans:(b)
5. Water content of human beings depend upon _____
(a) Age (b) Extra cellular (c) Intra cellular (d) none of the above Ans:(a)
6. Which of the following have high percentage of water _____
(a) New born (b) 1-10 years (c) 10-50 years (d) above 50 year Ans:(a)
7. The recommended daily calorie requirements of women is higher during _____
(a) Pregnancy (b) Lactation (c) Infant (d) Youngster Ans:(b)
8. The amount of heat can be measured using _____
(a) Weighing balance (b) Potentiometer (c) Bomb calorimeter (d) None of the above Ans:(c)
9. BMR is higher for _____
(a) Females (b) Male (c) Infant (d) Youngster Ans:(b)
10. BMR is inversely proportional to _____
(a) Surface area (b) Age (c) Climate (d) Habit Ans:(b)

SECTION – B**(2 Marks)****Answer the following questions**

1. What is Bio-Chemistry?
2. What are Macrobiogenic elements?
3. Why the water content decreases as age increases?
4. Why a fatty man has less water than lean man?
5. Define Kilo Calorie.
6. What is respiratory Quotient?
7. Define Basal metabolism.
8. What is specific dynamic action?
9. Give the conditions for the measurement of BMR.
10. How the simple elements form a cell?

SECTION C**(6 Marks)****Answer the following questions**

1. Write about the applications of Biochemistry.
2. Write about the chemical composition of life.
3. Discuss the water content of organisms.
4. How BMR is measured? Write its significance.
5. Explain specific dynamic action.

SECTION D**(10 Marks)****Answer the following questions**

1. Discuss the biological importance of water.
2. How will you determine the energy requirements of man?
3. Write about the caloric requirements of body.
4. Define BMR. What are the factors influencing BMR?
5. What is respiratory quotient of foodstuffs? Explain its significance.

UNIT – 2 Bio-energetics

SECTION A (1 Mark)

Choose the correct answer

- Which of the following is an Isolated system _____
(a) Earth system (b) Chlorophyll system (c) Cell system (d) None of the above Ans:(a)
- Which of the following is an Closed system _____
(a) Earth system (b) Chlorophyll system (c) Cell system (d) None of the above Ans:(b)
- Which of the following is an Open system _____
(a) Earth system (b) Chlorophyll system (c) Cell system (d) None of the above Ans:(c)
- The free energy change is negative for _____
(a) Exergonic (b) Endergonic (c) Enthalpy (d) Entropy Ans:(a)
- The free energy change is positive for _____
(a) Exergonic (b) Endergonic (c) Enthalpy (d) Entropy Ans:(b)
- A car at rest with petrol in its tank possess _____
(a) Internal energy (b) Kinetic energy (c) Potential energy (d) External energy Ans:(c)
- Which of the following have two high energy bonds _____
(a) ADP (b) UDP (c) ACP (d) BTP Ans:(a)
- Which of the following has single high energy bonds _____
(a) ATP (b) GTP (c) UDP (d) CMP Ans:(d)
- Wastage of free energy is released from _____
(a) Exergonic (b) Endergonic (c) Enthalpy (d) Entropy Ans:(a)
- Which of the following is very important in bio-energetics _____
(a) ATP (b) GTP (c) UTP (d) CTP Ans:(a)

SECTION – B

(2 Marks)

Answer the following questions

- Define Bio-energetics
- What is an exergonic reaction?
- What is an endergonic reaction?
- State first class thermodynamics.

5. State Second class thermodynamics.
6. What is an energy rich compounds?
7. What is an energy poor compounds?
8. What is an open system? Give an example.
9. What is a closed system? Give an example.
10. What is an isolated system? Give an example.

SECTION C

(6 Marks)

Answer the following questions

1. Explain the three types of systems involving biochemical reactions
2. Explain the reactions taking place in biological systems.
3. Write about energy and its forms.
4. What are energy rich and energy poor compounds?
5. What is Bioenergetics? Give the importance of bioenergetics.

SECTION D

(10 Marks)

Answer the following questions

1. Write about energy and work in detail.
2. Explain the principles of thermodynamics and it's uses in biochemical reactions.
3. How energy is related to biological work? Explain the principles involved with its uses.
4. Explain ATP, GTP, UTP and CTP.
5. Discuss about Energy coupling.

UNIT – 3 Vitamins

SECTION A

(1 Mark)

Choose the correct answer

1. An inactive vitamin is _____
(a) Vitamin A (b) Vitamin B (c) Carotene (d) Vitamin E Ans:(c)
2. Which of the vitamin is not responsible for blood formation _____
(a) Vitamin A (b) Vitamin B₆ (c) Vitamin B₁₂ (d) Vitamin E Ans:(a)
3. Vitamin K is a _____
(a) Water soluble (b) Fat soluble (c) Pro vitamin (d) Diverse group Ans:(b)
4. Vitamin H is insoluble in _____
(a) Fat (b) Water (c) Both a & B (d) Acids Ans:(c)
5. Xerophthalmia defect is due to _____
(a) Vitamin A (b) Vitamin B (c) Vitamin B₆ (d) Vitamin E Ans:(a)
6. Vitamin E functions as an _____
7. Antibiotics (b) Oxidant (c) Energy producer (d) Anti-oxidant Ans:(d)
8. Which of the vitamin is essential for blood clotting _____
(a) Vitamin A (b) Vitamin K (c) Vitamin B₆ (d) Vitamin B₃ Ans:(b)
9. Vitamin B₃ is a _____
(a) Mono peptide (b) di peptide (c) tri peptide (d) penda peptide Ans:(b)
10. _____ is essential during pregnancy
(a) Folic acid (b) nicotinic acid (c) pantothenic acid (d) riboflavin Ans:(a)
11. Deficiency of _____ vitamin increases blood Cholesterol
(a) B₂ (b) B₃ (c) B₇ (d) B₆ Ans:(c)

SECTION – B

(2 MARKS)

Answer the following questions

1. Define Vitamins.
2. Give the classification of vitamins.
3. What is a Pro-vitamin?
4. Give the biological importance of vitamin A, D, E and K.
5. Give the properties of vitamins.

6. What are fats soluble vitamins?
7. What are water soluble vitamins?
8. Give the sources of vitamin A and D.
9. Give the sources of vitamin B complex.
10. Give the biological functions of vitamin B₂, B₆ and B₁₂.

SECTION C

(6 Marks)

Answer the following questions

1. Define vitamin. Give its sources and deficiency diseases caused.
2. Give the properties and classifications of vitamins.
3. Explain the deficiency symptoms of vitamin B₁, B₂ and B₃.
4. What are the causes of deficiencies of vitamin A, D and E?
5. Write the important functions of fat and water soluble vitamin.

SECTION D

(10Marks)

Answer the following questions

1. What is a vitamin? Explain the properties and biological functions of vitamins.
2. Discuss in detail about the water soluble vitamins.
3. Explain the fat soluble vitamins.
4. Discuss the properties, function and deficiency of vitamin A, D and E
5. Write about the vitamin B complex.

UNIT – 4 Hormones
SECTION A (1 MARK)

Choose the correct answer

1. _____ are chemical messenger
(a) Blood (b) Bone (c) Urine (d) Hormones Ans:(d)
2. Hormones made of _____ are secreted by nervous system
(a) Amines (b) Steroids (c) Protein (d) Fatty acids Ans:(a)
3. _____ increases BMR development
(a) Thyroxin (b) Calcitonin (c) Insulin (d) Gastrin Ans:(a)
4. _____ is used for the regulation of blood sugar
(a) Thyroxin (b) Calcitonin (c) Insulin (d) Gastrin Ans:(c)
5. Which of the following is a plant hormone _____
(a) Thyroxin (b) Traumatic acid (c) Calcitonin (d) Gastrin Ans:(b)
6. In stem cutting rooting is favored by _____
(a) Thyroxin (b) Traumatic acid (c) Auxin (d) Gastrin Ans:(c)
7. Increased appearance of ketone bodies in urine is _____
(a) Ketonemia (b) Ketonuria (c) Glycosuria (d) Hyperglycaemia Ans:(b)
8. Increased appearance of ketone bodies in blood is _____
(a) Ketonemia (b) Ketonuria (c) Glycosuria (d) Hyperglycaemia Ans:(a)
9. Increase in blood sugar level is _____
(a) Ketonemia (b) Ketonuria (c) Glycosuria (d) Hyperglycaemia Ans:(d)
10. Addison's diseases is due to the deficiency of _____
(a) GH (b) ACTH (c) FSH (d) TSH Ans:(b)

SECTION – B (2 Marks)

Answer the following questions

1. Define Hormones.
2. What is an exocrine gland?
3. What is an endocrine gland?

4. Give some properties of hormones.
5. Give the biological functions of hormone.
6. What are hormone secreting glands?
7. What are plant hormones? Give examples.
8. What are animal hormones? Give examples.
9. Give the classification of hormones.
10. What is the chemical nature of hormones?

SECTION C

(6 Marks)

Answer the following questions choosing either (a) or (b)

1. What are hormones? Explain its properties.
2. Explain the biological functions of hormones.
3. Discuss about the chemical nature of hormones.
4. What are animal hormones? Give its important functions.
5. What are plant hormones? Give its important functions.

SECTION D

(10Marks)

Answer the following questions

1. What are the two kinds of glands in animal hormones? Explain its classification.
2. Write about the hormones secreting glands and the functions of hormones.
3. Explain the hormones producing organs and their functions.
4. Discuss in detail about animal hormones.
5. Discuss in detail about plant hormones.

UNIT – 5 Antibiotics

SECTION A

(1 MARK)

Choose the correct answer

1. _____ fight against bacterial infection
(a) Antibiotic (b) Vitamin (c) Protein (d) Fat Ans:(a)
2. Antibiotic target _____
(a) Blood (b) Skin (c) Bacterial cell wall (d) Virus Ans:(c)
3. Antibiotics does not treat the infection caused by _____
(a) Bacteria (b) Parasites (c) Virus (d) Microbes Ans:(c)
4. Penicillin is effective against _____
(a) Typhoid (b) Fever (c) Dysentery (d) Gram positive organisms Ans:(d)
5. Antibiotic affecting the bacterial cell wall is _____
(a) Cephalosporin (b) Polymyxins (c) Gramicidins (d) polyene Ans:(a)
6. Antibiotic affecting cytoplasmic membrane are _____
(a) Cephalosporin (b) Polymyxins (c) Penicillin (d) Bacitracin Ans:(b)
7. Streptomycin is an _____ antibiotic.
(a) Amino (b) Glycoside (c) Amino glycoside (d) Steroid Ans:(c)
8. _____ is used to treat the infection in large animals.
(a) Cephalosporin (b) Polymyxins (c) Streptomycin (d) Bacitracin Ans:(c)
9. _____ cannot be given as injection.
(a) Streptomycin (b) Neomycin (c) Penicillin (d) Overran Ans:(b)
10. Antibiotics are available as _____
(a) Injection (b) Tablets (c) Ointment (d) All the above Ans:(d)

SECTION – B

(2 Marks)

Answer the following questions

1. Define antibiotics.
2. What are the various available forms of antibiotics?
3. What are the antibiotics that affect the bacterial cell wall?
4. What are the adverse effects of Cephalosporin?
5. What are the antibiotics that inhibit proteins synthesis?

6. Give the important uses of Streptomycin.
7. Give the side effects of Erythromycin.
8. What is Neomycin?
9. What is drug resistance?
10. What are the antibiotics that affect the cytoplasmic membrane?

SECTION C

(6 Marks)

Answer the following questions choosing either (a) or (b)

1. Define antibiotics. Give its sources and its significance.
2. Write about penicillin.
3. What are the antibiotics that affect cytoplasmic membrane?
4. Write about streptomycin and Erythromycin
5. What is a protein synthesis inhibitor? Explain an antibiotic which inhibits protein synthesis.

SECTION D

(10Marks)

Answer the following questions

1. Write about the antibiotics affecting the cell wall synthesis.
2. Explain the antibiotics which inhibit the protein synthesis.
3. Write about Drug resistance.
4. Write about Penicillin and Cephalosporin.
5. Write about Streptomycin, Erythromycin and Neomycin.

ST.MARY'S COLLEGE(Autonomous), THOOTHUKUDI

I B.A/B.Sc./B.Com/BBA

Ability Enhancement Course

Value Education

Sub.Code:21UAVE11

Semester I

(For those who joined in July 2021 and after)

Question Bank

UNIT I Introduction to Value Education

Section A

(1 mark)

Choose the correct answer:

1. _____ is learning about self and wisdom of life in a self-exploratory, systematic and scientific way through formal education

(a) Value education (b) Morals (c) Wealth (d) Work (Ans: a)

2. _____ is examination oriented, provides a degree and helps to get a job or business.

(a) Explicit value education (b) Implicit value education
(c) Value education (d) Formal education (Ans: d)

3. _____ builds a person's overall character.

(a) Explicit value education (b) Implicit value education
(c) Value education (d) Formal education (Ans: c)

4. _____ are inborn divine virtues such as love, peace, happiness, mercy and compassion.

(a) Political values (b) Innate values
(c) Economic values (d) Acquired values (Ans: b)

5. _____ are those external values adopted at "place of birth" or "place of growth" and are influenced by the immediate environment.

(a) Political values (b) Innate values

(c) Economic values (d) Acquired values (Ans: d)

6. _____ constitute a critical part of the values and are apparent in attitudes, beliefs, and actions.

(a) Political values (b) Personal values

(c) Economic values (d) Religious values (Ans: b)

7. _____ includes equality, justice, liberty, freedom, and national pride.

(a) Political values (b) Social values

(c) Economic values (d) Religious values (Ans: b)

8. _____ are ideological beliefs about the best way to govern a country or organization.

(a) Political values (b) Social values

(c) Economic values (d) Religious values (Ans: a)

9. _____ are those around money, and may include beliefs around ownership of property.

(a) Political values (b) Social values

(c) Economic values (d) Religious values (Ans: c)

10. _____ are spiritual in nature and include beliefs in how we should live.

(a) Political values (b) Social values

(c) Economic values (d) Religious values (Ans: d)

11. Select the benefits of value education

(a) be honest and love one another (b) be kind and happy

(c) respect others and be responsible (d) All the above (Ans: d)

12. Select the characteristics of values

(a) Extremely practical-with an understanding of the strategic context not just techniques.

(b) Provide standards of competence and morality.

(c) Build up societies, integrate social relations.

(d) All the above

(Ans: d)

Section B

(2 marks)

1. Differentiate formal education and value education.
2. Mention the different types of values.
3. Differentiate personal and social value.
4. In what way political value is different from economic value.
5. What are the two main approaches to value education.
6. Enumerate the objectives of value education.
7. List out the benefits of value education.
8. Give any four characteristics of value education.

Section C

(4 marks)

1. What are the types of values?
2. Describe value education.
3. Write about the concept of values.
4. What are the types of education?
5. List out the objectives of value education.
6. Discuss the main two approaches of value education.
7. Point out the benefits of value education.
8. List out the issues to be taught in value education.
9. Draw the grid of human values and sub values.
10. Narrate the characteristics of values.

Section D

(10 marks)

1. What is value education ? Explain its benefits.
2. Name the important human values and sub values.
3. Why is value education important? Explain its types.
4. Draw a tree of values and list the values priority wise .

5. What are values? How can it be categorized and also discuss the important features of values.

UNIT II Human Values

Section A

Choose the correct answer:

1. Basic _____ refers to those values which are at the core of being human.
(a) punctuality (b) temper (c) human values (d) courage (Ans: c)
2. Which among the following cannot be considered as the main source of human values?
(a) education (b) culture (c) habits (d) illogical reasoning (Ans: d)
3. The function of basic values enable every human to realize or maintain high human Values for establishing relations of _____
(a) peace (b) encouragement (c) dispute (d) enrichment (Ans: a)
4. Understanding of human values varies according to _____
(a) health condition (b) age (c) nature (d) belief (Ans: b)
5. _____ is the basis of all relationships.
(a) courage (b) love (c) enthusiasm (d) age (Ans: b)
6. _____ is a set of emotions and behaviours characterized by intimacy, passion and commitment.
(a) love (b) compassion (c) success (d) excitement (Ans: a)
7. This type of love involves liking someone and sharing a certain degree of intimacy.
(a) infatuation (b) passionate love (c) friendship (d) unrequited love (Ans: c)
8. This form of love is marked by trust, affection, intimacy and commitment.
(a) infatuation (b) compassionate love (c) conditional love (d) obsessive love (Ans: b)
9. "You must give time to your fellow men - even if it is a little thing. Do something for others - something for which you get no pay but the privilege of doing it" said -----.
(a) A. V. Good (b) Mother Teresa (c) Albert Schweitzer (d) Mahatma Gandhi (Ans: c)
10. _____ was the founder of the huge organisation called the "Sisters of Charity"
(a) Mother Angelica (b) Mother Teresa (c) Therese of Lisieux (d) Scholastica (Ans: b)

11. _____ was the chairman and CEO of General Electric, a mammoth in American multinational Conglomerate during its peak growth.
(a) Jack Welch (b) David Patrich (c) Samuel Johnson (d) Barbara Frederick (Ans: a)
12. The fourth _____ in November every year in USA are thanksgiving national holidays.
(a) Monday (b) Tuesday (c) Wednesday (d) Thursday (Ans: d)
13. In Canada, the second Monday in _____ every year is considered as Thanksgiving National holiday.
(a) August (b) September (c) October (d) November (Ans: c)
14. _____ is an expression of gratitude especially to God.
(a) Thanksgiving (b) Forgiving (c) Happiness (d) Civility (Ans: a)
15. ----- wrote the book "Thank you Power".
(a) Jack Welch (b) Deborah Norville (c) William Wordsworth (d) Robert Emmars
(Ans: b)
16. "Gratitude is a fruit of great cultivation, you do not find it among gross people" was quoted by -----.
(a) William Wordsworth (b) David Patrich (c) Samuel Johnson (d) Barbara Frederick
(Ans: c)
17. The life of _____ shows courage and an indomitable will, that can succeed against all odds.
(a) Thomas Quasth (b) Crito (c) Goliath (d) David (Ans: a)
18. _____ said "Obstacles cannot crush me, every obstacle yields stern resolve."
(a) Thomas Quasth (b) Leonardo Da vinci (c) Archimedes (d) General Marullus
(Ans: b)
19. "The glass is half full" This expression is an example of _____
(a) courage (b) sympathy (c) optimism (d) gratitude (Ans: c)
20. _____ is a feeling of deep esteem for someone or something elicited by their abilities, qualities or achievements.
(a) faith (b) respect (c) beauty (d) wisdom (Ans: b)

Section B

1. Write a note on Universal human values.
2. Mention five types of Love.
3. Write down few impacts of Love.
4. Mention any three tips to cultivate Love.
5. How does Albert Schweitzer define Compassion?
6. What was the defining moment in the life of Mother Teresa?
7. How does Deborah Norville explain gratitude in her book "*Thank You Power*"?
8. How is courage manifested in the biblical story of Goliath and David?
9. What is optimism?
10. How does Martin Luther King Jr define forgiveness?
11. What sort of behaviour/actions make you angry?
12. How do you resolve anger against someone who has hurt you?

Section C

1. Write a note on Universal Human Values.
2. Discuss the importance of human values.
3. Briefly explain sources and dimensions of human values.
4. Discuss types of love and different ways to practice love.
5. Discuss about the role models for compassionate service to mankind Albert Schweitzer and Mother Teresa.
6. Briefly explain the virtue gratitude.
7. Comment on the virtue courage.
8. What you mean by optimism and state its importance in life.
9. Comment on the role of forgiveness to have a peaceful life.
10. Discuss the need and urgency to reinforce human values for better life.

Section D

1. What are Human Values? Explain its sources and dimensions.
2. Explain briefly the importance of Love, its types, impacts and tips for cultivating it.
3. Illustrate the compassionate service lent by Albert Schweitzer.
4. Describe briefly the dedicated service of Mother Teresa to humanity.
5. Account the term "Charity with Dignity" with an anecdote.
6. Explain the significance of courage and optimism in our day today life.
7. Explain the values to be reinforced for a better humane society.

UNIT III Social Values

Section A

1. Who believed that every human was at the center of a number of concentric circles?
(a) Leonarda Da Vinci (b) Confucius (c) Thomas Quasth (d) Crito (Ans:b)
2. _____ is the basis on which values are built
(a) Family (b) Society (c) World (d) Nation (Ans:a)
3. ----- are the first teachers.
(a) Father (b) Teacher (c) Mother (d) Sister (Ans:c)
4. "We must educate our masters", masters mean _____
(a) Common people (b) people (c) teacher (d) student(Ans:a)
5. Discipline and _____ are essential for a society to grow and prosper.
(a) loyalty (b) freedom (c) democracy (d) health (Ans:b)
6. "Man is a self-centered and self-willed character who has to learn to be a member of the family says _____.
(a) Richard Livingstone (b) C.V.Good (c) Author Roy Posner (d) Hindzay (Ans:a)
7. _____ needs to change the human being in better way,
(a) Character (b) Society (c) Family (d) Education (Ans:d)
8. _____ values builds strong character.
(a) Human (b) Social (c) Spiritual (d) Personal (Ans:a)
9. ----- is defined as understanding and sharing the feelings of another
(a) Empathy (b)Respect (c)Loyalty (d)Honesty (Ans:a)
10. _____ is a value that binds us to a person, thing or sentiment.
(a) Respect (b) Loyalty (c) Honesty (d) Empathy (Ans:b)

Section B

- 1) List out any five social values.
- 2) Briefly describe the belief of Confucius on social values.
- 3) What is the role of family in building social values?
- 4) Explain Sir Richard Livingstone's views on the role of education.
- 5) Name three functions of education.
- 6) Define empathy and respect.
- 7) Differentiate loyalty and honesty.
- 8) What is self-confidence.
- 9) What are the qualities that Luther King has as a transformational leader?
- 10) Define formative function.

Section C

1. Discuss the role of education.
2. Explain the role of family in building up social values.
3. Describe the role of educational institutions in inculcating values.
4. Write an essay on the social responsibilities of a student.
5. Elucidate the needs of society.

Section D

1. Briefly explain students responsibility towards the society.
2. How to build relationships at home?
3. Describe the role of educational institutions in inculcating values
4. State the function of education towards society?
5. Write about society's needs?

UNIT IV Spiritual Values

Section A

1. ____ refers to value that promote the spiritual growth of a personality.
(a) Humanistic value (b) Altruistic value (c) Personal value (d) Divine value (Ans: b)
2. ____ is an ability to recognise legal boundaries.

(a) Moral development

(b) Spiritual development

(c) Value inculcation

(d) Personality development (Ans:a)

3. Holistic development is incomplete without _____.

(a) Moral development

(b) Spiritual development

(c) Value inculcation

(d) Personality development (Ans:b)

4. _____ is a state of peace and fulfillment that allows to move towards happiness.

(a) Truth

(b) Charity

(c) Harmony

(d) Faith

(Ans:c)

5. Truth is the ultimate expression of _____

(a) happiness

(b) honesty

(c) love

(d) divinity

(Ans:d)

6. _____ cares only about well- being and pleasure.

(a) Ego

(b) Love

(c) Harmony

(d) Honesty

(Ans:a)

7. Charity should be done with the intention to -----.

(a) lessen others misery

(b) gain fame

(c) show off money

(d) gain benefits

(Ans:a)

8. _____ is the knowledge of soul.

(a) Value

(b) Character

(c) Behaviour

(d) Faith

(Ans:d)

9. Faith helps human being to _____.

(a) have fear

(b) mitigate worries

(c) lose hope

(d) mourn

(Ans:b)

10. ----- is an engine that allows to open and build roads in life.

(a) Faith

(b) Value

(c) Charity

(d) Hope

(Ans:d)

11. ____ is the ability and willingness to fully understand another person's experience.

(a) Sympathy

(b) Self- centered

(c) Empathy

(d) Worrying

(Ans:c)

Section B

1. What do you mean spiritual values?
2. How is moral development seen in the students?
3. What is truth?
4. Define hope?
5. How to develop your spiritual values?
6. What is faith?
7. What do you mean by charity?
8. What is the Importance of spiritual values?

Section C

- 1.What are the ways to develop your sense of empathy and compassion?
- 2.What are the principles to be followed to have faith?
- 3.List own the moral values to be followed to stay spiritual?
- 4.What are the benefits of adopting a contemplative practice?
- 5.Do you consider religion an influential factor of spirituality?
- 6.Differentiate spiritual development and moral development

Section D

1. Define Spiritual Values and Discuss about the importance of spiritual values.
2. Explain in detail about the importance and cultivation of spiritual values.
3. List out the five most common spiritual values and explain in detail.
4. Write in detail about the truth and charity and list out the spiritual values to be followed according to truth.
5. Describe briefly about hope and their importance.
6. Discuss in detail about the cultivation and development of empathy and compassion.

UNIT V Values for Life Enrichment

Section A

Choose the correct answer

- 1._____ activity is to balance the emphasis of professional abilities along with good character traits.

- (a) Physical (b) Analytical (c) Life Enrichment (d) Role play (Ans :c)
2. _____ is the basis on which values are built.
- (a) Family (b) Society (c) World (d) Nation (Ans:a)
3. Building relationship begins at _____
- (a) home (b) society (c) school (d) work (Ans: a)
4. An interpersonal relationship characterized by intimacy, trust and respect is called _____
- (a) trust (b) love (c) care (d) empathy (Ans:b)
5. _____ enables people to adjust their relationships with each other, to work together for a common purpose.
- (a) Gratitude (b) Loyalty (c) Tolerance (d) Patience (Ans: C)
6. _____ implies the fulfillment of obligations or performance of functions, motivated by a sense of inner urge without fear of punishment, or hope or reward, but for love
- (a) Dutifulness (b) Loyalty (c) Tolerance (d) Patience (Ans:a)
7. _____ is one of the most important values required to build and continue any relation.
- (a) Trust (b) Love (c) Care (d) Empathy (Ans:a)
8. In today's world, safety and security is the most vital and foremost priority in everyone's life, so _____ is one of the essential life skills that help in students' future development
- (a) Interest (b) Focus (c) Communication (d) Self Defense (Ans: d)
9. _____ skill is one of the most important life skills that all students need in their life.
- (a) Critical thinking (b) Communication (c) Resilience Thinking (d) Problem solving (Ans:d)
10. Maintaining adaptive emotional strategies refers to recognizing evidence for the effectiveness of uses of _____ strategies as primary capabilities decrease.
- (a) primary (b) secondary (c) both (d) modified. (Ans:b)

Section B

1. What are goals?
2. Write any two characteristics of goals?

3. Describe S.M.A.R.T.
4. Define patience and courtesy.
5. Define magnanimity and loyalty.
6. Define gratitude and tolerance.
7. Name six values that can enhance healthy relationship.
8. Write the importance of decision- making skills.
9. Write the importance communication skills.
10. Write the importance of problem solving skills.

Section C

1. Enumerate the characteristics of SMART goals.
2. Explain any five significant values for building relationships.
3. Briefly explain any five essential life skills that help in students for future development.
4. Describe the skill clusters and specific skills for enhancing quality of achievements.
5. Elaborate the skill clusters and specific skills for transforming meaning.
6. How would you maintain good relationship with your family?

Section D

1. Describe about SMART goals and explain how you would apply it to your life goals.
2. How would you establish a healthy friendship? Bring down the significant values you would consider for building it.
3. Through light on love relationships from the perspective of Abraham Lincoln and Sir Martin Luther King.
4. Elaborate on the four ways through which we can enhance our health and wellness.
5. Analyze the essential life skills that would help in the future development of students.
6. Describe the skill clusters and their specific skills for developing identity.

St. Mary's College (Autonomous), Thoothukudi - 628001
I B.Sc. Chemistry - Semester II
Core -II General Chemistry - II Sub. Code: 21UCHC21
Question Bank
(for those who joined in July 2021 and after)

UNIT I: GENERAL PRINCIPLES OF EXTRACTION OF METALS

Section – A

(1 mark)

Choose the correct answer

1. The impurities associated with a mineral are collectively known as -----

- a) flux b) gangue c) ore d) Slag (Ans:b)

2. Roasting is done in the case of -----

- a) Oxide ores b) Carbonate ores c) Sulphide ores d) Silicate ores (Ans:c)

3. Froth floatation process for the concentration of ores is an illustration of the practical applications of -----

- a) Adsorption b) Absorption c) Coagulation d) Sedimentation (Ans:a)

4. One among the following statements is true regarding calcination -----

- a) the ore is heated strongly in the absence of air b) the ore is heated with calcium
c) the ore is heated with carbon d) the mineral is melted with lime stone (Ans:a)

5. In froth floatation process ----- helps in the formation of the stable froth.

- a) potassium Xanthate b) Pine oil c) FeSO_4 d) NaOH (Ans:b)

6. The substance which is added to an ore in order to remove impurities during melting is called -

- a) Slag b) Flux c) Gangue d) catalyst (Ans:b)

7. In metallurgy flux is a substance used to convert -----

- a) Infusible impurities to fusible b) soluble particles to insoluble impurities
c) Fusible impurities to infusible material d) Mineral into silicate (Ans:a)

8. Heating an ore in the absence of air below its melting point is called -----

- a) Leaching b) Roasting c) Smelting d) Calcination (Ans:d)

9.----- process of purification is represented by the following equation.

a) Cupellation b) Poling c) Van Arkel's process d) Zone refining (Ans:c)

10. One among the following is a purification method for obtaining ultra pure silicon.

a) Zone refining b) Electrochemical refining
c) Thermal refining d) Vapour phase refining (Ans:a)

11. In electrolytic refining ---

a) Crude metal is made anode b) Crude metal is made cathode
c) Pure metal is made anode d) pure metal is made cathode (Ans:a)

12. Thermite is -----

a) a mixture of the ore and Mg powder b) the molten metal obtained as end product
c) a mixture of the ore and Al powder d) a mixture of the ore and Zn dust (Ans:c)

13. Magnetic separation is a method of concentrating.

a) oxide ores b) sulphide ores c) magnetic ores d) none (Ans:c)

14. Zone refining process is used for -----

a) Concentration of an ore b) Reduction of a metal oxide
c) Purification of metal d) Purification of an ore (Ans:c)

Section B

(2 Marks)

Answer the questions in 50 words each.

1. Define the term metallurgy.
2. What are ores? Give two examples.
3. What you mean by minerals?
4. Define the term flux.
5. What do you mean by concentration of ore?
6. What is the difference between calcination and roasting
7. What do you mean by smelting in metallurgy?

9.What is meant by Ellingham diagram?

Answer the questions in 200 words each.

Answer the questions in 400 words each.

- 1.The alkali metals are strong reducing agents due to -----
- a) Low ionization energy b) large ionic radii
c) High enthalpy of hydration d) Potential value (Ans:a)
- 2.In a period, the electronegativity and ionization energy of alkali metal is-----
- a) Maximum b) Minimum c) Intermediate d) Same as that of halogens (Ans:b)
- 3.Nitrates of IA group on heating give -----
- a) O₂ b) N₂ c) NO d) NO₂ (Ans:a)
- 4.Hydration energy is maximum for -----

a) Li^+ b) Na^+ c) K^+ d) CS^+ (Ans:a)

5. LiOH is-----

a) weak base b) strong base c) an amphoteric compound d) an acid compound (Ans:a)

6. The highly efficient method of obtaining beryllium is-----

a) Reduction of beryllium halide with Mg b) Reduction of beryllium oxide with carbon
c) Electrolysis of fused beryllium chloride d) Dissociation of beryllium carbide (Ans:c)

7. When CO_2 is bubbled into an aqueous solution of Na_2CO_3 ----- is formed

a) NaOH b) HCO_3^- c) H_2O d) OH^- (Ans :b)

8. In certain matters lithium differs from other alkali metals, the main reason for this is -----

a) Small size of Li atom and Li^+ ion b) Extremely high electro positivity of lithium
c) Greater hardness of lithium d) hydration of Li^+ ion (Ans:a)

9. The chemistry of lithium is very much similar to that of Mg even though they are placed in different groups. The reason is -----

a) Both have same size b) The ratio, of their charge to size is same
c) Both have similar electronic configuration d) Both are found together in nature (Ans:b)

10. Property of alkaline earth metals that increase with their atomic number is-----

a) Ionisation energy b) solubility of their hydroxides
c) solubility of their sulphates d) Electronegativity (Ans:b)

11. The general formula for diborane -----

a) B_xH_{x+4} type b) $\text{B}_x\text{H}_{2x+2}$ type c) B_xH_{x+3} type d) $\text{B}_x\text{H}_{2x+4}$ type (Ans:a)

12. The actual number of electron present in diborane molecule is -----

a) 14 b) 12 c) 16 d) 13 (Ans:b)

13. The boron atoms in diborane are -----

a) sp^3 hybridised b) sp^2 hybridised c) s hybridised d) sp^3 d hybridized (Ans:a)

14. Boron halides are -----

a) Lewis bases b) Lawis acid c) Arrhenius acid d) Arrhenius base (Ans:b)

15. Boric acid is heated with ethyl alcohol it burns with a _____ edged flame

a) red b) green c) orange d) violet (Ans:b)

16. Nitrolim is a mixture of -----

a) CaCN_2 and C b) CaCN_2 and N c) CaCN_3 and C d) CaCN_3 and N (Ans:a)

17. Al_2C_6 on hydrolysis gives -----

a) CH_4 b) C_2H_2 c) C_2H_6 d) C_2H_4 (Ans:b)

18. Al_4C_3 on hydrolysis gives -----

a) CH_4 b) C_2H_2 c) C_2H_6 d) C_2H_4 (Ans:a)

19. One among the following is the pseudo halide ion

a) $(\text{CN})_2$ b) $(\text{SCN})_2$ c) N^{3-} d) $(\text{SeCN})_2$ (Ans:c)

20. This type of interhalogen compound is not known

a) AB b) AB_2 c) AB_3 d) AB_5 (Ans:b)

21. The interhalogen which does not exist

a) ClF_5 b) ClI_5 c) I Cl_2^- d) I F_4^- (Ans:b)

Section B

(2 Marks)

Answer the questions in 50 words each.

1. What are the ores of lithium?

2. Give the ores of beryllium.

3. What is meant by diagonal relationship?

4. What are the uses of sodium carbonate?

5. Explain the principle of fire extinguisher

6. What are types of boron hydrides? Give examples.

7. Give any two preparation of diborane.

8. Write note on the ethane like structure of diborane.
9. Give any four uses of diborane.
10. With a suitable example, explain a three centre bond.
11. Explain why BF_3 molecule acts as a Lewis acid.
12. How is calcium carbide prepared?
13. Give the preparation of boron carbide.
14. How is carborundum prepared?
15. Mention the uses of boron carbide.
16. Give the preparation of carbondisulphide by Zahn's process.
17. What are pseudo halogens? Give examples.
18. Give the preparation of AB_3 type of inter halogen compounds.
19. What are polyhalides?

Section C (6 Marks)

Answer the questions in 200 words each.

1. In what respects does lithium differ from other alkali metals. Explain.
2. What is meant by diagonal relationship? Give the resemblance of lithium with magnesium.
3. Discuss the anomalous behavior of Beryllium.
4. Explain the manufacture of sodium bicarbonate.
5. Write short notes on Borax bead test.
6. Discuss the relative strength of boron halides as Lewis acid.
7. What are carbides? How are they classified? Give one example for each class.
8. Give the preparation, properties and structure of calcium carbide.
9. How is boron carbide prepared? Explain its properties, uses and structure.
10. How are the following prepared? (a) carbonyl chloride.
11. How is CS_2 manufactured by Zahn's process and Taylor's electrical process.

12. Write a note on peculiarities of fluorine
13. Give reasons for the basic nature of iodine.
14. Write a note on etching on glass.

Section D (10 Marks)

Answer the questions in 400 words each.

1. Discuss the general trends in group IA metals.
2. Describe the extraction of Beryllium.
3. Give a detailed account of position of II group (A) elements in the periodic table.
4. Illustrate the metallurgy of lithium.
5. Describe the principle involved in the manufacture of sodium carbonate.
6. Discuss the structure of diborane..
7. What are carbides? How are they classified? Explain with examples.
9. What are types of oxyacids of Boron? Give preparation properties and uses of ortho boric acid. (b) Write a note on Borax bead test.
10. What are pseudo halogens? Compare their properties of with those of halogens.
11. Compare the formation, physical state and stability of hydrogen halides.
12. Discuss the manufacture and peculiarities of fluorine.

UNIT –III STEREOCHEMISTRY

Section - A

Choose the correct answer

1. The stereoisomers of a compound, which are non-superimposable mirror images of each other are termed -----
 a) enantiomers b) isomers c) mesomers d) diastereomers (Ans : a)
2. The dextrorotatory compound rotates the plane of polarization -----
 a) towards left b) towards right c) towards up d) towards down (Ans : b)
3. The dashed wedge line  represents the bond----- the plane of the paper

- a) above b) below c) in d) behind (Ans : a)
4. An object that is not superimposable on its mirror image is called -----
- a) chiral b) achiral c) diastereomer d) isomer (Ans : a)
5. An example of chiral representation-----
- a) gloves b) ball c) nose d) cup (Ans : a)
6. An example of achiral representation ----
- a) fork b) hands c) screw d) gloves (Ans : a)
7. The isomer with one stereogenic center is called -----
- a) enantiomer b) diastereomer c) meso form d) cis form (Ans : a)
8. The ----- compounds are optically inactive.
- a) meso form b) diastereomer c) enantiomer d) cis form (Ans : a)
9. The maleic acid is the ----- of the isomer.
- a) meso form b) anti c) trans d) cis form (Ans : d)
10. The order of priority for atoms are arranged according to -----
- a) ionic radius b) atomic size c) atomic number d) atomic radii (Ans : c)

Section B

(2 Marks)

Answer the questions in 50 words each.

1. What is meant by stereoisomers?
2. What is called stereochemistry ?
3. Explain the term configuration.
4. What is meant by optically active compounds?
5. What is meant by enantiomer?
6. What is meant by diastereomer?
7. What is meant by geometrical isomerism?
8. Explain the term mesoform ?
9. What is meant by racemic mixture?

10.Explain the term resolution.

Section C

(6 Marks)

Answer the questions in 200 words each.

1.Explain the term chirality.

2.What are called elements of symmetry?

3.Assign R and S configuration to the following

i)

ii)

iii)

iv)

v)

vi)

- 4.Explain the optical activity of the compound.
- 5.Explain the E-Z system of nomenclature.
6. What is called racemisation ?
- 7.Explain Walden Inversion.
- 8.How the configuration of geometrical isomers can be determined?

Section D (10 Marks)

Answer the questions in 400 words each.

- 1.Explain the Cahn Ingold Prelog system of RS configuration.
- 2.Explain the stereochemistry of diphenyl compounds with examples.
3. Explain the conformational analysis of cyclohexane.
- 4.Define resolution. Explain the methods of resolution.

Unit – IV Hydrocarbons and Halogen Compounds

Section A (1 Mark)

Choose the correct answer

1. In Diel's-Alder reaction _____ addition takes place
a) 1,4 b) 1,2 c) 1,3 d) 2,4 (Ans: a)
2. Ozonolysis is a test for location of -----
a) $C\equiv C$ b) $C=C$ c) $C=O$ d) $C=N$ (Ans: b)
3. One mole of an organic compound on Ozonolysis forms one mole of acetone and acetaldehyde. The alkene is -----
a) 1-Butene b) 2-Butene c) 2-Methyl-2-Butane d) 2-Methyl-1-Butene (Ans: d)
4. Number of acidic hydrogen present in 1-Butyne is -----
a) 3 b) 4 c) 2 d) 1 (Ans: d)
5. Which of the following is capable of forming metallic derivatives by replacement of hydrogen atom?

a) C_2H_6 b) C_2H_2 c) C_2H_4 d) C_4H_{10} (Ans:b)

6. The Catalyst which is used in epoxidation is -----

a) Ag b) Au c) Cu d) Cd (Ans:a)

7. Ozonolysis of an alkene C_4H_8 gives only one product. The alkene is -----

a) 1-Butene b) 2-Butene c) 2-Methyl propene d) Cyclobutane (Ans:b)

8. The most acidic hydrogen is present in -----

a) Ethane b) Ethene c) Ethyne d) Propyne (Ans: c)

9. The number of π electrons in azulene is -----

a) 6 b) 2 c) 10 d) 14 (Ans :c)

10. Cyclopentadienyl anion is an example of -----

a) aromatic compound b) non aromatic compound
c) open chain compound d) closed chain compound (Ans :a)

11. In aromatic electrophilic substitution $-COOH$ group present in the benzene nucleus diverts the entering group into -----

a) meta position b) ortho position c) para position d) adjacent position (Ans : a)

12. The electrophile involved in the nitration of aromatic compound is-----

a) NO_2^- b) NO_2 c) NO_2^+ d) NO_2H (Ans : c)

13. Nitration of nitrobenzene gives -----

a) orthodinitro benzene b) meta dinitro benzene
c) paradinitro benzene d) none of these (Ans :b)

14. Aromatic compounds are characterized by the presence of

a) $4n - \pi$ electrons b) $2n + 4 \pi$ electrons c) $4n + 2\pi$ electrons d) none of these (Ans : c)

15. Which of the following groups when attached to benzene is o-,p- directing but deactivating

a) $-Cl$ b) $-Br$ c) $-NH_2$ d) $-OH$ (Ans: a)

16. The attacking species in sulphonation of benzene is

a) HSO_3 b) H_2SO_4 c) SO_3 d) H_3^+SO_4 (Ans: c)

17. The most reactive compound towards electrophilic substitution is

a) benzene b) benzene sulphonic acid c) nitrobenzene d) toluene (Ans : d)

18. Cine substitution is explained by

a) ortho effect b) S_N^1 mechanism c) benzyne d) S_N^2 mechanism (Ans : c)

19. Which among the following is anti aromatic

a) Benzene b) furan c) cyclopentadienyl anion d) [4]annulene (Ans : d)

20. Identify a reagent in the following list which distinguishes 1-Butyne and 2- Butyne.

a) Bromine in CCl_4 b) H_2 Lindlar catalyst
c) dil. H_2SO_4 , HgSO_4 d) ammonical Cu_2Cl_2 (Ans: d)

21. $\text{S}_\text{N}2$ reaction is undergone by

a) Primary halide b) Secondary halide c) Tertiary halide d) Allyl halide (Ans: a)

22. $\text{S}_\text{N}1$ reaction is under -----

a) 1° Halides b) 2° Halides c) 3° Halides d) Allyl halide (Ans: a)

23. Protic solvents like dimethyl sulphoxide favour

a) $\text{S}_\text{N}2$ reaction b) $\text{S}_\text{N}1$ reaction c) Addition reaction d) $\text{S}_\text{N}i$ reaction (Ans: a)

24. $\text{S}_\text{N}1$ mechanism involves

a) Carbonium ion b) Carbanion c) Transition state intermediate d) Carbene (Ans: a)

25. Which is a better leaving group?

a) F^- b) Cl^- c) Br^- d) I^- (Ans: d)

26. Which is a better solvent for $\text{S}_\text{N}2$ mechanism?

a) H_2O b) $\text{C}_2\text{H}_5\text{OH}$ c) CF_3COOH d) DMSO (Ans: d)

27. Which of the following contains the least reactive halogen atom?

a) methyl halide b) t- butyl chloride c) vinyl chloride d) allyl chloride (Ans: c)

28. Reaction of vinyl chloride and HCl yields -----

a) $\text{CH}_2\text{Cl}-\text{CH}_2\text{Cl}$ b) $\text{CH}_3-\text{CHCl}_2$ c) $\text{CH}_2=\text{Cl}_2$ d) CH_3CCl_3 (Ans: b)

29. When ----- undergoes polymerization in the presence of peroxide catalyst it gives poly vinyl chloride.

a) vinyl chloride b) allyl chloride c) benzyl chloride d) alkyl chloride (Ans: a)

30. Dehydrohalogenation of ethylene chloride by the action of alcoholic potassium hydroxide gives—

a) methyl halide b) t-butyl chloride c) vinyl chloride d) allyl chloride (Ans: c)

31. Chloroprene is-----

a) 1-chloro-1,3-butadiene b) 2-chloro-1,3-butadiene
c) 2-chloro-1,4-butadiene d) 1-chloro-1,2-butadiene (Ans: b)

32. Neoprene rubber is obtained by the polymerization of -----

a) vinyl chloride b) allyl chloride c) benzyl chloride d) chloroprene (Ans: d)

33. Benzyl chloride on reduction with nascent hydrogen it forms -----

a) aniline b) toluene c) benzene d) diphenylene (Ans: b)

34. Benzyl chloride when oxidized gives -----

a) Phenol b) benzyl nitrate c) Benzoic acid d) benzaldehyde (Ans: c)

Section B

(2 Marks)

Answer the questions in 50 words each.

1. What is Diels-Alder reaction?
2. What is meant by Ozonolysis?
3. Acetylene is acidic in nature – Explain
4. Acetylene forms metal acetylides – Explain
5. How will you locate the double bond in an organic compound?
6. What is epoxidation?
7. What do you understand by term benzenoid aromatic compounds?
8. Explain the terms aromaticity and aromatic character.

9. What is orientation?
10. State Huckel's rule of aromaticity.
11. What is cine substitution?
12. What are non-benzenoid aromatic compounds?
13. Will cyclo-octatetraene show aromatic character?
14. The incoming group is directed towards which position in benzene ring during nitration of nitrobenzene?
15. What are arenes?
16. What do you understand by the term anti-aromatic compounds?
17. Define S_N1 mechanism.
18. What are elimination reactions?
19. How is vinyl chloride prepared?
20. How is allyl chloride prepared?
21. How is benzyl chloride prepared?
22. Mention any two uses of chloroprene.
23. Compare the reactivity of alkyl and aryl halides

Section C (6 Marks)

Answer the questions in 200 words each.

1. 1-Butyne forms copper and silver salts whereas 2-Butyne does not form. Explain.
2. Acetylene is acidic in nature - Justify.
3. Give the classification of dienes with examples.
5. State Huckel's rule and explain it with suitable examples.
6. Write notes on non-benzenoid aromatic compounds.
7. Discuss the mechanism of nucleophilic aromatic substitution reaction with one example.
8. (i) Discuss the directive influence of $-NO_2$ group in electrophilic substitution reaction.
(ii) Benzene is an aromatic compound. But cyclooctatetraene is not aromatic. Why?
9. Write a note on the bimolecular mechanism of aromatic nucleophilic substitution.
10. Write a note on Markovnikov's rule.
11. Give the mechanism of addition of HBr to propene.

12. Write a note on peroxide effect.
13. Give the Mechanism of addition of HBr to propene in the presence of peroxide.
14. Explain S_N1 reaction with one example
15. Explain S_N2 reaction with one example
16. Vinyl substrates are very unreactive towards nucleophilic substitution- explain
17. How will you obtain vinyl chloride and allyl chloride
18. Mention the properties of vinyl chloride.
19. Mention the properties of Allyl chloride.
20. How is chloroprene prepared and mention its uses.
21. Differentiate between nuclear halogen derivative and side chain halogen derivative.

Section D (10 Marks)

Answer the questions in 400 words each.

1. Explain the formation of 1,2 & 1,4 addition reactions of Buta- 1,3 - diene
2. Write notes on: i) Epoxidation reaction of alkanes; ii) Diel's Alder reaction.
3. i) Discuss the bimolecular mechanism of nucleophilic aromatic substitution (S_NAR) giving evidences.

ii) Write a note on aromaticity of non-benzenoid aromatic compound.
4. Give an account of the directing ability of the $-NO_2$, $-NH_2$, $-CH_3$, SO_2OH groups present in the aromatic ring during electrophilic substitution.
5. i) What is benzyne? Discuss a reaction involving benzyne mechanism.

ii) Phenol is more reactive towards electrophilic substitution than benzene. Explain.
6. Explain the mechanism of the nucleophilic substitution depends upon the structure of the substrate.
7. Discuss the chlorination of nitrobenzene and chlorobenzene.
8. What are the various aspects in which S_N1 reaction differ from S_N2 Reaction?

9. How does a) nature of alkyl group b) Nature of alkyl halides c) Nature of nucleophile
d) Nature of solvent influence the rate of S_N2 reaction?
10. How does a) Nature of alkyl group b) Nature of alkyl halides c) Nature of nucleophile
d) Nature of solvent influence the rate of S_N1 reaction?
11. How does a) Nature of alkyl group b) Nature of alkyl halides c) Nature of nucleophile
d) Concentration of nucleophile influence the rate of E1 reaction?
12. How does a) Nature of alkyl group b) Nature of alkyl halides c) Nature of nucleophile
d) Concentration of nucleophile influence the rate of E2 reaction?
13. What are nucleophilic substitution reactions? Explain S_N1 reaction S_N2 mechanism in the hydrolysis of primary and tertiary halides.
14. What are elimination reactions? Explain E1 and E2 reactions with suitable examples.
15. Write any eight methods of mono halogen compound.
16. How will you obtain vinyl chloride and allyl chloride and explain its properties?
17. How is benzyl chloride prepared and explain its reactions?
18. Compare the reactivities of alkyl, aryl, vinyl and allyl halides.

Unit V Colligative Properties

Choose the correct answer:

1. Colligative properties depend only on the ----- of the solute particles.
a) Chemical nature b) number c) weight d) size (Ans b)
2. ----- properties depend on the number of particles in a given solution.
a) Additive b) Constitutive c) Colligative d) Creative (Ans c)
3. According to Raoult's law relative lowering of vapour pressure of a solution is equal to the
a) Mole fraction of the solute b) Mole fraction of the solvent
c) Concentration of the solution d) Concentration of the solvent (Ans a)
4. The vapour pressure of pure solvent is ----- when a non-volatile solute is dissolved in it.

a)constant b)zero c)decreased d)increased (Ans c)

5.The liquid boils, when the vapour pressure ----- the atmospheric pressure.

a)increases b) equals c)decreases d)constant (Ans b)

6.The boiling point of sea water is

a) 100° C b)More than100° C c) Less than100° C d) 0° C (Ans:b)

7.The elevation of boiling point is ----- to the lowering of vapour pressure.

a)directly proportional b)inversely proportional c) constant d)equal (Ans a)

8.Landsberger- Walker method is used to determine -----

a)elevation of boiling point b)depression of freezing point
c)osmotic pressure d)vapour pressure (Ans a)

9.Ebullioscopy is related to

a) Vapour pressure b) Boiling point c) Freezing point d) Osmosis (Ans b)

10.Cryoscopy is related to

a) Vapour pressure b) Boiling point c) Freezing point d) Osmosis (Ans c)

11.The molal depression constant of pure Camphor is -----

a) 40°C b)50°C c)60°C d)30°C (Ans a)

12.Osmotic pressure is designated by the symbol

a) O b) P c) α d) π (Ans d)

13.Isotonic solutions have the same

a) Osmotic pressure b) Pressure c) Boiling point d) Volume (Ans a)

14.Van't Hoff factor is represented by the symbol -----

a)v b)h c)m d) i (Ans d)

Section B

(2 Marks)

Answer the questions in 50 words each.

1. What are colligative properties? Give examples.
2. Explain why vapour pressure of the solution is lower than that of the pure solvent.
3. State Raoult's law
4. What is elevation of boiling point?
5. Define boiling point of the liquid. What happens to the boiling point when a non volatile solute is added to a pure solvent?
6. Define Ebullioscopic constant.
7. What is called depression of freezing point.
8. Define cryoscopic constant.
9. Why do electrolytes have abnormal molecular weights?
10. Define Osmosis .
9. Define osmotic pressure.
11. What are isotonic solutions?
12. Why do electrolytes have abnormal molecular weights?
13. Define Van't Hoff factor.
14. What is meant by Semipermeable Membrane?

Section C

(6 Marks)

Answer the questions in 200 words each.

1. What are colligative properties? Mention the various colligative properties.
2. What is meant by relative lowering of vapour pressure?.
3. What is meant by elevation of boiling point?
4. What is meant by depression of freezing point?

5. Write a note on anomalous behaviour of electrolytes
6. Write a note on Silica Garden.
7. How Cupric Ferrocyanide Membrane is prepared?
8. How semipermeable membrane is used during Kidney dialysis?
9. How will you determine the Osmotic pressure by a Modern Osmometer?
10. How Kidney dialysis is done?
11. Explain the theories of Osmosis i) Membrane solution theory ii) vapour pressure theory .
12. Explain the laws of Osmotic pressure.
13. Explain the Van't Hoff Theory of Dilute Solutions
14. Explain how vapour pressure and osmotic pressure is related.

Section D (10 Marks)

Answer the questions in 400 words each.

1. Derive Raoult's law and explain Ostwald-Walker's dynamic method.
2. Define elevation of boiling point and ebullioscopic constant. Explain Landsberger's method to determine elevation of boiling point.
3. Define depression of freezing point and cryoscopic constant. Explain Camphor method to determine depression of freezing point.
4. Define Osmotic pressure. Explain Berkley Hartley method.
5. Deduce a relation between Van't Hoff factor and degree of dissociation
6. Explain the theories of Osmosis i) Membrane solution theory ii) vapour pressure theory.
7. What is Reverse Osmosis? How will you purify the sea water into drinking water using
i) Hollow-Fibre Reverse Osmosis ii) Nanotube Membranes.
8. Explain the relation between vapour pressure and osmotic pressure.

SEMESTER- II			
Part III	Core II	General Chemistry-II	
Code :21UCHC22	Hrs/Week:6	Hrs/ Sem: 90	Credits:5

UNIT-I GENERAL PRINCIPLES OF EXTRACTION OF METALS

Minerals and ores -different steps of metallurgy – crushing and grinding of the ore – concentration of the ore – hand picking - gravity separation (Hydraulic Washing) - electromagnetic separation – electrostatic separation – froth flotation process – leaching- calcination – roasting –difference between calcination and roasting – reduction to free metals – reduction by displacement, thermal decomposition, carbon (smelting), heating in air, an electro positive metal (Gold Schmidt’s aluminothermic process) – Kroll’s process. Refining of impure metals – thermal refining - distillation, liquation – vapour phase refining - Van Arkel process - Mond’s process- electrolytic process- zone refining process. Ellingham diagram- Types of furnaces – Fuel fired – blast, reverberatory, vertical retort and muffle – Electric furnace – Arc furnaces – types - resistance furnace.

UNIT- II s AND p BLOCK ELEMENTS

General characteristics of IA and IIA group elements – diagonal relationship of lithium with magnesium – anomalous behaviour of lithium and beryllium – extraction of lithium and beryllium. Sodium carbonate and sodium bicarbonate – manufacture – properties and uses – principle of fire extinguisher. Boron – classification and nomenclature of boron hydrides – preparation, structure and uses of diborane – boron trihalides as Lewis acid – relative strength of boron trihalides. Oxo compounds of boron – ortho boric acid – preparation, properties and uses Borax bead test. Carbides – Classification with examples – Preparation, Properties, uses and structure of Calcium Carbide, Boron Carbide, Aluminium Carbide and Silicon Carbide – Preparation, Properties and uses of Carbonyl Chloride and Carbon disulphides. Halogens - Peculiarities of fluorine – manufacture of fluorine – etching on glass. Hydrides of halogens (hydrogen halides) - Interhalogen compounds – preparation and structure of interhalogen compounds. Pseudohalogen-polyhalides and basic nature of iodine.

UNIT –III STEREOCHEMISTRY

Stereoisomerism – Optical activity of compound with one and two chiral centres. Elements of symmetry – Plane of symmetry, axis of symmetry and centre of symmetry. Enantiomers and diastereo isomers (d, l and meso forms) with examples – asymmetric and dissymmetric molecules.

Conventions used in stereochemistry: Newman, Sawhorse and Fischer notations and their interconversions.

Cahn Ingold Prelog conversion DL and RS configuration.-notations for compounds containing more than one asymmetric C-atoms racemisation and methods of resolution of racemic mixture – Walden inversion – Stereochemistry of diphenyl compounds and allenes with examples. Geometrical isomerism – Definition – cis – trans and syn – anti concept E-Z notation. conformational analysis of cyclohexane.

UNIT –IV HYDROCARBONS AND HALOGEN COMPOUNDS

Alkenes – Mechanism of addition reaction to alkenes – Markanikow’s rule- Peroxide effect epoxidation – ozonolysis. Dienes Classification –Conjugated dienes –(1,2 &1,4-addition)- Diels Alder reaction. Alkynes – terminal & non-terminal alkynes – acidic nature of acetylenic hydrogen atom. Aromatic hydrocarbon- Concept & Condition – Huckel’s Rule- Aromatic, antiaromatic & non- aromatic compounds – Mechanism of aromatic electrophilic & Nucleophilic substitution reactions- Orientation (Electronic concept) – direct influence of substitution o, m & p directing – Benzyne mechanism.

Aliphatic halogen compounds –Mechanism of S_N1 , S_N2 , E1, E2 reaction – Halogen derivatives- Preparation and properties of Vinyl chloride – Allyl chloride – Preparation & uses of Chloroprene- Aromatic halogen compounds – Preparation and reaction of benzyl chloride – Nuclear & Side chain halogen compounds distinction- relative reactivities of alkyl, aryl, vinyl and allyl halides.

UNIT- V COLLIGATIVE PROPERTIES

Definition- lowering of Vapour Pressure-- Raoult’s Law - measurement of vapour pressure lowering— Ostwald and Walker’s Dynamic method – Elevation of boiling point and its determination- Landsberger –walker method. Depression of freezing point and its determination –Rast’s Camphor method –Abnormal molecular masses of electrolytes – Relation between Van’t Hoff factor and degree of association and dissociation

Osmosis-Definition - -Some Interesting Experiments Demonstrating Osmosis-Silica Garden- Semipermeable Membranes -Preparation of Cupric Ferrocyanide Membrane -Osmotic Pressure -Kidney Dialysis-Determination of Osmotic Pressure-Berkeley And Hartley’s Method – Modern Osmometer –Isotonic Solutions -Theories of Osmosis -Membrane Solution Theory - Vapour Pressure Theory- Reverse Osmosis-Desalination of Sea Water By Hollow-Fibre Reverse Osmosis-Nanotube Membranes- Laws of Osmotic Pressure –Boyle Van’t Hoff Law For

Solutions - Charles'-Van't Hoff Law For Solutions- Van't Hoff Equation For Solutions - Avogadro-Van't Hoff Law For Solutions -Van't Hoff Theory of Dilute Solutions - Calculation of Osmotic Pressure-Determination of Molecular Weight –Relation Between Vapour Pressure And Osmotic Pressure Osmotic Pressure of Electrolytes.

Skill Enhancement Course - Professional English for Chemistry II Sub. Code: 21UCHPE2
Semester – II – June 2022
(for those who joined in July 2021 and after)

Unit 1- Communicative Competence

SECTION A

(1 Mark)

Choose the correct answer

1.-----is a term referred to the acquired knowledge of a language and the ability to use it excellently well.

- a) Digital Competence b) Persuasive Communication
c) Communicative Competence d) Workplace Communication (Ans: c)

2. -----begins with an introductory sentence that states the title of the text, author and main points of the text.

- a) Comprehension b) A Paragraph c) A sentence d) A summary (Ans: d)

3. The sound systems in a language is called -----

- a) numerology b) phonology c) astrology d) physiology (Ans: b)

4. A group of individuals who gather and share some ideas of their interest is called -----

- a) Group discussion b) problem solving c) technology d) comprehension (Ans: a)

Fill in the blanks with the appropriate words chosen from the reading text

Nanotechnology is the understanding and control of matter at the nanoscale, at dimensions between approximately 1 and 100 nanometers, where unique phenomena enable novel applications. Matter can exhibit unusual physical, chemical, and biological properties at the nanoscale, differing in important ways from the properties of bulk materials, single atoms, and molecules. Some nanostructured materials are stronger or have different magnetic properties compared to other forms or sizes of the same material. Others are better at conducting heat or electricity. They may become more chemically reactive, reflect light better, or change color as

their size or structure is altered. Gold and silver nanoparticles created colors in the stained-glass windows of medieval churches hundreds of years ago. The artists back then just didn't know that they were using nanotechnology to create these beautiful works of art. Engineers have developed a thin film membrane with nanopores for energy-efficient desalination. This molybdenum disulphide (MoS_2) membrane filtered two to five times more water than current conventional filters.

5. Nanotechnology is the understanding and control of matter at the nanoscale, at dimensions between approximately -----nanometers. (Ans: 1 and 100)

6. -----nanoparticles created colors in the stained-glass windows of medieval churches hundreds of years ago. (Ans: Gold and silver)

7. Engineers have developed a thin film membrane ----- for energy-efficient desalination. (Ans: with nanopores)

Fill in the blanks with the appropriate words chosen from the reading text

Green chemistry can be defined as the invention, design and application of chemical products and processes to reduce or to eliminate the use and generation of hazardous substances for workers and consumer. The purpose was to initiate alternative practices in the chemical industry and processes more benign to the environment. They were selected with emphasis on economic considerations and for their future contribution to sustainable development. Paul Anastas, published a set of principles to guide the practice of green chemistry. The twelve principles address a range of ways to reduce the environmental and health impacts of chemical production, and also indicate research priorities for the development of green chemistry technologies. The principles cover such concepts as: the design of processes to maximize the amount of raw material that ends up in the product; the use of renewable material feedstocks and energy sources; the use of safe, environmentally benign substances, including solvents, whenever possible; the design of energy efficient processes; avoiding the production of waste, which is viewed as the ideal form of

waste management. The twelve principles of green chemistry are Preventing waste is better than treating or cleaning up waste after it is created. Atom economy, Synthetic methods should try to maximize the incorporation of all materials used in the process into the final product. This means that less waste will be generated as a result.

8. -----, published a set of principles to guide the practice of green chemistry.

(Ans: Paul Anastas)

9. The twelve principles address a range of ways to reduce the environmental and health impacts of chemical production, and also indicate research priorities for the development of -----

(Ans: green chemistry technologies)

10. Atom economy means -----

(Ans: less waste will be generated)

SECTION-B

(2 Marks)

Answer in about 50 words each

1. What are components to follow while listening a talk?
2. How an idea should be discussed in groups ?
3. What is mentioned as TED talk?
4. What is called group discussion?
5. How a summary should be written?

SECTION C

(4 Marks)

Answer in about 100 words each

1. What are the major components of communicative competence ?
2. Nanotechnology is the understanding and control of matter at the nanoscale, at dimensions between approximately 1 and 100 nanometers, where unique phenomena enable novel applications. Matter can exhibit unusual physical, chemical, and biological properties at the nanoscale, differing in important ways from the properties of bulk materials, single atoms, and molecules. Some nanostructured materials are stronger or have different magnetic properties

compared to other forms or sizes of the same material. Others are better at conducting heat or electricity. They may become more chemically reactive, reflect light better, or change color as their size or structure is altered. Although modern nanoscience and nanotechnology are relatively new, nanoscale materials have been used for centuries. Gold and silver nanoparticles created colors in the stained-glass windows of medieval churches hundreds of years ago. The artists back then just didn't know that they were using nanotechnology to create these beautiful works of art. Nanotechnology encompasses nanoscale science, engineering, and technology in fields such as chemistry, biology, physics, materials science, and engineering. Nanotechnology research and development involves imaging, measuring, modeling, and manipulating matter between approximately 1–100 nanometers.

a) Read the above passage and answer the following

- i) What is referred as Nano?
- ii) Why it is called Nanotechnology?
- iii) In which places the importance of nanotechnology has been observed?
- iv) Write the unique properties of nanomaterials.

3. Write a summary about the applications of Nanotechnology in a Paragraph.

4. Source passage : Dyes are classified according to their solubility and chemical properties.

Acid Dyes are water-soluble anionic dyes that are applied to fibers such as silk, wool, nylon and modified acrylic fibers using neutral to acid dye baths. Most synthetic food colors fall in this category. Examples of acid dye are Alizarine Pure Blue B, Acid red 88, etc. Basic dyes are water-soluble cationic dyes that are mainly applied to acrylic fibers, but find some use for wool and silk. Usually acetic acid is added to the dye bath to help the uptake of the dye onto the fiber. Basic dyes are also used in the coloration of paper.

Mordant dyes require a mordant, which improves the fastness of the dye against water, light and perspiration. The most important mordant dyes are the synthetic mordant dyes, or

chrome dyes, used for wool; these comprise some 30% of dyes used for wool, and are especially useful for black and navy shades. The mordant potassium dichromate is applied as an after-treatment. Disperse dyes were originally developed for the dyeing of cellulose acetate, and are water-insoluble. The dyes are finely ground in the presence of a dispersing agent and sold as a paste, or spray-dried and sold as a powder. Their main use is to dye polyester, but they can also be used to dye nylon, cellulose triacetate, and acrylic fibers. Sulfur dyes are inexpensive dyes used to dye cotton with dark colors. Dyeing is effected by heating the fabric in a solution of an organic compound, typically a nitrophenol derivative, and sulfide or polysulfide. The organic compound reacts with the sulfide source to form dark colors that adhere to the fabric. Sulfur Black 1, the largest selling dye by volume, does not have a well defined chemical structure. A number of other classes have also been established, including Oxidation bases, for mainly hair and fur, Laser dyes: rhodamine 6G and coumarin dyes. Leather dyes, for leather, Fluorescent brighteners, for textile fibres and paper, Solvent dyes, for wood staining and producing colored lacquers, solvent inks, coloring oils, waxes, Contrast dyes, injected for magnetic resonance imaging, are essentially the same as clothing dye except they are coupled to an agent that has strong paramagnetic properties.

- i) How dyes are classified?
- ii) Give two examples of Acid dye.
- iii) Which dye is used to dye cotton with dark colors?
- iv) Do dyes are used in magnetic resonance imaging?

SECTION D

(10 Marks)

Answer in about 400 words each

1. Paul Anastas, published a set of principles to guide the practice of green chemistry. The twelve principles address a range of ways to reduce the environmental and health impacts of chemical production, and also indicate research priorities for the development of green chemistry

technologies. The principles cover such concepts as: the design of processes to maximize the amount of raw material that ends up in the product; the use of renewable material feedstocks and energy sources; the use of safe, environmentally benign substances, including solvents, whenever possible; the design of energy efficient processes; avoiding the production of waste, which is viewed as the ideal form of waste management. The twelve principles of green chemistry are 1) Prevention. Preventing waste is better than treating or cleaning up waste after it is created. 2) Atom economy. Synthetic methods should try to maximize the incorporation of all materials used in the process into the final product. This means that less waste will be generated as a result. 3) Less hazardous chemical synthesis. Synthetic methods should avoid using or generating substances toxic to humans and/or the environment. 4) Designing safer chemicals. Chemical products should be designed to achieve their desired function while being as non-toxic as possible. 5) Safer solvents and auxiliaries. Auxiliary substances should be avoided wherever possible, and as non-hazardous as possible when they must be used. 6) Design for energy efficiency. Energy requirements should be minimized, and processes should be conducted at ambient temperature and pressure whenever possible. 7) Use of renewable feedstocks. Whenever it is practical to do so, renewable feedstocks or raw materials are preferable to non-renewable ones. 8) Reduce derivatives. Unnecessary generation of derivatives—such as the use of protecting groups—should be minimized or avoided if possible; such steps require additional reagents and may generate additional waste. 9) Catalysis. Catalytic reagents that can be used in small quantities to repeat a reaction are superior to stoichiometric reagents (ones that are consumed in a reaction). 10) Design for degradation. Chemical products should be designed so that they do not pollute the environment; when their function is complete, they should break down into non-harmful products. 11) Real-time analysis for pollution prevention. Analytical methodologies need to be further developed to permit real-time, in-process monitoring and control *before* hazardous substances form. 12) Inherently safer chemistry for accident prevention. Whenever possible, the

substances in a process, and the forms of those substances, should be chosen to minimize risks such as explosions, fires, and accidental releases.

Read the above following and answer the questions

- a) Who is the father of Green Chemistry? (1)
- b) How many principles have been published? (1)
- c) Mention the principles that are insisted in Green Chemistry. (4)
- d) What are the advantage of following the Principles of Green Chemistry ? (4)

2. Write a summary of the passage “ Green Chemistry”.

3. Source passage:

A dye is a colored substance that chemically bonds to the substrate to which it is being applied. This distinguishes dyes from pigments which do not chemically bind to the material they color. Dye is generally applied in an aqueous solution, and may require a mordant to improve the fastness of the dye on the fiber. Both dyes and pigments are colored, because they absorb only some wavelengths of visible light. Dyes are usually soluble in water whereas pigments are insoluble. Some dyes can be rendered insoluble with the addition of salt to produce a lake pigment. The majority of natural dyes are derived from non-animal sources: roots, berries, bark, leaves, wood, fungi and lichens. In the 21st century, most dyes are synthetic, i.e., are man-made from petrochemicals. The color of a dye is dependent upon the ability of the substance to absorb light within the visible region of the electromagnetic spectrum (380-750 nm). An earlier theory known as Witt theory stated that a colored dye had two components, a chromophore which imparts color by absorbing light in the visible region (some examples are nitro, azo, quinoid groups) and an auxochrome which serves to deepen the color. This theory has been superseded by modern electronic structure theory which states that the color in dyes is due to excitation of valence π -electrons by visible light. Dyes are classified according to their solubility and chemical properties.

- i) Choose a Group A and Group B, Let the Group A discuss the advantages of Natural dyes and Group B discuss the advantages of Artificial dyes.

Unit 2 - Persuasive Communication

SECTION A

(1 Mark)

Choose the correct answer

1. The ----- act protects the link between the author and his/her work.
a) copyright b) protection c) educational d) fundamental (Ans: a)
2. A communication strategy designed to convince consumers to buy a company's product is known as -----
a) Advertisement b) essay c) paragraph d) picture (Ans: a)
3. The arguments may take different flow and can lead to another view or thoughts in between is called -----
a) JAM activity b) debate c) group discussion d) communication (Ans: c)
4. The communication between two or three persons are called -----
a) dialogue b) comprehension c) writing d) spelling (Ans: a)
5. The Alchemist is referred as -----
a) job b) company c) novel d) reaction (Ans: c)
6. The ----- essay is a genre of writing that requires the student to investigate a topic , collect, generate and evaluate evidences and establish a position on the topic in a concise manner.
a) argumentative b) persuasive c) brief d) long (Ans: a)
7. The name *photosynthesis* is derived from the Greek word which means -----
a) light b) sound c) process d) making (Ans: a)

SECTION-B

(2 Marks)

Answer in about 50 words each

1. What is meant by product launch?
2. What is called JAM?
3. Define Advertisement.
4. What is persuasive communication?
5. List some of the persuasive techniques that a communicator adopts to succeed in his persuading act.
6. Write a slogan for a newly prepared chocolate?
7. What is an debate?

SECTION C

(4 Marks)

Answer in about 100 words each

1. What is persuasive communication?
2. List some of the persuasive techniques that a communicator practices during communication.
3. Write a creative slogan for a organic juice.
4. What is meant by advertising?
5. What is the difference between a group discussion and debate?
6. List some persuasive techniques a communicator should adopt .
7. Create an advertisement for a Teflon coated tawa using persuasive language.

SECTION D

(10 Marks)

Answer in about 400 words each

1, Answer these questions observed from this advertisement

Nescafé—the coffee with life in it!

- i). What does this advertisement shows?
- ii). How long it will take to prepare ?
- iii). From which this coffee is prepared?
- iv). What is the slogan shown in the advertisement?
- v) What is the word Aroma means?

2. Explain some types of Chemical reactions as a JAM activity.

3. Source passage: The Alchemist (Portuguese: O Alquimista) is a novel by Brazilian author Paulo Coelho which was first published in 1988. Originally written in Portuguese, it became a widely translated international bestseller. An allegorical novel, The Alchemist follows a young Andalusian shepherd in his journey to the pyramids of Egypt, after having a recurring dream of finding a treasure there.

An Andalusian shepherd boy named Santiago dreams of a treasure while in a ruined church. He consults a Gypsy fortune-teller about the meaning of the recurring dream. The woman interprets it as a prophecy, telling the boy that he will discover a treasure at the Egyptian pyramids.

After Santiago sets out, he meets an old king Melchizedek, or the king of Salem, who tells him to sell his sheep so as to travel to Egypt and accomplish his 'Personal Legend'. Early on his arrival in Africa, a man who claims to be able to take Santiago to the pyramids instead robs him of the money he had made from his flock. Santiago then has to work for a crystal merchant so to earn enough to get to the pyramids.

Along the way, the boy meets an Englishman who has come in search of an alchemist and continues his travels with his new companion. When they reach an oasis, Santiago meets and falls in love with an Arabian girl named Fatima, to whom he proposes marriage. She promises to marry him only after he completes his journey. Frustrated at first, he later learns that true love will not stop nor must one sacrifice one's destiny to it, since to do so robs it of truth.

The boy then encounters a wise alchemist, who teaches him to realize his true self. Together, they risk a journey through the territory of warring tribes, where Santiago is forced to demonstrate his oneness with "the soul of the world" by turning himself into a dust storm before he is allowed to proceed. When he begins digging within sight of the pyramids, he is robbed yet again, but accidentally learns from the leader of the thieves that the treasure he sought was all along in the ruined church where he had his original dream.

Coelho wrote *The Alchemist* in only two weeks in 1987. He explained that he was able to write at this pace because the story was "already written in [his] soul."

The book's main theme is about finding one's destiny, although according to The New York Times, *The Alchemist* is "more self-help than literature". The advice given to Santiago that "when you really want something to happen, the whole universe will conspire so that your wish comes true" is the core of the novel's philosophy and a motif that plays throughout it.

The Alchemist was first released by Rocco, an obscure Brazilian publishing house. Despite its having sold "well," the publisher after a year decided to give Coelho back the rights. Needing to

Identify the unknown words, learn them with their definitions :i)Alchemy, ii)Gypsy, iii)Other names of fortune-teller, iv) Prophecy, v)Novel.

(1 Mark)

Choose the right answer

- The creative use of ICT and digital media for the purpose of achieving goals related to work is called ----- competence.
a) digital b) communication c) data d) social (Ans: a)
- The DIGICOMP portal is an -----portal created under the project entitled Digital Competences for Teachers.
a) e learning b) activity c) speaking d) discussion (Ans: a)
- The probability questions answered in the interview should be ----- and confident reflecting optimistic nature.
a) positive b) negative c) irritating d) doubtful (Ans: a)
- A personal website or social media account where a person regularly posts short videos is called
a) vlog b) summary c) short video d) reels (Ans: a)

5. A website contains different _____.

- a) MS office b) Web pages c) pictoblox d) Python (Ans: b)

6. _____ is a process of reviewing, connecting and synthesizing ideas from lectures or reading.

- a) Role play b) Essay c) Note- making d) Interviewing (Ans: c)

7. Choose the right word for the glossary

A chemical element in its smallest form, made up of protons and neutrons .

- a) atom b) atomic mass c) nucleons d) photons (Ans: a)

8. _____ framework can help to monitor citizen's digital skills and to support curricula development.

- a) Digital Competence b) Curricula c) Competitive d) Auto learning (Ans: a)

9. Choose the perfect word for the following sentence

An exothermic reaction between an oxidant and a fuel.

- a) Dilution b) Crystallisation c) Combustion d) evaporation (Ans: c)

10. _____ is the ability to use information and communication technologies to find, evaluate, create, and communicate information, requiring both cognitive and technical skills.

- a) Digital literacy b) Knowledge c) Technology d) Role play (Ans: a)

SECTION B

(2 Marks)

Answer the following in about 50 words each

1. What is meant by digital competence?

2. What is called body language?

3. What is a web page?

4. Rearrange the words

Stiffness is strength advantage of greatest and composites The materials

5. Define Note making.
6. Write the meaning for the word Chemistry.
- 7.
- 8.

SECTION C

(4 Marks)

Answer the following in about 100 words each

1. What are the things to be kept in mind during interviews?
2. How to create a vlog?
3. Create a Web page for Chemistry.
4. Discuss the important rules to be followed while making notes.
5. Read the text and answer the questions.

Polymers are obtained through the chemical reaction of monomers. Monomers have the ability to react with another molecule from the same type or another type in the suitable condition to form the polymer chain. This process in nature has resulted to the formation of natural polymers, while the synthetic polymers are man-made. Both natural and synthetic polymers are remarkably involved in comfort and facilitation of human life and are responsible for life itself, for medication, nutrition, communication, transportation, irrigation, container, clothing, recording history, buildings, highways, etc. In fact, it is difficult to imagine human society without synthetic and natural polymers. In our ever-increasing technological world, science plays a crucial role in providing solutions to critical problems of food, clean and abundant water, air, energy, and health. The knowledge of polymers and related texts provide both the information and insights of their better understanding in our life. Synthetic and natural polymers could be used in the form of inorganic and organic polymers; coatings, elastomers, adhesives, blends, plastics, fibers, caulks, ceramics, and composites. polymer chemistry, more than any other research field, crosses over and cuts the traditional lines of all branches of chemistry, biology, physics, material, engineering, pharmacy, and even medicine.

1. How polymers are formed?
2. Write the role of polymers in our day to day life.
3. Discuss the role of science.
4. How natural and synthetic polymers are used?

6.

SECTION D

(10 Marks)

Answer any two in about 400 words each

1. Prepare the content of a vlog of your interest.
2. Discuss Chemistry. Assume the role of a student and a teacher.
3. Make notes from the following text.

Chemistry is a very important branch of science chemistry is the story of science that deals with the constituent of matters like atoms molecules ion etc and its properties structure or behavior and interaction among them since everything is made up of atoms and molecules Everybody can and should understand basic chemistry, but it may be important for you to have a course in chemistry or even make a career in it. Students wanting to become physicians, nurses, physicists, nutritionists, geologists, pharmacists, and (naturally) chemists, all study chemistry. we can see the chemistry all around us the chemistry has grown into a very diverse field there is a significant overlap between chemistry and another branch of science for example biochemistry relation between (chemistry and biology physical) chemistry relation between (chemistry and physics) medicinal chemistry relation between (medicine and chemistry) Chemical Engineering relation between (chemistry and engineering)

4. Write an essay on Digital Competence for Academic and Professional Life.
5. Write from the following passage: Nouns, Verbs, Adjectives and adverbs.

The radio, television. Light, fans, electric irons, mills, factories, and refrigerator-all work through the power of electricity. use of electricity. It has changed our life, society, and culture. Science has made our communication easy and short. On the seas, rivers, roads there are ships, launches, boats, trains, buses, cars, etc. These are all the gifts of science. Telegraph, telephone, fax, and wireless- are also some important means of communication. Trains, steamers airplane buses, etc make communication quick and easy.

Science has conquered diseases by inventing various medicines, x-ray, cardiograph, microscope end, etc, and relieving human suffering. Science has discovered many things for our recreation, we use Cinema, Television, Radio Tape recorder, V.C.R, etc for recreation. Our clothes and many other essential products like paper, pens, etc are possible to make only because of science now a day we can't think of human life without science. But we should use it wisely. Science discovers facts after conducting a series of experimentation and it tests the universal validity of the innovations. Science is interlinked with every field of one's life. Science has converted the world into a global village. Science is not limited to the sphere of the earth. It has studied the whole universe. Science has smoothened human life in every aspect. From communication to transportation, entertainment to education, science has helped human beings by innovating new machines.

Unit 4 - Creativity and Imagination

SECTION A

(1 Mark)

Choose the right answer

1. The aim of _____ is to educate, inform, entertain or present an argument.
 a) Oral presentation b) Role play c) Interviewing d) Speaking (Ans: a)
2. _____ are short productions that do not exceed thirty minutes.
 a) Oral presentation b) Role play c) Short film d) Speaking (Ans: c)
3. _____ part of essay must contain an attention grabber for the reader or at least make the essay sound.
 a) Introduction b) Body c) Conclusion d) References (Ans: a)
4. _____ should wrap all of your arguments and points.
 a) Introduction b) Body c) Conclusion d) References (Ans: c)
5. _____ is writing down the movements, actions, expression.
 a) Role play b) Dialogue c) speaking d) Script writing (Ans: d)
6. _____ are used as a platform for expressing the personal interests and talent
 a) Blogs b) Dialogue c) Stages d) Website (Ans: a)
7. _____ is called as an online diary.
 a) Blogs b) Dialogue c) Stages d) Website (Ans: a)
8. _____ are usually unfolded and single sheets.
 a) Website b) Web pages c) Flyers d) Brochures (Ans: c)

9. _____ contain folded pages or multiple sheets.

- a) Website b) Web pages c) Flyers d) Brochures (Ans: d)

10. _____ are short, catchy and easy to remember.

- a) Dialogue b) Slogans c) posters d) essay (Ans:b)

Section B

(2 Marks)

Answer the following in about 50 words each

1. Discuss the characteristics of a short film.
2. How important is an introduction to an essay?
3. Write an intro for photochemistry.
4. What is script writing?
5. What are the steps involved to make a slogan?
6. How will you create a blog?
7. What are the important components of an essay?
8. What is oral presentation?

Section C

(4 Marks)

Answer the following in about 100 words each

1. Write a script for science.
2. Design a flyer for environmental day celebration
3. Design a brochure for an instrument.
4. Create a poster for plastic awareness.
5. Write 4 slogans to create impact on environmental protection.
6. Create a slogan on Environment. Write the steps involved to create a slogan

Section D

Answer any two in about 400 words each

(10 Marks)

1. How will you create a short film on Environmental Chemistry.
2. Write an essay on application of glasses.
3. Design a marketing brochure for glass. Discuss the steps involved.
4. Design a poster for abrasives. Write the steps involved.

Unit – 5

Workplace Communication & Basics of Academic Writing

SECTION A

(1 Mark)

Choose the right answer

1. A _____ is essentially a letter containing some important information distributed to a large number of people.
a) Minutes b) circular c) Notes d) mail (Ans: b)
2. _____ is the written record of everything that's happened during a meeting.
a) Minutes b) circular c) Notes d) mail (Ans: a)
3. _____ is also known as a prolegomenon.
a) Note making b) circular c) Introduction d) Conclusion (Ans :c)
4. _____ is used for spacing, conventional signs.
a) Punctuation marks b) articles c) Prepositions d) Alphabets (Ans: a)
5. _____ helps to identify criminals by detecting chemical evidence left behind crime scene.
a) Police b) digitalist c) Detector d) Chemist (Ans: d)

6. _____ create a slideshow of valuable information through charts, and images for a presentation.
- a) Ms word b) Ms Powerpoint c) Ms Excel d) Paint (Ans: b)
7. _____ is the central subject in the study of environmental conservation.
- a) Chemistry b) Botany c) Zoology d) Maths (Ans: a)
8. _____ is vital to disambiguate the meaning of sentences.
- a) Vowels b) Punctuation c) articles d) prepositions (Ans : b)
9. The sharp _____ in meaning are produced by the simple differences in punctuation within the example pairs.
- a) differences b) resemblances c) spacing d) meaning (Ans: a)
10. _____ should gets the audience attention.
- a) Note making b) circular c) Introduction d) Conclusion (Ans : c)

Section B

(2 Marks)

Answer the following in about 50 words each

1. How Powerpoint will help for effective presentation?
2. What is a circular?
3. Create one slide for the Role of Chemist.
4. Write a circular for conducting the Chemistry Association Meet.
5. How a meeting Minutes will help for the academic life?
6. What are Meeting Minutes?
7. What is a Prelegomenon?
8. What is punctuation?

Section C

(4 Marks)

Answer the following in about 100 words each

1. Write the product description for the antibiotic.
2. Mention the important things to note for meeting Minutes.
3. Discuss the important parts of introduction.
4. Write some important punctuation marks.
5. Write an intro for chemistry.
6. Mention some important punctuation marks.

Section D

(10 Marks)

Answer any two in about 400 words each

1. Describe the important points for preparing the role of Chemist in various fields.
2. Write an essay on the topic paint.
3. Write an essay on the topic industrial Chemistry
4. Make punctuation in proper places

The chemical industries are not only concerned with the manufacture of pure chemicals but also with many kinds of industrial raw materials that are mixtures of substances. The raw materials of chemical industries are derived from various sources such as mines, forests, and sea, air, land, oil, gas, and brine wells.

The chemicals produced serve as essential raw materials for making thousands of articles, medicines, fertilizers, synthetic rubber, and fiber, plastics, explosives, etc. Chemicals are also used in many industries to improve or preserve the quality of nondurable and durable goods.

The chemical industry is comparatively a new addition to the manufacturing world. The prosperity of chemical industry in the national economy is the true reflection of the simultaneous development of the industries like engineering, metallurgy, and several other manufacturing activities.

ST. MARY'S COLLEGE (AUTONOMOUS) – Thoothukudi

I B.Sc. Chemistry

Allied Paper I Allied Biochemistry-II Sub. Code: 18UCBA21

Semester II

(For those who joined in July 2021 and after)

QuestionBank

UNIT – 1 Nutritional Biochemistry

SECTION A

(1 Mark)

Choose the correct answer

1. _____ is present in small fish.

- (a) Calcium (b) Potassium (c) Phosphorous (d) Nitrogen Ans: (a)

2. _____ are the products of fermentation of fruit juices.

- (a) Beer (b) Wines (c) Precipitae (d) Carbohydrates Ans: (b)

3. The carbohydrate of milk is _____.

- (a) Glucose (b) fructose (c) lactose (d) dehydrogenase Ans: (c)

4. _____ is richest in protein.

- (a) Vegetable (b) fruits (c) oat meal (d) ghee Ans: (c)

5. Large fish contains _____

- (a) Calcium (b) Potassium (c) Phosphorous (d) Nitrogen Ans: (c)

6. Potato contain

- (a) Fat (b) Protein (c) alcohol (d) starch Ans: (d)

7. Strong tea disturbs gastric digestion due to _____

- (a) Tartaric acid (b) Malic acid (c) Citric acid (d) Tannic acid Ans: (d)

8. The dried pulses are the good sources of vitamin _____
 (a) B (b) A (c) C (d) K Ans: (a)
- (b) _____ overload leads to complete heart block.
 (a) Ti (b) Mg (c) Ca (d) K Ans: (b)
10. _____ causes mental retardation in infants.
 (a) MSG (b) Tartrazine (c) Bile acid (d) Vitamin K Ans: (a)

SECTION B

(2 Marks)

Answer the following questions in about 50 words each

1. What is bioavailability?
2. What are protective foods?
3. How drugs are excreted?
4. What are energy foods?
5. What are body building foods?
6. What are the effects of phosphate depletion?
7. What are the symptoms of Magnesium overload?
8. What is iron malabsorption?
9. Write the composition of egg.
10. What are the constituents present in fish?

SECTION C

(5 Marks)

Answer the following questions in about 200 words each

1. Explain the constituents of a balanced diet.
2. Explain the effect of drugs on food intake, body weight and growth.
3. Explain the nutritive value of roots, green leafy vegetables and fruits.
4. Discuss the constituents of tea, coffee and alcohol.
5. Explain the effect of antacids and anticonvulsants.

SECTION D

(10 Marks)

Answer the following questions in about 400 words each

1. Explain the nutritive value of milk, egg, meat and cereals.
2. Discuss in detail about the effect of drugs on vitamin and minerals.
3. Discuss the important nutritive values present in pulses, nuts, fish, roots and tubers.
4. Explain bioavailability and absorption of drugs.
5. How drugs affect the bodyweight and growth?

Unit – 2 Cell Respiration and Biological Oxidation

SECTION A

(1 Mark)

Choose the correct answer

1. The breath down of food releases _____
(a) Molecules (b) Oxygen (c) Energy (d) H₂O Ans: (c)
2. In animals, energy is derived from _____
(a) Protein (b) Carbohydrates (c) Vitamin (d) All of the above Ans: (b)
3. As per Hydrogen activation theory, oxidations are catalyzed by _____ enzymes.
(a) Dehydrogenase (b) Oxidase (c) Reductase (d) Lipase Ans: (a)
4. Biological oxidation is the removal of _____
(a) Oxygen (b) Nitrogen (c) Hydrogen (d) Water Ans: (a)
5. For oxygen activation, _____ enzymes catalyze the reaction.
(a) Dehydrogenase (b) Oxidase (c) Reductase (d) Lipase Ans: (b)
6. In aerobic organisms, the ultimate electron acceptor is _____
(a) Oxygen (b) Nitrogen (c) Hydrogen (d) Water Ans: (a)
7. _____ is the major electron acceptor in biological oxidation.
(a) NADH (b) NAD (c) Oxygen (d) FAD Ans: (b)
8. _____ have essential function in electron transport.
(a) FAD (b) NAD (c) NADH (d) Cytochromes Ans: (d)
9. _____ are the major sites of biological oxidation.
(a) Cytochrome (b) Ribosome (c) Lysosome (d) Mitochondria Ans: (d)
10. _____ is described as power house of the cell.
(a) Cytochrome (b) Ribosome (c) Lysosome (d) Mitochondria Ans: (d)
11. _____ is responsible for synthesis of cellular components.
(a) Catabolic (b) Anabolic (c) Amphibolic (d) Central Ans: (b)
12. _____ Reaction requires free energy for electron transfer.
(a) Endergonic (b) Exergonic (c) Phosphorylation (d) Redox Ans: (a)
13. _____ Reaction releases free energy.
(a) Endergonic (b) Exergonic (c) Phosphorylation (d) Redox Ans: (b)
14. Biological oxidation is _____ process.
(a) Not complex (b) less efficient (c) direct (d) controlled Ans: (d)

15. In animals, oxygen enters by _____ from environment into the cells.

(a) Not complex (b) less efficient (c) direct (d) controlled Ans: (c)

SECTION B

(2 Marks)

Answer the following questions in about 50 words each

1. What is Biological oxidation?
2. Write about the two phases of respiration in animals.
3. Give any 2 salient features of biological oxidation.
4. What is dehydrogenation reaction?
5. What is oxygen activation theory?
6. What is hydrogen activation theory?
7. What are hydrogen acceptors? Give examples.
8. What are nicotinamide nucleotides?
9. What are flavin nucleotides?
10. What are cytochromes?
11. What is catabolic pathway?
12. What is anabolic pathway?
13. What is amphibolic pathway?
14. What is oxidative decarboxylation?
15. What is active acetaldehyde? How is formed in cells?
16. What is oxidative phosphorylation?
17. What are Rh blood groups?
18. What is Heme?
19. How will you find the blood group of an individual?
20. What is the composition of blood?

SECTION C

(5 Marks)

Answer the following questions in about 200 words each

1. Explain RBC.
2. Write a note on WBC.

3. What are Blood platelets? Give its important characteristics.
4. Write a note on plasma proteins.
5. Explain the classification Human blood.

SECTION D

(10 Marks)

Answer the following questions in about 400 words each

1. Describe the structure of Haemoglobin.
2. What are the alterations caused due to the variation in structure of Haemoglobin?
3. Describe the various components of Blood.
4. What is plasma protein? Explain its function?
5. What is Blood? Give the important functions of blood.

UNIT – 3

SECTION A

(1 Mark)

Choose the correct answer

1. _____ Complete the circulation of the body is 45 seconds.
(a) RBC (b) WBC (c) Platelets (d) Leukocyte Ans: (a)
2. _____ are chemical compounds produced by endocrine glands.
(a) Tissues (b) Oxygen (c) Blood (d) Hormones Ans: (d)
3. _____ Gland speeds up the heartbeat.
(a) Adrenal (b) Pituitary (c) Antidiuretic (d) Thyroid Ans: (a)
4. _____ Hormone is secreted at the base of the brain.
(a) Adrenal (b) Pituitary (c) Antidiuretic (d) Thyroid Ans: (c)
5. _____ Hormone controls the amount of water excreted by the kidney.
(a) Adrenal (b) Pituitary (c) Antidiuretic (d) Thyroid Ans: (c)
6. _____ neutralize the poisonous proteins given out by bacteria.
(a) RBC (b) WBC (c) Platelets (d) Antioxins Ans: (d)
7. RBC is also called _____
(a) Erythrocytes (b) Leukocytes (c) Thrombocytes (d) Plateocytes Ans: (a)
8. WBC is also called _____
(a) Erythrocytes (b) Leukocytes (c) Thrombocytes (d) Plateocytes Ans: (b)
9. Blood platelets are also called as _____
(a) Erythrocytes (b) Leukocytes (c) Thrombocytes (d) Plateocytes Ans: (c)
10. _____ play an important role in clotting of blood.
(a) Erythrocytes (b) Leukocytes (c) Thrombocytes (d) Plateocytes Ans: (c)
11. _____ blood group is not agglutinated by plasma of group A, B or AB
(a) A (b) B (c) O (d) AB Ans: (c)
12. _____ exerts higher osmotic pressure.
(a) Albumin (b) Globulin (c) Plasma (d) Tissues Ans: (a)
13. The chemical produced in the blood is _____
(a) Antacids (b) antitoxins (c) antidiuretic (d) antipyrolgesic Ans: (b)

SECTION B

(2 Marks)

Answer the following questions in about 50 words each

1. What is Erythrosis?
2. How erythrocytes alter their shape when passing through capillaries?
3. What is RBC?
4. What is WBC?
5. What are mast cells?
6. What are T-lymphocytes?
7. What are blood platelets?
8. What is plasma?
9. What is blood serum?
10. What is pseudo globulin?
11. What is true globulin?
12. What is albumin?
13. What are alpha globulins?
14. What are beta globulins?
15. What are Immune globulins?
16. What is Fibrinogen?
17. Which is an universal donor? Why?

SECTION C

(5 Marks)

Answer the following questions in about 200 words each

1. Explain the following nucleotides.
(a) Nicotinamide (b) Flavin
2. Explain the theories of Biological oxidation.
3. Explain the important hydrogen acceptors.
4. How mitochondria are important in all cell reactions?
5. Write about the energetics of biological oxidation.

SECTION D

(10 Marks)

Answer the following questions in about 400 words each

1. What is biological oxidation? Explain its salient feature.
2. What are hydrogen acceptors? How is important in biological oxidation?
3. Explain the process of oxidative decarboxylation.
4. Explain the process of oxidative phosphorylation.
5. Explain the pathway of biological oxidation.

UNIT – 4 Minerals

SECTION A

(1 Mark)

Choose the correct answer

1. _____ occurs due to demineralisation of bone.
(a) Osteoporosis (b) hypocalcaemia (c) rickets (d) Wilson's disease Ans: (a)
2. _____ is an important intracellular cation.
(a) Sodium (b) Potassium (c) Calcium (d) Chromium Ans: (b)
3. _____ enzyme requires potassium for its maximal activity.
(a) Catalytic dehydrogenase (b) lipase (c) pyruvate kinase (d) protease Ans: (c)
4. The best source of chromium is _____.
(a) Brewer's yeast (b) milk (c) butter (d) chocolate Ans: (a)
5. Excess of _____ causes chalky white patches in teeth.
(a) Sodium (b) fluorine (c) Calcium (d) Chromium Ans: (b)
6. Diminished sensitivity of taste occurs due to deficiency of _____.
(a) Sodium (b) Potassium (c) Calcium (d) Zinc Ans: (d)
7. Decrease in odour sensitivity is called _____.
(a) Hypogeusia (b) anaemia (c) Menkes kinky hair (d) hyposmia Ans: (d)
8. Vitamin _____ promotes the absorption of calcium.
(a) A (b) D (c) C (d) B Ans: (b)
9. _____ is an important extracellular cation.
(a) Sodium (b) Potassium (c) Calcium (d) Chromium Ans: (a)
10. Menkes disease is a rare disorder of _____ metabolism.
(a) Na (b) K (c) Cu (d) Mg Ans: (c)

SECTION B

(2 Marks)

Answer the following questions in about 50 words each

1. Define Minerals.
2. What are microelements?
3. What are macroelements?
4. Give the differences between hypercalcemia and hypocalcemia.

5. What is Osteoporosis?
6. List the sources of potassium.
7. What is Addison's disease?
8. What is Wilson's disease?
9. List the important functions of iodine.
10. How Iodine is excreted?
11. What is Respiratory acidosis?
12. How fluorine toxicity is caused?
13. What are the functions of zinc?
14. What are the symptoms of zinc deficiency?
15. Why Zinc present in plant foods are poorly absorbed?
16. What are the important sources of chromium?
17. Mention the symptoms of Chromium deficiency.
18. What are the functions of chromium?
19. What is anaemia?
20. What are the important functions of iron?

SECTION C

(5 Marks)

Answer the following questions in about 200 words each

1. Explain the important functions of iron.
2. Discuss the deficiencies of Calcium.
3. Explain the factors affecting the absorption of iron.
4. Why Iodine is important in our diet?
5. Why Minerals are essential for our body?

SECTION D

(10 Marks)

Answer the following questions in about 400 words each

1. Discuss the sources, deficiencies and the factors affecting the absorption of Calcium.
2. Write the sources, deficiencies and the factors affecting the absorption of Iron.

3. Explain the important functions, recommended dietary allowances of sodium.
4. Discuss the sources and functions of Potassium.
5. Discuss the sources and deficiencies of Zinc and Chromium.

UNIT – 5 Biochemical Techniques

SECTION A

(1 Mark)

Choose the correct answer

1. _____ is used to spin substances at high speed.
(a) Colorimeter (b) Oven (c) Centrifuge (d) Spectrometer Ans: (c)
2. The particles in centrifuge sediment under the influence of _____.
(a) Osmotic pressure (b) Pressure (c) Gravity (d) sedimentation Ans: (c)
3. Calomel electrode contains a saturated solution of _____.
(a) Mercury (b) Mercury chloride (c) KCl (d) NaCl Ans: (c)
4. Blood maintain a constant blood pH of _____.
(a) 6 (b) 3 (c) 13 (d) 7.4 Ans: (d)
5. The calomel electrode contains a saturated solution of _____.
(a) KCO_3 (b) KCl (c) KNO_3 (d) All the above Ans: (b)
6. The numerical aperture of a microscope is given by
(a) n (b) $n \cos \alpha$ (c) $n \sin \alpha$ (d) $n \sin \alpha \cos \alpha$ Ans: (c)
7. In _____ electron microscopy electrons bounce off the metal forming a shadowed surface.
(a) Transmission (b) powerful (c) wave (d) scanning Ans: (d)
8. _____ electrophoresis separation is carried out in the absence of supporting medium.
(a) Moving boundary (b) zone (c) solid (d) colloid Ans: (a)
9. _____ electrophoresis requires large volume of sample.
(a) Moving boundary (b) zone (c) solid (d) colloid Ans: (a)
10. _____ electrophoresis requires small volume of sample.
(a) Moving boundary (b) zone (c) solid (d) colloid Ans: (b)

11. _____ is fastest moving fraction of the protein of plasma in paper electrophoresis.

(a) Albumin (b) γ globulin (c) β globulin (d) α globulin Ans: (a)

12. _____ is slowest moving fraction of the protein of plasma in paper electrophoresis.

(a) Albumin (b) γ globulin (c) β globulin (d) α globulin Ans: (b)

SECTION B

(2 Marks)

Answer the following questions in about 50 words each

1. What is a centrifuge?
2. What are the two types of centrifugation techniques?
3. What is preparative centrifugation?
4. What is analytical centrifugation?
5. What are the uses of high speed centrifuge?
6. Give the composition of calomel electrode.
7. Give the composition of silver electrode.
8. What is a combined electrode?
9. What are the advantage and disadvantage of combined electrode?
10. Give the abbe's formula for resolution of microscope.

SECTION C

(5 Marks)

Answer the following questions in about 200 words each

1. Discuss pH meter with its principle.
2. Explain glass electrode with a neat diagram.
3. Compare optical and electron microscope.
4. Explain paper electrophoresis with a neat diagram.
5. Explain the two methods of Gel electrophoresis.

SECTION D

(10 Marks)

Answer the following questions in about 400 words each

1. What is centrifuge? Explain its types.
2. What is a combined electrode? Give its applications.
3. Explain optical microscope.
4. Discuss about electron microscope.
5. What is electrophoresis? Explain its types.

SEMESTER II			
Part III		ALLIED BIOCHEMISTRY –II	
Code: 21UCBA21	Hrs/Week : 4	Hrs/ Sem : 60	Credits : 3

UNIT – I NUTRITIONAL BIOCHEMISTRY

Nutritive value of Milk – Egg – Meat – Fish – Vegetable food (Cereals, Pulses, Nuts, Roots and Tubers, Green leafy vegetables) – Fruits – Tea – Coffee – Cocoa – Alcohol – Principles in balancing a diet - Bioavailability – absorption – effect of drugs on food intake, body weight, nutrient requirements and growth, vitamins and minerals – Energy yielding, Body building and Protective foods..

UNIT – II CELL RESPIRATION AND BIOLOGICAL OXIDATIONS

Introduction – Importance of Biological oxidation – Theories of biological oxidation : oxygen activation theory, hydrogen activation theory – Hydrogen acceptors – Nicotinamide nucleotide – Flavin nucleotide – Cytochrome – Sites – Pathways – Oxidative decarboxylation – Electron transport system – Oxidative Phosphorylation – Energetics of Biological oxidation.

UNIT – III BIOCHEMISTRY OF BLOOD

Introduction – Composition -Colour of Blood - Functions of Blood – (Homeostatic functions, Blood as transport system)- Red Blood Cells – White Blood Cells– Blood Platelets – Plasma – Plasma proteins – Albumin, Globulin (alpha, beta and gama), Fibrinogen – Functions of plasma proteins - Blood groups – Prevention of Blood Loss -Hemoglobin – Variation in structure Hemoglobin with reduced solubility, altered oxygen affinity.

UNIT - IV MINERALS

Introduction – Classification (Macro elements, Micro elements) –Functions, Distribution, Content level in blood , sources, Recommended Dietary allowances, Absorption and excretion, Factors affecting absorption, Deficiency Disease of Calcium, Phosphorous, Sodium, Potassium, Chlorine, Magnesium, Sulphur, Iron, Copper, Iodine, Fluorine, Zinc, Cobalt, Manganese, Chromium, Molybdenum, Selenium.

UNIT – V BIOCHEMICAL TECHNIQUES

Introduction –Cell Fractionation (Homogenization, Centrifugation) - Centrifuge – Principle, types – Hand Centrifuge, High Speed Centrifuge – pH meter – Principle, Electrodes

used, Applications – Microscopy: Optical and electron Microscope – comparison – Ion probe analysis – Electrophoresis – Paper electrophoresis, Gel electrophoresis –Applications.

Text Books:

1. Biochemistry – Dulsy Fatima, L.M. Narayanan, R.P. MeyyanPillai, K. Nallasingam, S. Prasanna Kumar and N. Arumugam
2. Nutritional Biochemistry –Patricia trueman, 2011, MJP publisher
3. Biochemistry- L.Veerakumari, 2010

Reference Books:

1. Concepts of Biochemistry – Dr. A.C. Deb
2. Biochemistry- C.B. Powar, G.R.Chatwal, 2002

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI

I BSc. Physics

Semester II

Allied Chemistry II

Sub. Code: 21UCHA22

Question Bank

(For those who joined from 2021 onwards)

UNIT I Metallurgy

Section A

(1 mark)

1. ----- is a process in which the ore is heated strongly in the absence of air
(a) roasting (b) smelting (c) calcinations (d) refining (Ans c)
2. Beach sands of Kerala and south TamilNadu contains
(a) pyrolusite (b) bauxite (c) haemitite (d) monazite (Ans d)
3. -----is an ore of Titanium
(a) Carnotite (b) Rutile (c) Thorite (d) Monazite (Ans b)
4. The reducing agent used in Kroll's process is
(a) Al (b) Mg (c) Ca (d) C (Ans b)
5. -----is used in the construction of air craft , marine equipments and chemical plants.
(a) Ti (b) W (c) Th (d) U (Ans a)
6. ----- used in the production of paints and pigments
(a) V_2O_5 (b) $Th(NO_3)_4$ (c) TiO_2 (d) $ThCl_4$ (Ans c)
7. ----- used as insecticides and fungicides.
(a) Ti (b) V (c) Th (d) W (Ans b)
8. In Van Arkel de Boer Method the pure metal is deposited on -----filament.
(a) W (b) Ti (c) V (d) Th (Ans a)
9. The slag formed in the blast furnace during the smelting of ore is ----
(a) Calcium carbonate (b) lime (c) ferrous silicate (d) calcium silicate (Ans d)
10. In Aluminothermic process ----- of metal oxide occurs.
(a) Reduction (b) oxidation (c) sulphonation (d) calcination (Ans a)
11. The Ion exchange method is used in the separation of -----
(a) Alkali metals (b) Halogens (c) lanthanides (d) alkaline earth metals (Ans c)
12. -----is used as smoke screens.
(a) V_2O_5 (b) $TiCl_4$ (c) $Th(NO)_3$ (d) ThI_2 (Ans a)

Section B**(2 marks)**

1. What are minerals and ores?
2. Mention any two types of ores with examples.
3. Write any two uses of Titanium.
4. Write down the preparation of TiCl_4
5. Write a note on purification of Titanium by van Arkel – de Boer method.
6. What is Kroll process?
7. Write the uses of V_2O_5 .
8. What is calcination?
9. What is roasting?
10. What is Marden and Rich method?

Section C**(5 marks)**

1. Write notes on i) zone refining ii) Kroll process.
2. Discuss the preparation and uses of the following compounds i) Titanium tetrachloride
ii) Vanadium pentoxide.
3. What are the differences between calcinations and roasting
4. Discuss the types of ores with suitable example
5. Explain Aluminothermic process.
6. Explain ion exchange method of purification of Lanthanides.
7. Write in detail about Muffle furnace and Electric furnace

Section D**(10 marks)**

1. Discuss the extraction properties and uses of Vanadium.
2. What are the ores of titanium? Discuss the metallurgy of Ti and its uses
3. Explain briefly the types of furnaces used in metallurgy.
4. Explain i) Kroll process ii) oxidative refining iii) electrolytic refining
5. Explain (i) Blast furnace (ii) Reverberatory furnace used in metallurgy

Unit-II Colloids and Emulsions

Section –A

(1 mark)

Choose the correct answer

1. The size of colloidal particle ranges from
(a) 10\AA - 1000\AA b) 1\AA - 10\AA
c) 10000\AA - 20000\AA d) 5000\AA - 20000\AA **(Ans a)**
2. Smoke is _____ dispersed in _____
(a) solid, liquid b) liquid, liquid
c) gas, gas d) solid, gas **(Ans d)**
3. The continuous zig-zag movement exhibited by colloidal particles is
a) Brownian movement b) Double layer movement
c) aggregation movement d) zero order movement **(Ans a)**
4. Helmholtz double layer is the combination of
a) -ve charge b) +ve charge
c) +ve and -ve charge d) neutral **(Ans c)**
5. _____ is used as reducing agent for the preparation of Au and Ag sols by chemical reduction method
a) hydrochloric acid b) tannic acid
c) oxalic acid d) sulphuric acid **(Ans b)**
6. Colloidal system containing a liquid dispersed in a solid is _____
a) sol b) aerosol c) gels d) emulsion **(Ans c)**
7. ----- is an example of an emulsifying agent
a) Soap b) NaOH c) Ca(OH)_2 d) NaCl **(Ans a)**
8. _____ is the most effective protective colloid
a) Saponin b) gum Arabic c) gelatin d) Starch **(Ans c)**
9. The phenomenon by which gels on standing expel spontaneously the liquid held by them and undergo shrinkage in volume is known as
a) Syneresis b) Thixotropy c) Imbibition d) precipitation **(Ans a)**
10. _____ is an example of water-in-oil emulsion is
a) salt water b) butter c) milk d) jam **(Ans b)**

Section B

(2marks)

Answer the following

1. What are colloids? Give example
2. What are emulsions? Give examples
3. Define Gold number.
4. What are protective colloids?
5. Define Hardy-Schulze law.
6. What are surfactants?
7. Define Thixotropy.
8. Define Imbibition
9. Define Syneresis
10. Write double decomposition method for the preparation of sol

Section C

(5 marks)

Answer the following questions

1. Compare lyophilic sol and lyophobic sol
2. Explain Bredig's arc method of preparation of sol
3. What are gels? Explain its preparation methods and properties
4. Explain briefly (i) Hardy Schulze law (ii) Gold number
5. Explain in detail the electrical property of colloids.

Section D

(10 marks)

Answer any the following

1. Explain (i) Tyndall effect (ii) Brownian movement
2. Discuss briefly the application of colloids in various fields.
3. Explain briefly optical, kinetic and electrical property of colloids.
4. Explain in detail (i) Emulsion (ii) Surfactants
5. Explain (i) mechanisms of action of soaps (ii) chemical methods of preparation of sols

UNIT III – SYNTHETIC REAGENTS AND SOME IMPORTANT ORGANIC COMPOUNDS

1. _____ is used as an antiknock in gasoline
a) Frankland reagent b) malaprade reagent c) Tetraethyllead d) Grignard reagent
(Ans c)
2. Diethyl zinc reacts with water to give
a) ethylene b) ethanol c) acetylene d) ethane
(Ans d)
3. Diethyl zinc reacts with formaldehyde to give
a) propanol b) ethanol c) butanol d) propane
(Ans a)
4. Methyl lithium reacts with formaldehyde to give
a) propanol b) ethanol c) butanol d) propane
(Ans b)
5. Which of the following has an active methylene group?
a) diethyl zinc b) methyl lithium c) tetra ethyl lead d) diethyl malonate
(Ans d)
6. Malonic ester on hydrolysis followed by heating gives
a) acetic acid b) butyric acid c) crotonic acid d) oxalic acid
(Ans a)
7. _____ is a sweetener suitable for diabetics.
a) Chloramine T b) Salicylic acid c) Saccharin d) Aspirin
(Ans c)
8. Acetyl salicylic acid is called
a) salol b) aspirin c) saccharin d) chloramine T
(Ans b)
9. _____ is used as an antiseptic for washing wounds and mouth.
a) salol b) saccharin c) aspirin d) chloramine T
(Ans d)
10. Nitration of phenol gives
a) o-nitro phenol b) m-nitro phenol c) p-nitro phenol d) picric acid
(Ans d)
11. _____ is used as an analgesic and an anti-pyretic
a) phenol b) aspirin c) saccharin d) chloramine T
(Ans b)

Section B**(2 marks)**

1. What are organometallic compounds? Give examples.
2. Write the preparation of diethyl zinc.
3. Define transmetalation reaction.
4. What is an active methylene group?
5. What is knoevenagal reaction?
6. How tetraethyl lead is prepared?
7. Write the preparation of salicylic acid.
8. Write the preparation of saccharin.
9. Give the uses of chloramine T.
10. Write the coupling reaction of phenol.

Section C**(5 marks)**

1. Give the reactions of methyl lithium with aldehydes.
2. Write the reactions of diethyl zinc.
3. Write the preparation and uses of tetra ethyl lead.
4. Write the preparation properties and uses of saccharin.
5. Explain the reactions of phenolic group of salicylic acid.
6. Give the preparation and uses of aspirin.

Section D**(10 marks)**

1. Write the synthesis and reactions of methyl lithium.
2. Write the synthesis and reactions of diethyl malonate.
3. Write the synthesis and reactions of Frankland reagent.
4. Explain the reactions of salicylic acid.
5. Give the preparation, properties and uses of chloramine T.

UNIT-IV SOLUTIONS

Section- A

(1 mark)

1. Mixing of components of an ideal solution involves

- a) decrease in entropy
- b) increase in entropy
- c) increase in volume
- d) decrease in enthalpy

(Ans b)

2. Addition of a more volatile component to the liquid mixture will increase the total pressure of the system according to

- a) Henry's law
- b) Distribution law
- c) Konovalov's law
- d) Raoult's law

(Ans c)

3. A quantitative relationship between the vapour pressure of a liquid and its concentration in solution was deduced by ____ law

- a) Raoult
- b) Nernst
- c) Konovalov
- d) Henry

(Ans a)

4. Non-ideal solutions show deviations from

- a) Henry's law
- b) Distribution law
- c) Konovalov's law
- d) Raoult's law

(Ans d)

5. The components of an ideal binary liquid system can be separated by

- a) fractional distillation
- b) azeotropic distillation
- c) zone distillation
- d) steam distillation

(Ans a)

6. CST measurement used to test the purity of phenol and other liquids partially miscible with water is known as

- a) Crismer test
- b) Lucas test
- c)Victormeyer test
- d) Schiff's test

(Ans a)

7. One among the following is an example of a system with both upper and lower CST

- a) Triethylamine-water
- b) phenol-water
- c) nicotine-water
- d) aniline-water

(Ans c)

8. In the fractional distillation of benzene and toluene _____ is present in the distillate

- a)benzene
- b)toluene
- c)water
- d)ethanol

(Ans a)

9. Constant boiling mixture is called _____

- a) isotopes
- b) azeotropes
- c)isomers
- d)critical solution

(Ans b)

10. Mixture of two immiscible liquids boils at _____ temperature than the two liquids
a) lower b) higher c) much higher d) same (Ans a)

11. Steam distillation is carried out for _____
a) benzene –toluene b) ethanol-water c) water- ether d) aniline-water
(Ans d)

Section- B

(2 marks)

1. Mention any four characteristics of ideal solution
2. Define Kononov's rule.
3. What is azeotropic distillation?
4. Define Raoult's law.
5. Define CST with suitable example.
6. What is azeotropic mixture?
7. What is critical solution temperature?
8. Give any two applications of steam distillation.
9. What are ideal solutions?
10. Draw the mole fraction – temperature curve for trimethylamine-water system.

Section C

(5 marks)

1. Define Raoult's law. Give the characteristic features of an ideal solution.
2. Sketch the boiling point-composition diagram for an ideal binary solution and discuss the theory of fractional distillation.
3. Discuss the principle of steam distillation.
4. What is critical solution temperature? Explain in detail a system with both upper and lower critical solution temperature.
5. Account on :a) azeotropic mixture b) azeotropic distillation

Section- D

(10 marks)

1. Discuss the boiling point and composition curves for an ideal binary solution and non-ideal binary solution.
2. Explain the theory of fractional distillation.
3. Discuss the theory of azeotropic distillation with water and ethanol.
4. Explain the boiling point composition curves with a maximum in azeotropic distillation
5. Explain the composition vapour pressure curves for non-ideal solutions

UNIT V ANALYTICAL CHEMISTRY

Section-A

(1mark)

1. Calculated and the true value for experimental data are 16.34 and 16.28. The relative error is
 a) 0.06. b) 3.69 c) 0.37 d) 0.0037 **(Ans d)**
2. The precision is expressed in terms of
 a) Standard deviation b) mean c) median d) mode **(Ans a)**
3. The mean and median for the set of data 16.40, 16.36, 16.26 and 16.34 are
 a) 16.36 and 16.35 b) 16.34 and 16.34 c) 16.35 and 16.34 d) 16.34 and 16.35
(Ans c)
4. Indeterminate errors are caused by
 a) Instabilities in power supplies during experimental observations
 b) Faulty procedure used
 c) wrong way of handling the instrument
 d) Use of defective instruments **(Ans a)**
5. _____ is the degree of agreement between the true value and observed value.
 a) precision b) accuracy c) mean d) median **(Ans b)**
6. Operative errors include
 a) defective instruments b) arithmetic mistakes
 c) impurities in the substance d) faulty procedure **(Ans b)**
7. Greater the error _____ will be the accuracy
 a) more b) equal c) zero d) lesser **(Ans d)**
8. Variation in temperature and pressure is an example for _____ error
 a) methodic b) personal c) random d) constant **(Ans c)**
9. Numerical difference between the observed value and the true value is called _____ error
 a) relative b) absolute c) constant d) additional **(Ans b)**
10. _____ is the closeness of the results in a series of same experiment
 a) precision b) accuracy c) mean d) median **(Ans a)**
11. Central value of the given data is called
 a) mean b) median c) mode d) mean deviation **(Ans b)**

Section- B

(2 marks)

1. Define median with an example?
2. Define accuracy
3. What is precision?
4. What is standard deviation?
5. What are indeterminate errors?
6. Define mode.
7. Write any four ways to reduce errors.
8. What is absolute error?
9. Define relative error.
10. What are determinate errors?

Section-C

(5 marks)

1. How are the determinate errors classified?
2. What are the sources of random errors?
3. How will you differentiate accuracy and precision?
4. What is meant by accuracy? How is it expressed? Write the means of improving accuracy.
5. Explain the terms i) mean ii) median iii) mode.

Section-D

(10 marks)

1. Discuss the various modes of minimization of error.
2. What is meant by precision? How will you express precision?
3. Explain the terms mean deviation and standard deviation?
4. From the following set of results, calculate mean value and standard deviation.
35.46, 35.49, 35.39, 35.47, 35.48.
5. What is significant figure? How numerical values are rounded off?

St. Mary's College (Autonomous), Thoothukudi - 628001
I B.Sc. Zoology - Semester II
Allied - Allied Chemistry - II Sub. Code: 21UCHA22
Question Bank
(for those who joined in July 2021 and after)

UNIT I Metallurgy
Section A

1. Beach sands of Kerala and south TamilNadu contains

- a) pyrolusite b) bauxite c) haemitite d) monazite (Ans:d)

2. Galena is an example of -----

- a) Oxide ores b) Carbonate ores c) Sulphide ores d) Silicate ores (Ans:c)

3. Beryl is an example of -----

- a) Oxide ores b) Carbonate ores c) Sulphide ores d) Silicate ores (Ans:d)

4. ----- is a process in which the ore is heated strongly in the absence of air.

- a) roasting b) smelting c) calcination d) refining (Ans:c)

5. Heating an ore in the absence of air below its melting point is called -----

- a) Leaching b) Roasting c) Smelting d) Calcination (Ans:d)

6. Roasting is done in the case of -----

- a) Oxide ores b) Carbonate ores c) Sulphide ores d) Silicate ores (Ans:c)

7. In Aluminothermic process ----- of metal oxide occurs.

- a) Reduction b) oxidation c) sulphonation d) calcination (Ans:a)

8. Thermite is -----

- a) a mixture of the ore and Mg powder b) the molten metal obtained as end product
c) a mixture of the ore and Al powder d) a mixture of the ore and Zn dust (Ans:c)

9. The substance which is added to an ore in order to remove impurities during smelting is called -

- a) Slag b) Flux c) Gangue d) catalyst (Ans:b)

10.The impurities associated with a mineral are collectively known as -----

- a) flux b) gangue c) ore d) Slag (Ans:b)

11.The slag formed during the smelting of ore to remove acidic impurities is ----

- a)Calcium carbonate b) lime c) ferrous silicate d) calcium silicate (Ans:d)

12.In electrolytic refining ---

- a) Impure metal is made anode b) Impure metal is made cathode
c) Pure metal is made anode d) pure metal is made cathode (Ans:a)

13.The Ion exchange method is used in the separation of -----

- a)Alkali metals b) Halogens c) lanthanides d) alkaline earth metals (Ans:c)

14.Zone refining process is used for -----

- a) Concentration of an ore b) Reduction of a metal oxide
c) Purification of metal d) Purification of an ore (Ans:c)

15.The reducing agent used in Kroll's process is -----

- a)Al b) Mg c) Ca d) C (Ans:b)

16.In Van Arkel de Boer Method the pure metal is deposited on -----filament.

- a)W b) Ti c) V d)Th (Ans:a)

17.-----is an ore of Titanium

- a)Carnotite b) Rutile c) Thorite d) Monazite (Ans:b)

18.-----is used in the construction of air craft , marine equipments and chemical plants.

- a)Ti b) W c) Th d) U (Ans:a)

19.----- used in the production of paints and pigments

- a)V₂O₅ b) Th(NO₃)₄ c) TiO₂ d) ThCl₄ (Ans:c)

20.-----is an ore of Vanadium.

- a)Carnotite b) Rutile c) Thorite d) Monazite (Ans:a)

21.----- used as insecticides and fungicides.

a)Ti b) V c) Th d) W

(Ans:b)

Section B

(2 Marks)

Answer the questions in 50 words each.

1. Define the term metallurgy.
2. What are minerals and ores?
3. Mention any two types of ores with examples.
4. What is calcination?
5. What is roasting?
6. What do you mean by smelting in metallurgy?
7. Define the term flux.
8. What is Kroll process?
9. What is meant by Kilns?
10. Write a note on purification of Titanium by van Arkel – de Boer method.
11. Mention the ores of Titanium.
12. Write any two uses of Titanium.
13. Mention the ores of Vanadium.
14. Write down the preparation of TiCl_4
15. Write down the preparation of V_2O_5 .

Section C

(6 Marks)

Answer the questions in 200 words each.

1. Discuss the types of ores with suitable example
2. What are the differences between calcinations and roasting
3. Explain the process of Smelting.
4. Explain Aluminothermic process.
5. Explain Electrolytic refining.
6. Explain ion exchange method of purification of Lanthanides.
7. Write notes on i) zone refining ii) Kroll process.
8. Write in detail about Muffle furnace
9. Write in detail about Electric furnace

10. Discuss the preparation of the following compounds i) Titanium tetrachloride ii) Vanadium pentoxide.

Section D (10 Marks)

Answer the questions in 400 words each.

- 1.Explain the following terms i) smelting ii) flux iii) slag iv) calcination
- 2.Explain i)Kroll process ii)oxidative refining iii) electrolytic refining
- 3.Explain briefly the types of furnaces used in metallurgy.
- 4.Explain (i) Blast furnace (ii) Reverberatory furnace used in metallurgy
- 5.What are the ores of titanium? Discuss the metallurgy of Ti and its uses
- 6.Discuss the extraction properties and uses of Vanadium.

Unit-II Colloids and Emulsions

Section –A

(1 mark)

Choose the correct answer

1. The particle size of colloids ranges from _____
a) 10-1000m b) 10-1000Å c) 10-1000cm d) 10-1000mm (Ans: b)
2. In Shaving cream the dispersed phase is -----
a) Gas b) liquid c) solid d) gel (Ans: a)
3. In cheese the dispersed phase is liquid and the dispersion medium is -----
a) Liquid b) solid c) gas d) dust (Ans: b)
4. An example of Lyophobic sols is -----
a) Starch b) gum c) protein in water d) sulphur in water (Ans: d)
5. The illuminated beam or cone formed by the scattering of light by the sol particles is referred as ----- cone.
a) Brownian b) Tyndall c) Helmholtz d) Stern (Ans: b)
6. The continuous rapid zig-zag movement executed by a colloidal particle in the dispersion medium is called -----
a) Stern double layer b) Tyndall effect c) Helmholtz layer d) Brownian movement (Ans: d)

7.Helmholtz double layer is the combination of -----

a)–ve charge b) + ve charge c) +ve and –ve charge d) neutral (Ans: c)

8.Coagulation can be effected by -----

a) heating b) shaking c) passing radiation d) all of these (Ans: d)

9.The protective power of a colloid is expressed by ----- number

a)avagadro b)oxidation c)gold d)colloidal (Ans:c)

10._____ is the most effective protective colloid

a) Saponin b) gum Arabic c) gelatin d) Starch (Ans: c)

11.Colloidal system containing a liquid dispersed in a solid is _____

a) gels b) aerosol c) sol d) emulsion (Ans: a)

12.Agar-agar gel is an example of ----- gel.

a)Elastic b) non elastic c) thixotropic d) irreversible (Ans: a)

13.The phenomenon by which gels on standing expel spontaneously the liquid held by them and undergo shrinkage in volume is knowmn as -----

a) Syneresis b) Thixotropy c) Imbibition d) precipitation (Ans: a)

14.An example for oil-in-water emulsion is -----

a) salt water (b) butter (c) milk (d) animal fat (Ans: c)

15.----- is an example of an emulsifying agent

a)Soap(b) NaOH (c) CaOH (d) NaCl (Ans: a)

Section B

(2marks)

Answer the questions in 50 words each.

1.What are colloids? Give example

2.Give any two examples of colloidal systems.

3.What is meant by Lyophillic sols? Give an example.

4.What is called Brownian Movement?

5.Write double decomposition method for the preparation of sol

- 6.What is meant by Coagulation?
- 7.Define Hardy-Schulze law.
- 8.What are protective colloids?
- 9.Define Gold number.
- 10.What is called Elastic gel?
- 11.What is called Thixotropic gel?
- 12.Define Imbibition
- 13.Define Syneresis
- 14.Define Thixotropy.
- 15.What are emulsions? Give examples
- 16.What are surfactants?

Section C

(6 marks)

Answer the questions in 200 words each.

- 1.Compare lyophilic sol and lyophobic sol
- 2.Explain Bredig's arc method of preparation of sol
- 3.Explain Tyndall effect.
- 4.Explain Brownian Movement.
- 5.Explain briefly (i) Hardy Schulze law (ii) Gold number
- 6.What are protective colloids? Explain gold number.
- 7.What are gels? How are they prepared?
- 8.Enumerate the properties of gels.
- 9.What are emulsions? Explain briefly the types of emulsion, emulsifiers and its action.
- 10.What are surfactants? Explain briefly the types of surfactants and its action.

Section D

(10 marks)

Answer the questions in 400 words each.

- 1.Explain (i) Tyndall effect (ii) Brownian movement
- 2.Explain briefly optical, kinetic and electrical property of colloids.
- 3.What are gels? How are they prepared and mention its properties.

4.Explain in detail (i) Emulsion (ii) Surfactants

5.Discuss briefly the application of colloids in various fields.

UNIT III – SYNTHETIC REAGENTS AND SOME IMPORTANT ORGANIC COMPOUNDS

Section –A

(1 mark)

Choose the correct answer

1. Diethyl zinc reacts with water to give -----
a)ethylene b)ethanol c)acetylene d)ethane **(Ans d)**
2. Diethyl zinc reacts with formaldehyde to give
a)propanol b)ethanol c)butanol d)propane **(Ans a)**
3. Methyl lithium reacts with formaldehyde to give
a)propanol b)ethanol c)butanol d)propane **(Ans b)**
4. _____ is used as an antiknock in gasoline
a)Frankland reagent b)malaprade reagent c) Tetraethyllead d)Grignard reagent
(Ans c)
5. Malonic ester on hydrolysis followed by heating gives -----
a)acetic acid b)butyric acid c) crotonic acid d)oxalic acid **(Ans a)**
6. _____ is a sweetener suitable for diabetics.
a)Chloramine T b)Salicylic acid c)Saccharin d)Aspirin **(Ans c)**
7. ----- is used for making Azo dyes.
a)Chloramine T b)Salicylic acid c)Saccharin d)Aspirin **(Ans b)**
8. Acetyl salicylic acid is called -----
a)salol b)aspirin c)saccharin d)chloramine T **(Ans b)**
9. _____ is used as an antiseptic for washing wounds and mouth.
a)salol b) saccharin c) aspirin d)chloramine T **(Ans d)**
10. _____ is used as an analgesic and an anti-pyretic
a)phenol b)aspirin c)saccharin d)chloramine T **(Ans b)**

Section B

(2marks)

Answer the questions in 50 words each.

1. Write the preparation of diethyl zinc.
2. What happens when methyl lithium reacts with carboxylic acid?

3. How diethyl malonate is prepared?
4. What happens when dimethyl malonate reacts with urea?
5. What is meant by Active methylene group?
6. How tetraethyl lead is prepared?
7. Write the preparation of saccharin.
8. Give the uses of chloramine T
9. Write the preparation of salicylic acid.
10. How is Aspirin prepared?

Section C

(6 marks)

Answer the questions in 200 words each.

1. Give the reactions of methyl lithium with aldehydes.
2. Write the reactions of diethyl zinc.
3. Write the preparation and uses of tetra ethyl lead.
4. Write the preparation properties and uses of saccharin.
5. Explain the reactions of phenolic group of salicylic acid.
6. Give the preparation and uses of aspirin.

Section D

(10 marks)

Answer the questions in 400 words each.

1. Write the synthesis and reactions of methyl lithium.
2. Write the synthesis and reactions of diethyl malonate.
3. Write the synthesis and reactions of Frankland reagent.
4. Explain the reactions of salicylic acid.
5. Give the preparation, properties and uses of chloramine T.

UNIT IV ALKALOIDS AND TERPENOIDS

Section –A

(1 mark)

Choose the correct answer

1. -----alkaloid is present in Hemlock seeds.

a) Coniine b)Nicotine c)Quinine d)Papavarine (Ans:a)

2. The source of nicotine is -----

a) black pepper b) Poppy seeds c)Tobacco leaves d)Hemlock seeds (Ans:c)

3. Alkaloids are generally -----

- a) Nitrogenous compounds b) Basic in nature
c) Physiologically active substances d) All of these are correct. (Ans:d)

4. The alkaloid responsible for the particular taste of black pepper is -----

- a) Coniine b) Papaverine c) Piperine d) Chavicine (Ans:c)

5. Hemlock alkaloid which was responsible for the forced death of great philosopher Socrates, contains -----

- a) Strychnine b) Opium c) Coniine d) Nicotine (Ans:c)

6. Terpenes occur in -----

- a) mineral water b) edible oil c) petroleum d) essential oil (Ans: d)

7. Which of the following is not a character of terpenoids?

- a) They are pleasant smelling liquids b) They are steam volatile
c) They are nitrogenous bases d) They are insoluble in water (Ans:c)

8) Ingold's isoprene rule states that in terpenoids isoprene units are joined -----

- a) Head to tail b) Head to head c) Tail to tail d) In a random order (Ans:a)

9. Which of the following is not the product of ozonolysis on citral?

- a) acetone b) levulaldehyde c) glyoxal d) oxalic acid (Ans:d)

10. The terpenoid present in oil of lemon grass is -----

- a) Citral b) Geraniol c) Nerol d) α - Terpineol (Ans:a)

11. Citral when heated with KHSO_4 forms?

- a) Isoprene b) p - cymene c) p - menthane d) dipentene (Ans:b)

Section B

(2marks)

Answer the questions in 50 words each.

1. What do you mean by an alkaloid?

2. How hydroxyl group can be detected?
3. How methoxy group can be estimated?
4. What is Hoffmann exhaustive methylation?
5. How will you convert nicotine into nicotinic acid?
6. What is meant by a terpene?
7. What are essential oils?
8. What are Isoprenoids?
9. How will you show that citral has an α, β unsaturated aldehyde group?
10. What happens when Citral undergoes Ozonolysis?
11. What happens when Menthol undergoes reduction with HI?

Section C

(6 marks)

Answer the questions in 200 words each.

1. Discuss the classification of alkaloids.
2. Exhaustive methylation has been an important tool in the study of the structure of alkaloids. Justify the statement by giving an example.
3. Discuss the structure of coniine.
4. Give the synthesis of nicotine.
5. What are terpenoids? How are they classified?
6. Write a note on isoprene rule.
7. How functional nature of oxygen is determined in terpenoids?
8. Give the synthesis of citral.

Section D

(10 marks)

Answer the questions in 400 words each.

1. What are alkaloids ? Taking nicotine as an example show how is the structure of an alkaloid determined?
2. Discuss the constitution of Nicotine.
3. Give an outline of the procedure adopted for structure elucidation of terpenoids.
4. Give an account of the analytical and synthetic evidence to elucidate the structure of citral.
5. Discuss the structure of Menthol.

UNIT V NANOCHEMISTRY

Section –A

(1 mark)

Choose the correct answer

1. The size of the nanoparticles is in the range of -----
 a) 1 – 1000 nm b) 1 – 500 nm c) 1 – 200 nm d) 1 – 100 nm (Ans:d)
2. The structure of nanomaterials in two-dimensional network is called -----
 a) nanoparticle b) nanofilms c) nanowire d) quantum dot (Ans:b)
3. The size of the quantum dot is in the range of -----
 a) 1-1000nm b) 1-10nm c) 1-200nm d) 1-100nm (Ans:b)
4. A nanometer scale is -----
 a) 1×10^{-9} nm b) 1×10^{-9} cm c) 1×10^{-9} m d) 1×10^{-9} mm (Ans:c)
5. One of the following nanoparticles acts as a semiconductor -----
 a) CdSe b) MgO c) CaO d) Al_2O_3 (Ans:a)
6. For the preparation of nanomaterials, polyvinyl pyrrolidone (PVP) is used as a -----
 a) reducing agent b) reactant c) capping agent d) solvent (Ans:c)
7. ----- is a ultrathin carbon fibre with nanometer size diameter and micrometer size length.
 a) carbon nanotube b) nano fibre c) nanorod d) nano dot (Ans:a)
8. CNTs are used to replace in transistors
 a) Si b) Pb c) Fe d) Cu (Ans:c)

9. CdSe behaves as -----

- a) Insulators b) Semiconductors c) Conductors d) super conductor (Ans:b)

10. The following nanomaterial is used in cosmetics -----

- a) Fe_2O_3 b) CuO c) ZnO d) Al_2O_3 (Ans:c)

Section B

(2marks)

Answer the questions in 50 words each.

1. What are nanoparticles?
2. Differentiate nanoparticles and nanowire.
3. Differentiate nanowire and quantum dot.
4. Differentiate Van der Waals clusters and Metal clusters.
5. What are CNTs?
6. Define SWNT.
7. What is nanoceramics?
8. What is SWNT and MWNT?

Section C

(6 marks)

Answer the questions in 200 words each.

1. Write notes on nanoparticles of metals.
2. Write notes on nanoparticles of semiconductors.
3. Write notes on Nanoceramics.
4. Write short notes on sol-gel method of synthesis of nano sized compounds
5. How nano sized compounds are synthesized by reduction method.
6. What are carbon nanotubes.

Section D

(10 marks)

Answer the questions in 400 words each.

1. Write notes on nanoparticles of metals, semiconductors and oxides.
2. How nano sized compounds are synthesized ?
3. What are carbon nanotubes? Explain its types.
4. Discuss the application of nanomaterials in various fields

SEMESTER II			
Part III		ALLIED CHEMISTRY -II	
Code: 21UCHA21	Hrs/Week :4	Hrs/ Sem : 60	Credits : 3

UNIT I METALLURGY

Ores and Minerals- types of ores – methods of ore dressing- roasting –calcination, reduction of metal oxide by aluminium (aluminothermic process)-smelting- flux and slag -purification by electrolysis and ion exchange method - oxidative refining- zone refining- Kroll process - van Arkel de Boer method- types of furnaces – kilns – blast – reverberatory- muffle and electric furnace. Extraction, properties and uses of titanium and vanadium. Preparation of Titanium tetrachloride and Vanadium pentoxide

UNIT II COLLOIDS AND EMULSIONS

Definition- Classification of Colloids –comparison of lyophilic and lyophobic colloids- Preparation of sols-Dispersion method (Bredig's Arc method) –Aggregation method(oxidation , reduction,double decomposition)-Properties – Optical(Tyndall effect) – kinetic(Brownian movement)Electrical (electrical double layer) – Coagulation of colloids – Hardy Schulze law – protective colloids – gold number – Gels – classification, preparation properties(imbibition,synerisis and thixotropy). Emulsion – types and their distinction.Emulsifiers – surfactants– applications of colloids-food, medicine, thixotropic paints, clarification of municipal water, formation of delta.

UNIT III SYNTHETIC REAGENTS AND SOME IMPORTANT ORGANIC COMPOUNDS

Synthetic reagents-preparation, properties of ethyl zinc-methyl lithium-diethyl malonate and tetra ethyl lead (TEL)

Preparation and properties and uses of Saccharin- chloramines -T-Salicylic acid -Aspirin.

UNIT IV ALKALOIDS AND TERPENOIDS

Alkaloids-Definition-General methods of structure determination- Hoffmann's exhaustive methylation with coniine as example- structure and synthesis of coniine and nicotine

Terpenes-Definition-classification-examples-isoprene rule-general methods of structure determination- structure and synthesis of citral and menthol.

UNIT V NANOCHEMISTRY

Nanoparticles – Definition – Types– nanoparticles of metals, semiconductors and oxides – Synthesis of nano sized compounds – reduction methods, sol-gel method– nanoclusters – nanorod- nano wire and uses . Carbon nanotubes – single walled nanotube- multiwalled nanotube. Application of nanochemistry in various fields.

4. Jain, M.K. and S.C.Sharma, Modern Organic chemistry. Vishal Publishing Co. 2012.

St. Mary's College (Autonomous), Thoothukudi.
I B.Sc. / B.A / B.Com / BBA
Semester II
Ability Enhancement Course Environmental Studies Sub. Code: 21UAEV21
Question Bank
(For Those Who Joined in 2021 And After)

UNIT I Environment and Ecosystem

Section A

1. -----is used to show the many feeding relationships in an ecosystem.
a) Food web b) Nutrient cycling diagram c) Food chains d) Trophic levels (Ans: a)
2. In an ecosystem, pyramid of _____ is always upright.
a) Number b) Biomass c) Energy d) Food (Ans: c)
3. Animals which feed on plants are called as _____.
a) Carnivores b) Herbivores c) Omnivores d) Decomposer (Ans: b)
4. The sequence of the eaters being eaten is called _____.
a) Food web b) Food chain c) Energy flow d) Ecological pyramid (Ans: b)
5. The word ecosystem concept was first put forth by _____.
a) E.P. Odum b) A.G. Tansley c) G. Smith d) N. Woodberg (Ans: b)
6. One among the following is an example of secondary consumers.
a) Lion b) Tiger c) Goat d) Fox (Ans: d)
7. One among the following requires maximum energy.
a) Secondary consumer b) Decomposer
c) Primary consumer d) Primary producer (Ans: d)
8. Lithosphere refers to _____.
a) Water b) Ozone c) Air d) Rock (Ans: d)

9. In an ecosystem, the energy flow is always -----.

- a) In any direction
- b) Always directing down
- c) Always unidirectional
- d) Always bidirectional (Ans: c)

10. The following food chain is -----.

dead animals → blowfly maggot → maggots → frog → snake

- a) Detrital food chain
- b) Grazing food chain
- c) Predator food chain
- d) Primary producer (Ans: a)

11. Food chain always starts with -----.

- a) Photosynthesis
- b) Respiration
- c) Nitrogen fixation
- d) Decay (Ans: a)

12. One of the food chain directly depends on solar radiations.

- a) Predator
- b) Detritus
- c) Grazing
- d) Decay (Ans: c)

13. The lowest layer of atmosphere is called as _____.

- a) Stratosphere
- b) Troposphere
- c) Thermosphere
- d) Mesosphere (Ans: b)

14. The solid component of earth is called _____.

- a) Ecosystem
- b) Exosphere
- c) Lithosphere
- d) Hydrosphere (Ans: c)

15. In pond ecosystem the shape of pyramid of number is -----.

- a) Linear
- b) Irregular
- c) Upright
- d) Inverted (Ans: c)

16. Graphic representation of biomass relationship between the producers and consumers in an ecosystem is called -----.

- a) Trophic level
- b) Ecological system
- c) Ecological niche
- d) Ecological pyramid (Ans: d)

17. One among the following is not a factor of the abiotic environment.

- a) Sunlight
- b) Decomposers
- c) water
- d) Temperature (Ans: b)

18. One among the following is an autotrophic component of a pond.

- a) Fungi
- b) Fishes
- c) water
- d) Submerged plants (Ans: d)

19. Organisms which breakdown dead or waste matter in to simpler substances is termed as

- a) Producers
- b) Consumers
- c) Decomposer
- d) Scavengers (Ans: c)

20. “The pyramid of energy is always upright” states that

- a) The energy conversion efficiency of herbivores is better than carnivores

- b) The energy conversion efficiency of carnivores is better than herbivores
- c) Producers have the lowest energy conversion efficiency
- d) Energy conversion efficiency is the same in all trophic levels (Ans : a)

Section B

1. Enumerate the aims of environmental studies.
2. Differentiate ecocide and ecoterrorism.
3. Highlight any two aims of environmental education.
4. Mention the different layers of atmosphere.
5. Differentiate thermosphere and exosphere.
6. What are the main structural components of an ecosystem.
7. Sketch neatly the food chain in a pond ecosystem.
8. Mention the significance of food web.
9. What is an ecological pyramid? Mention its types.

Section C

1. Discuss the aims of environmental studies .
2. What is the need for environmental studies?
3. List out the disturbances caused to Mother Earth.
4. Explain environmental education.
5. Explain the term "Ecosystem".
6. Brief out the structure of an ecosystem.
7. Distinguish between predator and parasitic food chains.
8. What are detritivores?
9. Explain the energy flows in an ecosystem.
10. Discuss the inverted pyramid ecosystem.

Section D

1. Explain the important components of environment.
2. Discuss on food chain and food web.
3. Write a note on ecological pyramid.
4. What is Ecosystem? Explain its structural components.

UNIT II Natural Resources

Section A

1. In fresh water, the salt content is less than _____.
a) 0.1% b) 0.2% c) 0.4% d) 1.5% (Ans: b)
2. World Water Day is celebrated on _____.
a) January 20 b) February 22 c) March 22 d) Sep 10 (Ans: c)
3. Percolation pit method is suitable for _____.
a) Sandy soil b) Alluvial soil c) Clayey soil d) gravelly soil (Ans: d)
4. About _____ of the world's land surface is covered with forests.
a) water b) land c) forests d) air (Ans: c)
5. Tropical rain forests in India occur in _____.
a) Assam b) Kerala c) Karnataka d) Tamil Nadu (Ans: a)
6. _____ refers to cutting of trees for timber and firewood.
a) Telling b) Felling c) Swelling d) Precipitation (Ans: b)
7. _____ energy is the best source of renewable energy to the world.
a) Chemical b) Nuclear c) Electrical d) Solar (Ans: d)
8. In solar cells two layers of _____ are used.
a) Silicon b) aluminium c) copper d) Steel (Ans: a)
9. The pioneer in generating electricity by using windmills is _____.
a) China b) Denmark c) Switzerland d) New York (Ans: b)
10. _____ in Tamilnadu has the highest concentration of windmills in Asia and it ranks third in the world.
a) Coimbatore b) Muppandal c) Tirunelveli d) Tiruppur (Ans: b)

Section B

1. Define natural resources.
2. Write briefly about the types of natural resources with examples.
3. How does the forest benefits human?
4. What are the four advantages of rainwater harvesting?
5. Define fossil fuels.
6. Write down some necessary steps to conserve forest.
7. How can we control fire accidents in forest?
8. What is a windmill and how does it work?
9. What is the difference between oil and crude oil?

Section C

1. Discuss natural resources and different types of natural resources?
2. Discuss water resources and illustrate the different methods of water conservation?
3. Explain the various methods of rain water harvesting?
4. Describe the importance of forest resources?
5. Briefly explain the steps in conservation of forests?

6. Illustrate the different types of energy resources?
7. Explain the role of individuals in conservation of forests?

Section D

1. Discuss the importance of rain water harvesting.
2. Enumerate the importance of forests to mankind.
3. Explain the importance of conservation of forest and methods adopted for the conservation.
4. Deliberate the energy resources available around us.
5. Summarize the responsibility of individuals in the conservation of natural resources.

UNIT III Environmental Pollution

Section A

1. One among the following is a secondary pollutant.
 a) Carbon monoxide b) Smog c) Carbon dioxide d) Fly ash (Ans: b)
2. Acid rain is mainly a mixture of -----.
 a) sulphuric acid and nitric acid b) hexane and methane
 c) acetic acid and bromine d) ascorbic acid and citric acid (Ans: a)
3. Major cause of acid rain is _____.
 a) sulphur dioxide b) calcium dioxide c) copper dioxide d) potassium dioxide (Ans: a)
4. CO₂ increases leads to _____.
 a) global warming b) ozone depletion c) silicosis d) ecoterrorism (Ans: a)
5. Minamata disease in Japan is due to _____ poisoning.
 a) lead b) zinc c) mercury d) arsenic (Ans: c)
6. Ozone layer is affected by excess release of _____ into the atmosphere.
 a) sulphur di oxide b) nitrogen
 c) chlorine d) chlorofluorocarbon (Ans: d)
7. Heavy loss of crop plants is caused by _____.
 a) smoke b) fog c) smog d) ozone (Ans: c)
8. Release of more CO₂ in the atmosphere leads to _____.
 a) green house effect b) acid rain c) cancer d) flood (Ans: a)
9. Burning of plastic causes _____.
 a) fever b) cancer c) skin disease d) ulcer (Ans: b)

10. Which of the following is a water borne disease?

- a) Cholera b) Leprosy c) Dengue d) Tuberculosis (Ans:a)

11. The process of decaying coconut husk to get fibre making coir is called -----.

- a) spinning b) retting c) reeling d) fermentation (Ans:b)

Section B

1. What are called pollutants?
2. How pollutants are classified on the basis of physical properties?
3. What are the sources of noise pollution?
4. What is recycling?
5. Define eutrophication.
6. Mention some of the common water pollutants.
7. Mention some of the impact of noise on man.
8. What is global warming?

Section C

1. Explain the causes of air pollution.
2. Explain how to control water pollution.
3. Discuss the effects of plastic pollution.
4. Explain the types of air pollutants.
5. Briefly discuss the ecological effects of water pollution.
6. Give in detail about global warming.

Section D

1. Elucidate the ecological effects of Air Pollution.
2. Analyze the causes and control of water pollution.
3. Briefly discuss plastic pollution.
4. Explain in detail the noise pollution
5. Explain global warming and climate change.

UNIT IV Human Population and Environment

Section A

1. _____ in cities creates an ecological imbalance which leads to severe environmental crisis and short fall of resources.

- a) Unemployment b) Malnutrition c) Pollution d) Overpopulation (Ans: d)

2. _____ is the major source that emits sulphur dioxide.
a) Industrial wastes b) automobiles c) Refrigerators d) Mines (Ans: b)
3. Destruction of ecological balance by the willful activities of man is called _____.
a) Eco suicide b) Eco terrorism c) Eco destruction d) Écocide (Ans: b)
4. According to the 2018 census, the population of India is over _____ million.
a) 1257 b) 1345 c) 1337 d) 1357 (Ans: d)
5. Ozone depletion causes _____.
a) Allergies b) Skin cancer c) Respiratory diseases d) Heart disease (Ans: b)
6. _____ causes minamata disease.
a) Radiation b) Acid rain c) Mercury d) SO₂ (Ans: c)
7. Over exploitation of natural resources occurs due to _____.
a) Deforestation b) Pollution c) Population explosion d) natural calamities (Ans: c)
8. The release of _____ results in greenhouse effect.
a) Sulphur dioxide b) Carbon dioxide c) Methane d) Mercury (Ans: b)
9. Construction of dams, protecting river banks and making percolation pits in houses are done as a measure for _____.
a) Saving ozone b) Clean water c) afforestation d) rain water harvesting (Ans: d)
10. NIOH is constituted in _____.
a) Maharashtra b) Ahmedabad c) New Delhi d) Jaipur (Ans: b)

Section B

1. What is population explosion?
2. List three measures taken by the government of India to reduce over population.
3. What is acid rain?
4. What is population explosion?
5. List the ways for conserving the environment by the involvement of population.
6. Differentiate deforestation and afforestation.
7. What is clean technology?
8. What is silicosis?
9. List the prevalent occupational diseases in India.
10. List four environmental pollutants on man.

Section C

1. State the difference between immigration and emigration
2. What are the policies for women development?
3. What is the problem related to population explosion?
4. List out the scheme for child welfare.
5. Enumerate the term population explosion
6. Explain in detail about the family welfare program.
7. List out the common violence among women

Section D

- 1.Explain briefly about the measures adopted by the government to control population growth.
2. Discuss about the environmental effects on human health.
3. What is the role played by the population in conservation of environment?
4. Explain the various policies and programmes for women and child development.
5. What are the problems related to population Explosion?
6. Explain briefly on human rights.

UNIT V Disaster Management

Section A

- 1.River flood is caused by the_____ of rivers.
 a) overflowing b) over rains c) over waves d) over air (Ans:a.)
- 2._____is a period of abnormally dry weather.
 a) drought b) flood c) earth quake d) cyclones (Ans: a.)
- 3.An _____is a sudden shaking of the earth.
 a) earthquake b) disaster c) cyclones d) landslides (Ans : a)
- 4.The term tsunami comes from the _____ word meaning “Harbour Wave”.
 a) Japanese b) Latin c) Greek d) English (Ans.a)

- 5.The point of origin of earthquake inside the earth is called_____
- a) epicenter b) hypocenter c) Richter d) tsunami (Ans.a.)
- 6.The study of earthquake is called_____
- a) seismograph b) seismology c) metrological d) cyclone (Ans:b)
- 7._____is the intrusion of seawater.
- a) river flood b) coastal flood c) urban flood d) ice jams (Ans:b)
- 8.Hydrological drought occurs when surface and subsurface water supplies are below _____.
- a) abnormal b) normal c) physical d) ethical (Ans :a)
- 9.The cyclone moves 300 to ____ in a day.
- a) 400 b) 500 c) 600 d) 1000 (Ans :b)
- 10.In December 26th _____ Indian Ocean Tsunami killed approximately 2,30,210 people.
- a) 2004 b) 2006 c) 2008 d) 2012 (Ans.a)

Section B

1. What is called disaster?
2. Explain types of flood?
3. List out four damages caused by flood.
4. What is called drought?
5. What is called earthquake?
6. What is called Richter scale?
7. What is called cyclones?
8. What is called tsunami?
9. What is called socio economic drought?
10. What is drought management?

Section C

1. Write the protective steps to be taken in flood.
2. Explain Do's and Don'ts during earthquake.
3. What is Richter? and explain Richter Scale.
4. Write a brief note on cyclones.
5. Explain the destruction caused by cyclones.
6. List out the causes and prevention of landslide in detail.
7. What is Tsunami? Write its causes, effects and prevention.

Section D

1. Explain in detail about the types of flood and its causes, damage & precautions to be followed.
2. Elaborate the Do's and Don'ts of Earthquake.
3. Name the four types of droughts and explain about the causes and impact of it.
4. Elucidate about cyclones and destruction caused by it.
5. List out the main causes of landslides and its precautions.
6. Explain about Tsunami and the causes, effects & prevention.

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI

II B.Sc. Chemistry

Semester III

Core

Physical Chemistry

Sub. Code: 21UCHC31

Question bank

Unit I Surface Chemistry

Section A

(1mark)

Choose the correct answer

1. The substance on whose surface adsorption takes place is called -----.
a) adsorption b) adsorbent c) adsorbate d) active substance **(Ans: b)**
2. The multilayer adsorption of gases on solids is explained by _____ equation.
a) Freundlich b) Langmuir c) BET d) None of the above **(Ans: c)**
3. A catalyst
a) changes the free energy change of a reaction
b) is included in the balanced chemical equation of a reaction
c) changes the mechanism for a reaction
d) slows down the rate of a reaction **(Ans c)**
4. A promoter is a substance which
a) lowers the kinetic energy of reactants
b) lowers the activation energy of reaction
c) enhances the activity of catalyst
d) enhances the concentration of catalyst **(Ans c)**
5. At high pressure Langmuir adsorption isotherm follows _____ kinetics.
a) zero b) first c) second d) third **(Ans a)**
6. Catalyst used in the combination of nitrogen and hydrogen to form ammonia is -----.
a) Pt b) Fe c) Ni d) MnO_2 **(Ans b)**
7. Glucose is converted to ethanol by ----- enzyme
a) Invertase b) Zymase c) Urease d) Amylase **(Ans b)**
8. Addition of _____ makes amylase catalytically very active.
a) Na^+ b) Mn^{2+} c) CO^+ d) Cu^{2+} **(Ans a)**
9. _____ promotes the activity of iron catalyst in Haber synthesis.
a) Pt b) Ni c) Mo d) Mn **(Ans c)**
10. Platinum catalyst used in the oxidation of sulphur dioxide is poisoned by -----.

- a) As_2O_3 d) ZnO c) Al_2O_3 d) MnO_2 (Ans a)
11. An intermediate compound formed in the chamber process of sulphuric acid is -----.
- a) MnO_3 b) SO_2 c) NO_2 d) AlCl_3 (Ans c)
12. Adsorbent used in decolouring sugar solution is -----.
- a) Silica gel b) Platinum c) Animal charcoal d) Alumina (Ans c)

Section B

(2 marks)

Answer all the questions

1. What are promoters?
2. Define negative catalysts.
3. What are adsorption isotherms?
4. How a negative catalyst poisons a catalyst?
5. Why heterogeneous catalysis is called as contact catalysis?
6. Why the hydrolysis of ester is an autocatalysis reaction?
7. How platinum catalyst is poisoned by carbon monoxide?
8. Give two examples for enzyme catalysis.
9. Name some species which can act as acid catalysts.
10. What is photocatalysis.

Section C

(5 marks)

Answer all the questions

1. List out the differences between physisorption and chemisorption.
2. Explain in detail Freundlich adsorption isotherm.
3. Mention any three applications of adsorption.
4. Give the postulates and explain BET adsorption isotherm.
5. What are the general characteristics of catalytic reactions?
6. List out the characteristics of enzyme catalysis.
7. Write the mechanism of enzyme catalysts.

Section D

(10 marks)

Answer all the questions

1. Derive and explain the Langmuir adsorption isotherm. Mention its limitations
2. Explain i) promoters ii) catalytic poison iii) negative catalyst
3. Explain the theories of catalysis.
4. Illustrate the mechanism of homogenous catalysis and hydrogenation of ethylene in the presence of nickel.

5. Derive Michaelis – Menton equation.

6. Explain acid – base catalysis.

Unit II Gaseous State

Section A

(1 Mark)

Choose the correct answer

- As the temperature increases, velocity of the molecules -----.
a) increases
b) decreases
c) remain the same
d) increases and then decreases (Ans a)
- At constant temperature, volume of a gas is inversely proportional to pressure according to ----
a) Boyle's law
b) Charles law
c) Avogadro's law
d) Dalton's law of diffusion (Ans a)
- At constant pressure, volume of a gas is directly proportional to temperature according to ---.
a) Boyle's law
b) Charles law
c) Avogadro's law
d) Dalton's law of diffusion (Ans b)
- According to Graham's law of diffusion, the rate of diffusion of a gas is inversely proportional to -----.
a) \sqrt{P}
b) $\sqrt{1/P}$
c) P^2
d) P^3 (Ans b)
- The velocity possessed by majority of the molecules in the system is called -----.
a) most probable velocity
b) root mean square velocity
c) average velocity
d) maximum velocity (Ans a)
- According to Maxwell's law of distribution of molecular velocities, the number of molecules having very low or very high velocity will be -----.
a) high
b) low
c) zero
d) infinity (Ans b)
- The magnitude of most probable velocity increases with -----.
a) temperature
b) volume
c) pressure
d) molecular weight (Ans a)
- Kinetic energy of the gas molecules is directly proportional to -----.
a) v
b) v^2
c) p
d) p^2 (Ans b)
- At constant temperature, the mean kinetic energy per molecule of any gas is ----.

- a) zero b) infinity c) high d) low **(Ans a)**

10. One among the following is not a type of molecular velocity.

- a) most probable velocity b) root mean square velocity
c) average velocity d) minimum velocity **(Ans d)**

11. The closest distance between the centre of two molecules taking part in collision is -----.

- a) collision diameter b) collision number
c) collision frequency d) mean free path **(Ans a)**

12. Collision diameter is denoted by the symbol -----.

- a) ρ b) η c) Z d) σ **(Ans d)**

13. The number of collisions experienced by a single molecule occurring per unit time, per unit volume of the gas is -----.

- a) collision diameter b) collision number
c) collision frequency d) mean free path **(Ans c)**

14. The total number of collisions experienced by all the molecules per unit time, per unit volume of the gas is -----.

- a) collision diameter b) collision number
c) collision frequency d) mean free path **(Ans b)**

15. The average distance travelled by a gas molecule between two successive collision is -----.

- a) collision diameter b) collision number
c) collision frequency d) mean free path **(Ans d)**

16. Mathematically, boyle's law can be represented as -----.

- a) $V \propto 1/P$ b) $V=k/P$ c) $VP = k$ d) all of these **(Ans d)**

17. Smaller the collision diameter, the mean free path will be -----.

- a) larger b) smaller c) average d) equal **(Ans a)**

18. The total pressure of a mixture of gases is equal to the sum of the partial pressures of all gases present is given by -----.

- a) Graham's law of diffusion b) Dalton's law of partial pressures
c) Avagodrao's law d) none of these **(Ans b)**

Section B

Answer all the questions

(2marks)

1. Define collision diameter.
2. Explain collision frequency.
3. What is collision number?
4. Define mean free path
5. What is RMS velocity?
6. Define average velocity.
7. Define Most Probable velocity.
8. Give the relation between different types of molecular velocities.
9. Calculate the RMS velocity of O_2 at $0^\circ C$.
10. For O_2 gas at $25^\circ C$ and 1atm pressure, calculate the mean free path. The collision diameter of O_2 molecule is 3.61 \AA
11. State Avogadro's law.

Section C

(5 Marks)

Answer all the questions

1. Enumerate the postulates of the Kinetic theory of gases and the justification for the postulates.
2. Explain the different types of molecular velocities and explain the effect of temperature on the distribution of molecular velocities.
3. Calculate the RMS, average velocity and most probable velocity of hydrogen gas at $0^\circ C$
4. Explain the following

i) collision diameter	ii) collision frequency
iii) collision number	iv) mean free path
5. Explain Andrew's isotherm of carbondioxide.

Section D

Answer all the questions

(10 marks)

1. Derive the kinetic gas equation.
2. Derive the following gas laws from the kinetic gas equation

i) Boyle's law	ii) Charles law
ii) Avogadro's law	iv) Ideal gas equation
v) Dalton's law of partial pressure	
3. Derive Maxwell's distribution of molecular velocities.
4. Explain the deviation of a gas from ideal behaviour and compressibility factor.
5. Derive Van der Waal's equation and give its limitations.

UNIT III COLLOIDS

Section – A

Choose the correct answer

1. The size of the colloidal particle ranges from -----.
a) 1-10A° b) 20-50 A° c) 10-1000 A° d) 1-100 A° **(Ans:c)**
2. Colloidal system in which both the dispersed phase and dispersion medium are liquids are called as -----.
a) emulsions b) sols c) aerosols d) gels **(Ans:a)**
3. Water loving colloids are known as -----.
a) Hydrophilic b) Hydrophobic c) Lyophilic d) Lyophobic **(Ans:c)**
4. Gold number is the index for -----.
a) Protective colloid b) Metallic gold c) Troplated gold d) Purity of gold **(Ans:a)**
5. Thixotropy is a property of -----.
a) emulsion b) sol c) aerosol d) gel **(Ans:d)**
6. An emulsion is a colloidal system which consists of -----.
a) two solids b) two liquids c) two gases d) one liquid and one gas **(Ans:b)**
7. Gold number is minimum in the case of -----.
a) gelatin b) egg albumin c) gum Arabic d) starch **(Ans:a)**
8. Colloidal systems containing a liquid dispersed in a solid is -----.
a) gel b) sol c)emulsion d) aerosol **(Ans:a)**
9. silicic acid is an example of _____ gel
a)elastic gel b)Non elastic gel c) thixotropic d)reversible **(Ans:b)**
- 10.An emulsifier among the following is -----.
a) soaps b) milk c) butter d)starch **(Ans:a)**

Section – B

(2 marks)

1. What is Hofmeister series?
2. What are protective colloids?
3. What is gold number?

4. What are gels?
5. What is imbibition?
6. What are emulsions?
7. Differentiate O/W and W/O type of emulsions.
8. Define emulsifiers.
9. Define surfactants.
10. Mention any one application of colloids in day to day life.

Section C (5 marks)

Answer the following

1. What are sols? How are they classified?
2. Define coagulation of colloids? Explain the various method of coagulation
3. What are emulsions? Explain the types of emulsions
4. Write short notes on: i) Hardy – Schulze law ii) Surfactants iii) Gold number
5. Explain the optical property of colloids.
6. Explain the electrical property of colloids.
7. Explain the kinetic property of colloids.
8. Differentiate emulsifiers and surfactants.

Section D (10 marks)

Answer the following

1. Explain the optical and electrical property of colloids.
2. What are gels? Mention the preparation and properties of gels.
3. How are colloids prepared by dispersion method and aggregation method.
4. Write short notes on i) Hardy Schulze law ii) Hoffmeister series iii) gold number
5. Enumerate the applications of colloids in day to day life.

UNIT IV SOLUTIONS

Section- A (1 mark)

- Mixing of components of an ideal solution involves -----.
a) decrease in entropy
b) increase in entropy
c) increase in volume
d) decrease in enthalpy (Ans b)
- Addition of a more volatile component to the liquid mixture will increase the total pressure of the system according to -----.
a) Henry's law
b) Distribution law
c) Konovalov's law
d) Raoult's law (Ans c)
- A quantitative relationship between the vapour pressure of a liquid and its concentration in solution was deduced by -----.
a) Raoult
b) Nernst
c) Konovalov
d) Henry (Ans a)
- Non-ideal solutions show deviations from
a) Henry's law
b) Distribution law
c) Konovalov's law
d) Raoult's law (Ans d)
- The components of an ideal binary liquid system can be separated by -----.
a) fractional distillation
b) azeotropic distillation
c) zone distillation
d) steam distillation (Ans a)
- CST measurement used to test the purity of phenol and other liquids partially miscible with water is known as -----.
a) Crismer test
b) Lucas test
c)Victormeyer test
d) Schiff's test (Ans a)
- One among the following is an example of a system with both upper and lower CST
a) Triethylamine-water
b) phenol-water
c) nicotine-water
d) aniline-water (Ans c)
- The distribution law is valid only when -----.
a) temperature is constant
b)solvents are miscible
c) solution is concentrate
d) solute reacts with solvent (Ans a)
- Constant boiling mixture is called _____.
a) isotopes
b) azeotropes
c)isomers
d)critical solution (Ans b)
- Mixture of two immiscible liquids boils at _____ temperature than the two liquids
a)lower
b)higher
c)much higher
d) same (Ans a)
- Steam distillation is carried out for _____.
a) benzene –toluene
b)ethanol-water
c) water- ether
d) anilne-water (Ans d)

Section- B**(2 marks)**

1. Mention any four characteristics of ideal solution.
2. What is azeotropic distillation?
3. Define CST with suitable example.
4. What is crismar test?
5. Give any two applications of steam distillation.
6. State Nernst distribution law.
7. Enumerate any four conditions for distribution law.
8. What is the use of distribution indicators?
9. List any two limitations of distribution law.
10. Draw the mole fraction – temperature curve for trimethylamine-water system

Section C**(5 marks)**

1. State and explain Nernst distribution law.
2. Explain solvent extraction process on the basis of Nernst Distribution law.
3. Sketch the boiling point-composition diagram for an ideal binary solution and discuss the theory of fractional distillation.
4. What is CST? Discuss the principle of steam distillation .
5. What is critical solution temperature? Explain in detail a system with both upper and lower critical solution temperature.
6. Account on a) azeotropic mixture b) azeotropic distillation
7. State Nernst distribution law. How is it modified when the solute undergoes association in one of the liquids in the solution?

Section- D**(10 marks)**

1. Discuss the boiling point and composition curves for an ideal binary solution and non-ideal binary solution.
2. Explain the theory of fractional distillation and steam distillation.
3. Derive distribution law and on the basis of it explain the principle of solvent extraction process.
4. Derive Nernst Distribution law and enumerate the conditions and limitations of the law.
5. Discuss the applications of Nernst distribution law.

Unit-V
Chemical Equilibrium
Section-A (1 mark)

1. A chemical system is at equilibrium
 - a) when the rate of the forward reaction becomes zero
 - b) when the rates of the forward reaction and the reverse reaction are equal
 - c) when all of the reactants have been used up
 - d) when the rates of the forward reaction and the reverse reaction are both zero

(Ans b)
2. One of the following represent equilibrium constants.
 - a) weak acid or weak base dissociation constant
 - b) K_c for a reaction
 - c) concentration of a strong acid in water
 - d) (a) and (b) represent equilibrium constants

(Ans d)
3. One among the following is true if the equilibrium constant for a reaction is large.
 - a) very little product is formed
 - b) very little reactant remains at equilibrium
 - c) the reaction goes to completion
 - d) large quantities of reactants will remain at equilibrium

(Ans b)
4. One of the following will change the equilibrium constant for a reaction mixture.
 - a) changing temperature
 - b) adding an inert gas
 - c) increasing pressure by decreasing volume
 - d) all of these

(Ans a)
5. A reaction is at equilibrium. What happens to the value of the equilibrium constant if an additional quantity of reactant is added to the reaction mixture?
 - a) the equilibrium constant is shifted to favour production of more reactant
 - b) the equilibrium constant is shifted to favour production of more product
 - c) the equilibrium constant is increased

d) the equilibrium constant stays the same **(Ans d)**

6. What effect does a catalyst have on the equilibrium position of a reaction?

- a) a catalyst favours the formation of products
- b) a catalyst favours the formation of reactants
- c) a catalyst does not change the equilibrium position of a reaction
- d) a catalyst may favour reactants or product formation, depending upon the direction in which the reaction is written **(Ans c)**

7. For the endothermic reaction $\text{CaCO}_3(\text{s}) \rightarrow \text{CaO}(\text{s}) + \text{CO}_2(\text{g})$, one of the following actions would favour shifting the equilibrium position to form more CO_2 gas.

- a) decreasing the system temperature
- b) both decreasing the system temperature and increasing the system pressure
- c) increasing the system pressure
- d) increasing the system temperature **(Ans d)**

8. Consider the following exothermic reaction : $\text{N}_2(\text{g}) + 3\text{H}_2(\text{g}) \rightleftharpoons 2\text{NH}_3(\text{g})$

One among the following changes would not increase the amount of NH_3 produced from given quantities of N_2 and H_2

- a) decrease in V
- b) increase in P
- c) remove some NH_3 and re-establish equilibrium
- d) increase in T **(Ans d)**

9. One among the following statements dealing with equilibria is incorrect.

- a) catalysts have no effect on the value of the equilibrium constant
- b) the vapour pressure of liquid can be expressed as an equilibrium constant.
- c) at equilibrium in a reversible reaction, the rate of the forward reaction is equal to the rate of the reverse reaction
- d) K_p and K_c are numerically equal if a reversible reaction involves only gases **(Ans d)**

10. Equilibrium reactions are characterized by -----.

- a) proceeding to completion
- b) being non-spontaneous
- c) both a and b
- d) the presence of both reactants and products in a definite proportion **(Ans d)**

Section B (2marks)

1. State Le Chaterlier's principle.
2. Differentiate reversible and irreversible reactions.
3. State law of mass action.
4. Mention the factors affecting equilibrium.
5. Write an equation for heterogeneous equilibrium.
6. What is the effect of pressure on an equilibrium?
7. What is meant by K_c and K_p ?
8. Define equilibrium constant.
9. Explain the dehydration of copper sulphate pentahydrate by applying law of mass action.
- 10 write any two characteristic features of a chemical equilibrium.

Section C (5 marks)

1. Explain the characteristics of chemical equilibrium.
2. Relate K_p and K_c When $\Delta n=0,1$ and 2 .
3. Discuss the law of chemical equilibrium for the synthesis of ammonia.
4. Explain the characteristics of equilibrium constant.
5. Write a note on equilibrium law.

Section D (10 marks)

1. Citing examples state and explain Le Chatelier's principle.
2. State law of mass action and explain the applications to formation of ammonia and dissociation of CaCO_3 .
3. Define equilibrium constant and explain its characteristics.
4. Explain law of mass action based on molecular collision theory.

ST. MARYS COLLEGE (AUTONOMOUS), THOOTHUKUDI

II B.Sc. BOTANY

Allied Chemistry - I

Sub Code: 21UCHA31

Question Bank

Semester: I

November 2022

(for those who joined in July 2021 after)

Unit – I

Atomic Structure and Chemical Bonding

Section-A

Choose the correct answer

(1 mark)

1.The value of n represents -----

- a) The shape of orbitals b) The size of the orbit
c) Angular momentum of an electron d) Spin of an electron **(Ans:b)**

2. Which orbitals has the following quantum numbers ? $n = 2$ $l = 0$ and $m = 0$

- a) $2s$ b) $2p_x$ c) $2p_y$ d) $2p_z$ (Ans:a)

3. Azimuthal Quantum number “ l ” represent the -----

- a) Energy of orbitals b) Radius of orbitals
c) Shape of orbitals d) Directional behavior **(Ans:c)**

4. How many d-orbitals are oriented along the axis ?

- a)5 b)4 c) 3 d)2 **(Ans:a)**

5. As per Aufbau principle the energy of 3p, 3d, 4s, 4p orbitals are such that

- a) $3p > 3d < 4s < 4p$ b) $3p < 4s < 3d < 4p$ c) $3p < 3d < 4s < 4p$ d) $3d < 3p < 4s < 4p$ **(Ans:c)**

6.London forces are -----

- a) Strong forces b) Weak forces c) Very weak forces d) Very strong forces **(Ans:c)**

7.H-atoms are held together to form H₂ molecule by -----

- a)Hydrogen bond b)Covalent bond c) Ionic bond d)Dative bond **(Ans:b)**

8. Which among the following bonds has maximum bond strength?

- a) Sigma bond b)Pi-bond c)Coordinate bond d)hydrogen bond **(Ans:a)**

9. Which bond is formed When two electron clouds overlap along their axis?

- a)Pi-bond b)Sigma bond c)Coordinate bond d)Ionic bond **(Ans:b)**

10. Germanium doped with Arsenic atoms is an example of -----

- a) p-type semiconductor b) n-type semiconductor c) Conductor d) Insulator **(Ans:b)**

Section-B

(2marks)

Answer all the questions

1. State Pauli's exclusion principle.
2. Define MO theory.
3. What is hydrogen bonding?
4. What are London forces?
5. Define Aufbau principle.
6. What is lattice energy?
7. Define bond order.
8. Define Quantum numbers.
9. Explain metallic bond.
10. Define lattice energy.
11. Write any two differences between bonding MO and antibonding MO.

Section-C

(5marks)

Answer all the questions

1. What are the four quantum numbers? How are they related to each other?
2. How is lattice energy calculated using Born-Haber cycle?
3. What are the differences between bonding molecular orbital and antibonding molecular orbital?
4. Draw the molecular orbital diagram of oxygen and explain why oxygen molecule is paramagnetic.
5. Draw the M.O diagram of N_2 and calculate its bond order.
6. Explain types and effects of Hydrogen bonding.

Section-D

(10marks)

Answer all the questions

1. Explain the Quantum numbers and their significance.
2. Discuss MO theory of bonding.
3. Discuss the MO configuration of N_2 and O_2 .

4. What are semiconductors Discuss band theory of metallic bonding.
5. What is hydrogen bonding? What are the difference types of hydrogen bonding and explain them.

UNIT II BASIC CONCEPTS IN ORGANIC CHEMISTRY

Section- A

Choose the correct answer

(1 mark)

1. sp^3 Hybridization is possible in ---- molecule.

- a) methane b) ethylene c) acetylene d) ethane (Ans:a)

2. Ethylene molecule undergoes ----- hybridization.

- a) sp^2 b) sp c) sp^3 d) dsp^2 (Ans:a)

3. The molecule which possess sp hybridisation is -----

- a) methane b) acetylene c) Ethylene d) ethane (Ans:b)

4. BF_3 is an example of -----

- a) positive electrophile b) neutral nucleophile
c) neutral electrophile d) negative nucleophile (Ans:c)

5. Dehydration of alcohol is an example of ----- reaction.

- a) addition b) substitution c) elimination d) polymerisation (Ans:c)

6. Isoprene polymerises to give polyisoprene. This is a ----- reaction.

- a) polymerization b) addition c) elimination d) substitution reaction (Ans: a)

7. An example of non-benzenoid aromatic compound is -----

- a) benzene b) Naphthalene c) furan d) pyrene (Ans: c)

8. How many π electrons are present in Naphthalene?

- a) 1 b) 10 c) 3 d) 6 (Ans:b)

9. A plane that cuts the molecule into two equal halves which are the mirror images of each other is called ---- of symmetry.

- a) centre b) plane c) axis d) alternating axis (Ans: b)

10. Molecule having no element of symmetry of any kind is known as ----- molecule.

- a) symmetry b) dissymmetric c) asymmetry d) nonsymmetry (Ans: c)

11. A carbon atom surrounded by ---- different atoms or groups is known as chiral centre.
 a) 3 b) 2 c) 4 d) 1 **(Ans: c)**
12. The process of converting an optically active compound into the racemic modification is known as -----
 a) resolution b) racemisation c) tautomerism d) Isomerism **(Ans: b)**
13. Stereoisomerism in which compounds have same structural formula but different configuration is called -----isomerism.
 a) Geometrical b) unsymmetry c) keto-enol d) diastereoisomer **(Ans: a)**
14. Molecules having only few elements of symmetry are known as ----- molecules.
 a) symmetry b) dissymmetric c) asymmetry d) nonsymmetry **(Ans: b)**
15. Erythrose and threose is a -----
 a) enantiomer b) racemic mixture c) diastereoisomer d) geometrical isomerism **(Ans: c)**
16. Maleic acid is a ----- form of Geometrical isomerism.
 a) trans b) meso c) anti d) cis **(Ans: d)**
17. A molecule not superimposable on its mirror image is called as ----- molecule.
 a) Symmetric b) asymmetric c) dissymmetric d) achiral **(Ans: c)**
18. Acetoacetic ester is an example of ----- tautomerism
 a) Keto-enol b) Nitro-acinitro c) amido-imido d) Nitro-nitroso
19. Which one of the following is optically active -----
 a) malonic acid b) lactic acid c) trichloroacetic acid d) meso tartaric acid **(Ans: b)**
20. A molecule with no element of symmetry is called ----- molecule.
 a) Symmetric b) asymmetric c) dissymmetric d) achiral **(Ans: b)**
21. Stereoisomers which are not mirror images of each other are known as -----
 a) Diastereoisomers b) optical isomers c) enantiomers d) optical antipodes **(Ans: a)**

Section- B

(2 Marks)

Answer all the questions

1. What is called Hybridization?
2. What are called electrophiles?
3. What is called polymerization reaction?

- 4.What is known as Huckel's rule?
- 5.Define Aromaticity with examples.
- 6.What are called non-benzenoid aromatic compounds?
- 7.What is called optical isomerism ?
- 8.What is called chiral centre?
- 9.What is called racemic mixture?
- 10.Define resonance.

Section -C

(5 Marks)

Answer all the questions

- 1.Explain the Hybridization of Methane and Ethylene.
2. Explain addition reactions with suitable example.
- 3.What are benzenoid compounds?
- 4.Write notes on i) Racemisation ii) resolution of racemic mixtures.
- 5.Write the difference between resonance and tautomerism?

Section- D

(10 Marks)

Answer all the questions

- 1.Explain sp^3 , sp^2 , sp hybridization with an example.
- 2.Explain the different types of organic reactions.
3. What are benzenoid and non benzenoid compounds? Give examples
- 4.Define Isomerism. Explain the symmetry of elements.
- 5.Explain Keto-enol tautomerism and differentiate the resonance and tautomerism.

Unit III Nuclear Chemistry

Section – A

(1 Mark)

Choose the correct answer

1. Isotones are the atoms of different elements having same number of -----
 a) neutrons b) protons c) electrons d) mesons **(Ans:a)**
- 2.-----are the atoms of different elements having different atomic number but same mass number.
 a) Isobars b) Isotones c)Isotopes d) Isomers **(Ans:a)**
- 3.Hydrogen bomb works on the principle of -----
 a) Nuclear fission b) Nuclear fusion c) spallation d) elastic scattering **(Ans:b)**

4. Atom bomb works on the principle of -----

- a) Nuclear fission b) Nuclear fusion c) spallation d) elastic scattering **(Ans: a)**

5. ----- is used as a moderator.

- a) cadmium b) Graphite c) boron d) bismuth **(Ans: b)**

6. A device which generates electricity by controlled fission reaction is -----.

- a) generator b) thermal reactor c) nuclear reactor d) moderator **(Ans: b)**

7. Thermal reactor is a device which generates electricity by -----

- a) Nuclear fusion b) spallation c) controlled fission reaction d) scattering **(Ans: c)**

8. The energy released by stars from a series of nuclear fusion reaction is called -----

- a) Stellar energy b) nuclear energy c) binding energy d) ionization energy **(Ans: a)**

9. ----- is an artificial radioactive series.

- a) Neptunium b) Thorium c) Uranium d) Actinium **(Ans: a)**

10. Mass defect is a measure of -----

- a) Binding energy b) Ionisation energy c) Activation energy d) Kinetic energy **(Ans: a)**

11. C-14 isotope is used in -----

- a) Carbon dating b) Tracer technique c) Artificial transmutation d) Medicine **(Ans: a)**

12. Actinium is a nuclide in the ----- series.

- a) $4n+1$ b) $4n+2$ c) $4n+3$ d) $4n$ **(Ans: c)**

13. The isotope that is used in the treatment of cancer is ---

- a) I-131 b) Co-50 c) U-233 d) Th-234 **(Ans: b)**

14. In terms of energy, 1 amu is equal to -----

- a) 100 J b) 10^7 erg c) 931.1 Kcal d) 931.1 MeV **(Ans: d)**

15. Which one of the following atomic number of Uranium is the most radioactive?

- a) 238 b) 235 c) 226 d) 248 **(Ans: b)**

16. Sr-90 isotope is used for the treatment of -----

- a) heart disorder b) anaemia c) blood cancer d) corneal cancer **(Ans: d)**

Section – B

(2 Marks)

Answer all the questions

1. What are called Isobars?
2. What are called Nuclear isomers?
3. What are called thermal reactions?

4. What is nuclear fission?
5. What are nuclear reactions?
6. Define nuclear fission with example.
7. Differentiate radioactive series.
8. Define group displacement law.
9. Define mass defect.
10. Give any four applications of radio isotopes in medicine.

Section – C

(5 Marks)

Answer all the questions

1. Compare chemical reactions and nuclear reactions.
2. Explain the principles involved in nuclear fission and fusion reactions.
3. Give the differences between Nuclear fission and Nuclear fusion reaction.
4. What is nuclear reaction? Explain the types of nuclear reactions.
5. Write notes on a) mass defect b) Group displacement law
6. Explain Carbon dating and rock dating.
7. Write the applications of radioactive isotopes in medicine.

Section – D

(10 Marks)

Answer all the questions

1. Distinguish Chemical Reaction and Nuclear reaction.
2. Explain the applications of Nuclear fission reaction.
3. Give the nuclear fusion reactions involved in
 - i) Proton – Proton chain ii) Carbon – Nitrogen Cycle.
4. Write notes on a) nuclear fusion reaction b) nuclear fission reaction
5. What is a nuclear reactor? Explain the functions of the various components of the reactor.
6. Discuss the applications of radioactive isotopes in medicine.

UNIT IV BIOMOLECULES

Section – A

(1 Mark)

Choose the correct answer

1. The number of hydroxyl group present in glucose is _____.
a) 6 b) 5 c) 4 d) 3 (Ans: b)
2. Choose the monosaccharide among the following
a) Cane sugar b) raffinose c) starch d) glucose (Ans: d)
3. An example for disaccharide is _____.
a) Glucose b) sucrose c) cellulose d) starch (Ans: b)
4. A molecule of starch is built up of a large number of -----
a) Glucose b) Lactose c) Sucrose d) maltose (Ans: a)
5. Glucose and Mannose are -----
a) Epimers b) C₂ epimers c) Anomers d) Isomers (Ans: b)
6. The specific rotation of α -D(+) Glucose is -----
a) +111° b) +19° c) +52.5° d) 100° (Ans: a)
7. Amino acids are building blocks of -----
a) Oil b) Fat c) Protein d) Carbohydrate (Ans: c)
8. The only optically inactive α -amino acid occurring in nature is
a) Glycine b) Alanine c) Phenyl alanine d) Tyrosine (Ans: a)
9. Proteins are combinations of -----
a) β -Amino acids b) α -Amino acids c) α and β -Amino acids d) γ -Amino acids (Ans: b)
10. With Millon's reagent protein gives the colour -----
a) Yellow b) Purple c) Black d) White precipitate (Ans: a)
11. Proteins are assigned -----
a) Primary structure b) Secondary structure c) Tertiary structure d) All the above (Ans: d)

Section – B**(2 Marks)****Answer all the questions**

1. What are carbohydrates?
2. Classify carbohydrates based on their saccharide units.
3. What are called called Oligosaccharides?
4. What are polysaccharides?
5. Draw the configuration of glucose.
6. Draw the configuration of fructose.
7. What is called epimerisation?
8. Define mutarotation.
9. Draw the structure of starch?
10. Define Amino acids.
11. Classify amino acids based on their nutritional requirement.
12. What are essential amino acids?
13. What is called peptide linkage?
14. What are simple proteins?
15. Define conjugated proteins with example.
16. Write any two colour reactions of proteins.

Section – C**(5 Marks)****Answer all the questions**

1. How are carbohydrates classified? Give examples.
2. Bring out the following conversions i) aldose to ketose ii) ketose to aldose
3. How will you convert the following i) Glucose to fructose ii) Fructose to glucose.
4. Explain the term mutarotation with a suitable example.
5. Write notes on : Epimerisation.
6. Write brief notes on starch and cellulose.
7. Discuss any two classifications of amino acids.
8. How are proteins classified on the basis of their function?
9. How proteins can be isolated?
10. Write the colour reactions of proteins.
11. Explain the primary structure of protein.

Section – D

(10 Marks)

Answer all the questions

1. Define carbohydrates. How are they classified?
2. How will you convert
a) Glucose — Fructose b) Fructose — Glucose
c) Glucose—Arabinose d) Arabinose—Glucose
3. Discuss the study of starch and cellulose.
4. Classify amino acids on the basis of (i) acidic/basic nature and (ii) chemical structure.
5. How are proteins classified? Explain with example.
6. Explain the structure of proteins.

UNIT V CHROMATOGRAPHY

Section – A

(1 Mark)

Choose the correct answer

1. In adsorption chromatography the stationary phase is -----
a) solid b) liquid c) Gas d) solution **(Ans:a)**
2. The principle of chromatography is -----
a) absorption b) adsorption c) solidification d) liquefaction **(Ans:b)**
3. The difference in the degree of ----- leads to the separation of components in a mixture.
a) concentration b) racemization c) isolation d) adsorption **(Ans:d)**
4. In adsorption column chromatography, the column is packed with ----
a) ion exchange resin b) alumina c) cotton d) jute **(Ans:b)**
5. In Thin layer chromatography the adsorbent are coated on a ----- as a thin film.
a) paper b) wood c) glass plate d) steel plate **(Ans:c)**
6. Softening of hard water can be done using ----- chromatography.
a) Ion exchange b) column c) paper d) column **(Ans:a)**
7. In TLC, the components can be identified using -----

a)silica gel b) Alumina c)Rf value d) Kd value **(Ans:c)**

8. In which type of chromatography both the stationary and mobile phases are liquid?

a) Adsorption b) partition c) Ion exchange d)absorption **(Ans:a)**

9. Column chromatography is used to remove ----- during purification of compounds.

a) moisture b) impurities c) ions d) atoms **(Ans:b)**

10.In qualitative analysis of amino acids,peptides,carbohydrates,lipids -----chromatography is used.

a) Thin layer b) Column c)Paper d) Ion-exchange **(Ans:a)**

Section-B

(2 Marks)

Answer all the questions

1.Define Chromatography.

2.What is the principle of Adsorption chromatography?

3. What is an adsorbent?

4. Write the Principle of Column chromatography.

5. Mention any two applications of Column chromatography.

6. Write the Principle of Thin layer chromatography.

7. Mention any two applications of Column chromatography.

8. Write the Principle of Column chromatography.

9. Mention any two applications of Column chromatography.

10.What is called R_f value?

Section -C

(5 Marks)

Answer all the questions

- 1.How chromatography is classified?
2. Mention some characteristics of good adsorbent.
- 3.Explain the experimental method of Column chromatography.
4. Mention few applications of Thin layer chromatography.
5. How R_f value is noted in TLC?

Section – D

(10 Marks)

Answer all the questions

- 1.Define Chromatography. How it is classified?
- 2.Explain principle of adsorption chromatography. Mention the characteristics of good adsorbents.
- 3.Explain the principle and applications of Column Chromatography.
- 4.Explain the principle and applications of Thin layer Chromatography.
- 5.Explain the principle and applications of Ion exchange Chromatography.

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI

II B.Sc. Chemistry

Semester III

Skill Based Elective

Agricultural Chemistry

Sub. Code: 21UCHS31

(For those who joined in 2021 and after)

Question Bank

UNIT I Soil nature and plant nutrients

Section A (1 mark)

1. One among the following is a primary nutrient.
a) N b) O c) H d) C **(Ans: a)**
2. One among the following is a micronutrient.
a) nitrogen b) phosphorus c) potassium d) molybdenum **(Ans: d)**
3. Potassium ion is an example of a -----.
a) micronutrient b) macronutrient c) nonessential element d) none **(Ans: b)**
4. The micronutrient necessary for the synthesis of proteins as cystine and methionine is -----.
a) calcium b) sulphur c) iron d) molybdenum **(Ans: b)**
5. ----- is a constituent of chlorophyll.
a) Fe b) Cu c) Mg d) Ca **(Ans: c)**
6. pH of acid soil is -----.
a) Greater than 7 b) 7 c) lower than 7 d) 0 **(Ans:c)**
7. One of the following is a characteristics of saline soils.
a) low percentage of soluble sodium salts
b) osmotic pressure of the soil solution is very high
c) pH range between 3.7 and 5.8
d) electrical conductivity of the soil solution is less than 4mmho/cm **(Ans:b)**
8. One of the following is not due to cultural methods of reclamation and management of saline soils.
a) providing proper drainage b) use of salt free irrigation water
c) use of acidic fertilisers d) scrapping of the soil surface **(Ans:d)**
9. Non saline-alkaline soils -----
a) do not contain soluble potassium salts
b) do not contain soluble sodium salts

c) contain soluble potassium salts

d) contain soluble sodium salts

(Ans:b)

10. Factor affecting buffering capacity of soil is -----.

a) soil texture b) nature of clay c) cation exchange capacity d) all (Ans:d)

11. The pH of potable or drinking water is -----.

a) 7 to 7.5 b) 7 to 8.5 c) 7.5 to 8 d) 7.5 to 9 (Ans:b)

Section B (2 marks)

1. Define acid soil?
2. Justify how addition of liming material neutralises acidic soil
3. Write any two effects of over liming.
4. What are alkaline soils?
5. Write any two characteristics of saline soils.
6. Define buffer action of soil.
7. Mention the characteristics of non saline alkali soil.
8. What are macronutrients?
9. What is the role of nitrogen in plant growth?
10. How phosphorous is essential for the growth of plants.
11. Explain the role of calcium in plant growth.

Section C (6 marks)

1. Discuss the formation of saline and alkaline soil.
2. Write the formation of acid soil.
3. Outline the methods of reclamation and management of saline soil by cultural method.
4. Recall the effect of soil acidity on plants.
5. Explain the buffering capacity of soil.
6. What are micro and macronutrients. Explain with examples.

Section D (12 marks)

1. Describe the methods of reclamation and management of acidic soils.
2. Give an account of deficiency symptoms of plant nutrients.
3. How do macro and micro nutrients help in plant growth? Give a detailed account of it.

UNIT II Fertilisers

Section A

- Azospirillum is a -----.
a) mixed fertilizer b) nitrogenous fertilizer
c) biofertilizer d) organic fertilizer **(Ans: c)**
- The important element in a fertilizer is -----.
a) N b) O c) H d) All the above **(Ans: d)**
- The fertilizer triple super phosphate contains the elements -----
a) N and K b) Mg and P c) N and P d) Ca and P **(Ans: d)**
- The percentage of nitrogen in urea is -----.
a) 15.2 b) 24.9 c) 36.7 d) 46.6 **(Ans: d)**
- Among the various fertilizers,----- has the maximum nitrogen content
a) urea b) potassium cyanamide c) calcium ammonium nitrate d) NH₃ **(Ans: a)**
- Triple superphosphate is
a. a mixture of monocalcium phosphate and gypsum
b. a mixture of phosphate rock and phosphoric acid
c. a mixture of monocalcium phosphate and calcium chloride
d. a mixture of monocalcium phosphate and potassium chloride **(Ans: b)**
- An example of manure is -----.
a) Oil cake b) Urea c) Azospirillum d) CAN **(Ans: a)**
- Triple super phosphate is obtained by treating phosphate rock with -----.
a) conc.sulphuric acid b) conc.nitric acid c) phosphoric acid d) con. HCl **(Ans: c)**
- Which is not true about a good fertilizer?
a) It should not produce acidity b) It should be leached away from the soil
c) It should not produce extra heat d) It should be soluble in soil moisture **(Ans: b)**
- Iron acts as ----- in the manufacture of ammonia by Haber's process.
a) a catalyst b) a promoter c) catalytic inhibitor d) an enzyme catalyst **(Ans: a)**
- One among the following is an example of biofertilizers.
a) Fe b) Urea c) BGA d) Triple superphosphate **(Ans: c)**
- One among the following is false about biofertilizers.
a) they are cheaper b) they are pollution free

- c) they are toxic d) they are renewable

(Ans: c)

Section B (2 marks)

1. What are fertilizers? Give examples.
2. Write down the advantages of using urea.
3. Mention the types of fertilisers. Give example.
4. Highlight the importance of manures.
5. Differentiate complete and incomplete fertilisers.
6. What is mixed fertilizer? Give examples.
7. Write any three advantages of bio fertilizer?
8. What are biofertilizers?
9. What is vermiculture?
10. What is vermicompost?

Section C (6 marks)

1. What do you mean by mixed fertilizer? Explain.
2. How is urea manufactured in the industry? Mention its uses
3. What is triple super phosphate? How is it prepared'?
4. Give the preparation of any one ammonium fertilizer.
5. What are biofertilizers and mixed fertilizers? Explain

Section D (12 marks)

1. How is urea manufactured? Give its uses.
2. How will you manufacture urea and triple superphosphate'?
3. What are ammonium fertilizers? Describe the method of preparation of any one ammonium fertilizer?
4. How human effluent can efficiently utilised as biogas?

UNIT III Pesticides

Section A

7. Define protectant pesticides. Give examples.
8. What are wettable powders?
9. Differentiate aerosols and fumigants.
10. What are attractants and repellants?. Give examples.

Section C

1. What are pesticides? How are they classified based on their mode of action?
2. How are pesticides classified based on the method of application?
3. What is bordeaux mixture? How is it prepared?
4. Discuss the preparation and uses of BHC and DDT.
5. How is lead arsenate prepared? Mention its uses.

Section D

1. Describe the preparation and uses of i) Bordeaux mixture ii) DDT iii) BHC
2. How are the following insecticides prepared i) lead arsenate ii) Bordeaux mixture
3. Discuss in detail the environmental hazards due to pesticides.
4. Classify pesticides based on i) their mode of action ii) method of application
iii) target organism they control.
5. What are biopesticides? Mention its types with examples.

UNIT IV Water quality parameters

Section A

1. The unit of DO is expressed in -----.
a) ppm b) mg/l c) litre d) both a and b **(Ans: d)**
2. ----- refers to enrichment of water bodies by nutrients.
a) sedimentation b) eutrophication c) overnutrition d) dystrophic state **(Ans: b)**
3. Drinking water usually has pH in the range -----.
a) 7-8.5 b) 6.5-9.2 c) 7-14 d) 0-7 **(Ans: a)**
4. Minamata disease is due to poisoning of -----.
a) lead b) mercury c) arsenic d) cadmium **(Ans: b)**
5. Itai-Itai disease is due to poisoning of -----.
a) lead b) mercury c) arsenic d) cadmium **(Ans: d)**
6. Methaemoglobinemia is disease found among children due to presence of excess of -----.
a) nitrates b) fluoride c) lead d) mercury **(Ans: a)**

7. Permanent hardness is due to _____ of calcium and magnesium in water.
a) carbonates b) bicarbonates c) chlorides d) phosphates **(Ans: c)**
8. The dissolved oxygen demand (DO) requirement for most of the aquatic organisms is -----.
a) 4ppm b) 5ppm c) 3ppm d) 7ppm **(Ans: b)**
9. The COD requirement for quality water is around -----.
a) 10ppm b) 5ppm c) 3ppm d) 7ppm **(Ans: a)**
10. The total solids in a liquid sample consists of -----.
a) TDS b) TSS c) TDS and TSS d) TSD **(Ans: c)**

Section B

1. Differentiate temporary and permanent hardness.
2. Define degree of hardness.
3. Enumerate the significance of BOD and COD.
4. What is methemoglobinemia?
5. List down any four undesirable effects of eutrophication.
6. Enumerate any four steps to control eutrophication.
7. List any four adverse effects of heavy metal toxicity in biological systems.
8. What are the major biochemical effects of Hg?
9. List the four major big pollution diseases of Japan.
10. What is BOD?

Section C

1. What is eutrophication and mention its types?
2. Write a note on Minamata epidemic and its effect.
3. Write a brief note on the toxic metal contamination due to Cd and its biochemical effect.
4. Write a note on Itai-Itai.
5. Write a brief note on the toxic metal contamination due to Hg and its biochemical effect.

Section D

1. Discuss in detail the various water quality parameters.
2. Write a brief note on the toxic metal contamination due to As and its biochemical effect.
3. Write in detail about the arsenic poisoning in West Bengal.
4. What is eutrophication? Mention its undesirable effects and the steps to control it.

5.Explain in detail the toxic metal contamination due to Cd and its biochemical effect.

UNIT V Water Treatment

Section A

1.Reverse osmosis is done using -----.

- a) a semi-permeable membrane b) an ion exchange resin
c) a selectively permeable membrane d) permeable membrane **(Ans: a)**

2.In tertiary treatment of waste water the technique used is -----.

- a) electrodialysis b) sedimentation c) oxidation pond d) anaerobic digestion **(Ans: a)**

3.Oil and grease in waste water is removed by -----.

- a) screening b) skimming c) filtration d) emulsification **(Ans: b)**

4.Activated carbon method is useful in the removal of -----.

- a) pesticides b) oil and grease c) suspended particles d) sand and pebbles **(Ans: a)**

5.One of the following is a biological waste water treatment process.

- a) oxidation pond b) screening c) coagulation d) sedimentation **(Ans: a)**

6._____ using chemical and physical methods is the final step in drinking water purification

- a) electrodialysis b) reverse osmosis c) ion exchange method d) disinfection **(Ans: d)**

7.Primary treatment of waste water is otherwise called -----.

- a) physical process b) chemical process c) biological process d) biophysical **(Ans: b)**

8.One among the following is a coagulant used in sedimentation of waste water.

- a) alum b) copper nitrate c) ferrous ammonium sulphate d) sodium chloride **(Ans: a)**

9._____ treatment of waste water reduces BOD.

- a) primary treatment b) secondary treatment
c) tertiary treatment d) preliminary treatment **(Ans: b)**

10.The secondary treatment of waste water is otherwise called -----.

- a) physical process b) chemical process
c) biological process d) biochemical process **(Ans: c)**

Section B

1. Enumerate any two objectives of preliminary waste water treatment.

2. What is skimming?

3. Give any two objectives of sedimentation.

4. What are the two stages involved in chemical precipitation?

5. What are the advantages of trickling filter and oxidation pond?

6. Enumerate the advantages of anaerobic digestion.
7. Differentiate standard high rate and two stage anaerobic digester.
8. What are the main objectives of tertiary waste water treatment?
9. Differentiate static and dynamic adsorption.
10. List the applications of ion-exchange method.

Section C

1. Explain how industrial wastes can be treated.
2. Examine the biological method employed in secondary waste water treatment by trickling filter method.
3. Write a note on oxidation pond.
4. Write a note on screening.
5. Discuss the primary treatment of waste water.
6. Show that suspended organic solids in waste water can be removed by sedimentation method.
7. Write notes on ion exchange method and anaerobic digestion.

Section D

1. Describe the methods used in domestic sewage treatment.
2. Describe the methods used for treatment of municipal water.
3. Write short notes on i) electrodialysis ii) reverse Osmosis
4. What are the objectives of tertiary treatment and write a note on adsorption method and ion exchange method of removing contaminants from waste water.
5. Write notes on i) coagulation ii) sedimentation

ST. MARY'S COLLEGE (AUTONOMOUS) – Thoothukudi

NME- Everyday Chemistry

Semester III

(For those who joined in July 2018 and after)

Sub. Code: 21UCHN31

Unit-I WATER

Section-A

1. Water is recognised as _____
 - a) Universal solute
 - b) Universal solvent
 - c) Universal compound
 - d) Universal fuel(Ans: b)
2. Hardness of water is due to bicarbonates, chlorides and sulphate of _____ and _____
 - a) Zinc , Cadmium
 - b) Aluminium, Potassium
 - c) Calcium, Magnesium
 - d) Titanium, Zirconium(Ans: c)
3. _____ is defined as the negative logarithm of hydrogen ion concentration
 - a) pH
 - b) pOH
 - c) Ka
 - d) Kb(Ans:a)
4. 60% of total body weight is made up of _____
 - a) Ions
 - b) Water
 - c) Electrons
 - d) Protons(Ans: b)
5. Major electrolytes present in the human body are _____
 - a) Na, Cl, K
 - b) Cs, K, Ti
 - c) Na, S, Zr
 - d) N, P, K(Ans: a)
6. Typhoid fever can be treated using_____ -
 - a) Mexaform
 - b) Flagyl
 - c) Enterovioform
 - d) Chloromycetin(Ans: d)

7. _____ can be used as semi permeable membrane for desalination of sea water using reverse osmosis method
- Polyol
 - Nylon
 - PVC
 - Bakelite
- (Ans: b)
8. Cholera is caused by a germ known as _____
- Vibrio cholera
 - Salmonella
 - Flexneri
 - Sonnei bacillus
- (Ans: a)
9. The art of converting sea water into drinking water on a larger scale is called _____
- Purification
 - Separation
 - Desalination
 - Mineralization
- (Ans: c)
10. Degree of hardness is measured as the number of parts by weight of _____
- Na_2CO_3
 - CaCO_3
 - NaCl
 - Na_2SO_4
- (Ans: b)

Section B

(2 marks)

- “Water as a universal solvent”- Explain
- Define Hard water.
- List the constituents of mineral water
- Define pH
- Indicate the diseases spread through water and write the antibiotics prescribed.
- What are hard and soft water?
- Define Degree of hardness of water.
- What is desalination?
- What is reverse osmosis?
- Define Mineral water

Section C

(4 marks)

- Compile the biological importance of water.
- Outline the biological importance of water
- Describe briefly the importance of electrolyte balance in the human body.

4. Explain Reverse Osmosis method
5. Describe the steps involved in the purification of drinking water.
6. Define pH. Explain briefly the effect of pH on animals and plants.
7. Describe briefly the effect of pH on other chemicals in water
8. What is dysentery? Explain their types and preventive measures

Section -D

(10 marks)

1. Appraise the steps involved in the purification of drinking water and explain desalination by reverse osmosis method.
2. Explain the importance of electrolyte balance in the human body.
3. What are water borne disease? Explain briefly typhoid and dysentery

Unit-II FUELS

Section-A

1. _____ are substance which when burnt in air produce heat energy.
 - a) Fuel
 - b) Acid
 - c) Alkali
 - d) Compound

(Ans: a)
2. Which among the following fuel has maximum calorific value?
 - a) Kerosene
 - b) Methane
 - c) LPG
 - d) Biogas

(Ans: c)
3. The lowest temperature to which the fuel must be heated so that the fuel can burn smoothly is called _____.
 - a) Ignition temperature
 - b) Calorific value
 - c) Starting temperature
 - d) Burning temperature

(Ans: a)
4. The nuclear fuel which occurs in nature is _____.
 - a) U-233
 - b) Pu-239
 - c) U-235
 - d) Bi-106

(Ans:c)

5. Which among the following is an example of monopropellant?

- a) Hydrogen peroxide
- b) aniline
- c) ammonia
- d) natural gas

(Ans: a)

6. An example for third generation fuel is _____

- a) Biodiesel
- b) Bioethanol
- c) Alga fuel
- d) Biohydrogen

(Ans: c)

7. _____ is a mixture of fuel and oxidant

- a) Rocket propellant
- b) Biofuel
- c) Natural gas
- d) Petroleum

(Ans: a)

8. Which among the following has lowest efficiency?

- a) Solid fuel
- b) Liquid fuel
- c) Gaseous fuel
- d) biofuel

(Ans: a)

9. An example for solid natural fuel is

- a) Charcoal
- b) Coke
- c) Kerosene
- d) Wood

(Ans: d)

10. _____ is an example of oldest composite propellant

- a) Cordite
- b) Gunpowder
- c) Ballisite
- d) Cellulose

(Ans: b)

Section-B

1. Define fuel. Give example

2. Define Calorific value.

3. Define biofuel.

4. Define nuclear fuel.

5. Write down the preparation of uranium oxide from UF_6

6. Define rocket propellant

7. Indicate any two characteristics of good propellant.
8. Identify any two differences between solid and liquid propellant.
9. Write the different types of fuels with example.
10. Define flash point of the fuel

Section-C

1. Classify different types of fuels with example.
2. Appraise biofuels and their types.
3. Classify Rocket propellants
4. Explain the characteristics of Solid fuels
5. Describe briefly about liquid fuels
6. Enumerate the characteristics of gaseous fuels
7. Distinguish between solid propellant and liquid propellant.

Section-D

1. Define flash point of the fuel. Analyse flash point using Pensky-Marten's apparatus.
(K4, An)
2. Compare the characteristics of solid, liquid and gaseous fuel.
3. Enumerate the characteristics of good propellant.

Unit-III SURFACE COATING

Section-A

1. Surface coatings are used to prevent the base metals from _____
 a) Reduction
 b) passivation
 c) Corrosion
 d) Hydrolysis (Ans: c)
2. _____ is a colloidal suspension of a solid pigment in liquid medium
 a) Perfumes
 b) varnishes
 c) paints
 d) abrasives (Ans: c)
3. _____ is the colouring matter used in paints
 a) Pigment
 b) vehicle
 c) thinners
 d) plasticizer (Ans: a)

4. In fire retardant paints_____ can used to produce non-inflammable gases.
 a) Epoxy resin
 b) alcohol
 c) carbon
 d) ether (Ans: a)
5. _____ is a widely used thinner in varnishes
 a) Resin
 b) turpentine
 c) linseed oil
 d) water (Ans: b)
6. The viscosity of the paints are reduced by adding
 a)thinners b)dries c) vehicles d)pigments (Ans: a)
7. _____ is used to minimize cracking of paint film after drying
 a)fillers b)dilutants c)plasticizers d)vehicles (Ans: c)
8. Oils which speed up the process of drying is called
 a)driers b)fillers c)pigments d)stabilizers (Ans: a)
9. In order to reduce the cost _____ are added to paints
 a)plasticizers b)dries c)thinners d)fillers (Ans: d)
10. _____ is considered as best resin for varishes
 a) Gum b) copal c) pine resin d) polyurethane (Ans: b)

Section B

1. Define surface coating .
2. Define paint.
3. Write any four general characteristics of good paint.
4. Write note on antiskinning agents?
5. Define varnish.
6. Write down the functions of varnish
7. What is Emulsion paint?
8. What is fire retardant paints?
9. Define luminescent paint.
10. What are fillers?

Section C

1. Compile the characteristics of good paint.
2. Describe briefly the constituents of emulsion paint
3. Explain in details the types and functions of pigments used in paints.
4. Explain the functions of drying oils.
5. Explain briefly emulsion paints
6. Describe in detail about varnishes

Section -D

1. Outline briefly the different constituents of paint and their functions.
2. Explain briefly about emulsion paints and varnishes

Unit-IV Sugar and Paper Industry

Section-A

1. Which one among the following is an example of monosaccharide?
a) Maltase b) lactose c) sucrose d) glucose (Ans: d)
2. Animal charcoal is used for _____ in the manufacture of sugar
a) Defecation b) coloration c) decolouration d) filtration (Ans: c)
3. Alcoholic beverages contains _____
a) ethyl alcohol b) methyl alcohol c) propyl alcohol d) butyl alcohol (Ans: a)
4. Which among the following is an alcoholic beverage?
a) Tea b) coffee c) wine d) milk (Ans: c)
5. In sulphitation process _____ gas is passed through sugar syrup
a) SO_3 b) H_2S c) H_2SO_4 d) SO_2 (Ans: d)
6. _____ is the raw material for the manufacture of paper
a) Lignin b) carbon c) cellulose d) starch (Ans: c)
7. In _____ process paper becomes smooth and receives fine glaze
a) Calendaring b) screening c) thickening d) bleaching (Ans: a)
8. Ultramarine blue is used as _____ - in the manufacture of paper
a) Filler b) thickener c) whitener d) diluent (Ans: c)
9. _____ converts starch to maltose in the manufacture of beer
a) distase b) invertase c) sucrase d) argol (Ans: a)
10. Which one among the following is present in grapes?
a) acetic acid b) oxalic acid c) tartaric acid d) succinic acid (Ans: c)

Section-B

1. What are sugars? Give example
2. Write down the different types of sugar

3. Define defecation.
4. What is called double sulphitation process?
5. Define carbonation.
6. Write down the recovery of sucrose from molasses.
7. Draw the flow chart for the manufacture of sugar from sugar beet
8. What are beverages? Explain their classification.
9. Define curing.
10. Write the steps involved in the blending of pulp.
11. Define calendaring

Section-C

1. Explain the purification and concentration of sugarcane juice in the manufacture of sugar
2. Describe briefly the manufacture of wine.
3. Enumerate the steps involved in the manufacture of beer.

Section-D

1. Explain the manufacture of sugar from sugarcane.
2. Explain the manufacture of sugar from sugarbeet.
3. Describe briefly the manufacture of wine.
4. Explain the steps involved in the manufacture of beer.
5. Explain the steps involved on the manufacture of paper.

UNIT V CHEMICALS IN DAY TO DAY USE

Section-A

1. Plaster of Paris is the raw material used in the preparation of
a) Chalk crayons b) writing inks c) tooth paste d) moth balls **(Ans a)**
2. Absorbent used in talcum powder is
a) zinc stearate b) magnesium carbonate c) zinc oxide d) glycerine **(Ans b)**
3. ----- is a moth repellant
a) soap stone b) white oil c) naphthalene d) ferrous sulphate **(Ans c)**
4. ----- is used in tooth paste to protect teeth from bacteria
a)thymol b) menthol c) sodium monofluorophosphate d) clove oil **(Ans c)**
5. The hardener added to wax candles is
a) stearic acid b) borax c) paraffin wax d) soap stone **(Ans a)**
6. The sweetener used in tooth paste is
a)lauryl sarcosinate b)saccharin c)menthol d)glycerol **(Ans b)**
7. Ultramarine blue is used as _____ in the preparation of chalk crayons
a)binder b)dye c)filler d)whitener **(Ans d)**

8. The emulsifier used in the preparation of phenyl is
a)m-cresol b)coal tar acid c)Rosin soap d)oleic acid (Ans c)
9. Zinc oxide is used as_____ in the preparation of face powder
a)binder b) perfume c)absorbent d)astringent (Ans d)
10. _____ is added to tooth paste for pleasant smell
a)flavours b)binder c)humectants d)detergent (Ans a)

Section-B

1. Write down the raw materials used in the manufacture of candle
2. What are all the ingredients used in the manufacture of tooth paste
3. What are moth balls?
4. What are all the ingredients used in the manufacture of face powder
5. What is an eyetex?

Section-C

1. Write the preparation of candles
2. Explain the preparation of black board chalk
3. Write the preparation of moth balls
4. Explain the preparation of liquid blue
5. Write the preparation of soap
6. Explain the preparation of shampoo

Section-D

1. Explain the preparation of (i) Eyetex (ii) Lipstick
2. Write the preparation of (i) black phenyle (ii) white phenyl
3. Write the raw materials and preparation of (i) cleaning powder (ii) face powder
4. Enumerate the steps involved in the preparation of (i) tooth paste (ii) moth ball

ST. MARY'S COLLEGE (Autonomous) – THOOTHUKUDI.

II B.A/B.Sc/B.Com/B.B.A Semester III

Ability Enhancement Course - Women's Synergy

Semester III – November 2022

Question Bank

Sub. Code: 18UAWS31

Unit- I

Physical Health

Section – A

Choose the correct answer (1 Mark)

1. Identify the smallest unit of a living organism.
a) Tissue b) Organ c) Cell d) Organelles **Ans: c**
2. _____ is an anatomically distinct structure of the body composed of two or more tissue types.
a) Tissue b) Organ c) Cell d) Organelles **Ans: b**
3. _____ system is composed of the skin and associated structures.
a) Skeletal b) Integumentary c) Muscular d) Lymphatic **Ans: b**
4. _____ gland located on the top of kidney.
a) Adrenal b) Parotid c) Thyroid d) Pituitary **Ans: a**
5. _____ system is composed of hormone-secreting glands and tissues.
a) Reproductive b) Endocrine c) Urinary d) Digestive **Ans: b**
6. _____ phase begins on the first day of menstrual bleeding.
a) Luteal b) Follicular c) Ovulatory d) Menstrual **Ans : b**
7. _____ phase begins when the level of luteinizing hormone surges.
a) Menstrual b) Luteal c) Ovulatory d) Follicular **Ans: c**
8. _____ is a group of many similar cells that work together to perform a specific function.
a) Tissue b) Organ c) Cell d) Organelles **Ans: a**
9. _____ phase begins after ovulation.
a) Follicular b) Ovulatory c) Menstrual d) Luteal **Ans: d**
10. _____ gland located at the base of brain.
a) Pituitary b) Adrenal c) Parotid d) Thyroid **Ans: a**

Section – B

Answer the following (2 Marks)

1. What is a cell?
2. What is an organ?
3. What are the components of digestive system?
4. What is Menstrual cycle?
5. List out the phases of Menstrual cycle.
6. What is a follicular phase?
7. Where pituitary gland is located in our body?
8. What is a tissue?
9. Define organ system.
10. What is an organism?

Section – C

Answer the following (5 Marks)

1. Explain the levels of organization.
2. Sketch and explain the organ system.
3. Discuss about the body image of women.
4. Explain the causes for negative body image of women.
5. Describe the female reproductive system.
6. Give the nutritional tips for pregnant and lactating women.
7. Explain the psychosomatic implications of women.

Section – D

Answer the following (10 Marks)

1. Explain the various stages of menstrual cycle.
2. Describe the ways to meet the nutritional demands during pregnancy.
3. Explain the organ system of human body.
4. Discuss about the child birth and lactation.

Unit-II
Psychological Health

Section- A

Choose the correct answer (1 Mark)

1. Feelings of sadness that last longer than 2 weeks is called _____ **Ans: b**
a) Anxiety b) depression c) stress d) sorrow
2. SAD is abbreviation of _____ **Ans: a**
a) Seasonal Affective Disorder c) Severe Affection Disorder
b) Seasonal Abnormal Disorder d) Seasonal Attractive Disorder
3. Prozac is an _____ **Ans: c**
a) Antibiotic b) pain killer c) anti-depressant d) enhancer
4. Feeling nervous is the first symptom of _____ **Ans: a**
a) anxiety b) depression c) stress d) sorrow
5. _____ are more prone to stress related weight gain. **Ans: b**
a) men b) women c) old people d) children
6. OCD is of type of _____ disorder. **Ans: a**
a) anxiety b) depression c) stress d) sorrow
7. Establishing healthy boundaries is a _____ way of managing stress. **Ans: c**
a) mental b) physical c) social d) spiritual
8. Prenatal sex discrimination was legally banned in the year _____ **Ans: b**
a) 1994 b) 1996 c) 1998 d) 2000
9. Female literacy rate in India as per 2011 Census is _____ **Ans: c**
a) 82.4% b) 51.2% c) 65.46% d) 91.58%
10. The prohibition of Child Marriage Act was established in the year _____ **Ans: c**
a) 2002 b) 2004 c) 2006 d) 2008
11. Sarva Shiksha Abhiyan means _____ **Ans: d**
a) Education for women c) Education for poor
b) Education for rural people d) Education for everyone
12. Burning of a widow to death on her husband's pyre is called _____ **Ans: d**
a) Bali b) Hati c) Gati d) Sati

13. Opinion about self is called _____

a) Self-thought b) self-image c) self-impression d) self-right **Ans: b**

14. _____ is a condition that affects mothers after child birth thought to be caused by hormones.

a) Seasonal affective disorder c) Post-partum depression
b) Bipolar disorder d) Persistent depressive disorder **Ans: c**

15. Prenatal tests to determine the sex of the fetus were criminalized by Indian Law in _____

a) 1991 b) 1992 c) 1993 d) 1994 **Ans: d**

Section- B

Answer the following (2 Marks)

1. Define anxiety.
2. What is stress management?
3. Give the symptoms of stress.
4. Define self image.
5. What is hysteria?
6. Write the factors determining women's Psychology.
7. What is discrimination?
8. Give the objectives of a woman.
9. How stress and health are related?
10. Give the symptoms of anxiety.

Section- C

Answer the following (5 Marks)

1. List some situations that contribute to anxiety and depression in women.
2. Explain the symptoms of depression.
3. Describe the types of depression and why are women affected more often than men.
4. Show the ways to treat depression.
5. List out the signs and symptoms of anxiety.
6. Explain the types of anxiety disorders and how can it be treated.

7. Explain the symptoms of stress.
8. How can stress affect a woman's health?
9. How can stress be managed?
10. Explain woman's discrimination before birth as an infant.
11. Write a note on self-image.

Section- D

Answer the following (10 Marks)

1. Explain in detail about depression.
2. Discuss in detail about anxiety disorders.
3. Define and explain stress in women.
4. Give a detailed account on "Discrimination against women".

Unit III

Women and Legal Awareness

Section – A

Choose the correct answer (1 Mark)

1. _____ principle is the main pillars of Indian Constitution.
 a) integrity b) liberty c) equality d) privacy **Ans: c**
2. _____ is an act to prohibit the giving or taking of dowry.
 a) Dowry Prohibition Act, 1961 b) Dowry Prohibition Act, 1951
 c) Dowry Prohibition Act, 1947 d) Dowry Prohibition Act, 1971 **Ans: a**
3. An act to prohibit indecent representation of women through advertisements or in publications, writings, paintings, figures or in any other manner
 a) Indecent Representation of Women Prohibition Act, 1988
 b) Indecent Representation of Women Prohibition Act, 1976
 c) Indecent Representation of Women Prohibition Act, 1986
 d) Indecent Representation of Women Prohibition Act, 1963 **Ans: c**
4. The Commission of Sati Prevention act was enacted in the year_____
 a) 1978 b) 1987 c) 1991 d) 1983 **Ans: b**

5. Act on protection of women from domestic violence was passed in the year_____
- a) 1995 b) 1950 c) 1998 d) 2005 **Ans: d**
6. The word Evidence means_____
- a) show clearly b) omission c) provisions d) violence **Ans: a**
7. FVPSA stands for
- a) Family Violence Prevention and Services Act
b) Family Violence Protection and Services Act
c) Family Violence Protection and Securities Act
d) Family Violence Prevention and Securities Act **Ans: a**
8. When was the violence against women reauthorization act passed ?
- a) 2003 b) 1993 c) 2013 d) 2011 **Ans: c**
9. Which of the following scheme prevent trafficking and rescue, rehabilitation and re-integration of victims of trafficking and commercial sexual exploitation?
- a) STEP b) MSK c) SWADHAR d) UJJAWALA **Ans: d**
10. A scheme for women in difficult circumstances_____
- a) STEP b) Mahila E-Haat c) SWADHAR Greh d) NIRBHAYA **Ans: c**
11. A person who gets an equal share of inherited land is_____
- a) karta b) coparcener c) partner d) manager **Ans: b**
12. Which among the following section of IPC deals with monogamous marriage?
- a) 494 b) 423 c) 365 d) 256 **Ans: a**
13. _____ provision under IPC make sexual harassment a punishable crime.
- a) 325A b) 376A c) 284A d) 354A **Ans: d**
14. Maternity benefits act was enacted in the year_____
- a) 1954 b) 1973 c) 1961 d) 1982 **Ans: c**
15. Every working woman is entitled to full paid absence from her work for a period of _____ weeks to take care of her new born child.
- a) 30 b) 26 c) 12 d) 21 **Ans: b**

Section – B

Answer the following (2 Marks)

1. Write about the educational schemes.
2. Explain the employment schemes.

3. Explain the women's right to property.
4. Explain the Maternity benefit act.
5. Write about the laws for the protection of women.
6. Write about the state schemes for women
7. Explain the national schemes for women.
8. What are the laws to prevent gender based violence?
9. Discuss the daughter's rights over her father's property.
10. Women have the Right against arrest at night. Justify,

Section – C

Answer the following (5 Marks)

1. Write a short note on the principle of equality.
2. Explain the sexual harassment of women at workplace act, 2013.
3. Give a short note on "Nirbhaya Act".
4. Explain the Indian Evidence Act, 1872.
5. Enlist the laws on violence against women.
6. Briefly explain the women empowerment schemes.
7. Write a short note on inherited property.
8. Bring out the significance of Maternity Benefits Act, 1961.

Section – D

Answer the following (10 Marks)

1. Explain the legislations connected with women in India.
2. Narrate the features of women's rights to property.
3. Explain the National Commission for Women Act, 1990.
4. Describe in detail the women's rights in the Indian Constitution.
5. Write an account on Maternity Benefits Act, 1961.

UNIT – IV
WOMEN AND FINANCE

Section – A

Choose the correct answer (1 Mark)

1. A _____ follow-up method can help you to save up to 15%.
a) Monthly b) Weekly c) Daily d) Half Yearly **Ans: c**
2. The secret of generating wealth is _____ management.
a) Money b) Business c) Budget d) Domestic **Ans: a**
3. Creating _____ fund helps you to face any possible problems or personal situations.
a) Retirement b) Emergency c) Grocery d) Flexible **Ans: b**
4. Investing by yourself to grow and create more capabilities is the best _____ investment.
a) Long-term b) Short-term c) Periodical d) Secret **Ans: a**
5. A _____ is a detailed plan of operations for some specific future period.
a) Sharing b) Saving c) Budget d) Investment **Ans: c**
6. The word Budget is derived from the _____ term 'Bougette'.
a) French b) Latin c) Greek d) English **Ans: a**
7. _____ expenses are the combination amount of the fixed and flexible expenses.
a) Total b) Fixed c) Flexible d) Disposable **Ans: a**
8. _____ income is the money which left over after the income tax is subtracted from the income.
a) Total b) Fixed c) Flexible d) Disposable **Ans: d**
9. The situation of expenditure exceeds the total income is known as _____ budget.
a) Surplus b) Balanced c) Deficit d) Affordable **Ans: c**
10. In _____ budget, the income is more than the expenditure.
a) Surplus b) Balanced c) Deficit d) Affordable **Ans: a**
11. _____ is power.
a) Wealth b) Budget c) Investment d) Knowledge **Ans: d**
12. The _____ is an asset or item acquired with the goal of generating income or appreciation.

a) Budget b) Investment c) Finance d) Sharing **Ans: b**

13. The shares and property are considered as _____ investment.

a) Fixed b) Cash c) Defensive d) Growth **Ans: d**

14. The _____ investment includes everyday bank accounts, high interest savings and term deposits.

a) Fixed b) Cash c) Defensive d) Growth **Ans: b**

Section – B

Answer the following (2 Marks)

1. Define deficit budget.
2. What is balanced budget?
3. Give any four disadvantages of family budget.
4. Illustrate the benefits of household budget.
5. How to plan travel budget?
6. Write any two saving strategies.
7. Define defensive investments.
8. What are the ways to manage family finance?
9. Give any four advantages of family budget.
10. Why the household budget is important?

Section – C

Answer the following (5 Marks)

1. Briefly explain the significance of Domestic Finance.
2. Write a short note on the tips of Manager of Domestic Finance.
3. Distinguish the various types of expenses.
4. Explain the relevance of Budget for meeting anticipated expenses.
5. Write an account on the Household Budget.
6. Trace out the importance of setting financial goals.
7. Narrate shortly on how to plan for the Travel Budget.
8. Write a note on the various strategies adopted for Saving.

Section – D

Answer the following (10 Marks)

1. Describe the role played by Women in Domestic Finance Management.
2. Evaluate the significance of Budget and creating the necessity of Family Budget.
3. Analyse the advantages and dis-advantages of Family Budget.
4. Explain the ten fundamental steps that help to manage the Finance.
5. Elucidate in detail the different types of Investments.

Unit- 5

Women's Empowerment in various domains

Section – A

Choose the correct answer (1 Mark)

1. _____ is the queen of Indian tracking field.
a) Muthulakshmi Reddy b) P.T. Usha c) M.S. Subbu lakshmi d) Saina **Ans: b**
2. P.T.Usha belong to the state _____
a) Mumbai b) Kerala c) Manipur d) Karnataka **Ans: b**
3. P.T.Usha has won _____ medals.
a) 101 b) 71 c) 51 d) 91 **Ans: a**
4. _____ became the first musician to be honored with India's highest civilian award.
a) Muthulakshmi Reddy b) P.T. Usha c) M.S. Subbu lakshmi d) Saina **Ans: c**
5. Sangeetha Kalasikhamani award in 1975 was presented to M.S. Subbu lakshmi by the Indian _____ Society.
a) Music b) culture c) trade d) Fine arts **Ans: d**
6. In 1988, the government of _____ honored M.S. Subbu lakshmi with the Kalidas Samman.
a) Mumbai b) Kerala c) Manipur d) Madhya Pradesh **Ans: d**
7. _____ started working for the welfare of leprosy patients.
a) Muthulakshmi Reddy b) Mother Theresa c) M.S. Subbu Lakshmi d) Saina **Ans: b**
8. _____ was the first woman to study in the Government College

Pudukottai .

a) Muthulakshmi Reddy b) Mother Theresa c) M.S. Subbu lakshmi d) Saina **Ans: a**

9. Muthulakshmi founded and started the _____ an orphanage at Santhome in Madras.

a) Avvai illam b) Mother illam c) Christ illam d) Sarada home **Ans: a**

10. Anti- cancer movement was started in the year _____

a) 1930 b) 1932 c) 1934 d) 1936 **Ans: d**

11. 5th All Indian conference held at _____

a) Mumbai b) Kerala c) Manipur d) lahore **Ans: d**

12. _____ as a powerful leader and a good director of war.

a) Indira Gandhi b) Mother Theresa c) M.S. Subbu lakshmi d) Saina **Ans: a**

13. _____ is famous for hoisting the Congress flag at the Gowalia Tank maidan in bombay during the Quit India Movement in 1942.

a) Indira Gandhi b) Mother Theresa c) M.S. Subbu lakshmi d) Aruna Asaf Ali **Ans: d**

14. _____ started Patriot newspaper.

a) Indira Gandhi b) Mother Theresa c) M.S. Subbu lakshmi d) Aruna Asaf Ali **Ans: d**

15. _____ was awarded the International Lenin Peace Prize in 1964.

a) Indira Gandhi b) Mother Theresa c) M.S. Subbu lakshmi d) Aruna Asaf Ali **Ans: d**

Section –B

Answer the following (2 Marks)

1. Give the benefits of women empowerment.
2. Write about the golden girl of Sports.
3. What are the obstacles that P.T.Usha faced in her life?
4. Explain the various awards received by P.T.Usha.
5. Write about the performance of M.S.Subbulakshmi in the movie Sakuntalai.
6. Write about the honours and awards received by M.S.Subbulakshmi.
7. How mother Teresa worked for the welfare of leprosy patients.
8. Write about saradha home.
9. What is Devadasi system?
10. Write about Avvai home.

Section –C

Answer the following (5 Marks)

1. Write about the women who created history in sports.
2. Give some interesting facts about P.T.Usha.
3. Explain the achievements of M.S.Subbulakshmi in Music.
4. Explain the childhood of M.S.Subbulakshmi and her role in cinema.
5. How M.S. Subbulakshmi is globally recognised?
6. Explain the social services rendered by Mother Theresa.
7. Describe the women empowerment through politics.

Section –D

Answer the following (10 Marks)

1. List out the achievements made by P.T. Usha.
2. Write about the role of Indira Gandhi in Indian politics.
3. Write a note on the heroine of 1942- Aruna asaf ali.
4. Write about the women who crossed hurdles in social service.
5. Explain the achievements of Muthulakshmi Reddy.
6. Discuss the role of women in freedom struggle.

Semester – III			
Women's Synergy			
Code : 18UAWS31	Hrs/ Week : 2	Hrs/Sem:30	Credits : 2

Unit I - Physical Health

Woman's Structural Organisation – Levels of organization – Body image - Reproductive health – Hormonal Cycle and its Psycho-somatic implications – Child birth – lactation – Nutritional status of women.

Unit II – Psychological Health

Examining factors determining psychological conditions of women – Anxiety, stress, depression hysteria – Socio – cultural and familial conditioning of women's minds – Self Image, Objectification of a Woman etc.

Unit III – Women and Legal Awareness

Women specific – centered legislations – legal issues – laws to prevent gender based violence National / State Pro-women schemes – educational and Employment schemes. Laws for protection of Women – Women's rights to property – Women's Rights in the Indian Constitution – Maternity benefit act.

Unit IV – Women and Finance

Manager of domestic finance – Budgeting basics – Create a family budget - Set financial goals – Plan for financial emergencies – Budget for travel – Saving strategies – Investment options.

Unit V – Women's Empowerment in various domains

Women created history in sports and music - Women who crossed hurdles in Social Service, Indian independence movement and Politics.

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI

II B.Sc. Chemistry

Semester IV

Core

Organic Chemistry

Sub. Code: 21UCHC41

Question bank

UNIT I Nitro compounds and Amino compounds

Section A (1 mark)

1. Nitriles on hydrolysis gives
a) Carboxylic acids b) Ketones c) Aldehydes d) esters **(Ans a)**
2. Propanonitrile on reduction with lithium aluminium hydride gives
a) n-propyl amine b) aniline c) n-butyl amine d) nitroaniline **(Ans a)**
3. Isonitriles are otherwise called as
a) Cyanides b) Carbylamines c) aromatic amines d) isocyanates **(Ans b)**
4. The substituent which increases the basicity of aromatic amines is
a) Br b) COOH c) -OCH₃ d) NO₂ **(Ans c)**
5. Nitrogen atom of amines is
a) sp² b) sp c) sp³d² d) sp³ **(Ans d)**
6. _____ will not react with diethyl oxalate
a) Aniline b) Primary amine c) Secondary amine d) tertiary amine **(Ans d)**
7. Aryldiazonium salts are prepared by the primary amine with
a) nitric acid b) nitrous acid c) sulphuric acid d) phenol **(Ans b)**
8. Benzene diazonium chloride on reaction with hypophosphorous acid to form
a) toluene b) aniline c) benzene d) nitro benzene **(Ans c)**
9. Ethyl nitrite on reduction gives
a) ethanol b) ethyl amine c) acetamide d) ethyl nitrate **(Ans a)**
10. Nitro ethane on reduction gives
a) ethanol b) ethyl amine c) ethyl nitrate d) acetamide **(Ans b)**
11. The major product obtained by heating nitrobenzene with con. Nitric acid and con. Sulphuric acid
a) o-dinitrobenzene b) p-dinitrobenzene c) m-dinitrobenzene d) trinitrobenzene **(Ans c)**

Section B (2 marks)

1. Write any one method for the preparation of alkyl nitrile.
2. Write the reaction of alkyl nitrate with nitrous acid.
3. What are diazonium compounds?

4. What is NEF reaction?
5. How benzene diazonium chloride is prepared?
6. How ortho and para dinitrobenzenes are prepared?
7. Write the ascending and descending of amines.
8. Give the preparation of trinitro benzene.
9. How phenylenediamine is prepared?
10. What is carbylamine reaction?

Section C (5 marks)

1. How mixture of amines is separated by Heisenberg method
2. Distinguish nitroalkane and alkyl nitrites.
3. Explain i) Mustard oil reaction ii) Mannich reaction
4. Write the preparation and properties of phenylenediamine
5. How nitroalkanes are reduced?
6. Discuss the preparation of dinitobenzenes.

Section D (10 marks)

1. Explain the preparation and synthetic applications of diazonium chloride
2. Explain the effect of substituents on the basicity of aromatic amines
3. Discuss the various methods for the separation of amines.
4. Write the preparation and properties of nitriles and isonitriles.
5. Compare primary, secondary and tertiary amines.

UNIT II Reactive Methylene compounds and Conformational Analysis

Section A (1 mark)

1. Compounds containing active methylene groups are called
 a) enolates b) diols c) esters d) acids **(Ans a)**
2. Acetoacetic ester is synthesized by _____ condensation
 a) Aldol b) Claisen c) Knoevenagel d) Dieckman **(Ans b)**

3. The repulsive interaction between the electron clouds of the C-H bonds of the neighbouring carbon atoms is _____
 a) Torsional strain b) Steric strain c) Dipole-dipole interaction d) Vander Walls strain
(Ans a)
4. The relative stabilities of different conformations of cyclohexane are
 a) Half chair < Boat < twist boat < chair b) Half chair << twist boat < Boat < chair
 c) chair < Boat < twist boat < Half chair d) chair < Boat < Half chair < twist boat
(Ans a)
5. The chair form of cyclohexane is similar to
 a) Staggered ethane b) eclipsed ethane c) Gauche 1,2 dichloroethane d) anti 1,2 dichloroethane
(Ans a)
6. The boat form of cyclohexane is similar to
 a) Staggered ethane b) eclipsed ethane c) gauche 1,2 dichloroethane d) anti 1,2 dichloroethane
(Ans b)
7. The least energetic conformation of cyclohexane is
 a) Boat form b) Chair form c) Twisted form d) Half chair form
(Ans b)
8. The stable conformation of cyclohexane is
 a) Boat form b) Chair form c) Twisted form d) Half chair form
(Ans b)
9. The conformation of cyclohexane which has no angle and torsional strain is
 a) Half chair form b) Boat form c) Twisted form d) chair form
(Ans d)
10. The isomers converted into each other by rotation around a single bond are _____
 a) conformers b) enantiomers c) diastereomers d) position isomers
(Ans a)
11. The stability of conformations of cyclohexane decreases in the order
 a) Chair > half chair > boat > twist boat b) Chair > twist boat > half chair > boat
 c) Chair > twist boat > boat > half chair d) boat > half chair > Chair > twist boat
(Ans c)
12. _____ cannot be isolated or prepared in their individual forms.
 a) conformers b) enantiomers c) diastereomers d) position isomers
(Ans a)
13. The dihedral angle for eclipsed conformation is _____
 a) 0 b) 60 c) 120 d) 180
(Ans a)

14. _____ have an infinite number of conformations by rotation around carbon-carbon single bonds.

- a) alkanes b) alkenes c) alkynes d) ethane

(Ans a)

Section B (2 marks)

1. What is enolization?
2. Why methylene hydrogens are acidic in nature?
3. Give the preparation of malonic ester.
4. How acetoacetic ester is prepared by Claisen condensation?
5. Enumerate any four differences between configuration and conformation.
6. Explain any one factor affecting the stability of conformation.
7. Draw the Newman projection of 1,2 dichloroethane.
8. Draw the Sawhorse projection of 1,2 dichloroethane.
9. What is angle strain?
10. What is torsional strain?
11. Define dipole-dipole interaction.
12. Draw the various conformations of ethane.
13. What is dihedral angle?

Section C (5 marks)

1. Enumerate the differences between configuration and conformation.
2. Discuss Sachse-Mohr theory of strainless rings.
3. Draw the chair, boat and conformations of cyclohexane. Draw the potential energy diagram for the conversion of chair form into boat form.
4. List out the postulates of Baeyer's strain theory.
5. Discuss the Newman projection and Sawhorse representation of ethane.

Section D (10 marks)

1. Discuss in detail the conformational analysis of cyclohexane
2. Explain in detail Baeyer's strain theory.

3. Draw the energy profile diagram of conformations of cyclohexane. How could you explain the greater stability of chair form as compared to that of boat form?
- 4.. What is conformation? What are the factors affecting the stability of conformations.
5. Explain the energy profile diagram of conformations of 1,2 dichloro ethane.

UNIT III Organometallic compounds and Organosulphur compounds

Section A (1 mark)

1. Grignard reagent reacts with acetaldehyde forms _____
a)1-propanol b)ethyl alcohol c)tert-butyl alcohol d)isopropyl alcohol **(Ans d)**
2. Methyl magnesium iodide on reaction with HCHO gives _____
a)ethanol b) 1-propanol c)ethane d)acetone **(Ans a)**
3. _____ is used to preserve old books from gradual decomposition due to acid in the paper
a) Dialkylzinc b)Tetraethyllead c)Sodamide d)Lithium Aluminium hydride
(Ans a)
4. _____ is used as a antiknock in gasoline
a)Frankland reagent b)malaprade reagent c) Tetraethyllead d)Grignard reagent
(Ans c)
5. Among the halides, the ease of formation of Grignard reagent is
a)iodine>bromide>chloride b) bromide>iodide>chloride
c)chloride>bromide>iodide d) iodide>chloride>bromide **(Ans a)**
6. Methyl magnesium iodide reacts with water to form
a)ethanol b)methanol c)methane d) ethane **(Ans c)**
7. Grignard reagents react with carbon dioxide to form
a)monocarboxylic acid b)dicarboxylic acid c)primary alcohol d)secondary alcohol
(Ans a)
6. _____ is manufactured by heating ethyl chloride with sodium lead alloy
a)Grignard reagent b)tetraethyl lead c)dimethyl zinc d)diethyl zinc **(Ans b)**
7. _____ is added to natral gas to make gas leaks detectable
a) methane thiol b)diethyl sulphide c)sodium ethyl mercaptide d)ethyl thioacetate
(Ans a)
8. Dimethyl sulphide on basic hydrolysis gives

a)trimethyl sulphonium hydroxide b)methane sulphonic acid c)methanethiol

d)dimethyl sulphoxide

(Ans d)

9. _____ is a highly poisonous gas used in warfare

a)sulphonal

b)acetone mercaptol

c)mustard gas

d)methane thiol

(Ans c)

10. Thiols are otherwise called as _____

a) mercaptans

b)alkyl sulphides

c) thio ethers

d) thiophenes

(Ans a)

Section B (2 marks)

1. Give any two methods of preparation of Grignard reagent.
2. How old books are preserved from decomposition by dialkyl zincs?
3. What are the uses of tetraethyl lead?
4. Give the synthesis of diethyl ether.
5. Write the uses of mustard gas.
6. Why thiols are called as mercaptans?
7. Why the boiling points of thiols are much lower than the corresponding alcohols?
8. Write any two methods of preparation of thiols.
9. How sulphonal is prepared?
10. Write the oxidation reaction of dimethyl sulphide.

Section C (5 marks)

1. Explain the synthesis of sulphonal and sulphone
2. Give the preparation and properties of mustard gas.
3. Write the chemical properties of thiols.
4. Discuss the chemical properties of thioethers.
5. Write the nucleophilic substitution reactions of Grignard reagents.

Section D (10 marks)

1. Discuss the preparation and applications of Grignard reagent.
2. Give the preparation and applications of Frankland reagent
3. Elaborate the preparation and properties of thiols.
4. Explain the synthesis and applications of thioethers.
5. What are organometallic compounds? Give the preparation and uses of tetraethyl lead.

UNIT IV CARBOHYDRATES

Section A (1 mark)

1. α -D glucose and β -D glucose differ from each other due to difference in
 - a) Size of hemiacetal ring
 - b) Number of –OH group
 - c) Configuration
 - d) Conformation(Ans c)
2. Fehling's solution and Benedict's solution are reduced by glucose to form
 - a) CuO
 - b) Cu₂O
 - c) Cu(OH)₂
 - d) Cu(Ans b)
3. Inulin is an example of
 - a) homopoly Saccharide
 - b) Oligosaccharide
 - c) Heteropolysaccharide
 - d) monosaccharide(Ans a)
4. Glucose contains and
 - a) one –CHO group and five –OH groups
 - b) One primary alcohol group
 - c) Four secondary alcoholic groups
 - d) All(Ans d)
5. α -D-glucose and β -D-glucose
 - a) Have 6-membered Pyranose structure
 - b) Show muta-rotation
 - c) Are called anomers
 - d) All(Ans d)
6. The carbon chain in fructose is identified by converting it into
 - a) α -methyl hexane
 - b) Cyclohexane
 - c) n-hexane
 - d) α -methyl caproic acid(Ans c)
7. Which one among the following does not show mutarotation
 - a) Glucose
 - b) Fructose
 - c) Sucrose
 - d) ribose(Ans c)
8. Which of the following reagent is used to distinguish between glucose and fructose
 - a) Tollen's reagent
 - b) Fehling's solution
 - c) Bromine water
 - d) H₂SO₄(Ans c)
9. When treated with Con. HCl, sucrose gives
 - a) Sorbitol
 - b) Mannitol
 - c) Laevulic acid
 - d) oxalic acid(Ans c)
10. Starch is an example of
 - a) monosaccharide
 - b) disaccharide
 - c) trisaccharide
 - d) polysaccharide(Ans b)
11. Cellulose is a polymer of
 - a) α -D-Glucose
 - b) β -D-Glucose
 - c) α -D-Fructose
 - d) β -D-Fructose(Ans b)

Section B (2 mark)

1. What are carbohydrates?
2. Classify carbohydrates based on their saccharide units.
3. Give the industrial preparation of glucose.
4. Give the laboratory preparation of fructose.
5. Explain the optical isomers of glucose and fructose.
6. Define mutarotation.
7. What are polysaccharides?
8. What are the uses of starch?
9. How glucose is obtained from starch?
10. What is cellulose? give any two properties.
11. What is mercerization?

Section C (5 mark)

1. Explain the term mutarotation with a suitable example.
2. Bring out the following conversions i) aldose to ketose ii) ketose to aldose
3. How will you convert the following i) Glucose to fructose ii) Fructose to glucose.
4. With excess of phenylhydrazine, glucose and fructose form the same osazone. Explain.
5. How are carbohydrates classified? Give examples

Section D (10 mark)

1. Establish the structure and configuration of glucose.
2. What is the reaction of glucose and fructose with i) Con. HNO_3 ii) Tollen's reagent iii) Hydroxylamine iv) Sodium amalgam
3. Discuss the structure and configuration of fructose.
4. Establish the structure and configuration of glucose.
5. Write notes on :Epimerisation.
6. Discuss the evidences in favour of the ring structure of glucose
7. Write brief notes on starch and cellulose.

Unit V Tautomerism and Molecular Rearrangement

Section A

1. Keto-enol tautomerism in acetoacetic ester is an example of

- a) Diad prototropy b) **Triad prototropy** c) Anionotropy d) valence tautomerism
2. Enol form of AAE with FeCl_3 gives
 a) Purple colour b) Black (c) **Reddish-Violet** d) Red
3. Nitro-acinitro tautomerism is not exhibited by -----.
 a) 1^0 nitro compound b) 2^0 nitro compound c) **3^0 nitro compound** d) 1^0 amines
4. Urea exhibits _____ tautomerism
 a) Keto enol (b) **amido-imido** (c) nitro-acinitro (d) lactam-lactim
5. In Benzilic acid rearrangement
 a) Benzaldehyde is converted into Benzoin (b) Benzoin is converted into benzilic acid
 c) benzilic acid is converted into benzil (d) **Benzil is converted into benzilic acid**
6. Pinacols are -----.
 a) alcohols b) Monohydric alcohols c) dihydric alcohols d) **1,2 – diols**
7. The rearrangement in which hydroxamic acids and their o-acyl derivatives give isocyanates on heating and is used to assign configuration for ketoxime is -----.
 a) Curtius b) **Lossen** c) nitro-acinitro d)
8. ----- rearrangement is an example of 1:7 proton shift.
 a) **p-nitroso phenol-quinone monoxime** b) Fries c) Lossen d) lactam-lactim
9. Isatin is an example of -----rearrangement.
 a) Curtius b) Fries c) nitro-acinitro d) **lactam-lactim**

Section B

1. Define tautomerism.
2. What is diad prototropy?
3. What is triad prototropy?
4. Explain valence tautomerism.
5. Differentiate prototropy and oxotropy.
6. What is ring – chain tautomerism?
7. What is open chain tautomerism?
8. Differentiate intermolecular and intramolecular rearrangement.

9. Cross over experiments can be carried out to detect inter or intra molecular rearrangement reaction- explain

Section B **(5x5=25)**

1. Define tautomerism. Explain the different types of tautomerism with examples.
2. What is Pinacol-Pinacolone rearrangement ? Discuss its mechanism and uses
3. Discuss Amido-Imido tautomerism with an example.
4. Explain Nitro-acinitro tautomerism with suitable examples.
5. Give the mechanism of Fries rearrangement.
6. Write the mechanism of Benzilic acid rearrangement.

Section C **(5x8=40)**

1. Define tautomerism. Explain the different types of tautomerism with examples.
2. Discuss the following rearrangements with mechanism i) Lossen rearrangement
 ii) Curtius rearrangement
3. Explain Keto-enol tautomerism in aceto acetic ester.
4. Explain pinacol-pinacolone rearrangement with suitable examples.
5. Describe Curtius rearrangement with suitable examples.

Question Bank
(For those who joined from 2021 onwards)

UNIT I Metallurgy

Section A

(1 mark)

1. ----- is a process in which the ore is heated strongly in the absence of air
(a) roasting (b) smelting (c) calcinations (d) refining **(Ans c)**
2. Beach sands of Kerala and south Tamilnadu contains
(a) pyrolusite (b) bauxite (c) haemitite (d) monazite **(Ans d)**
3. -----is an ore of Titanium
(a) Carnotite (b) Rutile (c) Thorite (d) Monazite **(Ans b)**
4. The reducing agent used in Kroll's process is
(a) Al (b) Mg (c) Ca (d) C **(Ans b)**
5. -----is used in the construction of air craft , marine equipments and chemical plants.
(a) Ti (b) W (c) Th (d) U **(Ans a)**
6. ----- used in the production of paints and pigments
(a) V_2O_5 (b) $Th(NO_3)_4$ (c) TiO_2 (d) $ThCl_4$ **(Ans c)**
7. ----- used as insecticides and fungicides.
(a) Ti (b) V (c) Th (d) W **(Ans b)**
8. In Van Arkel de Boer Method the pure metal is deposited on -----filament.
(a) W (b) Ti (c) V (d) Th **(Ans a)**
9. The slag formed in the blast furnace during the smelting of ore is ----
(a) Calcium carbonate (b) lime (c) ferrous silicate (d) calcium silicate **(Ans d)**
10. In Aluminothermic process ----- of metal oxide occurs.
(a) Reduction (b) oxidation (c) sulphonation (d) calcination **(Ans a)**
11. The Ion exchange method is used in the separation of -----
(a) Alkali metals (b) Halogens (c) lanthanides (d) alkaline earth metals **(Ans c)**
12. -----is used as smoke screens.
(a) V_2O_5 (b) $TiCl_4$ (c) $Th(NO)_3$ (d) ThI_2 **(Ans a)**

Section B**(2 marks)**

1. What are minerals and ores?
2. Mention any two types of ores with examples.
3. Write any two uses of Titanium.
4. Write down the preparation of TiCl_4
5. Write a note on purification of Titanium by van Arkel – de Boer method.
6. What is Kroll process?
7. Write the uses of V_2O_5 .
8. What is calcination?
9. What is roasting?
10. What is Marden and Rich method?

Section C**(5 marks)**

1. Write notes on i) zone refining ii) Kroll process.
2. Discuss the preparation and uses of the following compounds i) Titanium tetrachloride
ii) Vanadium pentoxide.
3. What are the differences between calcinations and roasting
4. Discuss the types of ores with suitable example
5. Explain Aluminothermic process.
6. Explain ion exchange method of purification of Lanthanides.
7. Write in detail about Muffle furnace and Electric furnace

Section D**(10 marks)**

1. Discuss the extraction properties and uses of Vanadium.
2. What are the ores of titanium? Discuss the metallurgy of Ti and its uses
3. Explain briefly the types of furnaces used in metallurgy.
4. Explain i) Kroll process ii) oxidative refining iii) electrolytic refining
5. Explain (i) Blast furnace (ii) Reverberatory furnace used in metallurgy

Unit-II Colloids and Emulsions

Section –A

(1 mark)

Choose the correct answer

1. The size of colloidal particle ranges from
(a) 10\AA - 1000\AA b) 1\AA - 10\AA
(c) 10000\AA - 20000\AA d) 5000\AA - 20000\AA (Ans a)
2. Smoke is _____ dispersed in _____
(a) solid, liquid b) liquid, liquid
(c) gas, gas d) solid, gas (Ans d)
3. The continuous zig-zag movement exhibited by colloidal particles is
a) Brownian movement b) Double layer movement
(c) aggregation movement d) zero order movement (Ans a)
4. Helmholtz double layer is the combination of
a) -ve charge b) +ve charge
(c) +ve and -ve charge d) neutral (Ans c)
5. _____ is used as reducing agent for the preparation of Au and Ag sols by chemical reduction method
a) hydrochloric acid b) tannic acid
(c) oxalic acid d) sulphuric acid (Ans b)
6. Colloidal system containing a liquid dispersed in a solid is _____
a) sol b) aerosol c) gels d) emulsion (Ans c)
7. _____ is an example of an emulsifying agent
a) Soap b) NaOH c) $\text{Ca}(\text{OH})_2$ d) NaCl (Ans a)
8. _____ is the most effective protective colloid
a) Saponin b) gum Arabic c) gelatin d) Starch (Ans c)
9. The phenomenon by which gels on standing expel spontaneously the liquid held by them and undergo shrinkage in volume is known as
a) Syneresis b) Thixotropy c) Imbibition d) precipitation (Ans a)
10. _____ is an example of water-in-oil emulsion is
a) salt water b) butter c) milk d) jam (Ans b)

Section B

(2marks)

Answer the following

1. What are colloids? Give example
2. What are emulsions? Give examples
3. Define Gold number.
4. What are protective colloids?
5. Define Hardy-Schulze law.
6. What are surfactants?
7. Define Thixotropy.
8. Define Imbibition
9. Define Syneresis
10. Write double decomposition method for the preparation of sol

Section C

(5 marks)

Answer the following questions

1. Compare lyophilic sol and lyophobic sol
2. Explain Bredig's arc method of preparation of sol
3. What are gels? Explain its preparation methods and properties
4. Explain briefly (i) Hardy Schulze law (ii) Gold number
5. Explain in detail the electrical property of colloids.

Section D

(10 marks)

Answer any the following

1. Explain (i) Tyndall effect (ii) Brownian movement
2. Discuss briefly the application of colloids in various fields.
3. Explain briefly optical, kinetic and electrical property of colloids.
4. Explain in detail (i) Emulsion (ii) Surfactants
5. Explain (i) mechanisms of action of action of soaps (ii) chemical methods of preparation of sols

UNIT III – SYNTHETIC REAGENTS AND SOME IMPORTANT ORGANIC COMPOUNDS

Section A

(1 mark)

1. _____ is used as an antiknock in gasoline
a) Frankland reagent b) malaprade reagent c) Tetraethyl lead d) Grignard reagent
(Ans c)
2. Diethyl zinc reacts with water to give
a) ethylene b) ethanol c) acetylene d) ethane
(Ans d)
3. Diethyl zinc reacts with formaldehyde to give
a) propanol b) ethanol c) butanol d) propane
(Ans a)
4. Methyl lithium reacts with formaldehyde to give
a) propanol b) ethanol c) butanol d) propane
(Ans b)
5. Which of the following has an active methylene group?
a) diethyl zinc b) methyl lithium c) tetra ethyl lead d) diethyl malonate
(Ans d)
6. Malonic ester on hydrolysis followed by heating gives
a) acetic acid b) butyric acid c) crotonic acid d) oxalic acid
(Ans a)
7. _____ is a sweetener suitable for diabetics.
a) Chloramine T b) Salicylic acid c) Saccharin d) Aspirin
(Ans c)
8. Acetyl salicylic acid is called
a) salol b) aspirin c) saccharin d) chloramine T
(Ans b)
9. _____ is used as an antiseptic for washing wounds and mouth.
a) salol b) saccharin c) aspirin d) chloramine T
(Ans d)
10. Nitration of salicylic acid gives
a) o-nitro phenol b) m-nitro phenol c) p-nitro phenol d) picric acid
(Ans d)
11. _____ is used as an analgesic and an anti-pyretic
a) phenol b) aspirin c) saccharin d) chloramine T
(Ans b)

Section B**(2 marks)**

1. What are organometallic compounds? Give examples.
2. Write the preparation of diethyl zinc.
3. What is an active methylene group?
4. How tetraethyl lead is prepared?
5. Write the preparation of salicylic acid.
6. Write the preparation of saccharin.
7. Give the uses of chloramine T.
8. Write the coupling reaction of phenol.
9. How acetic acid is synthesized from diethyl malonate?
10. Write the synthesis of aspirin.

Section C**(5 marks)**

1. Give the reactions of methyl lithium with aldehydes.
2. Write the reactions of diethyl zinc.
3. Write the preparation and uses of tetra ethyl lead.
4. Write the preparation properties and uses of saccharin.
5. Explain the reactions of phenolic group of salicylic acid.
6. Give the preparation and uses of aspirin.
7. Show how different acids are synthesized from diethyl malonate

Section D**(10 marks)**

1. Write the synthesis and reactions of methyl lithium.
2. Write the synthesis and reactions of diethyl malonate.
3. Write the synthesis and reactions of diethyl zinc.
4. Explain the reactions of salicylic acid.
5. Give the preparation, properties and uses of chloramine T.

UNIT IV ALKALOIDS AND TERPENOIDS

Section –A

(1 mark)

Choose the correct answer

1. -----alkaloid is present in Hemlock seeds.
a) Coniine b) Nicotine c) Quinine d) Papavarine **(Ans a)**
2. The source of nicotine is -----
a) black pepper b) Poppy seeds c) Tobacco leaves d) Hemlock seeds **(Ans c)**
3. Alkaloids are generally -----
a) Nitrogeous compounds b) Basic in nature
c) Physiologically active substances d) All of these are correct. **(Ans d)**
4. The alkaloid responsible for the particular taste of black pepper is -----
a) Coniine b) Papaverine c) Piperine d) Chavicine **(Ans c)**
5. Hemlock alkaloid which was responsible for the forced death of great philosopher Socrates, contains -----
a) Strychnine b) Opium c) Coniine d) Nicotine **(Ans c)**
6. Terpenes occur in -----
a) mineral water b) edible oil c) petroleum d) essential oil **(Ans d)**
7. Which of the following is not a character of terpenoids?
a) They are pleasant smelling liquids b) They are steam volatile
c) They are nitrogeous bases d) They are insoluble in water **(Ans c)**
- 8) Ingold 's isoprene rule states that in terpenoids isoprene units are joined -----
a) Head to tail b) Head to head c) Tail to tail d) In a random order **(Ans a)**
9. Which of the following is not the product of ozonolysis on citral?
a) acetone b) leavulaldehyde c) glyoxal d) oxalic acid **(Ans d)**
10. The terpenoid present in oil of lemon grass is -----
a) Citral b) Geraniol c) Nerol d) α – Terpineol **(Ans a)**
11. Citral when heated with KHSO_4 forms?
a) Isoprene b) p – cymene c) p – menthane d) dipentene **(Ans b)**

Section B

(2marks)

Answer the questions in 50 words each.

1. What do you mean by an alkaloid?
2. How hydroxyl group can be detected?
3. How methoxy group can be estimated?
4. What is Hoffmann exhaustive methylation?
5. How will you convert nicotine into nicotinic acid?
6. What is meant by a terpene?
7. What are essential oils?
8. What are Isoprenoids?
9. How will you show that citral has an α,β unsaturated aldehyde group?
10. What happens when Citral undergoes Ozonolysis?
11. What happens when Menthol undergoes reduction with HI?

Section C

(5 marks)

Answer the questions in 200 words each.

1. Discuss the classification of alkaloids.
2. Exhaustive methylation has been an important tool in the study of the structure of alkaloids.
3. Justify the statement by giving an example.
4. Discuss the structure of coniine.
5. Give the synthesis of nicotine.
6. What are terpenoids? How are they classified?
7. Write a note on isoprene rule.
8. How functional nature of oxygen is determined in terpenoids?
9. Give the synthesis of citral.

Section D

(10 marks)

Answer the questions in 400 words each.

1. What are alkaloids ? Taking nicotine as an example show how is the structure of an alkaloid determined?
2. Discuss the constitution of Nicotine.
3. Give an outline of the procedure adopted for structure elucidation of terpenoids.
4. Give an account of the analytical and synthetic evidence to elucidate the structure of citral.
5. Discuss the structure of Menthol.

UNIT V NANOCHEMISTRY

Section –A

(1 mark)

Choose the correct answer

1.The size of the nanoparticles is in the range of -----

- a)1 – 1000 nm b) 1 – 500 nm c)1 – 200 nm d)1 – 100 nm **(Ans d)**

2. The structure of nanomaterials in two-dimensional network is called -----

- a) nanoparticle b) nanofilms c) nanowire d) quantum dot **(Ans b)**

3.The size of the quantum dot is in the range of -----

- a)1-1000nm b)1-10nm c)1-200nm d)1-100nm **(Ans b)**

4.A nanometer scale is -----

- a) 1×10^{-9} nm b) 1×10^{-9} cm c) 1×10^{-9} m d) 1×10^{-9} mm **(Ans c)**

5.One of the following nanoparticles acts as a semiconductor -----

- a) CdSe b) MgO c) CaO d) Al_2O_3 **(Ans a)**

6.For the preparation of nanomaterials, polyvinyl pyrrolidone (PVP) is used as a -----

- a) reducing agent b) reactant c) capping agent d) solvent **(Ans c)**

7.----- is a ultrathin carbon fibre with nanometer size diameter and micrometer size length.

- a) carbon nanotube b) nano fibre c) nanorod d) nano dot **(Ans a)**

8. Sheet of graphite rolled up into a cylinder is called _____

- a) Carbon nanotube b) graphene c)carbon tubes d)graphite tubes **(Ans a)**

9. CdSe behaves as -----

- a) Insulators b) Semiconductors c) Conductors d) super conductor **(Ans b)**

10. The following nanomaterial is used in cosmetics -----

- a) Fe_2O_3 b) CuO c) ZnO d) Al_2O_3 **(Ans c)**

Section B

(2marks)

Answer the questions in 50 words each.

1. What are nanoparticles?
2. Differentiate nanoparticles and nanowire.
3. Differentiate nanowire and quantum dot.
4. What are nanoclusters?
5. What are CNTs?
6. Define SWNT.
7. What is nanoceramics?
8. What is SWNT and MWNT?
9. Define metal nanoparticles.
10. Name some common reducing agents used in the preparation of nanoparticles.

Section C

(5 marks)

Answer the questions in 200 words each.

1. Write notes on nanoparticles of metals.
2. Write notes on nanoparticles of semiconductors.
3. Write notes on Nanoceramics.
4. How nano sized compounds is synthesized by reduction method?
5. What are carbon nanotubes?

Section D

(10 marks)

Answer the questions in 400 words each.

1. Write notes on nanoparticles of metals, semiconductors and oxides.
2. How nano sized compounds are synthesized ?
3. What are carbon nanotubes? Explain its types.
4. Discuss the application of nanomaterials in various fields
5. With a flow chart, explain the synthesis of metal oxide nanoparticles by sol-gel method.

UNIT I Classification and mechanism of drug action

Section A

1. _____ disease is caused by the deficiency of iodine.
a) **goitre** b) amoebiasis c) leprosy d) rickets
2. The drugs which are used for skin diseases are called ____ drugs.
a) anti-inflammatory b) antifungal c) **dermatologicals** d) vasodilator
3. Sir Alexander Fleming discovered _____
a) procaine b) streptomycin c) tetracyclines d) **Penicillin**
4. _____ is an antiviral agent.
a) **Methisazone** b) triethylene c) streptomycin d) sulfones
5. Chemical substance produced by microorganisms inhibiting the growth of other microorganisms is called _____.
a) sulphonamides b) **antibiotics** c) antifungal agents d) hormones
6. The father of modern Chemotherapy is _____.
a) Louis Pasteur b) Alexander Flemming c) **Paul Ehrlich** d) Domagk
7. Drugs used to kill parasite worms are called _____.
a) antiprotozoal agents b) antifungal drugs
c) **anthelmintic agents** d) antiarrhythmics drugs
8. _____ is a group of nerve cells which controls the whole endocrine system
a) thyroid b) islets of Langerhans c) pituitary d) **hypothalamus**
9. Oestrogen is an example of _____.
a) **hormones** b) antioxidant c) antifungal agent d) antiviral agent
10. _____ acts on the cell surface.
a) **penicillin** b) osmotic diuretics c) steroid hormones d) plasma extenders
11. _____ is the length of time of a drug to produce desirable effect.
a) **onset action** b) maximal effect c) duration of action d) minimal effect

Section B (2 marks)

1. List out the various sources of drugs.
2. Differentiate antifungal and antibacterial agents.
3. What are chemotherapeutic agents?
4. Distinguish antiarrhythmic and vasodilator drugs.
5. Explain the term site of action of the drug with suitable example.
6. Recall the drug action at cellular sites.
7. Differentiate time- response and dose-response relationships.
8. Identify the symptoms of angina pain and its curative drug.

Section C (5 marks)

1. Classify drugs based on metabolic diseases and endocrine function.
2. Classify drugs based on i)chemical structure ii)commercial consideration iii)lay public
3. How drugs are classified based on their action on central nervous system?
4. Write short notes on i)antileptal agents ii)antineoplastics iii)antibacterial agents
5. Interpret the mechanism of drug action at the extracellular site.
6. Outline the chemistry of drug receptor binding.

Section D (10 marks)

1. Discuss the classification of chemotherapeutic drugs
2. Discuss the classification of pharmacodynamic agents.
3. Evaluate the activity of drug receptors and biological responses.
4. Explain the chemistry of drug receptor binding.

Unit II

Causes of common diseases and their treatment by drugs

1. _____ is an antimalarial drug
a) **chloroquin** b) tetracycline C) paramino salicylic acid d) DDT
2. The antibiotic used for the treatment of typhoid is -----.
a) camoquin b) **chloromycetin** c) streptomycin d) isoniazide
3. Amoebic dysentery is caused by _____
a) flexneri bacillus b) shingella bacillus
c) **entamoeba hystolytica** d) salmonella
4. An disease which results in the swelling of parotid glands is _____.
a) measles b) influenza c) tuberclosis d) **mumps**
5. The bacteria Tubercle bacillus causes -----.
a) common cold b) **tuberculosis** c) mumps d) influenza
6. _____ is commonly known as flu
a) Diphtheria b) **influenza** c) measles d) plague
7. _____ is a hereditary disease
a) filariasis b) cancer c) **diabetes** d) cholera
8. In controlling malaria ----- can be spread to check the growth of mosquitoes.
a) **DDT** b) BHC c) chloroquin b) tetracycline
9. ----- is effective in the treatment of plague.
a) chloroquin b) **tetracycline** C) paramino salicylic acid d) DDT
10. ----- disease can be prevented by giving triple vaccine to infants.
a) **diphtheria** b) influenza c) measles d) mumps

Section B

1. Match the common disorders of gastrointestinal tract and the drug to be used.
2. Describe the terms “disease” and “healthy”.

3. Identify the broad classification of diseases.
4. List out the preventive measures and methods of treatment for malaria.
5. List out the preventive measures and methods of treatment for filariasis.
6. Find out the causes for the widespread of plague .

Section C

1. Give the broad classification of diseases.
2. Explain water borne diseases and their treatment.
3. Interpret the causes, treatment and prevention methods for the following i) malaria
ii) filariasis .k2 (Un)
4. Discuss a common disorder of digestive system.

Section D

1. Write down some water borne diseases, their control and treatment methods
2. Evaluate in detail common air borne diseases , their control and treatment methods.
3. Explain insect borne diseases.

UNIT III

Unit III Clinical Chemistry

1. Folin and Wu's method can be used to determine the ---- in serum.
a) cholesterol
b) **sugar** c) blood pressure d) urea
2. Hypocholesterolaemia means -----in serum level of cholesterol.
a) **decrease** b) increase c) constant d) high
3. Salkowski test is used to determine -----
a) **cholesterol** b) glucose c) urea d) albumin
4. Benedict's test is used to diagnose the presence of ---- in urine.
a) cholesterol b) **sugar** c) blood pressure d) urea
5. Salicylate poisoning is caused by -----.

- a) mercury b) **aspirin** c) atropine d) ammonia
6. Castor oil can be for ----- poisoning.
- a) acid b) alkali c) **disinfectants** d) alcohol
7. White of egg in water should be given followed by milk for ----- poisoning.
- a) Salicylate b) **Mercury** c) disinfectant d) acid
8. The sodium carbonate solution is used to treat burns due to -----
- a) **strong acid** b) strong base c) weak acid d) weak base
9. Burnol is used as a medicine to treat -----
- a) fainting b) poisonous bites c) **burns** d) bleeding
10. Dimercaprol injection is used to treat ----- poisoning.
- a) alkali b) salicylate c) lead d) **mercury**

Section B

1. Describe any one important test for cholesterol. k1 (Re)
2. Find out the significance of clinistix-strip test. k2 (Un)
3. Recall the principle behind Sackett's method for cholesterol. k1 (Re)
4. What first aid can be done in case of bleeding?
5. Enumerate the first aid measures to be taken when a person faints.

Section C

1. Explain the tests for Cholesterol.
2. Write the composition of first aid box.
3. Explain the important rules adopted for first aid treatment and enumerate the articles in a first aid box.
4. How first aid is given for bleeding, fractures, burns and poisonous bites?
5. Explain any four poisons and their antidotes.

Section D

1. Explain Sackett's method to determine total cholesterol in serum
2. Explain Folin and Wu's method to determine sugar in serum

3. How is glucose estimated in urine by Benedict's method.
4. explain in detail few common poisons and their antidotes.

UNIT IV

Blood Pressure and Cardio Vascular drugs

1. Any agent which reduces blood pressure is known as _____ drugs
 - a) **hypotensive**
 - b) antiarrhythmic
 - c) anti anginal agents
 - d) anaesthetic agents
2. _____ drug depress the myocardium
 - a) bretylium
 - b) **quinidine**
 - c) verapamil
 - d) propranolol
3. ----- drugs are used in the treatment of diseases of heart and blood vessels.
 - a) barbiturates
 - b) anaesthetics
 - c) **cardio vascular**
 - d) hypoglycemic
4. The drug ----- is a cinchona alkaloid
 - a) **Quinidine**
 - b) procainamide
 - c) clonidine
 - d) Guanethidine
5. Clonidine finds use in the treatment of -----
 - a) **hypertension**
 - b) diabetes
 - c) cardiac diseases
 - d) anaesthetics
6. Large doses of the drug ----- may produce sedation and mental depression.
 - a) halothane
 - b) tolubutamide
 - c) **Reserpine**
 - d) quinidine
7. The normal blood pressure systolic in a young adult is -----mm (Hg)
 - a) **120**
 - b) 80
 - c) 150
 - d) 180
8. The normal blood pressure diastolic in a young adult is -----mm (Hg)
 - a) 120
 - b) **80**
 - c) 150
 - d) 180
9. The drug which reduces the blood pressure is called ----- drug
 - a) antiarrhythmic
 - b) **antihypertensive**
 - c) anaesthetic
 - d) antihypoglycemic
10. ----- helps to reduce the excitability of the cardiac tissue.
 - a) Clonidine
 - b) reserpine
 - c) **quinidine**
 - d) chlorpropamide.

Section B

1. Define the term blood pressure.
2. Mention the factors dependent on blood pressure.
3. What is systolic pressure?

4. Define the term diastolic pressure.
5. List out the differences between systolic and diastolic pressure.
6. Define hypertension.
7. List out the types of hypertension.
8. What is hypotension?
9. Write note on cardiovascular drugs.
10. List out the action of antiarrhythmic drugs.

Section C

1. What do you mean by Cardio vascular drugs?
2. What is hypertension? Explain its types of treatment.
3. What do you mean by antiarrhythmic drugs?
4. Explain the action of the drug Quinidine.
5. What do you mean by hypotensive drugs?

Section D

1. Explain antiarrhythmic drugs with an example.
2. What are antihypertensive agents? Explain the action of clonidine and reserpine.

UNIT V

Diabetes and some common drugs

1. Diabetes insipidus arises due to lesser secretion of
 a) oxytocin b) estrogen c) **vasopressin** d) phenformin
2. ----- controls all types of diabetes mellitus.
 a) **biguanides** b) chlorpropamide c) tolbutamide d) sulphonyl urea
3. Insulin is secreted by -----.
 a) **islets of Langerhans** b) pituitary c) adrenal d) hypothalamus.
4. An example of Tolbutamide drug is -----
 a) **Unitolbid** b) diabigon c) diabinese d) Phenformin
5. Hypoglycaemic drugs ----- the blood sugar level.

- a) enhances **b) lowers** c) increases d) elevates
6. Blood sugar level is maintained constant at a value of ----- mg of glucose/ 100ml.
- a) **70-120** b) 50-80 c) 140-160 d) 200-240
7. Presence of sugar in urine is known as -----.
- a) hypoglycemic b) **glycosuria** c) hyperglycemic d)

Section B

1. Define the term diabetes.
2. List out the types of diabetes.
3. Mention the official product of metformin.
4. Explain the main symptoms of adult type diabetes.
5. Define the term juvenile diabetes.
6. What do you mean by diabetes mellitus?
7. Define adult type diabetes.
8. List out any four methods to control diabetes.
9. Mention few food items that diabetic patients should avoid.
10. What do you mean by hypoglycemic drugs?

Section C

1. What are the types of diabetics and how it can be controlled?
2. Write notes on chlorpropamide.
3. Interpret on the methods by which diabetes can be controlled
4. Predict the structure and uses of the following i) biguanides ii) phenformin

Section D

1. What do you mean by Oral hypoglycemic agents? Explain the structure and uses of tolubutamide and chlorpropamide.

2. What is diabetes? Mention its types , methods of control and food to be avoided.

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI – 628001

II Year Non – Major Elective I

Semester III

Industrial Chemistry

Sub. Code: 21UCHN3

Question Bank

Unit-I PETROCHEMICALS

Section-A

1. The process of removing water from crude oil is called as
a) Emulsification b) reduction c) hydration d) **de-emulsification**
2. Water gas is a mixture of _____
a) **CO+H₂** b) CO₂ + N₂ c) C + N₂ d) CO₂ + O₂
3. The process of removing objectionable impurities from petroleum is called as
a) **refining** b) purification c) crystallisation d) oxidation
4. The process of breaking high boiling hydrocarbons into simpler low boiling hydrocarbons is called as _____
a) ignition b) combustion c) **cracking** d) annealing
5. A sharp metallic sound due to pressure rise in IC engine is known as _____
a) **Knocking** b) oxidation c) reduction d) combustion
6. _____ is not used as the anti-knock compound used for petrol
a) **Tetraethyl Lead** b) iron carbonyl c) ethanol d) octane
7. Sulphur compounds are removed by treating crude oil with
a) **Copper oxide** b) copper sulphide c) copper sulphate d) calcium oxide
8. The octane number of iso-octane is
a) 0 b) 50 c) **100** d) 10
9. The cetane number of α-methyl naphthalene is
a) **0** b) 100 c) 10 d) 50
10. Vinyl acetate is formed by the oxy esterification of a) Ethylene and formic acid
b) **ethylene and acetic acid** c) ethylene and HCl d) ethylene and benzoic acid
11. Synthetic petrol is obtained by the catalytic hydrogenation of _____
a) CO₂ b) **CO** c) O₂ d) H₂

SECTION-B

1. How sulphur is removed from petroleum?
2. What is cracking?
3. What are the advantages of catalytic cracking?
4. Define flash point.

5. What are anti knock agents?
6. What is knocking?
7. Explain unleaded petrol.
8. What is octane number?
9. What is cetane number?
10. Explain Fischer – Tropsch process.

SECTION C

1. Write a short note on diesel and petrol antiknock.
2. How is synthetic petrol obtained by Fischer Tropsch process
3. What is flash point? How it is determined?
4. Explain fractional distillation in the process of refining of petroleum.
5. Explain diesel knock.

SECTION D

1. Explain in detail about refining of petroleum
2. Write a short note on i) octane number ii) cetane number
3. What is cracking? Explain the methods involved in cracking.
4. Write notes on some important petrochemical industries India

Unit II

RUBBER INDUSTRY AND FIBRES

SECTION A

1. Latex is coagulated by adding
a) **acetic acid** b) oxalic acid c) succinic acid d) butyric acid
2. Trans polyisoprene is called
a) natural rubber b) SBR c) neoprene d) **Gutta percha**
3. The process in which a network of cross links is introduced into an elastomer is called
a) **vulcanization** b) curing c) calendaring d) devulcanisation
4. The monomer of neoprene rubber is

- a)isoprene b)**chloroprene** c)propylene d)isobutylene
5. _____ is directly prepared from latex by whipping
a)**foam rubber** b)reclaimed rubber c)crude rubber d)synthetic rubber
6. Natural rubber is a polymer of
a)**isoprene** b)chloroprene c)ethylene d)styrene
7. Vulcanisation of neoprene takes place in the presence of a) **magnesium oxide**
b) magnesium nitrat c) calcium oxide d) calcium nitrate
8. -----is used for making mattresses, pillows,and cushions.
a) **Foam rubber** b) reclaimed rubber c)crude rubber d)synthetic rubber
9. Water absorption capacity of gutta percha is ----- that of rubber.
a) higher than b)**lower than** c)equal to d) none
- 10.Catalyst for vulcanisation
a)stearic acid b) Carbon black c) **Benzothiazole** d) Ultramarine,
11. The crude rubber is separated from the diluted latex by
a)polymerization
b) **coagulation** c) vulcanization d) none of these
12. _____ rubber is produced by the polymerization of chloroprene.
a) SBR b) **Neoprene** c) Butyl d) Silicone

SECTION B

- How the rubber latex is coagulated?
- What is gutta percha?
- What is crude rubber?
- Give any four properties of vulcanised rubber.
- Define foam rubber.
- What is reclaimed rubber?
- What are fibers? classify them.
- Write any four differences between natural and synthetic fibres
- What are the requirements of fibers?
- What are the draw backs of natural rubber?
- What is crude rubber?

SECTION C

1. Give the preparation, properties and uses of SBR and neoprene.
2. Differentiate natural and synthetic fibres.
3. What is the purpose of compounding of rubber?
4. Explain the properties of natural rubber.
5. What the properties of vulcanised rubber

SECTION D

1. Explain vulcanisation
2. How rubber is manufactured from latex?
3. Give the preparation and properties of i)SBR ii)neoprene rubber iii) reclaimed rubber
4. Discuss the preparation and the uses of foam rubber
5. What is reclaimed rubber ?Explain the properties of reclaimed rubber.

Unit III

FATS, OILS AND WAXES

SECTION A

1. Higher alcohols esterified with long chain fatty acids are called
a)fat b) **wax** c) ghee d) oils
2. The degree of unsaturation in oils and fats is estimated in terms of
a)**iodine value** b)acid value c)R.M. value d)saponification value
3. Iodine number can be determined by _____ method
a)Betrand's b)Laneyon c)**Hanus** d)Wu's
4. In the RM value measurement solution was titrated against
a)Na₂S₂O₃ b)ferrous ammonium sulphate c)**KOH** d)KMnO₄
5. IBr is used in oil to determine
a)acid value b)R.M. value c)**iodine value** d)saponification value
6. Hydrogenated vegetable oil is otherwise called as _____
a)ghee b)**vanaspati** c)wax d)fat
7. ICl is used in oil to determine
a)acid value b)R.M. value c)**iodine value** d)saponification value
- 8.-----is a solid animal wax obtained from head cavities of sperm whale.
a) cerotic acid b) cetyl alcohol c) ceryl alcohol d) **cetyl palmitateis**
9. -----wax makes coating on the leaves of Brazillian palm
a) **Carnauba** b) mineral c)vegetable d) montan

SECTION B

1. What are oil and fats?
2. Define waxes.
3. What is vegetable ghee?
4. What are soaps?
5. Define Saponification value.
6. What is iodine value?
7. What is Reichert-Meissel value ?

SECTION C

1. What are the raw materials used in the manufacture of soap?
2. Define Reichert-Meissel number. How it is determined in of fat?
3. Explain the manufacture of vanaspati.

SECTION D

1. Explain the determination of i) Saponification number ii) Iodine number
2. Classify wax and explain its manufacture

UNIT IV

Food Additives

SECTION A

1. β carotene is a
 - a) ripening agent
 - (b) **natural food colorant**
 - c) flavouring agent
 - d) preservative
2. Commonly used leavening agent for bread is
 - a) **sodium bicarbonate**
 - b) sodium carbonate
 - c) potassium carbonate
 - d) potassium sulphate
3. An example for classic food preservative is
 - a) **common salt**
 - b) glucose
 - c) sorbitol
 - d) sodium hypochlorite
4. Substances used for prevention of microbiological spoilage, chemical deterioration and control of insects and rodents are known as
 - a) **Preservatives**
 - b) Nutritional supplements
 - c) Flavouring agents
 - d) maturing agent
5. Food additives are used to increase
 - a) **nutritional value**
 - b) iodine value
 - c) saponification value
 - d) none of these

6. Commonly used leavening agent for bread is
 a) **sodium bicarbonate** b) sodium carbonate c) potassium carbonate
 d) potassium sulphate
7. Substances used for prevention of microbiological spoilage, chemical deterioration and control of insects and rodents are known as
 a) **Preservatives** b) Nutritional supplements c) Flavouring agents d) maturing agent
8. -----used to colour edible fruits and vegetables.
 a) Annatto b) **Anthocyanins** c) Cochineal d) Carminic acid
9. ----- used to induce coagulation of milk in the manufacture of cheese
 a) **Lactic acid** b) Anthocyanins c) Cochineal d) Carminic acid
10. ----- is used to whiten the colour of milk
 a) **Hydrogen peroxide** b) calcium stearyl lactylate c) Sodium hypochlorite d) glycerol

SECTION B

1. What are humectants?
2. How baking soda works?
3. Mention any four functional characteristics of chemical additives.
4. What are stabilizers? Give example.
5. What are antioxidants?
6. Define intentional food additives.
7. What are food colourants? Classify them.
8. Give the uses of any four preservatives.

SECTION C

1. Write short notes on i) bleaching and maturing agents ii) baking soda
2. Enumerate the functions of acids in food with examples.
3. Explain the types of food colourants used in food industry.
4. Explain i) Humectants ii) preservatives.
5. What are the uses of stabilizers? Give examples.

SECTION D

1. Write short notes on i) anti oxidants ii) leavening agents iii) Bleaching and Maturing iv) stabilizers
2. Explain the functions performed by acids, bases and their salts as intentional food additives
3. Discuss food preservatives with examples

Unit-V Quality Control

Section-A

1. PFA is _____
 - a) **Prevention of Food Adulteration Act**
 - b) Prevention of Food Affirmation Act
 - c) Prevention of Food Act
 - d) Prevention of Food Abbreviation
2. The Central Food Technological Research Institute is located in _____
 - a) New Delhi
 - b) Mumbai
 - c) Goa
 - d) **Mysore**
3. **ISI** is _____
 - a) **Indian Standards Institute**
 - b) Indian Standard Institution
 - c) Indian Student Institution
 - d) Indian Student Institute
4. BIS is _____
 - a) **Bureau of Indian Standards**
 - b) Board of Indian Standards
 - c) Board of Indian System
 - d) Bureau of Indian System
5. _____ is the most essential part in the processing and distributing of foods.
 - a) Production
 - b) Manufacturing
 - c) **Packaging**
 - d) Labelling
6. _____ container comes in direct contact with food.
 - a) **Primary**
 - b) Secondary
 - c) Tertiary
 - d) Quaternary
7. Which among the following is the basic metal used in food packaging
 - a) Nickel and copper
 - b) **Steel and Aluminium**
 - c) Copper and iron
 - d) Silver and Aluminium
8. Corrosion of steel cans is inhibited by coating _____ metal.
 - a) **Tin**

- b) Copper
 - c) Silver
 - d) Nickel
9. _____ is a certification mark employed on agricultural products in India
- a) **AGMARK**
 - b) BIS
 - c) USFDA
 - d) ISI
10. FDA is _____
- a) **Food and Drug Administration**
 - b) Food and decoration
 - c) Food and detoxification
 - d) Food and Density

Section – B

1. Expand PFA and FDA.
2. Define food quality control.
3. Write note on vacuum packaging.
4. Give four requirements for packaging food materials.
5. Write four food standards in India.
6. What are the materials used in food packaging?
7. Discuss the hazards of plastic packaging.
8. Expand the abbreviations: ISI and WHO.

Section – C

1. List out the importance of quality control in food industry.
2. What is the basic information that should be given in a label?
3. Give an account of WHO specifications and standards for potable water.
4. Write note on essential commodities act.
5. What is the role of WHO in food safety.

Section – D

1. Discuss in brief about AGMARK certification procedure for food items.
2. Write short notes on FPO and Consumer protection act.
3. What are the rules has to be take care for getting drug licence? Who is responsible for licence issuing and explain their role.
4. What is AGMARK? In what purpose AGMARK license issued? What are the specifications for food quality?
5. Explain ISI. What are the specifications for packing food?

ST. MARY'S COLLEGE (Autonomous) - Thoothukudi.

III B.Sc. Physics/ Chemistry

Semester V

Common Core

Material Science

Sub. Code: 21UPCC51

Crystal structure and crystal imperfection

Section A

1. Which of the following is not true about the solid state?

- a) they have definite shape and volume
- b) they have high density and low compressibility
- c) they have high attractive forces among molecules
- d) they have high vapour pressure

(Ans: d)

2. Amorphous solids do not have _____

- a) Sharp melting point
- b) Characteristic geometrical shape
- c) Regularity of the structure
- d) All of these

(Ans: d)

3. A crystalline solid has _____

- a) No sharp melting point
- b) definite geometrical shape
- c) Isotropy in properties
- d) atoms or molecules arranged in random manner

(Ans: b)

4. One among the following is an example of amorphous solid

- a) Table salt
- b) Diamond
- c) Plastic
- d) Graphite

(Ans: c)

5. A cell with an interior point is called

- a) Primitive cell
- b) Cubic cell
- c) Body centered cell
- d) None of these

(Ans: c)

6. In BCC unit cell the coordination number is _____.

- a) 4
- b) 6
- c) 8
- d) 12

(Ans: c)

7. Total number of Bravais lattices in cubic crystal system is _____

- a) 1
- b) 2
- c) 3
- d) 4

(Ans: c)

8. Each sodium ion is surrounded by -----chloride ion in NaCl crystal.

- a) 3
- b) 4
- c) 5
- d) 6

(Ans: d)

10. Point defect is represented as ----- dimensional imperfection.

- a) zero
- b) one
- c) two
- d) three

(Ans: a)

11. Which among the following is an example of molecular crystal?

- a) Dry ice
- b) diamond
- c) CsCl
- d) NaCl

(Ans: a)

Section B

(2 marks)

1. What is a face centered unit cell?
2. Restate Miller indices
3. What is centre of symmetry?
4. Enumerate the defects present in crystals.
5. Define isotropy
6. Define anisotropy
7. Define elements of symmetry.
8. Define ionic crystal.
9. Define lattice energy.
10. Restate crystal defect.
11. Define liquid crystal.

Section C (5 marks)

1. Explain briefly the elements of symmetry present in a crystal.
2. Enumerate the steps involved in the calculation of miller indices of a crystal plane.
3. Explain in detail (i) Metallic crystal (ii) solar cells
4. Compile the principle of semiconductors and its significance in the preparation of solar cells.
5. Examine the different types of defects formed in the crystal with neat diagram.
6. Sketch neatly and explain the Born Haber cycle for the determination of lattice energy of NaCl.
7. Explain the types of liquid crystal.

(8 marks)

- ## Unit II New materials

10. _____ materials is the ability of materials to change its optical properties.
a) Electrochromic b) Piezoelectric c) Electrostrictive d) Rheological (Ans: a)

Section B

2 marks

1. What are shape memory alloys?
2. What are biomaterials? Give examples.
3. Enumerate any two applications of metallic glasses.
4. What are smart materials?
5. Mention the different types of high temperature materials.
6. List out any four advantages of shape memory alloys?
7. Express the term intermetallic compound with an example.
8. List the components of smart materials.
9. Summarize the types of dental cement.
10. List the properties of smart materials

Section C

(5 marks)

1. Define i) shape memory effect ii) pseudoelasticity
2. What are high temperature materials? Explain briefly.
3. Explain the importance of intermetallic compounds.
4. Appraise the components present in smart material and write their applications, merits and demerits.
5. Classify biomaterials. Explain briefly the significance of metals & alloys and ceramics in the field of biomaterials
6. Explain dental cement and its types.

Section D

1. What are metallic glasses? Enumerate its properties and applications.
2. Explain biomaterials in detail.
3. What are shape memory alloys? Explain their types, transformation mechanism and applications.
4. Explain the properties and preparation of intermetallic compounds.
5. Explain smart materials.

Unit-III X-rays

1. When a beam of X-rays is allowed to fall on a crystal, if the diffracted waves are out of phase are caused on the photographic plate.
a) Bright spots b) yellow spots c) dark spots d) holes (Ans: c)
2. when a beam of X-rays is allowed to fall on a crystal, if the diffracted waves are in the same phase__are caused on the photographic plate.
a. bright spots
b. dark spots
c. yellow spots
d. holes (Ans: a)
3. In Bragg's equation $n\lambda = 2d \sin\theta$, 'n' represents
a. the number of moles b) the principal quantum number
b. c) the Avogadro's number d) the order of reflection (Ans: d)

4. The diffraction angle, θ of a distorted crystal can be measured using_____method.
a)rotating crystal b) rotating mirror c) powder d) Laue (Ans: c)
5. The study of crystal structure with the help of X-rays is called _____
a)X-ray crystallography
b)X-ray pictography
c)X-ray mechanism
d)X-ray monograph (Ans: a)
6. When a beam of X-rays is allowed to fall on a crystal, if the diffracted waves are out ofphase___are caused on the photographic plate.
a)bright spots
b)dark spots
c)yellow spots
d)holes (Ans: b)
7. X- rays are determined as electromagnetic rays by
a)Laue b) Bragg c) Newton d) **Coolidge**
8. The continuous spectrum of x-rays is due to
a)Bremsstrahlung effect b) Laue effect c) Compton effect d) Thomson effect
9. The wavelength of x-rays are
a)10 – 0.5 Å b) 100 -10Å c) 1- 1000Å d) 500nm
10. The longer wavelength of x-rays are called as
a)Hard x-rays **b) soft x-rays** c) line spectrum d) continuous spectrum
11. The smoothly varying curves represent -----spectrum
a)line b) continuous c) **characteristic** d) peaks
12. The superimposed lines in the continuous background constitute ----- spectrum
a)line b) continuous c) **characteristic** d) peaks
13. The sharp peaks represent ----- spectrum
a)**line** b) continuous c) characteristic d) peaks
14. The Compton wavelength is
a) **h / mc** b) hc / m c) m / hc d) h/ mcv
15. Crystals having regular and periodic arrangement of atoms are called as ----- solids
a) crystalline b) amorphous c) anisotropic d) lattice

Section B

2marks

1. What is the mechanism of X-ray production?
2. What are characteristic X- rays?
3. State Mosley's law.
4. What is Compton effect?
5. Define Compton wavelength of electron
6. What is X-ray crystallography?
7. Write Bragg equation.
8. Name any two methods for the measurement of diffraction angle.

Section C

1. Explain briefly the experimental methods of X-ray study diffraction by Laue method.
2. Explain briefly the experimental method of X-ray study diffraction by rotating crystal method.
3. Give an account of the production, properties and applications of X-rays. What factors influence (i) cut off wavelength (ii) the wavelength of lines emitted from an x-ray tube.
4. Distinguish between continuous and characteristic x-ray spectrum and explain them.
5. Describe Moseley's work on x-rays. What is Moseley's law? What is its importance?
6. The potential difference across an X-ray tube is 10^5 volt. What is the maximum frequency of x-rays emitted? What is the corresponding wavelength?
7. Monochromatic X-radiation of wavelength of 0.124 \AA , undergoes Compton effect from a carbon block. Calculate the wavelength that is scattered through 180° .
8. Photon of energy 1.02 MeV undergoes Compton scattering through 180° . Calculate the energy of the scattered photon.
9. Explain why Compton effect is experimentally not observed for visible rays.
10. Explain the presence of unmodified line in Compton scattering. (when a photon collides with bound electron, its wavelength does not change)
11. Explain why the Compton shift of wavelength is independent of the scattering material.
12. An x-ray is found to have its wavelength doubled on being scattered through 90° . Calculate its wavelength.

Section D

1. Derive Bragg's equation. Describe briefly the experimental set up of rotating crystal method for the measurement of diffraction angle.
2. Explain briefly (i) Laue method (ii) powder method
3. Give theory of Compton effect and briefly explain its experimental verification.
How are modified and unmodified lines in the scattered beam accounted for?
4. State Moseley's law. Describe the importance of Moseley's work on X-rays.
5. Describe the principle of production of X-rays
6. What are X-ray spectra? Explain the origin of continuous X-ray spectra
7. What are characteristic X-ray spectra? How do they originate and how are they produced.
8. Find the wavelength of Compton. Given the mass of proton as $1.67 \times 10^{-27} \text{ Kg}$.
9. A monochromatic wave of wavelength of 1.24 \AA is viewed at an angle of 60° to the diffraction of incidence on a carbon slab. Calculate the Compton shift in wavelength.

Unit-IV Magnetic and dielectric materials

1. Materials not having permanent magnetic dipoles are

- a) paramagnetic b) ferromagnetic c) ferrimagnetic d) diamagnetic **(Ans:d)**

2. When a diamagnetic material is placed inside an external magnetic field

- a) induced magnetic dipoles act along the applied field direction
b) induced magnetic dipoles act opposite to the applied field direction
c) induced magnetic dipoles act perpendicular to the applied field direction
d) there will be not induced magnetic dipoles **(Ans:b)**

3. Diamagnetic susceptibility is -----.

- a) large, negative b) small , positive c) small , negative d) large , positive **(Ans:c)**

4. Which of the following statement is wrong?

- a) Diamagnetic property is independent of temperature
b) paramagnetic property is dependent of temperature
c) paramagnetic property is independent of temperature
d) ferromagnetic property is dependent of temperature **(Ans:c)**

5. Magnetic susceptibility is equal to

- a) The ratio of the magnetic induction in the sample to the applied magnetic field theory
b) magnetic moment per unit volume
c) the ratio of the intensity of magnetization produced in the sample to the magnetic field intensity producing it.
d) the ratio of the magnetic field intensity to the intensity of magnetization **(Ans:c)**

6. The unit of magnetic field intensity is

- a) A/m b) H/m c) Wb m⁻² d) no unit **(Ans:a)**

7. Magnetic induction B is related to magnetic field intensity H by the relation

- a) $B = \mu^0 (H - M)$ b) $B = \mu^0 (H / M)$ c) $B = \mu^0 (M/H)$ d) $B = \mu^0 (H+M)$ **(Ans:d)**

8. One Bohr magneton equals -----.

- a) $9.27 \times 10^{-24} \text{ A-m}^2$ b) $9.1 \times 10^{-31} \text{ A-m}^2$
c) $9.27 \times 10^{-16} \text{ A-m}^2$ d) $9.1 \times 10^{-24} \text{ A-m}^2$ **(Ans:a)**

9. The transition from the ferromagnetic to the paramagnetic state is named after

- a) Curie b) Curie – Weiss c) Neel d) Debye **(Ans:a)**

10. The temperature at which the transition of antiferro to para magnetism takes place is called----- temperature.

- a) Curie – Weiss b) Curie c) debye d) Neel **(Ans:d)**

11.The displacement of charged particles results in -----polarisation.

- a)electronic b) ionic c) orientation d) space charge **(Ans:a)**

12.Thepolarisation of ions sets in when the frequency of applied voltage is less than --.

- a) 10^5 Hz b) 10^{10} Hz c) 10^{13} Hz d) 10^{15} Hz **(Ans:c)**

13. The space charge polarisation is dependent on -----.

- a) temperature b) volume c) pressure d) concentration **(Ans:a)**

14. The permanent dipoles do not interact among themselves in ----- materials.

- a) paramagnetic b) diamagnetic c) ferromagnetic d) ferrimagnetic **(Ans: a)**

15.Special type of interaction called exchange coupling is observed in----- --.

- a) paramagnetic b) diamagnetic c) ferromagnetic d) ferrimagnetic **(Ans: c)**

16.Diamagnetic susceptibility is independent of----- --.

- a) temperature b) pressure c) frequency d)magnetic moment **(Ans: a)**

17.The change in the dimension of a ferromagnetic material when it is magnetised is known as --
-----.

- a) retentivity b) coercivity c) hysteresis d) magnetostriction **(Ans:d)**

18.Dielectrics are-----

- a) insulators b) conductors
c) n-type semiconductor d) p-type semiconductor **(Ans: a)**

19.Dielectric constant of ceramics is of the order of

- a) 1to 4 b) 4 to 10 c) 1 to 10 d) 4 to 6 **(Ans: b)**

Section B**2marks**

1. Define magnetisation.
2. Define magnetic induction
3. Define magnetic permeability.
4. Define magnetic susceptibility.
5. Define hysteresis.
6. Define the term retentivity.
7. Define the term coercivity.
8. Define the MR effect.
9. Define magnetostriction.
10. Define dielectric constant.
11. Define relaxation time.

Section C**5 marks**

1. What is diamagnetism? List out the properties of diamagnetic materials.
2. What is paramagnetism? List out the properties of paramagnetic materials.
3. What is ferromagnetism? What are the distinguishing features of ferromagnetism?
4. Explain hysteresis loop observed in Ferromagnetic material.
5. Explain the properties of ferri magnetic materials
6. Explain the properties of antiferromagnetic materials
7. Differentiate hard and soft magnetic materials.
8. Explain ionic and orientation polarization.
9. Describe the frequency dependence of various polarization processes in dielectric materials.
10. Describe the effect of temperature on dielectric constant.

Section D

1. Explain the Langevin theory of diamagnetism.
2. Explain the theory of paramagnetism.
3. Explain in detail domain theory of ferromagnetism.
6. Explain in detail the four types of energy involved in the process of domain growth.
5. Explain in detail the applications of magnetic materials.
7. Explain the origin of different kinds of polarization. Derive the expression for Langevin-Debye equation.
8. Obtain an expression for internal field seen by an atom in an infinite array of atoms subjected to an external field. Derive Clausius – Mosotti equation in dielectrics subjected to static fields
9. Explain in detail the classification of insulating materials.

Unit- V Nanomaterials

1. Nanoscience is the study of manipulation of materials at ----- scales.
a) millimeter b) nanometer c) micrometer d) centimeter **(Ans:b)**
2. When the axis of the tube is perpendicular to C-C bonds of the carbon hexagons, the structure is referred as----- --.
a) Armchair b) Zig-zag c) Chiral d) Single-wall **(Ans:b)**
3. 1 nm =----- --.
a) 10^{-6} m b) 10^{-9} m c) 10^9 m d) 10^6 m **(Ans:b)**
4. Non-magnetic materials become magnetic when the cluster size reduces to ----- atoms.
a) 80 b) 150 c) 200 d) 250 **(Ans:a)**
5. Hardness of a nano copper material is----- when compared to the hardness of ordinary copper.
a) greater b) lesser c) same d) becomes elastic **(Ans:a)**
6. Nano dots are almost----- in shape.
a) spherical b) rectangular c) triangular d) spherical or cubical **(Ans:d)**

7. The size of the powder particles put inside container in ball milling method should be -----.
- a) less than 100 μm b) less than 50 μm c) greater than 50 μm d) equal to 100 μm **(Ans:b)**
8. Plasma arcing method is mainly used for the production of-----.
- a) Fullerenes b) nano dots c) carbon rods d) nano rods **(Ans:a)**
9. Inter particle spacing----- with decrease in grain size.
- a) Increases b) decreases c) reduced to zero d) unaltered **(Ans:b)**
10. Magnetic moment of nano particles----- with decrease in coordination number.
- a) Increases b) decreases c) unaltered d) becomes non magnetic **(Ans:a)**
11. Diamond is one crystalline form of-----.
- a) Carbon b) silver c) nickel d) gold **(Ans:a)**
12. The structure obtained when the axis of the tube is parallel to C-C bonds is
- a) arm chair b) zigzag c) chiral d) spherical **(Ans:a)**
13. _____ is required to produce nano tubes in carbon arc discharge method.
- a) 3700⁰ C b) 2500⁰ C c) 1500⁰ C d) 1000⁰ C **(Ans:a)**
14. Nanoparticulate ZnO is used in the manufacture of-----.
- a) CDs b) sunscreen c) switches d) robots **(Ans:b)**
15. The catalyst used in pulsed laser deposition method is -----.
- a) nickel and cobalt b) nickel and iron c) iron and bismuth d) nickel and aluminium **(Ans:a)**
16. The size of the nanoparticles is in the order of-----.
- a) 10⁻¹⁰m b) 10⁻⁹m c) 10⁻⁸m d) 10⁻⁷m **(Ans: b)**
17. In DCAD method electrodes are made of-----.
- a) graphite b) copper c) nickel d) zinc **(Ans:a)**

Section B (2marks)

1. Define nanotechnology.
2. Mention few examples for nano materials.
3. What are the two routes through which nano particles can be synthesized?

4. Mention few techniques for synthesis of nano phase materials
5. What is sol-gel?
6. Mention few properties that drastically change with materials in nano phase.
7. How does the magnetic property change with material in nanophase?
8. Write a note on mechanical properties of nano phase material
9. What are the advantages of ball milling?
10. Mention the advantages of chemical vapour deposition technique.
11. What are the different crystalline forms in which carbon exists?
12. Mention different structures of carbon nano tubes.
13. What are chiral, arm chair and zig zag structure of nano tube?
14. What are single walled CNT (SWCNT) and multi walled CNT(MWCNT)?
15. Mention techniques used to produce carbon nano tubes (CNT)
16. Mention any two mechanical properties of CNT
17. Mention few physical properties of CNT
18. Mention any four applications of CNT.
19. Give the applications of nanoparticles in dispersed state and consolidated state.

Section C (5 marks)

1. Explain the physical properties of nanophase particles.
2. Explain the three types of nanotube structures.
3. What are nanophase materials? Discuss the mechanical behavior of nanostructured material.
4. What are nanophase materials? How do their magnetic properties vary with geometry?
5. Explain with neat sketch the plasma arcing method to produce nano particle.
6. Explain with neat sketch the electrodeposition method used to produce nanofilms.

Section D

- 1.Explain with a neat sketch the Ball milling method used to produce nanophase materials.
- 2.Explain the sol-gel method of preparing nano phase material and mention its advantages
- 3.What are the two types of vapor phase deposition? Describe chemical vapor phase deposition technique used to produce nanomaterials.
- 4.Explain the different properties which change significantly in materials at nano phase.
- 5.Explain the fabrication of carbon nanotubes using electric arc discharge method
- 6.Explain the fabrication of carbon nanotubes using pulsed laser deposition method
- 7.Explain the fabrication of carbon nanotubes using chemical vapour deposition method.
- 8.Discuss the electrical, mechanical,physical,chemical and thermal properties of CNT.
- 9.Explain in detail the applications of CNT.
- 10.Discuss applications of nanophase materials in various fields.

ST. MARY'S COLLEGE (Autonomous), THOOTHUKUDI-628001

III B.Sc Chemistry

Core VI

Inorganic Chemistry

Sub. Code:21UCHC51

**Semester V
Question Bank**

**UNIT I – NON AQUEOUS SOLVENTS
SECTION - A**

- The aprotic solvent is
(a) H_2O (b) C_6H_6 (c) HF (d) NH_3 **Ans: (c)**
- The basic solvent among the following is
(a) HF (b) NH_3 (c) H_2O (d) None of them **Ans: (b)**
- The polar solvent among the following is
(a) CCl_4 (b) C_6H_6 (c) H_2O (d) None **Ans: (c)**
- Benzene is _____ solvent
(a) Polar (b) Protionic (c) Non-Protionic (d) Acidic **Ans: (c)**
- A best solvent has a _____ liquid range
(a) Narrow (b) Wide (c) Average (d) No **Ans: (b)**
- Solvation of metals in liquid NH_3 possess
(a) deep blue colour (b) Blue colour (c) Bronze colour (d) Yellow colour **Ans: (a)**
- The ammonio acid among the following is
(a) KNH_2 (b) PbNH (c) BiN (d) NH_4I **Ans: (d)**
- Auto ionisation of liquid ammonia gives the ion
(a) NH_4^+ (b) H_3O^+ (c) NO^+ (d) NO_3^- **Ans: (a)**
- During redox reactions liquid NH_3 serves as
(a) a medium (b) a reducing agent (c) Both (a) and (b) (d) None **Ans: (c)**
- Liquid ammonia is
(a) Hygroscopic (b) Poisonous (c) Both (a) and (b) (d) None **Ans: (c)**
- The acid in liquid SO_2 is
(a) SOCl_2 (b) Na_2SO_3 (c) CS_2SO_3 (d) SO_2 **Ans: (a)**
- The base in liquid SO_2 is
(a) SOCl_2 (b) SOBr_2 (c) $\text{SO}(\text{CNS})_2$ (d) Na_2SO_3 **Ans: (d)**

SECTION – B

1. Define non-aqueous solvent with suitable examples.
2. What are protic and non-protic solvents?
3. Write any two disadvantages of using liquid ammonia as a non-aqueous solvent
4. What are Ammono acids and Ammono bases.
5. Which property of a solvent determines its solvating ability?
6. Liquid ammonia is a poor solvent for ionic substances. Give reason.
7. Give the neutralization reaction of Ammonoacids and Ammono bases
8. What is Ammonolysis reaction?
9. Write the Auto-ionization reaction of liquid Sulphur dioxide.
10. Give the neutralization reaction of liquid Sulphur dioxide.

SECTION - C

1. Explain how the solvents are classified.
2. Discuss the characteristics of a solvent.
3. Explain the reasons for using liquid NH_3 as a non-aqueous solvent.
4. Compare the solvolysis character of water and liquid NH_3 .
5. Liquid SO_2 as a non-aqueous solvent – Explain.

SECTION - D

1. Discuss the advantages and disadvantages of liquid NH_3 as a solvent.
2. Discuss the characteristics exhibited by solutions of alkali metals in liquid NH_3 .
3. Explain in detail the various reactions carried out using liquid SO_2 .
4. Explain the reactions of liquid NH_3 with examples (i) complex formation reaction (ii) Ammonolysis reaction
5. Explain the metathetical reactions given by ammono acids and ammono bases with suitable examples.

UNIT – II THEORIES OF CHEMICAL BONDING

SECTION A

- The shape of XeF_4 is
(a) linear (b) square planar (c) tetrahedral (d) pentagonal bipyramidal **Ans: (b)**
- No of lone pairs of electrons present in the structure of Xenon tetrafluoride
(a) Two (b) One (c) Three (d) Zero **Ans: (a)**
- Which of the following statements is not correct regarding bonding M.Os
(a) Bonding M.Os possess less energy than the atomic orbitals from which they are formed
(b) Bonding M.Os have low electron densities between the two nuclei
(c) Every electron in bonding M.Os contributes to the attraction between atoms
(d) They are formed when the lobes of the combining atomic orbitals have the same sign
Ans: (b)
- The paramagnetic character of oxygen molecule is explained by
(a) MO theory (b) VB theory (c) Lewis theory (d) VSEPR theory **Ans: (a)**
- The correct order of repulsion among the following is
a) b.p-b.p > l.p-b.p b) l.p-l.p > l.p-b.p c) l.p-b.p > l.p-l.p d) b.p-b.p > l.p-l.p **Ans (b)**
- The Shape of BeF_2 is
a) Linear b) Tetrahedral c) Octahedral d) None **Ans (a)**
- The bond angles in a trigonal bipyramid molecules are
a) 90° b) 120° c) $109^\circ 28'$ d) $120^\circ, 90^\circ$ **Ans (d)**
- The shape of BF_3 molecule is planar with bond angles _____ each.
a) 90° b) 120° c) $109^\circ 28'$ d) 75° **Ans (b)**
- The geometry of nitrate ion is trigonal with bond angle of
a) 90° b) 120° c) 180° d) 75° **Ans (b)**
- The shape of H_3^+ ion is
a) linear b) V-shape c) triangular d) T-shape **Ans (c)**
- Number of lone pair of electrons in XeF_2 molecule is
a) one b) two c) three d) four **Ans (c)**
- The term symbol of oxygen molecule is
a) $^3\Sigma_g$ b) $^1\Sigma_g$ c) $^1\Delta_g$ d) $^1\Pi_g$ **Ans (a)**

SECTION –B

- Sketch the MO diagram of H_2 molecule.
- Define valence bond theory.

3. What is LACO?
4. Define bonding molecular orbital.
5. Explain non – bonding orbitals.
6. Calculate the bond order of CO molecule.
7. What is antibonding orbital?
8. State VSEPR theory.
9. Explain the shape of XeF_2 molecule
10. Explain the shape of BF_3 molecule
11. Define Walsh diagram
12. Write the term symbol for H_2 molecule.

SECTION –C

1. Explain linear combination of atomic orbitals.
2. Discuss about the Linear combination of Atomic Orbitals.
3. List down the postulates of Valence bond theory.
4. Based on MO theory discuss the stability of O_2^- , O_2^{2-} and O_2^+ with oxygen molecule
5. Discuss the geometry of chlorate and perchlorate ion.
6. Write a note on the geometry of carbonate ion.
7. Show how VSEPR theory is used to explain the geometry of BF_3 , H_2O and PCl_5 molecules.
8. Explain the term symbol for O_2 molecule.
9. Explain Walsh diagram for AH_2 molecule.

SECTION –D

1. Draw MO diagram for CO molecule. Calculate bond order.
2. Explain the bonding in NO molecule.
3. Give the postulates of molecular bond theory. Explain the formation of O_2^{2-} molecule using MO Theory.
4. Explain the structure and shape of phosphorous pentafluoride, beryllium fluoride, boron trifluoride and carbon tetrachloride molecules.
5. Discuss the bonding, shape and structure of the following molecules.
 i) ClF_3 ii) XeF_4 iii) SnCl_2 iv) SF_4
6. Discuss the bonding, shape and structure of the following ions :
 i) carbonate ion ii) sulphate ion iii) chlorate ion iv) perchlorate ion

UNIT-III: TRANSITION ELEMENTS

SECTION A

Choose the correct answer

1. Transition elements form complexes very readily because of
(a) small size of a cation (b) vacant d-orbitals (c) large ionic charge (d) All
Ans : (d)
2. Colour of transition metal compounds are due to
(a) small size of metal ions (b) Absorption of light in the UV region
(c) Complete ns subshell (d) incomplete (n-1)d subshell
Ans : (d)
3. d-block elements are called
(a) Transuranic element (b) inner transition elements
(c) transition element (d) representative elements
Ans : (c)
4. The last electron in d-block element goes to
(a) nd (b) (n-1)d (c) np (d) (n-1)s
Ans : (b)
5. The element present in the haemoglobin of blood is
(a) Ca (b) Co (c) Fe (d) Mg
Ans : (c)
6. The metal added to glass which protects harmful radiation is
(a) titanium (b) vanadium (c) molybdenum (d) tungsten
Ans : (b)
7. The metal with highest melting point is
(a) titanium (b) molybdenum (c) tungsten (d) vanadium
Ans : (c)
8. The metal used in electric bulb is
(a) titanium (b) chromium (c) Tungsten (d) vanadium
Ans : (c)
9. V_2O_5 is coloured due to
(a) d-d electronic transition (b) crystal defect
(c) photo electric effect (d) incomplete d-level
Ans : (b)

10. Ilmenite is the ore of
(a) Titanium (b) vanadium (c) chromium (d) Uranium

Ans : (a)

11. The general electronic configuration of transition element is
(a) $(n-1)d^{1-10}$ (b) $(n-1)d^{10}ns^2$ (c) $(n-1)d^{1-10}ns^2$ (d) $nd^{1-10}ns^2$

Ans: (b)

12. Titanox contains
(a) $TiO_2 + BaS$ (b) $Ti + BaSO_4$ (c) $TiO_2 + BaSO_4$ (d) $TiO_2 + Ba$

Ans: (c)

13. The substance used as a scavenger in steel industry is
(a) Vanadium (b) Iron (c) ferrovanadium (d) Chromium

Ans: (c)

14. The ore does not contain tungsten is
(a) Wolframite (b) Scheelite (c) Hubernite (d) Ilmenite

Ans : (d)

15. The element does not exhibit poly valency
(a) Zinc (b) Vanadium (c) Chromium (d) Manganese

Ans: (a)

16. Coinage metals are
(a) Fe, Co, Ni (b) Cu, Ag, Au (c) Zn, Cd, Hg (d) Cr, Mo, W

Ans : (b)

17. The element with a fixed valency is
(a) V (b) Cr (c) Cu (d) Zn

Ans : (d)

18. The most stable oxide is
(a) NiO (b) FeO (c) Fe_3O_4 (d) CoO

Ans : (a)

19. Of the following, the metal which shows only +1 oxidation state is
(a) Au (b) Ag (c) Cu (d) Zn

Ans : (b)

20. The metal which occurs in the free state is
(a) Ag (b) Pt (c) Cd (d) Zn

Ans : (b)

SECTION – B

21. Why d-block elements form coloured ions?
22. Write any four uses of titanium
23. Give the preparation of titanium tetra chloride.
24. What are uses of titanium tetra chloride
25. How is Titanox prepared?
26. Give the uses of Titanox
27. What are uses of Molybdenum?
28. How is vanadium pentoxide prepared?
29. Give the preparation of ammonium molybdate.
30. Write the preparation of colloidal platinum.
31. Explain the preparation of potassium chloroplatinate.
32. What is platinized asbestos?

SECTION -C

33. Justify the inclusion of Ti, Zr and Hf in the same group of the periodic table.
34. Give the extraction of titanium. What are its uses?
35. Write note on the oxidation states of chromium group elements.
36. How is titanium and molybdenum purified?
37. Write a note on polyvalency of vanadium.
38. Write notes on the following i)platinised asbestos ii) Colloidal platinum (iii)platinum black
39. Compare Cu, Ag and Au

SECTION -D

40. Describe the general characteristics of d-block elements.
41. Discuss the metallurgy of molybdenum. What are its uses?
42. Give a comparative account of chromium group elements.
43. Describe the extraction of platinum. Write a note on potassium chloroplatinate.
44. Write notes on the following i)platinised asbestos ii) Colloidal platinum iii)platinum black
iv) Spongy platinum
45. Explain the extraction of tungsten.

UNIT-IV : INNER TRANSITION ELEMENTS

SECTION A

Choose the correct answer

1. The total number of lanthanides is
(a) 8 (b) 32 (c) 14 (d) 10
Ans : (c)
2. Cerium is a member of
(a) actinide series (b) lanthanide series (c) transition series (d) alkaline earth metals
Ans : (b)
3. f-block elements are called as
(a) transition element (b) inner transition elements
(c) rare - earths (d) alkaline earths
Ans : (b)
4. The most common oxidation state of f-block elements
(a) +2 (b) +3 (c) +4 (d) +5
Ans : (b)
5. Lanthanide contraction is due to
(a) Increase in effective nuclear charge (b) increase in shielding effect
(c) Increase in nuclear charge (d) decreases in shielding effect
Ans : (b)
6. Thorium is a member of
(a) Lanthanide series (b) actinium series (c) transition series (d) alkaline earth metals
Ans : (b)
7. The ore of thorium is
(a) monazite (b) bauxite (c) ilmenite (d) carnotite
Ans : (a)
8. The compound used in the separation of U-235 of U-238 is
(a) Thorium nitrite (b) uranium hexafluoride (c) zinc uranyl acetate (d) none
Ans : (b)
9. Tripositive lanthanide ions are coloured due to unpaired
(a) f-electrons (b) d-electrons (c) p-electrons (d) all
Ans : (a)
10. Thorium does not react with
(a) conc. HCl (b) HF (c) con. H₂SO₄ (d) chlorine
Ans : (b)

SECTION B

11. Write the preparation and uses of UF_6 .
12. Give the preparation of uranyl acetate.
13. What is lanthanide contraction?
14. What are the ores of thorium?
15. How thorium metal is purified?
16. Compare the basic character of lanthanide hydroxides.
17. What are ores of uranium?

SECTION C

Answer the following questions

18. Describe the general characteristics of actinides.
19. Describe the general characteristics of lanthanides with reference to (i) oxidation state (ii) colour and (iii) complex formation.
20. How is mixture of lanthanides separated from monazite sand?
21. What are the consequences of lanthanide contraction?
22. Write the preparation and uses of UF_6 and uranyl acetate.

SECTION D

Answer the following questions

23. How is uranium extracted from pitch blende? Mention its uses.
24. Explain the extraction of thorium.
25. Write in detail about the separation of lanthanides.
26. What are the important minerals of lanthanides? How are lanthanides extracted from monazite sand and separated into individual lanthanides?
27. Give the comparison between lanthanides and actinides.
28. Explain lanthanide contraction. What are the consequences?
29. Describe the general characteristics of lanthanides.

UNIT-V : INORGANIC POLYMERS

Choose the correct answer

1. Boron nitride is isoelectronic with
(a) C_2 (b) N_2 (c) F_2 (d) O_2
Ans: (a)
2. One of the following is used for the manufacturing optical lenses?
(a) boro phosphate glasses (b) Kuroll's salt (c) Maddrell's salt (d) none
Ans: (a)
3. Borazine is otherwise called
(a) borax (b) boron nitride (c) diborane (d) inorganic benzene
Ans: (d)
4. The general formula of polyphazene is
(a) NPX_2 (b) $(NPX_2)_n$ (c) NPK (d) $(PNH_2)_n$
Ans: (b)
5. $P_3N_3Cl_6$ reacting with excess of ammonia give
(a) Phospham (b) Phosphate fertilizers (c) Phosphate glasses (d) None
Ans: (a)
6. The structure of $N_3P_3Cl_6$ is
(a) Six membered planar (b) eight membered planar (c) puckered (d) none
Ans: (a)
7. Which is used for making fuel hoses?
(a) inorganic rubber (b) polyphosphate (c) metaphosphate (d) borazine
Ans: (a)
8. Zircon is an example of----- silicates
(a) Ortho silicates (b) Pyro silicates (c) Chain silicates (d) Sheet silicates
Ans: (a)
9. In Borazine molecule B and N atoms are ----- hybridized
(a) sp^2 (b) sp^3 (c) sp (d) sp^2d
Ans: (a)
10. Beryl and Wollastonite are belongs to
(a) Ortho silicates (b) Pyro silicates (c) Chain silicates (d) Sheet silicates
Ans: (c)
11. Molecular formula of borazine is -----

Ans.(a)

12. Silicone fluids are used in making -----

(a) Printed circuit boards

(b) Adhesive

(c) Car polish

(d) Ball bearings

Ans.(c)

13. Hemimorphite is an example of-----

(a) Ortho silicates

(b) Pyro silicates

(c) Chain silicates

(d) Sheet silicates

Ans.(b)

14. Borazine is isoelectronic with -----

(a) benzene

(b) Borazine

(c) Boron nitride

(d) Beryl

Ans.(a)

15. $N_3P_3Cl_3$ has a planar ----- membered ring structure

(a) seven

(b) eight

(c) six

(d) four

Ans.(c)

SECTION B

1. Give the uses of polyphosphonitrilic chloride
2. Write the methods of preparation of polyphosphonitrilic chloride
3. What are coordination polymers?
4. Give any two uses of silicones?
5. How Borazine is prepared?
6. Give the preparation of Boroxine
7. Write the methods of preparation of Boron nitride.
8. Give the uses of Boron nitride
9. Write about Sulphur nitride.

SECTION C

1. Discuss the general properties of inorganic polymers.
2. What are inorganic polymers? Classify them.
3. What are coordination polymers? How will you prepare them?
4. What are polyphosphonitrilic chlorides? Write different method for their preparation?
5. Write the preparation, properties and uses of boron nitride.
6. Discuss the structure of $N_3P_3Cl_6$.
7. Discuss the structure of borazine.

8. Discuss the preparation reaction of boroxine.
9. What are silicones? Classify them with examples.
10. Discuss the preparation of silicones?
11. Explain the classification of silicates.

PART – D

1. What are inorganic polymers? Classify them with examples, discuss the preparation and properties of inorganic polymers.
2. Write the preparation properties and structure of borazine.
3. Discuss the preparation, structure and uses of polyphosphonitrilic chlorides
4. Discuss the preparation, structure and uses of High thermal silicones ii) Silicone fluids iii) Silicone greases
5. Discuss the preparation and structure of boroxine.
6. What are silicates? How are they classified? Discuss the structure of silicates.

ST. MARY'S COLLEGE (Autonomous) – THOOTHUKUDI.
III B.Sc. CHEMISTRY
Core VII - Organic Chemistry II Sub. code : 21UCHC52
Semester V - November 2023
(for those who joined in June 2021 and after)
QUESTION BANK

UNIT-I Hydroxy Compounds and Carbonyl compounds

Section – A

Answer all questions

1. An alcohol on reaction with Lucas reagent gives no turbidity even after long time. The alcohol must be

- a) Primary b) Secondary c) Tertiary d) Vinyl Ans:(a)

2 On Victor Meyer's test tertiary alcohol form

- a) Violet colour b) Blue colour c) Red colour d) No colour Ans:(d)

3. Glycerol is _____ alcohol

- a) Monohydric b) Dihydric c) Trihydric d) Polyhydric Ans:(c)

4. Glycerol on reaction with KHSO_4 form

- a) Acrolein b) Allyl alcohol c) Allyl sulphate d) Formic acid Ans: (a)

5. Reaction of glycerol with sodium forms only a disodium derivative. The alcoholic group of glycerol which reacts with sodium is

- a) One primary and one secondary b) Both primary
c) Both secondary d) One primary and tertiary Ans:(b)

6. The alcohol which undergoes fast reaction with Lucas reagent is _____

- a) 3° b) 1° c) 2° d) allyl Ans: (a)

7. Acidity of phenol is due to

- a) benzene ring b) phenolic group
c) H- Bonding d) Resonance stabilization of its anion Ans: (d)

8. The IUPAC name of picric acid is

- a) 2,4,6-trinitrophenol b) 2,4,6-trinitro-1-hydroxyhexane
c) 2,4,6-trinitro-1-hydroxybenzene d) 1,3,5-trinitro-6-hydroxybenzene Ans: (a)

8. Benzoin condensation uses

- a) KCN b) KCl c) NaCl d) BaCl_2 Ans: a

9. The reagent which reacts with benzaldehyde but not with acetaldehyde

- a) HCN b) KCN c) NaHSO_3 d) NH_3 Ans: b

10. The reaction between an aldehyde or a ketone and a compound with active methylene group is called

- a) Cannizzaro reaction b) Benzoin reaction
c) Perkin reaction d) Knoevenagel reaction

Ans: d

11. In Perkin reaction the intermediate is

- a) carbanion b) carbonium ion c) nitrene d) carbene

Ans: a

12. The important reaction of carbonyl compounds are

- a) electrophilic addition b) nucleophilic addition
c) electrophilic substitution d) nucleophilic substitution

Ans: b

13. What is the Wittig reaction most useful for?

- a) synthesis of ketones b) preparation of aldehydes
c) synthesis of alkenes d) preparation of alkyl benzene

Ans: c

14. The formation of unsaturated aldehyde when benzaldehyde reacts with α -hydrogenated aliphatic aldehyde in presence of dil alkali is called

- a) Claisen reaction b) Benzoin reaction c) Perkin reaction d) Haloform reaction

Ans: a

15. When benzaldehyde is treated with acetic anhydride in the presence of sodium acetate the product formed is

- a) cinnamic acid b) phenyl acetic acid c) benzoic acid d) benzoic anhydride.

Ans: a

16. Which of the following is a Wittig reagent

- a) Ph_3P b) $(\text{Ph}_3\text{PCH}_3)^+ \text{I}^-$ c) $\text{Ph}_3\text{P}=\text{CH}_2$ d) Ph_2Pcl

Ans: c

17. Which of the following compounds yields a yellow precipitate when warmed with a mixture of iodine in aqueous sodium hydroxide?

- a) acetophenone b) benzaldehyde c) benzophenone d) propanol.

Ans: a

18. The product obtained in Wolf-Kishner reduction is -----

- a) hydrocarbon b) halogen c) hydroxide d) hydride

Ans: a

19. The solvent used in Meerwein-Ponndorf Verley reaction is -----

- a) ethanol b) Isopropyl alcohol c) chloroform d) carbon tetrachloride

Ans: b

20. Aldehyde and ketone react with HCN to form -----

- a) Cyanohydrin b) cyanogen c) Aldol d) cyanide

Ans: a

21. Grignard reagent reacts with acetaldehyde gives -----

- a) Ketone b) primary alcohol c) secondary alcohol d) tertiary alcohol

Ans: c

Section –B

Answer the following

- 1.What happens when glycerol is heated with Fenton' reagent?
- 2.How does glycerol react with nitration mixture?
- 3.What is spent – Lye?
- 4.Complete
Glycerol + $\text{KHSO}_4 \rightarrow ?$
- 5.How is allyl alcohol obtained from glycerol?
- 6.How will you convert methanol into ethanol?
- 7.What happens when glycerol is dehydrated?
- 8.How is dynamite prepared?
- 9.What is haloform reaction?
- 10.Give an example of Claisen reaction.
- 11.What is a Ylide? Give one example.
- 12.How is cinnamaldehyde prepared?
13. In Wittig reaction which reagent reacts with carbonyl compounds?
- 14.What is benzoin?
15. What is Knoevenagel reaction?
- 16.What is called Aldol condensation?
17. State Cannizzaro reaction.

Section- C

Answer the following

1. Give Victor Mayer's method of distinguishing the three types of alcohols.
2. How will you convert ethanol to isopropyl alcohol?
4. Discuss the behaviour of alkonols towards the following:
i)Oxidation ii)ester formation iii)Halogenation
- 5.Write the oxidation reactions of three types of alcohol.
- 6.How will you distinguish 1° 2° & 3° alcohol by catalytic dehydrogenation?
- 7.Write a note on derivates of glycerol.
8. How will you manufacture glycerol?

Section – D

Answer the following

1. Discuss the mechanism involved in benzaldehyde is refluxed with aqueous ethanolic Potassium cyanide
2. Predict the product in following reaction and give the mechanism for the same

3. Discuss the mechanism of MPV reduction.
4. How does carbonyl group react with i)HCN ii)NaHSO₃ and iii)NH₂OH
5. How will you distinguish between acetaldehyde and acetone?
6. Give the general mechanism of nucleophilic addition reactions of carbonyl compounds?
7. How can you distinguish all the three types of alcohols?
8. How does glycerol reacts with i) HI ii) (COOH)₂ iii) KHSO₄ iv) Concentrated HNO₃ .
9. How does glycerol react with PCl₅, HNO₃, and oxalic acid?
10. What happens when the three types of alcohols are i) oxidised and ii) dehydrogenated catalytically
11. How would you convert?
 - a)Methanol into ethanol and vice versa.
 - b)A Primary alcohol into secondary and tertiary alcohol.
 - c)n – Propyl alcohol to isopropyl alcohol
12. Discuss the mechanism of
 - (i) Cannizzaro reaction (ii) Benzoin reaction.
13. Describe the effects of substituents on the acidity of phenols.
14. Write short notes on : i)Perkin reaction ii) Aldol condensation
15. Discuss the following : i) Wittig reaction ii) Haloform reaction
16. Discuss the mechanism of Wolf – Kishner reduction.
17. Describe the important reactions of aliphatic aldehyde.

UNIT II - CARBOXYLIC ACIDS And Their Derivative

Section – A

Choose the correct answer

1. Which of the following is the strongest acid?
 - a) 2 – Chlorobutanoic acid b) 3 - Chlorobutanoic acid c) 4- Chlorobutanoic acid
 - d) Butanoic acid

Ans: a
2. Malonic acid on heating alone forms mainly
 - a) Acetic acid b)) Propionic acid c) Lactic acid d) Glycollic acid

Ans: a
3. Reaction of acetic acid with lithium aluminium hydride gives
 - a) Ethyl alcohol b) Ethane c) Ethanol d) Ethyl acetocacetate

Ans: a

4. A cyclic ester is called a

a) Lactone b) Semicarbazone c) Lactose d) Dioxane.

Ans: a

5. An amine reacts with an acid chloride to give

a) an amide b) an acid c) an ester d) a lactone

Ans: a

6. What product is formed when α -hydroxy acid is heated?

a) Lactide b) unsaturated acid c) Lactone d) Polymer

Ans: a

7. Citric acid contains-----

a) one COOH group b) Two COOH group c) three COOH group d) None of these

Ans: c

8. Which of the following is a hydroxy carboxylic acid

a) Citric acid b) Acetic acid c) Adipic acid d) formic acid

Ans: a

9. Tartaric acid reacts with HI to give-----

a) citral b) Malic acid c) Adipic acid d) dicarboxylic acid

Ans : b

10. Which of the following is a strongest acid-----

a) p-nitrobenzoic acid b) o-nitrobenzoic acid c) m-nitrobenzoic acid d) benzoic acid

Ans: b

11. Ethyl acetate is hydrolysed by water to give

a) a lactone b) an ester c) an anhydride d) a carboxylic acid and an alcohol

Ans : d

12. Citric acid is present in -----

a) Lemon b) Mango c) Apple d) Grapes

Ans : a

13. Benzamide reacts with P_2O_5 to give -----

a) Aniline b) benzyl amine c) N-Alkyl benzamide d) Benzonitrile

Ans : d

14. Malic acid reacts with chromic acid to give ----

a) Malonic acid b) Fumaric acid c) Maleic acid d) Oxalic acid

Ans : a

Section B

Answer the following

1. How will you convert citric acid into acetone dicarboxylic acid?

2. What happens when acetamide is treated with phosphorus pentoxide?

- 3.State blanc's rule
- 4.Mention any two methods of preparation of aliphatic mono carboxylic acid,
- 5,What are the factors affecting acid strength?
- 6.Explain the preparation of malic acid .
- 7.What happens when ethyl acetate is treated with ammonia?
- 8.What happens when acetamide is treated with phosphorus pentoxide?
- 9.Explain why chloroacetic acid is stronger acid than acetic acid.

Section C

Answer the following

- 1.Explain the reactions of Phthalic acid.
2. Explain the reactions of ester.
- 3.How will you distinguish between α , β . And γ – hydroxyl acids?
- 4.Write a note on Acidity of aliphatic carboxylic acid.
- 5.How will you synthesise citric acid from glycerol?
- 6.Write a note on Blanc's rule.

Section D

Answer the following

- 1.Explain the preparation and properties of Aliphatic monocarboxylic acid?
- 2.How is citric acid prepared?Describe its important properties.
- 3.Discuss the effect of substituents on the acidity of monocarboxylic acids.
- 4.Explain the preparation and properties of Malic acid.
- 5.Explain the acid strengths of substituted Benzoic acids.

UNIT III– Organic Photochemistry

Section – A

Choose the correct answer

- 1.Which of the following transition is forbidden.
a) $u \rightarrow u$ b) $u \rightarrow g$ c) $g \rightarrow u$ d) $\pi \rightarrow \pi^*$
- 2.Phosphorescence may be represented by
a) $S_1 \rightarrow S_0$ b) $T_1 \rightarrow S_0$ c) $T_2 \rightarrow T_1$ d) $S_2 \rightarrow S_1$
- 3.Which of the following does not involve v – hydrogen abstraction

Ans:a

Ans:b

a) Barton reaction b) Optical pumping c) Norrish type I reaction d) Norrish type II reaction **Ans:c**

4. Substituted oxetanes are formed in **Ans:b**

a) Barton reaction b) Paterno Buchi reaction c) Norrish type I reaction d) Norrish type II reaction

5. Photochemical reactions involving fission of α -carbon and carbonylic carbon followed by elimination is known as – **Ans:a**

a) Norrish type I process b) Norrish type II process c) Norrish type III process d) Barton reaction

6. Photoirradiation of cyclic α,β -unsaturated ketones results in

a) Photoreduction b) Photoisomerisation c) Photodegradation d) Photodimerisation **Ans:d**.

7. Norrish type II reaction involve

a) Proton abstraction

b) Hydride ion abstraction

c) Hydrogen abstraction

d) Rearrangement without abstraction

Ans:c

8. Photolysis of acetone at room temperature to yield biacetyl and other products is **Ans:a**

a) Norrish type I reaction b) Norrish type II reaction c) Paterno Buchi reaction d) Barton reaction

9. A chemical reaction that occurs as a consequence of light absorption is called

a) Photochemical reaction b) Photoreduction c) Chemiluminescence d) Fluorescence

Ans:a

10. In fluorescence which one of the following decay of excited state takes place

a) $S_1 \rightarrow S_0$ b) $T_1 \rightarrow S_0$ c) $T_2 \rightarrow T_1$ d) $S_2 \rightarrow S_1$

Ans:a

Section – B

Answer the following

1. What is primary process?

2. Define the term singlet.

3. Define photosensitisation?

4. What is Barton reaction?

5. State Norrish type – I reaction.

6. What do you know about triplet state?

7. What is intersystem crossing?

8. Define the term internal conversion.

9. State Fluorescence

10. What is Phosphorescence?

11. What is Photochemical reaction?

Section – C

Answer the following

1. Draw Jablonski diagram.

2. Write short notes on singlet and triplet states.

- 3.Explain internal conversion and intersystem crossing.
- 4.Compare fluorescence with phosphorescence.
- 5.Explain Barton reaction.
- 6.Explain the allowed and forbidden reaction
- 7.Compare and contrast photochemical and thermal reactions.

Section – D

Answer the following

- 1.Discuss the terms i) singlet and triplet states.ii) internal conversion iii) intersystem crossing
- 2.Explain photosensitisation with suitable example.
- 3.Discuss the mechanism of Norrish type I reaction
4. Give a detailed account of Norrish type II reaction
- 5.Discuss photocyclic addition reaction.
- 6.Discuss the photoinduced reactions of cyclopentenone and cyclohexenone

UNIT IV –Heterocyclic compounds

Section – A

Choose the correct answer

- 1.When acetylene is heated with ammonia it yields
a)furan b)pyrrole c)thiophene d)pyridine **Ans:b**
- 2.In isoquinoline the nucleophilic substitution occurs readily at
a)1- position b)3 – position c) 4- position d)5- position **Ans:a**
- 3.When pyrrole is treated with NaOH and CHCl₃ it yields
a)pyrrole – 2 - carboxylic acid b)pyridine c)pyrrolidine d)pyrrole – 2 -aldehyde **Ans:d**
- 4.The heterocyclic compound which is most reactive towards electrophilic reagent is
a)pyridine b)pyrrole c)Thiophene d)Furan **Ans:b.**
- 5.Nitration of thiophene with HNO₃ under ordinary condition gives **Ans:c**
a)2 – nitro thiophene b)3 - nitro thiophene c)2, 5 di nitro thiophene d)3,4 di nitro thiophene
- 6.Halogenation of which of the following compound yields a tetrahalo derivative even under mild conditions
a)pyridine b)pyrrole c)furan d)thiophene **Ans:b**
- 7.Electrophilic substitution in furan occurs preferentially at which position
a)1- position b)2- position c)3 – position d)it may occur at any position **Ans:b.**
- 8.The order of reaction of pyrrole, thiophene and furan is
a)Thiophene< Furan < Pyrrole
b) Pyrrole< Furan < Thiophene

c) Thiophene < Pyrrole < Furan

d) Furan < Thiophene < Pyrrole

Ans:a

9. Which of the following is most basic in nature?

a) pyrrole b) Aniline c) Pyridine d) Thiophene

Ans:c

10. In pyridine the electrophilic substitution occurs at

a) α – position b) β – position c) γ – position d) May occur at any of these positions.

Ans:b

11. Skraup synthesis is used to prepare

a) pyridine b) Quinoline c) Isoquinoline d) All of these

Ans:b.

12. Quinoline on oxidation with KMnO_4 gives

a) Quinolinic acid b) Nicotinic acid c) Picolinic acid d) All of these.

Ans:a

13. Bischler – Napieralski synthesis is used to prepare

a) Quinoline b) Isoquinoline c) Pyridine d) Pyrazine

Ans:b

Section – B

Answer the following

1. What do you mean by heterocyclic compounds?

2. How heterocyclic compounds are classified basis on the size of the ring?

3. How pyrrole is prepared through Paal- knorr synthesis?

4. What happens when furan is oxidised?

5. Explain the Diels Alder reaction of Furan.

6. What happens when thiophene is reduced with Raney Nickel?

7. Compare the reactivity of pyrrole, furan and Thiophene.

8. What happens when pyrrole is treated with CHCl_3 and KOH ?

9. Draw the resonating structure of Quinoline.

10. How Isoquinoline is prepared through Bischler- Napieralski reaction?

Section – C

Answer the following

1. what happens when pyridine is treated with the following

i) fuming HNO_3 ii) sodamide iii) methyl iodide iv) Na and alcohol

2. How would you prepare furan? What are its properties?

3. Describe the preparation and synthesis of pyridine.

4. What is meant by saying that pyridine is an aromatic substance which is easily attacked by electrophilic reagents than benzene?

5. How would you prove i) pyridine contains a tertiary nitrogen ii) pyridine has a ring structure with 5 carbons and 1 nitrogen in the ring?

6. Write a note on i) Skraup's synthesis of quinoline ii) Bischler - Napieraiski reaction.

Section – D

Answer the following

1. Compare the basicity of pyridine with that of pyrrole.
2. Justify the statement that many of the reactions of pyrrole are similar to those of phenols while others resemble those of aromatic amine giving suitable examples. Give at least one synthetic method for its preparation.
3. Give the method of preparation and properties of pyridine. Discuss its constitution.
4. Describe two methods for preparing quinoline. Discuss its properties and prove its constitution.
5. Discuss the constitution of isoquinoline.

Unit-V Reagents of Synthetic Importance and Name Reactions

Section – A

Choose the correct answer

1. Conversion of secondary alcohol into a ketone in the presence of Aluminium isopropoxide is ____
a) Meerwein-Ponndorf-Verley reduction b) Oppenauer oxidation c) Chichibabin reaction d) Darzens glycidic ester synthesis **Ans: b**
2. _____ oxidizing agent is used in the cleavage of vicinal diols
a) Periodic acid b) Sodium borohydride c) diethyl zinc d) selenium dioxide **Ans: a**
3. _____ is a reducing agent which selectively reduces carbonyl group in the presence of other sensitive groups **Ans: d**
a) N-Bromosuccinimide b) selenium dioxide c) periodic acid d) aluminium isopropoxide
4. A reagent used for allylic bromination and also in decarboxylation of α - amino acid is -----
a) $\text{Br}_2 - \text{H}_2\text{O}$ b) LDA c) $\text{Br}_2 - \text{AcOH}$ d) N –Bromosuccinimide **Ans: d**
5. A reagent used for cis –hydroxylation of double bond is -----
a) OsO_4 b) N-Bromosuccinimide c) selenium dioxide d) periodic acid **Ans: a**
6. Which one of the following reagent is used for the cyclisation of benzoic anhydride into fluorenone?
a) Wilkinson's catalyst b) N-Bromosuccinimide c) aluminium isopropoxide d) selenium dioxide **Ans: a**
7. The product obtained from the Reformatsky reaction is -----
a) α - Halo ester b) β - hydroxy ester c) α - Halo amides d) β - halo ester **Ans: b**
8. The thermal decomposition of tertiary amine oxide is called as ----- **Ans: a**

a) Cope elimination b) Saytzeff elimination c) Hoffman elimination d) Trans Elimination

9. In Baeyer-Villiger oxidation Acetophenone oxidises to -----

a) Phenol b) Phenyl acetate c) Phenolic acid d) Phenylenediamine **Ans: b**

10. Dakin reaction is the modification of ---- **Ans: d**

a) Reformatsky reaction b) Birch reduction c) Cope elimination d) Baeyer Villiger oxidation

11. The end product of Ritter reaction is -----

a) amines b) amides c) acid d) azides **Ans: b**

12. In HVZ reaction ----- is prepared by the action of Bromine with Phenylacetic acid.

a) α -Bromophenylacetic acid b) β -Chlorophenylacetic acid

c) α -Chlorophenylacetic acid d) β -Bromophenylacetic acid **Ans: a**

13. Salicylaldehyde is converted into Catechol, this is known as ----- reaction.

a) Dakin b) Darzen c) Birch d) Curtius **Ans: a**

Section – B

Answer the following

1. Give the reaction of glucose with periodic acid.
2. How is allylic bromination takes place by N-Bromosuccinimide?
3. Discuss the mechanism of cis-hydroxylation of double bond by OsO_4
4. Define Reformatsky reaction.
5. What is Baeyer- Villiger oxidation.
6. Define Ritter reaction.
7. What is Dakin reaction

Section – C

Answer the following

1. How periodic acid is used in carbohydrate chemistry?
2. How Lithium Aluminium hydride reduces the following i) butanone ii) acetanilide
iii) dimethyl sulphoxide iv) cinnamaldehyde at -10°C v) acetyl chloride
3. Explain the reaction mechanism of Reformatsky reaction.

- 4.Explain the reaction mechanism of Cope elimination.
- 5.Write in detail about the reaction mechanism of Ritter reaction.

Section – D

Answer the following

- 1.Write down the preparation and synthetic applications of Lithium Aluminium Hydride.
- 2.Write down the preparation and applications of N-Bromosuccinimide
- 3.Write a notes on i) HVZ reaction ii).Wilkinson's catalyst.
- 4.Discuss in detail about Baeyer- Villiger oxidation.
5. Explain the following i)Ritter reaction. Ii) Dakin reaction
- 6.Illustrate with an example of Cope elimination.

Question Bank

UNIT I Thermodynamics I

Section – A

(1 mark)

Choose the correct answer

1. A system that can transfer neither matter nor energy to and from its surroundings is called
a) closed system b) isolated system c) open system
d) homogeneous system **Ans: (b)**
2. A system that can transfer both energy and matter to and from its surroundings is called
a) an isolated system b) a closed system c) an open system
d) a heterogeneous system **Ans: (c)**
3. One among the following is an intensive property?
a) mass b) volume c) density d) internal energy **Ans: (c)**
4. One of the following sets of properties constitute intensive properties.
a) temperature, pressure and volume b) mass, density and volume
c) density, pressure and temperature d) internal energy, density and pressure **Ans: (c)**
5. The intensive property is -----.
a) ΔU b) ΔH c) ΔG d) C_p **Ans: (d)**
6. An isobaric process takes place at constant _____.
a) temperature b) pressure c) volume d) concentration **Ans: (b)**
7. An isochoric process takes place at constant _____.
a) volume b) temperature c) pressure d) concentration **Ans: (a)**
8. The mathematical relation for the first law of thermodynamics is
a) $\Delta E = q - w$ b) $\Delta E = 0$ for a cyclic process
c) $\Delta E = q$ for an isochoric process d) $\Delta E = q + w$ **Ans: (d)**
9. The enthalpy change, ΔH of a process is given by the relation
a) $\Delta H = \Delta E + P\Delta V$ b) $\Delta H = \Delta E + \Delta n R T$
c) $\Delta H = \Delta E + w$ d) $\Delta H = \Delta E + \Delta n R$ **Ans: (b)**

10. The amount of heat required to raise the temperature of one mole of the substance by 1 K is called
- a) heat capacity b) molar heat capacity
c) molar heat d) molar capacity **Ans: (b)**
11. Which of the following relations is true?
- a) $C_P > C_V$ b) $C_V > C_P$ c) $C_P = C_V$ d) $C_P - C_V = 0$ **Ans: (a)**

SECTION – B (2 Marks)

1. Define system and mention its types.
2. What do you mean by the term surrounding?
3. Differentiate open and closed systems.
4. Citing an example, define the term state function.
5. Define the terms enthalpy and internal energy.
6. Citing an example, define the term path function.
7. What do you mean by intensive property? Give examples.
8. What are extensive properties? Cite examples.
9. Give the mathematical form of the first law of thermodynamics.
10. Define molar heat capacity. Mention its types.
11. C_p is greater than C_v . Justify.
12. What do you mean by Joule Thomson effect?
13. What is meant by Joule Thomson coefficient?
14. Define inversion temperature.

SECTION – C (6 Marks)

Answer all the questions

1. Explain the following terms (a) Intensive properties (b) Extensive properties (c) Isothermal process.
2. Give the concise statement of the first law of thermodynamics. Deduce its mathematical form and explain the terms involved.
3. Describe open, closed and isolated systems.
4. Explain the difference between isothermal and adiabatic processes.
5. What do you understand by thermodynamics system and surroundings?
6. Write a note on Joule Thomson co-efficient.
7. Write a note on thermodynamic equilibrium.

8. What is meant by inversion temperature? What are its significances?

SECTION – D (12 Marks)

Answer all the questions

1. Write a note on internal energy and enthalpy. Derive the relationship $\Delta H = \Delta E + \Delta n RT$
2. What do you understand by C_P and C_V of gases? Why is the value of C_P always greater than that of C_V ? How are they related?
3. i.) Explain intensive and extensive properties ii.) Describe open, closed and isolated systems.
4. i.) State the first law of thermodynamics. Give its mathematical formulation. What are the sign conventions for ΔU and ΔH ?
ii.) Describe different types of thermodynamic processes with examples.
5. Write notes on (a) Joule – Thomson effect (b) inversion temperature.

UNIT II : THERMODYNAMICS – II

SECTION - A

Choose the correct answer

- [illegible]

5. The Gibb's Helmholtz equation is applicable to
- all processes, chemical or physical
 - all process, chemical or physical but in a closed system
 - all chemical processes in a closed system
 - all physical processes in a closed system
- Ans: (b)**
6. For a spontaneous process
- $\Delta G > 0$
 - $\Delta G < 0$
 - $\Delta G = 0$
 - None
- Ans: (b)**
8. A process accompanied by an increase in entropy tends to be -----
- spontaneous
 - non spontaneous
 - reversible
 - in equilibrium state
- Ans: (a)**
9. In a thermodynamically reversible process, the entropy of the system and its surroundings taken together is -----.
- remains constant
 - zero
 - increases
 - decreases
- Ans: (a)**
9. A spontaneous reaction is always -----.
- reversible
 - irreversible
 - in equilibrium state
 - two way
- Ans: (a)**

SECTION – B

- List down any two limitations of first law of thermodynamics.
- Giving example define the term spontaneous process.
- Give the Clausius statements of second law of thermodynamics.
- Define the term entropy. What is its unit?
- What do you mean by the term work function?
- Define free energy.
- What are partial molar properties?
- What is meant by chemical potential?
- Deduce the expression for combined form of first and second law of thermodynamics.
- Write the expression for the maximum work done for the reversible isothermal process.
- List down any two limitations of second law of thermodynamics.

SECTION - C

1. Differentiate Gibbs free energy from Helmholtz work function.
2. Derive the expression for entropy change for an isothermal process.
3. Discuss the need for second law of thermodynamics.
4. State the second law of thermodynamics in four different forms.
5. Discuss entropy changes in reversible and irreversible processes.
6. Explain partial molar properties.

SECTION - D

1. Derive Gibbs – Duhem equation. Give its applications.
2. Derive Gibbs – Helmholtz equation. What is its importance?
3. Explain the term chemical potential. How does chemical potential vary with temperature and pressure?
4. Define the terms Gibbs free energy and Helmholtz free energy. Discuss the variation of ΔG with variation in (a) temperature and pressure (b) pressure and volume

UNIT III : THERMODYNAMICS – III

SECTION - A

Choose the correct answer

1. According to Nernst heat theorem at $T = 0K$

a) $\left[\frac{\partial(\Delta G)}{\partial T} \right]_P = 0$ b) $\Delta G = \Delta E$ c) $\Delta G = \Delta H$ d) None

Ans: (c)

2. Van't Hoff equation is $\ln \frac{K_{P1}}{K_{P2}} =$

a) $\frac{\Delta E}{R} \left[\frac{1}{T_1} - \frac{1}{T_2} \right]$ b) $\frac{\Delta H}{R} \left[\frac{1}{T_1} - \frac{1}{T_2} \right]$ c) $\frac{\Delta E}{R} \left[\frac{1}{T_2} - \frac{1}{T_1} \right]$ d) $\frac{\Delta H}{R} \left[\frac{1}{T_2} - \frac{1}{T_1} \right]$

Ans: (b)

3. Using Van't Hoff – equation for an endothermic reaction, K_p

a) increases b) decreases c) remains constant

- d) not affected with increase of a temperature **Ans: (b)**
4. According to Clausius – Clapeyron equation increase of pressure of a liquid leads to
 a) increase in boiling point (b) decrease in boiling point
 c) boiling point doubled (d) no change in boiling point **Ans: (a)**
5. The Clausius - Clapeyron equation helps to calculate
 a) latent heat of vaporization b) boiling point of freezing point
 c) vapour pressure at one temperature, if at another temperature is given
 d) All of the above **Ans: (d)**
6. The equation $\frac{\Delta H}{RT^2} = \frac{d(\ln K_P)}{dT}$ is known as
 a) van't Hoff equation b) van't Hoff isochore
 c) Gibbs equation d) Gibbs Duhem equation **Ans: (b)**
7. According to Planck's statement the entropy of a solid or liquid becomes zero at -----
 a) absolute zero b) room temperature c) 25°C d) 273°C **Ans: (a)**
8. ----- equation can be used to discuss two phase equilibria in a one component system.
 a) Clapeyron b) Nernst c) Gibb's d) Van't Hoff **Ans: (a)**
9. ----- relates equilibrium constant and free energy change of a reaction.
 a) Van't Hoff's isotherm b) Van't Hoff's isochore c) Van't Hoff d) Gibb's **Ans: (a)**
10. ----- gives the variation of equilibrium constant with temperature.
 a) Van't Hoff's isochore b) Van't Hoff's isotherm c) Nernst d) Gibb's **Ans: (a)**

SECTION – B

- 1.State Nernst heat theorem.
- 2.Comment the term fugacity.
- 3.State zeroth law of thermodynamics.
4. State third law of thermodynamics.
- 5.Mention any two significances of Clausius - Clapeyron equation.
6. Write the expression for the intergrated form of Van't Hoff reaction isochore.
- 7.Mention the physical significance of fugacity.

SECTION - C

- 1.How will you determine the absolute entropy of a gas?
- 2.Derive the relationship $\Delta G^0 = - RT \ln K$. Give its importance.
- 3.What are the exceptions of third law of thermodynamics?
- 4.Discuss the applications of Nernst heat theorem.
- 5.Discuss the term fugacity and mention its physical significance .

SECTION – D

1. Relate the change of pressure with change of temperature of a system at equilibrium and henceforth derive the Clausius equation and integrated form of Clausius- Clapeyron equation.
2. Derive the expressions for Van't Hoff reaction isotherm and integrated Van't Hoff reaction isochore.
3. State and explain the third law of thermodynamics. How can it be verified experimentally?
- 4.Explain how the absolute entropy of a substance is determined with the help of the third law of thermodynamics.

UNIT IV Electrochemistry I

Section A

1. After addition of NaOH , the conductance of CH_3COOH solution
 - a) increases
 - b) decreases
 - c) does not change
 - d) remains constant**Ans: (a)**
2. pH scale is
 - a) 0-14
 - b) 0-10
 - c) 1-15
 - d) 0-25**Ans: (a)**
3. Hittorf's method is employed for the determination of -----
 - a) equivalent conductance
 - b) transport number

- c) specific conductance d) molar conductance
- 4.
- Ans: (b)**
5. Sum of the transport number of cation and anion is
a) 2 b) 1 c) 1.5 d) 0.5 **Ans: (b)**
6. Ionic mobility is expressed in terms of
a) cm² s⁻¹ b) cm s⁻¹ c) cm V⁻¹ s⁻¹ d) cm² V⁻¹ s⁻¹ **Ans: (d)**
7. The high mobility of H⁺ ions is due to
a) small size of hydrogen ions b) high velocity of hydrogen ions
c) hydrogen bonding in water molecules d) low viscosity of water **Ans: (c)**
8. Devices in which electrical energy is produced as a result of transfer of matter from one half cell to another due to difference in concentration is referred to as -----
a) galvanic cells b) voltaic cells c) concentration cells d) dry cell **Ans: (c)**

Section B

1. What is transport number?
2. State Kohlrausch's law.
3. What is ionic mobility? Mention its unit.
4. Differentiate chemical cells and concentration cells.
5. List out the characteristics of a standard cell .
6. What is standard reduction potential?
7. Define single electrode potential.

Section C

1. Discuss how the relaxation and electrophoretic effects retard the speed of an ion in a concentrated solution of a strong electrolyte.
2. State Kohlrausch's law of ionic mobilities. Explain its importance in the study of conductance of weak electrolytes.
3. Define transport number. How is it determined by Hittorf's method?
4. Draw and discuss the conductometric titrations of i) $\text{CH}_3\text{COOH} \times \text{NH}_4\text{OH}$
ii) $(\text{HCl} + \text{CH}_3\text{COOH}) \times \text{NaOH}$
5. How is the transport number of an ion determined by the moving boundary method?

Section D

1. Describe Debye-Huckel theory of strong electrolytes and mention its significance.
2. Explain in detail about conductometric titrations.
3. Define transport number. How is it determined by Hittorf's method and moving boundary method?
4. Write notes on i) reversible and irreversible cells ii) single electrode potential and standard electrode potential
5. Explain the different types of reversible electrodes

UNIT V Electrochemistry II

Section A

- [illegible]

- | | | |
|---------------------------------------|--------------------|-----------------|
| a) metal-ion electrode | b) gas electrode | |
| c) metal-insoluble salt ion electrode | d) redox electrode | Ans: (d) |

Section B

1. Recall the method of elimination of LJP.
2. Differentiate the different types of power sources and their representation.
3. Identify the term metal cladding.
4. What is the principle behind the working of a fuel cell?
5. What is corrosion?
6. How are ships protected against corrosion?

Section C

1. Calculate the single electrode potential for Cu metal in contact with 0.10M CuSO₄ solution .
E⁰ for copper is 0.34V.
2. Derive Nernst equation and mention its significance
3. Explain :1) single electrode potential 2) liquid junction potential
4. Derive expressions for ΔG , ΔH and ΔS in terms of emf.
5. What are reference electrodes? Draw and explain the working of calomel electrode. Write also the Nernst equation for that electrode.
6. What is salt bridge ?What is its function?
7. Write a note on electrochemical series and its significance.
8. Discuss the principle of corrosion and chemistry behind stability of metals.
9. Discuss the different types of coating to protect metals from corrosion.

Section D

1. What are concentration cells? Explain the different types of concentration cells giving suitable examples.
2. Discuss in detail about potentiometric titration.
3. Analyse in detail the principle and process of electroplating.
4. Analyse the principle and working of hydrogen-oxygen fuel cell.
5. Write short notes on i) Lead - Acid cell or storage battery ii) Nickel-cadmium battery

St. Mary's College (Autonomous), Thoonthukudi

III Year Semester V

CSB

Computer for Digital Era and Soft Skills

Sub. Code: 21UCSB51

Question Bank

Unit I - Fundamentals of computer

Section A

1 mark

Choose the correct option

1. _____ is the brain of the computer
a)Monitor b)Hard disk c)Central processing unit d)Keyboard **(Ans c)**
2. _____ is the fundamental building block of CPU used to perform arithmetic and logic operations
a)Arithmetic - logic unit b)Control unit c)Registers d)Drivers **(Ans a)**
3. _____ responsible for controlling, integrating, and managing the individual hardware components of a computer system
a)System software a)Application software c)Operating system d)Antivirus **(Ans a)**
4. _____ is an interface between computer user and computer hardware.
a)Operating system b)Web based apps c)Native apps d)Hybrid apps **(Ans a)**
5. Software that controls particular hardware which is attached to the system is _____
a)Registers b)drivers c)mobile apps d) web based apps **(Ans b)**
6. _____ also known as end-user programs are software that helps the user in completing various tasks.
a)Input devices b)Application software c)Operating system d)Output devices **(Ans b)**
7. Any software that is copyrighted and bears limits against use, distribution and modification that are imposed by its developer is called _____
a)system software b) application software c) proprietary software d)mobile software **(Ans c)**

8. Which of the following is a utility software?
a)WinRAR b)BIOS drive c)Symbian OS d)Ubuntu **(Ans a)**
9. A mobileOS among the following is
a)Google chrome b) Bada c)CC cleaner d)Internet explorer **(Ans b)**
10. _____ is a temporary storage place for instruction or data.
a)CPU b)Monitor c) Hard disk d)Registers **(Ans d)**

Section B

4marks

1. Explain the working principle of computers.
2. Differentiate system and application software.
3. What are the features of application software?
4. Write the functions of utility software.
5. What are the functions of program language translators?
6. Give the difference between free and open-source software.

Section C

10 marks

1. Explain the negative impacts of computers on society
2. Explain some of the popular Mobile Operating Systems.
3. Describe the features of some application software.
4. Explain the various types of computers.
5. Write the importance of an operating system.

Unit II - Recent Trends in Computer Science and E-Commerce

Section A

1 mark

1. Transactions carried out through a banking correspondent based on Aadhaar verification is called _____.
a)USSD b)AEPS c)UPI d)BHIM **(Ans b)**
2. _____ mobile apps are specifically built using different multi-platform web technologies like JavaScript and HTML5.
a) Hybrid b)Native c)MobileOS d)Web-Based Apps **(Ans a)**
3. _____ are developed for a certain mobile device operating system like Windows Phone or Android.
a)Operating system B) Web-based apps c) Native apps d)System softwares **(Ans c)**
4. _____ uses information about the behaviours of electricity suppliers and consumers in an automated fashion.
a)Smart grid b)Smart city c)Smart phone d)Smart home **(Ans a)**
5. _____ refers to the process of carrying out banking transactions online.
a)Internet banking b)E-commerce c)E-learning d)Internet of things **(Ans a)**
6. MOOC stands for
a)Massive open online course
b) Mass open online course
c) Massive online open credit
d) Mass online open credit **(Ans a)**
7. Which of the following is false about e-learning?
a) E-learning means electronic learning
b) Chalk and talk method
c) Multimedia enriched learning
d) Web-based learning **(Ans b)**
8. Hand held device that reads banking cards are called as_____
a)PoS terminals b)credit cards c)debit cards d)mobile wallets **(Ans a)**

9. _____ enables users to transfer money without a bank account or IFSC code.
a)MOOC b)AEPS c)UPI d)USSD (Ans c)
10. _____ type of payments can also be made with no mobile data facility.
a)USSD b)UPI c)AEPS d)BHIM (Ans a)

Section B

4marks

- 1) Explain any two types of digital payments in India.
- 2) Discuss some of the E-learning platforms
- 3) What are the benefits of E-commerce?
- 4) Write the disadvantages of E-Commerce
- 5) What are the benefits of Digital Payments?

Section C

10 marks

- 1) Give an account the various e-learning websites.
- 2) Explain the types of digital payments in India.
- 3) Explain i)smart home ii)smart city iii)smart grid
- 4) Give an account of various E- commerce.
- 5) Explain some of the applications of IoT.

Unit III - Social Media

Section A

1 mark

1. _____ are web-based communication tools that enable people to interact with each other by sharing and consuming information.
a) Email c) Browsers c)Operating system d)Social media **(Ans d)**
2. In Twitter the short messages which the users post are known as
a)SMS b)tweets c)mails d)chats **(Ans b)**
3. _____ are networks from compromised computers that are controlled externally by remote hackers.
a)Media b)Phishing c)Hacking d)Botnets **(Ans d)**
4. _____ are usually in the form of ads or spam emails that include promises of rewards or offers of unrealistic amounts of money.
a) Online scams b)OTP c)Hacking d)Craking **(Ans a)**
5. _____ is the fraudulent use of electronic communications to deceive and take advantage of users.
a)Hacking b)Coding c)Cracking d)Phishing **(Ans d)**
6. A _____ hacker is an individual who attempts to gain unauthorized entry into a system or network to exploit them for malicious reasons.
a)white-hat b)blue-hat c)black-hat d)pink-hat **(Ans c)**
7. One Time Password(OTP) is sent to the user as an SMS or an email at the mobile number/email address is a method of
a)authentication b)encryption c)decryption d)decoding **(Ans a)**
8. _____ is a technique to convert the data in unreadable form before transmitting it over the internet.
a)Authentication b)Encryption c)Decryption d)Decoding **(Ans b)**
9. Which type of crime specifically targets high profile and/or senior executives in an organization?
a) Hacking b) Whaling c)Encryption d)Cracking **(Ans b)**
10. The process of gaining unauthorized access into a computer system, or group of computer systems is called _____
a)coding b)encryption c)hacking d)cracking **(Ans c)**

11. The method by which the password or code is obtained is called _____
a) coding b) decryption c) hacking d) cracking **(Ans d)**
12. _____ acts as a shield between an organization's network and the internet and protects it from threats like virus, malware, hackers, etc.
a) Operating system b) Mobile OS c) Firewall d) Malwares **(Ans c)**
13. The technique of hiding secret messages in a document file, image file or a program is called _____
a) botnets b) encryption c) authentication d) Steganography **(Ans d)**

Section B

4 marks

1. What are the various forms of social media?
2. How Phishing Attacks can be prevented?
3. Explain the types of phishing attacks.
4. Write a brief account on the types of hackers.
5. Give the importance of antivirus.
6. What are the functions of firewall?

Section C

10 marks

1. Explain the features of any two free social media.
2. Write the disadvantages of Social Media.
3. What are the Importance of Social Media in Business Communication?
4. How can we protect ourselves from Social Networking problems?
5. Give an account on the types of cybercrime.
6. Explain the process of encryption.

Unit IV - Introduction to Soft Skills

Section A

1 mark

1. _____ are part of the skill set that is required for a job.
a)Soft skills b)Hard skills c)Learning skills d)Critical thinking **(Ans b)**
2. Skills related to dealing with others called _____
a)thinking skills b)personal skills c)social skills d)affective skills **(Ans c)**
3. Skills needed to maintain more complex social interactions are called _____
a)cognitive skills b)affective skills c) Interaction Skills d)foundation skills
(Ans a)
4. Resolving conflicts is an example for _____ skills
a)cognitive skills b)affective skills c) Interaction skills d)foundation skills
(Ans c)
5. _____ focus more on people than processes.
a)Soft skills b)Hard skills c)Learning skills d)Critical thinking **(Ans a)**
6. _____ is the ability to think clearly and rationally about what to do or what to believe.
a)Critical thinking b)Social skills c)Hard skills d)Affective skills **(Ans a)**
7. Understanding the logical connections between ideas is called _____
a)reflection b)critical thinking c)coding d)stroke **(Ans b)**
8. _____ is triggered with the help of Self assessment questions
a)Understanding b)Social skills c)Group work d)Reflective practice **(Ans d)**
9. _____ is a form of thinking used to fulfill a purpose or to achieve some anticipated outcome
a)Critical thinking b)Stroke c)Reflection d)Affective skills **(Ans c)**
10. Learning how to begin and end conversations is related to _____ skills
a)foundation b)interaction c)affective d)cognitive **(Ans b)**
11. _____ are used by a person to communicate and interact with others.
a)Interpersonal skills b)Intrapersonal skills c)Hard skills d)Listening skills

(Ans a)

Section B

4 marks

1. Why do we need soft skills?
2. Explain the categorization of soft skills.
3. Write the uses of soft skills.
4. Describe effective communication.
5. Write briefly about group work.
6. What are the outcomes of soft skills?

Section C

10 marks

1. Explain hard and soft skills.
2. Explain i)critical thinking ii)reflection
3. Write in detail about the various categories of soft skills.
4. Explain i)communication and interaction ii)skillful writing
5. Describe the peer-to-peer interaction method in detail.

Unit V - Understanding Self and Team Building

Section A

1 mark

1. _____ analysis is a systematic tool for personal growth and personal change.
a)Systematic b) Transactional c)Mechanical d)Exploratory **(Ans b)**
2. _____ state is a consistent pattern of feeling and experience directly related to a corresponding consistent pattern of behaviour.
a)Ego b)Conscious b)Subconscious d)Mind **(Ans a)**
3. _____ is a bar chart representing the person's entire personality.
a)Angiogram b)Cardiogram c)Egogram d) Mammogram **(Ans c)**
4. Unit of recognition is _____
a)stroke b)metre c)egogram d)pascal **(Ans a)**
5. A _____ is a set of interpersonal relationships structured to achieve established goals
a)society b) family c)team d)friends **(Ans c)**
6. _____ is a situation in which the ideology of the team clouds the capacity of team members to think and act rationally about the task.
a)Group work b)Hard word c)Smart think d)Group think **(Ans d)**
7. _____ involves establishing an environment in which all team members feel as responsible as the leader for the performance of the work unit.
a)Shared responsibility b)Aligned on purpose c)High communication
d)Future focused **(Ans a)**
8. _____ to our emotional side, our capacity to feel and express emotions.
a)Cognitive self b)Affective self c) Behavioural self d)Conscious self **(Ans b)**
9. _____ refer to those personal attributes of individual members that help remove barriers to creativity, and enable creative application of individual talents and skills.
a)Critical thinking b)Reflection c)Cognitive skills d)Creative talents **(Ans d)**
10. Successfully meeting the personal needs of members in a team increases _____
a)friendship b)leadership c)cohesion d)dependence **(Ans c)**
11. _____ ego state is those feelings, attitudes, behaviours related to current here and now reality
a)Parent b)Child c)Elder d)Adult **(Ans d)**

12. In _____ child, behaviour of rebellion or compliance is seen

- a) adapted b) natural c) sensitive d) serious **(Ans a)**

13. One of the useful ways of learning about cooperation, shared responsibility, project planning, and time management is _____

- a) hard work b) smart work c) group work d) soft work **(Ans c)**

Section B

4 marks

1. Explain briefly about transactional Analysis.
2. Describe the structural analysis of Ego states.
3. How the egogram represents person's entire personality?
4. What are the features of effective creative teams?
5. Write the rules and roles of a team.

Section C

10 marks

- 1) Explain the three broad aspects of self.
- 2) Explain the different types of strokes.
- 3) Give a detailed account of life Positions.
- 4) Explain team building.
- 5) Explain i) Positive interdependence ii) Group processing

St. Mary's College (Autonomous), Thoothukudi

III B.Sc Chemistry

Core

Inorganic chemistry II

Sub. Code: 23UCHC61

Semester VI – April 2024

(For those who joined in July 2021 and after)

UNIT I: CO-ORDINATION COMPOUNDS I

Section – A (1 mark)

Choose the correct answer

- Oxidation number of Fe in $K_2[Fe(CN)_6]$ is
a) I b) II c) III d) IV
(Ans: b)
- Ferric alum is
a) Complex b) simple salt c) double salt d) alloy
(Ans: c)
- One among the following is not true about ligand?
a) Nucleophilic b) Lewis acid c) Lewis base d) Donor group
(Ans: b)
- Choose the neutral ligand among the following
a) aqua b) cyano c) chloro d) oxalato
(Ans: a)
- The oxidation number of iron in the complex $[Fe(CN)_6]^{3-}$ is
a) 1 b) 2 c) 3 d) 4
(Ans: c)
- The formula of the complex species formed when excess of ammonia is added to copper sulphate solution
a) $[Cu(NH_3)_4]^{2+}$ b) $[Cu(NH_3)_4]SO_4$
c) $[Cu(NH_3)_2]SO_4$ d) $[Cu(NH_3)(H_2O)]SO_4$
(Ans: b)
- 'dien' is the abbreviation for the ligand
a) diethylene b) diethylene diamine

1. What are double salts? Give examples.
2. Define the term complex ion.
3. What are ligands?
4. Write notes on linkage isomerism.
5. Define coordination number.
6. Explain Ionisation isomerism.
7. Write notes on Hydrate isomerism.
8. What is EAN rule?
9. Explain coordination isomerism.
10. What is ligand isomerism?
11. Write notes on polymerization isomerism.

Section – C (5 marks)

1. Explain the following with suitable examples:
(i) linkage isomerism and (ii) Polymerisation isomerism.
2. Write the structure of the following complexes
(i) Potassium trioxalatoaluminate (III) (ii) Tetrocyano nickelate (II) ion
(iii) Potassium hexachloroplatinate (IV) (iv) Potassium hexacyano ferrate (II).
3. Explain the following with suitable examples.
(i) Ionisation isomerism (ii) Hydrate isomerism
4. Write about optical isomerism of complexes of the type
i) $[M(AA)_3]$ ii) $[M(AB)_3]$ iii) $[M(AA)_2a_2]$
6. Indicate the number of geometrical isomers of the complex Ma_4b_2 if it is having
(i) geometrical and (ii) optical isomerism. Draw the structure.
7. What are the limitations of valence bond theory?

Section – D (10 marks)

1. (i) Write the structure of the following complexes:
(a) Hexa cyano ferrate (III) ion (b) Tetrammine copper (II) ion
(c) Potassium hexa chloroplatinate (IV) (d) Hexaamine cobalt (III) chloride
(ii) Discuss cis-trans isomerism shown by $[Pt(NH_3)_2Cl_2]$.
2. Describe any four types of isomerism observed in metal complexes.

3. Discuss the geometrical and optical isomerism encountered in the following complexes.

- (i) Ma_2b_2 (ii) Ma_3b_3

4. Name the following complexes according to IUPAC

- (i) $[\text{Co}(\text{NH}_3)_5\text{CO}_3]\text{Cl}$ (ii) $(\text{NH}_4)_3[\text{ZrF}_7]$ (iii) $[\text{Ni}(\text{CO})_3\text{Py}]$.

Write the formula

- (i) Tris (ethylene diamine) rhodium (III) ion
(ii) Diammine tetrakis (isothiocyanato) chromate (III) ion
(iii) Edmann's salt (iv) $[\text{Ni}(\text{CO})_3\text{py}]$

5. Discuss briefly about the optical isomerism, ionisation isomerism and coordination isomerism of complexes.

6. Discuss the cis-trans isomerism shown by $[\text{Pt}(\text{NH}_3)_2\text{Cl}_2]$.

Write the structure of the following complexes:

- (i) Tris (ethylenediamine) chromium (III) chloride
(ii) Diammine silver (I) chloride (iii) Dichlorodiamine platinum (II)
(iv) Sodium hexanitrocobaltate (III).

UNIT II: CO-ORDINATION COMPOUNDS II

Section – A (1 mark)

Choose the correct answer

1. Identify the paramagnetic complex from the following

- a) $[\text{Co}(\text{NH}_3)_6]^{3+}$ b) $\text{K}_4[\text{Fe}(\text{CN})_6]$ c) $[\text{Co}(\text{CN})_6]^{3-}$ d) $[\text{CoF}_6]^{3-}$

(Ans: d)

2. The magnitude of Δ_0 value will depend on

- a) charge on the central metal ion b) nature of the ligand
c) principal quantum no. of the d-electron d) all the above.

(Ans: d)

3. The CFSE for a high spin octahedral complex of d^6 ion is

- a) $-1.8\Delta_0$ b) $-0.6\Delta_0$ c) $1.2\Delta_0$ d) $-0.4\Delta_0$

(Ans: d)

4. The ligands can stabilize metals in low oxidation state among the following is

- a) F^- b) NH_3 c) Co d) S^{2-}

(Ans: c)

5. The relation between Δ_t and Δ_0 for the same metal ligand system is

- a) $\Delta_0 = \frac{4}{9} \Delta_t$ b) $9 \Delta_t = 5 \Delta_0$ c) $4 \Delta_0 = 9 \Delta_t$ d) $\Delta_0 \approx \Delta_t$

(Ans: c)

6. The CFSE value of an octahedral field value is zero for

- a) d^5 low spin b) d^6 high spin c) d^5 high spin d) d^3 low spin

(Ans: c)

7. Ligands are classified into strong and weak in

- a) Werner's theory b) VB theory c) Crystal field theory d) Ligand field theory

(Ans: c)

8. Nickel tetracyanide complex has

- a) linear structure b) square planar structure c) tetrahedral structure d) none

(Ans: b)

9. The structure of $[\text{Cu}(\text{H}_2\text{O})_4]^{2+}$ ion is

- a) square planar b) tetrahedral c) distorted rectangle d) octahedral

(Ans: a)

10. One among the following has square planar structure?

- a) $\text{Ni}(\text{CO})_4$ b) $[\text{NiCl}_4]^{2-}$ c) $[\text{Ni}(\text{CN})_4]^{2-}$ d) All of these

(Ans: c)

11. Identify which of the following is paramagnetic?

- a) $[\text{Co}(\text{NH}_3)_6]^{2+}$ b) $[\text{Ni}(\text{CN})_4]^{2-}$ c) $[\text{Zn}(\text{NH}_3)_4]^{2+}$ d) $[\text{Fe}(\text{CN})_6]^{4-}$

(Ans: a)

12. One among the following is a diamagnetic species?

- a) $[\text{Ni}(\text{CN})_4]^{2-}$ b) $[\text{NiCl}_4]^{2-}$ c) $[\text{Ni}(\text{H}_2\text{O})_6]^{2+}$ d) $[\text{Ni}(\text{NH}_3)_4]^{2-}$

(Ans: a)

13. The complex ion $[\text{Pt}(\text{NH}_3)_4]^{2+}$ has a _____ structure

- a) Pyramidal b) tetrahedral c) square planar d) pentagonal

(Ans: c)

14. According to CFT, the splitting of the d-orbitals is due to

- a) electrostatic interaction between the ligands
b) overlap of the d-orbitals and ligand orbitals

- c) electrostatic interaction between the central metal atom and the ligands
- d) π -bond formation between the metal atom and the ligands

(Ans: c)

15. In a square-planar complex the d-orbital with the highest energy will be
- a) d_{xy}
 - b) d_{xz}
 - c) d_z^2
 - d) $d_{x^2-y^2}$

(Ans: d)

16. In an octahedral complex, the orbital which has the highest energy is
- a) d_{xy}
 - b) d_{xz}
 - c) d_z^2
 - d) d_{yz}

(Ans: c)

17. The extent of splitting of d-orbitals of a metal ion in a tetrahedral ligand field will be
- a) same as in an octahedral ligand field
 - b) higher than in an octahedral ligand field
 - c) lower than in an octahedral field
 - d) unpredictable

(Ans: c)

18. The ligand which produces the maximum splitting of d-orbitals is
- a) Cl^-
 - b) CO
 - c) H_2O
 - d) $\text{C}_2\text{O}_4^{2-}$

(Ans: b)

19. High spin complexes are formed when
- a) $D_0 < P$
 - b) $D_0 > P$
 - c) $D_0 = P$
 - d) unpredictable

(Ans: a)

20. Regular octahedral complexes are formed when
- a) t_{2g} and e_g orbitals are filled unsymmetrically
 - b) t_{2g} and e_g orbitals are filled symmetrically
 - c) t_{2g} orbitals are filled symmetrically and e_g orbitals are filled unsymmetrically
 - d) e_g orbitals are filled symmetrically

(Ans: b)

Section – B (2 marks)

1. State Jahn-Teller theorem.
2. What are High spin complexes.
3. What are inner orbital complexes?
4. What do you mean by crystal field stabilization energy?
5. List out any two limitations of valence bond theory

6. Give two limitations of crystal field theory
7. Mention two applications of crystal field theory
8. What are low spin complexes?
9. Compare valence bond theory and crystal field theory (any two)

Section – C (5 marks)

1. Describe the valence bond theory of coordination complexes. What are its defects?
2. Among $[\text{Ni}(\text{CN})_4]^{2-}$ and $[\text{NiCl}_4]^{2-}$ which is diamagnetic and which one is paramagnetic? Why?
3. State and explain Jahn-Teller theorem and discuss the Jahn-teller effects.
4. Write a short note on d-orbital splitting in a tetrahedral environment of ligand.
5. Explain d-orbital splitting in octahedral environment of ligand.
6. What are the factors which will affect the magnitude of crystal field splitting energy?

Section – D (10 marks)

1. Explain the structure of the following complexes on the basis of VB theory
a) $[\text{NiCl}_4]^{2-}$ b) $[\text{Ni}(\text{CN})_4]^{2-}$ c) $\text{K}_4[\text{Fe}(\text{CN})_6]$ d) $[\text{Co}(\text{F})_6]^{3-}$
2. Why the complexes $\text{Ni}(\text{CO})_4$ and $[\text{Ni}(\text{CN})_4]^{2-}$ are diamagnetic and $[\text{NiCl}_4]^{2-}$ is paramagnetic.
3. Sketch five 'd' orbitals and label them. What is the degeneracy of the d orbitals? How is the degeneracy lift up in octahedral and tetrahedral fields?
4. List out two special features and two drawbacks of the following theories?
(i) Valance band theory (ii) CF theory
5. (i) Explain the Jahn-Teller effect of an octahedral complex of Cu^{2+} .
(ii) Why is the complex $[\text{CoF}_6]^{3-}$ paramagnetic while $[\text{Co}(\text{CN})_6]^{3-}$ is diamagnetic.
8. Discuss d-orbital splitting in octahedral and Square planar environment of ligand.

UNIT III: REACTION MECHANISM IN CO-ORDINATION COMPOUNDS

Section – A (1 mark)

Choose the correct answer

1. Which of the following is having higher trans effect

a) NH_3 b) CN^- c) en d) Cl^-

(Ans: b)

2. Inertness of a complex depends on

- a) reaction energy
- b) activation energy
- c) free energy change
- d) both a) and b)

(Ans: b)

3. Identify the factor which is involved in dissociative mechanism

- a) increase in entropy of activation
- b) decrease in entropy of activation
- c) decrease in the volume of activation
- d) no change in volume of activation

(Ans: a)

4. In simple acid hydrolysis the reaction rate depends on the concentration of ____

- a) acid
- b) base
- c) water
- d) reactants

(Ans: d)

5. Hydrolysis of complexes having ligands derived from weak acids follow _____

- a) simple acid hydrolysis
- b) acid catalysed hydrolysis
- c) base hydrolysis
- d) S_N1 CB mechanism

(Ans: b)

6. Substitution reactions of Pt(II) square planar complexes generally proceed by

- a) bimolecular associative mechanism
- b) bimolecular dissociative mechanism
- c) unimolecular associative mechanism
- d) unimolecular dissociative mechanism

(Ans: a)

7. The conjugate base formed by proton abstraction on $[\text{Co}(\text{NH}_3)_5\text{Cl}]^{2+}$ gives

- a) $[\text{Co}(\text{NH}_3)_4(\text{NH}_2)\text{Cl}]^+$
- b) $[\text{Co}(\text{NH}_3)_4(\text{NH}_2)\text{Cl}]^{2+}$
- c) $[\text{Co}(\text{NH}_3)_3(\text{NH}_2)_2\text{Cl}]^+$
- d) $[\text{Co}(\text{NH}_3)_3(\text{NH}_2)_2\text{Cl}]^{2+}$

(Ans: a)

8. $[\text{Pt}(\text{NH}_3)_4]^{2+}$ on treatment with Cl^- gives product of composition $[\text{Pt}(\text{NH}_3)_2\text{Cl}_2]$. It is a
- a) cis-isomer b) trans-isomer
c) mixture of cis and trans d) none of the above

(Ans: b)

9. _____ deals with the directive influence of a ligand towards the incoming group
a) Trans effect b) associative effect c) dissociative effect d) recombination

(Ans: a)

10. _____ is the most effective trans directing ligand
a) CN b) H₂O c) OH c) Cl

(Ans: a)

Section – B (2 marks)

1. Define dissociative mechanism.
2. Give the mechanism of acid hydrolysis in octahedral complexes?
3. What is associative mechanism?
4. What is Trans effect?
5. How trans effect is involved in the preparation of trans-(Pt(NH₃)₂Cl₂).
6. Define outer sphere mechanism.
7. Explain inner sphere mechanism.
8. Give the proof for inner sphere mechanism.
9. What are labile complexes?
10. Define inert complexes.

Section – C (5 marks)

1. Explain S_N1 CB mechanism in octahedral complexes
2. Discuss the base hydrolysis of octahedral complexes.
3. Differentiate Labile and inert complexes
4. Discuss the associative and dissociative mechanism of substitution reactions in complexes.

SECTION – D (10 marks)

1. Explain about trans effect.
2. Discuss the acid and base hydrolysis of the substitution reaction in octahedral complexes.

3. Explain in detail about inner sphere mechanism.
4. Explain in detail about outer sphere mechanism
5. Discuss the substitution reactions in Square planar complexes
6. Sketch the MO diagram of $[\text{Ti}(\text{H}_2\text{O})_6]^{3+}$

UNIT IV: ORGANOMETALLIC COMPOUNDS AND METAL CLUSTERS

Section – A (1 mark)

Choose the correct answer

1. One of the following is an example of homopolynuclear carbonyl
 a) $\text{V}(\text{CO})_6$ b) $\text{Ni}(\text{CO})_4$ c) $\text{Mn}_2(\text{CO})_{10}$ d) $\text{Mn}_2\text{Fe}(\text{CO})_{14}$
 (Ans: c)
2. Select the mononuclear carbonyl from the following
 a) $\text{Co}_2(\text{CO})_8$ b) $\text{Fe}(\text{CO})_5$ c) $\text{Fe}_2(\text{CO})_9$ d) $\text{Fe}_2\text{Ru}(\text{CO})_{12}$
 (Ans: b)
3. The paramagnetic carbonyl is
 a) $\text{Ni}(\text{CO})_4$ b) $\text{Fe}(\text{CO})_5$ c) $\text{V}(\text{CO})_6$ d) $\text{Ru}(\text{CO})_5$
 (Ans: c)
4. The colour of $\text{Fe}(\text{CO})_5$ is
 a) Black b) Yellow c) Dark green d) Orange
 (Ans: b)
5. The hybridization of $\text{Fe}(\text{CO})_5$ is
 a) sp^3 b) dsp^3 c) d^2sp^3 d) sp^3d^2
 (Ans: b)
6. The structure of $\text{V}(\text{CO})_6$ is
 a) Octahedral b) trigonal bipyramidal c) square planar d) square pyramidal
 (Ans: a)
7. Each manganese atom in $\text{Mn}_2(\text{CO})_{10}$ takes _____ hybridization
 a) sp^3 b) dsp^3 c) d^2sp^3 d) sp^3d^2
 (Ans: c)
8. Number of terminal carbonyl group in each cobalt atom of dicobaltocta carbonyl is _____.
 a) 4 b) 3 c) 2 d) 5

(Ans: b)

9. In Di-iron Enna carbonyl, each iron atom has _____ hybridization
a) $d^2 sp^3$ b) $sp^3 d^2$ c) sp^3 d) $d s p^2$

(Ans: a)

10. The carbonyl which has the cyclic structure is _____.
a) Di-iron Enna carbonyl b) Tri-iron dodeca carbonyl
c) dicobalt octa carbonyl d) Dimanganese decacarbonyl

(Ans: b)

11. In iron penta carbonyl the valency of iron is
a) 2 b) 0 c) 3 d) 5

(Ans: b)

12. The metal which does not form a mononuclear carbonyl is
a) Fe b) Co c) V d) Mn

(Ans: b)

13. The complex responsible for browning is
a) $[Fe (H_2O)_5 NO]^{3+}$ b) $[Fe (H_2O)_5 NO_2]^{2+}$ c) $[Fe (H_2O)_5 NO]^{2+}$ d) $[Fe (H_2O)_5 NO]^{2+}$

(Ans: c)

14. The metal which does not form a polynuclear carbonyl is
a) Mn b) Fe c) Co d) Cr

(Ans: d)

15. In a metal nitrosyl, the number of electrons given by each nitric oxide molecule is
a) One b) Two c) Three d) Zero

(Ans: c)

Section – B (2 marks)

1. Define the lower oxidation state of metal in metal carbonyls
2. What are pi-acid complexes
3. Give any two general methods of preparation of $Ni (CO)_4$
4. Give any two properties of $Fe(CO)_5$
5. Draw the structure of $Fe(CO)_5$
6. Write the preparation of $Cr(CO)_6$
7. Draw the structure of $Cr(CO)_6$

8. Write any two properties of $\text{Ni}(\text{CO})_4$

Section – C (5 marks)

1. Discuss the nature of bonding in carbonyls.
2. Give the structure of $\text{Fe}(\text{CO})_5$, $\text{Mn}(\text{CO})_{10}$ and $\text{Cr}(\text{CO})_6$.
3. Discuss the nature of M-L bond in metal carbonyls.
4. Discuss the bonding characteristics and structures of (i) $\text{Fe}_3(\text{CO})_{12}$ and (ii) $\text{Fe}_2(\text{CO})_9$.
5. Explain the structure of (i) $\text{Ni}(\text{CO})_4$ and (ii) $\text{Cr}(\text{CO})_6$.
6. Discuss the structure of (i) $\text{Mn}_2(\text{CO})_{10}$ and (ii) $\text{Co}_2(\text{CO})_8$.

Section – D (10 marks)

1. Write the general methods of preparation of metal carbonyls.
2. Discuss the classification of metal carbonyls.
3. Explain the bonding in the polynuclear carbonyls (i) $\text{Fe}_2(\text{CO})_9$ (ii) $\text{Fe}_3(\text{CO})_{12}$
(iii) $\text{Co}_2(\text{CO})_8$
4. Discuss the structure of the following (i) $\text{Fe}_3(\text{CO})_{12}$ (ii) $\text{Mn}_2(\text{CO})_{10}$ (iii) $\text{Fe}(\text{CO})_5$
5. Discuss the preparation, properties and structure of Nickel tetra carbonyl.
6. Give the preparation, properties and structure of $\text{Fe}_3(\text{CO})_{12}$.

UNIT V: BIO-INORGANIC CHEMISTRY

Section – A (1 mark)

Choose the correct answer

1. Number of heme groups present in haemoglobin is
a) 3 b) 4 C) 2 d) 1 **(Ans: b)**
2. Oxidation status of iron in haemoglobin and myoglobin are
a) 2,3 b) 3,2 C) 2,2 d) 3,3 **(Ans: c)**
3. The building up of excessive quantities of copper in body causes.
a) Thomason's disease b) Nerve disorder
c) Bronchitis d) Wilson's disease **(Ans: d)**
4. Which of the following complexes is used for cancer therapy?
a) Cis-platin b) Trans-platin
c) cuprammonium complex d) $[\text{Cu-EDTA}]^2$ **(Ans: a)**

5. In Na^+/K^+ pump
 - a) Na^+ goes out and K^+ comes in
 - b) Na^+ brings in and K^+ goes out
 - c) both go out
 - d) Both bring in

(Ans: a)
6. The prosthetic group in haemoglobin is
 - a) azurin
 - b) Stellacyanin
 - c) heme
 - d) vitamin B_{12}

(Ans: c)
7. Example for blue copper protein is
 - a) haemoglobin
 - b) cytochrome
 - c) ferridoxin
 - d) plastocyanin

(Ans: d)
8. In lower animals the oxygen carrier is
 - a) haemoglobin
 - b) myoglobin
 - c) hemocyanin
 - d) cyanocobalamin

(Ans: c)
9. Oxyhemoglobin is
 - a) tetrahedral
 - b) square pyramidal
 - c) octahedral
 - d) none of these

(Ans: c)
9. Find the central metal in Chlorophyll.
 - a) Cu
 - b) Mg
 - c) Mn
 - d) Zn

(Ans: b)

Section – B (2 marks)

- 1 What are metalloenzymes?
- 2 Write notes on metalloprotein.
- 3 Name the disease caused by the toxic effects of copper.
- 4 Differentiate metalloenzymes and metalloprotein.
- 5 What are metalloporphyrins?
- 6 Write notes on Bohr Effect.
- 7 List any two differences between hemoglobin and myoglobin.
- 8 List any four biological functions of hemoglobin.

Section – C (5 marks)

- 1 Writ about essential elements in biological system.
- 2 Describe the working principle of Na^+/K^+ pump in a cell.
- 3 Explain briefly metalloproteins and metallo enxzyeme. Give two examples for each.

- 4 Explain the functions of sodium –potassium pump.
- 5 Sketch the structure of chlorophyll.
- 6 Give the differences between metalloprotein and metalloenzymes

Section – D (10 marks)

- 1 Discuss the structure and mechanism of action of haemoglobin.
- 2 Discuss the structure and function of myoglobin.
- 3 Discuss the role of metal ions in biological systems.
- 4 Discuss the structure and functions of Chlorophyll.
- 5 Explain the applications of co-ordination compounds.
- 6 Describe the working principle of Na^+/K^+ pump.

St. Mary's College (Autonomous), Thoothukudi

III B.Sc Chemistry

Core

Organic Chemistry III

Sub. Code: 21UCHC62

Semester VI – April 2024

(For those who joined in July 2021 and after)

UNIT I: GREEN CHEMISTRY

Section - A (1 mark)

Choose the correct answer

1. The first listed of the 12 Principles of Green Chemistry is?
a) Prevent waste b) Catalysis c) Atom economy d) Benign solvents **(Ans: a)**
2. Green chemistry synthesis could also involve which of the following?
a) High temperature b) Dichloromethane c) Fossil fuels d) Microwave **(Ans: d)**
3. Green chemistry can reduce all but which of the following?
a) Cost b) Risk & Hazard c) Awareness d) Waste **(Ans: c)**
4. This 'green' chemical is used in household cleaners to remove stains and is also a favorite dressing on salads!?
a) Vinegar (acetic acid) b) Citric acid c) Hydrochloric acid (HCl) d) Water **(Ans: a)**
5. Which of the following is the greenest solvent?
a) Formaldehyde b) Benzene c) Ethanol d) Water **(Ans: d)**
6. Green chemistry aims to?
a) Design chemical products and process that maximize profits
b) Design safer chemical products and processes that reduce or eliminate the use and generation of hazardous substances
c) Design chemical products and processes that work most efficiently
d) Utilize non-renewable energy **(Ans: b)**
7. Who is the father of green chemistry?
a) John C Warner b) Paul T Anastas c) Chaurin d) Richard Schrock **(Ans: b)**
8. Reaction conducted in the solid state without the use of solvent is called
a) Substitution reaction b) Saponification reaction
c) Solid state reaction d) Stereochemical reaction **(Ans: c)**

9. An example of volatile organic compounds is
a) methylene chloride b) Freon 1,2 c) water d) ionic liquids (Ans: a)
10. In micro wave assisted organic synthesis water is used as a solvent in
a) Hofmann elimination reaction b) esterification
c) Fries rearrangement d) oxidation of alcohol (Ans: a)

Section - B (2 marks)

1. What is green chemistry?
2. Write the disadvantages of using ionic liquids as solvent.
3. Define green solvents.
4. What is atom Economy?
5. Write an example of organic reaction using water as solvent.
6. "Hydrogen peroxide used as a versatile bleaching agent" – Explain the statement.
7. State Hofmann Elimination.
8. What is solventless process?
9. What is deacetylation?
10. Write the disadvantages of using ScCO_2 as solvent

Section - C (5 marks)

1. Explain Green oxidation of alcohols with one example
2. Write a short note on ionic liquids
3. Write a short note on super critical CO_2
4. Write short notes on i) dry cleaning ii) atom economy
5. Give two examples for micro wave assisted reaction in organic solvent
6. Discuss Fries rearrangement reaction.

Section - D (10 marks)

1. What are green solvents? What are the advantages and disadvantages of using super critical CO_2 as solvent
2. What are green solvents? What are the advantages and disadvantages of using water as solvent
3. Give two examples each of the following
(i) Organic reactions using water as solvent

- (ii) Organic reactions in solid phase
- Write the twelve principles of green chemistry.
 - How will you obtain benzyl alcohol by green synthesis? What is the merit over conventional method?
 - How will you synthesis aryl vinyl ketone by Hofmann elimination

UNIT II: DYES AND POLYNUCLEAR HYDROCARBONS

Section - A (1 mark)

Choose the correct answer

- Oxidation of naphthalene by acidic KMnO_4 gives
a) Toluene b) Benzaldehyde c) Phthalic acid d) Benzoic acid (Ans: c)
- Which of the following is polynuclear hydrocarbon?
a) Xylene b) Cumene c) Styrene d) Napthalene (Ans: d)
- Oxidation of anthracene with V_2O_5 gives -----
a) 1, 2- anthraquinone b) 1,4 –anthraquinone
c) 9,10-anthraquinone d) None of these (Ans: c)
- Complete reduction of naphthalene with Ni catalyst gives-----
a) Dialin b) Decalin c) Tetralin d) Octalin (Ans: b)
- Phthalic anhydride is obtained by the oxidation of -----
a) phthalic acid b) naphthalene c) anthracene d) phenolphthalein (Ans: b)
- Anthracene has a tendency for addition across_____ positions
1. 9, 10 b) 1, 2 c) 1, 4 d) 1, 3 (Ans: a)
- Which of the following is a chromophore?
a) $-\text{NH}_2$ b) $-\text{OH}$ c) $-\text{N}=\text{N}-$ d) $-\text{NR}_2$ (Ans: c)
- The shift to a longer wavelength is known as
a) Hypsochromic shift b) Bathochromic shift
c) Hyper chromic effect d) Hypsochromic effect (Ans: b)
- Which among the following is an example of an azo dye
a) Bismarck brown b) Malachite green c) flourescein d) phenolphthalein (Ans: a)
- Martius yellow is an example of
a) Nitro dye b) azo dye c) trimethyl phenyl d) xanthene dye (Ans: a)

Section - B (2 marks)

1. Write the synthesis of naphthalene from 4-phenyl-1-butene.
2. What happens when naphthalene is reduced with Na/Ethanol?
3. Write the preparation of phthalic anhydride from naphthalene
4. Write the preparation of anthraquinone from anthracene
5. Draw the resonance structures of anthracene
6. Discuss the preparation of Martius yellow
7. Write down the preparation of phenolphthalein.
8. Define chromophore with examples

Section - C (5 marks)

1. How is anthracene isolated from coal-tar?
2. i) How is phenanthrene synthesised from naphthalene? Describe its reactions
ii) How is naphthalene converted into α -Naphthol and decalin?
3. Discuss the preparation of the following (i) Fluorescein and (ii) Rhodamine B
4. Discuss the natural and synthetic preparation of Indigo dyes
5. Write down the classification of dyes based on their structure with examples

Section - D (10 marks)

1. Discuss the structure of anthracene. Describe one of its synthesis.
2. i) Discuss the constitution of naphthalene.
ii) How will you convert naphthalene into α -Naphthol and phthaldehyde?
3. Describe the important chemical reactions of anthracene.
4. Discuss the structure of naphthalene.
5. Discuss the preparation and uses of the following dyes
i) aniline yellow ii) methyl orange iii) Congo red iv) Bismark Brown
6. Discuss in details the Witts Chromophore Theory.

UNIT III: RETROSYNTHETIC ANALYSIS AND CROWN ETHERS

Section - A (1 mark)

Choose the correct answer

1. Retrosynthetic analysis is the ----- synthetic reactions.

- a) forward b) backward c) reverse d) redox (Ans: c)
2. An intramolecular cyclisation of the Claisen condensation reaction is known as -----
a) Mannich reaction b) Aldol condensation
c) Michael reaction d) Dieckmann condensation (Ans: d)
3. Cyclic molecules can be synthesised by using -----
a) Dieckmann condensation b) Aldol condensation
c) Michael reaction d) Mannich reaction (Ans: a)
4. Retrosynthesis starts with -----
a) synthon b) synthetic equivalent c) Target molecule d) starting material (Ans: c)
5. ----- is the reverse of synthetic reactions.
a) synthesis b) retrosynthesis c) fragmentation d) cyclization (Ans: b)
6. Michael reaction involves ----- addition.
a) 1,2 – carbonyl b) 1,4- carbonyl c) Olefin addition d) 2,3- carbonyl (Ans: b)
7. The protecting group ----- the reactivity of a more reactive functional group by converting it into a different group.
a) increases b) decreases c) blocks d) initiates (Ans: c)
8. The ketal THP (tetrahydropyranol derivative) is used as the protecting group for -----
a) alcohols b) aldehydes c) acids d) alkyl compounds (Ans: a)
9. 1, 3-Dioxolane is most widely used protecting group for -----compounds.
a) carboxylic acid b) carbonyl c) carboxy d) carbon (Ans: b)
10. ----- are commonly used as protecting group for phenols in large synthesis.
a) Ethers b) alcohols c) amides d) esters (Ans: a)
11. Crown ethers is used as ____ in reaction
a) phase transfer catalyst b) starting material c) oxidising agent d) reducing agent (Ans: a)
12. Crown ethers are
a) Macrocyclic polyethers b) macrocyclic polyesters
c) amine compound d) alcoholic compound (Ans: a)

Section - B (2 marks)

1. What are called Synthons?
2. Mention the Retrosynthetic analysis of Dieckmann condensation.
3. What is called protecting group?

4. Discuss the protection and deprotection of amine compounds
5. How phenols are protected in organic synthesis?
6. Discuss the use of crown ether in oxidation reaction

Section - C (5 marks)

1. Define the following terms used in synthesis a) Retrosynthetic analysis b) Synthons c) synthetic equivalent.
2. Present the mechanism of Michael addition and show the retrosynthetic approach for the synthesis of the following compound.

3. How alcohols are protected and deprotected in organic synthesis?
4. Discuss the protection and deprotection in carbonyl compounds
5. Discuss the preparation of i) Dibenzo-18-crown-6 ii) 18-crown-6

Section - D (10 marks)

1. Explain the terms a) Synthesis b) Retrosynthetic analysis c) Synthons d) synthetic equivalent e) protecting group
2. How are the functional groups protected and deprotected in (i) alcohol (ii) carbonyl compounds (iii) carboxylic acid?
3. How is 5-hexenoic acid retrosynthetically analysed?
4. Explain the preparation and uses of crown ethers.

UNIT IV: ALKALOIDS AND TERPENOIDS

Section – A (1 mark)

Choose the correct answer

1. Piperidine alkaloid is
a) Coniine b) Nicotine c) Quinine d) Papavarine (Ans: a)
2. The source of nicotine is
a) Black pepper b) Poppy seeds c) Tobacco leaves d) Hemlock seeds (Ans: c)
3. Alkaloids are generally
a) Nitrogenous compounds b) Basic in nature
c) Physiologically active substances d) all of these are correct. (Ans: d)

4. The alkaloid responsible for the particular taste of black pepper is
a) Coniine b) Papaverine c) Piperine d) Chavicine **(Ans: d)**
5. Hemlock alkaloid which was responsible for the forced death of great philosopher Socrates, contains
a) Strychnine b) Opium c) Coniine d) Nicotine **(Ans: c)**
6. Enfleurage process is used to extract the essential oil from
a) Bark of plant b) Seeds of plant c) Leaves of plant d) Flowers of plant **(Ans: d)**
7. Which of the following is not the product of ozonolysis on citral?
a) acetone b) leavulaldehyde c) glyoxal d) oxalic acid **(Ans: d)**
8. Ingold's isoprene rule states that in terpenoids isoprene units are joined
a) Head to tail b) Head to head c) Tail to tail d) In a random order **(Ans: a)**
9. Which of the following is not a character of terpenoids?
a) They are pleasant smelling liquids b) They are steam volatile
c) They are nitrogeneous bases d) They are insoluble in water **(Ans: c)**
10. The terpenoid present in oil of lemon grass is
a) Citral b) Geraniol c) Nerol d) α – Terpineol **(Ans: a)**
11. Citral when heated with KHSO_4 forms?
a) Isoprene b) p – cymene c) p – menthane d) dipentene **(Ans: b)**

Section – B (2 marks)

1. What are Isoprenoids?
2. What are essential oils?
3. How will you show that citral has an α , β unsaturated aldehyde group?
4. What do you mean by an alkaloid?
5. What is Hoffmann exhaustive methylation?
6. How hydroxyl group can be detected?
7. Conyryne is a pyridine derivative explain.
8. How will you convert nicotine into nicotinic acid?

Section – C (5 marks)

1. Give the synthesis of nicotine.

- Exhaustive methylation has been an important tool in the study of the structure of alkaloids. Justify the statement by giving an example.
- Discuss the classification of alkaloids.
- Discuss the structure of coniine.
- Write a note on isoprene rule.
- What are terpenoids? How are they classified?
- Write a note on methods of isolation of terpenoids.

Section – D (10 marks)

- Discuss the structure of dipentene.
- Discuss the structure of coniine.
- Give an account of the analytical to elucidate the structure of citral.
- What are alkaloids? Taking nicotine as an example show how is the structure of an alkaloid determined?
- Discuss the constitution of piperine.

UNIT V: ORGANIC SPECTROSCOPY

Section – A (1 mark)

Choose the correct answer

- The term hyperchromic effect in UV spectra represents
 - shift of absorption to longer wavelength
 - shift of absorption to shorter wavelength
 - increase in the intensity of absorption
 - decrease in the intensity of absorption

(Ans: c)
- The number of signals obtained for ethylmethyl ether is
 - 1
 - 2
 - 3
 - 4

(Ans: c)
- The number of signals exhibited by mesitylene in H- NMR is
 - 2
 - 3
 - 4
 - 1

(Ans: a)
- A strong band at 1718 cm^{-1} corresponds to
 - C=O group
 - C-C group
 - NH group
 - NO_2

(Ans: a)
- NMR Spectra uses
 - UV light
 - IR light
 - microwaves
 - Radiofrequencies

(Ans: d)

6. The basic value of λ_{\max} for hetero annular diene group.
 a) 207 μm b) 215 μm c) 193 μm d) 253 μm **(Ans: b)**
7. In UV spectra the absorption maxima (λ_{\max}) increment for $-\text{NR}_2$
 a) 30 μm b) 60 μm c) 5 μm d) 75 μm **(Ans: a)**
8. The number of signals obtained for ethylmethyl ketone is
 a) 1 b) 2 c) 3 d) 4 **(Ans: c)**
9. Which of the following molecules exhibit IR spectra?
 a) H_2 b) N_2 c) Cl_2 d) CO **(Ans: d)**
10. The commonly used reference compound in NMR spectrum is
 a) tetramethyl silane b) tetramethyl methane c) benzene d) ethanol **(Ans: a)**

Section – B (2 marks)

1. What are the types of electronic transitions?
2. Define bathochromic shift.
3. Define blue shift.
4. Define hyperchromic shift.
5. Define hypochromic shift.
6. Write any two reason for using TMS as internal standard.
7. Define spin – spin splitting.
8. Define coupling constant.
9. Define chemical shift.

Section – C (5 marks)

1. (i) Explain the terms chromophore, and auxochrome with suitable examples.
 (ii) Predict the number of signals and splitting of propionic acid.
2. Different types of shifts in UV spectroscopy
3. What is meant by finger print region in the IR spectrum? What is its significance?
4. Define chemical shift in NMR spectra. What is the effect of hydrogen bonding on the chemical shift?
5. Give an account of the characteristics of IR frequencies.
6. Write notes on spin-spin coupling.
7. Explain the types of vibrations in IR spectroscopy.

Section – D (10 marks)

1. (i) What are the different types of hydrogen bonding? How are they differentiated using IR spectroscopy?
(ii) Write down the significance of finger print region in IR spectroscopy.
2. i) Find λ_{\max} for the following compounds

- ii) How will you determine inter and intramolecular hydrogen bonding using IR spectrum?
3. How many signals and the splitting be expected in the NMR spectrum of each of the following compounds?
i) mesitylene ii) ethyl methyl ketone iii) ethanol iv) propionic acid
4. i) Write a note on number and position of signals in NMR spectroscopy.
ii) Why TMS is used in NMR spectroscopy?
iii) Sketch and discuss the NMR spectrum of mesitylene.
5. Define chemical shift. What are the factors that affect the chemical shift in NMR

St. Mary's College (Autonomous), Thoothukudi

III B.Sc Chemistry

Core XI

Physical Chemistry III

Sub. Code: 21UCHC63

Semester VI – April 2024

(For those who joined in 2021 and after)

UNIT I: PHASE RULE

Section - A (1 mark)

Choose the correct answer

1. The mathematical statement of Gibbs phase rule is -----.
a) $F=C-P+2$ b) $P=F-C+2$ c) $F=C+P+2$ d) $F=C+P+1$ (Ans: a)
2. In water system at the triple point $F=$ -----.
a) zero b) one c) two d) three (Ans: a)
3. A system containing liquid water and water vapour has the number of phases equal to -
-----.
a) 0 b) 1 c) 2 d) 4 (Ans: c)
4. A mixture of three gases H_2 , O_2 and N_2 belongs to ---- phase system
a) 1 b) 3 c) 2 d) 0 (Ans: a)
5. A mixture of two miscible liquids (water and honey) has ----- phases.
a) 0 b) 1 c) 2 d) 3 (Ans: b)
6. The number of components in a water system containing solid, liquid and gaseous phases is equal to
a) 3 b) 1 c) 2 d) 4 (Ans: b)
7. A saturated solution of potassium chloride is a ----- phase system.
a) 0 b) 1 c) 2 d) 3 (Ans: c)
8. For one component system the phase rule is
a) $F = 3-P$ b) $F = 2-P$ c) $F = 1-P$ d) $F = 4-P$ (Ans: a)
9. For one component and one phase system the degrees of freedom is equal to -----.
a) 0 b) 1 c) 2 d) 3 (Ans: c)
10. The temperature at which a polymorphic substance change from one form to another is called

- a) critical temperature b) transition temperature
c) inversion temperature d) absolute temperature

(Ans: b)

11. A system with zero-degree of freedom is known as

- a) Monovariant b) Invariant c) Bivariant d) Trivariant

(Ans: b)

Section - B (2 marks)

1. Explain the term phase with an example.
2. What is meant by component? Give an example for two component system.
3. Define degrees of freedom.
4. What is a phase diagram?
5. Define triple point.
6. What is a condensed system?
7. Why eutectic mixture is not regarded as a compound?
8. What is congruent melting point?

Section - C (5 marks)

1. State Gibb's phase rule and explain the terms giving examples.
2. What do you mean by a condensed system? Derive phase rule for such system.
3. What do you mean by congruent melting point? Explain with the help of Zn-Mg system.
4. Draw and discuss the phase diagram of Ag-Pb system.
5. Define the term component. Choosing CaCO_3 and CO_2 as a two component system, express
6. The composition of each of the phases for the equilibrium. $\text{CaCO}_3 \rightarrow \text{CaO} + \text{CO}_2$.
7. Sketch and explain the phase diagram of water system.

Section – D (10 marks)

1. Draw and explain the phase diagram of two component system forming a compound with a congruent melting point. Provide an illustration.
2. Draw and explain the phase diagram of sulphur system.
3. What are freezing mixtures? Explain with the help of KI- H_2O system.
4. Explain FeCl_3 -water system using a phase diagram.

UNIT II: CHEMICAL KINETICS

Section – A (1 mark)

Choose the correct answer

- Hydrolysis of ester catalysed by alkali is an example of ----- order.
a) First b) Second c) Third d) Zero **(Ans: b)**
- According to Arrhenius equation, the rate constant $k =$
a) $Ae^{-E_a/RT}$ b) $Ae^{E_a/RT}$ c) Ae^{E_a/RT^2} d) Ae^{E_a} **(Ans: a)**
- For first order reactions, the rate constant k has the unit -----.
a) lit. mol^{-1} b) time^{-1} c) $(\text{mol/lit})^{-1} \text{ time}^{-1}$ d) time mol lit^{-1} **(Ans: b)**
- For a reaction $A \rightarrow \text{product}$, a graph of $1/[a-x]$ versus time is found to be a straight line. The order to the reaction is -----.
a) zero order b) first order c) second order d) third order **(Ans: c)**
- One among the following concentration plot is linear for a first order reaction?
a) $[A]$ Vs time b) $\sqrt{[A]}$ Vs time c) $\ln[A]$ Vs time d) $[A]^2$ Vs time **(Ans: c)**
- If the unit of rate constant is $\text{lit mol}^{-1} \text{ sec}^{-1}$, the order of the reaction will be -----
a) 0 b) 1 c) 2 d) 3 **(Ans: c)**
- $\text{Mol. Lit}^{-1} \text{ sec}^{-1}$ is the unit of -----.
a) rate of reaction b) molecularity c) order of reaction d) concentration **(Ans: a)**
- Reaction rate changes with -----.
a) temperature b) catalyst c) concentration of reactants d) all of these **(Ans: d)**
- A first order reaction required 8.96 months for the concentration of reactants to be reduced to 25% of the original value. What is the half-life of the reaction?
a) 4.48 months b) 2.24 months c) 8.96 months d) 17.92 months **(Ans: d)**

Section – B (2 marks)

- Define rate of a reaction. Mention its unit.
- Write any two factors influencing the rate of the reaction.
- Distinguish order and molecularity of a reaction.
- Define activation energy.
- Mention the significance of activation energy.
- Enumerate the assumptions of collision theory.

- At 25 °C, the $t_{1/2}$ for the decomposition of N_2O_5 is 5.7 h and is independent of the initial pressure of N_2O_5 . Calculate the rate constant.
- Prove that half-life period of a zero order reaction varies directly with the initial concentration.

Section - C (5 marks)

- What is meant by rate of a reaction? Write rate laws for the following reactions.
i) $2A + B \rightarrow \text{products}$ ii) $2B \rightarrow \text{products}$
- Differentiate order and the molecularity of the reaction.
- Explain pseudo order reaction with an example.
- How will you determine the order of the reactions by half-life method?
- How will you determine order of reactions by differential method?

Section - D (10 marks)

- i) Derive the rate expression for the first order reaction and mention its significance. (8)
ii) The value of rate constant for the decomposition of nitrogen pentoxide is 4.346×10^{-5} at 25 °C and 4.87×10^{-3} at 65 °C .Calculate the activation energy for the reaction. (4)
- Explain in detail, the various methods of determining the order of the reactions.
- i) Define activation energy. Mention its significance. (4)
ii) Discuss the Lindemann's theory of unimolecular reactions. (8)
- Discuss the collision theory of bimolecular reactions.
- What do mean by molecularity? Explain Absolute reaction rate theory and its significance

UNIT III: PHOTOCHEMISTRY AND SONOCHEMISTRY

Section - A (1 mark)

Choose the correct answer

- The rate of the photochemical reaction $H_{2(g)} + Br_{2(g)} \longrightarrow 2HBr_{(g)}$ is
a) inversely proportional to the intensity of light
b) directly proportional to the square root of the intensity of light
c) directly proportional to $[HBr]$
d) directly proportional to $[H_2]$ (Ans: a)
- The photo sensitizer used in the chemical actinometer is -----.

- a) oxalic acid b) mercury vapour c) uranyl ion d) benzophenone **(Ans: c)**
3. Photochemistry is a study of chemical reaction caused by absorption of -----.
- a) UV light b) Visible and UV light c) IR radiation d) X-Rays **(Ans: b)**
4. The quantum yield for the photochemical combination of hydrogen and chlorine is -----.
- a) <1 b) >1 c) 1 d) abnormal **(Ans: d)**
5. is used in traffic signals.
- a) Fluorescent dyes b) organic dyes
- b) c) a paste of radium with zinc sulphide d) inorganic dyes **(Ans: a)**
6. The photosensitizer used in photosynthesis is -----.
- a) Light b) CO₂ c) H₂O d) Chlorophyll **(Ans: d)**
7. The reverse of photochemical reaction is -----.
- a) Bioluminescence b) Chemiluminescence c) Fluorescence d) Photosensitization **(Ans: b)**
8. The emission of light by jelly-fish is an example of -----.
- a) Bioluminescence b) Chemiluminescence c) Fluorescence d) Photosensitization **(Ans: a)**
9. The rate of the photochemical reaction depends on the -----.
- a) Concentration b) Pressure c) Intensity of light d) Temperature **(Ans: c)**
10. The number of quantum of light absorbed in a photochemical reaction is determined using
- a) Actinometer b) Barometer c) Calorimeter d) Densimeter **(Ans: a)**
11. The emission of light by a firefly is due to
- a) Fluorescence b) Phosphorescence c) Photosensitization d) Bioluminescence **(Ans: d)**
12. Sonochemistry deals with -----.
- a) Light b) Sound c) Collision d) Diffusion **(Ans: b)**

Section - B (2 marks)

- What are photochemical reactions? Give two examples and mention the region where the light radiations are absorbed.
- Compare thermal reactions with photochemical reactions.
- State Lambert Beer's law. List out the limitations of this law.
- Explain the term quantum efficiency of a photochemical reaction.

5. Discuss the determination of the number of Einsteins of light absorbed in a photochemical reaction.
6. Discuss the quantum yield of hydrogen chlorine reaction.
7. Explain the terms 'fluorescence' and 'phosphorescence' distinguishing between the two.
8. State and explain Stark-Einstein law.
9. Illustrate photosensitized reaction with two examples.
10. State the Laws of photochemistry.
11. Explain primary and secondary processes in photochemistry.
12. Differentiate bioluminescence and chemiluminescence.
13. Explain the principle of sonochemistry.

Section - C (5 marks)

1. State and explain the laws of photochemistry.
2. Describe the kinetics of hydrogen chlorine reaction.
3. Describe the kinetics of hydrogen bromine reaction.
4. Define quantum yield. Citing examples give reasons for high and low quantum yield.
5. Write notes on: 1. Chemiluminescence 2. Bioluminescence 3. Photosensitisation
6. Explain the various photophysical processes.
7. Give a neat sketch of Jablonski diagram and explain the mechanism of fluorescence and phosphorescence.
8. Explain the applications of sonochemistry

Section – D (10 marks)

1. State and explain the laws of photochemistry.
2. Describe the kinetics of hydrogen chlorine reaction
3. Describe the kinetics of hydrogen bromine reaction
4. Define Quantum Yield, citing examples give reasons for high and low quantum yield.
5. Write notes on: 1. Chemiluminescence 2. Bioluminescence 3. Photosensitisation
6. Explain the various photophysical processes.
7. Give a neat sketch of Jablonski diagram and explain the mechanism of fluorescence and phosphorescence.
8. Explain the applications of Sonochemistry

UNIT IV: GROUP THEORY

Section – A (1 marks)

Choose the correct answer

- Find out the point group of SF_6 .
a) T_d b) D_2 c) C_{4v} d) O_h (Ans: d)
- Identify the term used to represent the number of symmetry elements present in the group.
a) Order b) Class c) Sub-group d) Abelian group (Ans: a)
- Match the molecule which has centre of inversion.
a) BF_3 b) CO_2 c) CHCl_3 d) CH_3Cl_3 (Ans: b)
- Name the symmetry element which involves rotation followed by reflection.
a) Proper axis of symmetry b) Inversion
c) Improper axis of rotation d) Plane of symmetry (Ans: c)
- Identify the irreducible representation of normal modes of vibration of NH_3 molecule.
a) $2A_1 + B_2$ b) $2A_1 + 2E$ c) $2A_1 + 2B_2$ d) $2A_1 + E$ (Ans: b)
- Identify the point group of water.
a) C_{2v} b) C_{3v} c) D_{2h} d) D_{3h} (Ans: a)
- Match the molecule which belongs to C_{3v} .
a) CH_4 b) CO_2 c) NH_3 d) BF_3 (Ans: c)
- Write the matrix notation for the plane of symmetry.
a) 1 b) -1 c) 3 d) -3 (Ans: a)
- Label the matrix notation for the improper axis of rotation.
a) 1 b) -1 c) $2\cos\theta + 1$ d) $2\cos\theta - 1$ (Ans: d)
- Identify the number of vibrational modes in linear molecule.
a) $3N$ b) $3N - 4$ c) $3N - 5$ d) $3N - 6$ (Ans: c)
- Find out the number of vibrational modes in CO_2 .
a) 2 b) 3 c) 4 d) 5 (Ans: c)
- Match the molecule which shows sp^2 hybridisation.
a) CH_4 b) CO_2 c) NH_3 d) BF_3 (Ans: d)
- Find out the hybridisation involved in CH_4 .
a) sp^2 b) sp^3 c) dsp^2 d) dsp^3 (Ans: b)
- Recall the number of vibrational modes in non-linear molecule.

a) $3N$ b) $3N - 4$ c) $3N - 5$ d) $3N - 6$ (Ans: d)

16. Recall the symmetry point group of NH_3 .

a) C_{2v} b) C_{3v} c) D_{2h} d) D_{3h} (Ans: b)

Section – B (2 marks)

1. Restate the symmetry element.
2. Indicate the symmetry operation.
3. Distinguish the proper axis of symmetry?
4. Explain the plane of symmetry?
5. Illustrate the improper axis of symmetry?
6. Paraphrase the centre of inversion.
7. Infer the symmetry elements present in H_2O ?
8. Relate the symmetry elements present in ammonia molecule?
9. Interpret the point group of BF_3 .

Section - C (5 marks)

1. Implement the properties of irreducible representations.
2. Compute the symmetry operations of NH_3 molecule as a group.
3. Construct the matrix notations for the following symmetry operations.
i) Plane of symmetry ii) Centre of inversion iii) Improper axis of rotation
4. Compile the group multiplication table for C_{3v} point group.
5. Relate the reducible and irreducible representations?
6. Predict the hybrid orbitals of BF_3 molecule.

Section – D (10 marks)

1. Sketch the proper and improper axis of symmetry with examples.
2. Organise the construction of character table for C_{2v} point group.
3. Predict the abelian and non-abelian group with an example.
4. Sketch the character table for H_2O .
5. Construct the of character table for C_{3v} point group.
6. Deconstruct the construction of character table for D_{2h} point group.
7. Appraise the symmetry elements and the corresponding symmetry operation.
8. Examine the symmetry operations of NH_3 molecule as group.

UNIT V: SPECTROSCOPY

Section – A (2 marks)

1. Molecules when subjected to a radiation of wavelength 10^{-2} to 10 cm ----- spectra is obtained.
2. a) rotational b) vibrational c) NMR d) ESR (Ans: a)
3. One among the following is microwave active.
a) H_2 b) O_2 c) Cl_2 d) HCl (Ans: d)
4. In rotational spectra when $J=2$, E_J is -----.
a) zero b) $2B$ c) $6B$ d) $12B$ (Ans: c)
5. The energy range involved in pure rotational spectroscopy is -----.
a) $1-10\text{ cm}^{-1}$ b) $1-100\text{ cm}^{-1}$ c) $10-100\text{ cm}^{-1}$ d) $10-1000\text{ cm}^{-1}$ (Ans: b)
6. In microwave oven ----- in food absorb the radiation.
a) carbohydrate b) proteins c) fat d) water (Ans: d)
7. In the electromagnetic spectrum, the radiations are arranged in the order of their increasing ---.
a) wavelength b) wave number c) frequency d) energy (Ans: a)
8. Energy associated with the transition of an electron from one level to another energy level is known as ----- energy
a) translational b) rotational c) vibrational d) electronic (Ans: d)
9. The angular momentum 'L' of a rotating molecule is given by -----.
a) $I^2\omega$ b) $I\omega$ c) $I\omega^2$ d) $I_2\omega_2$ (Ans: b)
10. The rotational spectrum of a rigid diatomic molecule consists of a series of lines separated by -----.
a) B b) $2B$ c) $3B$ d) $5B$ (Ans: b)
11. The molecule which is IR inactive is -----.
a) N_2 b) H_2O c) HCl d) CO_2 (Ans: a)
12. Assuming Simple harmonic the selection rule for vibrational spectroscopy is -----.
a) $\Delta J = \pm 1$ b) $\Delta v = \pm 1$ c) $\Delta v = 0$ d) $\Delta J = 0$ (Ans: b)
13. There are ----- possible types of electronic transitions.
a) one b) two c) three d) four (Ans: d)

14. ----- shift is produced by the presence of an auxochrome attached to a chromophore in a molecule.
a) red shift b) blue shift c) hyperchromic effect d) hypochromic effect **(Ans: a)**
15. The shift of an absorption maximum in electronic spectroscopy to a shorter wavelength side is called as -----.
a) bathochromic shift b) hypsochromic shift
c) hyperchromic shift d) hypochromic shift **(Ans: b)**
16. The effect which causes a decrease in the intensity of absorption maximum of a compound is called -----.
a) bathochromic shift b) hypsochromic shift
c) hyperchromic effect d) hypochromic effect **(Ans: d)**
17. NMR spectra are observed in _____ region
Microwave b) Radiofrequency c) UV d) Visible **(Ans: b)**
18. Which among the following doesn't give signal in the NMR spectrum?
a) H^1 b) C^{13} c) P^{31} d) O^{18} **(Ans: d)**
19. _____ is a commonly used reference in NMR spectroscopy.
Acetone b) water c) CCl_4 d) TMS **(Ans: d)**
20. The number of NMR signals for ethanol is _____
a) 1 b) 2 c) 3 d) 4 **(Ans: c)**
21. The spacing between the peaks in a multiplet is called _____
a) chemical shift b) coupling constant
c) shielding constant d) pascal's constant **(Ans: b)**
22. _____ gives a single sharp line in NMR spectrum.
a) ethanol b) benzaldehyde c) TMS d) anisole **(Ans: c)**
23. Which among the following give signal in the NMR spectrum?
a) proton b) carbon c) nitrogen d) oxygen **(Ans: a)**

Section - B (2 marks)

1. What is the condition and selection rule for obtaining rotational spectra?
2. What is Born-Oppenheimer approximation?
3. Differentiate atomic and molecular spectroscopy.
4. How is food cooked in a microwave oven?

5. What are combination bands?
6. Define Fermi resonance in IR spectroscopy.
7. Write about symmetric and asymmetric stretching.
8. What is called in plane and out of plane bending vibration in IR spectroscopy?
9. What are the selection rules for electronic spectroscopy?
10. How is UV spectroscopy used to distinguish geometrical isomers?
11. Calculate λ_{max} for 3-methylpent-3-en-2-one.
12. Mention the different types of electronic transitions and arrange them in the order of increasing energy.
13. What are the two important informations obtained from UV spectrum?
14. Define Chemical shift.
15. Write any two factors affecting chemical shift.
16. What is TMS? Write any two uses of TMS.
17. What is MRI?

Section – C (5 marks)

1. What is molecular spectroscopy? Mention its types.
2. The internuclear distance of CO is 1.13\AA . Calculate the energy in joules in the first excited rotational level. The reduced mass of CO is 1.14×10^{-26} Kg.
3. What is electromagnetic spectrum? Mention its regions.
4. How is food cooked in a microwave oven?
5. Explain briefly the types of vibration in IR spectroscopy.
6. Illustrate with an example how IR spectroscopy is useful in identifying inter and intramolecular H-bonding
7. How force constant and bond strength are determined using IR spectroscopy?
8. Explain the different types of electronic transitions.
9. With suitable examples explain the term chromophore and auxochrome.
10. Explain red shift and blue shift.
11. Define i) hypsochromic shift ii) hyperchromic effect iii) hypochromic effect
12. Write briefly the principle of NMR spectroscopy.
13. Explain briefly the factors affecting chemical shift.
14. Explain why TMS is used as internal standard in NMR spectroscopy

Section – D (10 marks)

1. Derive an expression for the rotational energy of a diatomic molecule.
2. Explain different types of molecular energies with the help of a neat energy level diagram.
3. How is moment of inertia and bond length of a diatomic molecule calculated using rotational spectroscopy?
4. Explain briefly the theory of IR spectroscopy.
5. Explain the different types of electronic transitions in detail.
6. Taking three suitable examples each for α,β unsaturated carbonyl compounds and dienes calculate the λ_{\max} values using Woodward Fieser's rule.
7. Define the following with suitable examples i) chromophore ii) auxochrome iii) red shift iv) blue shift v) hyperchromic effect
8. Discuss the theory behind electronic spectroscopy and mention the selection rules also.
9. Describe briefly (i) principle of NMR spectroscopy (ii) factors affecting chemical shift

ST. MARY'S COLLEGE (Autonomous) – THOOTHUKUDI.

III B.Sc. CHEMISTRY

Elective

Polymer Chemistry

Sub. code: 21UCHE61

Semester VI – April 2024

(for those who joined in June 2021 and after)

UNIT I: INTRODUCTION TO POLYMERS

Section – A (1 mark)

Choose the correct answer

1. An irreversible plastic is called
a) thermoplastic b) thermosetting plastic c) elastomers d) resin **(Ans: b)**
2. The functionality of ethylene glycol is
a) 1 b) 3 c) 2 d) 0 **(Ans: c)**
3. _____ is an example of conducting polymer
a) HDPE b) teflon c) polyacetylene d) PVC **(Ans: c)**
4. Which among the following is a synthetic polymer?
a) cellulose b) starch c) protein d) terylene **(Ans: d)**
5. Polymerisation is generally
a) an exothermic reaction b) an endothermic reaction
c) dehydration reaction c) an oxidation reaction **(Ans: a)**
6. Conducting polymer possess
a) pi- electron b) sigma electron c) conjugated pi electron d) odd electron **(Ans: c)**
7. Silicone rubber is an example of
a) fibres b) plastics c) resin d) elastomers **(Ans: d)**
8. An example of fibre is
a) silicone b) orlon c) PVC d) PMMA **(Ans: b)**
9. In a polymer if all the substituent groups are arranged alternatively above and below the carbon – carbon chain, it is called as
a) isotactic b) syndiotactic c) atactic d) heterotactic **(Ans: b)**
10. Polyaniline can be synthesized by oxidation with
a) KOH b) KCl c) $K_2S_2O_8$ d) KBr **(Ans: c)**

Section – B (2 marks)

1. Define degree of polymerization.
2. What are fibres?
3. What are elastomers?
4. What are conducting polymers?
5. Define tacticity.
6. What are thermoplastics? Give an example
7. What are thermosetting plastic? Give an example
8. What are copolymers? Give an example
9. Write any two general characteristics of polymers.
10. What is addition polymerization? Give an example
11. What is condensation polymerization? Give an example
12. Write any two difference between thermoplast and thermoset.

Section – C (5 marks)

1. Compare thermoplastic and thermosetting plastics.
2. With a suitable example explain the tacticity encountered in polymers.
3. What are copolymers? Explain their types
4. Enumerate the general characteristics of polymers
5. Describe how polymers are classified on the basis of mode of synthesis.
6. Define functionality. Discuss the different types of functionality with example.
7. Explain homopolymer and copolymer with suitable examples
8. Sketch the structural feature of polymers with different tacticity.
9. How do plastics, elastomers and fibres differ from one another?
10. Write briefly on branched and cross-linked polymer.

Section-D (10 marks)

1. What are conducting polymers? Explain in detail their classification, synthesis, properties and applications.
2. Write short notes on (i) tacticity (ii) functionality (iii) copolymer and its types.
3. List out the general characteristics of polymers.
4. Write notes on i) Nomenclature of polymer ii) Homo and hetero polymer iii) Cross linking

UNIT II: PROPERTIES OF POLYMERS

Section – A (1 mark)

Choose the correct answer

1. The temperature at which an amorphous polymer passes from glassy state to rubbery state is
a) T_m b) T_c c) T_g d) T_a **(Ans: c)**
2. If the backbone of the polymer is more flexible then its T_g is
a) high b) unity c) low d) 0 **(Ans: c)**
3. The temperature at which an crystalline polymer passes from crystalline flexible state to rubbery state is
a) T_m b) T_c c) T_g d) T_a **(Ans: a)**
4. Which of the following statement about melting point of polymer is not true?
a) Isotactic polymers melt at higher temperature than atactic polymers
b) Homopolymers melt at higher temperature than copolymers
c) Block copolymer melt at high temperature than random copolymers
d) The higher the molecular weight of polymer, the lower is the melting point **(Ans: d)**
5. Rubber on oxidative degradation yields
a) acetic acid b) hydrochloric acid
c) oxalic acid d) phenolic acid **(Ans: a)**
6. The equation $[\eta] = KM^a$, which relates the viscosity and the molecular weight of a polymer is known as
a) Staudinger equation b) Flory –Fox equation
c) Mark–Houwink equation d) Flory – Huggins equation. **(Ans: c)**
7. One of the common oxidative products obtained in rubber is
a) isoprene b) levulinaldehyde c) 2, 3 –butadiene d) chloroprene. **(Ans: b)**
8. Weight average molecular mass of macromolecules is determined by
a) Sedimentation equilibrium method b) Light scattering method
c) both a and b d) Osmotic pressure method. **(Ans: c)**
9. In Carother's equation, p is
a) Extent of reaction b) degree of polymerization
c) average number of functional groups d) principal quantum number **(Ans: a)**

10. Osmotic pressure method is used to determine
 a) \overline{M}_n b) \overline{M}_w c) \overline{M}_v d) none **(Ans: a)**
11. Low molecular weight polymers have ----- T_g value
 a) low b) high c) very high d) zero **(Ans: a)**
12. For all polymers the following is true
 a) $\overline{M}_n = \overline{M}_w$ b) $\overline{M}_n > \overline{M}_w$ c) $\overline{M}_n < \overline{M}_w$ d) $\overline{M}_n / \overline{M}_w = 1$ **(Ans: c)**
13. The glass transition temperature(T_g) is related to the crystalline melting point (T_m) for the symmetrical polymers as
 a) $T_g = 2/3 T_m$ b) $T_g = 1/2 T_m$ c) $T_g = 1/3 T_m$ d) $T_g = 3/4 T_m$ **(Ans: b)**
14. The number average of a polymer containing equal number of fragments with molecular weights 50, 000 and 90,000 is
 a) 40,000 b) 50,000 c) 70,000 d) 1,00,000 **(Ans: c)**

Section – B (2 marks)

1. Define glass transition temperature.
2. What are the factors which affect glass transition temperature?
3. Define crystalline melting temperature.
4. Write down the relationship between T_g and T_m for unsymmetrical and symmetrical polymers.
5. List the factors which affect crystalline melting temperature?
6. What is degradation of polymers?
7. What are the types of polymer degradation

Section – C (5 marks)

1. Discuss the factors affecting the glass transition temperature of a polymer
2. Write out the expressions and determination methods for number average and weight average molecular weights
3. Explain thermal method of degradation of polymer.
4. Discuss the oxidative method of degradation of polymer.
5. Calculate \overline{M}_n , \overline{M}_w , of a polymer equal numbers of polymer molecules with $M_1 = 10,000$ and $M_2 = 1,00,000$ are mixed. Calculate M_n and M_w taking n to be equal to 10.

Section – D (10 marks)

1. What is meant by polymer degradation? Explain the process of oxidative degradation of rubber.
2. Write about the expressions for number average and weight average molecular weights of polymers.
3. Discuss the properties of polymers.
4. Discuss the practical significance of molecular mass distribution.
5. Write short notes on size of polymers

UNIT III: POLYMERIZATION AND POLYMERIZATION TECHNIQUES

Section – A (1 mark)

Choose the correct answer

1. Protective colloid(s) used in emulsion polymerization are
 a) poly vinyl alcohol b) carboxymethyl cellulose
 c) gum and casein d) all the above. **(Ans: d)**
2. Which of the following is pearl polymerization?
 a) Bulk polymerization b) solution polymerization
 c) suspension polymerization d) emulsion polymerization. **(Ans: c)**
3. Example for initiator in free radical polymerization technique is
 a) Benzoyl peroxide b) BF_3
 c) alkyl lithium compound d) H_2O . **(Ans: a)**
4. In which of the polymerization technique dissipation of exothermal energy is easy?
 a) Bulk polymerization b) Solution polymerization
 c) Suspension polymerization d) emulsion polymerization **(Ans: d)**
5. Example of Homogeneous polymerization
 a) chain end polymerization b) Solution polymerization
 c) suspension polymerization d) emulsion polymerization **(Ans: b)**
6. Example of Heterogeneous Polymerization
 a) Bulk polymerization b) Solution polymerization
 c) Addition polymerization d) Emulsion polymerization **(Ans: d)**
7. In emulsion Polymerization, protective colloids are added
 a) to regulate the pH of the mixture b) to prevent premature precipitation
 c) to prevent adhesion d) to regulate the surface tension **(Ans: a)**

8. Which Polymerization technique gives the largest possible yield per reactor volume?
- a) mass polymerization b) solution polymerization
 c) suspension polymerization d) emulsion polymerization **(Ans: a)**
9. All commercial processes of polymerization are
- a) solid phase reaction b) liquid phase reaction
 c) gas phase reaction d) all the above **(Ans: b)**
10. Polymerization carried out in the absence of solvent is
- a) Bulk polymerization b) Solution polymerization
 c) suspension polymerization d) emulsion polymerization **(Ans: a)**

Section – B (2 marks)

1. Define polymerization and polymerisation techniques
1. Write any two difference between addition and condensation polymerisation
2. What is ionic polymerization?
3. What is coordination polymerization?
4. Define bulk polymerisation
5. List down the disadvantages of bulk polymerisation
6. Write any two advantages of emulsion polymerisation
7. Why protective colloids are added in emulsion polymerization technique.
8. What are advantages of solution polymerization?

Section – C (5 marks)

1. Give the important advantages of emulsion and bulk polymerizations.
2. Write short notes on Homogeneous Polymerization techniques.
3. Describe two methods in Heterogeneous Polymerization.
4. Discuss about Bulk Polymerization.
5. Tabulate the differences between addition polymerization and condensation polymerization

Section - D (10 marks)

1. Discuss the mechanism of coordination polymerization with suitable example.
2. What are addition and condensation polymers? Explain free radical mechanism of addition polymerization.

3. Tabulate the differences between addition polymerization and condensation polymerization
4. Write short notes Suspension and solution polymerization.
5. Differentiate between bulk, suspension, emulsion and solution polymerization.
6. Distinguish between various polymerization techniques.
7. Give an account of i) Emulsion Polymerization ii) Suspension Polymerization

UNIT IV: POLYMER REACTIONS

Section - A (1 mark)

Choose the correct answer

1. Diphenyl picryl hydrazide (DPPA) is an example of
a) initiator b) polymer c) inhibitor d) fibre **(Ans: c)**
2. Fentons Reagent is an example of
a) redox initiator b) azo initiator c) free radical initiator d) none **(Ans: a)**
3. Ziegler – natta catalyst is used in -----polymerisation
a) addition polymerization b) condensation polymerization
c) co-ordination polymerization d) ionic polymerization **(Ans: c)**
4. Which of the following(s) is/are the example of initiators?
a) Benzyle peroxide b) Azo-bis-iso butyronitrile
c) Cumene peroxide d) All the above **(Ans: d)**
5. Nitro benzene is an example of
a) Initiator b) Inhibitor c) retarder d) none **(Ans: b)**
6. Which of the following is peroxide initiator?
a) benzoyl peroxide b) Azobis isobutyronitrile c) Fenton's reagent d) none **(Ans: a)**
7. Which of the following is/are free radical initiator?
a) Hydrogen peroxide b) Cumene c) Potassium persulphate d) all the above **(Ans: d)**
8. Polymerization reaction initiated by UV light are
a) Cationic polymerization b) photo initiated polymerization
c) Anionic polymerization d) none **(Ans: b)**

Section – B (2 marks)

1. What are retarders? Give an example

2. What are initiators?
3. What are inhibitors? Give example.
4. List any two applications of inhibitors
5. What are all the steps involved in free radical mechanism.
6. Give an example of azo initiator
7. What is fenton's reagent?

Section – C (5 marks)

1. What are initiators? Discuss its types
2. Write a note on retarders.
3. Discuss the applications of inhibitors.
4. Explain Anionic polymerization
5. Write short notes on inhibitors
6. Discuss the kinetics of free radical polymerization

Section – D (10 marks)

1. Derive an expression for kinetics of Anionic polymerization.
2. Describe the various types of initiators in polymerization
3. Discuss the mechanism of anionic polymerization with suitable example.
4. Discuss the mechanism of cationic polymerization with suitable example
5. Derive the rate equation for the kinetics of radical polymerization. What information do you obtain from the equation
6. Explain the kinetics of Ziegler- Natta polymerization.

UNIT V: SOME IMPORTANT SYNTHETIC RESINS AND POLYMERS

Section – A (1 mark)

Choose the correct answer

1. Which among the following is a raw material used in the preparation of nylon 66?
 a) Butadiene b) Adipic acid c) Styrene d) Phenol **(Ans: b)**
2. The stereochemistry of PVC is
 a) syndiotactic b) atactic c) isotactic d) tetrahedral **(Ans: b)**
3. The characteristic linkage present in polyamide is
 a) —NHCO— b) COOH c) —NH_2 d) OH **(Ans: a)**

4. LDPE is an example of
 a) linear homopolymer b) branched homopolymer
 c) copolymer d) heterolytic polymer **(Ans: b)**
5. The polymer used in the manufacture of toys is
 a) HDPE b) LDPE c) PVC d) PMMA **(Ans: a)**
6. Teflon is obtained by the polymerization of
 a) vinyl chloride b) tetrachloro ethylene c) tetrafluoro ethylene d) chloroprene **(Ans: c)**
7. The monomer of plexiglass is
 a) Methylmethacrylate b) Adipic acid c) Caprolactum d) ethylene **(Ans: a)**
8. The condensation of phenol and formaldehyde give
 a) Bakelite b) Orlon c) Gutta Percha d) Araldite **(Ans: a)**
9. The trade names of epoxy resin is
 a) Araldite b) M-seals c) Epikote d) All the above **(Ans: d)**
10. Which of the following is called amino resin?
 a) Epoxy resin b) Melanine formaldehyde resin
 c) Nylon resin d) Phenol formaldehyde resin **(Ans: c)**
11. The slipperiest polymer is
 a) Plexi glass b) Teflon c) PVC d) Polymerization **(Ans: b)**
12. Nylon 6 is obtained by polymerization of
 a) DMT b) Adipic acid c) Acrylonitrile d) Caprolactum **(Ans: d)**
13. The trade name of Polyester is
 a) Dacron b) Terylene c) Orlon d) both a and b **(Ans: d)**

Section – B (2 marks)

1. Write any two applications of polypropylene.
2. What is LLDPE? Write down its preparation.
3. Write down the preparation of SBR rubber.
4. How is Teflon prepared?
5. Write the preparation of butyl rubber.
6. Justify hydrogen bonding in nylon
7. What is pexiglass? How are they prepared?

Section – C (5 marks)

1. Give a comprehensive account of preparation and uses of LDPE, HDPE.
2. Discuss the various grades of PVC.
3. Explain the term HDPE. How is it prepared?
4. Sketch the preparation properties and uses of Styrene rubber, Nitrile rubber, Butyl rubber.
5. Explain the preparation properties and uses of Neoprene
6. How are the following prepared? Mention any two of their important uses.
i) Phenol –formaldehyde resin ii) polyurethanes
7. Give an account of epoxy resins with reference to their preparation, grades and curing processes.
8. How are the following prepared? Mention any two of their important uses.
(i) Melamine- formaldehyde ii) Poly carbonates
9. Discuss the biomedical applications of polymers.

Section – D (10 marks)

1. Discuss the preparation properties and uses of epoxy resins and explain cure reaction.
2. What are polyesters? Discuss their preparation and applications.
3. Explain the different methods of preparation of vinyl chloride. Write the applications of rigid and plasticized PVC.
4. Give the synthesis of the monomers required for the production of PET and Nylon 6,6
5. Give a comprehensive account of preparations and uses of Poly olefins- HDPE, LDPE and LLDPE.
6. Write in detail the preparation and application of Styrene and Neoprene rubbers.
7. Discuss the biomedical applications of polymer in medicine and surgery.

Section :A (one mark each)

Choose the correct answer

Unit :I

Q.1. There can be many ways to insert page number in a document. Which of the following lets you insert page number?

(A) **Page number from insert menu**

(B) Page setup from file menu

(C) Footnote from Insert menu

(D) Both a & c

Q.2. Which is not data source component?

(A) mail merge toolbar

(B) header row

(C) data fields

(D) data records

Q.3. Which of the following is not the part of standard office suite?

(A) Word Processor

(B) Data base

(C) Image editor

(D) File manager

Q.4. Where can you find the Draw Table tool button?

(A) Standard toolbar

(B) Formatting toolbar

(C) Drawing toolbar

(D) Tables and Formatting toolbar

Q.5. Which of the following option in file put down menu is used to close a MS Word document?

(A) Quit

(B) Close

(C) Exit

(D) New

Q.6. You need to jump to the next column breaking current column right at the cursor position. How can you break column?

(A) Pressing Ctrl+Enter

(B) Pressing Alt+Shit+Enter

(C) Break command form Insert menu

(D) Both b and c

Q.7. Superscript, subscript, outline, emboss, engrave are known as

(A) Font styles

(B) font effects

(C) word art

(D) text effects

Q.8. Shimmer, Sparkle text, Blinking background etc. are known as

(A) Font styles

(B) font effects

(C) word art

(D) text effects

Q.9.The feature of word that automatically adjusts the amount of space between certain combination of characters so that an entire word looks more evenly spaced. What is that feature called?

- (A) Spacing
- (B) Scaling
- (C) Kerning
- (D) Positioning

Q.10. Which of the following is not available in font spacing?

- (A) Normal
- (B) Loosely
- (C) Condensed
- (D) Expanded

Unit :II

Q.1 Formula palette is used to?

- (A) format cells containing number
- (B) created and edit formulas containing functions
- (C) entered assumption data
- (D) Copy all cells

Q.2 A Spreadsheet contains?

- (A) columns
- (B) rows
- (C) rows and columns
- (D) None of these

Q.3 To open an existing workbook, click the open button on the.....toolbar?

- (A) form
- (B) standard

(C) Drawing

(D) Formatting

Q.4 Which among following is not associated with spelling dialogue box?

(A) Edit

(B) Ignore All

(C) Ignore

(D) Change

Q.5 What term describes a background that appears as a grainy, non-smooth surface?

(A) Pattern

(B) Gradient

(C) Velvet

(D) Texture

Q.6 Which among following is associated with excel?

(A) Graphic program

(B) Spreadsheet

(C) Microsoft office

(D) None of these

Q.7 The cell reference for a range of cells that starts in cell C1 and goes over to column H and down to row 10 is?

(A) C1:10H

(B) **C1:H10**

(C) C1:H-10

(D) C1:H:10

Q.8 You can convert existing Excel worksheet data and charts to HTML document by using the?

- (A) Intranet Wizard
- (B) Internet Assistant Wizard
- (C) Important Wizard
- (D) Export Wizard

Q.9 To create an interactive Pivot Table for the web, you use a Microsoft Office Web component called?

- (A) Pivot Table Report
- (B) Pivot Table List
- (C) Pivot Table Field List
- (D) HTML

Q.10 What function displays row data in a column or column data in a row?

- (A) Hyperlinks
- (B) Rows
- (C) Index
- (D) Transpose

Unit :III

Q.1. Which file format can be added to a power point show?

- (A) .gif
- (B) .jpg
- (C) .wav
- (D) All of above

Q.2.How to select one hyperlink after another during a slide presentation?

- (A) Ctrl+K

(B) Ctrl+D

(C) Ctrl+H

(D) Tab

Q.3. Which power point view works best for adding slide transition?

(A) Animations

(B) Chart Wizard

(C) Transition Wizard

(D) Auto Content Wizard

Q.4. Which power point view works best for adding slide transition?

(A) Slide sorter view

(B) Slide show view

(C) Slide view

(D) Notes

Q.5. You can edit an embedded organization chart object by ?

(A) Double clicking the organization chart object.

(B) Clicking edit object

(C) Right clicking the chart object, then clicking edit MS-Organization Chart object.

(D) A and C both

Q.6. Special effects used to introduce slides in a presentation are known as ?

(A) transition

(B) effects

(C) Custom animations

(D) annotations

Q.7. Slide sorter can be accessed from which menu?

- (A) View
- (B) Edit
- (C) File
- (D) Insert

Q.8. To print power point presentation, press:

- (A) Ctrl+P
- (B) Ctrl+S
- (C) Ctrl+Shift+P
- (D) Ctrl+A

Q.9. What would I choose to create a pre-formatted style?

- (A) Format
- (B) Slide layout
- (C) Slide sorter view
- (D) None of above

Q.10. To edit a chart, we can

- (A) Click and drag the chart object
- (B) Double click the chart object
- (C) Triple click the chart object
- (D) Click the chart object

Unit IV

Q.1. Which of the following relation algebra operation do not required the participation tables to be union-compatible?

- (A) Union

(B) Intersection

(C) Difference

(D) Join

Q.2. Which of the following is not a property of transactions?

(A) Atomicity

(B) Concurrency

(C) Isolation

(D) Durability

Q.3. Relational Algebra does not have

(A) Selection operator

(B) Projection operator

(C) Aggregation operators

(D) Division operators

Q.4. Checkpoints are a part of

(A) Recovery measures

(B) Security measures

(C) Concurrency measures

(D) Authorization measures

Q.5. Tree structures are used to stored data in

(A) Network model

(B) Relational model

(C) Hierarchical model

(D) File base system

Q.6. The language that requires a user to specify the data to be retrieved without specifying exactly how to get it is

- (A) Procedural DML.
- (B) Non-Procedural DML.
- (C) Procedural DDL.
- (D) Non-Procedural DDL.

Q.7. Precedence graphs help to find an AC14/AT11 Database Management System

- (A) Serializable schedule
- (B) Recoverable schedule.
- (C) Deadlock free schedule.
- (D) Cascade less schedule.

Q.8. The rule that a value of a foreign key must appear as a value of some specific table is called a

- (A) Referential constraint
- (B) Index
- (C) Integrity constraint
- (D) Functional dependency

Q.9. The clause in SQL that specifies that the query result should be sorted in ascending or descending order based on the values of one or more columns is

- (A) View
- (B) Order by
- (C) Group by
- (D) Having

Q.10. What is disjoint less constraint?

- (A) It requires that an entity belongs to no more than one level entity set.

- (B) The same entity may belong to more than one level.
- (C) The database must contain an unmatched foreign key value
- (D) An entity can be joined with another entity in the same level entity set

Unit :V

Q.1. Internet's Initial development was supported by:

- (A) ARPANET
- (B) IBM
- (C) Microsoft
- (D) None of these

Q.2. World wide web was proposed by:

- (A) Bill Gates
- (B) Bill Rogers
- (C) Tim Berners Lee
- (D) None of Above

Q.3.What are the uses of the internet

- (A) Communication
- (B) Information Retrieval
- (C) Presentation of Information
- (D) All of the Above

Q.4. .net domain is used for:

- (A) educational institution
- (B) internet infrastructure and Service Providers

- (C) International Organizations
- (D) None of these

Q.5. URL stands for:

- (A) Uniform Resource Locator
- (B) Uniform Resource Library
- (C) United Resource Locators
- (D) None of these

Q.6. Benefits of Email are:

- (A) Speed
- (B) Cost
- (C) Record Keeping
- (D) All of the Above

Q.7. WWW provides standardized access to:

- (A) GOPHER
- (B) TELENET
- (C) FTP
- (D) All of the above

Q.8. Which among the following is not an internet browser:

- (A) Netscape Navigator
- (B) Chrome
- (C) Drupal
- (D) Opera

Q.9. What should be minimum requirement of random-access memory (RAM) for internet access?

- (A) 8 MB
- (B) 16 MB
- (C) 32 MB
- (D) 64 MB

Q.10. A modem is not needed when accessing the internet through:

- (A) LAN
- (B) Cable
- (C) Wi-Fi
- (D) None of these

Extra Questions

Q.1. You can use.....to copy selected text; andto paste it in a document.

- (A) CTRL+C, CTRL+V
- (B) CTRL+C, CTRL+P
- (C) CTRL+S, CTRL+S
- (D) SHIFT+C, ALT+P
- (E) CTRL+D, CTRL+A

Q.2. Each box in a spreadsheet is called is called a.....

- (A) cell
- (B) empty space
- (C) record
- (D) field
- (E) None of these

Q.3. When a file is saved for the first time.....

- (A) a copy is automatically printed
- (B) file name and folder name must be the same
- (C) it does not need a name
- (D) it only need a name if it is not going to be printed
- (E) It must be given a name to identify it.

Q.4. The letter and number the intersecting column and row is the-

- (A) Cell location
- (B) Cell position
- (C) Cell address
- (D) Cell coordinates
- (E) Cell continents

Q.5. Forms that are used to organize business data into rows and columns are called.....

- (A) Transaction sheets
- (B) Registers
- (C) Business forms
- (D) Sheep-spreads
- (E) Spreadsheets

Q.6. The PC productivity tool that manipulates data organized in rows and columns is called a.....

- (A) Spreadsheet
- (B) Word processing document
- (C) Presentation mechanism
- (D) Database record manager
- (E) EDI creator

Q.7. If a previously saved file is edited

- (A) It cannot be saved again
- (B) The changes will automatically be saved in the file
- (C) The file will only have to be saved again if it is more than one page in length
- (D) Its name must be changed
- (E) The file must be saved again to store the changes

Q.8. A.....is a collection of information saved as unit.

- (A) folder
- (B) File
- (C) path
- (D) file extension

Q.9. What is the overall term for creating, editing, formatting, storing retrieving and printing a text document ?

- (A) Word processing
- (B) Spreadsheet design
- (C) Web design
- (D) Database management
- (E) Presentation generation

Q.10. A file is often referred to as a (n).....

- (A) Wizard
- (B) Document
- (C) Pane
- (D) Device
- (E) Documentation

Q.11. Microsoft office is an example of a.....

- (A) closed source software
- (B) open source software
- (C) horizontal market software
- (D) vertical market software
- (E) compiler

Q.12. To correct the spelling in Ms-Word we use.....

- (A) Spellpro
- (B) Spellcheck
- (C) outlook Express
- (D) All of These

Q.13. Which one of the following software applications would be the most appropriate for performing numerical and statistical calculations?

- (A) Data base
- (B) Document processor
- (C) Graphics package
- (D) Spreadsheet
- (E) None of these

Q.14. The background of any word document.....

- (A) is always white
- (B) is the colour you pre-set under the option menu
- (C) is always the same for the entire document
- (D) Can have any colour you choose

Q.15. Text in a column is generally aligned.....

- (A) Justified
- (B) Right
- (C) Centre
- (D) Left

Q.16. Numbers in table columns are usual....

- (A) right-aligned
- (B) left-aligned
- (C) justified
- (D) cantered

Q.17.A collection of related files is called.....

- (A) Character
- (B) Field
- (C) Date base
- (D) Record

Q.18.In which group do we work at the time of text formatting in word ?

- (A) Table, paragraph and Indexes
- (B) Paragraph, Indexes and Sections
- (C) Characters, sections and paragraphs
- (D) Indexes, characters and Tables

Q.19.To save an existing file with new location we should.....command.

- (A) save

(B) save and replace

(C) save as

(D) New file

Q.20. In power point, the Header & Footer button can be found on the insert tab in what group?

(A) Illustrations group

(B) Object group

(C) Text group

(D) Tables group

Q.21. Which power point view displays each slide of the presentation as a thumbnail and is useful for rearranging slides ?

(A) Slide Sorter

(B) Slide show

(C) Slide master

(D) Notes Page

(E) Slide Design

Q.22. To print a document.....

(A) Select the Print command and then select ok

(B) Select the Ready Printer command and then select OK

(C) type Print and then press Enter

(D) None of these

Q.23. What is a list of data files of any database called ?

(A) Data diary

(B) Data list

- (C) Data disc
- (D) Data dictionary
- (E) None of these

Q.24. What is the main folder on a storage device called ?

- (A) Root directory
- (B) Interface
- (C) Device driver
- (D) Platform
- (E) Main directory

Q.25.Excel workbook is a collection of.....

- (A) Chart
- (B) Word book
- (C) Worksheet
- (D) a and c
- (E) None of these

Q.26. Which of the following is not related to text formatting?

- (A) Line spacing
- (B) Text spacing
- (C) Margin change
- (D) Searching
- (E) None of these

Q.27.In a spreadsheet program the.....contains related worksheets and document.

- (A) Workbook
- (B) Column

(C) Call

(D) Formula

(E) None of these

Q.28. The word wrap feature -

(A) Automatically moves the text to next line when necessary

(B) Appears at the bottom of the document

(C) Allows you to type over text

(D) Is the short horizontal line indicating the end of the document

Q.29. What is a default file extension for all word documents?

(A) TXT

(B) WRD

(C) FIL

(D) DOC

(E) None of these

Q.30. A directory within a directory is called.....

(A) Mini directory

(B) Junior directory

(C) Part directory

(D) Sub directory

(E) None of these

Section :B

Unit :I

1. How do you open a Word Document?
2. Discuss various alignments in MS Word ?
3. What is text formatting ?
4. How to change case in MS Word ?
5. Why do we use paragraph ?

6. What are uses of paragraph ?
7. What is Tabs (Tab stops) ?
8. Name the tab stops available in MS Word ?
9. Name the tabs available in MS Word ?
10. How to apply bullets and numbering in MS Word ?
11. What is table ? Mention the advantages of table ?
12. What is mail merge ?
13. Steps of mail merge ?
14. How to print page range in MS Word ?
15. What is the procedure of inserting Symbols in an MS Word document
16. How can you replace multiple wrong with correct ones at a time in MS Word? (MT)
17. Write down the keyboard shortcuts for the following functions:-
18. How can you add automatic page numbering in the header of an Ms Word document?
19. What are the uses of Header and Footer in MS Word?
20. How can you correct the spelling and grammatical mistakes in MS Word?
21. How can you add columns to an existing table in MS Word ?
22. Describe the keyboard methods for navigating between the cells in a table in MS Word
23. Describe how you can set custom margins and paper size for an MS Word document.
24. How can you insert a picture (available as file in the computer) in a MS Word document?
25. Write down the keyboard shortcut for the following functions of MS Word:-
26. What is format painter ? (MT)
27. What are the two page orientations ?
28. How can alphabetical sorting order in Microsoft word ?

Unit :II

- 1) What is Microsoft Excel?
- 2) What are cells?
- 3) Does each cell have unique address?
- 4) How can you add cells, rows or columns in Excel?
- 5) How would you format a cell? What are the options?
- 6) What is the use of comment? How to add comments to a cell?
- 7) What does the red triangle indicate at the top right hand corner of the cell?
- 8) How would you add comments to a cell?
- 9) What are charts in MS Excel?
- 10) What is Freeze Panes in MS-Excel?
- 11) Which are the different workbook protection types in Excel?
- 12) What is the difference among COUNT, COUNTA, COUNTIF and COUNTBLANK in Ms-Excel?
- 13) What is Ribbon?
- 14) Is it possible to hide or show the ribbon?
- 15) How to prevent someone from copying the cell from your worksheet?
- 16) How to sum up the rows and column number quickly in the Excel sheet?
- 17) How can you resize the column?
- 18) What are the several report formats in Excel?
- 19) Is it possible to make Pivot table using multiple sources of data?
- 20) How can you check whether the Pivot table is modified or not?

- 21) What does the IF function in Excel?
- 22) What filter should we use, if you want more than two conditions or if you want to analyze the list using database function?
- 23) What are the advantages of using formula in Excel sheet?
- 24) What is the order of sequence of operating mathematical operation in Excel?
- 25) What is the use of LOOK UP function in MS Excel?
- 26) What is a Macro in Excel? How to create an Excel Macro?
- 27) How many rows and columns are there in Microsoft Excel 2003 and later versions?
- 28) Is it possible to make pivot table using multiple sources of data?

Unit :III

- 1) What is the slide show View in Ms Power point?
- 2) What is slide Master?
- 3) How can you insert dates into the footer in the power point presentation?
- 4) Write the step for inserting Slides with a particular Slide layout.
- 5) How can you insert a picture (clipart) into a master slide?
- 6) What is slide transition? How can you apply the same slide transition to all the slides at a time?
- 7) What is slide shorter view in MS PowerPoint?
- 8) Write the steps to change background color on all the slides within a presentation?
- 9) How can you apply automatic slide numbering in your presentation?
- 10) Can we make PowerPoint slides into PDF files in PowerPoint 2013?
- 11) How someone can check compatibility check when you share PowerPoint 2013 slide to previous or older version?
- 12) How you can add services in PowerPoint 2013?
- 13) How you can convert text to shapes in PowerPoint 2013?
- 14) How to use PowerPoint 2013 Slide Zoom Feature?
- 15) How to customize your slide PowerPoint 2013?
- 16) How you can use Document Inspector and what is the role of it in PowerPoint presentation?
- 17) How you can protect your presentation in PowerPoint 2013?
- 18) How you can insert online video in PowerPoint 2013?
- 19) How you can trim video in PowerPoint 2013?
- 20) How you can add bookmark to the video in PowerPoint 2013?
- 21) How you can customize slide layout?
- 22) How you can rehearse the slide show timing in PowerPoint 2013?
- 23) How to change effect's start option?
- 24) How you can embed a chart from Excel to PowerPoint?
- 25) How you can record a slide show?

Unit :IV

1. What is Database Management System (DBMS)?
2. What do you mean by data processing?
3. List some database applications.
4. What is MS-Access?
5. What is Database?
6. What is the extension of Access database file?

7. What is relational database?
8. What is a key field?
9. What is primary key?
10. What do you mean by foreign key?
11. What are the elements of a database?
12. What is a table?
13. What is a field?
14. What is a record?
15. What is a query?
16. What is a form?
17. What is a report?
18. What are the differences between a form and a report?
19. What is a macro?
20. What is a module?
21. What are the different Number field types in Access?
22. What do you mean by data processing?
23. What are the ten field types in Access?
24. What are the two types of data processing techniques?
25. What is batch processing or offline processing?
26. What is online processing or real-time processing?
27. Who introduced Relational Database Model?
28. What are the front-end and back-end components of a database?
29. What are link tables?
30. What are the objects of Access Database?

Unit V

1. What is the internet?
2. What is a Browser?
3. What does URL mean?
4. What is a domain suffix?
5. What is the software program that lets you search and see material on the Internet?
6. What is an Internet Service Provider (ISP)?
7. What is a commercial on-line service?
8. What is a freenet?
9. What is a firewall?

B.Com Semester I
Financial Accounting I
QUESTION BANK

Subject Code: 21UCOC11

Choose the correct answer.

Section- A

Unit- I

1. The business entity concept can be applied to _____
a) Sole Proprietor b) Partnership firm c) **Company** d) none
2. Journal is a book of _____
a) **Prime entry** b) Compound entry c) Closing entry d) Adjusting entry
3. Business is treated separate from the -----
a) **Proprietor**. b) Creditor c) Debtor d) Debenture holder.
4. Excess of sales over cost of goods sold is _____
a) Net profit b) Net loss c) **Gross profit** d) Gross loss
5. Cash sales are entered in the _____
a) Purchases book b) Sales book c) **Cash book** d) Debit note
6. Money received by a business from the proprietor is _____
a) **Capital** b) Liabilities c) Investment d) Loan
7. Dual aspect concept is otherwise known as _____
a) **Accounting equation concept** b) Cost concept c) Business entity concept d) Money measurement concept.
8. Accounting principles can be classified into _____
a) **Two** b) Three c) Four d) Five.
9. Cash account will show ____
a) **Debit** b) Credit c) Liability d) Asset.
10. Drawings account is _____
a) Personal account b) **Nominal account** c) Real account d) None of these.

Unit- II

11. While valuing closing stock, only _____ expense is taken

- a) Indirect b) **Direct** c) Cash d) Accrued

12. Final account is prepared by _____

- a) **Business Concern** b) Banking Company c) Non- Trading association d) Government Company

13. Provision are shown on _____ side

- a) Debit b) **Credit** c) Liability d) Asset

14. Building is _____ asset.

- a) Current b) **Fixed** c) Intangible d) Depleting

15. Good will is -----

- a) Tangible asset b) **Intangible asset** c) Liquid asset d) Current asset.

16. Trial balance is a _____

- a) **Statement** b) Account c) Voucher d) Note.

17. Excess of sales over cost of goods sold is _____

- a) Net profit b) Net loss c) **Gross profit** d) Gross loss

18. Summary of assets and liabilities is known as _____

- a) **Balance sheet** b) Trial balance c) Trading account d) Profit and loss account

19. _____ item is appearing in balance sheet

- a) Opening stock b) **Closing stock** c) Sales d) Purchases.

20. Outstanding wages is _____

- a) **Liability** b) Asset c) Loss d) Profit.

UNIT III

21. We are _____ the principle of double entry for recording the transactions under single entry

- a) Following b) **Not following** c) Analysing d) Suggesting

22. Statement of affairs is prepared to find out _____

- a) Asset value b) Capital value c) Assets and capital value d) Loss

23. Statements of affairs is another name for _____

a) Trading a/c b) Personal a/c c) **Balance-sheet** d) Credit A/C

24) Assets Rs. 8000 Liabilities Rs 3200, then capital _____

a) 11,200 b) 10,200 c) **4,800** d) 12,200

25) In the single entry, Trading a/c shows _____ profit

a) **Gross** b) Net c) Capital d) Drawing

26. Single entry system is the _____ System of recording the business transactions.

a) Scientific b) **Unscientific** c) Cash d) Debit

27) In the single entry system chances of committing frauds are _____

a) Nil b) **More** c) Less d) Ever

28) Single Entry system is suitable only for _____ Concerns

a) **Small** b) Big c) Medium d) Group

29) Single entry system is the _____ System by itself

a) Complete b) crude c) **Incomplete** d) Unscientific

30. Assets _____ Liabilities Rs 8000 Capital Rs 32,000

a) Rs 24,000 b) **Rs 40,000** c) Rs 28,000 d) Rs 20,000

Unit- IV

31. Bank Reconciliation statement is _____

a) **a statement** b) a ledger c) a portion of a cash book d) a pass book

32. When the bank sends a copy of the account of customer for his information, it is called _____

a) Current account b) Account current c) Account sales d) **Statement**

33) Bank Reconciliation statement is prepared to eliminate the difference in _____

a) Cash book b) Pass book c) **Both cash book and pass book** d) B/R Book

34) Bank Reconciliation Statement is prepared by _____

a) banker b) auditor c) **accountant of a firm** d) customer

35). Bank reconciliation statement is prepared with the help of ____

- a) Bank pass book and bank columns of cash book
- b) **Bank pass book and cash columns** of Cash book
- c) Bank pass book
- d) Cash book.

36. Error of omission means

- a) The transaction is recorded wrongly in the books of account.
- b) The transaction is not recorded according to the fundamental principles of accountancy
- c) One type of error is compensated by the other type of error.
- d) **The transaction is completely omitted to be recorded.**

37. Where the total of the debit balances exceeds the total of the credit balances in the balance, the difference is

- a) **Recorded in the credit of suspense account.**
- b) Capital
- c) Recorded in the debit of suspense account.
- d) To be deleted.

38. Preparation of trial balance helps in the detection of

- a) Error of omission
- b) **Error of commission**
- c) Error of Principle
- d) Compensating error

39. Any difference in the trial balance must be entered in

- a) Capital account
- b) Nominal account
- c) **Suspense account**
- d) Miscellaneous Account

40. Which of these would be disclosed by the trial balance?

- a) Error of Omission
- b) Error of Principle
- c) One book instead of another book

d) Debit instead of credit

41. Purchase of machinery is entered wrongly in the purchases book. This is an error of

- a) Omission
- b) Commission

c) Principle

- d) Compensating error

42. To increase the debit balance

a) Further debit the concerned a/c

- b) Credit the concerned a/c
- c) Delete any credit item in the a/c
- d) None of the above.

UNIT V

43) Digits method of depreciation is based on _____

- a) Number of years
- b) Number of units**
- c) Table value
- d) Number of tables

44. Exhaustion is a _____ for Depreciation

- a) Not a cause
- b) Cause**
- c) Liability
- d) Different

45) We have to take the _____ values while calculating depreciation

- a) Increase
- b) Scrap**
- c) Capital
- d) Same

46) Under _____ method, the amount of depreciation is same for all years.

- a) Annuity
- b) Re-Valuation
- c) Fixed Installment**
- d) Annuity

47) For oil wells _____ method of depreciation is to be followed

- a) **Exhaustion** b) Effluxion c) Wear & Tear d) Cause

48) The older name for straight line method is _____

- a) Annuity b) Revaluation c) **Fixed Installment**
d) Annuity

49. Depreciation arises due to _____

- a) Wear & Tear b) Fall in market value c) Effluxion of time d) **All the above**

50). The increase in the value of fixed assets _____

- a) Depreciation b) **Appreciation** c) Depletion d) Cash account

51). The Term depletion is used for _____

- a) Fixed assets b) Intangible assets c) **Natural Resources** d)
Revaluation

52). Interest is debited to asset a/c in _____

- a) **Annuity Method** b) Depreciation Fund Method c) Insurance Policy Method d)
Cause

- a) Rs 24,000 b) **Rs40,000** c) Rs 28,000 d) Rs 20,000

Section- B (2 Marks questions)

Unit-I

1. Define Accounting.
2. What is Journal entry?
3. What is contra entry?
4. What is Book keeping?
5. What is Double entry system of accounting?
6. What is Triple column of cash book?
7. Journalize the following:

Jan 15. Ajit drew Rs.200 for personal use.
8. What is business entity concept?
9. What is dual aspect concept?
10. Write any two differences between double entry system and single entry system..

UNIT II

1. What is Trial balance?
2. What is Balance sheet?
3. What is Trading Account?
4. What is closing entries?
5. What is Adjusting entries?
6. Write any two differences between Trial balance and Balance sheet.
7. From the following calculate Gross profit.

Opening Stock Rs. 1, 00,000, Purchases 1, 20,000 Sales 5, 00,000, Closing Stock 50,000

UNIT III

1. What is Single entry system?
2. Write any two differences between Single entry system and double entry system.
- 3 Write any two differences between balance sheet and Statement of affairs method.
4. Mention any two advantages of single entry system.
5. What is Statement of affairs method?

Unit IV

1. What is Bank Reconciliation Statement?
2. Write any two reasons for variation in pass book and cash book balance.
3. What do you understand by rectification of errors?
4. What is error of Principle?
5. What is suspense account?
6. What is error of commission?
7. What is compensating error?
8. Rectify the error: Purchase book is overcast by Rs.300.

Unit V

1. Define the term depreciation.
2. What is straight line method of depreciation?
3. What is annuity method of depreciation?
4. What do you mean by Sinking Fund method?

- Unit I** **Section- C (6 Marks questions)**

- Jan 21 Withdrew from Bank for personal use Rs. 1000.

23 Purchased from Jeya stores Rs. 2000

29 The proprietor has brought into the business further cash Rs. 7000. Furniture worth Rs3000, Stock worth Rs. 5000 and gave for business purpose building worth Rs. 25000.

6. Journalise the following in the books of Mr. John and post them into the Ledger.

15	Paid office rent	1,150
----	------------------	-------

6	Credit sales to Kannan	1,200
---	------------------------	-------

7	Kannan paid his dues @2 % discount	
8	Credit purchases from Mr. Singh	2,700
9	Paid Mr. Singh Rs.2, 670 and settled their account	
11	Cash withdrawal for personal expense	400

Unit II

1. From the following prepare profit and loss amount

Gross profits	1.00,000
Salary paid	5,000
Rent Paid	2,000
Discount received	1,000
Depreciation written off	500
Discount paid	100
Repair Expenses	1,500

2.Enumerate the difference between Trial balance & Balance sheet.

3. From the information given below prepare trading account

Opening Stock	1, 00,000
Purchases	1, 50,000
Purchases return	25,000
Direct expenses	10,000
Carriage inwards	5,000
Sales	4, 00,000
Closing Stock	50,000

4.) Prepare the trial balance.

	Rs.
Cash at bank	30,000
Cash in hand	20,000
Debtors	7, 20,000
Creditors	3,00,000
Furniture	1, 50,000
Capital	13,50,000
Plant	4, 30,000
Stock in hand	3, 00,000

5. The following items are found in the Trial Balance of Mr. Annan on 31st December 1986

	Rs
Debtors	32,000
Bad Debts	600
Provision for Bad Debts	
(1 st January 1969)	1,400

You are required to provide for Bad and Doubtful Debts at 5 percent. Give the necessary journal entry or entries and prepare Bad Debts Account and Provision for Bad Debts Account.

6. The following information appear in the books of a concern

Provision for doubtful debts 1.1.05	6,500
Bad debts written off during the year	4,000
Sundry debtors on 31.12.05	75,000

Of the sundry debtors Rs 2000 was bad and provision for doubtful debt was to be maintained at 5% on the sundry debtors. Show journal, bad debts account, Provision for doubtful debts account and the relevant extracts of profit and loss account and balance sheet.

7. Write down adjustment entries for the following items

- i) Write off Rs 2100 depreciation on Furniture
- ii) Provide Rs.1300 for provision for doubtful debts
- iii) Charge Rs 1100 interest on capital
- iv) Interest receivable Rs 600.
- v) Prepaid insurance premium Rs 400
- vi) Investments of book value Rs 14000, were sold for Rs 15000

UNIT III

1. David started business with a capital of Rs 20,000 on 1st January 2004. During the year he has withdrawn Rs 500 per month for his personal expenses. Also David has brought additional capital of Rs 5000 into the business. His capital at the end of the year, ie on 31st December 2004 was Rs 36,000, Ascertain the profit or loss for the year

2. Creditors on 1.1.2001	50,000
Cash paid to Creditors	40,000
B/P accepted	10,000

Discount received	1,000
Purchases returns	4,000
Creditors on 31.12.2001	25,000

Find the credit purchases

3. Calculate total purchases

	Rs
Cash purchases	8,500
Cash paid to Creditors	15,500
Creditors on 1.1.2000	4,000
Purchases Returns	500
Creditors on 31.12.2000	6,700

4. Calculate total Sales

Debtors on 1.1.2000	2,000
Bad debts	1,200
Cash received from them	30,400
Debtors on 31.12.2000	13,800
Returns inwards	2,700
Cash Sales	28,400

5. Find the missing figure :

Profit	1,200
Closing capital	4,200
Additional capital introduced	1,000
Drawings	1,000
Opening capital	600

6. Gowri started business with a capital of Rs10, 000 on 1st January 2004. He has withdrawn Rs 1000 for his personal use during the year and he has put in Rs 2000 as

additional capital into the business. His capital at the end of the year ie, 31 December 2004 was Rs 18000

Ascertain the profit or loss for the year

7.	Stock on 1.1.1999	27,000
	Purchases	73,000
	Sales	1,20,000
	Direct expenses	16,000
	Gross profit	25% on cost
	Find out closing stock	

8. Calculate bills received from customers from the following information

Opening balance of bill	7,000
Bills dishonored by customers	2,000
Bills collected	13,000
B/R endorsed to creditors	1,000
Closing balance of bill	6,000

9. Calculate the missing figure:

Profit made during the year	2,400
Capital at the end	8,000
Capital introduced during the year	2,000
Drawings	1200
Capital at the beginning	?

10. Calculate the missing figure

Capital at the end	18,500
Capital introduced in the middle	4,700
Drawings	2,800
Loss	1,400

Capital at the beginning

?

Unit IV

1. Explain the reasons for variation in pass book and cash book balance.
2. What is average due date? Explain the steps for calculating Average due date.
3. Prepare Bank Reconciliation Statement
 - i) Bank balance as per cash book Rs 200
 - ii) Cheque deposited but not collected Rs. 1500
 - iii) Cheque issued but not presented for payment Rs.2500
 - iv) Bank charges debited to the pass book Rs 200
 - v) Interest followed in the pass book only Rs 100

4. The bank overdraft of Ravi on 31.12.2015 as per cash book is Rs.9, 000. From the following Particulars, prepare bank reconciliation statement:

- i) Unpresented cheque Rs.3, 000
- ii) Uncleared cheque Rs.1, 700
- iii) Bank interest debited in the pass book only Rs.500
- iv) Bill collected and credited in the pass book only Rs.500
- v) Cheque of Renu dishonored Rs.500
- vi) Cheques issued to Sekar entered in the cash column of cash book Rs.300

5. Rectify the following errors:

- i) Purchase of machinery for Rs. 5000 has been passed through Purchases Book.
- ii) A credit purchase of Rs. 20000 from Raja & Co was omitted to be passed through the invoice book.
- iii) Goods returned by Rani & Co Rs. 700 posted to Vani & Co
- iv) Rent paid Rs. 450 to proprietor's house was debited to rent a/c
- v) A credit purchase from Jeyam Stores has been passed through the sales Day Book Rs. 2000

6. Rectify the following errors:

- i) Salaries paid to manager Rs. 5000 debited to his personal account
- ii) Total of discount column in the debit side of the cash book is wrongly cast short Rs 40

- iii) Total of sales book has been added Rs. 100 excess
- iv) Rs. 250 received in respect of a book debt was posted to sales account
- v) Good sol for Rs. 317 to Raghu were returned to us and recorded in sales book.

7. Rectify the following errors:

- i) A welding machine purchased for Rs. 5,000 from the Oxygen Co. Ltd. Has been entered in the purchase day book.
- ii) The total of returns outwards book is Rs. 100 short.
- iii) A sale of Rs. 175 of M/s Gupta and Mukherjee has been entered in the sales book as Rs. 157
- iv) A purchase of Rs. 215 from M/s Goha & Ray has been posted to the debit of their account.
- v) License fee for proprietor's gun Rs. 300 has been debited to General expenses account.
- vi) A sale of Rs. 200 for old furniture has been passed through a sale book.
- vii) Rs. 375 paid for wages to workmen for making show cases has been charged to wages account.
- viii) A sale of Rs. 200 to Singh's & Co was credited to their account.

Unit-V

1. On the 1st January 2000, Anand Ltd, purchased a machine costing Rs 6000. It is estimated that working life is four years and it will fetch no scrap value. The company decided to write off depreciation according to the fixing installment method. Prepare the machinery account.
2. Teetee Ltd. purchased certain machinery at the cost of Rs 20,000 on 1st January 2001. They decided to write off depreciation @ 20 % per annum, according to straight line method. Prepare the Machinery account and Depreciation account for the year 2001 to 2004.

3. A company acquired a machine on 1.7.1996 at a cost of Rs 40,000 and spent Rs 1000 on its installation. The firm writes off depreciation at 10 % on the diminishing balance. The books are closed on 31st December of each year. Show the machinery account for 3 years.
4. Distinguish between Fixed instalment method and Written down value method.
5. Write short note on i) Fixed percentage method (ii) Diminishing balance method
6. Explain the various causes of depreciation.
7. A machine was purchased on 1-1-2000 at a cost of Rs 50000, and the cost of installation being Rs.8000. It is expected that total machine life is 1, 00,000 hours. The scrap value may be Rs. 3000. During the year 2000, the machine worked for 1200 hours and in 2001, hours 1350. Calculate the depreciation for 2000 and 2001.
8. An asset has been purchased for Rs. 50000, its effective life being 5 years. The scrap value is estimated at Rs. 5000. Calculate depreciation under the sum of year's digit method.

Section- D (12 mark questions)

Unit- I

- .1. Enter the following transactions in journal. 1950 Jan

Jan 1 Mathavan started business with cash	3,000
Jan 2 Purchased goods doe cash	5,000
Jan 3 Sold goods for cash	800
Jan 5 Paid Mohan	2,050
Jan 8 Returned goods to Mohan	100
Jan 10 Sold goods to Raman	1,500
Jan 15 Purchased goods from Kannan	2,000
Jan 20 Raman returned goods	30
Jan 25 Sold goods to Gopal subject to a trade discount of 5%	1,000
Jan 30 Paid Kannan	1,575
Jan 31 Paid Salaries	50

Jan 31 Paid Rent	25
Jan 31 Purchased Stationery	302.

2. From the following transactions prepare in Gopal's Three column cash book.

Jan 1 Opening balance: Cash Rs.830, Bank 12700.

2. Sold goods for cash Rs.1300
3. Paid dues to Rama Rs.1000 by cheque.
4. Paid Rs.1000 into bank.
5. Received Rs. 800 from kesav in full settlement of his debt for Rs. 820
6. Paid wages Rs. 50 in cash.
7. Withdrew Rs. 5000 from bank and paid salaries Rs. 3800 and advertising charges Rs.500.
8. Settled a debt of Rs. 1000 at 2% discount by issuing a cheque.

3. From the following transactions in Mani's Three columnar cash book.

Sep 1. Balance of cash Rs.600, Banks Rs. 7300.

3. Sold goods for cash Rs. 2000
4. Paid into bank Rs. 1000
5. Withdrew from bank Rs. 5000
6. Paid wages in cash Rs.6000
10. Received by cheque Rs.8000 from a debtor and allowed him a discount of Rs.50.
12. Withdrew from bank Rs. 800
13. Paid for furniture by cheque Rs.200

4. Enter the following transactions in the Three columnar cash book of Nagarajan.

	1967	Rs.
Jan 1 Cash balance Bank		1,200
4. Sold goods for cash		7,200
8. Paid into bank		5,000
10. Paid Raman by cheque		4,500

14. Bought Office equipment	3,000
Less 5% trade discount and paid by cheque	800
18. Received from a debtor who Allowed a discount of Rs.20	3,000
20. Purchased goods for cash	800
25. Paid salaries in cash	1,200

5. Enter the following transactions in Kishore's cash Book with cash, bank and discount columns and strike the balance at the end of the period.

1967	Rs.
April 1. Balance of cash Bank	13,600
3. Paid Suresh by cheque	36,800
4. Sold goods for cash	12,500
5. Paid into bank	5,300

4. What are the two ways of conversation?
5. Explain picture writing.
6. What is the purpose of communication?
7. What does listening requires?
8. What is flow chart?
9. What is a role play?
10. What are the techniques employed while reading?
11. Explain skimming and scanning?
12. What is description?
13. What is descriptive writing?
14. Define single sentence definition? Give examples.
15. What is extended definition? Give examples.
16. What is an Interview?
17. What can we develop by listening to Interviews?
18. What is Brainstorming?
19. What are the instructions to be followed during Brainstorming?
20. What is Mind Mapping?
21. What is Group Discussion?
22. Why learn the skill of writing an essay?
23. Mention any two types of writing.
24. How to explain your ideas using Flow chart?
25. How to read a pie chart?
26. Define PPT?
27. What is Note Making?
28. Explain the formats for Note Making?
29. Explain the structure of writing a paragraph?
30. What is summary writing?

Creative Thinking Questions.

Read the following text and answer the questions given below.

THE EFFECT OF MOBILE PHONES

1. Can talking on a mobile phone be hazardous to your health? It is difficult to know for sure. Some research suggests that heavy users of mobile phones are at a greater risk of developing cancerous brain tumors. However, many other studies suggest that there are no links between cancer and mobile phone use. The main problem with current research is that mobile phones have only been popular since the 1990s. As a result, it is impossible to study long term exposure to mobile phones. This concerns many health professionals who point out that certain cancers can take over twenty years to develop. Another concern about these studies is that many have been funded by the mobile phone industry or those who benefit from it. Over five billion people now use mobile phones daily, and many talk for more than an hour a day. Mobile phone antennas are like microwave ovens. While both rely on electromagnetic radiation (EMR), the radio waves in mobile phones are lower in frequency. Microwave ovens have radio wave frequencies that are high enough to cook food, and they are also known to be dangerous to human tissues like those in the brain. The concern is that the lower-frequency radio waves that mobile phones rely on may also be dangerous. It seems logical that holding a heat source near your brain for a long period is a potential health hazard. Some researchers believe that other types of wireless technology may also be dangerous to human health, including cordless phones, wireless gaming consoles, and laptop or tablet computers with wireless connections. They suggest replacing all cordless and wireless devices with wired ones where possible. They also say that many cordless phones can emit dangerous levels of Electromagnetic Radiation even when they are not in use. They even suggest keeping electronic devices such as desktop and tablet computers out of the bedroom, or at least six feet from the head while we're sleeping. A growing number of health professionals worldwide are recommending that mobile phone users err on the side of caution but this cannot be accepted, until more definitive studies can be conducted. They use the example of tobacco to illustrate the potential risks. Many years ago, people smoked freely and were not concerned about the effects of cigarettes on their health. Today, people know that cigarettes cause lung cancer, though it is still unknown exactly how or why. Some doctors fear that the same thing will happen with mobile phones. In May 2016, the UK's Independent newspaper reported on research by the US government's National Toxicology Program that showed a slight increase in brain tumors among rats exposed to the type of radio frequencies commonly emitted by mobile phones. This doesn't prove that mobile phones can cause brain tumors in humans, but it does show that it's possible. As a result, many experts now recommend texting or using headsets or speakerphones instead of holding a mobile phone to the ear.

a. How does the usage of mobile phones affect our health?

- b. In what way does a cordless phone harm our body?
- c. What are the dangers caused by the microwave oven to humans?
- d. Why should electronic gadgets be kept out of the bedroom while sleeping?
- e. What was the finding of the US government's National Toxicology?

2. APJ Abdul Kalam's speech at IIT Madras 2010 Friends, before I begin my address I want to share a thought with all the youth present here. I have met, so far, 11 million youth like you in a decade's time, in India and abroad. I have seen their hopes, experienced their pains, walked with their aspirations and heard through their despair. All this experience made me learn something about them, which I would like to share with you: I learnt, every youth wants to be unique, that is, YOU! But the world all around you, is doing its best, day and night, to make you just "everybody else". Being like everybody else is convenient at the first glance, but not satisfying in the long vision. The challenge, therefore, my young friends, is that you have to fight the hardest battle, which any human being can ever imagine to fight; and never stop fighting until you arrive at your destined place, that is, a UNIQUE YOU! Being unique will require excellence. Let us understand what is excellence in more detail. Excellence is a self-imposed self-directed life-long process. Excellence is not by accident. It is a process, where an individual, organization or nation, continuously strives to better oneself. The performance standards are set by themselves, they work on their dreams with focus and are prepared to take calculated risks and do not get deterred by failures as they move towards their dreams. Then they step up their dreams as they tend to reach the original targets. They strive to work to their potential, in the process, they increase their performance thereby multiplying further their potential and this is an unending life cycle phenomenon. They are not in competition with anyone else, but themselves. In this context, I will talk to you about four important aspects in life with my experiences. Aim in life, Acquiring Knowledge, Working Hard towards your dream even in the times of difficulty and then finally how to manage failures and success in life.

- 1) What does the author mean when he says I have seen their hopes.... Heard through their despair?
- 2) What does the author mean by "UNIQUE YOU"?
- 3) What does the world around you want you to be according to the passage?
- 4) How according to the author APJ Abdul Kalam, the pursuit of excellence achieved?
- 5) What is the "unending life cycle phenomena" that the author is referring to?

3. **Read the passage and summarize the important points**

PAPER BOOKS AND E-BOOKS

There is a growing concern that mass media and digital technologies have decreased the time spent on reading. Still, people all over the world still like books. Reading is a great pleasure because you have a chance to immerse into the exciting world and learn something new. Thousands of new books are published every year, and given the number of already existing books, every person has unlimited opportunities in selecting some interesting pieces of literary work. During the past several years, e-books have gained immense popularity around the world. Due to their accessibility and convenience, they easily won over the market and now successfully compete with traditional paper books. This essay will explore differences and similarities between e-books and paper books. Despite all their visible differences, digital versions and paper books are similar in many ways. First, they both have the same text structure including the cover, title page, copyright page, table of content, chapters, etc. Second, they have the same function – provide readers with new information. Irrespective of the form, all readers use paper books and e-readers for the same purposes, that is, to study, relax, work, and learn. At the same time, there are many differences between them too. E-books are sleek and thin, which makes them easier to carry. They have a huge capacity, meaning that users can download thousands of books in one gadget and spare themselves of the necessity of carrying large volumes. Some opponents of e-books claim that contrary to regular books, electronic devices are not so pleasant to smell and touch. They are made of plastic and metal that have no smell, whereas traditional books smell of paper, ink, dust, someone's perfumes, and many other things related to their history. Some people love old library books for this unique, authentic smell that cannot be compared to the coldness and impersonality of digital devices. Another important difference relates to books' durability. Traditional paper books can stand the test of time. They easily withstand heat, falls, moisture, tearing, and so on, which allows to keep them for hundreds and even thousands of years. E-readers do not have this amazing quality. They are easier to carry and hold, yet they may break at any time; files kept in gadgets can be damaged by computer viruses. Besides, as technologies develop, some e-book models come out of use, which means that a person will have to buy new models to be able to download and use digital books. The cost is another point of comparison. While e-books themselves can be expensive, users can save much money by buying electronic versions of printed books. They often cost half the price of traditional books and can be downloaded immediately. Paper books, especially rare ones, can be very expensive and hard to find. Moreover, buying many paper books to use for a limited period of time (e.g., for studying) is impractical. At the same time, the value of some paper books may increase with time, which allows collecting and reselling them later for much profit. To conclude, the selection of a form depends on the purpose, readers' taste, financial resources, etc. E-books and traditional books have

their similarities and differences, and it seems there is no better choice. Ultimately, it is information that matters, so everything works as long as you can get it

4. Write an essay on “How do you productively utilise the Covid-19 Lockdown period”.
5. Write a narrative essay on the incident which created an impact on you.
6. Debate with your friend the advantages of online classes.
7. Write about your business idea and discuss the rate of success of your idea.
8. Develop a story with the given picture below

9. The following chart gives the information about the classroom management with its different characteristics. Interpret and express your opinion in four or five paragraphs on the classroom management based on the picture.

10. Develop an idea based on the picture given below

11. Give instructions for a newly joined trainee in the organization that you work.

12. Develop an idea based on the picture given below

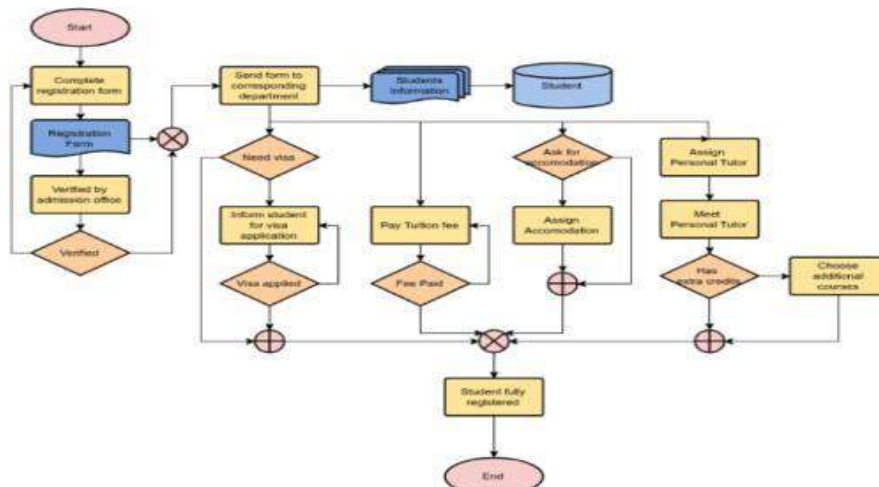

13. Initiate a conversation regarding the planning of union budget.

14. Debate on work pressure during normal days Vs COVID times(Work From Home)

15. **Convert the given passage into a flowchart.**

This flow chart describes the process of extraction of silver from its ores. Silver occurs in ores of several metals. Firstly the ore is ground to powder. Then the frothing agents are added to the powder and it is thoroughly agitated by air. The silver bearing ore is skimmed off and washed. The final refining is done using electrolysis. Through this frothprocess 75% of silver is extracted from its ore.

16. **Convert the flowchart into a passage.**

17. Look at the picture and write down the product description.

18. Describe the product with the picture.

19. Read the passage and answer the questions :

E-shopping or online shopping simply means shopping via the Internet. An example is the integrated online shopping-cart system that allows the user to order directly over the Web. Then, there is the online shopping-cart system that allows the user to generate an order form to be sent to the merchant via fax or snail-mail. Today, many people are taking advantage of this convenient way of shopping. However, together with this luxury of convenience, new concerns on information security have emerged, with online frauds or cyber crimes being one of the biggest threat

To make e-shopping safer, here are some tips: First, choose e-shopping sites that are well-known or provide trusted services like Amazon.com as these sites "put their name on the line". When in doubt, always check out the merchant website. Contact someone there who can verify the company's privacy policy for you before you make a purchase. Ask if they will send you a catalogue. If they do not list phone numbers and only have an e-mail address, you have to be careful.

Before typing in your credit card information, look for the "plural URL." That is, when you go to the site's checkout page, the "http" in the URL should change to "https." A closed padlock or key should also appear on the page, letting you know your personal information will be encrypted or scrambled. if you don't see either of these "locked" icons or a change in the URL, log out and shop elsewhere. Even if you see a proof of encryption, such as the plural URL, you should not equate that with the site's trustworthiness. To verify the site's trustworthiness, call the company to ask about its privacy policy.

You have found a trustworthy site with a secure checkout page. Now you are ready to pay. With what do you pay? Cheque, money order, debit card or credit card? Experts say credit cards are the safest method for online purchases as most credit cards have protection on them. Even if someone rips you off, you can dispute the charge. Secondly, by using a credit card, it is not just

your money on the line but also the creditor's. If you have a problem with your transaction, the credit card company will help you resolve it. If you are at the checkout page and the site asks for your date of birth and identity card number, be very careful as people can manipulate this combination to start applying for new credit cards in your name. If anything seems suspicious, call up the company. Also, be wary of sending out credit card information via e-mail or instant messaging as neither is encrypted.

According to the latest survey, books are one of the things bought most online. This is followed by accessories. Cosmetics and groceries are increasingly being purchased online. Today, most of the travelers are buying tickets online because it is a quick and easy way to make a purchase.

Is online shopping safer than shopping offline? It is difficult to say. When shopping online, caution is the word.

- A. From paragraph 1,
(a) Define e-shopping.
(b) What is the difference between the integrated online shopping-cart system and the online shopping-cart system?

B. From paragraph 2, what is one of the biggest threats to e-commerce?

C. From paragraph 4, what do the "plural URL" and the "locked icon" indicate?

- D. From paragraph 5,
(a) Give *two* advantages of paying by credit card.
(b) Why is it dangerous to send credit card information via e-mail or instant messaging?

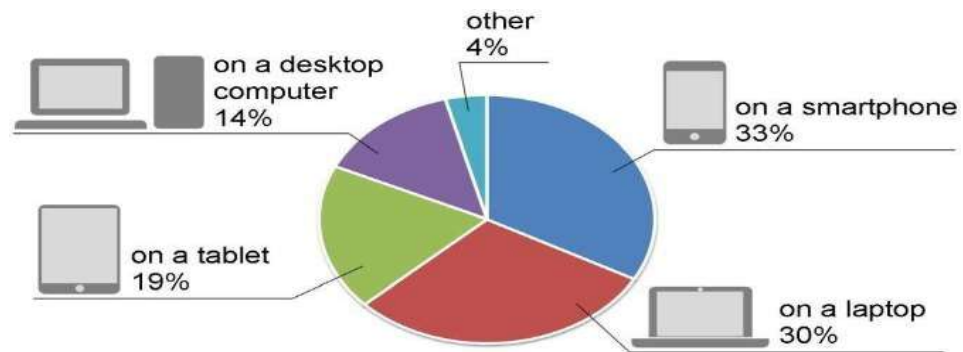

20. . Model auxiliaries :

You Look at me when I am talking to you(could, should, would)

I _____ be able to help you , but I'm not sure yet .(might, would, should)

The head master.....to talk to you (want, wants, is wanting)

21. The pie chart given below illustrates how internet users prefer to access the internet at home and in other places. Summarise the information in the pie chart by selecting and reporting the main features in four or five paragraphs.

22. Discuss the advantages and disadvantages of online shopping .

23. Name the famous logos and personality

24. Write any two sentences on your favourite Online Delivery App
 25. Observe the picture and write any five sentences.

pixtastock.com - 72441237

26. Write definitions for the following words:
 a. Bad debt b. Business c. CPA
27. Write a dialogue between a banker and a customer who wish to open an account in the bank.
28. Compare and Contrast between Traditional Banking and Digital Banking.
29. List out the 10 advantages and disadvantages of any topic which is related to Commerce?
30. Write a dialogue between a banker and a customer who wants to open a current account

31. Complete the Mind Map

QUESTION BANK
(Those who joined in July 2021 and after)

Unit I

Section A

1 mark

1. Management is
 - a) A science
 - b) An art
 - c) **Both a science and Art**
 - d) None of these
2. The father of scientific management is
 - a) **F.W. Taylor**
 - b) Henry fayol
 - c) Luther Gullick
 - d) Urwick
3. Henry Fayol I has developed.....principles of management
 - a) 10
 - b) 12
 - c) **14**
 - d) 16
4.refers to owners of the enterprise
 - a) Administration
 - b) **Management**
 - c) Organization
 - d) None of these
5. Example for top level management is
 - a) **Board of Directors**
 - b) Supervisor
 - c) Employees
 - d) Workers
6. The father of Modern management is
 - a) F.W. Taylor
 - b) **Henry fayol**
 - c) Luther Gullick
 - d) Urwick
7. According to Henry fayol, a manager must possess.....Qualities
 - a) Four
 - b) Five
 - c) **Six**
 - d) Three
8. ----- is the chief function of management.

- a) **Planning**
 - b) organizing
 - c) Decision making
 - d) motivating
9. Levels of management
- a) Two levels
 - b) **Three levels**
 - c) One levels
 - d) None of these
10. Management is
- a) Only for traders
 - b) Only for colleges and schools
 - c) Only for financial companies
 - d) **For all these**

Unit II

11. function is a thinking process function.
- a) **Planning**
 - b) Controlling
 - c) Co-ordinating
 - d) None of these
12.is an example for single used plans.
- a) **Programmes**
 - b) Budget
 - c) Schedules
 - d) Objectives
13. plan include Policies and Procedures.
- a) Master
 - b) Objective
 - c) **Standing**
 - d) small
14. Uncertainties can be predicted through -----
- a) Planning
 - b) **Forecasting**
 - c) Decision making
 - d) Budget
15. plan include complete course of action.
- a) **Master**
 - b) Objective
 - c) Standing
 - d) small
16. Decision making is one among the functions of management.
- a) **Top level**
 - b) Middle level

- c) Lower level
 - d) None of these
17. is looking into future.
- a) Planning**
 - b) Decision making
 - c) Organisation
 - d) Controlling
- 18.....is an example for mathematical theory.
- a) game**
 - b) marginal
 - c) sales
 - d) none of these.
19. Diagnosis of the problem is the step in the process of decision making.
- a) First
 - b) Second**
 - c) Third
 - d) Fourth
20. O.R. is
- a) Operation Research**
 - b) Operating Reader
 - c) Office Organisation
 - d) Only Revenue

Unit III

21. The word organisation is derived from the word -----
- a) Organ
 - b) Organism**
 - c) Orgnism
 - d) None of these
22. The military Organisation has the advantage of
- a) Specialisation
 - b) Unified control**
 - c) Overloading
 - d) None of these
23.is the process of dividing the work of the organisation into various units or departments.
- a) Departmentation
 - b) Delegation
 - c) Decentralisation
 - d) Responsibility
24. In functional organisation the work is organized on the basis of
- a) Specialisation**
 - b) Command

- c) Objectives
- d) Equity
- 25. Line organisation is also known asorganisation.
 - a) **Military**
 - b) Functional
 - c) Staff
 - d) Line of staff
- 26.organisation is a mix of two organisation.
 - a) Scalar
 - b) Project
 - c) Matrix
 - d) committee
- 27. means one head one plan for a group of activities having the same objectives.
 - a) unity of command
 - b) unity of direction
 - c) **span of control**
 - d) authority
- 28. In line and staff organization, staff are responsible for -----
 - a) **Planning**
 - b) Execution
 - c) Controlling
 - d) none of these.
- 29.flows from top level to bottom level management.
 - a) **Authority**
 - b) Responsibility
 - c) Accountability
 - d) None of these
- 30. Scalar principle is also known as -----
 - a) Responsibility
 - b) **Line of Authority**
 - c) Unity of direction
 - d) Span of control

Unit IV

- 31. Staffing includes -----
 - a) **selection of right persons**
 - b) Decision making
 - c) motivating
 - d) interview
- 32 If the job is filled up out of the present employees of the company is said to be----- source
 - a) **Internal**
 - b) External

- c) company
 - d) Organizing
33. means overseeing the subordinates at work.
- a) Leadership
 - b) Supervision
 - c) Motivation
 - d) Communication
34. If the job is filled up out of the society, is said to be----- source
- a) Internal
 - b) External**
 - c) company
 - d) Organizing
35. ----- is an example of an external source of recruitment.
- a) Advertisement
 - b) Recommendations
 - c) Employment exchange
 - d) All the above**
36. Employment exchange is of ----- kinds
- a) 2**
 - b) 3
 - c) 4
 - d) 5
37. The determination of standard in control system is the -----
- a) First step
 - b) Second step
 - c) Third step
 - d) Fourth step
38. The basis for control is -----
- a) Planning**
 - b) forecasting
 - c) Controlling
 - d) Policies
39. If the job is filled up out of the present employees of the company, is said to be----- source
- a) Internal**
 - b) External
 - c) company
 - d) Organizing
40. The purpose of control is -----
- a) to fix standard
 - b) to measure actual performance
 - c) to find out deviation
 - d) All of these.**

Unit V

41.is forward looking
a) Plan **b) Control** c) Direction d) Organisation
42. Determination of standard is a step in a control system.
a) First b) Second c) Third d) None of these
43.without control is useless
a) Planning b) Controlling c) Directing d) None of these
44. Actual performance of work relates to
a) Past b) Present c) Future d) None of these
45. Explain ROI
a) Return Outward Invoice **b) Return on Investment**
c) Rate, Output Investment d) None of these
47. is not a function of management.
a) Planning b) Co-ordinating **c) Co -operation** d) Motivating
48. means working together for a common and by voluntary action.
a) Co-operation b) Co-ordination c) Organisation d) Staffing
49. Internal co-ordination may be classified into
a) Two b) Three c) Four d) Five
50.is the end result of management process.
a) Planning b) Co-ordinating **c) Controlling** d) Motivating

Section B

Unit I

2 marks

1. Define Management.
2. Define MBO.
3. Write any two qualities of manager.
4. What is Management?
5. Write any two functions of Management.
6. What is Es spirit de corps?
7. What is Unity of command?
8. What is Scalar chain?
9. Who is a Manager?
10. Write any two Principles of Management.

Unit II

1. What is planning?
2. Define Planning.
3. What is objective plans?
4. What is Standing plans?
5. What is Master plans?
6. What do you understand by the term decision-making?
7. Define Decision-making.
8. What is Psychological theory?
9. What is diagnosing the problem?

10. What is Principle of participation?

Unit III

1. What is meant by Organisation?
2. What is Military organisation?
3. What is functional organisation?
4. What is Informal organisation?
5. What is Line and Staff organisation?
6. What is Committee organisation?
7. Define Organisation.
8. Write any two differences between a formal organisation and an informal organisation.
9. Write any two Principles of organisation.
10. What is formal organisation?

Unit IV

1. What is meant by Staffing?
2. Define Staffing.
3. What is meant by Recruitment?
4. What is meant by Employment exchange?
5. What is meant by External sources of Recruitment?
6. What is meant by Direction?
7. Define Direction.
8. Write any two Principles of direction.
9. Write any two importance of direction.
10. What is meant by intelligence test?

Unit V

1. What is meant by Co-ordination?
2. Define Co-ordination.
3. What is meant by external Co-ordination?
4. What is meant by congruity of flows?
5. What is meant by controlling?
6. Write any two difference between co-ordination and co-operation?
7. Define Controlling.
8. Write any two importance of Controlling.
9. What is meant by Internal Co-ordination?
10. What is meant by Vertical Co-ordination?

Section C

Unit I

5 marks

1. Write any five functions of Management.
2. Enumerate the qualities of a manager.
3. Explain any five Principles of Management.
4. Explain about Qualities of Manager.
5. What is MBO? Explain its features.

6. What are the differences between Management and administration?
7. Explain any six functions of Manager.
8. Write short note on Scientific Management?
9. Write short note on MBO.
10. Briefly explain the features of MBO

Unit II

1. What are the objectives of planning?
2. What are the importance of Planning?
3. Explain any six characteristics of Planning
4. Explain any six limitations of Planning.
5. Explain the methods of Planning.
6. Explain any four principles of decision making.
7. Explain any six characteristics of decision-making.
8. Write short note on a) Marginal theory b) Psychological theory.
9. Write any six elements of decision making?
10. Explain any six demerits of Planning.

Unit III

1. Explain any Five principles of Organisation.
2. Explain any five differences between formal and informal Organisation.
3. What are the advantages of Line and Staff Organisation?
4. Briefly explain line and staff organisation?
5. Explain any five principles of organisation.
6. Briefly explain the merits of functional organisation.
7. Briefly explain the demerits of Line organisation.
8. Write short note on Committee organisation.
9. Explain the merits of formal organisation.
10. Write short note on line and staff organisation?

Unit IV

1. Briefly explain Internal sources of Recruitment.
2. Briefly explain External sources of Recruitment.
3. Explain various stages of selection procedure.
4. Briefly explain the Principles of direction.
5. Write any two methods of selection?
6. Explain the merits of Internal sources of Recruitment?
7. Write the various types of Proficiency test
8. Briefly Explain the various types of Aptitude tests
9. Write any six Principles of direction.
10. Explain the importance of direction.

Unit V

1. Explain the techniques of co-ordination.
2. Write any five need and importance of co-ordination.
3. Explain the steps for effective co-ordination?

4. Explain the external type of co-ordination.
5. Explain the importance of controlling.
6. Briefly Explain the various steps adopted in the control process.
7. Enumerate the importance of controlling.
8. Discuss the need of effective controlling.
9. Distinguish between coordination and co operation.
10. Explain any five techniques of co-ordination

Section D

Unit I

10 marks

1. Define Management. Describe the functions of Manager.
2. Define Management. Discuss the different functions of management.
3. Discuss the Principles of Management.
4. Differentiate between administration and Management.
5. Explain the Process or steps in MBO.
6. Enumerate the various features of MBO.
7. Enumerate the various qualities of manager.
8. Discuss the important Functions of Management.
9. Briefly examine the contributions of F.W. Taylor.
10. What is MBO? Write the various Process involved in MBO.

Unit II

1. Discuss the various objectives of planning?
2. What are the various limitations of planning?
3. What is Planning? Discuss the importance for planning.
4. What is Planning? Explain the Methods of planning.
5. Explain the characteristics of planning.
6. Explain the Principles of decision making?
7. Explain the various steps involved in the process of decision making?
8. Explain the characteristics of decision-making.
9. What is decision making? Discuss the elements of decision making?
10. Explain the various demerits of Planning.

Unit III

1. What are the basic principles of organisation?
2. What is line organization? Discuss its merits and demerits.
3. What are the differences between a formal organisation and an informal organisation?
4. Explain committee form of organisation.
5. What is line and staff organization? Explain its merits.
6. Explain the Merits and demerits of Committee organization.
7. What is formal organization? Explain its merits.
8. What is informal organization? Explain its merits.
9. What is Functional organization? Explain its merits.
10. Discuss the various principles of organisation?

Unit IV

1. What is Recruitment? Explain Internal sources of Recruitment.
2. What is Recruitment? Explain External sources of Recruitment.
3. Explain various stages of selection procedure.
4. What is direction? Explain the Principles of direction.
5. What are the different methods of selection?
6. What is Internal sources of Recruitment? Explain its merits and demerits.
7. What is direction? Explain the Principles of direction.
8. What is selection? Explain the various types of tests conducted for selection
9. What is direction? Explain the Principles of direction.
10. Enumerate the different methods of selection?

Unit V

11. Explain the techniques of co-ordination.
12. Explain the need and importance of co-ordination.
13. Define co-ordination. Explain the steps for effective co-ordination?
14. Explain the various types of co-ordination.
15. What is controlling? Explain the importance of controlling.
16. Explain the various steps adopted in the control process.
17. Enumerate the importance of controlling.
18. Discuss the need of effective controlling.
19. Define control and define the process of control.
20. Define co-ordination and Explain the various techniques of co-ordination.

UNIT- I

1. Heavy advertising to launch a new product is a _____ expenditure
a) Capital b) Revenue c)Deferred revenue d) Deferred capital
2. Revenue expenditure is intended to benefit _____ period
a)Current b)Future c) Both d) Current or Future
3. Preliminary expenses are the example of _____ expenditure
a)Capital b)Deferred c)Revenue d) Deferred revenue
- 4.Subscription received in advance is
a)An asset b)An income c)A liability d) An expenditure
- 5.The distinction between capital and revenue is necessary for the preparation of
a)Final accounts b)Trial balance c)Receipts and payments accounts
d)Income and expenditure a/c.
6. Prepaid expenses are
a) Wasting Assets b) Liquid Assets c) Fictitious Asset d) Fixed Asset
7. Receipts and Payments account is
a) Personal a/c b) Real a/c c) Nominal a/c d) Capital a/c
8. Sale of old newspaper is to be shown on the _____ side of the income and expenditure a/c
a)Surplus b)Deficit c)Liability d)Credit
9. Any expenditure incurred in acquiring fixed assets for the business is called _____ expenditure
a)Capital b)Revenue c)Liability d) Credit
10. Income and expenditure account relates to _____ account
a) Real b) Nominal c) Personal d) Impersonal

UNIT-II

1. The relationship between the consignor and consignee is that of
a) **Principal & agent** b) Buyer & seller c) Debtor & creditor d) Boss & servant
2. A loss arising due to pilferage,theft,fire etc., is
a)Normal b)**Abnormal** c)Total d) Sub normal
3. While valuing the closing stock, only _____ expenses must be taken
a)Indirect b)**Direct** c)Cash d) Non cash
- 4.Consignor account is a _____ account
a)**Nominal** b) Real c) Personal d) Creditor's
- 5.Accidental loss or loss due to negligence is called _____ loss
a)Normal loss b)**Abnormal loss** c)Not a loss d)Gain.
6. Normal loss is _____ in nature.
a)Avoidable b)**Unavoidable** c)Profitable d) Non profitable

7. Del-credere commission is a commission _____
- a) On sales b) **For the guarantee against by debts** c) On purchases d) Credit sales
8. The relationship between co-venturers in a joint venture resembles
- a) **Partnership** b) Principal and agent c) Debtor and creditor d) Shareholders
9. Joint venture account is a _____ account
- a) Personal b) Real c) **Nominal** d) Debtor's
10. The owners of a joint venture are known as
- a) **Co-ventures** b) Partners c) Shareholders d) Co-parceners

UNIT-III

1. Self-balancing can be introduced in _____
- a) small business b) **big business** c) both big & small d) Trust
2. Self-balancing system consists of _____
- a) Cash book b) Debtors c) Creditors d) **Debtors and Creditors book**
3. Once the self-balancing is introduced, there will be _____ in the ledger.
- a) **No errors** b) Errors c) Minimum errors d) Maximum errors
4. Sales ledger is also called _____ ledger.
- a) **Debtors** b) Creditors c) General d) Bought
5. Purchases ledger is called _____ ledger.
- a) Debtors b) **Creditors** c) General d) Sold
6. No entry for self balancing is required when a transaction affects _____ ledger.
- a) 1 b) **2** c) 3 d) 4
7. Sales ledger control account (adjustment a/c) is opened in _____ ledger.
- a) Debtors b) Creditors c) **General** d) Both debtors and creditors
8. Purchases ledger adjustment account is opened in _____ ledger.
- a) Debtors b) Creditors c) **General** d) Purchase
9. General ledger adjustment account is opened in _____ ledger.
- a) Debtors b) Creditors c) General d) **Both debtors and creditors**
10. Self-balancing entry is not required for _____
- a) Bad debts b) **Bad debts previously written off recovered** c) Discount received d) Interest charged to customers

UNIT -IV

1. Fire insurance provides cover for _____ assets
- a) Fixed b) Movable c) **Tangible** d) Intangible
2. While valuing the closing stock, only _____ expenses must be taken.
- a) Indirect b) **Direct** c) Cash d) Revenue
3. Consequential loss policy indemnifies _____ losses.
- a) Capital b) **Revenue** c) Cash d) Normal
4. The indemnity period is decided by _____.
- a) **Insured** b) Insurer c) Both Insured & Insurer d) Insured or Insurer
5. Rate of gross profit has a _____ meaning in loss of profits policies.
- a) Same b) **Different** c) Cash d) Zero
6. Abnormal loss of stock after adjusting recovery and insurance claim is transferred to
- a) Trading account b) **Profit and Loss account** c) Capital account d) Balance sheet
7. Closing stock must be valued at cost or market price whichever is _____
- a) **Lower** b) Higher c) Cost d) Sales
8. The average clause in a loss of profits policy protects the interest of the _____

- a) **Insured** b) Insurer c) workers d) Bank
9. The main object of the average clause is to _____ insurance
a) **discourage under** b) discourage full c) encourage full d) zero
10. Rate of gross profit = $\frac{\text{Gross Profit}}{\text{_____}} \times 100$
a) **Sales** b) Purchase c) Cost d) Stock

UNIT-V

1. Short workings irrecoverable are transferred to _____ a/c
a) **Profit & loss a/c** b) Minimum Rent a/c c) Royalty a/c d) Land & lord a/c
2. Royalty receivable account is a
a) Nominal account b) Personal account c) **Real account** d) Capital account
3. Irrecoverable short workings are transferred to _____ account
a) Trading b) **P&L** c) P&L appropriation d) Non Trading
4. Royalty account is
a) Personal a/c b) Real a/c c) **Nominal a/c** d) Non Personal a/c
5. Lease is an agreement between lessor and lessee for
a) Maintenance b) **Rent** c) Concession d) Agreement
6. _____ is the minimum amount payable to the landlord when there is no production or when production is less
a) Royalty b) **Minimum Rent** c) Short workings d) Sublease.
7. The lessee can recover the short workings with in
a) First 5 years b) Last 3 Years c) **any number of years as per agreement** d) One year
8. In the books of lessor short workings irrecoverable are to be
a) Credited to P&L a/c b) **Debited to P&L a/c**
c) Credited to trading a/c d) Credited to short workings a/c
9. In the case of sublease, royalty receivable must be transferred to
a) **Landlord a/c** b) Profit & loss a/c c) Royalty payable a/c d) Lessor a/c
10. In the books of lessee short workings irrecoverable are to be debited to
a) **Profit & loss a/c** b) Landlord a/c c) Short workings a/c d) Lessor a/c

SECTION-B

2 MARKS

UNIT-I

- What is non-trading concern?
- Write a note on 'surplus' and 'deficit'.
- What is capital fund?
- What is endowment fund?
- What is Receipts & Payments a/c?
- What is Income & Expenditure A/c?
- Write a short note on Legacy.
- What amount will be shown in the income & expenditure?

Stock of sport goods as on 1.1.2021	Rs. 500
Stock of sport goods as on 31.12.2021	Rs. 200
Sports goods purchased during 2021	Rs. 1, 800
Old goods sold during 2021	Rs. 40

9. Calculate the amount to be posted to Income and Expenditure a/c for the years ending on 31.12.2020.

Stock of stationery on 1.1.2020	Rs.3, 000
Creditors for stationery outstanding on 1.1.2020	Rs. 2,000
Amount paid for stationery during the years 2020	Rs.10, 800
Stock of stationery on 31.12.2020	Rs. 500
Creditors for stationery on 31.12.2020	Rs. 1,300

10. Write a short note on Life membership fee.

UNIT-II

1. What is Consignment?
2. What is Proforma invoice?
3. Write a short note on Consignor & Consignee.
4. What do you meant by del-credre commission?
5. What is Over-riding commission?
6. What is the basic difference between Sale and Consignment?
7. What is Account sale? Write the specimen format for Account sales.
8. What is Joint venture?
9. What is the basic difference between Joint venture and Partnership?
10. What is the basic difference between Joint venture and Consignment?

UNIT -III

1. What is Self-balancing system?
2. What is sectional balancing system?
3. What is general ledger adjustment account?
4. What is sales ledger adjustment account?
5. What is purchase ledger adjustment account?
6. Give transfer entry from one ledger to another.
7. Give journal entries to make sales ledger self-balancing.
8. Give journal entries to make purchase ledger self-balancing.
9. Pass journal entry for items on the credit side of creditors account.
10. Pass journal entry for items on the debit side of debtors account

UNIT -IV

1. What is Average Clause?
2. What is Memorandum Trading account?
3. What do you mean by the term salvaged stock?
4. What is over valuation of stock?
5. What is under valuation of stock?
6. Give formula for Gross Profit Ratio.
7. Give formula for average clause.
8. Calculate the insurance claim from the following.
Stock on the date of fire Rs. 50,000
Salvaged stock Rs 30,000
Insurance policy with average clause. Rs 25,000
9. What do you mean by the term insurance claim?
10. What do you mean by the term short sales?

UNIT-V

1. Writeshort notes on Royalty a/c.
2. Explain the term "Sub lease".
3. What is minimum rent?
4. Explain recoupment of short workings.
5. Write the specimen Journals when royalty is less than minimum rent.
6. Write the specimen Journals when royalty is more than minimum rent.
7. Write short notes on 'lessor' and 'lessee'.
8. What is a short working?
9. What is the rule of lease agreement during the time of Strike?
10. Write any two examples for royalty account.

SECTION-C

5 MARKS

UNIT-I

1. Distinguish between Income and Expenditure account and Receipts and Payment Account.
2. Fancy Pictures Ltd constructs a cinema house and incurs the following expenditure:
 - a) Second hand furniture worth Rs.9, 000 was purchased: repairing the furniture cost Rs.1, 000. The furniture was installed by own workmen, wages for being Rs.4, 000
 - b) Expenses in connection with obtaining license for running the cinema were Rs.20, 000
 - c) Fire insurance premium Rs.500 paid for the year
 - d) Temporary huts were constructed costing Rs.15, 000, they were necessary for the construction of the theatre. They are demolished when the theatre was ready
3. Write a note on the following
 - a) Life membership fee
 - b) Donations
 - c) Entrance fee
 - d) Legacy
4. From the following find how much is it to be shown in Income and expenditure account for the year ending 31.12.21 for subscriptions.

Subscription received during the year as per receipts and payments.	Rs. 28,680
Subscriptions outstanding on 1.1.21	2,400
Subscription outstanding on 31.12.21	3,000
Subscription received in advance on 1.1.21	1,800
Subscription received in advance on 31.12.21	1,080
5. Distinguish between capital and revenue expenditure.
6. Show by giving reasons whether the following items of expenditure are capital or revenue.
 - i. Carriage paid on goods purchased
 - ii. Wages of workmen employed for setting up a new machinery.
 - iii. Replacement cost of a worn out part of plant.
 - iv. Repairs to furniture purchased second hand.
 - v. Brokerage paid in connection with the purchase of Land.
7. Prepare Income and Expenditure a/c from the following Receipts and Payments a/c of Nazareth sports club for the year ending 31st Dec 2021.

Nazareth Sports Club

Receipts and Payments a/c for the year ending 31 Dec 2021

<u>Receipts</u>	Rs	<u>Payments</u>	Rs
To Bal b/d	1000	By Rent	400
To Donations	520	By Sundry expenses	420
To Subscriptions	6600	By Postage & Telegram	140
		By Stationery	60

By Investments	2000
By Balance c/d	
Cash at Bank	4350
Cash in hand	750
	<u>8120</u>

(i) Subscriptions from members outstanding on 31 Dec 2021Rs. 400

(ii) Rent due but not paid on 31 Dec 2021Rs. 120

8. Point out whether the following is capital expenditure or revenue expenditure

i)A building was purchased for Rs.20, 000

ii)A second hand machine was purchased for Rs.35, 000 and Rs.5, 000spent on repairing it

iii)Paid fire insurance premium Rs.500

iv) Rs.200 paid in connection with carriage on goods purchased

v) Paid municipal tax Rs.20

vi) Cost of conveyance in connection with a newly acquired furniture Rs.30

9. There is a tournament fund showing a credit balance of Rs.5, 000 on 1stJanuary 2021 in a sports club. During 2021 income to the fund amounted to Rs.1, 000 and tournament expenses Rs.800.Tournament fund investment on 1st January 2021 was Rs.5, 000. How will they appear in the final accounts of the club for the year ended 31st December 2021?

10. Following is the receipts and payments account of Victoria club for the year ending 31.3.2021.

Receipts	Rs	Payments	Rs
To cash balance	14,000	By salaries	6,000
To subscriptions	60,000	By tournament expenses	
To Donations	10,000	By investments	39,500
To tournament ticket collected	44,000	By postage	35,000
To interest received		By building maintenance	5,500
	4,000	By cash balance	
			6,000
			40,000
	<u>1,32,000</u>		<u>1,32,000</u>

Additional information:

(i)Subscriptions received include Rs.2, 000 for the previous year and Rs.3, 000 for the next year

(ii)Outstanding salaries Rs.400.

Show the Income and Expenditure account for the club for the year.

UNIT-II

1. Mohan consigns to Nathan 80 cases of goods at a cost of Rs.250 per case and incurs the following expenses: cartage and freight Rs.600 and insurance Rs.1, 400. On arrival of the goods, Nathan spends unloading charges Rs.100; import duties Rs.100; octroi Rs.100. He sends Mohan an account sales and a bank draft for the balance due. The market price at Nathan's place falls to Rs.270 per case on the accounting date. Show the Valuation of unsold stock.

2. What is joint venture? Distinguish between Joint venture and consignment.

3. Raman sends 400 kilos edible oil at Rs.40 per kilo to Krishnan. Freight and insurance amounted to Rs.500. On the way, 20 kg oil was spoiled. Krishnan took delivery of the consignment and spent Rs.1, 900 for octroi and carriage inwards. In addition he also spent Rs.2, 000 as recurring expenses. You are required to calculate stock at the end, if Krishnan sells 300 kilos of oil.
4. Raja of Madurai sent goods to Kumar of Chennai at a cost price of Rs.29, 675. He paid freight Rs.983 and insurance Rs.700. On the way one-fourth of the consignment was lost by fire and a claim of Rs.5, 000 was recorded. Show how you will deal with the claim and loss due to fire in the books of consignor.
5. Write a note on the following
 - a) Proforma Invoice
 - b) Consignment
6. Prem of Pollachi sent 100 bicycles of Rs.1,200 each to Mathew of Mysore on consignment basis, Prem paid freight Rs.5,000 and Rs.1,500 as insurance transit. Mathew's expenses at Mysore to take the goods to his place were Rs.3, 000. Mathew sold 80 bicycles at the rate of Rs.1, 500 per cycle. Calculate the value of unsold stock.
7. Explain the differences between joint venture and partnership.
8. On 1.7.2021, Malligai Enterprises sent goods worth Rs.40, 000 on consignment to Y. Malligai enterprise spent Rs.2, 200 on freight and insurance. Y received the goods and spent Rs.1, 500 on Godown rent and insurance. Y sold $\frac{3}{4}$ th of the goods till 31.8.2021 for Rs.55, 000. He charges 10% commission on sales and sends the balance of cash to Malligai enterprises with statement of accounts on 31.8.2021. Give journal entries in the books of the consignor and consignee and prepares ledger accounts.
9. X consigns to Y 1000 fans costing Rs.180 each, at invoice price Rs.200 per fan, pays Rs.1, 400 for expenses. Y remits Rs.5, 000 as advance and spent Rs.1, 400 for expenses. Y sells 600 fans at Rs.260 each on credit and 200 fans at Rs.250 each for cash Y remits the balance due by a bank draft after deducting commission 5% and del-credere commission at 1%. The consignee incurs a bad debt of Rs.300. Pass entries and prepares necessary ledger accounts in the books of both the parties.
10. Explain the following
 - a) Del - Credre Commission
 - b) Account Sale.

UNIT -III

1. Explain the purpose of self-balancing ledgers.
2. Distinguish between self-balancing and sectional balancing.
3. State the advantage of self-balancing ledgers.
4. From the following details prepare purchases ledger adjustment account for the Year 2021.

	Rs
Balance of creditors on 1.1.2021	34,000
Credit purchases	1, 28,000
Cash paid to creditors	1, 00, 000
B/P accepted	12,000
Discount allowed	4,000
Transfers	6,000
Purchases returns	5000

5. From the following particulars prepare sales ledger adjustment in the general ledger.

	Rs
Opening balance (Dr)	45,000
Credit sales	4, 50,000
Cash received	2, 30,000

Discount allowed	6,000
Returns inwards	6,000
Bad debts	3,000

6. From the given details prepare general ledger adjustment account. January 1, 2021

	Rs
Balance on sales ledger (Dr)	29,240
Balance on sales ledger (Cr)	480
January 31, 2021	
Sales	1, 74,980
Sales returns	2340
Cash received from customers	1, 52,420
Discount allowed	5,640
B/R	8,240
Cash paid to customers	260
B/R dishonored	500
Sales ledger balance (Cr)	36,700

7. From the following balances prepare general ledger adjustment account in Sales ledger.

Debtors on 1.4.2021	Rs
Debit	21,000
Credit	500
Provision for doubtful debts on 1.4.21	600
Total sales	85,000
Cash sales	5,000
Cash received from debtors	61,000
B/R received	20,000
Sundry charges debited to customers	750
Bad debts recovered	250
Debtors on 31.3.22 (cr)	700

8. From the following, prepare general ledger adjustment account in the purchases ledger.

Rs	
Opening balance (cr)	6500
Credit purchases	15000
Acceptance given	4000
Returns outwards	500
Cash paid	7500
Discount received	300

9. Mr. X maintained separate sales ledger. Prepare general ledger adjustment a/c in sales ledger.

Rs	
Opening balance in sales ledger (Dr)	15000
Sales	24,000
Sales returns	2530
Cash received	18000
Discount allowed	1100
Bad debts	2900
Bills receivable received	1000

10. You are required to prepare sales ledger adjustment a/c in the general ledger.

	Rs
Opening balance (Dr)	90,000
Credit sales	9, 00,000
Cash received	4, 50,000
Discount allowed	20,000
Returns inwards	20,000
Bad debts	6000

UNIT –IV

1. How do you calculate fire claims in Insurance? Explain.
2. What is Average Clause? Explain with an example.
3. A fire occurred at the premises of a trader on 31, May, 2021 destroying goods. His stock on January 1, 2021 was Rs 60,000. The value of salvaged stock was Rs.13, 500. The gross profit was 30% .Sales amounted to the date of fire was Rs.1,53,000.Purchases amounted to Rs.1,03,500.Prepare claim account.
4. A Fire occurred on 15th October 2021 in the business premises. From the following figures ascertain the claim to be lodged.

Rs

Stock on 1 April 2021	1, 57,000
Purchases from 1 April to the date of fire	4, 25,000
Manufacturing expenses	3, 90,000
Sales from 1 April to the date of fire	10, 14,000
Goods used by the partners privately cost	15,000

The rate of gross profit is 30% on cost. The stock salvaged is Rs.54, 000.

5. A fire occurred in the premises of a merchant, on June 15, 2021 and considerable part of the stock was destroyed. The value of the stock saved was Rs. 4,500. The books disclosed that on April 1, 2021, the stock was valued at Rs.36, 750. The purchases to the date of fire amounted to Rs.1, 04,940 and the sale to date of fire Rs.1, 56,500. On investigation it is found that during the past five years the average gross profit on sale was 36%. Calculate the claim to be made.

6. A fire occurred at the premises of a trader on 18th October 2021 destroying goods. His

Stock on January 1, 2021	Rs 2, 00,000
Purchases 1.1.21 to 18.10.21	Rs 6,00,000
Sales 1.1.21 to 18.10.21	Rs 10, 00,000
Direct expenses	Rs 50,000
Gross profit ratio	20%
Salvaged stock	Rs 20,000

Prepare claim account.

7. A Fire occurred on 15th September 2021 in the business premises. From the following figures ascertain the claim to be lodged.

Rs

Stock on 1 April 2021	1,05,000
Purchases from 1 April to the date of fire	3,50,000
Manufacturing expenses	2,60,000
Sales from 1 April to the date of fire	6,76,000
Goods used by the partners privately cost	10,500

The rate of gross profit is 30% on cost. The stock salvaged is Rs.36, 000.

8. A fire occurred in the premises of a merchant, on June 15, 2021 and considerable part of the stock was destroyed. The value of the stock saved was Rs.9, 000. The books disclosed that on April 1, 2021, the stock was valued at Rs.73, 500. The purchases to the date of fire amounted to Rs.2, 09,880 and the sale to date of fire Rs.3, 13,000. On investigation it is found that during the past five years the average gross profit on sale was 36%. Calculate the claim to be made.

9. A fire occurred in the premises of a business unit on 1.9.2021 and stock of the value of Rs.1, 01,000 was saved.

Rs.

Purchases for the year ended 31.3.2021	6, 80,000
Sales for the year ended 31.3.2021	11, 00,000
Purchases from 1.4.2021 to 1.9.2021	2, 50,000
Sales from 1.4.2021 to 1.9.2021	3, 60,000
Stock on 31.3.2020	3, 00,000
Stock on 31.3.2021	13, 40,000
Stock on 31.3.2021 was overvalued by	20,000

Calculate amount of claim.

10. A fire occurred on 15.3.2021 in the premises of a company. From the following find out the amount of claim.

Rs.

Stock 1.1.2021	2, 00,000
Purchases from 1.1.2021 to 15.3.2021	6, 00,000
Wages	1, 50,000
Manufacturing expenses	50,000
Sales from 1.1.2021 to 15.3.2021	10, 00,000

The gross profit ratio is 20%. The stock salvaged was Rs.20, 000.

UNIT-V

- Write short notes on
 - Royalty account
 - Minimum rent
- Explain recoupment of short workings.
- Pass journal entries in the books of lessor and lessee, when royalty is more than the minimum Rent, provided short workings can be recouped.
- India coal ltd. leased a colliery on 1.1.2000 at a minimum rent of Rs.15, 000 merging into royalty of Rs.1 per ton with a stipulation to recoup short workings over the first three years of the lease. The output for the first four years of the lease was 8,000; 13,000; 21,000 and 18,000 tons respectively. Draft the necessary journal entries.
- On 1.1.2018 Malar and co. leased a coal mine agreeing to pay a minimum rent of Rs.4,000 per annum merging into a royalty of Re.1 per ton with power to recoup short workings over the first three years. The annual output for four years to 31.12.2021 was 2,000; 20,000; 30,000 and 40,000 tons respectively. Prepare the journal entries in the books of Lessee.
- A company leased a mine at a minimum rent of Rs.1, 500 per annum, merging into a royalty of Rs.0.25 per ton. The short workings were recoverable during the first six years of the lease only. The output of the first six years was 3,600; 5,200; 5,800; 7,200; 7,600 and 6,400 tons of mineral respectively. Prepare the table showing all the calculations.
- Write short notes on
 - Lease agreement
 - Dead rent
- Mr.A took out a lease under a royalty agreement from Mr.B which provides as follows:
The minimum rent is agreed at Rs.5, 000 p.a. The actual royalties for the first four years were Rs.2, 000, Rs.3, 000, Rs.6, 000 and Rs.10, 000. Short workings can be recouped only during the first three years. Write up the journal entries for the first three years.
- On 1.1.2018 Raja collieries ltd. Leased a piece of land agreeing to pay a minimum rent of Rs.2,000 in the first year, Rs.4,000 in the second year and thereafter Rs.6,000 per annum, merging into a royalty of 40 paise per ton, with power to recoup short workings over the first three years only.

Raman had instructions to sell goods at cost plus 25% and was entitled to a Commission of 4% on sales, in addition to 1% del credere commission on total sales for guaranteeing collection of all the sale proceeds.

During the year ended 31st December 2021, cash sales were

Rs.1, 20,000; credit sales Rs.1,05,000 and Raman's expenses relating to the consignment Rs.3,000 being salaries and insurance. Bad debts were Rs.3,000 and goods sent on consignment Rs.2,00,00. From the above particulars, prepare

- a) Consignment a/c
- b) Goods sent on consignment account
- c) Raman's account in the books of Raghavan.

6. Manohar and Jeyam entered into a joint venture for purchase and sale of cosmetics. They agreed to share profits and losses in the ratio of 4/7 and 3/7 respectively. They opened a joint bank account, Manohar depositing Rs.5, 000 and Jeyam Rs.6, 500. Goods were purchased by Manohar for Rs.5, 000 and expenses paid by Jeyam amounted to Rs.100. They also purchased goods for Rs.7, 500 through the joint bank account.

They sold part of the goods for Rs.20,000 and paid selling expenses Rs.2,000. The unsold goods were taken over by Manohar at an agreed value of Rs.2, 500. Give journal entries and prepare the necessary ledger accounts.

7. Anbu and Babu doing business separately as building contractors, under take jointly to construct a building for a newly started joint stock company for a contract price of Rs.2,50,000 payable as to Rs.2,00,000 by instalment in cash and Rs.50,000 in fully paid shares of the company. A bank account is opened in their joint names. Anbu paying Rs.62,500 and Babu paying Rs.37,500. They also to share profit and losses in the proportion of 2/3 and 1/3 respectively. Their transactions were as follows:

	Rs.
Wages	75,000
Bought materials	1, 75,000
Materials supplied by Anbu	12,500
Materials supplied by Babu	10,000
Architect's fees paid by Anbu	5,000

The contract was completed and the price (cash & shares) duly received. The joint venture was closed by Anbu taking up all the shares of the company at an agreed valuation

of Rs.40,000 and Babu taking up the stock of materials at an agreed valuation of Rs.7,500. Show the journal and Prepare ledger accounts.

8. Mr. Thangam consigned 100 cycles costing Rs.1,500 each to Mr. Raja. He incurred an expense of Rs.2,000 for sending the consignment. During the transit, 5 cycles were damaged and a claim of Rs.7,000 was received from the insurance company. Mr. Raja took possession of the remaining cycles and out of them, sold 80 cycles at Rs.2,000 each. He incurred a direct expenditure of Rs.3,800 and an indirect expenditure of Rs.1,500 on the consignment. He is allowed a commission of 5% on gross sales. Prepare Consignment a/c and Consignee a/c in the books of consignor.
9. A and B doing business separately as building contractors, undertake jointly to construct a building for a newly started joint stock company for a contract price of Rs.1,00,000 payable as to Rs.80,000 by instalment in cash and Rs.20,000 in fully paid shares of the new company. A bank account is opened in their joint names. A paying in Rs.25,000 and B Rs.15,000. They are to share profit and losses in 2/3 and 1/3 respectively. Their transactions were:

Rs.	
Paid wages	30,000
Bought materials	70,000
Materials supplied by A	5,000
Materials supplied by B	4,000
Architect's fees paid by A	2,000

The contract was completed and the price duly received. The joint venture was closed by A taking all shares of the company at an agreed value of Rs.16,000 and B taking up the stock of material at an agreed valuation of Rs.3,000. Prepare joint venture a/c, joint bank a/c, A's a/c and B's a/c.

10. 'X' and 'y' enter into a joint venture. 'x' agrees to bring capital in cash. Accordingly, a joint bank account is opened by 'x' for a sum of Rs.80,000. 'Y' buys goods worth Rs.50,000 as part of his share capital. Further, goods worth Rs.118,000 were purchased from 'c' by paying Rs.60,000 and balance by a promissory note signed by 'x' and 'y'.

The goods were sent to Kolkata for sales. Expenses totaling Rs.5,000 were incurred in sending the goods. Part of the goods was damaged and a sum of Rs.25,000 was received from the insurance company. The remaining goods were sold for Rs.220,000.

Prepare joint venture a/c, personal a/c's of the co-ventures and the joint bank a/c. assuming that the promissory note were duly honoured.

UNIT III

1. Explain the sub divisions of ledgers in self-balancing system.
2. From the following figures relating to April 2021, prepare Total Debtor and

Total creditor account.

Rs

Balance, 1st April 2021

Total debtors	21,000
Total creditors	8,000
Sales – Credit	43,000
Purchases – Credit	25,000
Cash paid to creditors	19,100
Cash received from customers	37,200
Bills payable issued	5,000
Bills received	4,000
Bills receivable dishonoured	500
Bad debts written off	600
Cash sales	6,300
Discount received from suppliers	900
Discount allowed	1,100

3. From the following prepare the adjustment a/c as they would appear in its general ledger.

2021 Jan 1

Rs

Balance of debtors	24,000
Balance of creditors	27,750
Credit sales	19,600
2021 Dec 31	
Credit purchases	9,000
Cash received	15,000
Discount allowed	400
Bills received	6,000
Sales return	400
Paid to creditors	19,750
Discount allowed	650
B/P accepted	3,000
Bad debts written off	900

4. Sunder and Sunil keep bought and sold ledger on self-balancing system.

From the following particulars prepare necessary adjustment a/c.

Rs

Debtors 1.1.2021	62,000
Creditors 1.1.2021	25,000
Credit purchases	1,03,000
Credit sales	1,34,000
Cash received from debtors	78,000
Returns inwards	3,000
Acceptance given	40,000
Returns outwards	2,500
Debtor's acceptance dishonoured	5,000
Discount allowed	1,000
Bad debts written off	2,000
Creditors 31-12-2021	10,500

5. The following details relate to the transactions for the year ended 30.6.2021. Show the sales ledger adjustment account as it will appear in general ledger from the following particulars:

Rs

2020 July 1	Sales ledger balance	40,000
	Provision for doubtful debts	2,000
2021 June 30	Sales	90,000
	Return from customers	8,000
	Cheque received from customers	80,000
	Cheque dishonoured	4,000
	Bills accepted by customers	2,700
	Bills dishonoured	400
2021 June 30	Bad debts written off	1,600
	Carriage charged to customers	200
	Cash discount allowed	1,800

6. Below given are particulars from the books of Mr. Ram, a trader for the month of Jan.2021.

January 1, 2021Rs

Opening balance	30,000
Jan 31, 2021 Total sales for the month	90,000
Sales returns	500
Cash received from debtors	40,000
Bills receivable received	15,000
January 31 2021	
Bills dishonoured	1,500
Discount allowed to debtors	400
Bad debts	350

Transfer from another ledger	750
B/R endorsed to suppliers	1,200

You are required to prepare the sales ledger in general ledger adjustment.

7. From the following figures relating to April 2021, Prepare Total debtor and Total creditor accounts.

Rs

Balance, 1 st April 2021	
Total debtors	21,600
Total creditors	8,000
Purchases- Credit	25,300
Sales- Credit	39,400
Cash paid to creditors	19,100
Bills payable issued	5,000
Bills received	4,000
Bills receivable dishoured	500
Bad debts written off	600
Cash sales	6,300
Discount received from suppliers	900
Discount allowed	1,100

8. Prepare purchases ledger adjustment a/c from the following details.

Rs

1.1.2021	Creditors balance (Cr)	12,000
	Creditors balance (Dr)	150
31.12.2021	Total Purchases	40,000

Credits sales	13,270
Goods returned to creditors	1,440
Bad debts	625

1. How will you compute the claim for loss of profit policy?

a) abnormal lines of stock b) over and under valuation of stock c) average clause

4. A fire occurred in the premises of a business unit on 1.9.21 and stock of the value of Rs.1, 01,000 was saved.

Purchased for the year ended 31.3.21	6, 80,000
--------------------------------------	-----------

Purchases from 1.4.21 to 1.9.21	2, 50,000
---------------------------------	-----------

Stock on 31.3.20	3, 00,000
------------------	-----------

Stock on 31.3.21 was overvalued by 2,00,000

$$R_s$$

Stock on 1 st Jan, 2020	90,000
Purchases during the year 2020	3, 65,000
Purchases returns during the year 2020	5,000
Stock on 31 st Dec, 2020	1, 26,000
Sales for the year 2020	4, 10,000
Sales returns during the year 2020	10,000
Purchases from 1.1.2021 to date of fire	84,000
Sales from 1.1.2021 to date of fire	1, 03,000
Sales returns from 1.1.2021 to date of fire	4,000
Value of stock saved	19,800

6. A fire occurred in the premises of a merchant on 18th Sep, 2021 and a considerable part of stock was destroyed. the vale of the stock salvaged was Rs 8,200 The books closed that on 1st April 2021, the stock was valued at Rs 66,850; the purchases to the date of fire amounted

to Rs1,85,000 and the sales to date of fire Rs 2,82,500. Goods costing Rs 500 were taken for personal use and goods sold for Rs 2,500 were returned to the merchant. On investigation it is found that during the past five years the average gross profit on the cost was 25% . Prepare a statement of account that the merchant has to claim.

7. On Dec 31, 2020, a fire damaged the premises of Best Bros. Ltd and the wasdisorganized until March 31, 2021.The loss of profit policy forRs 26,000 with a six months period of indemnity was taken. Thecompanies' accounts for the year ended October, 2020showed a turnover of Rs 70,000 with a net profit of Rs 8,000 The standing charges debited was Rs 20,000. Turnover for 12 months ended Dec 31, 2020 wasRs78, 000. The turnover during the period of dislocation Rs8, 000 whileduring the corresponding period in the preceding year was Rs17, 000. A sum of Rs 2,000 was spent as additional expenses to mitigate the loss,however, no saving in standing charges as a result of fire. Calculate claim to be made.

8. Fire occurred in the premises of XYZ Ltd on 20th February, 2021.TheCompany has taken out a fire insurance policy of Rs.1, 00,000 covering its stock in trade and the and the policy was subject to average clause. From the following particulars ascertain the claim to be lodged. Rs.

Stock on 1 st January,2020	80,000
Purchases during the year 2020	3, 55,000
Purchases returns during the year 2020	15,000
Stock on 31 st December 2020	1, 46,000
Sales for the year 2020	4,40,000
Sales returns during the year 2020	20,000
Purchases from 1.1.2021to date of fire	64,000
Sales from 1.1.2021 to date of fire	93,000
Sales return from 1.1.2021 to date of fire	3,000
Value of stock saved	18,000

It was the practice of the concern to value the stocks at cost less 10%

9. From the following particulars ascertain the claim to be lodged in respect of consequential loss policy.

- Fire occurred on July 1st 2021 and affected sales for 3 months.
 - Sales for 3 months ending 30th September in 2020 and 2021 were Rs 1, 50,000 and 50,000 respectively.
 - The policy was for Rs 4, 50,000 with a six months indemnity
 - Sales for 12 months ending June 30th 2021 were Rs 19, 00,000
 - Accounts are prepared on 31st December. The net profit for 2008 Rs 2, 50,000 after debiting standing charges Rs 1,10,000. Sales for 2020 were 18, 00,000.
 - A sum of Rs 3,500 was spent as additional expenses to mitigate the loss.
10. Fire occurred in the premises of Unlucky Ltd on 30th April 2021.All the stocks with the exception of Rs 13,000 were destroyed by fire From the following figures ascertain the loss suffered by the company.

Rs

Stock on 1.1.2020	36,000
Stock on 31.1.2020	66,000
Purchases during 2020	4,80,000
Sales during 2020	6,00,000
Sales from 1.1.2021 to date of fire	3,00,000
Purchases from 1.1.2021 to date of fire	2,30,000

On 20th December 2020 also fire broke out and the cost of stock destroyed was Rs 10,000.There was a practice of the firm to value the stock at cost less 10%.

But all on a sudden they changed the practice and valued stock as on 31st December 2020 at a cost plus 10%. The amount of the policy was Rs 40,000 and

the claim was subject to an average clause. Ascertain the claim to be lodged.

UNIT-V

1. On 1.1.1996 sri malar and co. leased a coal mine agreeing to pay a minimum rent of Rs.4,000 per annum merging into a royalty of Re.1 per ton will power to recoup short workings over the first three years. The annual output for four years to 31.12.2000 was 2,000; 20,000; 30,000 and 40,000 tons respectively. Prepare the accounts in the books of the company.
2. Neyveli coal company ltd are the lessee of the mine on a royalty of Rs.5 per ton of coal raised with a dead rent of Rs.60,000 per annum and power to recoup short workings during the first 6 years of the lease. The output for the first 6 years was as follows:
 - I year-2,500 tons
 - II year-10,000 tons
 - III year-15,000 tons
 - IV year-8,000 tons
 - V year-12,000 tons
 - VI year-20,000 tonsPrepare necessary a/cs in the books of the Neyveli coal ltd.
3. A company leased a mine at a minimum rent of Rs.1, 500 per annum, merging into a royalty of Rs.0.25 per ton. The short workings were recoverable during the first six years of the lease only. 2. Discuss the importance of the following: i) Knowing the audience
ii) Clarity of purpose iii) Rehearsal and practice iv) Using a hook
3. If a person is going to make a presentation, what tips would you like to give him on i) dressing suitably ii) using the podium iii) consulting notes iv) Audio-visual aids
4. Briefly discuss the factors to be taken into consideration while planning a presentation.
5. Describe the structure of a presentation.
6. Discuss the role of paralinguistic elements in presentation
7. What precautions should be taken while using audio-visual aids during presentation?
8. How should one handle the question-hour session?
9. Explain the guidelines for using the aids in presentation.
10. State and explain the structure of the presentation.

Semester V
QUESTION BANK
(for those who have joined in July 2021 or after)

SECTION A (1 mark)

Choose the correct answer:

UNIT I

1. Equation with highest index for the variable three is called ----- equation.
(a) simultaneous (c) quadratic (b) **cubic** (d) linear
2. The power of unknown variable in algebraic expressions is called-----.
(a) **Polynomial** (b) Index (c) Identity (d) Equality
3. If $5x - 10 = 0$, $x =$ -----.
(a) 5 (b) **2** (c) 10 (d) $5/2$
4. For finding three unknown variables we need ----- equations.
(a) 5 (b) **3** (c) 4 (d) 2
5. A statement of equality of two expressions is known as -----.
(a) association (b) **equation** (c) expression (d) quadratic
6. Equations which holds true for any value of the variable is called -----.
(a) equality (b) identity (c) coefficient (d) index
7. The equation of the first degree is called ----- equation.
(a) Cubic (b) **Linear** (c) Quadratic (d) Simultaneous
8. The number of equations required for calculating the unknown variables is equal to the number of -----.
(a) **known variables** (b) unknown variables (c) index (d) Identities
9. When the unknown variable in a equation is more than one, the value of the unknown variables can be obtained by using ----- equations.
(a) quadratic equations (b) simultaneous (c) **linear** (d) cubic
10. In the equation $ax^2 + bx + c = 0$, c is ----- term.
(a) Coefficient (b) **constant** (c) quotient (d) perfect

UNIT II

11. Index is otherwise called _____.
(a) Logarithm (b) Fraction (c) **Power of a number** (d) Integer
12. In a^m , m is called -----.
(a) integer (b) **index** (c) base (d) none of the above
13. $4^{1/2}$ is equal to -----.
(a) 0 (b) **2** (c) 4 (d) 1
14. 625 can be written as _____.
(a) **5^4** (b) 4^5 (c) 5^2 (d) 125^2
15. Anything other than zero raised to the power zero is -----.
(a) 0 (b) **1** (c) a (d) -1
16. When the powers are equal the ----- are equal.
(a) integer (b) **base** (c) functions (d) numerators
17. $2^4, 2^2$ is equal to _____.
(a) 2^8 (b) **2^6** (c) 6^2 (d) 16
18. $3^2 \sqrt{3}$ is equal to _____.
(a) 3^5 (b) **$\sqrt{3^5}$** (c) 3 (d) 3^3

19. $4^{1/2}$ can also written as _____
 (a) $\sqrt{2}$ (b) 0 (c) 2^2 (d) 2^3
20. When the powers are equal the ----- are equal.
 (a) **integer** (b) base (c) functions (d) numerators

UNIT III

21. $\log 5 + \log 2$ is equal to -----.
 (a) $\log 7$ (b) **$\log 10$** (c) $\log 1$ (d) $\log 5/2$
22. The logarithm of a number to the base ---- is called common logarithm.
 (a) a (b) **10** (c) e (d) 0
23. If $10^x = k$ _____
 (a) $\log_{10} x = k$ (b) **$\log_{10} k = x$** (c) 100 (d) $\log_k x = 10$
24. The integral part of the logarithm is called _____
 (a) **Characteristics** (b) mantissa (c) Index (d) Positive Index
25. The fractional part of the logarithm is called _____
 (a) Index (b) Common Logarithm (c) **Mantissa** (d) Characteristics
26. The logarithm of the quotient of 2 numbers is equal to the ----- of their logarithms to the same base.
 (a) product (b) difference (c) quotient (d) **sum**
27. Mantissa is always
 (a) Negative (b) **Positive** (c) Zero (d) Either positive or negative
28. $\log_3 9$ is equal to
 (a) **2** (b) 3 (c) $\log_3 2^3$ (d) 0
29. $\log 1$ to any base is
 (a) 5 (b) 1 (c) **0** (d) 10
30. $\log \sqrt{3}$ may be written as
 (a) $\frac{1}{2} \log 3$ (b) $2 \log 3$ (c) $\log_2 3$ (d) 3

UNIT IV

31. A matrix was introduced by
 (a) Issac newton (b) George fefdinand (c) **Arthur cayley** (d) Henry briggs
32. A matrix that consist of only one row is called
 (a) **Row matrix** (b) Column matrix (c) Square matrix (d) Diagonal matrix
33. $\begin{bmatrix} 8 & -3 & 5 & 9 \end{bmatrix}$ is a row matrix of order
 (a) 4×1 (b) **1×4** (c) 4×4 (d) 1×1
34. A matrix that consist of only one column is called
 (a) Square matrix (b) **Column matrix** (c) Row matrix (d) Scalar matrix
35. If all the elements of a matrix are zero, that matrix is called
 (a) Unit matrix (b) Scalar matrix (c) Row matrix (d) **Null matrix**
36. $\begin{bmatrix} 0 & 0 & 0 \end{bmatrix}$ is a
 (a) Row matrix (b) **Null matrix** (c) Square matrix (d) Unit matrix
37. A matrix which has equal number of rows and columns is called
 (a) **Square matrix** (b) Column matrix (c) Diagonal matrix (d) Row matrix
38. $\begin{bmatrix} 2 & 3 \\ 9 & 8 \end{bmatrix}$ is a _____ matrix
 (a) Identity (b) Diagonal (c) **Square** (d) Scalar
39. $\begin{bmatrix} -9 & 2 & -5 \\ 10 & 3 & 2 \\ 8 & 7 & 5 \end{bmatrix}$ and $\begin{bmatrix} 4 & -5 \\ -6 & 7 \end{bmatrix}$ are
 (a) Unit matrix (b) Null matrix (c) **Square matrix** (d) Scalar matrix
40. A square matrix, in which all the elements are zero, except the leading diagonal, is called
 (a) Row matrix (b) Unit matrix (c) Square matrix (d) **Diagonal matrix**

UNIT V

41. Sum of money charged by the lender from the borrower for making use of his money is called
(a) **Interest** (b) Depreciation (c) Amount (d) Principal
42. Simple interest will be income for
(a) **Lender** (b) Seller (c) Borrower (d) None
42. The sum of money lent is called
(a) Interest (b) **Principal** (c) Amount (d) Discount
43. The formula for simple interest is
(a) $I = Pn$ (b) $I = Pi$ (c) **$I = Pni$** (d) $I = ni$
44. The compound interest for Rs.10000 for 2 years at 10% is
(a) Rs. 2000 (b) Rs. 2200 (c) **Rs. 2100** (d) Rs. 2300
46. Under compound interest
(a) **$A = P(1 + ni)$** (b) $A = \frac{Pnr}{100}$ (c) $A = P(1 + i)$ (d) **$A = P(1 + i)^n$**
47. When the interest is compounded half – yearly
(a) **$P \left(1 + \frac{i}{2}\right)^{2n}$** (b) $P(1 + i)^n$ (c) $P \left(1 + \frac{i}{4}\right)^{4n}$ (d) $P(1 + i)^n - P$
48. While discounting, A is given by
(a) $\frac{BD \times TD}{BD - TD}$ (b) $\frac{100 \times TD}{n - rD}$ (c) $\frac{100r}{100 - nr}$ (d) $\frac{TD}{BD - TD}$
49. Banker's gain
(a) $\frac{Anr}{100}$ (b) $\frac{Pnr}{100}$ (c) $\frac{An^2 r^2}{100(100 + nr)}$ (d) $\frac{Anr}{100(100 + nr)}$
50. Various amounts fall due on different dates settled in a single payment on
(a) Due date (b) Legal due date (c) Nominal due date (d) **Equated due date**

SECTION B (2 marks)

Unit I

51. What is an equation?
52. Write any four identities.
53. Write a note on quadratic equation.
54. Write a note on linear equation.
55. Write the procedure of forming an equation.
56. What is the procedure for calculating the unknown variables?
57. Write a note on degree of equation.
58. What do you mean by Quadratic equation?
59. What is simultaneous equation?
60. What is cubic equation?

Unit II

61. Write any 4 laws of indices.
62. Mention the types of indices.
63. What is known as Index?
64. Find the value of $(27)^{2/3} + (64)^{1/3}$
65. What do you mean by positive indices?
66. What do you mean by negative indices?
67. What are zero indices?
68. What is a fractional index?
69. What is known as base?
70. What is called as exponent?

Unit III

71. Define logarithm.
72. State the laws of logarithms.
73. What is the product rule of logarithm?
74. What is the quotient rule of logarithm?
75. What is the power rule of logarithm?
77. What is the change of base rule?
78. What do you mean by Common logarithm?
79. What do you mean by Characteristics?
80. What do you mean by Mantissa?

Unit IV

81. What is a matrix?
82. What is diagonal matrix?
83. Write a note on principal diagonal.
84. What condition should be satisfied for multiplying a matrix by another matrix?
85. Write a note on transpose of a matrix.
86. Write a note on singular and non-singular matrix.
87. Write a note on Row Matrix?
88. What is Column Matrix?
89. What is square Matrix?
90. What is Identity Matrix?

Unit V

91. What is banker's discount?
92. What is an annuity?
93. Write a note on cash discount
94. What is simple interest?
95. What is banker's gain?
96. Write a note on trade discount?
97. What do you mean by true discount?
98. What are percentages?
99. What is compound interest?
100. What do you mean by discount?

Section C (5 marks)

Unit I

101. Solve: $\frac{3}{x+6} + \frac{2}{x-1} = \frac{5}{x+5}$

102. Solve by quadratic formula: $8x^2 - 10x + 3 = 0$

103. Solve: $\begin{cases} 2x + y = 13 \\ x^2 + xy = 36 \end{cases}$

104. Solve: $\begin{cases} \frac{2}{x} + \frac{5}{y} = 23 \\ \frac{6}{x} + \frac{3}{y} = 21 \end{cases}$

105. Solve: $6x^2 - x - 35 = 0$ by factorization method

106. The cost of 3 Accountancy Books and 4 Business Mathematics books is Rs. 48 while 2 Accountancy books and 5 Business mathematics books cost is Rs.46. Find the cost of an Accountancy book and a Business Mathematics book.
107. Solve: $5x^2+27x+10=0$ by equation method
108. Solve $4x+3y=17$ and $5x-2y=4$
109. Solve $10x-5y=50$ and $5x-4y=19$
110. Solve $4x^2-24x+11=0$

Unit II

111. Simplify: $\frac{81^8 \cdot 9^2 \cdot 27^{-8}}{243^2}$
112. If $a^x = b^y = ab$, prove that $\frac{1}{x} + \frac{1}{y} = 1$
113. Simplify: $(x^{a-b})^{a+b} (x^{b-c})^{b+c} (x^{c-a})^{c+a}$
114. If $x^a = y^b = z^c$ and $x^2 = yz$ show that $\frac{1}{b} + \frac{1}{c} = \frac{2}{a}$
115. Prove that $\left[\frac{x^a}{x^b}\right]^c \times \left[\frac{x^b}{x^c}\right]^a \times \left[\frac{x^c}{x^a}\right]^b = 1$
116. Simplify: $\frac{5x^5}{2x^2} + \frac{7x^7}{2x^4}$
117. Simplify: $\sqrt{\frac{x^5 y^3}{a^2}}$
118. Find the value of $\left(\frac{81}{625}\right)^{3/4}$
119. Find the value of $\left(\frac{27}{64}\right)^{-2/3}$
120. Find the value of $\left(\frac{32}{243}\right)^{-4/5}$

Unit III

121. If $\log 2 = 0.3010$ & $\log 3 = 0.4771$, find the value of $\log 36$ & $\log 324$.
122. Find the value of $\log \frac{bc}{a^2} + \log \frac{ca}{b^2} + \log \frac{ab}{c^2}$
123. Simplify: $(\log_3 81) (\log_{243} 9) (\log_{27} 729)$
124. Simplify: $4 \log \sqrt{\frac{125}{15}} + 2 \log \sqrt{\frac{75}{625}} + \frac{1}{2} \log \frac{25}{9}$
125. Show that $\log \frac{9}{14} + \log \frac{35}{24} - \log \frac{15}{16} = 0$
126. Simplify $\log_4 1000 \div \log_4 100$
127. Show that $\log \left(\frac{27}{8}\right) - \log \left(\frac{4}{3}\right) + \log \left(\frac{64}{81}\right) = \log 2$
128. Find the value of $\frac{2 \log 6 + 6 \log 2}{4 \log 2 + \log 27 - \log 9}$
129. If $\log 3 = 0.47712$ and $\log 5 = 0.6990$, Calculate $\log 75$ and $\log 225$
130. Find the number of digits in 4^{21} if $\log 4 = 0.6021$

Unit IV

131. If $A = \begin{bmatrix} a & b \\ c & d \end{bmatrix}$ show that $A^2 - (a+d)A + (ad-bc)I = 0$ where $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$
132. If $A = \begin{bmatrix} 1 & 0 \\ 2 & 0 \end{bmatrix}$ and $B = \begin{bmatrix} 0 & 0 \\ 1 & 12 \end{bmatrix}$ is $AB = BA$?
133. If $A = \begin{bmatrix} 1 & 5 & 2 \\ 3 & -2 & 4 \\ 6 & 2 & 1 \end{bmatrix}$, find the inverse of A.
134. Solve the following equations by Cramer's Rule: $2x + 5y = 45$; $5x + 3y = 46$
135. Find the rank of $\begin{bmatrix} 2 & 3 & 4 \\ 4 & 6 & 8 \\ 8 & 12 & 16 \end{bmatrix}$
136. If $A = \begin{bmatrix} 2 & -1 & 2 \\ 7 & 2 & 3 \\ 1 & 1 & 1 \end{bmatrix}$ Find A^2
137. Prove the matrix $\begin{bmatrix} 4 & 3 & -3 \\ -1 & 0 & -1 \\ -4 & -4 & -3 \end{bmatrix}$ is a non-singular
138. Solve: $\begin{bmatrix} a+b & 6 \\ 5 & a-b \end{bmatrix} = \begin{bmatrix} 7 & 6 \\ 5 & 3 \end{bmatrix}$
139. If $A = \begin{bmatrix} 1 & 3 & 1 \\ 4 & -5 & 7 \\ 3 & 5 & 2 \end{bmatrix}$ and $B = \begin{bmatrix} 1 & 2 & 2 \\ 4 & 3 & 6 \\ 2 & -3 & 1 \end{bmatrix}$ show that $(A+B)^t = A^t + B^t$
140. Explain any four types of matrices.

Unit V

141. A company intends to create depreciation fund to replace at the end of 25th year an asset costing rupees 1, 00,000. Calculate the amount to be retained out of profit every year, if interest rate is 3% per annum
142. A trader sold 2 motor cars for Rs 9,900 each getting 10% profit on one and 10% percent loss on the other. Find his gain or loss % on the sale of two cars together.
143. An investment of Rs. 20,000 becomes Rs.20, 800 after 73 days. Find the rate of Simple Interest.
144. Find the number of years in which Rs. 14,000 became Rs. 20849 @ 12% compound interest.
145. If the difference between the compound interest and the simple interest @10% for 3 years is Rs. 279, find the principal.
146. A person deposits in a bank at the end of each month Rs.4000 for a period of 2 years @ 10% compound interest. Find the total amount in the credit of his account at the end of the 2nd year.
147. Find the number of years and the fraction of a year in which a sum of money will treble itself as compound interest at 8% per annum.
148. Find the effective rate equivalent to the nominal rate of interest of 8% per annum when interest is computed at the end of every 3 months.
149. X sold Rs.12,000 worth of goods to Y on 5th January 2002. Y received a trade discount of 25% and in addition, a cash discount of 6%. Find out of the net price of the goods.
150. Find the true discount and the face value of the bill if the banker's gain for a bill of 4 months discounted @12% p.a is Rs.50.

Section C (10 marks)

Unit I

151. Solve: $x^2 - y^2 = 20$ and $x + y = 10$
 152. Solve: $2x + 3y + 5z = 17$, $3x + 2y + 2z = 15$ and $x + 5y + 3z = 16$
 153. Solve: $x^2 + xy = 36$ and $2x + y = 13$
 154. $x^2 - y^2 = 20$ and $x + y = 10$
 155. $xy + y + x = 27$, $1/x + 1/y = 1/2$
 156. Solve $x^2 - x - 42 = 0$
 157. Solve $1/x + 1/y = 56$, $3x + 4y = 18$
 158. $1/x^2 + 1/y^2 = 13$; $1/x + 1/y = 5$
 159. Solve $x/4 + y/5 = 31/20$ and $x/2 + y/7 = 29/14$
 160. $x^2 + xy = 24$ and $2x + y = 11$

Unit II

161. Simplify: $\frac{81^3 \cdot 9^2 \cdot 27^{-8}}{243^2}$
162. (i) If $a^x = b^y = ab$, prove that $\frac{1}{x} + \frac{1}{y} = 1$
 (ii) Simplify: $(x^{a-b})^{a+b} (x^{b-c})^{b+c} (x^{c-a})^{c+a}$
163. If $x^a = y^b = z^c$ and $x^2 = yz$ show that $\frac{1}{b} + \frac{1}{c} = \frac{2}{a}$
164. Prove that $\left[\frac{x^a}{x^b}\right]^c \times \left[\frac{x^b}{x^c}\right]^a \times \left[\frac{x^c}{x^a}\right]^b = 1$
165. Show that: $\frac{1}{1+x^{a-b}+x^{a-c}} + \frac{1}{1+x^{b-c}+x^{b-a}} + \frac{1}{1+x^{c-a}+x^{c-b}} = 1$
166. Show that: $\frac{x^{4/7} \cdot \sqrt[5]{x^3} \cdot \sqrt[7]{x^3}}{\sqrt[8]{x^{-3}} \cdot \sqrt[5]{y^5} \cdot x^8} \cdot \frac{y^2}{(x^{1/8})^3} = y$
167. Find the value of $\left(\frac{81}{625}\right)^{3/4}$
168. Find the value of $\left(\frac{32}{243}\right)^{-4/5}$
169. If $2^{x+4} - 2^{x+2} = 3$ then find the value of x .
170. Prove $\frac{4^{2x}}{2^{4x+4} - 2^{x+1} \cdot 8^x} = \frac{1}{14}$

Unit III

171. If $a^2 + b^2 = 7ab$ show that $\log\left(\frac{a+b}{3}\right) = \frac{1}{2} \log a + \frac{1}{2} \log b$
172. Simplify: $\frac{\log 72 - \log 3}{\frac{1}{5} \log 27 + \frac{1}{2} \log 64}$
173. If $a^2 = b^3 = c^5 = d^6$, prove that $\log_d abc = \frac{31}{5}$
174. If $\log_2 x + \log_4 x + \log_{16} x = \frac{21}{4}$, find x .
175. Simplify: $\log \frac{16}{5} + \log \frac{15}{12} - \log \frac{1}{3}$
176. Evaluate $5 \log \frac{25}{24} + 7 \log \frac{16}{15} + 3 \log \frac{81}{80}$

177. Prove that $\frac{\log \sqrt{27} + \log 8 + \log \sqrt{1000}}{\log 120} = \frac{3}{2}$

178. Find the value of $\frac{36.72 \times \sqrt{4.51}}{(1.87)^3 \times 2.19}$ by using logarithm.

179. Using logarithm find the value of $\frac{(6.215)^{3/5} \times (0.02878)^{2/3}}{(45.67)^{1/2} \times (0.002185)^{1/4}}$

180. Prove that: $\frac{1}{\log_{xy} xyz} + \frac{1}{\log_{yz} xyz} + \frac{1}{\log_{xz} xyz} = 2$

Unit IV

181. Find the inverse matrix for $A = \begin{pmatrix} 4 & 2 & 1 \\ 3 & 1 & 5 \\ 2 & -1 & 0 \end{pmatrix}$ and hence verify that $A \cdot A^{-1} = I$

182. Using matrix solve $\begin{aligned} x + y + z &= 7 \\ x + 2y + 3z &= 16 \\ x + 3y + 4z &= 22 \end{aligned}$

183. Solve by using matrices $\begin{aligned} 4x + 2y + 3z &= 35 \\ x + 3y + 2z &= 45 \\ 2x + y + 5z &= 28 \end{aligned}$

184. Solve by using matrices $\begin{aligned} x + y + z &= 3 \\ 2x - 3y + 5z &= 4 \\ x + 2y + 3z &= 6 \end{aligned}$

185. Find the matrix X which satisfy the relation $4A - 5B + 2X = 0$ where $A = \begin{pmatrix} 1 & 3 & 2 & 5 \\ 2 & 1 & 3 & -1 \\ 0 & 4 & 2 & 3 \end{pmatrix}$

$$B = \begin{pmatrix} 2 & 4 & 3 & 1 \\ 3 & 7 & 4 & -2 \\ 5 & 3 & 1 & 8 \end{pmatrix}$$

186. Find the inverse matrix for $A = \begin{pmatrix} 4 & 2 & 1 \\ 3 & 1 & 5 \\ 2 & -1 & 0 \end{pmatrix}$ and hence verify that $AA^{-1} = A^{-1}A$

187. (i) If $A = \begin{pmatrix} 1 & 3 & -2 \\ -3 & 0 & -5 \\ 2 & 5 & 0 \end{pmatrix}$ find A^{-1}

(ii) Solve $\begin{pmatrix} a & 2 \\ 3b & 4 \end{pmatrix} + \begin{pmatrix} 5 & c \\ 6 & d \end{pmatrix} = \begin{pmatrix} 11 & 6 \\ 12 & 7 \end{pmatrix}$

188. (i) Compute the inverse of the matrix $\begin{pmatrix} 1 & 0 & -4 \\ -2 & 2 & 5 \\ 3 & -1 & 2 \end{pmatrix}$

(ii) Solve $\begin{pmatrix} a+b & 6 \\ 5 & a-b \end{pmatrix} = \begin{pmatrix} 7 & 6 \\ 5 & 3 \end{pmatrix}$

189. (i) If $A = \begin{pmatrix} 1 & 2 \\ 0 & 4 \\ -3 & 5 \end{pmatrix}$ and $B = \begin{pmatrix} 2 & -1 & 1 \\ 0 & 3 & -4 \end{pmatrix}$ find AB and $(AB)^T$ and verify that $(AB)^T = B^T A^T$

(ii) If $P = \begin{pmatrix} 9 & 1 \\ 4 & 3 \end{pmatrix}$, $Q = \begin{pmatrix} 1 & 5 \\ 7 & 12 \end{pmatrix}$ find the matrix R such that $5P + 3Q + 2R$ is a null matrix.

190. (i) If $A = \begin{pmatrix} 1 & 0 & -3 \\ 2 & 4 & 5 \end{pmatrix}$ and $B = \begin{pmatrix} 2 & -1 & 1 \\ 0 & 3 & -4 \end{pmatrix}$ find $(A+B)^T$ and verify that $(A+B)^T = A^T + B^T$

(ii) If $A = \begin{pmatrix} 1 & -1 & 0 \\ 0 & 1 & 1 \end{pmatrix}$, $B = \begin{pmatrix} 1 & -1 & 1 \\ 0 & 1 & -1 \\ 1 & 0 & 1 \end{pmatrix}$ and $C = \begin{pmatrix} 1 & 1 \\ -1 & 0 \\ 0 & 1 \end{pmatrix}$ verify that $A(BC) = (AB)C$

UNIT V

191. A bill is drawn for Rs. 5,913 at six months from July 1st and is discounted on 11th September at $3\frac{1}{2}$ %. How much does the banker get? What is the amount for which the bill is discounted?
192. Find the compound interest on Rs. 6,950 for 3 years if interest is payable half yearly, the rate for the first 2 years being 6% p.a and for the 3rd year 9% per annum.
193. Calculate compound interest and the amount for an investment of Rs. 20,000 for a period of 4 years. The rate of interest are , first 2 years 10% and the next 2 years 12%.
194. An amount of investment became Rs. 28,092 at the end of the second year and Rs. 35,870 at the end of the fourth year. Calculate the investment and the rate of compound interest.
195. The rate of depreciation for a machine is 15% p.a. under diminishing balance method. The purchase price of the machine is RS. 1,20,000. If the machine has a life of 20 years, find out the scrap value of the machine.
196. X purchased a motor car for Rs. 2 50,000 under a hire purchase scheme. He paid 30% as down payment at the time of taking delivery of the car and agreed to pay the balance amount in 10 equal annual instalments, together with a compound interest @ 9% per annum. Calculate the amount of each instalment.
197. The pension of a person is Rs. 48,000 per year. His retirement age is 58 years. If he commutes $\frac{1}{3}$ rd of his pension, find out how much he will receive. Assume that the rate of compound interest is 9% p.a. and the expected life for the purpose of commutation is 70 years.
198. In an examination a candidate who secures 25% of the maximum marks fails by 60 marks but another candidate who secures 42% of the maximum marks get 8 marks more than necessary for passing. Find the maximum marks and the percentage necessary for passing.
199. A machine priced at Rs. 50,000 was sold by a producer to an agent after allowing a trade discount and cash discount of 20% and 6% respectively. The agent sold the machine to a company after allowing a discount of 8%. If the agent earned 12% profit on his cost, find the market price of the machine.
200. A bill for Rs. 6,000 drawn on 1st February 2012 for a period of 5 months is discounted in a bank on 10th February 2012 for a discount @ 6% p.a. Calculate the discount for the bank, True discount, Banker's gain and the amount received by the party.

QUESTION BANK
B.COM Semester III
Core1 – Advanced Financial Accounting 21UCOC31

Section A(1Mark)

Choose the correct answer:

UNIT-I

1. In partnership, partners share their profits and losses in _____ ratio
 - a) Capital
 - b) Equal
 - c) Agreed
 - d) None
2. Under fixed capital system the profit and losses of partners will be transferred to their
 - a) **Current Account**
 - b) Capital Account
 - c) Drawings Account
 - d) Loan Account
3. In the absence of partnership deed, interest on partner's loan shall be
 - a) 5%
 - b) **6%**
 - c) 8%
 - d) 10%
4. Indian partnership Act was enacted in the year
 - a) 1956
 - b) **1932**
 - c) 1986
 - d) 1948.
5. Goodwill is an-----
 - a) Tangible Asset
 - b) **Intangible asset**
 - c) Fictitious Asset
 - d) None
6. When goodwill is brought in cash by the new partner the method is known as
 - a) Revaluation method
 - b) **Premium method**
 - c) Memorandum revaluation method
 - d) Realization method
7. On admission profit from revaluation of assets and liabilities will be shared in
 - a) **Old profit Ratio**
 - b) New Profit Ratio
 - c) Sacrificing Ratio
 - d) None
8. Revaluation Account is a
 - a) **Nominal Account**
 - b) Personal Account
 - c) Real Account
 - d) None of the Above
9. The premium goodwill paid by the new partner must be shared by the old partners in ____
 - a) Old ratio
 - b) **Sacrificing ratio**
 - c) New ratio
 - d) Equal ratio
10. Any amount written off after admission of a partner is transferred to the capital accounts of the partners in
 - a) **New ratio**
 - b) Old ratio
 - c) Sacrificing ratio
 - d) Gaining ratio

Fill in the Blanks

11. The general reserve appearing in the books of partnership should be transferred to the old partner's capital account in their **Old Profit Sharing Ratio.**
12. The profits of the business are to be shared among the partners, when the sharing terms is silent in **Equal** ratio.
13. Current account is opened if the capital accounts are maintained under **Fixed Capital** method.
14. When a partner is admitted, if the value of assets and liabilities are not to be altered, the firm should prepare **Memorandum Revaluation** account.

15. If A and B share profits in the ratio of 3:2 and C is admitted to take 1/10 of profits from each of the partners, the new ratio will be **5:3:2**
16. Interest on capital is calculated on **Opening** capital.
17. Sacrificing ratio = **Old Ratio – New Ratio**
18. The name under which the partnership business is carried on is called the **Firm Name**
19. In case of preparing partnership under fixed capital method, we prepare the two accounts namely **Capital Account** and **Current Account**
20. Partnership is created by an **Agreement**
21. In case of average profits method the value of goodwill depends on two factors namely **Average Expected Profit** and **Number of Years**
22. The statutory provisions regarding admission of a new partner is given **u/s 31** of the partnership Act.
23. Depreciation fund at the time of admission of a new partner is transferred to **Capital** account.
24. Partner's salary to be debited to **Profit & Loss Appropriation account**.
25. A and B are sharing profits in the ratio 3:2. C is admitted as a new partner with 1/5 share. Then the sacrificing ratio is **2:2:1**
26. For the firm, interest on drawings is an **Income/ Receipt**
27. When a goodwill account is raised, credit is given to old partners' capital account in **sacrificing** ratio.

UNIT-II

Choose the correct answer:

1. Gaining ratio can be calculated as follows:
 - a) Old ratio less sacrificing ratio
 - b) Old ratio less New ratio**
 - c) New ratio less Old ratio
 - d) None of the above
2. In the absence of any agreement partner's loan to the firm will carry an interest of
 - a) 6%**
 - b) 10%
 - c) 12%
 - d) 5%
3. If the retiring partners is not paid off immediately amount due to him is transferred to
 - a) Partner's capital account
 - b) Partner's loan account**
 - c) Suspense account
 - d) none
4. Profit or loss on revaluation at the time of retirement must be transferred to the partners in
 - a) Capital ratio
 - b) Old profit sharing ratio**
 - c) Gaining ratio
 - d) Sacrificing ratio
5. A, B and C are partners sharing profits in 2:2:1 if 'C' retires the new ratio will be
 - a) 3:2
 - b) 2:3
 - c) 1:1**
 - d) 2:1
6. Sec 37 of the Partnership Act provides interest on the accounts left by the retiring or deceased partner at
 - a) 5%
 - b) 6%**
 - c) Bank rate
7. On the retirement of a partner the goodwill at its full value is to be credited to the account of
 - a) Only retiring partner
 - b) all partners including retiring partner**
 - c) Only remaining partners.
8. On the retirement of a partner, profit on the adjustment in the value of assets should be credited to the capital accounts of:
 - a) all partners in the old profit –sharing ratio**
 - b) The remaining partners in their new profit – sharing ratio
 - c) The remaining partners in their old profit –sharing ratio
9. The amount of general reserve is transferred to Partner's capital Accounts in:
 - a) New profit sharing ratio
 - b) Capital ratio
 - c) Old profit sharing ratio**

10. When the retiring partner is paid in instalments, the total amount payable to the retiring partner is transferred to:

- a) **His loan account** b) an 'annuity suspense' account c) none of these

Fill in the Blanks

11. Revaluation is **Nominal** account.
12. A, B and C are partners sharing profits in the ratio of 2:2:1. C retired. The new profit sharing ratio between A and B will be **2:2**
13. In the event of death of a partner the accumulated profit and loss are shared by the partners in their **Old Profit sharing** ratio.
14. A partner may retire from the firm with the **Consent** of all other partners.
15. A partner may retire from the firm in accordance with an **Express Agreement** by the partners.
16. **Gaining** Ratio is calculated when a partner retires from the firm.
17. Gaining ratio = **New Ratio – Old Ratio**
18. A, B and C are partners sharing profits and losses in the ratio of 4:2:4. When A retires from the firm what would be the gaining ratio of B and C **2:4**
19. All accumulated profits and losses are distributed among all partners in their **Old ratio**.
20. When the firm does not have sufficient amount to pay of the retiring partners, it can pay the amount under **Instalment** basis.
21. If payment is made to the retiring partner by annuity in some years, an **Annuity Suspense** account is opened.
22. If there is sufficient amount to pay the retiring partner in cash, then the amount can be paid in **Lump Sum**
23. Partnership Act provides interest on the amount left by the retiring partner at **6%**.

UNIT-III

1. When a firm is dissolved the following account is to be prepared
a) Revaluation account **b) Realization account**
c) Memorandum revaluation account d) goodwill
2. When a firm dissolved goodwill amount is closed by transferring to
a) Capital account b) Revaluation account
c) Realization account d) None of the above
3. When the partnership is dissolved the balance in the general reserve should be transferred to
a) **Capital/Current account** b) Realisation account
c) Revaluation account d) None of the above
4. On the dissolution of partnership, profit or loss on realization should be divided among partners
a) In the Capital Ratio **b) In the Profit sharing Ratio**
c) Equally d) None of the above
5. On Dissolution of a firm, when an unrecorded asset is realized, the debit is to the
a) Realisation account b) Capital account
c) Bank account d) Asset account
6. Realisation account is a
a) Nominal account b) Personal account
c) Real account d) Liability account
7. A firm is unable to pay the debts when
a) A partner is insolvent b) A partner has debits balance in capital account

4. The balance in the 'goods sent to branch' account is transferred to
 - a) Branch account
 - b) Head office account
 - c) Profit & Loss account
 - d) Trading or purchases account**
5. Depreciation on assets should be divided among the different departments on the basis of
 - a) Floor area
 - b) Sales price
 - c) Purchase ratio
 - d) Assets value of each department**
6. Rent and Rates are apportioned to different department on the basis of
 - a) Floor area**
 - b) No of workers
 - c) Sales of each dept
 - d) Value of assets kept
7. Selling expenses should be divided among the different department on the basis of
 - a) Space occupied
 - b) Purchases
 - c) Sales**
 - d) None of the above
8. When goods are transferred from one department to another
 - a) Credit the receiving department
 - b) Debit the receiving department**
 - c) Debit the giving department
 - d) None of the above
9. While preparing the departmental accounts advertisement expenditure is apportioned between the departments on the basis of the following
 - a) Space occupied by each dept
 - b) Sales made by each dept**
 - c) Cash in hand with each dept
 - d) None of the above
10. Apportion on the basis of value of assets
 - a) Labour welfare exp.
 - b) Lighting
 - c) Depreciation
 - d) Insurance**

UNIT-V

1. Hire purchase price includes
 - a) Cash price and interest**
 - b) Cash price and down payment
 - c) Down payment and interest
 - d) None of the above
2. The amount of interest is credited by the buyer to
 - a) Interest a/c
 - b) Vendor a/c**
 - c) Asset a/c
 - d) None of the above
3. Down payment is the payment made at the time of_____
 - a) Paying the first instalment
 - b) Signing the agreement**
 - c) Paying the second instalment
 - d) Paying the last instalment
4. When the hire purchaser makes default in paying the instalment the hire vendor has----
 - a) The right to take repossession of the asset**
 - b) No right to take repossession
 - c) The option to reposses or not to reposses
 - d) None of the above
5. Under hire purchase System buyer becomes the owner_____
 - a) On payment of down payment
 - b) After receipt of goods
 - c) On payment of last instalment**
 - d) On payment of first instalment
6. The difference between the hire purchase price and cash price is
 - a) Down payment
 - b) Advance payment
 - c) Interest**
 - d) Principal
7. In the books of hire purchaser, depreciation is charged on
 - a) HP price
 - b) Cash price**
 - c) Cash price/ Hp price whichever is higher
 - d) None of the above
8. The last instalment paid under hire purchase comprises
 - a) Cash price only
 - b) Interest only
 - c) Cash price and interest
 - d) Hire purchase price and interest**
9. Under hire purchase system the initial payment is known as

6. Why is there need for the revaluation of assets and liabilities on the admission of a partner?
7. A and B were partners in a firm sharing profits and losses in the ratio of 3:2. They admit C into the partnership with $\frac{1}{6}$ share in the profits. Calculate the new profit sharing ratio?
8. A, B, C were partners in a firm sharing profits in 3:2:1 ratio. They admitted D for 10% profits. Calculate the new profit sharing ratio?
9. X and Y are partners sharing profits in 5:3 ratio admitted Z for $\frac{1}{10}$ share which he acquired equally for X and Y. Calculate new profit sharing ratio?
10. What is goodwill? What are the factors that effect goodwill?

UNIT II

1. What is meant by retirement of a partner?
2. Is a retiring partner liable for firm's acts after his retirement?
3. Define gaining ratio
4. What are the methods in which payment can be made to an outgoing partner?
5. Why is gaining ratio of the remaining partners calculated at the time of retirement/death of a partner?
6. State the ratio in which share of goodwill of the retiring partner is debited to Capital Accounts of the remaining partners.
7. At what rate is interest payable on the amount remaining unpaid to the executor of deceased partner?
8. Name the account which is opened to credit the share of profit of the deceased partner, till the time of his death to his capital account.
9. State any two deductions that may have to be made from the amount payable to the legal representative of a deceased partner.
10. Who is the executor?

UNIT III

1. Dissolution of a partnership is different from dissolution of a firm
2. State the difference between dissolution of Partnership and Dissolution of Partnership firm.
3. State the accounting treatment for
(i) Unrecorded assets (ii) Unrecorded liabilities.
4. On dissolution, how will you deal with partner's loan if it appears on the
(a) assets side of the balance sheet,
(b) liabilities side of balance sheet.
5. Distinguish between Firm's Debts and Partner's Private Debts.
6. State the order of settlement of accounts on dissolution.
7. On what account Realisation Account differs from Revaluation Account?
8. Who is an insolvent
9. What is piecemeal distribution?
10. Explain Garner vs Murray Rule
11. What is proportionate capital method?

UNIT IV

1. What is the purpose of branch accounting?
2. Are there more types of branch accounting?
3. What are the methods of branch accounting?

4. What are the objectives of branch accounting?
5. What is departmental accounts?
6. What are the advantages of departmental accounts?
7. What are basis for the allocation of common expenses to different departments?
8. How are transfers from one department to another treated in departmental accounts?
9. State the system of departmental accounts.
10. What is the procedure for the preparation of departmental accounts?

UNIT V

1. What is meant by hire purchase system?
2. In what respect hire purchase differ from instalment system?
3. Distinguish between hire purchase and instalment system.
4. What is meant by instalment purchase system?
5. How will you prepare Instalment system account?
6. Discuss the accounting treatment of repossessed goods.
7. What are the benefits of instalment system?
8. What are the benefits of hire purchase system?
9. Give the specimen of hire purchase trading account
10. Give the specimen of instalment purchase trading account

SECTION C (5 Marks)

UNIT-I

1. A and B are partners sharing profits and losses in the ratio of 3:2. They admit C who is to have a tenth share of profits with a guaranteed minimum of Rs.15000. A and B continue to share profits as before but agree to suffer any excess $\frac{1}{10}$ th going to C in the ratio of 4:1 respectively. The profits of the firm for the year are Rs.100000. Prepare profit and loss adjustment account.
2. Show how the following items will appear in the capital accounts of the partners Babu and Gopu when their capitals are fluctuating:

	Babu Rs.	Gopu Rs.
Capital on 1.1.07	800000	700000
Drawing during 2007	160000	140000
Interest at 5% on drawings	4000	2000
Shares of profits for 2007	84000	66000
Interest on capital at 6%	48000	42000
Salary	72000	Nil

3. Show how the following items will appear in the capital account of the Partners X and Y when their capital is fixed

	X (Rs.)	Y (Rs.)
Capital as on 1.1.2005	40000	35000
Drawing during 2005	8000	5000
Interest on capital at 6%	2400	2100
Interest at 5% on drawing	200	100
Share of profit for 2005	4200	3300
Partner's salary	3600	-

4. Raman and Kannan started business with a capital of Rs.50000 and Rs.30000 on 1.4.2000. Raman is entitled to a monthly salary of Rs.800 and they are eligible for interest on capital at 6% They agreed to share the remaining profit in the ratio of 3:2 in the current year, they have earned a profit of Rs.30000. Prepare profit and loss appropriation account for the year ended 31.3.2001.

5. Define Partnership? What are two types of Capital Accounts of Partners?

Gay died on 1st September 2007. The profits for the 3 years ending 30th June 2007 were Rs.7,200, Rs.6,300 and Rs.9,000.

4) On 30th June 2007 Gay's capital was Rs.12000. During the period from 1st July to his date of death, he had withdrawn Rs.4500

Prepare Gay's capital Account and ascertain the amount payable to his Executor.

4. A, B and C were partners sharing profits and losses in the ratio of 2:2:1 On 1st July 2007 their goodwill was valued at Rs.30000, there being no account for it in the books. On this date 'B' retires. Pass Journal entries to record goodwill if

- Goodwill is raised in the books
- Goodwill is raised and not allowed to remain in books
- Only B's share is recorded and written off
- No account is raised for goodwill

5. Arun retires from the partnership in January 1, 2003. Other partners settle the amount due to Arun in three equal annual instalments with interest at 5% the amount due to Arun on 1.1.2003 was Rs.30000 Prepare the loan account of Arun.

6. A, B and C are partners in a firm sharing profits and losses in the ratio of 1/3, 1/2, 1/6 respectively. Their Balance Sheet as on 31.3.2006 was as follows.

Retirement, Retirement cum Admission & Death of a partner

Liabilities	Rs.	Assets	Rs.
Reserve Fund	16000	Building	50000
Capitals:		Plant & Machinery	40000
A	30000	Stock	25000
B	40000	Furniture	10000
		Debtors	18000
Loan payable	15000	Less: Provision	500
Sundry Creditors	<u>25000</u>	Cash	<u>8500</u>
	151000		151000

'C' retires 31.3.2006 subject to the following conditions:

- Goodwill of the firm is valued at Rs.24000
- Machinery to be depreciated by 10%
- Furniture to be depreciated by 5%
- Stock to be appreciated by 15% and buildings to be appreciated by 10%
- Reserve for doubtful debts to be raised to Rs.2000

Prepare necessary ledger accounts and find the amount due to C.

7. A, B and C were partners in a firm, sharing profits and losses in the ratio of 3:2:5 'C' retires and on that date the firm's goodwill is valued at Rs.80000. Pass necessary journal entry to adjust goodwill at the time of retirement.

8. P, Q R and S are partners in a firm sharing profits in the ratio of 2:1:2:1. On the retirement of R, the firm's goodwill was valued at Rs.45000. P, Q and S decided to share the future profits equally. Pass journal entry for goodwill.

9. Discuss the method of payment due to retiring partners?

10. Distinguish between sacrificing and gaining ratio?

UNIT-III

1. The following was the balance sheet of Anbu, Arivu and Arasu as on 31.12.1998.

Liabilities	Rs.	Assets	Rs.
Reserve	3000		
Capitals:		Machinery	25000
Anbu	20000	Stock	11000
Arasu	10000	Goodwill	13000
Arivu	15000	Debtors	9500
Sundry Creditors	<u>12000</u>	Cash	<u>1500</u>
	60000		60000

On the above date the firm was dissolved. The assets realized Rs.50000; the creditors were settled at Rs.11500. Dissolution expenses amounted to Rs.1100. The partners had 3:2:1 as their profit sharing ratio. Give necessary ledger accounts to close the books of the firm.

2. P, Q and R share profits in proportion $\frac{1}{2}$, $\frac{1}{4}$, and $\frac{1}{4}$. On the date of dissolution their balance sheet was as follows:

Liabilities	Rs.	Assets	Rs.
Capitals:		Sundry Assets	40000
P	10000		
Q	10000		
R	6000		
Sundry Creditors	<u>14000</u>		
	40000		40000

The assets realized Rs.35000. Creditors were paid in full. Realization expenses amounted to Rs.1500. Close the books of the firm.

3. A, B, and C are partners sharing profits and losses in the proportion of $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{6}$ respectively. On 31st December 2006 they decided to dissolve the partnership and the position of the firm on this date is represented by the following balance sheet.

Liabilities	Rs.	Assets	Rs.
Capitals:		Land and Building	57000
A	60000	Stock	50000
B	40000		
C	10000	Sundry Debtors	50000
A's Loan account	10000		
Creditors	<u>40000</u>	Cash at bank	<u>3000</u>
	160000		160000

Loan and buildings were sold for Rs.76000; Stock was sold for Rs.47000 and Debtors realized Rs.45000. Expenses of realization amounted to Rs.2000. Creditors are paid in full. You are required to close the books of the firm.

4. What is realisation account?

5. A, B, C and D were partners sharing profit in 3:2:3:2 ratio. Their Balance sheet on the date of dissolution was as follows:

Liabilities	Rs.	Assets	Rs.
Reserve	4000	Assets	17000
Capitals:		Capital: C	6360
A	10000	D	<u>1640</u>
B	5000		
Sundry Creditors	<u>6000</u>		
	25000		25000

On the above date 'C' becomes insolvent and was able to contribute only 50 paise in the rupee. Assets realized Rs.12500. Realisation expenses amounted to Rs.400. Prepare realization account and C's capital account.

6. The following is the Balance sheet of A and B who share profits in the ratio of 3:2 on 31.12.2000

Liabilities	Rs.	Assets	Rs.
Capitals: A	15000	Sundry Assets	45000
B	10000		
Sundry Creditors	<u>25000</u>	Cash	<u>5000</u>
	50000		50000

All assets were sold for Rs.15000 only except cash and the private assets of A and B are insufficient to pay off their liabilities show the relevant accounts for closing the books of A and B.

7. What is piecemeal distribution?

8. The following is balance sheet of A & B who share profits in the ratio of 7:3 on 31.12.2002

Liabilities	Rs.	Assets	Rs.
Capitals: A	120000	Sundry Assets	245000

Sundry Creditors	<u>50000</u>	Cash	<u>5000</u>
	250000		250000

The realization of assets was as follows.

31.1.2003 - Rs.40000

28.2.2003 - Rs.80000

31.3.2003 - Rs.45000

Show the distribution using maximum loss method.

9. When a person is said to be insolvent?

10. The following was the balance sheet of A and B on 31.12.83.

Liabilities	Rs.	Assets	Rs.
Sundry Creditors	38000	Cash at bank	11500

Mrs. A's loan	10000	Stock in trade	6000
B's Loan	15000	Debtors	20000
Reserve Fund	5000	Less: Provision	1000
A's Capital	10000	Fixture & Fitting	4000
B's Capital	<u>8000</u>	Plant & Machinery	28000
		Investments	10000
		P & L account	<u>7500</u>
	86000		86000

The firm was dissolved on 31.12.83 and the following was the result:

- A took over the investment at an agreed value of Rs.8000 and agreed to pay off the loan to Mrs. A
 - The assets realized as follows:
 - Stock Rs.5000, Debtors Rs.18500; Fixture & Filling Rs.4500 and Plant & Machinery Rs.25000
 - The expenses were Rs.1100
 - The Sundry Creditors were paid off less 2 ½% discount.
- A & B shared profits & losses in the ratio of 3:2 journalize the entries to be made on dissolution.

UNIT-IV

1. Royal shoe company opened a branch at Chennai on 1.1.2002. From the following particulars

Calculate the Chennai Branch Account for the year 2002 and 2003.

	2002	2003
	Rs.	Rs
Goods sent to Chennai Branch	15000	45000
Cash sent to Branch for Rent	1800	1800
Salaries	3000	5000
Other expenses	1200	1600
Cash received from the branch	24000	60000
Stock on 31 st December	2300	5800
Petty Cash in hand on 31 st Dec	40	30

2. From the following particulars relating to Kanpur branch for the year ending December 31 2008 show the Branch Account in the Head office books.

	Rs.		Rs
Stock on Jan 1, 2008	60000	Bad debits written off	600
Debtors on Jan 1 2008	24000	Discount allowed to	
Petty Cash on Jan 1, 2008	400	customers	200
Goods sent to branch		Branch expenses paid	
during the year	100000	by Head office	6000
Goods returned to		Petty cash sent to	
Head office	1200	the branch	1000
Sales at the branch:		Petty expense incurred	
Cash	60000	by the branch	800
Credit	<u>84000</u>	Furniture purchased	
	144000	By the branch	2000
Sales returns to branch	500	Stock on 31, Dec 2008	25000
		Cash received from	
		Customers	70000

3. From the following particulars relating to Delhi Branch for the year ending 31st

December 2002, prepare Branch Account in the head office books

	Rs	
Stock at the Branch on 1.1.2002	15000	
Debtors at the Branch on 1.1.2002	30000	
Petty cash at the Branch on 1.1.2002	300	
Goods sent to Branch during 2002	252000	
Remittances from branch during 2002		
Cash Sales	60000	
Received from Debtors	<u>210000</u>	270000
Credit sales during 1982		228000
Cheques sent to branch 2002		
For Salaries	9000	
For Rent and Taxes	1500	
For Petty cash	<u>1100</u>	11600
Stock at the branch on 31.12.2002		25000
Goods returned by the branch		2000
Debtors on 31.12.2002		48000
Petty cash on 31.12.2002		300

4. A Company has two departments P and Q. From the following particulars, prepare Departmental trading and profit & loss account for the year ending 31.3.1999?

	Dept P (Rs)	Dept Q (Rs)
Opening stock	100000	--
Purchases	2300000	200000
Goods from Dept 'P'	-	700000
Wages	100000	160000
Travelling Expenses	10000	140000
Closing stock	800000	180000
Sales	2300000	1500000
Printing and Stationery	20000	16000

5. What is the branch? Explain the objectives of branch accounts?

6. Discuss the features of dependent branches?

7. Distinguish between departmental and branch account?

8. From the following particulars relating to the Trichy Branch for the year ending 31st December 2000 show the Branch Account in the books of Head Office.

	Rs.	
Stock on 1.1.2000	225000	
Debtors as on 1.1.2000	90000	
Petty cash as on 1.1.2000	1500	
Goods sent to branch during the year	375000	
Goods returned to Head office	4500	
Sales at the branch		
Cash	225000	
Credit	315000	540000
Cash received from Debtors		262500
Salas returns to branch		1875

Furniture purchased by the branch	7500
Stock on 31 st Dec 2000	93750

9. Maran and Co. had a branch at Coimbatore. Goods are invoiced to the branch at cost plus 25%. From the

Following particulars prepare branch account in the books of Head office.

	Rs.
Stock on 1.1.2000	2500
Stock on 31.12.2000	3000
Sundry Debtors on 1.1.2000	1400
Sundry Debtors on 31.12.2000	1800
Cash sales	10800
Credit sales	7000
Cash remitted to H.O	15000
Cash remitted by H.O for purchase of safe	1300
Furniture purchased by branch manager	1200
Goods invoiced from H.O	18200
Expenses paid by H.O	1640
Expenses paid by the branch	120

10. What is departmental accounting? Discuss the basis of apportionment of departmental expenses.

UNIT-V

1. X Ltd had purchased machinery on hire purchase system from Y Ltd. The terms are that X Ltd. would pay Rs.20000 on signing of the agreement and 4 annual instalments of Rs.11000 each commencing from the beginning of the next year. Interest charged at 10%. Calculate cash price.

2. On 1st January, 1979 Ram purchased a machine on hire purchase under a hire purchase agreement which provided for an initial payment of Rs.1500 and the balance in four equal half yearly instalment of Rs.2000 each, the 1st instalment falling due on 30th June 1979. Assuming a rate of interest of 6% per Annam, determine the cash price of the machine.

3. Explain the difference between hire purchase and instalment system?

4. A purchase a motor truck on hire purchase system paying Rs.40000 annually for 3 years. The rate of interest charged by the hire vendor is 5% p.a. Given the present value of an annuity of Rs.1 for three years at 5% is Rs.2.72325. Calculate the cash price.

5. Mr. P purchased 4 cars for Rs.14000 each on 1.1.92 under the hire purchase system. The hire purchase price for all the 4 cars was Rs.60000 to be paid as Rs.15000 down payment and 3 equal instalment of Rs.15000 each at the end of each year. Interest is charged at 5% p.a. The buyer depreciates the car at 10% p.a. on straight line method.

From the above particulars give journal entries and relevant ledger accounts in the books of P.

6. Muralidharan purchases a tractor on hire purchase system on July 1, 1998 from Balu Ltd. The total cash price of the same is Rs.264000 payable Rs.80000 on signing of the agreement and 3 equal annual instalments of Rs.80000 payable on June 30th for 3 years. Interest is charged at 15% per annum. You are required to calculate interest in each year's instalment.
7. The cash price of a machine is Rs.30000. The hire purchase price is Rs.36000. No down payment and amount is payable in three equal annual instalments. Calculate the interest for each year.
8. Rakesh purchased a motor car on hire purchase system. Total cash price of the car is Rs.15980 payable Rs.4000 down and three instalments of Rs.6000, Rs.5000 and Rs.2000 payable at the end of first, second and third years respectively. Interest is charged at 5% p.a. Rakesh depreciate the car at 10% p.a on straight line method. From the above particulars give journal entries in the books of Rakesh.
9. Write the entries in the books of buyer and seller under instalment system.
10. Elucidate accounting treatment for complete repossession under hire purchase system.

SECTION D (10Marks)

UNIT-I

1. P and Q enter into a partnership on 1st January 2007 contributing Rs.30000 and Rs.20000 respectively as capital. They agree to share profit in the ratio of 2:1 'P' is to be allowed a salary of Rs.3600 and 'Q' Rs.2400 per year. 6% interest is payable on capital. UNIT- III

1.Raja, Rajini and Robert were partners sharing profits in the ratio of 3:2:1. Their balance sheet as on 31.12.02 was as follows:

Liability	Rs	Assets	Rs
Creditors	15400	Cash at bank	3500
Bills Payable	3600	Stock	19800
Loan by Raja	10000	Debtors	15000
Capitals:		Less: Reserve	1000
Raja	20000	Land	4000
Rajini	16000	Machinery	<u>43700</u>
Robert	8000		
Reserve Fund	<u>12000</u>		
	85000		85000

The firm was dissolved on 1.1.2003. Raja took over land of Rs.5000; Stock and Debtors were sold for Rs.18000 and Rs.14500 respectively and Machinery for Rs.36000. All liabilities are settled Rs.700, a bill discounted was dishonoured and therefore amount has to be paid to bank towards the same. Dissolution expenses were Rs.300. Prepare necessary ledger account and close the firms account.

2. A, B and C are partners sharing profits (or) losses in the proportion of 4:3:2. Their Balance sheet on 31.12.1996 stood as follows.

Liabilities	Rs.	Assets	Rs.
Capitals:		Land and Building	5500

A	4000		Stock	2000
B	2000			
C	500	6500	Debtors	1000
Creditors		<u>3500</u>	Cash	<u>1500</u>
		10000		10000

They agree to dissolve partnership as from 31.12.96. A agrees to take the stock at a valuation of Rs.1500 and B agrees to take the debtors at Rs.700. The land and buildings are sold at auction for Rs.2700. Close the books of the firm.

3. K, M and S are three partners in a firm sharing profits and losses in the ratio of 5:4:3. On March 31.1996, they decided to dissolve the firm when their statement of affairs was as follows

Liabilities	Rs.	Assets	Rs.
Capitals:		Buildings	20500
K	20000	Machinery	12000
M	9000	Stock	9240
S	73030	Investment	12400
		Debtors	7950
		Lease holders	37300
		Goodwill	12790
Sundry Creditors	<u>10860</u>	Cash at bank	<u>710</u>
	112890		112890

K agreed to take over the buildings at Rs.32000 and M took over goodwill, stock and debtors at book value, lease hold at Rs.29250 and machinery at Rs.5780. M also agreed to pay the creditors he took the investment at the agreed value at Rs.11500. Show the realization account, partners capital accounts and the cash account.

4. X, Y, Z are in partnership sharing profits and losses equally. On 31st December 2002 they decided to dissolve the firm whose position on that date is as given below:

Liabilities	Rs.	Assets	Rs.
Reserve Fund	9000	Investments at cost	9000
Capitals:		Less: Reserve	<u>1000</u> 8000
X	10000	Plant & Machinery	21000
Y	10000	Stock in trade	18000
Z	15000		
Profit & Loss Account	6000	Debtors	15000
X current account	5000	Less: Provision <u>2000</u>	13000
Sundry Creditors	<u>500 0</u>		60000
	60000		

The Investment realized Rs.8000 and Debtors Rs.14000. Stock in trade was taken over by M/s Cama & company for Rs.15000, which amount they paid in cash. The plant and machinery realized Rs.14750. The expenses of realization amounted to Rs.750. The creditors were paid off in full. Prepare the necessary accounts showing the above transactions and final payments to the partners.

6. Rani and Lalitha are partners sharing profits as 2:1. The position of the firm was as follows on 31st December 1993 when they decided to dissolve.

Liabilities	Rs.	Assets	Rs.
Reserve	10000		
Capitals:		Machinery	25000
Rani	22000	Stock	10000
Lalitha	22000	Furniture	4000
		Debtors	20000
Sundry Creditors	<u>15000</u>	Cash at bank	<u>10000</u>
	69000		69000

The realization were as

- Rani took over machinery and furniture at book value less 10%
- Lalitha took over the stock at Rs.17500
- Debtors realized Rs.18500
- Creditors were settled at a discount of 5%

Close the books.

7.Ramesh and Ravi were in equal partners. Their balance sheet stood as under on 31.12.1989 when their firm was dissolved.

Liabilities	Rs.	Assets	Rs
Capitals:		Machinery	2160
Ramesh	720	Stock	720
		Furniture	540
		Debtors	900
Sundry Creditors	<u>5760</u>	Cash	324
	6480	Ravi's drawing a/c	<u>1836</u>
			6480

The assets realized as under:

- Machinery Rs.1080, Furniture Rs.180, Debtors Rs.720, Stock Rs.540
- The expenses on realization amounted to Rs.252.
- Ramesh private estate is not sufficient even to pay his private debts where as in Ravi's estate there is a surplus of Rs.252.

Give accounts to close the books of the firm.

8. Sathya, Samma and sakila were equal partners.

Liabilities	Rs.	Assets	Rs.
Reserve	3000		
Capitals:		Sakila's capital	3800
Sathya	9000	Stock	9250
Samma	4000	Furniture	5200
		Debtors	6250
Sundry Creditors	<u>9000</u>	Cash in hand	<u>500</u>
	25000		25000

On December 31.2008 the firm was dissolved due to sakila's insolvency. Only Rs.5850 could be realized from debtors while stock and furniture fetched Rs.5840 and Rs.4000 respectively. Expenses came to Rs.90. Sakila's estate could pay only 50% of what due from her. Show journal entries, prepare ledger accounts and close the books of the firm, Apply Garner Vs Murray rule.

9. K, L and M who were equal partners, dissolved their partnership on June 30, 2008.

Liabilities	Rs.	Assets	Rs.
Capitals:			
K	30000	Sundry Assets	40000
L	30000	M's account	30000
		Profit & Loss a/c	<u>30000</u>
Sundry Creditors	<u>40000</u>		
	100000		100000

Sundry assets realized Rs.34000. An amount of Rs.3000 were received from K's estate and no surplus was available in the estates of L and M. Close the books of the firm.

10. Given below is the Balance sheet of M/s A, B and C as on 31 December 2005.

Liabilities	Rs.	Assets	Rs.
A's loan	10000	Stock	24000
Capitals:		Debtors	20000
A	5000	C's capital account	10000
B	3000	Furniture	3000
Sundry Creditors	<u>40000</u>	Cash at bank	<u>1000</u>
	58000		58000

Owing to the inability of the firm to pay off its creditors, the partners decided to dissolve the firm as from the above date. Stock realized Rs.15000, Debtors Rs.16000 and furniture Rs.1000. Expenses amounted to Rs.3000. 'B' and 'C' cannot pay anything; 'A' can contribute only Rs.1500 from his private estate.

11. P, Q and R were partners in a firm sharing profits and losses in the ratio of 2:2:1 was dissolved on December 31, 2007 and balance sheet on that date was as follows:

Liabilities	Rs.	Assets	Rs.
Capital account		Other assets	38000
P	16000		
Q	10000		
R	3000		
Profit and Loss account	5000		
Sundry Creditors	<u>6000</u>	Cash in hand	<u>2000</u>
	40000		40000

The assets were realized gradually Rs.10000 was received in the first instalment; Rs.10000 the second time and Rs.13000 finally. Show how cash was distributed applying Garner Vs Murray principle.

Note: Application of Garner Vs Murray principle refers to the maximum loss method.

UNIT-IV

1. The head office of a company invoices goods to its shillong Branch at cost plus 20%.

The shillong Branch also purchases independently from local parties goods for which payments are made by the head office. All the cash collected by the branch is banked on the same day to the credit of the head office and all expenses are directly paid by the head office except for a petty cash account maintained by the branch for which periodical transfers are made from the head office. From the following particulars, show the Branch

account as maintained in the Head office books reflecting the Branch profit for the year ended 31,December 2007.

Imprest Cash	1.1.2007	2000
	31.12.2007	1850
Sundry Debtors on	1.1.2007	25000
Stock on	1.1.2007	
Transferred from H.O at invoice price	24000	
Directly purchased by branch	<u>16000</u>	40000
Cash sales		45000
Credit sales		130000
Direct purchase		45000
Returns from customers		3000
Goods sent to branch from H.O at invoice price		60000
Branch expenses		30000
Transfer from H.O for petty cash expenses		2500
Bad debts		1000
Discount to customers		2000
Received from customers		125000
Stock on 31.12.2007		
Transferred from H.O Invoice price	18000	
Directly purchased by branch	12000	30000

2. New stores of Delhi had a branch at Chennai Goods are sent by the head office at invoice price which at a profit of 20% on invoice price. All expenses of the branch are paid by the head office. From the following particulars prepare branch account in the head office books.

(i) When goods are shown at cost price

(ii) When goods are shown at invoice price

	Rs		Rs
Opening balance		Remitted made to H.O	
Stock at Invoice price	11000	Cash sales	2650
Debtors 1700		Cash collected from	
Petty cash 100		Debtors	21000
Goods sent branch at		Goods returned by branch	
Invoice price	20000	at invoice price	400
Expenses met by H.O:		Balance at the end:	
Rent	600	Stock at invoice price	13000
Wages	200	Debtors	2000
Salary & office expenses	900	Petty Cash	25

3. The following purchases were made by a firm having three departments.

Dept A – 1000 units, **Dept B** – 2000 units, **Dept C** – 2400 units

At a total cost of Rs. 100000

Stock on 1st January were

Dept A – 120 units, Dept B – 80 units, Dept C – 152 units.

Sales were Dept A – 1020 units at Rs.20 each, Dept B – 1920 units at Rs. 22.50 each, Dept C – 2496 units at Rs.25 each. The rate of gross profit is same in each case.

Prepare Departmental Trading Account.

4. ABC & Co has two departments P and Q. From the following particulars prepare Departmental Trading and Profit and Loss Account for the year ended 31.3.2014 and also ascertain the net profit to be transferred to balance sheet.

Particulars	Dept. P Rs.	Dept. Q Rs.
Opening Stock	100000	--
Purchases	2300000	200000
Goods from Dept P	--	700000
Wages	100000	160000
Travelling expenses	10000	140000
Closing stock at cost to the dept	800000	180000
Sales	2300000	1500000
Printing and Stationery	20000	16000

The following expenses incurred for both the departments were not apportioned between the departments.

- (i). Salaries Rs.270000
- (ii). Advertisement expenses Rs.90000
- (iii). General expenses Rs.800000
- (iv) Depreciation on machinery Rs.48000

Advertisements expenses are to be apportioned in the turnover ratio. Salaries in 2:1 ratio and depreciation in 1:3 ratio between the departments P and Q. General expenses are to be apportioned in 3:1 ratio.

5. Modern company has two departments X and Y. Department X sells goods to Y department at normal market Price. From the following particulars prepare departmental trading and profit and loss account for the year ended 31.12.2003

Particulars	Dept. X Rs.	Dept. Y Rs	General Total Rs
Stock on 1.1.2003	15000	-	-
Purchases	250000	40000	-
Goods from department X	-	40000	-
Wages	15000	20000	-
Salaries (departmental)	7000	5000	-
Closing stock at cost to the depart	80000	20000	-
Sales	260000	145000	-
Printing & Stationery	2500	1500	-
Machinery	-	15000	-
Advertisement (general)	-	-	12000
Salaries (general)	-	-	18000

Depreciate machinery by 10%. The general unallocated expenses are to be apportioned in the ratio of 2:1. To the departments X and Y. Half of the closing stock of department Y represents goods received from department X.

6. The southern confectionary company Mumbai has a branch at Chennai. Goods are invoiced to the Chennai Branch at selling prices being cost plus 25% From the following details prepare Chennai Branch Account for the year ended 1998.

	Rs.		Rs.
Stock 1.1.1998	12500	Cash Sales for the year	54000
Stock 31.12.1998	15000	Credit sales for the year	35000
Debtors 1.1.1998	7000	Cash received from Debtors	33000
Debtors 31.12.1998	9000	Goods invoiced from Mumbai	91000
Rent and Rates		Wages paid from H.o	3400
(paid by H.O)	4000		
Sundry expenses			
(paid by H.O)	800		

7. Indian Traders Bombay opened a branch at Baroda on 1st January 2008. The following information is available in respect of the branch for the year 2008.

	Rs.
Goods sent to branch	75000
Cash sales at the branch	50000
Credit sales at the branch	60000
Salaries of the branch staff paid by head office	15000
Office expenses of the branch paid by the head office	12000
Cash remittances to branch towards petty cash	6000
Petty cash at branch on 31.12.2008	500
Debtors at branch on 31.12.2008	5000
Stock at the branch on 31.12.2008	27000

Prepare Branch Account to show the profit / loss from the branch for the year 2008.

8. A Head office in Mumbai has a branch at Delhi to which goods are invoiced by the head office at cost plus 25% prepare

- (i) Delhi Branch Trading profit and Loss Account
- (ii) Delhi Branch Debtors Account
- (iii) Delhi Branch Account

	Rs.
Stock in the beginning	12500
Debtors in the beginning	12000
Goods received from Mumbai	40000
Cash sales	16000
Cash received from Debtors	29500
Goods returned to H.O	2000
Cash received for expenses	14500
Stock at the end	15000
Debtors at the end	22500

9. What is departmental accounting .Discuss the various types of departmental expenses and the basis for apportionment of non allocable expenses

10. The firm had two departments, cloth and readymade cloths. The Ready-mades are made by the firm itself out of cloth supplied by the cloth department at its selling price. From the following figures prepare departmental trading and profit and loss account for the year 1999.

	Cloth Dept	Readymade dept
	Rs.	Rs.
Opening stock	300000	50000
Purchases	2000000	15000

Sales	2200000	450000
Transfer to readymade dept	300000	-
Expenses: Manufacturing	-	60000
Selling	20000	6000
Closing Stock	200000	60000

The Stock in the readymade dept. may be considered as consisting of 75% cloth and 25% other expenses. The cloth department earned gross profit at the rate of 15% in 1998. General expenses of the business as a whole came to Rs.110000.

UNIT-V

1.X purchased a truck for Rs.160000 from Y on 1.1.93 payment to be made Rs.40000 down and Rs.46000 at the end of first year Rs.44000 at the end of second year and Rs.42000 at the end of third year. Interest is to be charged at 5% X depreciate the truck at 10% p.a. on W.D.V. method X after having paid down payment and first instalment, could not pay second instalment. Then Y took possession of the truck and after spending Rs.4000 on repairs of the asset, sold it away for Rs.91500. Give the ledger accounts in the books of the both parties.

2.X Co. Ltd. Purchased Lorries from Sugal & Co on hire purchase system on 1.4.95. Payment being made Rs.298500 down and Rs.300000 annually for three years. The instalments are required to be paid on 31st March each year. The cash price of the Lorries purchased was Rs.930000. Sugal & Co charged interest @ 20% per annum. X Co Ltd. Provided depreciation on lorries @ 20% p.a on the diminishing Balance method. The books of account are closed on March 31, every year. Prepare ledger accounts in the books of X Co Ltd.

3. P purchased a machine on hire purchase system for Rs.56000, payment to be made Rs.15000 down and 3 instalments of Rs.15000 each at the end of each year. Rate of interest is charged at 5% p.a. Buyer depreciates the asset at 10% p.a. on written down value method.

Because of financial difficulties, P after having paid the down payment and first instalment at the end of the first year, could not pay second instalment and the seller took possession of the machine Seller after expending Rs.357 on repairs of asset sold it away for Rs.30110.

Open ledger accounts in the books of the both parties to record the transactions.

4. On 1.1.1997 Sharma purchased a plant from Ahuja on hire purchase system. The hire purchase price was settled at Rs.60000 payable as to Rs.15000 on 1.1.97 and Rs.15000 at the end of three successive years. Interest was charged at 5% p.a. The asset was to be depreciated in the books of the purchaser at 10% p.a. on reducing instalment method. Given the present value of an annuity of Re. 1 per annum for three years @ 5% interest is Rs 2.7232.

Show the vendors Account and plant account in the books of the purchaser. All calculations are to be made to the nearest rupee.

5. On 1.1.98 National Transport Company purchased from Metro Motors five trucks costing Rs.40000 each on the hire purchase system. It was agreed that Rs.50000 should be paid immediately and the balance in three instalments of Rs.60000 each at the end of each year. The Metro Motors charged interest @ 10% p.a. The buyer depreciates truck at 20% p.a. on the diminishing balance method.

The buyer paid cash down and two instalments but failed to pay the last instalment. Consequently, the Metro Motors repossessed three trucks leaving two trucks with

the buyer and adjusting the value of 3 trucks against the amount due. The trucks repossessed were valued on the basis of 30% depreciation p.a. On the written down value. The trucks repossessed were sold by Metro Motors for Rs.60000 after necessary repairs amounting to Rs.10000. Open the necessary ledger accounts in the books of both the parties.

6. On 1st Jan 2000, X purchased a machine from ABC Ltd. On hire purchase basis. The particulars are as follow

1. Cash price Rs.10000
2. Rs.4000 to be paid on signing the contract
3. Balance in three instalments of Rs.2000 plus interest
4. Interest charged on outstanding balance at 5%
5. Depreciation at 10% p.a on written down value method prepare ABC Ltd. Account in the books of purchaser

7. P purchased 4 cars of Rs.14000 each by the hire purchase system. The hire purchase price for all the 4 cars was Rs.60000 to be paid as Rs.15000 down payment and three instalments of Rs.15000 each at the end of each year. Interest is charged at 5% per annum. Buyer depreciates the car at 10% p.a on straight line method.

After having paid the down payment and the first instalment, the buyer could not pay the second instalment and the seller took possession of three cars at an agreed value to be calculated after depreciating cars at 20% per annum on written down value method. One car was left with the buyer.

Seller after spending Rs1200 on repairs sold all the 3 cars to X for Rs.35000. Open ledger accounts in the books of hire purchaser and the hire vendor.

8. On 1st January 1996 Baba & Co. purchased a machine on hire purchase basis, the total amount payable being Rs.42700. Payment was to be made Rs.12000 on that date and balance in three half-yearly instalments of Rs.11400, Rs.10900, and Rs.8400 commencing from 30th June 1996. The vendor charged interest @10p.a., calculated on half-yearly rests. Baba & Co. close their books annually on 30th June and provide depreciation @10p.a. on reducing balance method.

Determine the cash price of the machine and show the relevant accounts in the books of Baba & Co.

9. Malan purchased a machine on hire purchase system on 1st January 1993. The terms of payment are four annual instalments of Rs.12690 at the end of each year. Interest is charged @5% and is included in the annual payment of Rs.12690.

Show Machinery account and Hire vendor account in the books of Malan who defaulted in the payment of the third yearly payment where upon the vendor repossessed the Machinery. Malan provides depreciation on the machinery @10p.a., on the reducing balance.

10. On 1.1.93, a firm purchased a Truck on instalment system. The cash price of the machinery was Rs.11175 and payment was to be made as follows:

Rs.3000 was to be paid on signing of the agreement and the balance in three instalments of Rs.3000 each at the end of each year. Interest at 5% is charged by the vendor. The firm has decided to write off 10% annually on the diminishing balance of the cash price.

Give journal entries and ledger Accounts in the books of the purchaser and Hire vendor.

Unit –II:

1) A book where small items of expenditure like postage, carriage, coolies, stationery, etc., are entered is called _____.

- a) **Petty cash book**
- b) Sales book
- c) Purchases book
- d) Cash book

2) Subsidiary books are maintained in _____.

- a) **Big business concerns**
- b) Small business concerns
- c) Banks

 - d) None of the above
16. Free sample using by manufacturers is debited to _____.
 - a) Trading account
 - b) Balance sheet
 - c) **Profit & Loss Account**
 - d) None of the above

Section B

Answer the following in about 50 words each:

Unit – I:

1. Define the term Accounting.
2. State any two functions of Accounting.

3. List the persons interested in Accounting.
4. What is bookkeeping?
5. What is meant by Double Entry System?
6. What is a Journal?
7. Specify the classification of accounts.
8. State the golden rules for accounting.
9. What do you mean by ledger?
10. Distinguish between Journal and Ledger.

Unit – II:

1. What are subsidiary books?
2. What do you mean by Journal Proper?
3. State any two advantages of Subsidiary books.
4. Distinguish between trade discount and cash discount.
5. What is a cash book? State its types.
6. What is a petty cash book?
7. What do you mean by two column cash book?
8. What do you mean by three column cash book?
9. State briefly the imprest system of petty cash book.
10. State the different types of subsidiary books.

Unit – III:

1. What is a trial balance?
2. State the functions of trial balance.
3. Give the specimen of trial balance.
4. Bring out the objectives of preparing trial balance.
5. Differentiate between balance sheet and trial balance.
6. How is the preparation of trial balance useful?
7. What is the purpose of preparing trial balance?
8. Does trial balance discloses all errors?
9. State the limitations of trial balance.
10. Is trial balance an account? If not explain, why?

Unit – IV:

1. What are final accounts?
2. What is the aim of preparing final accounts?
3. What do you mean by trading account?
4. What is a manufacturing account?
5. What is a profit and loss account?
6. What are adjusting entries?
7. State some of the common adjustments.
8. Give the adjusting entry for Depreciation.
9. What are bad debts?
10. State the provision for interest on capital and interest on drawings.

Unit – V:

1. What do you mean by balance sheet?
2. State any two differences between trial balance and balance sheet.
3. State the provision for closing stock.

5. State the provision for income received in advance and accrued income.
6. Give the formula for manager's commission.
7. State the provision for bad and doubtful debts.
8. State the provision for discount on creditors and debtors.
9. How is goods distributed as free sample shown in the account?
10. State the provision for loss of stock by fire.

Section – C

Answer the following in about 500 words each:

Unit – I:

- 1) Journalize the following transactions in the books of Mrs. Shanthi.

2010 Jan.	1	Started business with cash	Rs. 9,000
	2	Purchased goods for cash	Rs. 2,100
	3	Sold goods for cash	Rs. 700
	4	Deposited into Bank	Rs. 3,000
	5	Cash received from Rajan	Rs. 700
	8	Paid salary	Rs. 300
	10	Received commission	Rs. 200
	11	Purchased Furniture	Rs. 1,000
	15	Received Interest	Rs. 50

2) Journalise the following transactions:

2005

Jan 11	Purchased goods for Rs. 1,500
12	Purchased goods from Jeyam Stores Rs. 900
13	Sold goods for Rs. 1,100
14	Sold goods to Raju Rs. 250
15	Bought furniture for cash Rs. 2,000
16	Bought furniture from JFA Furniture Mart Rs. 800
17	Goods returned to Jeyam stores Rs. 200
18	Raju returned goods worth Rs. 100
19	Drew for private use Rs. 500
20	Electric charges amounted Rs. 120

3) Pass necessary journal entries for the following transactions in the books of Rajan:

2009

May 11	Rs. 2,000 was stolen from the office
18	Given on charity cash Rs. 400, Goods Rs. 800 and a fan Rs. 1,000
20	Received cash from Raj bad debts written off last year Rs. 1,800
24	Goods worth Rs. 1,500 stolen by an employee
26	Installation charges Rs. 600
27	Goods worth Rs. 800 destroyed by fire
30	Goods worth Rs. 500 distributed as sample

4) Journalise the following transactions.

1996

April 1	Started business with a capital Rs. 5,000
3	Purchased goods from Mr. Guru Rs. 1,500
5	Sold goods to Mr. Kamal Rs. 500
7	Cash sales Rs. 1,300
8	Purchased furniture for Rs. 1,000
9	Received Interest Rs. 50
11	Withdrew cash from bank for personal use Rs. 200
15	Deposited cash into bank Rs. 2,000

5) Journalise the following transactions.

	Rs.
Salary paid to Santhosh	15,000
Bought goods from Shyam	10,000
Sold goods to Raja	12,000
Purchased furniture from Hari & Co. for cash	1,500
Cash received from Raj	18,000
Paid cash to Shyam	6,000
Cash received from "S" Rs. 1,900 and discount Allowed to him Rs. 100	

6) From the information below, journalise it.

- Salary paid Rs. 5,000
- Rent paid to house owner Rs. 1,000
- Credit purchases from Mr. A Rs. 2,000
- Discount received Rs. 500
- Cash sales Rs. 10,000

7) Journalise the following transactions in the books of Martin.

1997

- July 1 Bought a cycle for office use for Rs. 1,600 in cash
4 Sold goods on credit to the following customers
Deva 2,000
Kanna 3,000
Krishna 4,000
9 Martin the proprietor has brought in further to the business.
Cash 7,000
Furniture 3,000
Stock 5,000
The same for business purpose building worth Rs. 25,000
13 Bought goods from Ravindra & Bros for Rs. 2,400 on credit

8) Journalise the following transactions in the books of a trader.

April 1994: Cash in hand Rs. 8,000, Cash at bank Rs. 25,600, Stock of goods Rs. 20,000, Furniture Rs. 4,000, Building Rs. 10,000

Debtors: Vijay Rs. 2,700, Anil Rs. 1,500, Akbar Rs. 2,000, Anbu Rs. 1,800, Madhu Rs. 100

Creditors: Anand Rs. 5,400, Ahamed and Co Rs. 7,700, Balu Rs. 5,200, Loan from wife Rs. 10,000

April

- 1994 1 Purchased goods worth Rs. 5,000 and 20% trade discount and 5% cash discount.
3 Rs. 2,646 received from Vijay, allowed him discount of Rs. 54
8 Goods worth Rs. 500 were damaged in transit and a claim was made on the railway authorities for the same
10 Anbu is declared insolvent and a dividend of 50 paise in the rupee is received from him in full settlement.

9) Prepare A's account from the following transactions:

1995

- Jan 3 A bought goods for Rs. 5,000 subject to a trade discount of 15%.
6 Bought goods from A for Rs. 2,500
8 Sold goods to A for cash Rs. 3,000
10 Damaged goods returned by A Rs. 200
14 Received cash from A Rs. 1,000, allowed him discount Rs. 100
15 A sold goods for Rs. 1,000 subject to trade discount of 10%
20 Sold goods to A on credit Rs. 2,000
30 A settled his account

10) Distinguish between Double entry system and Single entry system.

Unit – II:

1) Enter the following transactions in the simple column cash book.

2003

- Aug 1 Started business with cash Rs. 1,000
2 Purchased goods for cash Rs. 400
3 Sold goods for Rs. 840

4	Paid to PrabhuRs. 200
5	Received from Asoka Rs.700
6	Paid Rent Rs. 100
7	Sold goods for cash Rs. 500

2) Enter the following transactions in the purchases book o M/s Arun and post them in the ledger.

2004

Jan	9	Purchased from Joseph stores, 15 boxes of pencil @ Rs. 6 per box
	15	Purchased for cash 10 Exercise book @ Rs.5 per book
	18	Bought Furniture from Fancy furniture mark Rs. 2,000, trade discount 10%
	21	Purchased 25 bags of tea dust from Subam Traders @ Rs. 20 per bag, trade discount 5%

3) Enter the following transactions in the sales book o M/s Arun and post them in the ledger.

2005

Feb	1	Sold goods to prince Rs. 2,500
	10	Sold to Kannan 100 shirts @ Rs. 45 per shirt, trade discount 10%
	21	Sold old furniture to Kumar & Sons Rs. 1,200 on credit

4) Enter the following transactions in the purchases returns book o M/s Arun and post them in the ledger.

2004

Mar	1	Returned to Nellai stores goods worth Rs. 750
	8	Returned 10 boxes of soaps to Colombo stores Rs. 1,500
	21	Returned to Modern Culture Palace 10 Thanjavur Plates @ Rs. 200 each subject o 20% trade discount.

5) Enter the following transactions in the sales returns book o M/s Arun and post them in the ledger.

2004

Apr	1	Suresh returned goods worth Rs. 700
	15	Mahesh returned goods worth Rs. 800

6) Enter the following in a cash book with cash and discount columns only.

2002

 25 Sold to V. Vasu 50 kg tea at Rs. 20 per kg

9) Enter the following transactions in the proper subsidiary books.

2000

Apr 1	Purchased goods from Das	Rs. 1,000
2	Sold goods to Sen	Rs. 400
3	Sold goods to Ramesh	Rs. 250
5	Bought goods from Suresh	Rs. 200
7	Sold goods to A for cash	Rs. 300
8	Received goods returned by Sen	Rs. 50
9	Purchased goods from Shyam	Rs. 600
10	Returned goods to Suresh	Rs. 100

10) Enter the following transactions in the proper subsidiary books.

2005

Mar 1	Sold goods on credit to 'A' for	Rs. 6,500
2	Credit sales	Rs. 8,400
3	Goods returned from 'A'	Rs. 600
4	Credit sales to 'B'	Rs. 8,000
5	Sold goods on credit to 'A' for	Rs. 5,000
6	Sales returns from 'B'	Rs. 800
7	Sales returns from 'A'	RS. 350

Unit – III:

1. Prepare Trial Balance from the following.

Particulars	Rs.
Capital	75,000
Sales	1,25,000
Stock	30,000
Debtors	40,000
Purchases	50,000
Salary	10,000
Interest (Cr)	5,000
Loan to Rajan	25,000
Bills Payable	9,000
Wages	3,000
Bad Debts	2,000

- Cash 12,000
Buildings 42,000
2. From the following list of balances, prepare a trial balance as on 31.03.2000
- | | | | |
|---------------------|--------------|----------------|--------------|
| Capital | Rs. 1,00,000 | Buildings | Rs. 15,000 |
| Drawings | Rs. 18,000 | Furniture | Rs. 7,500 |
| Motor Van | Rs. 25,000 | Loan from Arun | Rs. 15,000 |
| Interest paid | Rs. 900 | Sales | Rs. 1,00,000 |
| Purchases | Rs. 75,000 | Stock | Rs. 25,000 |
| Wages | Rs. 3,000 | Salaries | Rs. 15,000 |
| Commission Received | Rs. 7,500 | Debtors | Rs. 28,100 |
| Bank balance | Rs. 20,000 | Creditors | Rs. 10,000 |
3. Correct the following trial balance as on 31.3.97.
- | | | | |
|------------------|-----------------|-------------------|-----------------|
| Returns outwards | Rs. 16,000 | Debtors | Rs. 15,000 |
| Opening stock | Rs. 34,200 | Rent paid | Rs. 5,000 |
| Salaries | Rs. 12,000 | Capital | Rs. 55,200 |
| Creditors | Rs. 48,000 | Machinery | Rs. 18,000 |
| Bank | Rs. 45,000 | Returns inwards | Rs. 3,000 |
| Carriage inwards | Rs. 6,000 | Discount received | Rs. 4,000 |
| Rent received | Rs. 3,000 | General expenses | Rs. 6,000 |
| Discount allowed | Rs. 2,000 | Sales | Rs. 1,40,000 |
| Purchases | Rs. 1,00,000 | Building | Rs. 20,000 |
| Total | 2,66,200 | Total | 2,66,200 |
4. The following trial balance has been prepared wrongly and you are required to prepare the trial balance correctly.

Particulars	Debit	Credit
Capital	22,000	
Stock		10,000
Debtors	8,000	
Creditors		12,000
Machinery		20,000
Cash in hand		2,000
Bank overdraft	14,000	
Sales return		8,000
Purchase return	4,000	
Miscellaneous expenses	12,000	
Sales	26,000	
Purchases	10,000	
Wages		12,000
Salaries		200
Prepaid Insurance	10,800	
Bills payable	1,400	
Outstanding expenses		
Total	1,08,200	1,08,200

5. From the following balances extracted from the books of Mahimaidoss, prepare a trial balance as on 31st March 1992:

Particulars	Rs.	Particulars	Rs.
Capital	24,500	Loan (Cr)	7,880
Drawings	2,000	Sales	65,360
General expenses	3,500	Purchases	47,000
Buildings	11,000	Motor Car	2,000
Machinery	9,340	Reserve Fund	900
Stock	16,000	Commission (Cr)	2,370
Taxes and Insurance	1,315	Car expenses	1,800
Wages	7,200	Bills payable	3,800
Debtors	7,280	Cash	80
Bad debts	550	Bank overdraft	4,300
Creditors	2,500	Charity	105
Discount	2,440		

6. From the following balance of accounts, prepare trial balance.

Capital Rs. 40,000, Buildings Rs. 6,000, Bank Rs. 4,000, Interest paid Rs. 350, Bills receivable Rs. 8,000, Debtors Rs. 30,000, Bills payable Rs. 15,900, Furniture Rs. 6,500, Discount received Rs. 1,200, Discount allowed Rs. 2,100, Machinery Rs. 8,000, Creditors Rs. 7,850.

7. The following balances were extracted from the ledger of Ramakrishna Engineering works on 31st March 1997. You are required to prepare a trial balance as on that date in proper form:

Particulars	Rs.	Particulars	Rs.
Capital	24,000	Loan (Cr)	7,880
Drawings	6,000	Sales	65,360
General expenses	3,500	Purchases	47,000
Buildings	11,000	Motor Car	2,000
Machinery	9,340	Reserve Fund	900
Stock	16,000	Commission (Cr)	2,370
Taxes and Insurance	1,315	Car expenses	1,800
Wages	7,200	Bills payable	300
Debtors	7,280	Cash	80
Bad debts	550	Bank overdraft	4,300
Creditors	43,000	Charity	105
Discount	2,440		

8. The following balances were extracted from the ledger of Radhakrishna Engineering works on 31st March 1997. You are required to prepare a trial balance as on that date in proper form:

Particulars	Rs.	Particulars	Rs.
Capital	20,000	Loan (Cr)	3,880
Drawings	5,000	Sales	45,360
General expenses	5,500	Purchases	37,000

Buildings	31,000	Motor Car	2,000
Machinery	2,340	Reserve Fund	900
Stock	6,000	Commission (Cr)	1,370
Taxes and Insurance	11,315	Car expenses	2,800
Wages	2,200	Bills payable	300
Debtors	6,280	Cash	80
Bad debts	550	Bank overdraft	7,300
Creditors	43,000	Charity	105
Discount	1,440		

9. The following balances were extracted from the ledger of Mr. Arjun on 31st March 1997.

You are required to prepare a trial balance as on that date in proper form:

Particulars	Rs.	Particulars	Rs.
Capital	14,000	Loan (Cr)	3,880
Drawings	2,000	Sales	35,360
General expenses	1,500	Purchases	17,000
Buildings	41,000	Motor Car	1,000
Machinery	3,340	Reserve Fund	900
Stock	6,000	Commission (Cr)	1,370
Taxes and Insurance	21,315	Car expenses	1,800
Wages	4,200	Bills payable	300
Debtors	6,280	Cash	80
Bad debts	550	Bank overdraft	3,300
Creditors	43,000	Charity	105
Discount	440		

10. The following balances were extracted from the ledger of Mrs. Anjali on 31st March 1997.

You are required to prepare a trial balance as on that date in proper form:

Particulars	Rs.	Particulars	Rs.
Capital	22,000	Loan (Cr)	7,580
Drawings	4,000	Sales	61,360
General expenses	500	Purchases	48,000
Buildings	10,000	Motor Car	2,000
Machinery	9,340	Reserve Fund	900
Stock	17,000	Commission (Cr)	2,370
Taxes and Insurance	1,215	Car expenses	1,800
Wages	7,400	Bills payable	200
Debtors	7,180	Cash	80
Bad debts	550	Bank overdraft	5,300
Creditors	41,000	Charity	105
Discount	2,340		

Unit – IV:

1. Prepare profit and loss account for the year ending 31.3.1999.

Particulars	Rs.	Particulars	Rs.
Gross Profit	25,000	Stationery	75

Salaries	5,600	Rent	650
Insurance	200	Interest on loan	225
Discount allowed	400	Repairs	125
Discount received	300	Office expenses	55
Commission earned	100	General expenses	875
Advertisement	450	Postage	175
Taxes	150	Printing charges	375
Travelling expenses	500		

2. Ascertain cost of goods sold from the following figures:

Particulars	Rs.
Opening stock	8,500
Purchases	30,700
Direct Expenses	4,800
Indirect Expenses	5,200
Closing Stock	9,000

3. From the following, calculate Gross profit.

Particulars	Rs.
Opening stock	1,00,000
Purchases	1,20,000
Carriage inwards	10,000
Sales	5,00,000
Closing Stock	50,000

4. From the information given below, prepare trading account.

Particulars	Rs.
Opening stock	1,00,000
Purchases	1,50,000
Direct Expenses	10,000
Purchases Return	25,000
Closing Stock	50,000
Carriage inwards	5,000
Sales	4,00,000

5. From the following information, ascertain gross profit and net profit.

Particulars	Rs.
Opening stock	2,400
Purchases	15,205
Indirect Expenses	200
Return outwards	185
Return inwards	860
Closing Stock	3,840
Carriage inwards	524
Sales	20,860
Loss due to fire	1,000
Manufacturing wages paid	2,800
Manufacturing wages owing	96

6. From the following particulars, calculate cost of goods and gross profit.

Particulars	Rs.
Opening stock	30,000
Purchases	21,000
Direct Expenses	5,000
Purchases Return	1,000
Closing Stock	12,000
Sales	78,000

7. Calculate stock at the end.

Particulars	Rs.
Opening stock	5,000
Purchases	20,000
Direct Expenses	22,000
Sales	45,000
Rate of gross profit on cost $\frac{1}{4}$.	

8. Calculate the stock in the beginning.

Particulars	Rs.
Closing stock	8,000
Purchases	60,000
Sales	80,000
Loss on cost $\frac{1}{6}$.	

9. From the following particulars, prepare the provision for bad debts account.

1990

Jan	1	Provision for bad debts	2,500
Dec	31	Bad debts	1,870
		Debtors	20,000

Make a provision for bad debts at 5% on debtors.

10. The following information appear in the books of a concern.

Provision for doubtful debts 1.1.05	6,500
Bad debts written off during the year	4,000
Sundry debtors on 31.12.05	75,000

Of the sundry debtors Rs. 2,000 was bad and provision for doubtful debts was to be maintained at 5% on sundry debtors.

Show journal, bad debts account, provision for doubtful debts account and the relevant extracts of profit and loss account and balance sheet.

Unit – V:

1. From the following, prepare Balance sheet.

Particulars	Rs.
Capital	5,00,000
Sundry Creditors	50,000
Debentures	2,00,000
Sundry Debtors	1,00,000
Assets	7,75,000
Cash at Bank	25,000
Other Liabilities	1,00,000
Profit	50,000

2. From the information given below, prepare Trading Account.

Particulars	Rs.
Opening Stock	80,000
Purchases	70,000
Purchases Return	15,000
Direct Expenses	5,000
Carriage Inwards	3,000
Sales	2,00,000
Closing Stock	40,000

3. Ascertain the cost of goods sold from the following.

Particulars	Rs.
Opening stock	15,000
Purchases	65,000
Wages paid	9,000
Closing stock	20,000

4. Find out the cost of goods sold from the following.

Particulars	Rs.
Opening stock	7,400
Purchases	40,000
Closing stock	5,000
Carriage inwards	1,600
Carriage outwards	400

5. Calculate the stock in the beginning.

Particulars	Rs.
Closing stock	16,000
Purchases	1,20,000
Sales	1,60,000
Loss on sales 1/6.	

6. From the following, prepare profit and loss account.

Particulars	Rs.
Gross Profit	1,00,000
Salary paid	5,000
Rent paid	2,000
Discount received	1,000

Depr eciation written off	500
Discount paid	100
Repair expenses	1,500

7. From the information given below, prepare trading account.

Particulars	Rs.
Opening stock	50,000
Purchases	25,000
Direct Expenses	5,000
Purchases Return	12,500
Closing Stock	25,000
Carriage inwards	2,500
Sales	2,00,000

8. From the information given below, calculate gross profit.

Particulars	Rs.
Opening stock	2,000
Purchases	15,000
Closing Stock	3,000
Return inwards	700
Return outwards	200
Wages	1,000
Salaries	2,000
Interest	500
Sales	26,000

9. From the information given below, calculate gross profit and cost of goods sold.

Particulars	Rs.
Opening stock	8,500
Purchases	30,700
Direct Expenses	4,800
Closing Stock	9,000
Indirect expenses	5,200
Sales	38,500

10. Calculate stock at the end.

Particulars	Rs.
Stock in the beginning	10,000
Purchases	35,000
Cash Sales	30,000
Credit sales	20,000
Rate of gross profit on cost $\frac{1}{3}$.	

Section D

Unit – I:

1. Journalise the following transactions and prepare ledger accounts.

2005

Feb 1 Sold goods for cash Rs. 1,300

- 2 Purchased goods Rs.400
- 3 Purchased goods from Kumar Rs. 3,000

Bad debts	700	Bills payable	9000
Sundry debtors	40000	Provision for bad and	
Furniture	15000	doubtable debts	1200
Cash in hand	800	Sundry creditors	
Machinery	20000	Provision of discount	22000
Buildings	15000	on debtors	700
Discount allowed	400	Sales	
Wages & salaries	24000	Commission	166000
Trade expenses	10000	Discount earned	300
Manufacturing expense	15000		800
Income Tax	8200		
Advertisement	14000		
Provision for discount			
On creditors	300		
Insurance premium	2100		
	285500		
			285500

Adjustments:

i) Closing stock Rs.40,000

ii) Depreciation for Furnitures 15 %; Machinery 10%; Building 5%

iii) Write off bad debts Rs.1000

vi) Maintain provision for doubtful debts @ 5%

i) Create a provision @ 2% each for discount on debtors and creators.

9. From the following list of balances, prepare a trial balance as on 31.3.2000

Capital	1,00,000	Buildings	15,000
Drawings	18,000	Furniture	7,500
Motor Van	25,000	Loan from Arun	15,000
Interest paid	900	Sales	1,00,000
Purchases	75,000	Stock	25,000
Wages	3,000	Salaries	15,000
Commission received	7,500	Debtors	28,100
Bank balance	20,000	Creditors	10,000

10. Correct the following trial balance as on 31.3.1997

Returns outwards	16,000	Debtors	15,000
Opening stock	34,200	Rent paid	5,000
Salaries	12,000	Capital	55,200
Creditors	48,000	Machinery	18,000
Bank	45,000	Returns inwards	3,000
Carriage inwards	6,000	Discount received	4,000
Rent received	3,000	General expenses	6,000
Discount allowed	2,000	Sales	1,40,000
Purchases	1,00,000	Building	20,000
	<u>2,66,200</u>		<u>2,66,200</u>

Unit- IV:

1. From the following information, prepare Balance sheet.

Particulars	Rs.
Capital	4,00,000
Furniture	1,00,000
Bank Balance	50,000
Cash in hand	75,000
Profit	25,000
Bills Receivable	50,000
Bills Payable	40,000
Sundry Debtors	30,000
Sundry Creditors	50,000
Goodwill	60,000
Building	1,50,000

2. From the following trial balance of Mr.Kannapan as on 31.3.2000 prepare trading account and profit and loss account for the year ended 31.3.2000 and a balance sheet as on that date after making necessary adjustments.

Particulars	Rs	Particulars	Rs.
Kannapan's drawings	22,000	Kannappan's capital	80,000
Furniture&fixtures	4,000	Return outward	2,000
Plant &machinery	30,000	Sales	1,80,000
Op stock	20,000	Creditors	12,000
Purchase	1,20,000	Ramesh's 6% loan	10,000
Salaries and wages	22,400	Discount	1,600
Debtors	20,400		
Return inward	15,000		
Postage&telegram	1,500		
Rent,Rates&Taxes	2,600		
Bad debts written off	400		
Trade expenses	1,200		
Interest on ramesh's loan	150		
Insurance	1800		
Travelling expenses	500		

Sundry expenses	300		
Cash	13,050		
Bank	10,300		

Adjustments:

- Closing stock - Rs.25,000
 - Of the debtors Rs. 400 are bad and should be written off. Create a reserve for bad debts at 5% on sundry debtors and a reserve for discount on debtors 2½%
 - Salaries Rs.1,800 for march 2000 are outstanding.
 - Interest on capital is to be calculated at 5% p.a. and on drawings Rs.830
 - Prepaid insurance amounted to Rs.700
 - Depreciate furniture and fixture by 7½% and plant and machinery 10%
 - Make a reserve for discount on creditors @ 2 ½%
3. From the following Particular's, Prepare Trading and profit and loss account for the Year ended 31.12.2004 and a Balance sheet as on the date.

Sales	83,000	Discount received	200
Opening stock	8,200	Sales Returns	600
Land& Building	13,700	Furniture	7,400
Debtors	9,300	Travelling expenses	5,300
Creditors	6,100	Salaries	16,900
Bills receivable	1,500	Purchase return	100
Wages	12,600	Insurance	600
Purchases	33,600	Capital	29,600
Carriage inwards	600	Plant	10,000
		Bank over draft	5,000
		Cash	3,700

Adjustments:

- Closing Stock was valued at Rs.7,000
 - Provide 10% Depreciation on plant
 - Insurance was prepaid for a quarter
 - An amount of Rs.3000 was due to workers.
4. From the trial balance given below, Prepare trading account and Profit and loss account For the year ended 31.3.97 and the balance sheet as on that date:

Debit	Rs	Credit	Rs
Stock (1.4.96)	55,000	Discount Received	200
Purchases	1,92,000	Interest	1,000
Wages	12,500	Sales	2,93,500
Carriage Inwards	4,000	Bills payable	18,500
Insurance	3,500	Sundry creditors	93,250
Bills receivable	22,500	Capital	1,93,500
Sundry debtors	1,50,000		

Commission	4,000		
Interest	3,500		
Trade expenses	3,450		
Furniture(1.4.96)	6,000		
Cash and Bank	42,250		
Rent & Rates	12,750		
Office expenses	8,000		
Buildings	20,000		
Plant and Machinery	60,000		

Adjustments:

- i) Closing stock on 31.03.97-Rs.50,000
 - ii) Outstanding expenses on 31.3.97 – Rs.200
 - iii) Prepaid insurance Rs.100
 - iv) Provide Rs.600 for doubtful debts
 - v) Depreciate : Buildings 2 ½% ;Machinery 10%
5. From the following particulars for the year ending 31 Dec 2002,Prepare trading, Profit and loss a/c and a balance sheet as on that date.

Debit	Rs	Credit	Rs
Salaries	5,500	Creditors	9,500
Rent	1,300	Sales	32,000
Cash	1,000	Capital	30,000
Debtors	40,000	Loans	10,000
Trade expenses	600		
Purchases	25,000		
Advances	2,500		
Bank Balance	5,600		
	81,500		81,500

Adjustments:

- i) The Closing Stock is Rs.9,000
 - ii) Out standing salary Rs.500
 - iii) Rent prepaid Rs.200
 - iv) Calculate 5% interest on capital.
6. From the following trial balance and other information, you are required to prepare trading& profit and loss a/c for the year ended 31st Dec-2002 and balance sheet.

Particulars	Dr (Rs)	Cr (Rs)
Drawings & Capital	20,000	2,04,000
Cash at bank	48,000	-
Machinery	50,000	-
Bills Receivable & Payable	15,000	9,000
Purchases & sales	2,05,000	3,50,000
Return inward & outward	4,000	5,000
Wages	20,000	-
Stock (1.1.02)	30,000	-
Carriage inwards	2,000	-
Discount	1,000	2,000
Salaries	30,000	-
Debtors & Creditors	45,000	50,000
Commission received	-	4,000
Other asset (fixed)	1,22,000	-
Rent	16,000	-
Cash in Hand	10,000	-
Bad debts	6,000	-
	6,24,000	6,24,000

Adjustments:

- i) Closing stock on 31.02.02 Rs.35,000
- ii) Write of 6% Provision for doubtful debts
- iii) Depreciation: 10% on all fixed assets
- iv) Salary outstanding Rs.3,000

7. The following trial balance is extracted from the books of Mohiden on 31 Dec 1999

Debit	Rs	Credit	Rs
Stock on Jan1,1999	3,500	Bank O/D	3,000
Purchases	5,500	Provision for bad debts	200

Machinery	75,000	Creditors	15,000
Trade charges	10,000	Bad debts provision	200
Carriage inwards	2,500	Bills Payable	2,000
Carriage outwards	1,500		
Factory Rent	1,500		
Discount	350		
Insurance premium	700		
Debtors	60,000		
Office Rent	3,000		
Printing and Stationery	600		
General Expenses	17,800		
Bills Receivable	3,000		
Drawings	6,000		
Salaries	18,000		
Manufacturing Wages	21,000		
Furniture	7,500		
Cash at bank	14,500		
Total	5,12,950		5,12,950

Closing stock is valued at Rs.35,000.

2. From the following particulars, prepare a manufacturing account for the year ended 31.12.1997

Particulars	Rs.
Raw materials (1.1.97)	6,000
Work in progress (1.1.97)	4,200
Purchases of raw materials	45,000
Carriage inwards	5,000
Direct wages	10,000

Indirect wages	5,000
Depreciation on factory plant	4,000
Depreciation on factory furniture	1,200
Factory power	3,000
Repairs to factory assets	500
Raw materials (31.12.97)	8,000
Work in progress(31.12.97)	5,000

3. The following figures appear in the books of Vinayagam.
1997

Jan	1	Bad and doubtful debts provision	1,200
		Discount allowed provision	560
Dec	31	Discount allowed during the year	930
		Bad debts written off	470
		Bad debts recovered	25
		Debtors	10,060

Write off further Rs. 240 (definitely bad). Create a discount allowed provision of 2%.

Create a bad and doubtful provision of 10%. Prepare provision for doubtful debts account, bad debts account and provision for discount account.

4. The following are the balances extracted from the books of Thiru. Patel as on 31.3.2000. Prepare profit and loss account for the year ended 31 Dec 2000 and a balance sheet as on that date.

Particulars	Rs.	Rs.
Capital	-	1,00,000
Opening stock	20,000	-
Machinery	40,000	-
Purchases	70,000	-
Purchase Returns	-	1,000
Sales	-	90,000
Sales Returns	1,000	-
Wages	2,000	-
Salaries	5,000	-
Office Rent	2,000	-
Insurance	1,000	-
Sundry Debtors	50,000	-
Sundry Creditors	-	29,000
Cash	4,000	-
Bank balance	25,000	-

Adjustments:

- Closing stock is valued at Rs. 20,000
 - Outstanding salaries Rs.1,000
 - Prepaid Insurance Rs. 500
 - Bad debts Rs. 1,000
 - Provide 10% depreciation on machinery.
5. The following ledger balances were extracted from the books of Madhumathi. You are required to prepare trading and profit and loss account and balance sheet as on 31st March 2000

Particulars	Rs.	Particulars	Rs.
Capital	10,000	Returns inwards	300
Drawings	2,000	Returns outwards	580
Purchases	20,800	Carriage inwards	400
Stock (1.4.95)	6,900	Wages	325
Sales	27,500	Salaries	900
Creditors	8,100	Interest	480

 [a] **Primary inventory entity** [b] Secondary inventory entity
 [c] compulsory inventory entity [d] none
3. ----- is to count the quantity of stock items.
 [a] **Units of Measure** [b] Units of time [c] Units of accounts [d] Units of stock
4. ----- records receipt and issue of goods/stocks.
 [a] Accounting voucher [b] **Inventory voucher** [c] Purchase voucher [d] sales voucher
5. Tally records the goods rejected by the customer in -----voucher.
 [a] Rejection out [b] **Rejection in** [c] Delivery note [d] Physical stock
6. Tally records the goods returned to the supplier in -----voucher.
 [a] **Rejection out** [b] Rejection in [c] Delivery note [d] Physical stock
7. Tally records the physical stock to know the stock in hand in -----voucher.
 [a] Rejection out [b] **Rejection in** [c] Delivery note [d] Physical stock
8. ----- maintains the stock details at manufacturing level.
 [a] **Manufacturing Journal** [b] Rejection in [c] Rejection out [d] Rejection out
9. POS is the acronym for -----.
 [a] Point of Supply [b] Product of Supply [c] **Point of Sales** [d] Product of Sales
10. ----- is an unit of an organisation to which cost or expenses are allocated.
 [a] Cost category [b] Cost unit [c] Cost group [d] **Cost Centre**

Unit - IV

1. A company can be deleted only in
 A. Display **B. Alter+D** C. delete D. Create
2. Company features in tally includes
 A. Accounting features B. Inventory features
 C. Statutory features **D. all of the above**
3. The short key for changing period in tally is
 A. Alt+f3 **B. alt+f2** C. ctrl+f1 D. ctrl+f2
4. Integrated accounts with inventory is available in
A. F12 configuration B. f11 features C. inventory info D. accounts info
5. Collection of ledgers of same nature is called

- A. Vouchers** B.asset C.Group D.None of these
6. Tally software was developed by
a)America b)France **c)India** d)Bangladesh
7. capital is grouped under accounting group
a)sundry debtors b)sundry creditors c)Drawings **d)capital**
8. Rent paid is entered in _____ voucher
a)Receipt voucher **b) payment voucher** c) Cash voucher d)Sales Voucher
9. Furniture purchased is entered in _____ voucher
a)Receipt voucher **b)payment voucher** c)Cash voucher d)Sales Voucher
10. Capital brought in is entered in _____ voucher
a) Receipt voucher b)payment voucher c)Cash voucher d)Sales Voucher

Unit - V

1. Location where a sales transaction takes place is
a)Sales **b)place of Sales** c)Point of sales d)purpose of sales
2. Tally means_____.
a) Operating system b) Translator program **c) Application software** d) None of these
3. In Tally , F11 refers to _____
a) features b) configuration c) statutory d) all of these
4. _____is the short cut key to delete the voucher.
a) F1 key **b) Alt +D** c) Alt + C d) Ctrl + D
5. Salary paid is entered in _____
a) payment voucher b) receipt voucher c) purchases voucher d) journal voucher
6. _____is used to record transfer of funds between bank to cash
a) payment voucher b) receipt voucher c) purchases voucher **d) contra voucher**
7. A credit note is used to record all _____
a) sales returns b) sales discount c) other entries for party credits d) all of the above
8. Which is useful for recording transfer of stock?
a) stock note b) receipt note c) delivery note **d) stock journal**
9. The basic unit by which stock items are measured is known as _____
a) stock group b) stock items c) stock godown **d) units of measure**
10. _____key is used for inventory receipt note
a) F6 a) Alt+F6 a) F9 **a) Alt+F9**

Section –B (2 marks)

Unit- I

1. Define the term accounting
2. List out the functions of accounting
3. State the types of ledgers
4. How to alter a group?
5. Write notes on masters in gateway of tally
6. Write about importance of accounting
7. Sort out the merits of tally
8. Distinguish between computerized accounting and accounting

9. Draw the company info. Menu.
10. Write about the single ledger creation

Unit-II

1. What is contra voucher?
2. What is memo voucher?
3. What is Journal voucher?
4. What is Debit note?
5. How to delete Company?
6. How to shut company?
7. How to select company?
8. What is Tally?
9. What is Tally ERP.9?
10. What is a pre-defined group?

Unit -III

1. Draw the format of trading account
2. Write about current assets
3. What are the current liabilities?
4. Write about profit and loss?
5. How to view the detailed option? Explain.
6. What is fixed asset?
7. Explain the justification of balance sheet
8. What is meant by capital goods?
9. How to edit vouchers?
10. What is the procedure to select company?

Unit –IV

1. What is stock group?
2. What is stock?
3. What is Units of Measure?
4. What is stock category?
5. What is cost categories?
6. What is Stock Journal?
7. What is stock item?
8. What is Accounting ledger?
9. What is Inventory ledger?
10. What is compound units of measure?

Unit –V

1. What do you mean by cost?
2. What is cost center?
3. What is cost category?
4. How to alter cost category?
5. How to delete cost center?
6. What is Purchase order?
7. What do you mean by Sales order?

8. What are the reports in tally?
9. What is Rejection in voucher?
10. What is Rejection out voucher?

Section-C (6 marks)

Unit - I

1. How to create a Company in Tally ERP.9
2. Explain Accounting features – F11
3. Explain the functions of Accounting
4. What are the phases of Accounting cycle
5. Give detailed notes on voucher configuration – F12
6. Explain usage of tally ERP.9
7. Explain the process of entering cash payment vouchers.
8. Sort out the features of Tally
9. Discuss the various parts of screen in Tally
10. Explain the evolution of tally.

Unit-II

1. Write in detail about contra voucher with example.
2. Explain Rejection-in Voucher, Rejection-out voucher and delivery note voucher.
3. Mention 15 pre-defined groups under accounting groups.
4. Write notes on journal voucher
5. What do you mean by memo voucher?
6. Briefly explain about payment voucher
7. Write the procedure to enter the receipt voucher
8. What is the post dated voucher? Explain
9. How will you enter contra entries in Tally? Explain
10. Which voucher is known for adjustment entries? Explain

Unit-III

1. Explain about debit note and credit note
2. Draft the format of trading a/c
3. Give examples for purchase return and sales return
4. What is Point of sales?
5. Explain the branches of accounting.
6. Format of trading account
7. What are the indirect expenses explain?
8. Draw the format of profit and loss account
9. List out the current and fixed assets
10. State and explain the current and long-term liabilities.

Unit - IV

1. Write the procedure to delete the voucher entry
2. How to create, alter and delete the unit of measure
3. Write notes on godown creation
4. What are the options available in inventory information option?

5. Give detailed notes on gate way of tally menu
6. Write the format of Profit and loss account
7. Explain the format of Balance sheet
8. Explain the day book and delete the voucher entries
9. How will you alter the voucher entries?
10. What is stock group? Give some examples.

Unit- V

1. Explain Cost categories with example?
2. Explain Stock Categories with example?
3. Explain Godown with example.
4. Explain the procedure for creating inventory ledger in Tally
5. How to create stock item and stock group.
6. How will you create simple unit of measure, compound unit of measure.
7. Explain stock journal with example.
8. Explain the procedure for creating accounting ledger in Tally
9. Show the steps in creating single ledger creation and multiple ledger creation.
10. Explain Cost centre with example?

Section D (10 Marks)

Unit-I

1. Explain Features of Tally with Examples?
2. Write the procedure for company creation
3. State and explain about the ledger and predefined ledgers in Tally
4. Draft Tally screen and its categories
5. Explain the technological advantages of tally ERP.9
6. Explain the 15 pre-defined groups of accounting group.
7. Explain Accounting features – F11
8. What are the types of Journal voucher?
9. Explain all Accounting Vouchers with diagram.
10. How to delete the company? Explain the procedure?

Unit –II

1. Illustrate types of vouchers in Tally.
2. Explain purchase and sales with Examples?
3. Enumerate the features of Tally
4. Elucidate the F12 : voucher configuration
5. Elucidate the display menu
6. List out and explain shortcut keys in Tally
7. Explain in detail about i) Credit note ii) Debit note iii) Purchase return iv) Sales return.
8. What is journal voucher and its advantages?
9. Explain the following :

- Sale voucher
- Sales return
- Purchase

- Purchase return
- 10. Explain the following:
 - ✓ Memo voucher
 - ✓ Journal voucher
 - ✓ Contra voucher
 - ✓ Receipt voucher

Unit –III

1. Explain steps for Final accounts preparation in Tally?
2. Explain the procedure for creating accounting ledger.
3. Explain the procedure for creating inventory ledger.
4. Explain the procedure for creating Stock Item,
5. How to create, alter and delete Stock Group? Explain.
6. What is the procedure to create and delete Stock Categories?
7. What is the procedure to create units of measure?
8. Explain the procedure for creating Godown
9. What is Stock Journal? Explain its usage.
10. Explain the various exception reports in Tally.

Unit-IV

1. Explain how to create, alter and delete a godown?
2. Explain stock group heads with examples?
3. Explain inventory voucher classifications with example?
4. Explain the procedure for creating stock item with examples?
5. Explain all Inventory Vouchers with diagram.
6. Give detailed notes on gate way of tally menu
7. Write the format of Profit and loss account
8. Explain the format of Balance sheet
9. Explain the day book and delete the voucher entries
10. How will you alter the voucher entries?

Unit - V

1. Explain the procedure for creating Cost category
2. Write the procedure to delete Cost centre.
3. What is purchase order? Explain the steps to create purchase order?
4. What is cost category? Explain the usage of cost category
5. Explain the Rejection vouchers.
6. Write notes on Gate way of Tally
7. Give detailed notes on creation of cost category
8. How to alter or delete cost category?
9. Explain the following :
 - a) Stock Journal voucher b) Purchase order c) Sales order.
10. What is Sales order? Explain the steps to create Sales order?

Section A

Unit I

1. Which of the following is one dimensional?
(a) **Bar diagram** (b) Pie-chart (c) Graph (d) Cylinder
2. In chronological classification data are classified on the basis of
(a) attributes (b) location (c) **time** (d) class interval
3. Tables are used for _____ of data
(a) presentation (b) analysis (c) **organization** (d) interpretation
4. ----- refer to those data which are collected for the first time.
(a) Published data (b) **Primary data** (c) Secondary data (d) Recorded data
5. Pie diagram consists of
(a) **Circles** (b) Lines (c) Rectangles (d) Squares
6. Indian Statistical Institute's head office is situated in
(a) **Calcutta** (b) Chennai (c) Bombay (d) Madurai
7. Data collected from the official records is known as -----.
(a) primary data (b) **secondary data** (c) both (d) qualitative data
8. The Latin word status means -----.
(a) collection of data (b) **political state** (c) facts (d) none
9. The method suitable for collecting information about social evils is ----- method.
(a) direct interview (b) indirect interview (c) questionnaire (d) **all the above**
10. Which diagram is preferred for comparing the data?
(a) **Multiple bar diagram** (b) Percentage bar (c) Simple bar (d) Cartograms

Unit II

1. Which is useful to find out mode?
(a) Lorenz curve (b) Ogive curve (c) **frequency curve** (d) band graph
2. Which of the following is not a measure of central tendency?
(a) G.M (b) median (c) mode (d) **standard deviation**
3. The value of the variable which occurs more frequently is
(a) range (b) mean (c) median (d) **mode**
4. Mean is a measure of
(a) **Location** (b) dispersion (c) correlation (d) none of these
5. If median is 72 & mean is 78, find the value mode.
(a) **60** (b) 70 (c) 75 (d) 80
6. Which of the following is a positional average?
(a) range (b) **median** (c) mean (d) deviation
7. Mean deviation can be calculated by using -----.
(a) Mean value (b) mode value (c) median value (d) **all the above**
8. Empirical relationship among mean, median and mode
(a) mean=2 mode- 3 median (b) **mode= 3 median-2 mean**
(c) median= 3 median -2 mode (d) none of these
9. Mean is a measure of-----
(a) dispersion (b) **central value** (c) frequency (d) variable
10. The difference between the lower limit and the upper limit is called -----.
(a) frequency (b) class (c) class interval (d) **range**

Unit III

1. Dispersion is known as
(a) Measure of central tendency (b) **Measure of variation** (c) Measure of skewness
(d) Correlation
2. Which one of the given measure of dispersion is considered the best?
(a) Variance (b) **standard deviation** (c) Mean deviation (d) Range
3. Statistically, the spread or scatterings of observations in a data is called
(a) discriminant (b) **dispersion** (c) range (d) standard deviation
4. The mean of the squared deviations of some observations from their arithmetic mean is called
(a) standard deviation (b) **variation** (c) median (d) mode
5. The positive square root of the mean of the squared deviations of some observations from their arithmetic mean is called
(a) **standard deviation** (b) variation (c) median (d) mode
6. Sum of the deviations of a variable from its mean is always
(a) **0** (b) 1 (c) 2 (d) 5
7. The measures that are used to determine the degree or extent of variation in a data set are called
(a) Mean (b) median (c) measures of dispersion (d) **measures of central tendency**
8. The measures of dispersion can never be:
(a) Positive (b) Zero (c) **Negative** (d) Equal to 2
9. The measure of dispersion which uses only two observations is called
(a) Mean (b) Median (c) **Range** (d) Coefficient of variation
10. Which measure of dispersion can be computed in case of open-end classes?
(a) Standard deviation (b) Range (c) **Quartile deviation** (d) Coefficient of variation

Unit IV

1. Rank correlation was formulated by-----.
(a) Fisher (b) **Spearman** (c) Karl Pearson (d) Lorenz
2. The term Regression was first used by -----.
(a) Karl Pearson (b) Fisher (c) **Francis Galton** (d) Spearman
3. The coefficient of correlation-----.
(a) has no limits (b) can be less than 1 (c) **varies between ± 1** (d) can be more than 1.
4. 'r' refers to coefficient of -----.
(a) regression (b) skewness (c) **correlation** (d) variation
5. ----- and ----- are types of correlation based on the direction of change.
(a) Simple, partial (b) **Positive, negative** (c) Multiple, simple (d) linear, non-linear
6. Association of two variables is -----.
(a) regression (b) **correlation** (c) skewness (d) probability
7. When two variables move in opposite direction there is ----- correlation.
(a) positive (b) high degree (c) low degree (d) **negative**.
8. In regression analysis there are ----- regression equations.
(a) 3 (b) 1 (c) 4 (d) **2**
9. The most likely values for future can be estimated through ----- analysis.
(a) percentage (b) **regression** (c) median (d) all the above
10. The correlation coefficient is used to measure the ----- & ----- of relationship between the variables.
(a) quality, quantity (b) **degree, direction** (c) association, moment (d) none of these

Unit V

1. An orderly set of data arranged in accordance with their time of occurrence is called:
(a) Arithmetic series (b) Harmonic series (c) Geometric series (d) **Time series**
2. A time series consists of:
(a) Short-term variations (b) Long-term variations (c) Irregular variations (d) **All of the above**
3. The graph of time series is called:
(a) Histogram (b) Straight line (c) **Historigram** (d) Ogive
4. In time series seasonal variations can occur within a period of:
(a) Four years (b) Three years (c) **One year** (d) Nine years
5. The method of moving average is used to find the:
(a) Secular trend (b) Seasonal variation (c) Cyclical variation (d) Irregular variation
6. In semi averages method, we divide the data into:
(a) Two parts (b) **Two equal parts** (c) Three parts (d) Difficult to tell
7. The most commonly used mathematical method for measuring the trend is:
(a) Moving average method (b) Semi average method (c) **Method of least squares**
(d) None of them
8. In moving average method, we cannot find the trend values of some:
(a) Middle periods (b) End periods (c) Starting periods (d) **Between extreme periods**
9. In semi averages method, if the number of values is odd then we drop:
(a) First value (b) Last value (c) **Middle value** (d) Middle two values
10. The trend values in freehand curve method are obtained by:
(a) Equation of straight line (b) **Graph** (c) Second degree parabola (d) All of the above

Section B (2 marks)

Unit I

1. Define Statistics
2. What do you mean by statistical methods?
3. Give two uses of Statistics.
4. Give four limitations of Statistics.
5. Give two meanings of Statistics
6. Mention the methods of collection of Primary data.
7. Mention the methods of collecting Secondary data.
8. Mention the different types of diagrams.
9. Define diagrams.
10. Write two uses of Bar diagram.

Unit II

1. Define statistical averages.
2. Define mean.
3. Define median.
4. Define mode.
5. What do you mean by Harmonic mean?
6. What do you mean by Geometric mean?
7. What do you mean by Arithmetic mean?
8. Give two properties of Median.
9. State the relationship of Mean, Median and Mode
10. Define average.

Unit III

1. Define Dispersion
2. Define Range.

3. Define Quartile deviation
4. Define Mean deviation
5. Define standard deviation.
6. Define co-efficient of Variation
7. Mention the methods of measuring dispersion.
8. What are the important mathematical properties of Standard Deviation?
9. Write the difference between variation and co-efficient of variation.
10. Write two advantages of standard deviation.

Unit IV

1. Define Correlation Analysis.
2. What are types of Correlation?
3. Mention the methods of correlation Analysis
4. Give two uses of Correlation
5. What is scatter diagram?
6. Define Regression.
7. What do you mean by Regression lines?
8. Write the two differences between Correlation and Regression.
9. What do you mean by Regression Equation?
10. State the methods of ascertaining regression equation.

Unit V

1. Define Time series.
2. Mention the components of Time series.
3. Write the measurement of secular trend.
4. What is Trend?
5. What do you mean by Irregular movements?
6. What do you mean by Secular Trend?
7. Write a note on Cyclical Variation.
8. Write a note on Seasonal Variation.
9. Write a note on Moving Average.
10. Give two examples of time series which consists seasonal variations.

Section C (5 marks)

Unit I

1. Draw a pie diagram.

Item:	Food	Clothing	Housing	Fuel & Lighting	Miscellaneous
% of total expenses:	65	10	12	5	8

2. Construct a multiple bar diagram.

Year	2005	2006	2007	2008
Public company	8	13	15	12
Private company	12	20	18	21

3. Define Statistics and explain its features.
4. What important points are to be considered while preparing a questionnaire?
5. Explain the methods of collecting primary data.
6. Explain the scope of Statistics.
7. Explain one and two dimensional diagrams.
8. What are the advantages and disadvantages of diagrammatic presentation?
9. Write short notes of the following
 - (i) Pie Diagram
 - (ii) Pictogram
 - (iii) Cartogram
10. Draw a pie chart to represent the following data.

Cost of material	Rs. 18,300	Cost of labour	Rs. 16,500
Direct expenses	Rs. 3,700	Overhead	Rs. 7,500

Unit II

1. Calculate mean.

Value	1	2	3	4	5	6	7	8	9	10
Frequency	21	30	28	40	26	34	40	9	15	57

2. The average marks secured by 36 students were 52. It was discovered that an item 64 was misread as 46. Find the correct mean of marks.

3. Find median

Roll No.	1	2	3	4	5	6	7
Marks	45	32	18	57	65	28	46

4. Calculate G.M

Weight	130	135	140	145	146	148	149	150	157
No. of persons	3	4	6	6	3	5	2	1	1

5. Calculate median:

Class	10-25	25-40	40-55	55-70	70-85	85-100
Frequency	6	20	44	26	3	1

6. Calculate mean deviation.

Marks	10	20	30	40	50	60	70	80
Frequency	4	16	14	7	9	11	12	25

7. Calculate harmonic mean

Marks:	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80
Frequency	6	5	8	15	7	6	3	9

8. Obtain the value of median.

392	384	539	407	672	522	777	753	640
-----	-----	-----	-----	-----	-----	-----	-----	-----

9. Calculate median from the following data

Marks	0-10	10-40	40-60	60-90	90-100
No. of students	3	9	20	12	3

10. Calculate mode from the data given below:

Marks	20	30	40	50	60	70	80	90
No. of students	3	2	1	15	14	8	9	12

Unit III

1. Calculate quartile deviation from the following data.

25, 15, 30, 45, 40, 20, 50 Also calculate co-efficient of quartile deviation.

2. Find out the value of mean deviation from the data given below

50, 70, 45, 20, 80, 90, 25, 30, 40, 10

3. Calculate standard deviation from the following data

39, 46, 52, 75, 82, 93, 97

4. Calculate standard deviation

Age:	20-30	30-40	40-50	50-60	60-70	70-80	80-90
No. of persons:	3	61	132	153	140	51	2

5. Find the range and coefficient of range of the following data: 25, 67, 48, 53, 18, 39, and 44.

6. The number of televisions sold in each day of a week is 13, 8, 4, 9, 7, 12, and 10.

Find its standard deviation.

7. Calculate range and co-efficient of range from the data. 150, 175, 35, 52, 73, 29, 86, 57

8. Calculate quartile deviation and co-efficient of quartile deviation from the data given below.

Weight of students in K.gms 47.5, 42.2, 53.4, 59.4, 39.5, 40.4, 46.7

9. The following data are related with the daily income of workers in a factory. Calculate mean deviation and its co-efficient

Daily Income (Rs.)	15	25	35	45	55	65
No. of workers	3	2	7	9	12	6

10. Calculate arithmetic mean of the two series if their coefficient of variation are 40 % and 75 % respectively. The standard deviations of the two series are 8 and 5 respectively.

Unit IV

1. Find the two regression equations that are associated with the given values

	X	Y
Mean	65	67
Standard deviation	2.5	3.5

$r = 0.8$

2. Explain the difference between regression and correlation.

3. Calculate rank correlation coefficient

Rank by A	2	1	4	3	5	7	6
Rank by B	1	3	2	4	5	6	7

4. Find rank correlation coefficient between X & Y.

X	46	54	56	56	58	60	62
Y	36	40	44	54	42	58	54

5. What are types of correlation?

6. The two regression equation is: $x = 16.4 - 1.3y$ & $y = 11.9 - 0.65x$. Find the regression coefficients & correlation coefficient.

7. Explain scatter diagram method.

8. Calculate the coefficient of concurrent deviation.

Year	2010	2011	2012	2013	2014
Supply	140	154	160	140	170
Price	180	160	190	200	210

9. From the data given below find the mean values of x & y.

Regression equations: $8x - 10y + 66 = 0$ & $40x - 18y = 214$

10. Find the two regression equations.

	x	y
Arithmetic mean	36	85
Standard deviation	11	8

Correlation coefficient between x & y = 0.66

Unit V

1. Draw a trend line by the method of semi- averages.

Year	2001	2002	2003	2004	2005	2006
Sales ('000)	60	75	81	110	106	120

2. Calculate 3 yearly moving averages of the following data

Year	1991	1992	1993	1994	1995	1996	1997	1998
No. of students	15	18	17	20	23	25	29	33

3. Fit a straight line trend.

Year	2008	2009	2010	2011	2012	2013	2014
Production	83	60	54	21	22	13	23

4. Explain the components of time series.

5. Fit a trend line through semi-average method for the following data

Year	2012	2013	2014	2015	2016	2017	2018	2019
Income	45	49	54	60	80	96	100	120

6. Compute 3 yearly moving averages from the following data.

Year 20'	09	10	11	12	13	14	15	16	17	18	19
Income	55	47	59	151	79	36	45	72	83	89	102

7. Draw a trend line to the following data by semi-average method.

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020
Sales	47	62	73	70	80	85	87	94	98

8. Fit a trend line to the following data related to the production in a factory

Year	2012	2013	2014	2015	2016	2017	2018	2019	2020
Production (in 000 of rupees)	50	75	49	80	60	95	75	100	110

9. Draw Trend Line by the method of Semi-Average from the following data.

Year	2012	2013	2014	2015	2016	2017
Profit (in 000 of rupees)	34	47	52	73	89	95

10. Fit a straight line trend for the following data by least square method

Year	2012	2013	2014	2015	2016	2017	2018
Output (in '00 tonnes)	12	15	20	24	32	40	45

Section C (10 marks)

Unit I

1. Explain the importance and limitations of statistics.
2. Explain the types of data.
3. Explain primary data and secondary data. Discuss the various methods of collecting primary data.
4. What is a questionnaire? What important points are to be considered while preparing a Questionnaire?
5. Explain the types of diagrams. What are the advantages & disadvantages of diagrammatic presentation?
6. Distinguish between Primary and Secondary data. Give illustrations.
7. From the following data draw the Multiple Bar Diagram

Year	Production ('000 units)		
	X	Y	Z
2015	47	55	73
2016	32	60	79
2017	50	75	85
2018	55	87	98
2019	62	96	110

8. Present the following data by a percentage bar diagram.

Year	2009	2010	2011
Cost	Rs.	Rs.	Rs.
Raw material	2,200	2,600	3,000
Labour	1,500	1,900	3,200
Direct expenses	800	1,000	1,800

9. Prepare a Bar Diagram from the following data.

Year	2010	2011	2012	2013	2014	2015
Profit(Rs.'000)	32	55	63	70	89	95

10. Draw a pie diagram from the following data. The selling price of a product contains the following elements of costs and profit

Prime cost	30%
Factory Overhead	18%
Administrative Overhead	28%
Selling and Distribution overhead	14%
Profit	10%

1. There are two branches of a company employing 280 and 320 persons respectively. If the arithmetic mean of the monthly salaries paid by the two companies is Rs. 750 & Rs. 937.50 respectively. Find the A.M of the salaries of the employees of the companies as a whole.

- | | | | | | | | | |
|----|------|-------|-------|-------|-------|-------|-------|-------|
| X: | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 | 70-80 |
| F: | 12 | 13 | 14 | 13 | 12 | 11 | 10 | 6 |

- | | | | | | | | | |
|-----------|-------|-------|-------|-------|-------|-------|-------|-------|
| Class | 10-15 | 15-20 | 20-25 | 25-30 | 30-35 | 35-40 | 40-45 | 45-50 |
| Frequency | 2 | 5 | 7 | 13 | 21 | 15 | 8 | 3 |

- | | | | | | | | |
|----------------|------|-------|-------|-------|-------|-------|-------|
| Age | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 |
| No. of workers | 5 | 7 | 12 | 18 | 16 | 10 | |

6. Marks obtained by students of a class in mathematics are given below

Marks	25	30	35	40	45	50	55	60	65	70
No. of students	3	8	12	9	4	7	15	5	10	7

7. Following are the data related with monthly income of 100 families in a village. Calculate arithmetic mean

Monthly Income (Rs.)	No. of families
Above 0	100
Above 100	95
Above 200	80
Above 300	75
Above 400	60
Above 500	55
Above 600	40
Above 700	35
Above 800	25
Above 900	20
Above 1000	0

9. Calculate A.M, G.M and H.M for the data 35, 24, 75, 50, 40

- ## Unit III

- | | | | | | | |
|---|------|-------|-------|-------|-------|-------|
| X | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 |
| Y | 5 | 12 | 15 | 9 | 10 | 3 |

- | Age | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 |
|----------------|------|-------|-------|-------|-------|-------|-------|
| No. of workers | 5 | 7 | 12 | 18 | 16 | 10 | 5 |

3. What is meant by a measure of dispersion? State the different methods of measuring it.

4. Calculate mean deviation from mean, median and mode from the following data. Also calculate the co-efficient of mean deviation. 45, 5, 10, 45, 25, 45, 35
5. Following are the information related with the marks obtained by 40 students of a class in 2 papers. Find out which one got the homogeneity and which one got highest marks in the Class
- | Marks | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 |
|----------|------|-------|-------|-------|-------|-------|-------|
| Paper I | 4 | 1 | 2 | 8 | 9 | 6 | 10 |
| Paper II | 5 | 7 | 6 | 6 | 7 | 5 | 4 |
6. The amount that the children have spent for purchasing some eatables in one day trip of a school are 5, 10, 15, 20, 25, 30, 35, 40. Using step deviation method, find the standard deviation of the amount they have spent.
7. For the following open-ended data, calculate the Quartile Deviation and its coefficient.
- | Marks | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 |
|-----------------|------|-------|-------|-------|-------|-------|
| No. of Students | 10 | 20 | 30 | 50 | 40 | 30 |
8. Calculate the range, mean deviation, and the coefficient of mean deviation of the given data
- | Marks | 0-10 | 10-20 | 20-30 | 30-40 |
|--------------------|------|-------|-------|-------|
| Number of Students | 2 | 5 | 1 | 3 |
9. You are given you are given the following data related with the income of families in a city for one month. Calculate quartile deviation coefficient of quartile deviation and semi interquartile deviation
- | Monthly Income (Rs.) | 350 | 475 | 590 | 670 | 890 | 950 |
|----------------------|-----|-----|-----|-----|-----|-----|
| No. of families | 3 | 4 | 21 | 18 | 9 | 5 |
10. Calculate coefficient of variation
- | Age | 0-10 | 10-20 | 20-30 | 30-40 | 40-50 | 50-60 | 60-70 |
|----------------|------|-------|-------|-------|-------|-------|-------|
| No. of workers | 5 | 7 | 12 | 18 | 16 | 10 | 5 |

Unit IV

1. Find out the Karl Pearson's co-efficient of correlation.
- | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|
| X: | 78 | 36 | 98 | 25 | 75 | 82 | 90 | 62 | 65 | 39 |
| Y: | 84 | 51 | 91 | 60 | 68 | 62 | 86 | 58 | 53 | 47 |
2. Obtain the two regression equations from the given data:
- | | | | | | | | |
|----|---|---|----|----|----|----|----|
| X: | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Y: | 9 | 8 | 10 | 12 | 11 | 13 | 14 |
3. Compute Spearman's rank co-efficient of correlation.
- | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|
| X: | 15 | 20 | 28 | 12 | 40 | 60 | 20 | 80 |
| Y: | 4 | 30 | 50 | 30 | 20 | 10 | 30 | 60 |
4. Calculate the two regression equations.
- | | | | | | | |
|---------|----|----|----|----|----|----|
| Price : | 10 | 12 | 13 | 12 | 16 | 15 |
| Demand: | 40 | 38 | 43 | 45 | 37 | 43 |
5. Obtain the two regression equations. If the intelligence test scores of a salesman are 65, what would be his expected weekly sales?
- | Salesmen | A | B | C | D | E | F | G | H | I |
|--------------|----|----|----|----|----|----|----|----|----|
| Test Score | 50 | 60 | 50 | 60 | 80 | 50 | 80 | 40 | 70 |
| Weekly sales | 30 | 60 | 40 | 50 | 60 | 30 | 70 | 50 | 60 |
6. Calculate coefficient of correlation. Assume 69 & 112 as mean.
- | | | | | | | | | |
|---|-----|-----|-----|-----|-----|-----|-----|-----|
| X | 78 | 89 | 96 | 69 | 59 | 79 | 68 | 61 |
| Y | 125 | 137 | 156 | 112 | 107 | 136 | 128 | 108 |
7. Find r between X & Y.
- | | | | | | | | |
|---|----|----|----|----|----|----|----|
| X | 46 | 54 | 56 | 56 | 58 | 60 | 62 |
| Y | 36 | 40 | 44 | 54 | 42 | 58 | 54 |

8. The two regression lines are: $Y = 4.5 - 0.75x$ and $X = 3.8 - 0.6y$. Find mean.
9. Two ladies were asked to rank 7 different types of lipsticks. The ranks given by them are as follows:
- | Lipstick | A | B | C | D | E | F | G |
|----------|---|---|---|---|---|---|---|
| Neelu | 2 | 1 | 4 | 3 | 5 | 7 | 6 |
| Neetu | 1 | 3 | 2 | 4 | 5 | 6 | 7 |
10. Explain the methods of measuring correlation.

Unit V

1. Fit a straight line by the method of Least squares. Estimate for the year 2012.
- | Year | 2004 | 2005 | 2006 | 2007 | 2008 |
|-------|------|------|------|------|------|
| Sales | 70 | 74 | 80 | 86 | 90 |
2. Calculate the trend values by using 4 yearly moving averages for the following data.
- | Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 |
|-------|------|------|------|------|------|------|------|------|------|------|
| Sales | 464 | 515 | 518 | 467 | 502 | 540 | 557 | 571 | 586 | 612 |
3. Fit a straight line by the method of least squares.
- | Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 |
|-------|------|------|------|------|------|------|------|------|
| Sales | 412 | 438 | 444 | 454 | 470 | 482 | 490 | 500 |
4. Fit a straight line trend and estimate the value for 2015.
- | Year | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|-------|------|------|------|------|------|------|------|
| Value | 2 | 5 | 8 | 10 | 12 | 15 | 20 |
5. Calculate 5 yearly moving averages from the following data.
- | Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|------------------------|------|------|------|------|------|------|------|------|------|------|------|
| Income
(in '000Rs.) | 161 | 127 | 152 | 143 | 144 | 167 | 182 | 179 | 152 | 163 | 159 |
6. From the following data, fit a straight line trend through the method of least square.
- | Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 |
|-----------------------------|------|------|------|------|------|------|------|------|
| Expenditure
(in '000Rs.) | 43 | 49 | 54 | 62 | 71 | 75 | 78 | 80 |
7. Fit a straight line trend through the method of least squares for the following data. Also estimate the value for the year 2023
- | Year | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
|-------|------|------|------|------|------|------|------|
| Sales | 110 | 115 | 130 | 140 | 145 | 160 | 180 |
8. Following are the data related with the output of a factory for 7 years. Calculate trend values through the method of least squares and also forecast the production in 2022 and 2024
- | Year | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
|-------|------|------|------|------|------|------|------|
| Sales | 47 | 64 | 77 | 88 | 97 | 109 | 113 |
9. Calculate 6 yearly moving averages from the following data
- | Year | 2001 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 |
|-----------------------|------|------|------|------|------|------|------|------|------|------|------|
| Demand
(in tonnes) | 105 | 120 | 115 | 110 | 100 | 130 | 135 | 160 | 155 | 140 | 145 |
10. Calculate the four year moving average from the following data
- | Year (20') | 04 | 05 | 06 | 07 | 08 | 09 | 10 | 11 |
|---------------------------|----|----|----|----|----|----|----|----|
| Production
(in tonnes) | 33 | 44 | 57 | 20 | 15 | 39 | 35 | 55 |
| Year (20') | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 |
| Production
(in tonnes) | 65 | 64 | 69 | 75 | 79 | 85 | 87 | 90 |

XXXXXXXX

ST. MARY'S COLLEGE (Autonomous) THOOTHUKUDI
QUESTION BANK
II B.Com Semester IV
Core 1 CORPORATE ACCOUNTING Sub.code: 21UCOC41

Section – A (20 x 1 =20)

Unit –I

1. Share allotment is a
a. Personal A/c b. Real c. Impersonal d. Nominal A/c
2. Share Application A/c is a
a. Personal A/c b. Real c. Nominal d. Impersonal
3. The minimum share application money is:
a. 5% of the face value of shares b. 10% of the issue price of shares
c. Re.1 Per share d. 15% of the face value of shares
4. Premium received on issue of shares A/c is shown on:
a. Assets side of B/s **b. Liabilities side of B/s**
c. Credit side of P&L A/c d. Debit side of P&L A/c
5. Premium on issue of shares can be used for:
a. Distribution of dividend **b. writing off capital losses**
c. Transferring to General Reserve d. Paying fees to directors
6. The rate of discount on share cannot exceed:
a. 3% b. 6% c. 5% **d. 10%**
7. Discount on issue of shares A/c is shown on:
a. Revenue Loss b. Liabilities side of B/s
c. Debit side of P&L A/c d. Credit side of P&L A/c
8. Discount on issue of shares is a:
a. Revenue Loss **b. Capital Loss**
c. Deferred revenue expenditure d. Credit side of P&L A/c
9. When shares are forfeited, the share capital a/c is debited by:
a. Paid-up Capital **b. Called-up amount**
c. Calls –in –arrear d. Nominal value of such shares.
10. The profit on re-issue of forfeited shares is transferred to:
a. General Reserve b. Capital redemption reserve
c. Capital reserve d. Profit & Loss
11. Rights shares are those shares which are:

- a. Issued by a newly formed company
 - b. First offered to the existing shareholders**
 - c. Issued to the directors of the company
 - d. Issued to holders of convertible debentures.
12. The difference between subscribed capital and called-up capital is called:
- a. Uncalled Capital**
 - b. Calls-in-arrear
 - c. Paid-up-Capital
 - d. Calls-in-advance
13. Redeemable preference shares can be redeemed out of
- (a) Amount realized on sale of investments;
 - (b) Divisible profits otherwise available for dividend;
 - (c) Proceeds of fresh issue of shares;
 - (d) Both (b) & (c)**
14. When preference shares are redeemed out of profits otherwise available for dividend, the sum equal to the nominal amount of shares must be transferred to:
- (a) **Capital redemption reserve**
 - (b) Reserve Fund
 - (c) P & L A/c
 - (d) Insurance fund
15. Capital Redemption reserve is created :
- (a) Out of share forfeiture a/c
 - (b) To meet legal requirements**
 - (c) Out of securities premium a/c
 - (d) Voluntarily
16. Transfer to capital Redemption Reserve can be made from :
- (b) Capital Reserve
 - (b) Forfeited shares a/c
 - (c) General Reserve**
 - (d) Securities premium a/c
17. Transfer to Capital Redemption Reserve a/c is not allowed from :
- (c) P & L A/c
 - (b) Debenture redemption fund
 - (c) Workmen's Accident fund
 - (d) Profit prior to incorporation**
18. Capital redemption reserve a/c can be used for
- a) Writing off past losses**
 - (b) Issuing fully paid bonus shares**
 - (c) Declaring dividends
 - (d) Declaring bonus to employees.
19. The premium on redemption of preference shares can be provided out of:
- (a) Securities premium**
 - (b) Insurance fund
 - (c) Forfeited shares A/c
 - (d) Depreciation Reserve
20. X Ltd. Has issued 10,000 equity shares of Rs.10 each at a premium of Rs.2 for redemption of preference shares. Which of the following amounts would be taken as "proceeds of fresh issue"?
- (a) Rs.1,00,000**
 - (b) Rs.1,20,000
 - (c) Rs.80,000
 - (d) None of the above

21. Y Ltd. Has made a public issue of 2,000 6% preference shares of Rs.100 each at a discount 8% for providing funds for redemption of preference shares. Which of the following amounts would be considered as 'Proceeds of fresh issue'?
- (a) Rs.2,00,000 (b) **Rs.1,84,000**
 (c) Rs.2,16,000 (d) None of the above
22. Which section of the companies Act 1956 provides for the issue and redemption of preference shares?
- (a) **Section 80** (b) Section 78
 (c) Section 77 A (d) Section 77 B

UNIT II

1. Debentures represent the :
 (a) Manager's share in a business (b) Investment by shareholders in a business
 (c) **Long term borrowing of a business** (d) None of the above
2. Debenture holders are the
 (a) Customers of the company (b) **Creditors of the company**
 (c) Owners of the Company (d) None of the above
3. Debentures are shown under the following heading in a company's Balance sheet
 (a) **Secured loan** (b) Unsecured Loan
 (c) Share Capital (d) Current Liabilities
4. According to companies (Amendment) Act 1999, the premium on issue of debentures should be credited to :
 (a) Share premium A/c (b) Debenture Premium A/c
 (c) **Securities Premium A/c** (d) None of the above
5. Discount on issue of debentures is shown under the following heading in a company's Balance sheet.
 (a). Fixed Assets (b). Loans & Advances
 (c). Annually (d). **Monthly**
6. Interest on debentures is normally payable:
 (a). **Half Yearly** (b). Quarterly
 (c). Annually (d). Monthly
7. A fixed percentage of interest on debentures is calculated on:
 (a). The issu price of Debentures (b). **The nominal value of debentures**
 (c). The face value of debentures plus premium
 (d). None of the above
8. Profit on calculation of own debentures is transferred to:
 (a). Profit & Loss A/c (b). Debenture A/c
 (c). **Capital Reserve** (d). None of the above

9. Own debentures a/c (at the time of purchase of own debentures) is always debited with:

- (a). The fair value
- (b). The cum - interest price
- (c). **The ex-interest price**
- (d). None of the above

10. The balance of sinking fund investment a/c after the realization of investments is transferred to:

- (a). Profit & Loss A/c
- (b). **Debenture A/c**
- (c). Sinking Fund A/c
- (d). None of the above

UNIT III

1. In the Balance Sheet of a limited company, assets are arranged in the order of
 - (a). Liquidity
 - (b) **Permanence**
 - (c). Neither of the two
 - (d) Either liquidity or permanence
2. Dividends are usually paid on
 - (a). Authorized Capital
 - (b) Subscribed Capital
 - (c). **Paid up Capital**
 - (d) Called up Capital
3. Good will is shown in assets side of the company's Balance sheet under the heading of
 - (a). **Fixed Assets**
 - (b) Current Assets
 - (c). Investment
 - (d) Miscellaneous Expenditure
4. Advance payment of tax in the nature of
 - (a). Capital Expenses
 - (b) Revenue Expenses
 - (c). **Prepaid Expense**
 - (d) Outstanding Expense
5. In the liabilities side of the company's Balance Sheet, calls in arrears is shown
 - (a). Under the heading reserves and surplus
 - (b). Under the heading current Liabilities
 - (c). Under the heading secured loans
 - (d) **by subtracting the amount from the called up capital.**
6. In the assets side of Company's Balance sheet, fictitious assets like discount on issue of debentures are shown under the heading
 - (a). Fixed assets
 - (b) Investments
 - (c). Current Assets
 - (d) **Miscellaneous Expenditure**
7. Preliminary Expenses are an example of
 - (a). Fixed Asset
 - (b) Current Assets
 - (c). **Fictitious Assets**
 - (d) Investment
8. In the liabilities side of a company's balance sheet forfeited shares a/c balance is shown
 - (a). Under the heading current liabilities

- (b) Under the heading unsecured loans
 (c).Under the heading reserves & surplus
(d) By Adding to the paid up capital
9. Divisible profits do not include
 (a). Reserve Fund (b) P & L A/c Balance
(c). Revaluation Reserve (d) Insurance Fund
10. In the liability side of company's balance sheet, unclaimed dividend is shown under the heading
 (a). Share Capital **(b) Current liabilities and provisions**
 (c). Secured loans (d) Unsecured loans
11. The amount set aside to meet the loss of bad debts is a
 (a). Reserve (b) Liability
 (c). Contingent liability **(d) Provisions**
12. When the proposed dividend exceeds 20% of the paid up capital the percentage of profits to be transferred to reserve is
(a). 10% (b) 7.5 %
 (c). 5% (d) 2.5%
13. Interim dividend is always shown
 (a). In P&L a/c **(b) In P&L Appropriation a/c**
 (c). On the assets side of the balance sheet
 (d). On he liabilities side
14. Debentures are shown in the balance sheet under the heading
 (a). Unsecured loans (b) Current Liabilities
(c). Secured Loans (d) Share capital
15. The maximum remuneration payable to a part time director (without managing director (s) or whole time director(s), or manager) should not exceed
 (a). 1% of the annual profits **(b) 3% of the annual profits**
 (c). 5% of the annual profits (d) 10% of the annual profits
16. In the assets side of Company's Balance sheet, preliminary expenses are shown under the heading
 (a). Fixed assets (b) Investments
 (c). Current Assets **(d) Miscellaneous Expenditure**
17. Outstanding expenses are shown in the balance sheet under the heading
 (a). Unsecured loans (b) Current Liabilities
(c). Secured Loans (d) Share capital

18. Patents is shown in assets side of the company's Balance sheet under the heading of

- (a). **Fixed Assets**
- (b) Current Assets
- (c). Investment
- (d) Miscellaneous Expenditure

19. Advance payment of tax is always shown

- (a). **In P&L a/c**
- (b) In P&L Appropriation a/c
- (c). On the assets side of the balance sheet
- (d). On the liabilities side

20. Trademarks is shown in assets side of the company's Balance sheet under the heading of

- (a). **Fixed Assets**
- (b) Current Assets
- (c). Investment
- (d) Miscellaneous Expenditure

UNIT IV

1. Accounting standard for Amalgamation is
 - a. AS – 18
 - b. AS – 20
 - c. **AS – 14**
 - d. AS – 3
2. Pooling of interest method is used to account for Amalgamation in the Nature of
 - a. Purchase
 - b. Sale
 - c. **Merger**
 - d. None of the above
3. Purchase consideration, as per AS – 14 should include the cash and securities agreed to be given by the transferee company to transferor company's.
 - a. **Share holders**
 - b. Shareholders & Debenture Holders
 - c. Creditors, Debenture holders and share holders
 - d. None of the above
4. Expenses of liquidation of transferor company may be shown as 'Reimbursement' in transferor company's book, if the expenses are agreed to be paid by :
 - a. Transferor company
 - b. **Transferee company**

30. Rashid Ltd. Has Rs.10,00,000 8% debentures outstanding on 1.1.96. The company has been redeeming every year on January 1st Rs. 1,00,000 debentures by drawing by lot, at par. Give necessary journal entries.

- a. If the redemption is out of profits
- b. If the redemption is out of capital

UNIT II

1. Mohith Ltd., which has Rs.10,00,000 8% debentures of Rs.100 each outstanding on 1.1.96 on which interest is payable on 30th June and on 31st December each year is permitted to purchase its own debentures in the open market and cancel them or retain them or resell them at its option.

The company made the following purchase in the open market on 1.4.96.
500 Debentures at Rs.97 ex-interest.

Give appropriate Journal entries if

- c. The debentures were cancelled on the same day;
 - d. The debentures were retained till 1.7.96 on which date they were cancelled.
2. What is a debenture ? What are its characteristics?
 3. Distinguish between debentures and shares.
 4. Calculate the amount of goodwill on the basis of three years purchase of the last five years' average profits. The profits for the last five years are :

	Rs.
--	-----

I Year	4,800
II Year	7,200
III Year	10,000
IV Year	3,000
V Year	5,000

5. The profits of Thilalga Ltd. For the last 5 years were as follows :

	Rs.
1994	15,000
1995	18,000
1996	22,000
1997	25,000
1998	27,000

Compute the value of goodwill of Thilaga Ltd. On the basis of 4 years purchase of weighted average profit after assigning weights 1, 2, 3, 4 and 5 serially to the profits.

6. A firm earned net profit during the last three years as follows :

	Rs.
I Year	36,000
II Year	40,000
III Year	44,000

The capital investment of the firm is Rs. 1,00,000.

A fair return on the capital, having regard to the risk involved, is 10%

Calculate the value of goodwill on the basis of 3 years' purchase of super profit.

7. The average net profits of a business as adjusted for valuation of goodwill amounted to Rs.2,35,450. The net tangible assets employed were of the value of Rs.14,50,000. But upon valuation, they amounted to Rs.15,00,000. Assuming that 10% represented a fair commercial return, calculate the amount of goodwill by capitalizing super profits.

UNIT III

1. From the following particulars, determine the maximum remuneration available to a full time director of a manufacturing company.

The profit & Loss account of the company showed a net profit of Rs.40,00,000 after taking into account the following items:

	Rs.
(a) Depreciation (including special depreciation of Rs. 40,000)	1,00,000
(b) Provision for income tax	2,00,000
(c) Donation to political parties	50,000
(d) Ex-gratia payment to a worker	10,000
(e) Capital profit on sale of assets	15,000

2. Determine the maximum remuneration payable to the part time directors and Manager of Bharat Ltd (a manufacturing company) under sections 309 and 387 of the companies Act 1956 from the following particulars.

Before charging any such remuneration, the profit & Loss account showed a credit balance of Rs.23,05,000 for the year ended 32st March 1998 after taking into account the following matters:

	Rs
(i) Profit on sale of investment	2,05,000
(ii) Subsidy received from government	4,10,000
(iii) Loss on sale of fixed assets	65,000
(iv) Ex-gratia to an employee	30,000
(v) Compensation paid to injured workman	75,000
(vi) Provision for taxation	2,79,000
(vii) Bonus to foreign technicians	3,12,000
(viii) Multiple shift allowance	1,00,000
(ix) Special depreciation	75,000
(x) Capital expenditure	5,10,000

Company is providing depreciation as per section 350 of the companies Act 1956.

3. From the following Profit & Loss account of Soundarya Ltd. For the year ended 31.12.92 and additional data given, calculate commission due to managing director at 5% of net profit. Salary of managing director is to be treated as part payment of the commission:

Profit & Loss A/c for the year ended 31.12.92

	Rs		Rs
To opening Stock	11,000	By sales	1,70,000
To Bonous (including Rs.5000 for 1991	5,000	By closing stock	15,000
To Director's fees	3,000	By other Incomes:	
To managing director:		Discount	2,000
Salary	2,000	Profit on sale of	
Commission	1,000	Fixed assets	1,000
To Development rebate reserve	800		
To provision for tax	3,000		
To Establishment Expenses	40,000		
To loss on sale of investments	200		
To Net profit c/d	1,22,000		
	1,88,000		1,88,000

The book value of the fixed assets sold was Rs.2,000 and their original cost was Rs.2,600.

4. The Manager of M/s Slow and Steady Ltd, is entitled to get a salary of Rs.2,500 per month plus 1% commission on the net profits of the company after such salary and commission.

The following is the profit & loss account of the company for the year ended 31st March 1998.

	Rs		Rs
To Salaries, wages & bonus	1,92,500	By Gross prot b/d	9,00,00
To General expenses	74,00	By Subsidiary from govt	60,000
To Depreciation	82,000	By profit on sale of assets (Cost price Rs 2,50,000 and written down value Rs.1,80,000)	1,00,000
To Expenditure in scientific research (cost of an apparatus)	14,000		
To Manager's salary	30,000		
To commission to manager	6,000		
To provision for bad and doubtful debts	17,500		
To provision for income tax	2,40,000		
To proposed dividend	1,00,000		
To Balance c/d	3,04,000		
	10,60,000		10,60,000

Depreciation as per income tax rules amount to Rs.81,000. calculate the remuneration payable to the manager.

5. What are the 'Components' of 'Financial Accounts' of a Joint stock company?
6. Give an imaginary 'Profit and loss Appropriation Account; of a Limited company.
7. How is 'Provision for Tax' treated in the final Accounts of a company?
8. What is 'Advance payment to Income Tax'? How is it dealt with in company final accounts?
9. What is "Tax deductd at source (TDS)"? How is it shown in company final accounts.
10. What is managerial Remuneration? Write a note.

11. From the following particulars, determine the maximum remuneration available to a full time director of a manufacturing company.

The profit & Loss account of the company showed a net profit of Rs.20,00,000 after taking into account the following items:

	Rs.
(a) Depreciation (including special depreciation of Rs. 20,000)	50,000
(b) Provision for income tax	1,00,000

(c) Donation to political parties	25,000
(d) Ex-gratia payment to a worker	5,000
(e) Capital profit on sale of assets	7,500

12. Determine the maximum remuneration payable to the part time directors and Manager of Bharat Ltd (a manufacturing company) under sections 309 and 387 of the companies Act 1956 from the following particulars.

Before charging any such remuneration, the profit & Loss account showed a credit balance of Rs.20,00,000 for the year ended 31st March 1998 after taking into account the following matters:

	Rs
(i) Profit on sale of investment	2,00,000
(ii) Subsidy received from government	4,00,000
(iii) Loss on sale of fixed assets	60,000
(iv) Ex-gratia to an employee	25,000
(v) Compensation paid to injured workman	70,000
(vi) Provision for taxation	2,70,000
(vii) Bonus to foreign technicians	3,00,000
(viii) Multiple shift allowance	1,00,000
(ix) Special depreciation	70,000
(x) Capital expenditure	5,00,000

Company is providing depreciation as per section 350 of the companies Act 1956.

13. From the following Profit & Loss account of Shanmuga Ltd. For the year ended 31.12.93 and additional data given, calculate commission due to managing director at 5% of net profit. Salary of managing director is to be treated as part payment of the commission:

Profit & Loss A/c for the year ended 31.12.93

	Rs		Rs
To opening Stock	5,500	By sales	85,000
To Bonous (including Rs.5000 for 1991	2,500	By closing stock	7,500
To Director's fees	1,500	By other Incomes:	
To managing director:		Discount	1,000
Salary	1,000	Profit on sale of	
Commission	500	Fixed assets	500
To Development rebate reserve	400		
To provision for tax	1,500		
To Establishment Expenses	20,000		
To loss on sale of investments	100		
To Net profit c/d	61,000		
	94,000		94,000

The book value of the fixed assets sold was Rs.1,000 and their original cost was Rs.1,300.

14. The Manager of M/s Slow and Steady Ltd, is entitled to get a salary of Rs.1,250 per month plus 1% commission on the net profits of the company after such salary and commission. The following is the profit & loss account of the company for the year ended 31st March 1997.

	Rs		Rs
To Salaries, wages & bonus	96,250	By Gross profit b/d	4,50,000
To General expenses	37,000	By Subsidiary from govt	30,000
To Depreciation	41,000	By profit on sale of assets (Cost price Rs 2,50,000 and written down value Rs.1,80,000)	50,000
To Expenditure in scientific research (cost of an apparatus)	7,000		
To Manager's salary	15,000		
To commission to manager	3,000		
To provision for bad and doubtful debts	8,750		
To provision for income tax	1,20,000		
To proposed dividend	50,000		
To Balance c/d	1,52,000		
	5,30,000		5,30,000

Depreciation as per income tax rules amount to Rs.40,500. calculate the remuneration payable to the manager.

15. From the following particulars, determine the maximum remuneration available to a full time director of a manufacturing company.

The profit & Loss account of the company showed a net profit of Rs.10,00,000 after taking into account the following items:

	Rs.
(a) Depreciation (including special depreciation of Rs. 10,000)	25,000
(b) Provision for income tax	50,000
(c) Donation to political parties	12,500
(d) Ex-gratia payment to a worker	2,500
(e) Capital profit on sale of assets	3,750

16. Determine the maximum remuneration payable to the part time directors and Manager of Bharat Ltd (a manufacturing company) under sections 309 and 387 of the companies Act 1956 from the following particulars.

Before charging any such remuneration, the profit & Loss account showed a credit balance of Rs.5,76,250 for the year ended 32st March 1998 after taking into account the following matters:

	Rs
(i) Profit on sale of investment	51,250

(iii) Loss on sale of fixed assets	16,250
(iv) Ex-gratia to an employee	7,500
(v) Compensation paid to injured workman	18,750
(vi) Provision for taxation	69,750
(vii) Bonus to foreign technicians	1,56,000
(viii) Multiple shift allowance	25,000
(ix) Special depreciation	18,750
(x) Capital expenditure	2,55,000

Company is providing depreciation as per section 350 of the companies Act 1956.

17. From the following Profit & Loss account of Soundarya Ltd. For the year ended 31.12.96 and additional data given, calculate commission due to managing director at 5% of net profit. Salary of managing director is to be treated as part payment of the commission:

Profit & Loss A/c for the year ended 31.12.96

	Rs		Rs
To opening Stock	2,750	By sales	42,500
To Bonous (including Rs.5000 for 1991	1,250	By closing stock	3,750
To Director's fees	750	By other Incomes:	
To managing director:		Discount	500
Salary	500	Profit on sale of	
Commission	250	Fixed assets	250
To Development rebate reserve	200		
To provision for tax	750		
To Establishment Expenses	10,000		
To loss on sale of investments	50		
To Net profit c/d	30,500		
	47,000		47,000

The book value of the fixed assets sold was Rs.2,000 and their original cost was Rs.2,600.

18. The Manager of M/s Slow and Steady Ltd, is entitled to get a salary of Rs.625 per month plus 1% commission on the net profits of the company after such salary and commission.

The following is the profit & loss account of the company for the year ended 31st March 1998.

	Rs		Rs
To Salaries, wages & bonus	48,125	By Gross prot b/d	2,25,000
To General expenses	18,500	By Subsidiary from	15,000
		govt	
To Depreciation	20,500	By profit on sale of	25,000

		assets (Cost price Rs 2,50,000 and written down value Rs.1,80,000)	
To Expenditure in scientific research (cost of an apparatus)	3,500		
To Manager's salary	7,500		
To commission to manager	1,500		
To provision for bad and doubtful debts	4,375		
To provision for income tax	60,000		
To proposed dividend	25,000		
To Balance c/d	1,52,000		
	2,65,000		2,65,000

Depreciation as per income tax rules amount to Rs.20,250. calculate the remuneration payable to the manager.

19. From the following particulars, determine the maximum remuneration available to a full time director of a manufacturing company.

The profit & Loss account of the company showed a net profit of Rs.5,00,000 after taking into account the following items:

	Rs.
(a) Depreciation (including special depreciation of Rs. 5,000)	20,000
(b) Provision for income tax	40,000
(c) Donation to political parties	10,000

(e) Capital profit on sale of assets	3,000

20. Determine the maximum remuneration payable to the part time directors and Manager of Bharat Ltd (a manufacturing company) under sections 309 and 387 of the companies Act 1956 from the following particulars.

Before charging any such remuneration, the profit & Loss account showed a credit balance of Rs.4,60,000 for the year ended 32st March 1998 after taking into account the following matters:

	Rs
(i) Profit on sale of investment	40,000
(ii) Subsidy received from government	80,000
(iii) Loss on sale of fixed assets	10,000
(iv) Ex-gratia to an employee	6,500

(v) Compensation paid to injured workman	20,000
(vi) Provision for taxation	60,800
(vii) Bonus to foreign technicians	60,400
(viii) Multiple shift allowance	20,000
(ix) Special depreciation	20,000
(x) Capital expenditure	1, 00,000

Company is providing depreciation as per section 350 of the companies Act 1956.

UNIT IV

1. Bee Ltd. Has 60,000 equity shares of Rs.100 each, Rs.80 per share called up. Now the company decides to pay off Rs.20 per share of the paid up capital and at the same time to reduce the Rs.100 share to Rs.60 share fully paid up by canceling the unpaid amount. Give journal entries.
2. ABC company Ltd. Passed resolution and got court permission for the reduction of its share capital by Rs.5,00,000 for the purposes mentioned as under :
 - i. To write off the debit balance of P & L a/c of Rs.2,10,000
 - ii. To reduce the value of Plant & Machinery by Rs.90,000 and goodwill by Rs.40,000
 - iii. To reduce the value of investments by Rs.80,000

The reduction was made by converting 50,000 preference shares of Rs.20 each fully paid to the same number of preference shares of Rs.15 each fully paid and by converting 50,000 equity shares of Rs.20 each on which Rs.15 is paid up into 50,000 equity shares of Rs.10 each fully paid up.

Pass journal entries to record the share capital reduction.

3. Explain the different kinds of 'Alteration of Share capital' which do not require approval of a court of law.
4. What is capital reduction? What are the provisions of the companies act in regard to the reduction of share capital?
5. Raman Ltd. Agrees to purchase the business of Krishnan Ltd., on the following terms:
 - a. For each of the 10,000 shares of Rs.10 each in Krishnan Ltd. 2 shares in Raman Ltd. Of Rs.10 each will be issued at an agreed value of Rs.12 per share. In addition, Rs.4 per share cash also will be paid.
 - b. 8% debentures worth Rs.80,000 will be issued to settle the Rs.60,000 9% debentures in Krishnan Ltd.
 - c. Rs.10,000 will be paid towards expenses of winding up.

Calculate the purchase consideration.

6. M Ltd. And N Ltd. Agreed to amalgamate on the basis of the following balance sheets as on 31.3.97.

<i>Liabilities</i>	<i>M</i> <i>Rs.</i>	<i>N</i> <i>Rs.</i>	<i>Assets</i>	<i>M</i> <i>Rs.</i>	<i>N</i> <i>Rs.</i>
Share capital			Goodwill	30,000	-
Rs.25 each	75,000	50,000	Fixed assets	31,500	38,800
P&L a/c	7,500	2,500	Stock	15,000	12,000

Creditors	3,500	3,500	Debtors	8,000	5,200
Depreciation		2,500	Bank	1,500	2,500
Fund					
	86,000	58,500		86,000	58,500

The assets and liabilities are to be taken over by a new company formed called P Ltd., at book values. P Ltd., 's capital is Rs.2,00,000 dividend into 10,000 equity shares of Rs.10 each and 10,000 9% preference shares of Rs.10 each.
